FOREWORD

PRESIDENT THEODORE ROOSEVELT said: "If the proper study of mankind is man, then the proper study of a nation is its own history, and all true patriots should encourage in every way the associations which record the great deeds and the successes and failures alike of the forefathers of their people." Through the years, the U.S. Navy has written a significant part of that history.

Sea power has been instrumental in deciding our Nation's fate through war and peace since the American Revolution, when George Washington said it "was the pivot upon which everything turned." Our destiny today on many frontiers depends largely on the effective use of the seas.

Men shape sea power as they shape all else in life. The greatest strength of the U.S. Navy has been, and always will be, its men. In their hearts and minds and souls lies the destiny of America at sea.

Yet, just as men are the living spirit of sea power, ships are its magnificent manifestation. Ships are the spearhead and visible evidence of the United States' purpose wherever water reaches. On the free sea they are American territory. They extend the frontiers of freedom to the coast of every other land. As a Greek statesman said of the 6th Fleet:

"I hardly know any countryman of mine who does not rejoice when he sees your beautiful and powerful ships visiting the Greek seas . . . The sea stands for freedom in every human soul, to us it stands for life itself."

A few years later, Americans in the Middle East, caught in the Suez crisis of 1955, for the first time in their sheltered lives in our blessed land of freedom, understood this truth vividly. An evacuee from Asia Minor, expressing appreciation to the Commanding Officer of USS *Chilton* (APA-38), wrote:

"When we spied the first U.S. uniforms on the dock we felt wonderful, and finally, when we were aboard the *Chilton*, we felt practically invulnerable. I guess we never realized how much the Flag meant to us until we saw it on the stern of the landing craft, and we will never forget how it appeared that night on the *Chilton's* masthead with a spotlight on it."

Men have other reasons besides security for loving ships. They find in these stout hulls beauty, strength, and tireless purpose as they cleave through broad seas day and night without pause. Most of all, when a man has served in a ship, it becomes one of the deepest loves of his life. He becomes part of it and the ship becomes part of him forever after.

Hence, like its predecessors, this third volume of the *Dictionary of Naval Fighting Ships* will be received eagerly by a host of readers for many different reasons. As men open this volume today and in years to come, may a paramount reason be understanding of what ships represent in the slow upward growth of freedom. Ships, the sea, and freedom are inseparably united. In the words of President Johnson:

"Sea power is essential to the security of our Nation. The mobility and versatility of our naval forces manifested each day are a constant reminder

to any aggressor that this country has the means to act quickly and decisively to protect the interests of the United States and the Free World. Paradoxically, the powerful United States Navy is a symbol of peace . . . The dedicated men serving in Navy Blue . . . safeguard the peace and freedom of the world and the future of the American way of life.”

Paul H. Nitze

PREFACE

SHIPS ARE THE VISIBLE majesty of seapower—and consequently of freedom since from earliest times the free sea has offered strength to those who believe in freedom. Therefore we issue this third volume of the *Dictionary of American Naval Fighting Ships* with confidence of its value. In the years ahead this fleet of books will contain a brief biography of every ship that has served the United States in her strange and divine surge to the leadership of man—and of his bright dream of freedom under God for all.

“Porte after toyle in weary seas” well expresses our gratification to have launched hull number 3. When Volume II commissioned 4 years ago to quickly become a “GPO best seller”, we promised ourselves to have this third one in your hands long before now. Very soon thereafter we met headwinds in the loss of staff and in the press of other work.

Now that this volume comes to you we hope you will find it a better “Mark and Mod.” than its predecessors. We have earnestly labored to make it so. Several readers have gone over each history. We have added more detail in many of them, more photographs, broader perspective. Otherwise our Op-Plan has remained essentially the same as given in the introductions to Volumes I and II.

Perhaps we should make the further qualification that we have added more special appendices than originally envisioned. Three unique ones ornament this book—“Civil War Ordnance”; “Monitors”; “Historic Ship Exhibits”. Each is an outstanding contribution that in itself makes this work worthwhile. Further special appendices under consideration for future volumes include such titles as “The Continental Navy”; “Ships-of-the-Line”; “Task Forces of World War II”; and “Ship Losses by Wars”.

Some of these will come from the hands of dedicated seekers of truth outside the division as in the case of “Civil War Ordnance” by Eugene Canfield and “Monitors” by Lieutenant Richard Webber, USNR, who also helped in other ways while at-

tached to the division. Indeed many men and women outside the division have also helped with other parts of the book. To them of the staffs of the bureaus and offices, within and outside the Navy Department and to the many interested Americans elsewhere we express our warm appreciation; and especially to: Dr. K. Jack Bauer; Mr. Howard I. Chapelle; Mr. Robert J. Fletcher; Captain Neville T. Kirk, USNR; Mr. John Maffett; Miss Olga B. Mager; Midshipman Samuel L. Morison; Mr. Dave Rosenberg; Mrs. Betty W. Shirley; Mrs. Jesse B. Thomas; Mrs. Esther Vail.

Willing workers previously with the division who made important contributions in research, writing, or typing include: Lt. (j.g.) Richard M. Basoco, USNR; Yeoman Second Class Paul Culbertson, USN; Commander Dermott V. Hickey, USN; Miss Sandra L. McNair; Lt. William F. Rope, USNR; Mr. Jesse B. Thomas; Mrs. Dianne Witt.

Happily the Naval History Division is small so that all parts interrelate effectively. Therefore members of other sections of our division made many worthwhile contributions; they are: Dr. William J. Morgan, Head of the General Historical Research Section; Dr. Dean Allard, Head of the Operational Archives Branch, and his most able assistants, Miss Barbara Gilmore, Mr. Richard Von Doenhoff, Mrs. Mildred D. Mayeux, and Mr. Bernard Cavalcante. Very valuable aid has come from Commander Victor J. Robison, Jr., Assistant Curator of the Navy Department, in both selecting and obtaining illustrations for this volume, and from his assistants Mr. Henry A. Vadnais, Lieutenant (j.g.) Jeffrey Bogart, Mrs. Agnes Hoover and Chief Yeoman Terrance Sklodoski. The Navy Department Library a branch of the Naval History Division with Mr. W. B. Greenwood at the helm and his assistant, Mr. Fred Meigs, provided source material on the older ships. Others not directly connected with the DANFS project who have made giant contributions are: the veterans Mr. Loyd A. Olsson and Mr. Don Martin.

The late Mrs. Ethel S. Talley and her successor, Mrs. Emily Fishe, provided data on new ships. Some of the writing was performed under contract by Mr. Wayne S. Knight, while others produced historical sketches while on Naval Reserve training duty; those include Comdr. Ernest H. Post, Jr., Lt. Bernard A. Barufaldi and Chief Journalist Joseph J. Sarver.

In every stage, including final editing, the project, like all others of this busy division has benefited greatly from the wise and able guidance of Captain F. Kent Loomis, USN (Ret.), Assistant Director of Naval History.

The basic credit for this volume goes to Commander Clayton F. Johnson whose skilled hand shows through all these pages and to the small section he heads that has a host of work, besides this publication, devoted to morale and esprit—such as Ships' Names and Sponsors, Insigna, Historic Plaques, Command Histories, and that constant flow of queries by mail, telephone, and visitors.

Within the section this volume has enjoyed the effective writing and editing of Lieutenant John C. Roberts in its early stages and of his successors. Besides him, basic writing was done by some of those previously mentioned and now separated from the division; however, the lion's share of basic writing was performed by Mr. Raymond J. Iwanowski, who has just recently departed for another field of work, and his most able co-worker, Mr. James V. Stewart, Jr. Miss Joan A. Schrader and Mr. John Reilly, Jr., provided willing and able assistance by proofreading, rewriting, and

performing administrative chores. High speed and accurate writing, typing, and record keeping has stemmed from Mrs. Jo Ann Ward, Chief Yeoman Carmen Vitelli, and Yeoman Second Class Jack Street, all of the Ships' Histories Section.

Including Confederate Ships, these three volumes contain the histories of some 5,000 warships that have served the destiny of this sea-girt land of ours. At the outset we estimated a total of over 10,000 histories and a listing of several thousand other noncommissioned craft. Revised "Op-Plans" to include histories of all named ships, whether or not commissioned and the scouting out of little known obscure vessels that served the United States in war have swelled the total to 14,000 or more. So we still have a long voyage to complete.

Each warship has well served our country in duties great or small. Their records span the full history of America, sometimes in ships of the same name, for ships, like men, can have noble ancestry. Their histories *are* the history of America, for in them lie much of her strength and salvation. The key to victory in every war that has come to our country has lain at sea.

This was true in the days of sail in the American Revolution. It was true in the days of steam from the Civil War to World War II. It is true in this swiftly changing age of nuclear power, space flights and exploration to the depths of the sea. It will continue true into the long future.

E. M. ELLER,
Rear Admiral, USN (Ret.),
Director of Naval History.

MONITORS APPENDIX II

U.S. Monitor <i>Kickapoo</i> —The photograph was probably taken prior to her transfer to Admiral Farragut's West Gulf Blockading Squadron in July 1864. An interesting point is that the Eads' turret forward is outwardly identical to the Ericsson turret aft.	NR&L(Old) 11767.....	746
Hand colored pen and ink sketch of U.S. Monitor <i>Squando</i> apparently drawn by a watchstander on the ship—The drawing was found in the ship's log at the National Archives.	NR&L(Mod) 38235.....	746
USS <i>Tallahassee</i> (ex-USS <i>Florida</i>) serving as a submarine tender during the World War I period—Submarines <i>K-5</i> and <i>K-6</i> are shown alongside on 10 December 1916 in a picture taken in Hampton Roads.	NR&L(Old) 3754.....	747
The first of her kind, USS <i>Monitor</i> , showing the scars of her historic battle with C.S.S. Iron Clad <i>Virginia</i> .	NR&L(Old) 19972.....	748
General plan of the U.S. Iron Clad <i>Monitor</i> "deduced from the original drawings of Captain John Ericsson and from actual measurements taken from the vessel"	-----	750
Facsimile of the contract dated 25 October 1861 between John Ericsson and Thomas Rowland for construction of USS <i>Monitor's</i> hull at the latter's Continental Iron Works, Greenpoint, N.Y.	NR&L(Mod) 38610, 38611, and 38612.	751
Shiphouse at the Continental Iron Works in which USS <i>Monitor</i> was constructed during the winter of 1861-2.	NR&L(Mod) 38609.....	754
USS <i>Monterey</i> in dry dock 22 April 1898—She was the first ship to use the graving dock at what is now Puget Sound Naval Shipyard, Bremerton, Wash. The ram bow and full body, characteristic of "New Navy" monitors, can be seen.	-----	755
This fine contemporary lithograph of <i>Roanoke</i> is an example of the ship "portraits" published by Endicott & Co. of New York, N.Y. Endicott & Co. was noted for its excellent craftsmanship and scrupulous attention to detail.	LP-577.....	755
USS <i>Monterey</i> at target practice off Port Angeles, Wash—The splash of one of her 12-inch shells may be seen in the right background.	NR&L(Old) 7710.....	756

Caption	Identification number	Page
Artist's impression of U.S. Monitor <i>Kalamazoo</i> —This is the only representation of this class found to date.	NR&L(Mod) 38146-----	757
Monitors forming part of the fleet of Rear Admiral D. D. Porter, USN, riding out a gale at anchor off Fort Fisher, N.C., 21 December 1864.	-----	759
Builder's half model of U.S. Monitor <i>Passaic</i> , lead ship of her class.	-----	760
U.S. Monitor <i>Camanche</i> under construction in San Francisco during 1864—This photograph appears to have been taken shortly before the next one in the group as the ships in the background are the same.	NR&L(Mod) 38106-----	760
Propeller and rudder arrangement of U.S. Monitor <i>Passaic</i> -----	NR&L(Mod) 38603-----	761
This gathering of San Francisco notables was probably occasioned by the imminent launching of USS <i>Camanche</i> from the yard of Danohue, Ryan and Secor on 14 November 1864. USS <i>Camanche</i> was the only monitor to serve on the West Coast until the arrival of USS <i>Monadnock</i> in 1866.	-----	762
USS <i>Camanche</i> fitting out alongside the pier shown in the center background of the two construction photographs. She was finally commissioned in May 1865.	NR&L(Mod) 38102-----	763
U.S. Monitor <i>Camanche</i> as she appeared in 1898—The Civil War monitors which were not fully rebuilt but which remained on the Navy list received additional deck ventilators and a light hurricane deck over the years, the once long and low clean lines becoming cluttered and ugly.	NR&L(Old) 5809-----	763
Deck of U.S. Monitor <i>Catskill</i> , off Charleston during early 1865—The Commanding Officer, Lt. Comdr. Edward Barrett, is seated in front of the armored pilothouse on top of the turret. Barrett's executive officer, probably Lt. Charles W. Tracy, is standing at his right. The XV-inch and XI-inch Dahlgren smoothbores which formed the armament may be seen through the gunports in the turret. The XV-inch on the left could not be run out of the port because of its size and had to be fired inside the turret through a box mounted in the interior.	NR&L(Old) 20274-----	764
U.S. Monitor <i>Lehigh</i> while operating on the James River during the spring of 1863.	National Archives 111-B-652----	764
Body plan of U.S. Monitor <i>Passaic</i> -----	NR&L(Mod) 38613-----	765
This plan of U.S. Monitor <i>Passaic</i> was prepared at the Boston Navy Yard during 1896. The changes made over the years are particularly apparent when these views are compared with the plans drawn during the Civil War.	National Archives RG-19-----	765
Deck and hold plans of U.S. Ironclad <i>Roanoke</i> prepared at the New York Navy Yard in February 1874.	National Archives RG-19-----	766
Plan view of U.S. Monitor <i>Onondaga</i> -----	National Archives RG-19-----	767
USS <i>Onondaga</i> on the James River during the Civil War. The bulletproof shields installed around the tops of the turrets on many monitors during 1863-1865 are clearly visible.	National Archives 111-B-40-----	767
U.S. Monitor <i>Agamenticus</i> as she appeared shortly after her completion in 1865. The <i>Miantonomchs</i> were the only Civil War monitors originally built with hurricane decks, with the possible exception of USS <i>Dictator</i> .	-----	768
U.S. Monitor <i>Miantonomch</i> on her historic trip to Europe in 1866-1867—The ship is seen during a visit to Malaga, Spain, 24 December 1866-3 January 1867. The photograph was probably taken on 26 December 1866 when the log made specific mention of the ship being crowded with visitors.	NRSL(Old) 17137-----	769
Extract from the log of USS <i>Miantonomch</i> including 26 December 1866.	NR&L(Mod) 38607-----	769
USS <i>Dictator</i> on the ways at Delameter Iron Works, New York, N. Y.—From the advanced stage of completion and the overcoats on the figures in the foreground, it seems likely that the photograph was taken in the winter of 1863, shortly prior to the launching of USS <i>Dictator</i> on 26 December 1863. Note the minimal overhang of the armored "raft" and the large screw, 21 feet, 6 inches, in diameter.	NR&L(Mod) 38104-----	770
A lithograph of USS <i>Dictator</i> as she probably appeared during the Civil War. No photographs of USS <i>Dictator</i> have been located except for the preceding construction photograph.	-----	771
U.S. Monitor <i>Catawba</i> of the <i>Canonicus</i> class as <i>Atahualpa</i> in the Peruvian navy. American monitors rarely, if ever, used sails except on long ocean passages. Actually the lithograph may depict <i>Atahualpa</i> as she appeared upon departing New Orleans for Peru in 1888. Under the circumstances it would not be surprising to see sails.	NR&L(Mod) 38105-----	772

Caption	Identification number	Page
U.S. Monitor <i>Mahopac</i> on the Appomatox River during the Civil War—The booms extending from the starboard side support netting which served as a primitive minesweeping device. Confederate mooring mines known as "torpedoes," represented a very real threat to all Union warships. The USS Monitors <i>Milwaukee</i> , <i>Osage</i> , <i>Patapsco</i> , and <i>Tecumseh</i> were lost to mines. The black area results from damage to the original glass negative.	National Archives 111-B-409----	772
Engraving by Harley depicting U.S. Monitor <i>Puritan</i> as she would have appeared when completed to her original Civil War design.	NR&L(Old) 4754-----	773
Plan of the spar torpedo equipment designed for installation on USS <i>Casco</i> , USS <i>Chimo</i> , USS <i>Napa</i> , USS <i>Naubuc</i> , and USS <i>Modoc</i> . USS <i>Napa</i> and USS <i>Modoc</i> were not commissioned during the Civil War.	NR&L(Mod) 38606-----	774
Plan of U.S. Monitor <i>Koka</i> . USS <i>Koka</i> was one of the 15 ships of the <i>Casco</i> class to be redesigned and completed as monitors, although she never saw commissioned service.	National Archives RG-19-----	774
U.S. Monitor <i>Wassuc</i> , one of the 15 <i>Cascos</i> actually completed as monitors—However, she was never commissioned as this lithograph would indicate. It can only be concluded that the lithograph was prepared in anticipation of USS <i>Wassuc</i> 's completion and commissioning. Also, it is interesting to note that the publishers, Endicott & Co., used the same plate for all ships of a given class, changing only the caption.	NR&L(Mod) 38103-----	776
<i>Onondaga</i> as she appeared while serving in the French Navy under original name—She was carried on the French navy list as a coast defense ship.	NR&L(Old) 20612-----	777
Mould loft dimensions of <i>Kalamazoo</i> -----	NR&L(Mod) 38615, NR&L(Mod) 38616, and NR&L(Mod) 38617.	778
Body plan of U.S. Monitor <i>Tonawanda</i> -----	NR&L(Mod) 38601-----	780
U.S. Torpedo Boat <i>Casco</i> , name ship of the light draft <i>Casco</i> class of monitors, shown on the James River near Dutch Gap during March-April 1865.	National Archives 111-B-5374---	780
Photograph of U.S. Monitor <i>Osage</i> , probably taken shortly after completion—The armored casing of the sternwheel is conspicuous, as is the "turtleback", characteristic of an Eads design.	NR&L(Old) 396-----	782
USS <i>Osage</i> shown on the Red River during the 1864 expedition in support of General Banks—Additional deck structures erected since the previous photograph can be seen. Thomas O. Selfridge, Jr., who commanded USS <i>Osage</i> at this time, spoke in his memoirs of using a periscope mounted on the turret to direct fire of the battery.	NR&L(Old) 21999-----	782
Plans initially submitted to the Navy by the contractors for the USS Monitors <i>Marietta</i> and <i>Sandusky</i> .—The ships were not completed until nearly 2 years after these plans were probably drawn and, accordingly, it is not possible to be sure that there were not major design changes prior to their acceptance by the Navy in 1888.	National Archives RG-19-----	784
U.S. Monitor <i>Ozark</i> while part of the Mississippi Squadron in 1864.—The deckhouse and exposed pivot guns may be seen clearly. <i>Ozark</i> 's pilothouse resembles that which was placed on the main deck of the <i>Milwaukee</i> class. The pilothouse on most monitors was approximately 6 feet high but that on <i>Ozark</i> appears to be about 12 feet in height.	NR&L(Old) 1603-----	784
This drawing of the <i>Milwaukee</i> class was submitted to the Navy Department by James B. Eads as part of a proposal for warship construction. The ships generally followed the drawing as completed. However, one boiler was added to the middle pair and the pilothouse aft of the forward turret, designed by Eads as a truncated cone, was substantially altered.	National Archives RG-19-----	786
USS <i>Puritan</i> -----	NR&L(Old) 2141-----	786
USS <i>Amphitrite</i> underway off the Boston Navy Yard 27 August 1901	National Archives 19N-7-11-21--	788
USS <i>Monadnock</i> under construction in 1892—The indented area running the length of the hull provided the support for the wood backing of the armor belt.	National Archives 19N-7-14-2---	788
USS <i>Amphitrite</i> under construction at the Norfolk Navy Yard.—The wood backing for the armor has been set in place but the belt is not yet installed. The tall military mast which was typical of the "New Navy" monitors has already been set in place.	National Archives 19N-7-11-3---	789
USS <i>Monadnock</i> enroute from San Francisco to Manila in 1898.—Note the amount of water being taken over the main deck of the "new" monitor in a relatively light sea.	NR&L(Old) 14078-----	789
Plan of U.S. Monitor <i>Manadnock</i> -----	National Archives RG-19-----	790
USS <i>Wyoming</i> on the building ways at the Union Iron Works, San Francisco, Calif.—The photograph was taken 30 June 1900.	-----	791

<i>Caption</i>	<i>Identification number</i>	<i>Page</i>
Outboard profile of USS <i>Monterey</i> -----	NR&L(Old) 17682-----	791
USS <i>Florida</i> being outfitted at the Crescent Shipyard of Lewis Nixon, Elizabethport, N.J.—The photograph was taken sometime in 1901–02. Another characteristic of the “New Navy” monitors was the towering stack.	NR&L(Mod) 38097-----	792
Launch of USS <i>Arkansas</i> at Newport News Shipbuilding and Drydock Co., Newport News, Va., 10 November 1900.	NR&L(Old) 37880-----	792
U.S. Monitor <i>Miantonomoh</i> lying at Boston in 1874—Her armor, turrets and other fittings have been removed and she is in reality only a hulk. At the same time construction of the second monitor to be named USS <i>Miantonomoh</i> was beginning.	NR&L(Old) 2807-----	793
USS <i>Arkansas</i> fitting out at the Newport News Shipbuilding and Drydock Co., 1 July 1902—Her armament is completely installed and the ship is only four months away from commissioning. The ship in the aft background is the battleship USS <i>Missouri</i> .	National Archives 19N-7-9-3----	794
Although the last monitor was stricken from the Navy List before World War II, the type nevertheless played a role in the career of the Navy's greatest wartime leader. USS <i>Tonopah</i> (ex- <i>Connecticut</i>) served periodically as Lt. Nimitz's (later Fleet Admiral Nimitz) flagship when he was Commander. Atlantic Submarine Flotilla, from 20 May 1912 to 30 March 1913.	NR&L(Mod) 33163-----	794
U.S. Monitor <i>Saugus</i> on the James River during the Civil War—The booms and netting protruding from the bow of USS <i>Saugus</i> are a so-called “torpedo rake”, designed to sweep Confederate mines from the path of the ship.	National Archives 111-B-398----	796

CIVIL WAR NAVAL ORDNANCE APPENDIX III

Commander Dahlgren and the Dahlgren gun. From Harper's Weekly 20 April 1861.	NR&L(Old) 21708-----	799
Dahlgren shell guns.—The lock-lugs for mounting the hammer are shown near the vent. Original drawing by author. The 4-wheel common carriage was used to mount 32-pdrs in broadside. From 1866 <i>Ordnance Manual</i> .	-----	801
The 4-wheel common carriage was used to mount 32-pdrs in broadside. From 1866 <i>Ordnance Manual</i> .	-----	802
The Marsilly carriage was the usual mounting for the 9-inch shell gun. From 1866 <i>Ordnance Manual</i> .	-----	802
The pivot carriage was used for mounting 11-inch shell guns and heavy Parrott rifles. From 1866 <i>Ordnance Manual</i> .	-----	804
The 7½-inch Dahlgren rifle, shown with Brooke and Parrott rifles, was never used on board ship. Other Dahlgren rifles, except the 12 and 20-pdr bronze pieces, were of the same form. Original drawing by author.	-----	804
The original 15-inch cannon designed by Dahlgren for the monitor turret vent is slightly altered from original concept. Original drawing by author.	-----	806
Monitor turret showing arrangements for 15-inch guns— <i>Passaic</i> class monitors had smoke boxes to enclose the muzzle as shown at left. Longer guns and larger ports were used with <i>Canonicus</i> class monitors as shown at right. From 1866 <i>Ordnance Manual</i> . (Note: The <i>Canonicus</i> class is referred to on this plan as the <i>Tecumseh</i> class. See Appendix II).	-----	807
Dahlgren howitzer on field carriage. From 1866 <i>Ordnance Manual</i> ..	-----	810
Open launch, as used by Cushing to torpedo Albemarle, mounting a 12-pdr Dahlgren howitzer on boat carriage. From J. S. Barnes, <i>Submarine Warfare</i> (New York: Van Nostrand, 1869).	-----	810
Various fuses and projectiles. Original drawing by author.	-----	812
Percussion lock and various smoothbore ordnance. Original drawing by author.	-----	813
Rifle projectiles by Brooke and Dahlgren. Original drawing by author.	-----	814
Civil War naval ordnance-----	-----	815
Initial velocity of guns-----	-----	817
Cost of guns-----	-----	817
Armament of a few ships-----	-----	817
Admiral Dahlgren-----	-----	818

ADDENDA TO APPENDICES OF VOLUMES I AND II APPENDIX IV

<i>Caption</i>	<i>Identification Number</i>	<i>Page</i>
Experimental gunnery ship <i>Mississippi</i> (AG-128), the former battleship BB-41, made giant contributions in gunnery and ordnance developments. She launched the Navy into the age of the guided missile war ships. Her terrier missile installation was completed in the Norfolk Navy Yard by 9 August 1952, followed by successful firing in the Cape Cod area, off Georges Bank, 28-29 January 1952. Her newly developed terrier missile systems made their first appearance in the active fleet in <i>Boston</i> (CAG-1) when recommissioned as a guided missile cruiser 1 November 1955, followed by <i>Canberra</i> (CAG-2) when recommissioned as a guided missile cruiser 15 July 1956.	-----	821
Guided missile cruiser USS <i>Albany</i> on 30 January 1963 success fully fired three surface-to-air test missiles simultaneously—the first such launching by any Navy in the world.	USN 711235-----	822
<i>Skate</i> at North Pole-----	-----	823
Launching of <i>Blueback</i> (SS-581), the last fleet submarine with diesel-electric power contracted for and launched by the U.S. Navy. She incorporates all recent developments in submarine construction, with the exception of nuclear power, and far sur passes her predecessor types of diesel-electric submarines.	USN 1041989-----	826
USS <i>Nautilus</i> (SSN-571)-----	709366-----	828
USS <i>Sturgeon</i> (SSN-637)-----	-----	829
Inaugural cruise of <i>George Washington</i> -----	-----	833
President John F. Kennedy's letter to Admiral Galantin-----	-----	834
USS <i>Benjamin Franklin</i> (SSBN-640), the 30th of the 41 polaris submarines.	SP-397-----	835
A polaris 2,500 mile range A-3 missile fired from USS <i>Lewis and Clark</i> (SSBN-644)	SP-392-----	837
Submarine Ballistic Missiles-----	-----	838
USS <i>L. Y. Spear</i> (AS-36)-----	USN 1110567-----	840
USS <i>Richard S. Edwards</i> -----	-----	841
Artist's conception of DLG(N)-36-----	-----	846
USS <i>Knox</i> (DE-1052)-----	-----	849
Artist's conception of CVAN-68-----	-----	850

SHIPS NAMED "A" THROUGH "F" SINCE PUBLICATION OF VOLUMES I AND II APPENDIX V

The constantly-evolving scientific Navy is deployed and ready to maintain the peace.	-----	856
LSD—amphibious transport dock-----	USN 1110569-----	856
PG—gunboat-----	USN 1110562-----	857
AGOR—oceanographic research ship-----	-----	857
AD—destroyer tender-----	USN 1110566-----	858
AE—ammunition ship-----	-----	858
AKA—attack cargo ship-----	USN 1110561-----	859
AFS—combat store ship-----	-----	859
LST—tank landing ship-----	-----	860
AOE—fast combat support ship-----	-----	860
PGH—patrol gunboat (hydrofoil)-----	USN 1110568-----	861
MSSO—minesweeper, ocean (nonmagnetic)-----	-----	861
ATS—salvage tug-----	-----	862
AOR—replenishment oiler-----	-----	862
AGS—surveying ship-----	-----	863
ASR—submarine rescue ship-----	-----	863

ABBREVIATIONS AND SYMBOLS

- A—alternating current generator.
a.—armament.
AA—antiaircraft.
AB—crane ship.
ABD—advance base dock.
A/C—Allis-Chalmers Mfg. Co., Milwaukee, Wis. (1942).
ABSD—advance base section dock.
AC—collier.
ac.—aircraft.
ABDA—American - British - Dutch - Australian Command
ACM—auxiliary mine layer.
ACR—armored cruiser.
ACV—auxiliary aircraft carrier; or tender.
Act.—acting.
AD—destroyer tender.
ADG—degaussing ship.
AE—ammunition ship.
A.E.F.—American Expeditionary Force (World War I);
or Allied Expeditionary Force (World War II).
AF—store ship.
AFD—auxiliary floating dock.
AFDB—large auxiliary floating dry dock.
AFDL—small auxiliary floating dry dock.
AFDM—medium auxiliary floating dry dock.
AFS—combat store ship.
AG—miscellaneous auxiliary ship.
AGB—icebreaker.
AGC—general communications vessel; or amphibious force
flagship.
AGD—seagoing dredge.
AGDE—escort research ship.
AGEH—hydrofoil research ship.
AGL—lighthouse tender.
AGM—missile range instrumentation ship.
AGMR—major communications relay ship.
AGOR—oceanographic research ship.
AGP—motor torpedo boat tender.
AGR—radar picket ship.
AGS—surveying ship.
AGSC—coastal survey ship.
AGSL—satellite launching ship.
AGSS—auxiliary, submarine.
AGTR—technical research ship.
AH—hospital ship.
AHP—evacuation hospital ship.
AK—cargo ship.
AKA—attack cargo ship.
AKD—cargo ship dock; or deep-hold cargo ship.
AKI—general stores issue ship.
AKL—light cargo ship.
AKN—net cargo ship.
AKS—stores cargo ship.
AK(SS)—cargo submarine.
AKV—cargo ship and aircraft ferry.
AL—lightship.
ALCo—American Locomotive Co., Auburn, N.Y.
AM—mine sweeper.
AMb—mine sweeper, harbor.
AMc—coastal mine sweeper.
Am-Int—American International Shipbuilding Corp., Hog
Island, Pa.
AMS—motor mine sweeper.
AM(U)—coastal mine sweeper (underwater location);
or mine hunter.
AN—net laying ship.
AO—oiler; or fuel oil tanker.
AOE—fast combat support ship.
AOG—small oiler; or gasoline tanker.
AOR—replenishment oiler; or fleet tanker.
AOSS—submarine oiler.
AP—transport.
APA—attack transport; or animal transport.
APB—self-propelled barracks ship; or artillery barge.
APb—base repair ship.
APC—cavalry transport.
APc—small coastal transport.
APD—high speed transport.
APF—administrative flagship.
APG—supporting gunnery ship.
APH—transport (fitted for evacuation of wounded).
APL—barracks craft (nonself-propelled).
APM—mechanized artillery transport.
APN—nonmechanized artillery transport.
APP—troop barge, class A.
APR—rescue transport.
APS—mine laying submarine; or transport, submarine.
APSS—transport, submarine.
APT—troop barge, class B.
APV—transport and aircraft ferry.
APY—giant "Y" boat.
AR—repair ship.
ARB—battle damage repair ship.
ARC—cable repairing or laying ship.
ARD—auxiliary repair dock (floating dry dock).
ARDC—auxiliary repair dock, concrete.
ARDM—medium auxiliary repair dry dock.
ARH—internal combustion engine repair ship.
ARH—heavy-hull repair ship.
ARL—landing craft repair ship.
ARM—heavy machinery repair ship.
ARS—salvage ship.
ARSD—salvage lifting ship.
ARST—salvage craft tender.
ARV—aircraft repair ship.
ARVA—aircraft repair ship (aircraft).
ARVE—aircraft repair ship (engine).
ARVH—aircraft repair ship (helicopter).
AS—submarine tender.
ASR—submarine rescue ship.
ASROC—antisubmarine rocket.
ASSA—cargo submarine.
ASSP—transport submarine.
ASW—antisubmarine warfare.
AT—ocean tug.
ATA—auxiliary ocean tug.
ATF—fleet ocean tug.
ATL—tank landing craft.
Atlas—Atlas Imperial Diesel Engine Co., Mattoon, Ill.
ATO—ocean tug, old.
ATR—rescue tug.
ATS—salvage tug.
aux.—auxiliary.
AV—seaplane tender.
AVB—advance aviation base ship.
AVC—large catapult lighter.
AVD—seaplane tender (destroyer).
AVG—aircraft escort vessel.
avgas—aviation gasoline.
AVM—guided missile ship.

AVP—small seaplane tender.
 AVR—aircraft rescue vessel.
 AVS—aviation supply ship.
 AVT—auxiliary aircraft transport.
 AW—distilling ship.
 AWK—water tanker.
 AZ—airship tender (lighter than air).
 b.—beam.
 BAK—British cargo ship.
 BB—battleship.
 BBG—guided missile capital ship.
 bbls.—barrels.
 B.C.—British Columbia.
 BIM—ballistic intercontinental missile.
 BDE—British escort ship.
 Beth-Alam—Bethlehem-Alameda Shipyard, Inc., Alameda, Calif.
 Beth-Fair—Bethlehem-Fairfield Shipyard, Inc., Baltimore, Md.
 Beth-Hing—Bethlehem-Hingham Shipyard, Inc., Hingham, Mass.
 BethPac-SanP—Bethlehem Pacific Coast Steel Corp., San Pedro, Calif.
 BethPac-SanF—Bethlehem Pacific Coast Steel Corp., San Francisco, Calif.
 BethSb-Wilm—Bethlehem Shipbuilding Corp., Wilmington, Del.
 Beth-Spar—Bethlehem-Sparrow Point Shipyard, Inc., Sparrows Point, Md.
 BethSt-Balt—Bethlehem Steel Co., Shipbuilding Div., Baltimore, Md.
 BethSt-Bklyn—Bethlehem Steel Co., Shipbuilding Div., Brooklyn, N.Y.
 BethSt-Quin—Bethlehem Steel Co., Shipbuilding Div., Quincy, Mass.
 BethSt-Stat—Bethlehem Steel Co., Shipbuilding Div., Staten Island, N.Y.
 Bg—barge.
 bhp.—brake horsepower.
 blr.—breach-loading rifle.
 BM—monitor.
 bom—"builders old measurement."
 bp.—between perpendiculars (length).
 Bt.—boat.
 btry—battery.
 Buda—Buda Diesel Engine Co.
 BUEXP—Bureau Express Boiler.
 Buff-B—Buffalo Shipbuilding Co., Buffalo, N.Y.
 Buff-E—Buffalo Shipbuilding Co., Erie, Pa.
 BUMODT—Bureau-modified Thornycroft boiler.
 BUR4DR—Bureau 4—Drum Boiler.
 Busch.—Busch Sulzer Brothers Diesel Engine Co., St. Louis, Mo.
 BW—Babcock & Wilcox Co., Boiler Div., Barberton, Ohio.
 BWA—Babcock & Wilcox Co., 3-drum express-type boiler.
 BWA3DR—Babcock & Wilcox header-type boiler.
 B.W.I.—British West Indies.
 BWSHC—Babcock & Wilcox superheat control boiler.
 BWSX—Babcock & Wilcox sectional express boiler.
 BW2DR—Babcock & Wilcox 2-drum boiler.
 BW2DRD—Babcock & Wilcox 2-drum D-type boiler.
 BW2DSU—Babcock & Wilcox 2-drum single-uptake boiler.
 C—protected cruiser.
 CA—heavy cruiser.
 CAG—guided missile heavy cruiser.
 cal.—caliber.
 car.—carronade.
 CB—large cruiser.
 C/B—Cooper Bessemer
 CBC—large tactical command ship.
 CC—battle cruiser; or command ship.
 C/C—controlled-circulation boiler.
 CCS—Combined Chiefs of Staff.
 C/E—Combustion Engineering Co., Chattanooga, Tenn.
 CED—Combustion Engineering D-type boiler.
 CEH—Cummins Engine Co. Inc.
 CEHDR—combustion engineering header-type boiler.
 CE2DRD—combustion engineering 2-drum D-type boiler.
 CF—flying-deck cruiser.
 CFC—controlled forced circulation.
 CG—guided missile cruiser.
 CGC—Coast Guard cutter.
 CG(N)—guided missile cruiser (nuclear powered).
 CH—Cutler-Hammer.
 Char—Naval Shipyard, Charleston, S.C. (formerly Navy Yard, Charleston).
 Chry—Chrysler Corp.
 CinCLant—Commander in Chief, U.S. Atlantic Fleet.
 CinCPac—Commander in Chief, U.S. Pacific Fleet.
 CIW—Columbian Iron Works, Baltimore, Md.
 CL—light cruiser.
 cl/—class.
 CLAA—Antiaircraft light cruiser.
 CLBt—canal boat.
 CLC—tactical command ship.
 CLG—guided missile light cruiser.
 CLK—cruiser hunter-killer ship.
 CM—mine layer.
 CMC—coastal mine layer.
 CMC—Continental Motors Corp.
 CNO—Chief of Naval Operations.
 C.O.—Commanding Officer.
 compos.—composite drive (2 diesel engines, electric drive; 2 diesel engines, geared drive; hydraulic couple).
 const.—Construction.
 cont.—Continued.
 Cor—Corvette.
 epl.—complement.
 Craig—Craig Shipbuilding Co., Long Beach, Calif.
 Cramp—Wm. Cramp & Sons Ship & Engine Building Co., Philadelphia, Pa.
 Cres—Crescent Shipyard, Elizabethport, N.J.
 CS—scout cruiser.
 CSA—Confederate States Army.
 CSN—Confederate States Navy.
 CSS—Confederate States Ship.
 CTB—coastal torpedo boat.
 CTF—Commander Task Force.
 CTG—Comander Task Group.
 Ctr—Cutter.
 CTU—Commander Task Unit.
 Cur.—Curtis-type turbine.
 CV—aircraft carrier.
 OVA(N)—attack aircraft carrier (nuclear powered).
 CVB—large aircraft carrier.
 CVE—escort aircraft carrier.
 CVHA—assault helicopter aircraft carrier.
 CVL—small aircraft carrier.
 CVS—antisubmarine warfare support aircraft carrier; or seaplane carrier.
 CVU—utility aircraft carrier.
 C.Z.—Canal Zone.
 DANFS—*Dictionary of American Naval Fighting Ships*.
 DASH—drone antisubmarine helicopter.
 dcp.—depth charge projector.
 dcp. (h.h.)—depth charge projector (hedgehog-type).
 dct.—depth charge track.
 DD—destroyer.
 dd.—drydock.
 d/d—diesel direct.
 DDC—corvette.
 ddd.—diesel direct drive.
 DDE—antisubmarine destroyer.
 DDG—guided missile destroyer.
 DDR—radar picket destroyer.
 DE—escort ship.
 d/e—diesel electric.
 DEC—control escort vessel.
 ded.—diesel electric drive.
 DEG—guided missile escort ship.
 DeL—De Laval Steam Turbine Co., Trenton, N.J.
 DeL-FB—De Laval & Farrel-Birmingham.
 DeL-Falk—De Laval & Falk.
 DeL-GE—DeLaval & General Electric.
 DeL-Wes—De Laval & Westinghouse.
 DER—radar picket escort ship.

de/r—diesel-electric reduction.
 derd.—diesel electric reduction drive.
 des.—design.
 det.—diesel electric tandem motor drive.
 DEW—Distant Early Warning System (a radar network across upper North America).
 dgd.—diesel geared drive.
 Diehl—diehl manufacturing Co., Bridgeport, N.Y.
 div.—division.
 DL—frigate.
 DLG—guided missile frigate.
 DLG(N)—guided missile frigate (nuclear powered).
 dlt.—double reduction-locked train.
 DM—destroyer minelayer; or light minelayer.
 DMS—high-speed mine sweeper; or destroyer mine-sweeper.
 dp.—displacement; or dual purpose (guns).
 dr.—draft.
 D.r.—Dahlgren rifle.
 drd.—diesel reduction drive.
 D.sb.—Dahlgren smoothbore.
 EAG—experimental miscellaneous auxiliary.
 EBCo—Electric Boat Co., Groton, Conn.
 ED—Electric Dynamic Co., Bayonne, N.J.
 ehp.—electric horse power.
 EIWHDR—Edgemoor Iron Works header-type boiler.
 Ell—Elliot Motor Co., Jeannette, Pa.
 EllMach—Ellicott Machine Corp., Baltimore, Md.
 ElSpecCo—Electric Specialty Co., Stamford, Conn.
 eng.—engine.
 enl.—enlisted.
 Enter—Enterprise Engine and Foundary Co., San Francisco, Calif.
 ew.—extreme width of flight deck.
 ex—former.
 Exide—Exide Electric Storage Battery Corp., Philadelphia, Pa.
 exp.—expansion.
 f.—full load (displacement).
 Falk-DeL—Falk & De Laval.
 Falk-FB—Falk & Farrel-Birmingham.
 Falk-GE—Falk & General Electric.
 Falk-Wes—Falk & Westinghouse.
 FB—Farrel-Birmingham Co., Buffalo, N.Y.
 FB—Falk—Farrel-Birmingham & Falk.
 FB-Wes—Farrel-Birmingham & Westinghouse.
 Fed—Federal Shipbuilding & Drydock Co., Kearny, N.J.
 Fiat—Fiat-San Giorgio Ltd., Turin, Italy.
 FltBtry—floating battery.
 FM—Fairbanks Morse diesel, reverse gear drive (manufactured by Fairbanks More & Co., Beloit, Wis.).
 Fore—Fore River Ship and Engine Co., Quincy, Mass.
 Fr—Frigate.
 FSch—F. Schichau GmbH., Elbing, Germany.
 ft.—fire-tube (Scotch-type boiler).
 FW—Foster Wheeler Corp., Mountaintop, Pa.
 FWA—Foster Wheeler 3-Drum Express-Type Boiler.
 FWHDR—Foster Wheeler Header-Type Boiler.
 FWPFBS—Foster Wheeler Pressure-Fixed Supercharged Boiler.
 FWSEFD—Foster Wheeler Single-Furnace D-Type Boiler.
 FWSHC—Foster Wheeler Superheat Control Boiler.
 FW2DR—Foster Wheeler 2-Drum Boiler.
 FW2DRS—Foster Wheeler 2-Drum Superheat Control Boiler.
 gal.—gallon.
 Gbt—gunboat.
 gd.—gundeck.
 GDEB—Grot—General Dynamics Corp., Electric Boat Div., Groton, Conn.
 GDEB—Quin—General Dynamics Corp., Electric Boat Div., Quincy, Mass.
 GE—General Electric Co., Schenectady, N.Y.
 gen.—generator.
 G.g.—Gatling gun.
 GM—General Motors Corp., Cleveland Diesel Division, Cleveland, Ohio.
 Gond—gondola.
 Gould—Gould Storage Battery Co., Trenton, N.J.
 gr.—gross (tonnage).
 Gulf—Gulf Shipbuilding Corp., Chickasaw, Ala.
 Gy—galley.
 Hall-S—Hall-Scott.
 HBM—His (Her) Britannic Majesty's.
 helo.—helicopter.
 Herc—Hercules Motor Corp., Canton, Ohio.
 HH—Harlan and Hollingsworth Corp., Wilmington, Del.
 HIJMS—His Imperial Japanese Majesty's Ship.
 HL—R. L. Hawthorn, Leslie and Co., Ltd., Newcastle-on-Tyne, England.
 HMAS—His (Her) Majesty's Australian Ship.
 HMCS—His (Her) Majesty's Canadian Ship.
 HMNZS—Her (Her) Majesty's New Zealand Ship.
 HNMS—Her Netherlands Majesty's Ships.
 HOCR—Hooven, Owens, Renschler Co., Hamilton, Ohio.
 hor3—horizontal triple-expansion.
 how.—howitzer.
 hp.—horsepower.
 HT—Humphreys and Tenant Ltd., London, England.
 Hw—Hunter-wheel.
 HwGbt—Hunter-wheel gunboat.
 HwStr—Hunter-wheel steamer.
 IFS—inshore fire support ship.
 ihp.—indicated horsepower.
 ip.—Intermediate pressure.
 int.—international.
 Ire—Ironclad.
 IreFltBtry—ironclad floating battery.
 IreGbt—ironclad gunboat.
 IreRam—ironclad ram.
 IreSlp—ironclad sloop.
 IreStr—ironclad steamer.
 IreStFltBtry—ironclad steam floating battery.
 IX—unclassified miscellaneous auxiliary (ship).
 JCS—Joint Chiefs of Staff.
 JHendy—Joshua Hendy.
 JTF—Joint Task Force.
 k.—knots.
 KA—contraction of AKA (attack cargo ship).
 Kopp—Koppers Manufacturing Co.
 kw.—Kilowatts.
 l.—length.
 LBP—personnel landing boat.
 lbp.—length between perpendiculars.
 LBS—support landing boat.
 LBV—vehicle landing boat.
 LCA—assault landing craft.
 LCC(1)—landing craft, control mk I.
 LCC(2)—landing craft, control mk II.
 LC(FF)—landing craft, infantry (gunboat).
 LCI(L)—landing craft, infantry (large).
 LCI(M)—landing craft, infantry (mortar).
 LCI(R)—landing craft, infantry (rocket).
 LCM(2)—landing craft, mechanized, mk II.
 LCM(3)—landing craft, mechanized, mk III.
 LCM(6)—landing craft, mechanized, mk VI.
 LCM(8)—landing craft, mechanized, mk VIII.
 LCP(L)—landing craft, personnel (large).
 LCP(N)—landing craft, personnel (nested).
 LCP(R)—landing craft, personnel (with ramp).
 LCR(L)—landing craft, inflatable boat (large).
 LCR(S)—landing craft, inflatable boat (small).
 LCSL—landing craft, infantry (support).
 LSCR—landing craft, swimmer reconnaissance.
 LSC(S)(1)—landing craft, support (small) mk (I).
 LSC(S)(2)—landing craft, support (small) mk (II).
 LCT—landing craft, tank.
 LCU—landing craft, utility.
 LCV—landing craft, vehicle.
 LCVP—landing craft, vehicle and personnel.
 LHT—lighthouse tender.
 lim.—limiting.
 lp.—low pressure.
 LPD—amphibious transport dock.
 LPH—amphibious assault ship.
 LSD—dock landing ship.

LSFF—flotilla flagship landing ship
 LSI—landing ship, infantry (giant "Y" boat).
 LSI(G)—landing ship, infantry (gunboat).
 LSI(L)—landing ship, infantry (large).
 LSI(M)—landing ship, infantry (mortar).
 LSI(R)—landing ship, infantry (rocket).
 LSM—medium landing ship.
 LSM(R)—medium landing ship (rocket).
 LSS(L)—support landing ship (large) mk III.
 LST—tank landing ship.
 LSTH—landing ship, tank (casualty evacuation).
 LSTS—landing ship (utility).
 LSU—landing ship (utility).
 LSV—landing ship, vehicle.
 LT—large tug (Army).
 lt.—light (displacement).
 Lufkin—Lufkin Foundry & Machine Co.
 LVT—landing vehicle, track.
 m.—mortar.
 MAC—military Air Command.
 MAP—Military Assistance Program.
 MB—motor boat.
 M.C.—Maritime Commission.
 mc.b.—moulded beam.
 M.C.E.—Maritime Commission Emergency Ship Program ("Liberty" ships).
 MCS—mine countermeasures support ship.
 M.C.V.—Maritime Commission Victory Ship Program ("Victory" ships).
 M.D.A.P.—Mutual Defense Assistance Program.
 Mfr.—Manufacturer.
 mg.—machine gun.
 MHA—minehunter, auxiliary.
 MHC—minehunter, coastal.
 mis.—missile.
 mk.—mark.
 mlr.—muzzle-loading rifle.
 MM—minelayer, fleet.
 mm.—millimeter.
 MMA—minelayer, auxiliary.
 MMC—minelayer, coastal.
 MMF—minelayer, fleet.
 Mon—monitor.
 Moran—Moran Brothers Co., Seattle, Wash.
 Mosh.—Mosher-type boiler.
 mot.—motor generator.
 mph.—miles per hour.
 MS—motor ship.
 MSA—minesweeper, auxiliary.
 MSB—minesweeper, boat.
 MSC—minesweeper, coastal.
 MSC—minesweeper, coastal (nonmagnetic).
 MSC(O)—minesweeper, coastal (old).
 MSF—minesweeper, fleet (steel hulled).
 MSI—minesweeper, inshore.
 MSO—minesweeper, ocean (nonmagnetic).
 MSS—minesweeper, special.
 MSTs—Military Sea Transportation Service.
 n.—normal (displacement).
 NAR—Naval Auxiliary Reserve.
 NASA—National Aeronautics and Space Administration.
 NaSuCo—National Supply Co.
 NATO—North Atlantic Treaty Organization.
 NaTran—National Transit Pump & Machine Co., Oil City, Pa.
 NATS—Naval Air Transport Service.
 NavSyd—naval shipyard.
 NavSyd-Bos—Boston Naval Shipyard, Boston, Mass. (formerly Boston Navy Yard).
 NavSyd-Bklyn—New York Naval Shipyard, Brooklyn, N.Y. (formerly New York Navy Yard).
 NavSyd-Charl—Charleston Naval Shipyard, Charleston, S.C. (formerly Charleston Navy Yard).
 NavSyd-Hunt—Hunters Point Div., San Francisco Bay Naval Shipyard, San Francisco, Calif.
 NavSyd-LBeach—Long Beach Naval Shipyard, Long Beach, Calif.
 NavSyd-MI—Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif. (formerly Mare Island Navy Yard).
 NavSyd-Norfolk—Norfolk Naval Shipyard, Norfolk, Va. (formerly Norfolk Navy Yard).
 NavSyd-Pearl—Pearl Harbor Naval Shipyard, Pearl Harbor, Hawaii (formerly Pearl Harbor Navy Yard).
 NavSyd-Phil—Philadelphia Naval Shipyard, Philadelphia, Pa. (formerly Philadelphia Navy Yard).
 NavSyd-Ports—Portsmouth Naval Shipyard, Portsmouth, N.H. (formerly Portsmouth Navy Yard).
 NavSyd-Puget—Puget Sound Naval Shipyard, Bremerton, Wash. (formerly Puget Sound Navy Yard).
 Neafie—Neafie and Levy Ship and Engine Building Co., Philadelphia, Pa.
 N.E.I.—Netherlands East Indies.
 Nfld.—Newfoundland.
 N.G.—New Guinea.
 N.I.—Northern Ireland.
 NICB—Niclausse-type boiler (built by the Stirling Co., Barberton, Ohio).
 Niles—Niles Tool Works Div., General Machinery Corp.
 NLSE—New London Ship and Engine Co., Groton, Conn.
 NN—Newport News Shipbuilding and Dry Dock Co., Newport News, Va.
 NNV—National Naval Volunteers.
 NOR—Normand-type Boiler.
 Nordb—Nordberg Manufacturing Co., Milwaukee, Wis.
 NOTS—Naval Overseas Transportation Service.
 NROTC—Naval Reserve Officers Training Corps.
 N.S.—Nova Scotia.
 NSSC—Naval Shipment Systems Command.
 N.W.I.—Netherlands West Indies.
 NYd—Navy yard.
 NYd-Pensa—Pensacola Navy Yard, Pensacola, Fla.
 NYd-Wash—Washington Navy Yard, Washington, D.C.
 NYSb—New York Shipbuilding Corp., Camden, N.J.
 off.—officer(s).
 OIC—Officer in Charge.
 PA—contraction of APA (attack transport).
 Palm—N. F. Palmer, Jr., and Co., New York, N.Y.
 PBM—Twin-engine patrol bomber seaplane, known as "Mariner," manufactured by Glenn L. Martin Co.
 PBY—Twin-engine patrol bomber seaplane, known as "Catalina," manufactured by Consolidated-Vultee Aircraft Corps.
 PC—submarine chaser (173').
 PCC—control submarine chaser (173').
 PCE—escort (180').
 PCEC—control escort (180').
 PCER—rescue escort (180').
 PCF—patrol craft, coastal (fast).
 PC(H)—submarine chaser (hydrofoil).
 PCS—submarine chaser (136').
 PCSC—control submarine chaser (136').
 pdr.—pounder.
 PE—eagle boat.
 PF—patrol escort; or frigate.
 PG—gunboat.
 PGM—motor gunboat.
 P.I.—Philippine Islands.
 PIRAZ—positive identification and radar advisory board.
 Pol.—Polaris (missile).
 P.Q.—Providence of Quebec.
 PR—river gunboat.
 P.R.—Puerto Rico.
 P.r.—parrott rifle.
 PT—motor torpedo boat.
 PTC—motor boat subchaser.
 PTF—fast patrol boat.
 Pusey—Pusey & Jones, Wilmington, Del.
 PY—patrol vessel converted yacht.
 PYc—patrol vessel converted yacht (coastal).
 QIW—Quintard Iron Works, New York, N.Y.
 quad.—quadruple.
 quint.—quintuple.
 r.—rifle.

RAF—Royal Air Force.
 RAAF—Royal Australian Air Force.
 RAN—Royal Australian Navy.
 RC—Revenue cutter.
 RCAF—Royal Canadian Air Force.
 RCN—Royal Canadian Navy.
 RCS—Revenue Cutter Service.
 recip3—reciprocating, triple expansion.
 Reg.—Regulus (missile).
 rf.—rapid fire.
 Rich—Richmond Locomotive Works, Richmond, Va.
 Ridg—Ridgeway Dynamo and Electric Co., Ridgeway, Pa.
 rkt.—rocket launcher.
 RN—Royal Navy.
 RNN—Royal Netherlands Navy.
 RNZN—Royal New Zealand Navy.
 Roach—John Roach and Sons, Chester, Pa.
 ROK—Republic of Korea.
 s.—speed.
 sa.—semiautomatic.
 SACEUR—Supreme Allied Commander, Europe.
 SACLANT—Supreme Allied Commander, Atlantic.
 SACMED—Supreme Allied Commander, Mediterranean.
 SAR—Search and Rescue.
 sat.—saturated.
 sb.—smooth bore.
 SC—submarine chaser (110'); or cruiser submarine.
 Sc—screw.
 SCAJAP—Shipping Control Administrator, Japan.
 SCC—control submarine chaser (110').
 ScFr—screw frigate.
 ScGbt—screw gunboat.
 Sch—schooner.
 SchBg—schooner barge.
 SCOTCH—(Scotch) fire tube boiler (All others are water-tube.).
 ScSlp—screw sloop-of-war.
 ScStr—screw steamer.
 ScTug—screw tug.
 SEATO—Southeast Asia Treaty Organization.
 SF—fleet submarine.
 Sg.—shell gun.
 s-g—single & double reduction gears.
 sgl.—single.
 SHAFF—Supreme Headquarters Allied Expeditionary Forces.
 SHAPE—Supreme Headquarters Allied Powers, Europe.
 shp.—shaft horsepower.
 SINS—Ships Inertial Navigational System.
 SL—ship-of-the-line.
 Slp—sloop.
 SlpW—sloop-of-war.
 SlvBg—salvage barge.
 SM—mine laying submarine.
 SP—motor patrol boat.
 sr—single reduction gears.
 S.r.—Sawyer rifle.
 SS—submarine; or merchant steamship.
 SSA—submarine cargo.
 SSB—fleet ballistic missile submarine.
 SSB(N)—fleet ballistic missile submarine (nuclear powered).
 SSC—cruiser submarine.
 SSG—guided missile submarine.
 SSG(N)—guided missile submarine (nuclear powered).
 SSK—antisubmarine submarine.
 SS(N)—submarine (nuclear powered).
 SSO—submarine oiler.
 SSP—submarine transport.
 SSR—radar picket submarine.
 SSR(N)—radar picket submarine (nuclear powered).
 SST—target and training submarine.
 St—steam.
 StBrig—steam brig.
 StBt—steamboat.
 stbd.—starboard.
 StFr—steam frigate.
 Str—steamer.
 StRam—steam ram.
 StTBt—steam torpedo boat.
 StTug—steam tug.
 Stw—stern wheel.
 StwGbt—stern wheel gunboat.
 StwRam—stern wheel ram.
 StwStr—stern wheel steamer.
 Sun—Sun Shipbuilding and Dry Dock Co., Chester, Pa.
 Sup—Superior Marine Manufacturing Co., Milwaukee, Wis.
 surf.—surface.
 Sw—side wheel.
 SwGbt—side wheel gunboat.
 SwStr—side wheel steamer.
 SwRam—side wheel ram.
 SwTug—side wheel tug.
 Syd—Shipyard.
 t.—tonnage.
 T.—Maritime Commission standard type.
 Tal.—Talos (missile launcher).
 Tar.—Tartar (missile launcher).
 TB—torpedo boat.
 td.—turbine direct drive.
 ted.—turbine electric drive.
 Ter.—Terrier (missile launcher).
 terd.—turbine electric reduction drive.
 TF—Task Force.
 TG—Task Group.
 THORN—Thonycroft-type boiler.
 Tk—Tanker.
 tl.—trial (speed).
 TLL—tank lighter.
 TLLW—tank lighter (medium tank-well type).
 torp.—torpedo (es).
 Tr—trawler.
 Trigg—Wm. R. Trigg Co., Richmond, Va.
 Troy—Troy Engine & Machine Co.
 trp.—troop capacity.
 tt.—torpedo tubes.
 TU—Task Unit.
 tur.—turbine.
 UDT—Underwater Demolition Team.
 UIW—Union Iron Work, San Francisco, Calif.
 UIWHDR—Union Iron Work Header-type boiler.
 U.K.—United Kingdom.
 UN—United Nations.
 una.—unafLOW.
 UN-CR—Universal cruiser.
 USA—United States Army.
 USAAC—United States Army Air Corps.
 USAAF—United States Army Air Forces.
 USAF—United States Air Force.
 USAMC—United States Army Medical Corps.
 USANF—United States Auxiliary Naval Force.
 USAT—United States Army transport.
 USCG—United States Coast Guard.
 USCGR—United States Coast Guard Reserve.
 USCGS—United States Coast and Geodetic Survey.
 USCS—United States Coast Survey.
 USCS—United States Marine Corps.
 USMCR—United States Marine Corps Reserve.
 USMCWR—United States Marine Corps Women's Reserve.
 USN—United States Navy.
 USNA—United States Naval Academy.
 USNR—United States Naval Reserve.
 USNRF—United States Naval Reserve Force.
 USRCS—United States Revenue Cutter Service.
 USSB—United States Shipping Board.
 vert.—vertical.
 V.I.—Virgin Islands.
 Vog—Henry Vogt Machine Co., Louisville, Ky.
 VOGHDR—Vogt header-type boiler.
 vt2—vertical double-expansion.
 vt3—vertical triple-expansion.
 vt4—vertical quadruple-expansion.
 WAVES—Women Accepted for Voluntary Emergency Service.

Wes—Westinghouse.
 Wes-DeL—Westinghouse & De Laval.
 Wes-Falk—Westinghouse & Falk.
 Wes-FB—Westinghouse & Farrel-Birmingham.
 WFB—White-Forster-type boiler (manufactured by Babcock and Wilcox Co.).
 Wint—Winton Engine Corp., Cleveland, Ohio.
 WIW—Washington Iron Works, Seattle, Wash.
 WM—White and Middleton Co., Springfield, Ohio.
 WSA—War Shipping Administration.
 wt.—water-tube boiler.
 WTDF—water-tube single-furnace boiler.
 X—submersible craft.
 XMAP—sweeper device.
 YA—ash lighter.
 YAG—miscellaneous auxiliary service craft.
 YAGR—ocean radar station ship.
 YAR—Yarrow-type boiler.
 YC—open lighter; or yard craft.
 YCD—fueling barge.
 YCF—car float.
 YCK—open cargo lighter.
 YCV—aircraft transportation lighter.
 YD—floating derrick.
 Yd—Yard (Navy).
 YDG—district degaussing vessel.
 YDT—diving tender.
 YE—ammunition lighter.
 YF—covered lighter (self-propelled); or range tender.
 YFB—ferryboat; or launch.
 YFD—yard floating dry dock.
 YFN—covered lighter (non-self-propelled).
 YFNB—large covered lighter.
 YFND—dry dock companion craft.
 YFNG—covered lighter (special purpose).
 YFNX—lighter (special purpose).
 YFP—floating power barge.
 YFR—refrigerated covered lighter (self-propelled).
 YFRN—refrigerated covered lighter (nonself-propelled).
 YFRT—covered lighter (range tender).
 YFT—torpedo transportation lighter.
 YFU—harbor utility craft.
 YG—garbage lighter (self propelled).
 YGN—garbage lighter, (non self-propelled).
 Y-gun—Y-type depth charge projector.

YH—ambulance boat.
 YHB—house boat.
 YHT—scow, heating.
 YLA—open landing lighter.
 YM—dredge.
 YMP—motor mine planter.
 YMS—auxiliary motor mine sweeper.
 YMT—motor tug.
 YN—net tender (boom).
 YNG—gate craft.
 YNT—district net tender (tug class).
 YO—fuel oil barge (self-propelled).
 YOG—gasoline barge (self-propelled).
 YOGN—gasoline barge (non self-propelled).
 YON—fuel oil barge (nonself-propelled).
 YOS—oil storage barge.
 YP—patrol craft.
 YPD—floating pile driver.
 YPK—pontoon stowage barge.
 YR—floating workshop.
 YRB—submarine repair and berthing barge.
 YRBM—submarine repair, berthing and messing barge.
 YRBM(L)—submarine repair, berthing and messing barge (large).
 YRC—submarine rescue chamber.
 YRDH—floating dry dock workshop (hull).
 YRDM—floating dry dock workshop (machinery).
 YRL—covered lighter (repair).
 YRR—radiological repair range.
 YS—stevedoring barge.
 YSD—seaplane wrecking derrick.
 YSR—sludge removal barge.
 YSP—stowage pontoon.
 YT—harbor tug.
 YTB—large harbor tug.
 YTL—small harbor tug.
 YTM—medium harbor tug.
 YTT—torpedo testing barge.
 YV—drone aircraft catapult control craft; or seaplane barge.
 YVC—catapult lighter.
 YW—water barge (self-propelled).
 YWN—water barge (nonself-propelled).
 ZR—rigid airship.
 ZRS—rigid airship (scouting).

HISTORICAL SKETCHES

G-1

(SS-19½: dp. 400 (n.); l. 161'; b. 13'1"; dr. 12'2"; s. 14 k.; cpl. 24; a. 6 18" tt.; cl. G-1)

G-1 was laid down as *Seal 2* February 1909 by the Newport News Shipbuilding Co., Newport News, Va., under a subcontract from Lake Torpedo Boat Co.; launched 9 February 1911; sponsored by Miss Margaret V. Lake, daughter of the submarine pioneer; renamed G-1 on 17 November 1911; and commissioned in the New York Navy Yard 28 October 1912, Lt. K. Whiting in command.

G-1, Simon Lake's first submarine for the United States Navy, introduced the even keel submarine into the United States Navy, being the forerunner of the Lake designs that influenced United States Navy submarines into the atomic and hydrodynamic era.

G-1 joined the Atlantic Torpedo Flotilla in practice operations that were usually conducted from New York and Newport into Long Island Sound and the Narragansett Bay. She made a record dive of 256 feet in Long Island Sound and departed New York 25 March 1915 for a cruise with the 3d Division of the Submarine Flotilla into Chesapeake Bay and down the seaboard to the Charleston Navy Yard, where she completed overhaul 5 May. She departed the following day to act as school ship at Newport where she carried out in harbor defense and patrol problems along with practice on the torpedo range. This duty continued until 3 October 1915 when she set course with the Flotilla for practice attacks in the Chesapeake Bay, thence via Newport to New London, Conn.

G-1 arrived at the last named port 18 October 1915 in company with three other G-class submarines, tended by monitor *Ozark*. This marked the beginning of her new career as a submarine designated for experimental tests and instructional purposes. She acted as a schoolship for the newly established Submarine Base and Submarine School at New London, playing an important role in preparing officers and men of the expanded submarine service occasioned by the new construction after our entry into World War I. Concurrently, G-1 tested detector

devices for the Experiment Board off Provincetown, and served in similar capacity for the Experimental Stations at Nahant, Mass., and New London in the development and use of sound detection and experiments with the "K tube," a communications device. With German U-boats reported off the coast in June 1918, the submarine spent two four-day periscope and listening patrols in the vicinity of Nantucket as a defense screen for shipping. She continued her instructions of student submariners of the Listener and Hydrophone School at New London until 13 January 1920, then was towed to the Philadelphia Navy Yard, where she decommissioned on 6 March 1920.

G-1 was designated a target for depth charge experiments under cognizance of the Bureau of Ordnance. She was sunk 21 June 1921, following eight experimental bomb attacks administered by *Grebe* in Narragansett Bay off Taylor's Point, R.I. Her wreck was officially abandoned 26 August 1921.

G-2

(SS-27: dp. 400 (n.); l. 161'; b. 13'1"; dr. 12'; s. 14 k.; cpl. 24; a. 4 18" tt.; cl. G-2)

G-2 was laid down as *Tuna 20* October 1909; renamed G-2, 17 November 1911; launched by the Lake Torpedo Boat Co., Bridgeport, Conn., 10 January 1912; sponsored by Miss Marjorie F. Miller; completed in the New York Navy Yard; and commissioned 6 February 1915, Lt. (j.g.) R. C. Needham in command.

G-2 joined Division 3 of the Submarine Flotilla 27 March at Portsmouth, Va., for practice cruises that found her at Norfolk, Charleston, New York, Newport, and Provincetown. The submarine was extensively overhauled in the New York Navy Yard and the Lake Torpedo Boat Co. from 26 March 1916 to 28 June 1917, then reported to the Submarine Flotilla, Patrol Force, U.S. Atlantic Fleet at New London, Conn.

The submarine remained at New London for further installations until 23 August when she left for instructional and experimental operations out of Boston off

USS G-1 (SS-19½)

Boston Lightship. With students embarked, she assisted in proving out submarine detection devices for the Experimental Board embarked in *Margaret*, and in experimental problems with *SC-6*.

G-2 shifted her base from Boston to New London, Conn., 20 October 1917 and combined experimental work on sound detection devices with training for the newly established Submarine School in the area of Block Island and Long Island Sounds. She had defensive patrol duty during June and July 1918, maintaining a listening and periscope alert on station off Block Island. She experimented with magnetic detectors and the Very System Signal device and tested the strength of her hull against depth charges. Concurrently, she trained student officers in cooperation with the Experimental Station at New London, Conn.

G-2 continued schoolship and experimental duty until after World War I, and she decommissioned 2 April 1919. She was designated as a target for testing depth charges and ordnance nets in Niantic Bay, Conn. During inspection by a six-man maintenance crew on 30 July 1919, the target boat suddenly flooded and sank at her moorings in Two Tree Channel near Niantic Bay. She went down in 13½ fathoms, drowning three of the inspection crew. The submarine was never raised.

G-3

(SS-31: dp. 393 n.; l. 161'; b. 13'11"; dr. 12'10"; s. 14 k.; cpl. 25; a. 6 18" tt.; cl. *G-3*)

G-3 was laid down as *Turbot* 30 March 1911 by the Lake Torpedo Boat Co., Bridgeport, Conn.; renamed *G-3* on 11 November 1911; launched 27 December 1913 at New York Navy Yard; and commissioned 22 March 1915, Lt. F. X. Gyax in command.

G-3 spent the greater part of her entire career out of the submarine base at New London, Conn. She was constantly employed in the training of student officers in Block Island Sound and in Great Salt Pond Bay. In addition she carried out pioneering work that included: experimental submarine net operations off Port Jefferson, N.Y.; use of the submarine rescue diving bell; experiments with reflector recognition lights; submerged sound and magnetic detection tests with patrol boats and submarine chasers; and use as target in approach and attack problems that involved the testing of depth charges.

When German U-boats appeared off the eastern seaboard in the last year of World War I, *G-3* conducted periscope and listening patrols in the submarine defense areas of New London.

After World War I, *G-3* continued her schoolship and experimental work in the New London area. She decommissioned 5 May 1921; was towed to the Philadelphia Navy Yard from New London 17 August; and was sold for scrapping 19 April 1922 to J. G. Hitner, Philadelphia, Pa.

G-4

(SS-26: dp. 360(n); l. 157'6"; b. 17'6"; dr. 10'11"; s. 14 k.; cpl. 24; a. 4 18" tt.; cl. *G-4*)

G-4 was laid down as *Thrasher* 9 July 1910 by William Cramp & Sons, Philadelphia, Pa. renamed *G-4* on 17 November 1911; launched 15 August 1912; sponsored by Miss Grace Anna Taussig; and commissioned in the Philadelphia Navy Yard 22 January 1914, Lt. E. D. McWhorter in command.

G-4 arrived New York Navy Yard from Philadelphia 25 April 1914 for service with Division 3 of the Atlantic Submarine Flotilla in Long Island Sound and intermittently at Newport, R.I., and New London, Conn. Arriving New London 24 April 1917, she served as schoolship for students of the submarine school while taking part in pioneering work to advance the capabilities of submarine and antisubmarine warfare.

G-4 assisted in experiments and tests with underwater sound apparatus in the Thames River, Long Island

Sound, and Narragansett Bay. During the last year of World War I she test-fired the Mark VII torpedo in Narragansett Bay for *N*-class and *O*-class submarines.

G-4 continued her training and experimental duties until 1 March 1919 when she was placed in ordinary for stripping and inactivation. She decommissioned 5 September 1919; was designated as a target for depth charge and ordnance tests 6 December; and was sold for scrapping 15 April 1920 to Connecticut Iron & Metal Co., New London.

G. H. Corliss, see *Adhara* (AK-71)

G. H. McNeal

A merchant name retained.

(SP-312: t. 244; l. 140'; b. 21'; dr. 5'; s. 10 k.; cpl. 5; a. 2 3")

G. H. McNeal (also called *George H. McNeal*) was built in 1911 by W. C. Abbott, Milford, Del.; purchased from McNeal-Edwards Co., Reedville, Va., 26 May 1917; and commissioned the same day, Boatswain Alvin Downey, USNRF, in command.

The wooden steam tug was equipped with mine sweeping apparatus and enrolled in the Naval Coast Defense Reserve of the 5th Naval District. Based at Norfolk, Va., she served on patrol in the Virginia Capes area as a unit of Mine Sweeping Squadron 3 throughout her career. *G. H. McNeal* decommissioned 17 May 1919 and was sold to the McNeal Dodson Co., Norfolk, 17 July 1919.

G. L. Brockenborough

A former name retained.

(Slp: a. 1 how.)

G. L. Brockenborough (also spelled *Brockenboro* or *G. L. Brockenboro*) was a small sloop captured 15 October 1862 by *Fort McHenry*, Lt. E. Y. McCauley. *G. L. Brockenborough* had apparently been used as a blockade runner and was discovered after being scuttled in the Apalachicola River, Fla. She was subsequently raised and purchased at the Prize Court in Key West by Rear Admiral J. L. Lardner 15 November 1862.

Assigned to the East Gulf Blockading Squadron, *G. L. Brockenborough's* shallow draft made her an ideal vessel to blockade the many inlets of the Florida coast. She served as a blockader and tender to steamers *Port Royal* and *Somerset* in St. George's Sound and Apalachicola River, Fla. until she was abandoned after a severe gale had forced her aground in St. George's Sound 27 May 1863.

G. M. Randall, General, see *General G. M. Randall* (AP-115)

G. O. Squier, General, see *General G. O. Squier* (AP-130)

G. W. Blunt

George William Blunt, born in Newburyport, Mass., 11 March 1802, was a pioneer publisher of nautical charts and books. His firm published many editions of Bowditch's *Navigator* and Blunt's *Coastal Pilot*. For over 40 years Blunt served as first assistant in the U.S. Coast Survey and was instrumental in gaining reforms in the U.S. Lighthouse Service. He died 19 April 1878 in New York City.

(Sch: t. 121; l. 76'6"; b. 20'6"; dph. 8'9"; s. 10 k.; a. 1 12-pdr., and 1 12-pdr. r.)

G. W. Blunt, formerly *Blunt*, was a wooden two-masted schooner acquired by the Navy in New York 23 November

1861. She commissioned 4 December 1861, Acting Master Henry Sherwood in command.

Arriving at Port Royal, S.C., 11 December 1861, *G. W. Blunt* served as a mail and dispatch boat for the South Atlantic Blockading Squadron between such points as Charleston, S.C., Wassaw Sound, Ga., and Fernandina, Fla. En route to Georgetown, S.C., 19 April 1862, she captured blockade-running schooner *Wave* with a cargo of cotton.

For the following year *G. W. Blunt* was on a blockade duty off Charleston and assisted in capturing several more vessels. She departed Port Royal for Philadelphia 7 May 1863 and decommissioned for repairs 13 May. Recommissioned 2 June 1863, *G. W. Blunt* rejoined the blockading squadron off Charleston, patrolling the many small inlets and bays near the main harbor.

Cruising on Charleston station until midsummer 1864, *G. W. Blunt* was sent to Port Royal 7 August, and on 25 August was fitted with diving equipment for salvage duty. She worked on many wrecks, including *Constance* on 13 November and *Housatonic*, (sunk 17 February 1864 by Confederate submarine *H. L. Hunley*) from 15 to 19 November. She was sent to Savannah 1 March 1865 to clear obstructions from the harbor, and returned to Charleston 1 April 1865. *G. W. Blunt* decommissioned 16 August 1865 at Port Royal and was sold there 20 October 1865.

Gabilan

An eagle-ray fish of the Gulf of California.

(SS-252: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 60; a. 1 5", 2 .50 cal. mg., 2 .30 cal. mg., 10 21" tt.; cl. *Gato*)

Gabilan (SS-252) was launched 19 September 1943 by the Electric Boat Co., Groton, Conn.; sponsored by Mrs. Jules James, wife of Rear Admiral James; and commissioned 28 December 1943, Comdr. K. R. Wheland in command.

After shakedown out of New London, *Gabilan* sailed for brief antisubmarine training at Key West before transiting the Panama Canal for the Hawaiian Islands. She arrived Pearl Harbor 23 March 1944 and spent her first war patrol (21 April-6 June) scouting the Marianas gathering information for the United States invasion of those islands. Her second war patrol (29 June-18 August) took her to the south coast of Honshu, Japan, where, on the night of 17 July, she made a daring radar chase through bright moonlight and phosphorescent water. Skirting dangerous reefs and shoals, she pressed home an attack that sank a 492-ton minesweeper. Her third war patrol (26 September-12 November) took her south of the Japanese Empire in company with *Besugo* (SS-321) and *Ronquill* (SS-396) to detect the departure from Bungo Suido of any major enemy fleet units that might interfere with the campaign to liberate the Philippine Islands. The latter period of the patrol was independent search of approaches of Kii Suido where, in a dawn periscope attack on 31 October, she destroyed auxiliary ship *Kaiyo No. 6* with a single torpedo.

Gabilan terminated her third war patrol at Saipan on 12 November 1944, and proceeded to Brisbane, Australia, for refit. Her fourth war patrol was in the South China Sea (29 December 1944-15 February 1945). She joined *Perch* (SS-313) and *Barbel* (SS-316) in a coordinated patrol off the southern entrance to Palawan Passage and the western approach to Balapac Strait, where Japanese battleships *Ise* and *Hyuga* were expected to appear en route to threaten American invasion forces in the Philippines. There were many quick dives to avoid aircraft; floating mines were sunk by rifle fire from the submarine, but there was no sign of their quarry. Passing back through the Java Sea en route to Fremantle, the submarine had a nerve-wracking morning as numerous aircraft dropped depth charge bombs in the near vicinity, culminated by the appearance of a Japanese minelayer that made two deliberate attacks in shallow water, drop-

ping 20 depth charges. Thoroughly shaken, but suffering only superficial damage, *Gabilan* evaded her antagonist in a providential heavy rain squall. Her only other diversion en route to Fremantle was an encounter with British submarine HMS *Spiteful*, an approach target in morning twilight; but, fortunately, there was sufficient illumination to enable *Gabilan* to identify *Spiteful* at the last moment before firing.

Gabilan conducted the greater part of her fifth war patrol (20 March-28 May) as a unit of a "wolf pack" that included *Charr* (SS-328) and *Besugo* (SS-321). Patrolling below the Celebes, the pack began an epic four-day chase on 4 April with a morning contact on cruiser *Isuzu* and her four escorts. One of the escorts fell prey to *Besugo*, and the elusive cruiser was spotted as she entered Bima Bay on the night of 6 April. Word was flashed to *Gabilan*, already executing a daring surface attack that left the cruiser listing and down by the bow. With the enemy formation confused by *Gabilan*'s attack, *Charr* completed the kill with a six-torpedo salvo on the morning of 7 April. The demise of *Isuzu*, last of the Japanese light cruisers to fall victim to a submarine torpedo, was witnessed by British submarine *Spark*.

Gabilan outwitted three escorts to sink a small freighter the morning of 14 April 1945, then scored hits in two cargo ships of another convoy. After a short stay off the coast of Hainan where she destroyed drifting mines, she returned to Pearl Harbor 28 May for refit.

Gabilan's sixth and last war patrol (20 June-17 August 1945) was on lifeguard station for American fliers off Tokyo Bay. She first rescued six men, the crews of two torpedo bombers; then raced well inside Tokyo Bay, in easy range of shore batteries, to rescue another three-man crew. Six Navy "Hellcat" fighter planes gave her cover for the mission. On the way out, she paused to destroy a drifting mine with gunfire. Altogether, on this patrol *Gabilan* rescued 17 aviators.

En route to Pearl Harbor, *Gabilan* received news of the Japanese surrender. Steaming by way of San Francisco and the Canal Zone, *Gabilan* arrived New London, Conn., where she decommissioned 23 February 1946 and joined the Atlantic Reserve Fleet. She was sold for scrapping 15 December 1959.

Gabilan received four battle stars for World War II service. Her second, third, fifth, and sixth war patrols were designated "successful."

Gadsen

A county in Florida.

(AK-182: dp. 2,382 (lt.); l. 338'6"; b. 50'; dr. 21'; s. 12 k.; cpl. 85; a. 1 3"; cl. *Alamosa*; T. CI-M-AVI)

Gadsen was launched 8 April 1944 under Maritime Commission contract by Walter Butler Shipbuilders, Inc., Superior, Wis.; sponsored by Mrs. Morgan Murphy of Superior; acquired by the Navy on loan-charter basis 26 December 1944; and commissioned at New Orleans, La., 28 February 1945, Lt. W. J. Sattel in command.

After shakedown in the Gulf of Mexico, *Gadsen* departed New Orleans 31 March 1945 with a cargo of frozen meat and ammunition for Ulithi, Western Caroline Islands, where she arrived on 11 May after 34 days at sea. From there she proceeded to Kossol Roads, Palau Islands for a 3-day stay marked by alerts for enemy suicide swimmers. She was convoyed by way of Leyte to Morotai Island, Netherlands East Indies, where she spent 3 months as ammunition ship for units of the 7th Fleet. At times she serviced six to eight ships a day as she handled much of the ammunition used by fleet units for the Brunei Bay-Balikpapan invasions of Borneo.

Gadsen arrived at Leyte 31 July 1945 with about one-third of her cargo. She served as ammunition ship there until announcement of the Japanese capitulation. On 21 August 1945 she departed Leyte on a shuttle cargo run to Subic Bay, P.I., and Hollandia, New Guinea; thence back to Leyte and was routed onward to Manila, P.I.

Gadsen put to sea from Manila 26 November 1945; transited the Panama Canal 8 January 1946; and reached Norfolk, Va., on the 19th for inactivation. She decommissioned 31 January 1946 and was redelivered to the Maritime Commission on 1 February 1946 for layup in the Maritime James River fleet. She was subsequently sold to the Korean Shipping Corp. and renamed *Yosu*.

Gadwall

A species of wild duck (*Chauleasmus streperus*), about the size of the mallard.

(AM-362: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3', 4 40mm.; cl. *Admirable*)

Gadwall was launched 15 July 1943 by Willamette Iron and Steel Corp., Portland, Ore.; sponsored by Mrs. Charles L. McNary; and commissioned 23 June 1945, Lt. Robert C. Thompson in command.

Gadwall departed Astoria, Ore., 11 July 1945 for shake-down training out of San Pedro, Calif., followed by mine warfare exercises and amphibious maneuvers with fleet units off the California bases of Santa Barbara, San Diego, and Newport Beach. On 7 December 1945 she put to sea from San Diego for inactivation overhaul at New Orleans, La., until 11 April 1946. She then shifted to Orange, Tex., where she decommissioned 14 June 1945 and was assigned to the Texas Group, Atlantic Reserve Fleet. She was reclassified MSF-362 on 7 February 1955 and she remained in reserve berthed at Orange, Tex., until struck from the Navy List 1 November 1966. *Gadwall* was stripped and designated for sale 10 April 1967.

Gaffey, General Hugh J., see *General Hugh J. Gaffey* (AP-121)

Gage

A county in Nebraska.

(APA-168: dp. 14,837; l. 455'; b. 62'; dr. 24'; s. 18 k.; cpl. 692; a. 1 5'; cl. *Haskell*)

Gage was built under Maritime Commission contract by the Oregon Shipbuilding Corp., Portland, Ore.; launched 14 October 1944; sponsored by Mrs. H. L. Edmunds; acquired by the Navy 4 November 1944; and commissioned 12 November 1944, Comdr. L. J. Alexanderson, USNR, in command.

After shakedown out of San Diego, Calif., *Gage* sailed from San Francisco 17 January 1945 for the South Pacific. Following the landing of a military civil affairs group at Kaurimaru, Russell Islands, she arrived off West Kukum Beach, Guadalcanal, S.I., 4 February 1945 with 298 marines and military cargo. She became a unit of Division 34, Transport Squadron 12, and spent the ensuing weeks in amphibious warfare maneuvers in the Solomons. On 15 March 1945, the attack transport departed Guadalcanal for Ulithi, the staging base for the Okinawa invasion. From there she sailed to Hagushi Beach, Okinawa, where she joined in the initial assault 1 April 1945 conducted under cover of heavy naval gun and plane bombardment.

Through five grueling days and nights of almost continual "Flash Red" alerts against Japanese suicide planes, *Gage* landed marines of the 3rd Battalion, 4th Regiment, 6th Division; a Navy construction battalion; a medical company, and combat equipment. Her mission completed 5 April, she proceeded via the Marianas and Hawaii to San Francisco, where she arrived 11 May 1945. Here *Gage* embarked the men and equipment of an Army Air Corps Casuals and landed them at Manila, Luzon, P.I., 12 June 1945.

Gage reported for duty with Amphibious Group 9 at Leyte 22 June 1945 and was dispatched to New Guinea. After embarking troops at Langemak and Humboldt Bays

for transport to Iloilo, Panay Island, P.I., she steamed to San Francisco, Calif., where she arrived 2 August 1945. The announcement of Japanese capitulation found her under repair in Todd's Dry Dock at Seattle, Wash.

Gage stood out from Seattle 21 August 1945 with 1,724 Army casual replacements who disembarked at Saipan in the Marianas 5 September. Thirteen days later she departed with some 1,500 marines whom she landed late in October as part of the occupation forces at Hiro Wan, Honshu, Japan. Homeward bound, she served as the "Magic-Carpet" for 1,700 Army veterans embarked at Okinawa and Manila. She reached Portland, Ore. 14 December 1945. The attack transport made a "Magic-Carpet" voyage from San Francisco to Yokosuka and back (10 January to 25 February 1946); followed by one to Samar, P.I., and back (4 April to 10 May 1946). She again departed San Francisco 28 May 1946 to support Navy occupation forces at the Chinese ports of Tsingtao and Tientsin and the Japanese ports of Yokosuka and Sasebo.

Gage departed Sasebo 26 June; embarked Army veterans in the Marianas and Hawaii; then transited the Panama Canal for Norfolk, arriving 29 July 1946. She remained in the Norfolk Naval Shipyard until decommissioning 26 February 1947. *Gage* was placed in the Atlantic Reserve Fleet and was inactive until her name was struck from the Navy List 1 October 1958. She was transferred the same day to the Maritime Commission Reserve Fleet and at present is berthed in James River, Va.

Gage received one battle star for World War II service.

Gage, Lyman J., see *Cheleb* (AK-138)

Gainard

Joseph Aloysius Gainard, born 11 October 1889 in Chelsea, Mass., enlisted in the U.S. Naval Reserve Force 23 November 1917. He received the Navy Cross for distinguished service while Master of American merchant steamer *City of Flint*, seized by a German cruiser on the high seas 9 October 1939 but returned to him in a Norwegian fjord 3 November. Recalled to active duty on 30 July 1941, he commanded submarine decoy ship *Big Horn* (AO-45) in the Caribbean, then commanded attack transport *Bolivar* (APA-34) in the Pacific. Illness took Captain Gainard from this duty and he died in the U.S. Naval Hospital at San Diego, Calif., 23 December 1943.

(DD-706: dp. 2,200; l. 376'6"; b. 40'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 12 40mm., 11 20mm., 10 21" tt., 6 dp., 2 det.; cl. *Allen M. Sumner*)

Gainard was laid down 29 March 1944 by the Federal Shipbuilding and Dry Dock Co., Kearney, N.J.; launched 17 September 1944; sponsored by Mrs. Joseph A. Gainard, widow of Captain Gainard; and commissioned at New York 23 November 1944. Comdr. Francis J. Foley in command.

After shakedown training off Bermuda, *Gainard* departed New York 1 February 1945 for operations out of San Diego and Pearl Harbor. She departed Pearl Harbor 12 March and staged at Saipan for the forthcoming invasion of Okinawa, acting as a part of a decoy task force that made feints against the southeastern coast between 1 and 2 April while the landings were effected on the western beaches.

Gainard operated as radar picket and fighter director ship throughout the bloody Okinawa Campaign, detecting enemy air raids, providing early and continuous information to friendly forces, and initiating interception with a Combat Air Patrol unit that found her controlling an average of 10 planes from dawn to dusk with the assistance of a fighter director team on board. In 39 days on picket stations she was instrumental in the destruction of at least 28 suicide planes, 4 of which were shot down by her gunners.

On 27 occasions enemy aerial strikes of 50 or more planes attacked *Gainard* and ships in her immediate vicinity. Seventeen of these attacks were close aboard the destroyer, and four nearby ships were hit by suicide planes. She manned the fighter director unit for initial landings at Iheya Shima, Aguni Shima, and Kume Shima. *Gainard* also rescued the crew of a Navy patrol bomber which had run out of fuel and landed in the sea, and she directed two other damaged patrol planes back to their base. Though several times narrowly missed by determined runs of suicide planes, her skillful gunners and effective maneuvering prevented damage. She remained on station until 1 July when Okinawa was officially declared secured.

After patrol and convoy escort duty in approaches to Okinawa, she sailed 21 July to the Philippines for logistics and upkeep. The destroyer arrived off Honshu, Japan, 17 September and served as air-sea rescue ship until 21 February 1946 when she sailed for the United States. *Gainard* reached San Pedro, Calif., 15 March, then steamed via the Panama Canal to Casco Bay, Maine, arriving 16 April.

Based out of Newport, R.I., her operations over the next 20 years have included nine deployments as an antisubmarine warfare specialist with the "Steel Gray Diplomats" of the 6th Fleet; several cruises to northern Europe for the training of midshipmen; amphibious warfare exercises along the coasts of Virginia and North Carolina; plane guard duty for aircraft carriers off Mayport, Fla.; and combined 2nd Fleet exercises and antisubmarine tactics along the Atlantic seaboard and in the Caribbean.

As one of 150 warships from six NATO nations, in September 1957 *Gainard* participated in Exercise "Strike-

back," large-scale combined fleet maneuvers that ranged over the North Atlantic to waters adjacent to the British Isles, between Iceland and the Faeroes, and into the Norwegian Sea and portions of the North Sea. This was only one of many operations in which *Gainard* made important contributions to improve the overall combat readiness of forces earmarked for the Allied command in defense of the free world.

Gainard's eighth tour with the 6th Fleet (August 1960–February 1961) was interrupted by 6 weeks of combat readiness operations with the Middle East forces in the Indian Ocean. During her ninth Mediterranean tour (February–August 1962), she transited the Suez Canal for 5 days of battle rehearsals with units of the British and Iranian Navies and many days of realistic training in the Red Sea and the Persian Gulf. Other vital tasks included schoolship duties for the Fleet Sonar School at Key West, Fla.; participation in Operation "Mercy" with carriers *Shangri La* (CVA-38) and *Antietam* (CVS-36) in rendering assistance to thousands of flood-stricken victims of Hurricane Carla off the Texas coast during September–October 1961; gunnery schoolship duties for the Fleet at Norfolk; and service as a unit of the Cuban Contingency Task Groups during the Cuban crisis of November–December 1962.

In May 1963 *Gainard* served as support ship on recovery station during the successful launching of "Faith 7," the ninth and final Project Mercury manned space flight, piloted by Astronaut L. Gordon Cooper. In addition, between 1963 and 1967 *Gainard* has continued schoolship and support services in the Caribbean and along the Atlantic and Gulf Coasts from Newport to New Orleans.

USS *Gainard* (DD-706) on 19 September 1951

At present, she operates out of Newport as a unit of Destroyer Squadron 12.

Gainard received the Navy Unit Commendation for extraordinary heroism in action off Okinawa and one battle star for World War II service.

Gaivota

A merchant name retained.

(SP-436: t. 74; l. 91'8"; b. 15'9"; dph. 8'6"; s. 14 k.; cpl. 7; a. 1 3-pdr., 1 1-pdr., 1 mg.)

Gaivota, a wooden steam yacht built in 1897 by A. C. Brown of Tottenville, Long Island, was chartered by the Navy from Alfred C. Maron 8 June 1917. She was fitted out as a scout patrol craft in the Philadelphia Navy Yard; and commissioned 13 September 1917, Lt. (j.g.) E. D. Newell, USNRF, in command.

Target practice in the Delaware Bay was followed by alterations at Philadelphia. Assigned for duty to the 4th Naval District, she reached Cold Springs Harbor, N.J., 9 November 1917 to serve as a unit of the harbor entrance patrol off that port, Lewes, Del. and Breakwater Harbor, N.J. *Gaivota* returned to the Philadelphia Naval Shipyard 19 April 1918 and decommissioned 11 May 1918 for return to her owner.

Gakona, Lake, see *Lake Gakona*

Galatea

A Greek mythological sea nymph whose lover Acis was destroyed in a jealous rage by the Cyclops Polyphemus, and an ivory statue fashioned by Pygmalion and endowed with life by Aphrodite.

I

(ScStr: t. 1,244; l. 209'6"; b. 35'6"; dph. 20'8"; s. 10 k.; a. 8 32-pdrs., 1 100-pdr., 2 30-pdrs.)

The first *Galatea* was built at New York in 1862 under the direction of J. B. and J. D. Van Dusen, Master Builders; purchased by the Navy 31 July 1863 from the Neptune Steamship Co.; and commissioned 29 January 1864, Comdr. John Guest in command.

Galatea departed New York 21 February 1864 for service as a unit of the West India Squadron. Based at Cape Haitien, where she arrived 29 February, she gave convoy protection in the West Indies to California mail steamers plying between New York and Aspinwall (Colon, Panama). She had twice returned to New York for repairs by 10 November 1864 when she was assigned with two other ships to convoy California mail streamers from Cap Haitien through the Windward Passage, between the islands of Nacassa and Mariguana. During this cruise leaks developed which made *Galatea* unfit for arduous convoy duty. Remaining on station at Cape Haitien, she cruised to Key West for provisions and dispatches and afforded protection to American citizens in Haiti until convoy service was discontinued in June 1865.

Galatea arrived New York from Cap Haitien 1 July 1865; decommissioned 12 July; and was sold to the Haitian government 15 August.

II

(SP-714: t. 367 (gross); l. 192'; b. 24'; dr. 9'; s. 14 k.; cpl. 57; a. 3 3")

The second *Galatea* was a fresh water yacht built in 1914 by Pusey and Jones of Wilmington, Del.; purchased by the Navy 14 July 1917 at Detroit from E. L. Ford, Grosse Pointe Farms, Mich., and commissioned at Detroit 25 August 1917, Lt. Comdr. O. T. McClurg, USNRF, in command.

Galatea departed Detroit 25 August 1917 for the Boston Navy Yard where she decommissioned 26 September

for conversion to an armed patrol craft. She recommissioned 16 November 1917, Lt. H. D. Hinckley, USCG, in command. Next proceeding to Philadelphia, she sailed from there for the Azores 15 December 1917 with French *Submarine Chaser 314* in tow.

Proceeding by way of Bermuda, *Galatea* arrived Ponta Delgada, Azores, 22 January 1918, racked and strained by the towing of the submarine chaser. Damage required repairs until May of 1919 when she began service as an interisland transport in the Azores. She carried the American Consul from Ponta Delgada for official calls on the governors of Horta, Fayal and Angra, Terceira, returning to her base in time to honor Navy Seaplane NC-3 on 19 May, and Navy Seaplane NC-4 on 20 May, as they arrived in Ponta Delgada on the historic first transoceanic flight.

Galatea departed Ponta Delgada 7 June 1919 for Boston, Mass., where she decommissioned 15 July. The following year she was towed to the Portsmouth Navy Yard, N.H., to serve as receiving ship for submarine crews. She was sold at Portsmouth 20 December 1921 to Captain A. A. Tanos of New York City.

Galaxy

A merchant name retained.

(IX-54: dp. 320; l. 130'; b. 21'4"; dr. 7'3"; s. 11.4 k.; cpl. 27)

Galaxy was a diesel motor yacht built in 1930 by Pusey and Jones Co., Wilmington, Del.; purchased 8 September 1941 from Mr. Bernard W. Doyle, Leominster, Mass.; and commissioned at East Boston, Mass., 20 September 1941, Lt. (j.g.) William D. Hodges, USNR, in command.

Galaxy was acquired for the express purpose of research in underwater sound. Based at East Boston throughout her entire career, as a unit of the 1st Naval District, she completed a variety of assignments for the Underwater Sound Laboratory, Fort Trumbull, New London, Conn.; experimental underwater sound work for the Bureau of Ships and the Harvard Underwater Sound Laboratory. These operations were carried out at Boston, off New London, Conn.; for a brief time off the Delaware breakwaters and in the Chesapeake Bay. She decommissioned and was placed "in service" 2 August 1945, to continue her experimental assignments until placed out of service at Boston 25 March 1946. Her name was struck from the Navy List 1 May 1946 and she was transferred to the Maritime Commission on 20 May 1946 for disposal.

Galen L. Stone, see YF-522

Galena

Cities in Kansas and Illinois; towns in Maryland and Missouri; and villages in Ohio and Alaska named for a native lead sulfide, the chief ore of lead.

I

(IreScStr: t. 738; l. 210'; b. 36'; dph. 12'8"; dr. 11'; s. 8 k.; cpl. 164; a. (1862) 4 9", 2 100-pdrs.)

The first *Galena* was launched 14 February 1862 by C. S. and H. L. Bushnell, Mystic, Conn.; and commissioned 21 April 1862, Comdr. Alfred Taylor in command.

Galena, one of the first three ironclads, each of a different design, built by the Union Navy during the Civil War, was towed from New York to arrive off Fortress Monroe, Va., 24 April and join Flag Officer L. M. Goldsborough's North Atlantic Blockading Squadron. Comdr. John Rodgers relieved Comdr. Taylor the same day.

Galena cleared her decks for action 4 and 7 May when dreaded Confederate ironclad *Virginia* briefly appeared. On 8 May *Galena* stood up the James River with gunboats *Port Royal* and *Aroostook* in an attempt to reach Richmond and compel its surrender. They silenced an

11-gun Confederate battery at Rock Wharf that morning; and in the early afternoon, stoutly engaged a 12-gun battery on Mother Tynes' Bluff silencing all but one of the Confederate guns. *Galena* engaged this remaining gun until the two gunboats had safely passed and left then with the Confederate battery in flames.

After the feared *Virginia* was destroyed, *Monitor* and *Naugatuck* joined the expedition at James Island on 12 May and on the 13th the force steamed across Harrison's Bar to City Point, where *Galena* stopped two steamers for evidence of contraband. She opened fire the following morning to scatter Confederate sharpshooters waiting in ambush along the river banks. On 15 May she stood up river leading the expedition to Drewry's Bluff, about 8 miles from Richmond. *Galena* was hit twice as she swung to bear her broadside guns on a Confederate battery. She nearly silenced the battery before her shells were expended, but then the Confederate guns opened upon her with terrible effect. Numerous hits perforated her iron-clad sides with 12 killed and 15 wounded.

She returned down river to City Point. The following days were spent in shelling Confederate soldiers along the river banks and destroying City Point buildings in which Confederates were entrenched. On 27 June 1862 *Galena* bombarded City Point while two boats went ashore with a landing force which set fire to the depots. That same day General McClellan came on board *Galena* to make a reconnaissance for the position of a new camp which was subsequently established near Harrison's Landing. On 30 June 1862 Major General McClellan was compelled to withdraw down the James and escaped disaster through naval gunfire support and transportation.

On 6 July 1862 Commodore Charles Wilkes was ordered to command the James River Flotilla, *Galena* included, as an independent division of the North Atlantic Blockading Squadron. With gunboats of the flotilla, *Galena* afforded protection to the daily movement of Army transports and supply ships along the James River from Harrison's Bay to the mouth of the Chickahominy, giving the indispensable protection that left the Confederate troops without ability to move effectively against McClellan's Army of the Potomac along the James River.

Galena was detached from the James River Flotilla in September 1862 and assigned picket duty at Hampton Roads and Newport News until 21 May 1863 when she arrived at Philadelphia and was decommissioned for repairs. Her ineffective iron plating which had been so badly shattered in the action at Drewry's Bluff was stripped off; and she was overhauled to operate as a wooden-hulled ship.

Recommissioned 15 February 1864, *Galena* stood down the river on the 18th for the Gulf of Mexico. Becoming icebound at New Castle, Del., she was towed to sea by an ice boat, then developed leaks which forced her to put in at Norfolk. She then proceeded to Baltimore for repairs. *Galena* put to sea from Norfolk on 10 May and joined the West Gulf Blockading Squadron at Pensacola, Fla., on 20 May 1865 for blockade duty off Mobile, Ala., that included the shelling of Fort Morgan and firing upon various blockade runners near the fort.

Galena was a unit of Admiral Farragut's fleet in the Battle of Mobile Bay on 5 August 1864. Passing through the narrow channel under heavy fire from Forts Morgan and Gaines, *Galena*, lashed to the port side of *Onieda*, suffered seven hits and one man killed before she entered Mobile Bay for a gallant fleet action of about 3 hours that left 165 Union dead and 170 wounded while the Confederate losses were 12 killed and 20 wounded. Union monitor *Tecumseh* was destroyed by torpedo in the channel and Confederate ram *Tennessee* and gunboat *Selma* fell into Union hands. *Galena* used her power to pass both herself and *Onieda* beyond range of the fort's fire when the latter had her starboard boiler put out of commission by a shell hit. Admiral Farragut wrote concerning the battle: "Notwithstanding the loss of life, particularly to this ship (*Hartford*), and the terrible disaster to the *Tecumseh*, the result of the fight was a glorious victory,

and I have reason to feel proud of the officers, seamen, and marines of the squadron under my command."

Galena provided supporting bombardment for the capture of Fort Morgan on 23 August 1864 and departed Mobile Bay on the 31st to serve as a part of the East Gulf Blockading Squadron out of Key West, Fla. She arrived in Philadelphia from her blockade station on 4 November 1864 and was decommissioned for repair on the 22d.

Galena was recommissioned at Philadelphia on 29 March 1865 and reached Newport News, Va., 2 April to serve the North Atlantic Squadron as a picket and patrol ship at the mouth of the Nansemond River and in the James River until her departure 5 June for Portsmouth, N.H. She was decommissioned there 17 June 1865 and remained inactive until recommissioned 9 April 1869 for movement to Hampton Roads, where she was placed out of commission 2 June. Condemned by survey in 1870, *Galena* was broken up in 1872 at the Norfolk Navy Yard.

II

(SStr: dp. 1,900; l. 216' (b.p.); b. 37'; d. 16'6"; s. 9.5 k.; cpl. 214; a. 6 9" sb., 1 8" r., 1 60-pdr. blr.)

The second *Galena*, a wooden steamer, was built by the Norfolk Navy Yard in 1879; and commissioned at Norfolk 26 August 1880, Comdr. James O'Kane in command.

Galena departed Hampton Roads 19 December 1880 and reached Gibraltar 12 January 1881. She cruised between the ports of France, Spain, Portugal, Turkey, Greece, along the coast of Africa; and to the Canary, Cape Verde and Madeira Islands. On 7 April 1881 she arrived at Kastro, Chios, in the Aegean Sea and remained until the 15th helping to relieve the distress caused by a severe earthquake. Her surgeon went ashore to treat the injured; her crew furnished work parties to help clear the rubble; and her steam launch moved relief supplies. Another mercy mission began 10 June 1882 when she reached Alexandria, Egypt, to embark American citizens and personnel of the American Consulate for protection aboard during a rebellion. An Italian ship was chartered as a haven for about 135 refugees until 27 June when Admiral J. W. A. Nicholson arrived in *Lancaster* to relieve *Galena*.

Galena departed Alexandria 11 July 1882 for operations along the eastern seaboard of South America out of Rio de Janeiro. From 19 October 1882 to 31 January 1883 she was the flagship of Rear Admiral P. Crosby, commanding American Naval Forces in the South Atlantic. She arrived in New York 10 September 1883 to serve in the North Atlantic along the eastern seaboard and throughout the Caribbean Sea to the shores of Aspinwall, Colombia (now Colon, Panama). This included station duty at Key West (1 May-16 August 1884) to prevent illegal filibustering expeditions from the United States to Cuba.

Another special service began 11 March 1885 when she arrived at Aspinwall from New Orleans to offer protection to the lives and property of American citizens during a serious revolution that threatened to interrupt traffic over the Isthmus of Panama. On 30 March 1885 after a party of revolutionists had seized Pacific Mail Line steamer *Colon*, *Galena* regained the steamer and returned her the same day. The next day *Galena*'s landing force went ashore to save a part of the town of Colon which had been set afire by the revolutionists. Through utmost exertion the landing force saved a part of the town and all the property of the Pacific Mail Company. On 10 April Admiral Jouett arrived in *Tennessee* and with a force of 600 bluejackets and marines, assisted by *Galena*, kept the Isthmus open to crossing travelers and enforced treaty obligations until order was restored in May.

Galena departed Colon 9 June and reached Portsmouth, N.H., 26 June 1885 to begin several months cruising along the eastern seaboard. *Galena* returned to Columbian waters 27 November 1885 for service in the Caribbean. She visited St. Andrew Island 114 miles east of the Nicaraguan coast 14 February 1886 to investigate the detention of American steamer *City of Mexico*. Finding

United States neutrality laws had been violated by the steamer, *Galena* seized *City of Mexico* and sailed her under a prize crew to Key West where the steamer was turned over to the U.S. marshal.

Galena returned to New York 23 May 1886 to join the squadron in battle practice along the New England coast. She then sailed to the Newfoundland fishing banks and back. She departed Portsmouth, N.H., 15 December 1886 to cruise among ports of the West Indies and off Colombia until 18 April 1887.

Galena returned north in time to participate in ceremonies for the unveiling of the soldiers and sailors monument at New Haven, Conn., 14 June. After a cruise that took her to Halifax, Quebec, Montreal, and Habitant's Bay, *Galena* arrived at Philadelphia 12 September 1887 to join other ships of the Navy in celebrating the centennial of the adoption of the Constitution of the United States. Target practice in Gardner's Bay, N.Y., was followed by repairs in the Norfolk Navy Yard until 9 April 1888. *Galena* then cruised with her squadron along the eastern seaboard and the Gulf Coast visiting New Orleans, La.; Mobile, Ala.; and Port Royal, S.C. From 18 August to 15 September 1888 she watched over American interests during political disturbances at Port-au-Prince, Haiti, then proceeded to New York.

Galena departed New York 12 December 1888 as flagship of Rear Admiral Stephen B. Luce, Commander in Chief, North Atlantic Station, and reached Port-au-Prince 20 December. Here, the American steamer *Haytien Republic*, seized by Haitian authorities for alleged violation of the blockade, was surrendered to the force under Admiral Luce.

Galena arrived in Key West, Fla., 19 January 1889. Here, on 16 February Rear Admiral Bancroft Gherardi relieved Admiral Luce as Commander in Chief, North Atlantic Station, and broke his flag in *Galena*. She sailed the following day for Haitian waters and then returned to New York 29 May. Admiral Gherardi transferred his flag to *Kearsarge* on 15 June.

After repairs at New York, *Galena* arrived at Cap Haitien 6 September 1889 and relieved *Kearsarge* as flagship. At the island of Navassa 6 October, she took on board nine ring-leaders of a riot, then proceeded to Baltimore, Md., where they were turned over to the custody of the United States marshal 25 October. She repaired at the New York Navy Yard, then sailed 3 December to serve once more as Admiral Gherardi's flagship out of Key West in a series of cruises to waters of Haiti. She was relieved as flagship by *Dolphin* while at St. Nicholas Mole 14 February 1890 and departed Key West 25 May for calls at Port Royal and Charleston before arriving New York Navy Yard 1 July. She decommissioned 23 July 1890 and remained there until 12 March 1891 when she was towed by tug *Nina* toward the Portsmouth Navy Yard, N.H., to be fitted with new boilers. The following day, both ships ran aground on a beach about a mile south of Gay Head, Martha's Vineyard, Mass.

Salvaged under a contract to the Boston Tow Boat Co., *Galena* arrived at the Portsmouth Navy Yard 6 April 1891. However, it was decided that repairs would be too costly. *Galena* was stricken from the Navy List 29 February 1892 and she was sold to E. J. Butler of Arlington, Mass., 9 May.

III

(PC-1136: dp. 280; l. 173'8"; b. 23'; dr. 10'10"; s. 20 k.; cpl. 65; a. 1 3", 1 40mm., 5 20mm., 2 rkt., 2 dcp., 2 det.; cl. PC-553)

PC-1136 was laid down by Defoe Shipbuilding Co., Bay City, Mich., 17 December 1942; launched 5 March 1943; and commissioned at New Orleans, La., 16 November 1943, Lt. (j.g.) Allston Boyer in command.

After shakedown, PC-1136 operated out of Miami and Key West, Fla., while receiving ASW training. Departing Key West 1 January 1944, she steamed via the Panama Canal and the Society and Tonga Islands to arrive Noumea, New Caledonia, 12 March for duty as patrol

and escort ship. From 27 March to 1 April she escorted merchant ships to Guadalcanal, then sailed the following day to Efate as escort for *Shasta* (AE-6). Arriving 4 April, she steamed the 5th to Espiritu Santo to escort a merchant tanker to Guadalcanal.

PC-1136 reached Guadalcanal 8 April, and for almost 2 months she continued intermittent convoy escort and ASW patrol duties out of the Solomons to New Caledonia and the New Hebrides. Departing in convoy 31 May, she arrived Kwajalein, Marshalls, 6 June to prepare for the invasion of Guam. Assigned to Task Group 53.1, she sailed the 9th, arriving east of the Marianas 22 June. After patrolling east of Saipan, she returned to Kwajalein 5 July. Between 15 and 21 July she steamed to Guam, where she served as amphibious control ship during the landings. After screening offshore transports during the next week, she departed for the Marshalls 28 July and arrived Eniwetok 3 August. Between 8 and 13 August, she sailed to Saipan as a convoy escort. For almost 7 months she operated between the Marshalls and the Marianas, escorting merchant ships and searching for enemy submarines. She departed Guam 3 March 1945, touched Eniwetok, and arrived Pearl Harbor 18 March.

After overhaul and conversion to a control ship, PC-1136 sailed for the Western Pacific 21 May. Escorting a convoy of LSTs, she reached Guam 9 June and resumed convoy escort duties in the Marianas. She departed Guam 6 August, touched Ulithi, and arrived Subic Bay, Philippines, 15 August. She reclassified PCC-1136, 5 days later. After steaming to Lingayen Gulf 10 September, she escorted a convoy of LSTs to Japan, arriving Wakayama 19 September. Between 24 and 30 September she returned to Lingayen Gulf; and during the first 2 days of October she sailed to Manila.

PCC-1136 departed Manila for the Marianas 17 October and arrived Guam the 22d. For more than 6 months she operated out of Guam, steaming to Saipan and Rota, Marianas; and Ulithi. She sailed for the United States 1 May 1946 via Eniwetok and Pearl Harbor, arriving Astoria, Oregon, 29 May. She decommissioned 28 July 1946 and entered the Pacific Reserve Fleet. While berthed in the Columbia River, she was classified PC-1136 on 27 October 1955 and named *Galena* 15 February 1956. She was sold by the Navy 11 March 1960 to Miami Ports Co.

PC-1136 received one battle star for World War II service.

Galilea

A minor planet or asteroid.

Montauk (LSV-6) (q.v.) was renamed and reclassified *Galilea* (AKN-6) on 1 October 1946.

Gallagher, Charles T., see *Charles T. Gallagher*

Gallant

Noble in bearing or spirit; brave; high-spirited; chivalrous; stately in appearance or action.

I

(PYc-29: dp. 350 (gross); l. 177'6"; b. 23'6"; dr. 12'; s. 13 k.; cpl. 11; a. 1 3", 1 20mm., 1 .50 cal. mg.)

The first *Gallant* (PYc-29) was built in 1909 as the yacht *North Star* by Pusey and Jones Co., Wilmington, Del.; purchased 17 March 1942 from the North Star Excursion Corp., Brooklyn, N.Y.; converted to a coastal patrol yacht by Sullivan's Drydock Co., Brooklyn; and commissioned as *Gallant* in the conversion yard 15 April 1942, Lt. (j.g.) D. R. Stoneleigh in command.

After temporary inshore patrol duties for the 3rd Naval District at New York, *Gallant* changed her home port to Boston, Mass., 20 July 1942, and finished out her Navy career as a training and local defense patrol ship of the 1st Naval District.

USS *Galena*, a wooden steamer built at the Norfolk Navy Yard

Gallant made daily patrols outside Boston Harbor and along the New England coast, with time out for upkeep and repairs, until decommissioned at Boston 22 January 1945. She was transferred to WSA for disposal and sold to her former owner 28 June 1945.

II

(MSO-489: dp. 780; l. 172'; b. 36'; dr. 10'; s. 15 k.; cpl. 74; a. 1 40mm.; cl. *Aggressive*)

The second *Gallant* (AM-498) was laid down 21 May 1953 by J. M. Martinac Shipbuilding Corp., Tacoma, Wash.; launched 4 June 1954; sponsored by Mrs. Walter Meserole; reclassified (MSO-489) on 7 February 1955; and commissioned as *Gallant* (MSO-489) at Tacoma 14 September 1955, Lt. Dixon Lademan in command.

After shakedown, *Gallant* based from Long Beach, Calif., as a unit of Mine Division 96, Mine Force, U.S. Pacific Fleet. Her readiness exercises ranged as far south as Acapulco, Mexico. She rescued two crew members of a Navy plane downed off Santa Catalina Island and joined Mine Division 73 in January 1957 for concentrated training preparatory to a 6-month tour with the 7th Fleet (March–August 1957). This duty found her in Korean waters for combined operations with the Republic of Korea Navy, followed by similar service off Formosa with units of the Chinese Nationalist Navy. Other training took her to ports of Japan and Hong Kong before her return to Long Beach 20 August 1957.

After a yard overhaul at San Diego, she took part in amphibious landing exercises along the California coast followed by combined minesweeping operations with Canadian Mine Squadron 2 off the coast of Vancouver, British Columbia, in October 1958. Another overhaul period was completed by April 1959 when she began refresher training and mine countermeasures exercises that won her the Battle Efficiency Competition Award "E" and the Minesweeping "M" as the outstanding minesweeper of the Pacific Mine Force during Fiscal 1959.

Gallant's second tour with the 7th Fleet (August 1959–March 1960) again included training with the Republic of Korea Navy. While operating out of the Philippines, she participated in joint readiness operations with the navies of SEATO nations. She returned to Long Beach in March 1960 and spent the next 12 months in a training schedule with the mine force of the 1st Fleet that carried her as far north as Ketchikan, Alaska.

Service during her third deployment in the Far East (August 1961–April 1962) once again included fleet readiness defense exercises with the free-world navies of Southeast Asia. In addition, she patrolled the coast of South Vietnam and provided valuable service during training operations of the South Vietnam Navy. Returning to the West Coast 20 April 1962, she resumed duty out of Long Beach; and during the next 15 months participated in fleet maneuvers and mine squadron exercises off southern California.

Departing Long Beach 12 August 1963, *Gallant* steamed on her fourth deployment to the troubled Far East, where she arrived Sasebo, Japan, 23 September. There, she resumed peace-keeping operations with the mighty 7th Fleet; and, during readiness patrols in far eastern waters, she cruised from the coast of South Korea through the East China and South China Seas to the coast of Southeast Asia. She departed WestPac in the spring of 1964; and, after additional training in hunting mines, sailed for blockade and coastal patrol duty off Vietnam. Arriving off the southern coast of South Vietnam 1 October 1965, she joined Operation "Market Time," designed to control coastal infiltration of men and supplies by the Viet Cong. Throughout the remainder of the year, *Gallant* boarded and searched suspicious Vietnamese boats, providing valuable support for the Republic of Vietnam in her struggle against Communist insurgency.

She supported "Market Time" operations until 9 March 1966 when she departed for the United States. Steaming via the Philippines, Guam, and Pearl Harbor, she arrived Long Beach 28 April. During the remainder of the year, she operated along the West Coast from Long Beach to Portland, Oreg., to maintain her fighting capabilities and operational readiness.

Gallatin

Albert Gallatin, born in Switzerland 29 January 1761, emigrated to America in 1780 and began his political career eight years later in a conference held at Harrisburg, Pa., to consider revising the U.S. Constitution. The following year, he was prominent in the convention which revised the Pennsylvania Constitution. After serving in the Pennsylvania Legislature from 1790 to 1792, Gallatin was elected to the U.S. Senate in 1793. During the "Whisky Rebellion," he helped avert civil war by persuading an angry mob to submit peacefully. After serving in the U.S. House of Representatives from 1795 to 1801, he became Jefferson's Secretary of the Treasury and served with distinction in that post until 1814. His supervision of the Nation's finances was noted for frugal and efficient administration.

In May 1813, President Madison, upon receiving from the Tsar an offer of mediation to end the war with England, sent Gallatin to Russia as peace commissioner. Although the mediation effort failed, Gallatin remained in Europe to help negotiate the Treaty of Ghent which Henry Adams called "the special and peculiar triumph of Mr. Gallatin."

After the war, Gallatin, as Minister to France and later as Minister to England, worked assiduously to improve American commercial relations with the nations of Europe. In 1827, he retired from public office and devoted his talents to commercial activities and to the study of American Indians. He died at Astoria, Long Island, N.Y., 12 August 1849.

Counties in Illinois, Kentucky, and Montana were named for Albert Gallatin. The first *Gallatin* was named for Albert Gallatin; the second *Gallatin* was named for the counties.

I

The first *Gallatin* was purchased by the Treasury Department at Norfolk for the Revenue Cutter Service in December 1807. In the ensuing years, she was active in suppressing smuggling and in assisting American Merchantmen. Acting under Navy orders during the War of 1812, she intercepted a British "letter of marque" sailing from Jamaica for England and took her after a fierce 8 hour battle 6 August 1812. She subsequently captured several merchantmen. She caught fire at Charleston, S.C., exploded, and sank 1 April 1813.

II

(APA-169: dp. 14, 837; l. 455'; b. 62'; dr. 25'6"; s. 18 k.; epl. 560; a. 1 1/2", 8 40mm.; cl. *Haskell*)

The second *Gallatin* was built under Maritime Commission contract by the Oregon Shipbuilding Co., Portland,

Oreg.; launched 17 October 1944 sponsored by Mrs. Lorán T. King of Portland; acquired by the Navy on a loan-charter basis 15 November 1944 and commissioned the same day at Astoria, Oreg., Comdr. Frank S. Dowd in command.

After shakedown training out of San Pedro, Calif., *Gallatin* departed San Diego 18 January 1945 with more than a thousand troops plus cargo. In the ensuing months she carried passengers and military cargo to ports throughout the Pacific, supporting the final blows which forced Japan to surrender. She visited Hawaii; the Marshall Islands; the New Hebrides; New Caledonia; the Philippines; New Guinea; and the Admiralty Islands. She sailed from the Philippines for the west coast and arrived San Francisco with nearly 1,500 weary war veterans 10 August 1945. Eight days later she headed west again with as many troops for garrison duty at Lingayen Gulf, P.I. During October she steamed to Japan with vehicles, stores, and advance elements of the Army's 25th Division which she landed at Honshu as occupation forces.

Assigned to "Magic-Carpet" duty, *Gallatin* carried nearly 2,000 marines and other military veterans home from the Philippines and Hawaii. She reached San Diego with her veteran passengers 20 November 1945, and then made another "Magic-Carpet" voyage to the Philippines which terminated at San Diego 25 January 1946. After transiting the Panama Canal, she decommissioned at Newport News, Va. 23 April 1946; was returned to WSA the following day; and was placed in the National Defense Reserve Fleet, James River, Va., where she remains.

Gallatin, see YP-42

Gallinipper

A large mosquito or other stinging insect.

The barge *Gallinipper* was one of five ship's boats equipped with sails and double-banked oars in January 1823 for duty with Capt. David Porter's West India Squadron, known as the "Mosquito Fleet," fitted out under an act of Congress approved 20 December 1822 to cruise in the West Indies and Gulf of Mexico for the suppression of piracy.

On 14 February 1823 the squadron, composed of 12 ships, sailed from Hampton Roads for its base at Thompson's Island (later Key West, Fla.) via a circuitous route through the Caribbean, while *Gallinipper* and the other barges, in charge of Lt. T. M. Newell, loaded on two chartered schooners, proceeded directly to base a few days later. Arriving at Thompson's Island 3 April, Captain Porter landed the stores, built storehouses, and fitted out the barges and manned them from the crew of *Peacock*.

Gallinipper, one of the more active barges, participated in several successful expeditions against the pirates operating on the coast of Cuba. On 8 April 1823 she and barge *Mosquito*, under command of Lt. C. K. Stribling, captured pirate schooner *Pilot* near Havana after running her on shore; two pirates were killed and one captured, the others escaping on shore.

In July, 1823 *Gallinipper*, Lt. W. H. Watson in command, with the aid of *Mosquito*, captured the pirate schooner *Catilina* and a launch near Sigaumpa Bay. *Catilina*, commanded by the celebrated pirate Diaboleto, lost about one-third of her crew of approximately 75 in the running fight. The barges pursued the schooner to the village of Signapa; as they closed to board, the pirates fled to their launch. A volley of musketry directed at the launch drove them into the sea where the boats cut off the retreat of all but 15. Even of these, 11 were killed or taken prisoner by the barges' men who landed in pursuit, and the remaining 4 were apprehended by the local authorities. Lt. Watson was highly commended by Captain Porter for his brilliant victory over a superior force without the loss of a man, and recommended to the Department for promotion.

In March 1825 a joint American-British expedition under Lt. I. McKeever in *Gallinipper*, destroyed a pirates'

lair east of Matanzas, Cuba, and captured 2 of their schooners, killing at least 8 pirates and taking 19 prisoners.

The ultimate fate of *Gallinipper* is unknown. By December 1825 it was reported that one of the barges had been lost at sea, some had decayed to the point of uselessness, and the rest remained on duty in Florida.

Gallipolis

A town in southern Ohio on the Ohio River, 30 miles northeast of Ironton.

(PC-778: dp. 295; l. 173'8"; b. 23'; dr. 10'10"; s. 20.2 k.; cpl. 65; a. 1 3", 1 40mm., 3 20mm., 2 rkt., 4 dcp., 2 dct.; cl. PC-461)

PC-778 was laid down 7 September 1942 by Commercial Iron Works, Portland, Oreg.; launched 26 November 1942, sponsored by Miss Virginia Sering; and commissioned 30 April 1943, Lt. W. R. Herrick in command.

The new submarine chaser departed Astoria, Oreg., 21 May 1943 for shakedown out of San Diego. For the next year she operated along the West Coast as an escort, patrol, and aircraft-target ship. PC-778 departed Seattle 21 May 1944 for Alaska and arrived Dutch Harbor a week later for patrol and escort duty on the Aleutians. PC-778 departed Adak 15 November and returned to Seattle on the 26th.

After a four-month overhaul, the submarine chaser made two escort voyages to the Hawaiian Islands. Upon arrival at Pearl Harbor 2 April 1945, she performed patrol and escort duty in the Hawaiian Islands and made one voyage to Canton Island. On 3 July, she sailed for Midway Island to assist in training submarines and to continue patrol duty.

After the war ended, PC-778 departed Midway 1 September for the West Coast, via Pearl Harbor and arrived Los Angeles Harbor on the 28th. She sailed for the East Coast 11 October, transited the Panama Canal on the 26th and arrived Key West, Fla., 9 November. A month later the submarine chaser reported to Green Cove Springs, Fla. PC-778 transferred to Charleston, where she served as a reserve training ship until decommissioning in October 1949 and entered the Atlantic Reserve Fleet at Norfolk. The veteran submarine chaser was named *Gallipolis* 15 February 1956 and was struck from the Navy List 1 April 1957 and sold to Hughes Brothers, Inc., 15 September 1959.

Gallup

A town in New Mexico.

I

(PF-47; dp. c. 2,000; l. 304'; b. 38'; dr. 12' s. 20 k.; cpl. 190; a. 3 3" 440mm., 9 20mm., 8 dcp., 1 dcp (h. h.), 2 dct.; cl. *Tacoma*)

Gallup was launched 17 September 1943 by the Consolidated Steel Corp., Los Angeles; sponsored by Ens. Helen McMahan, NNRC; and commissioned 29 February 1944 at San Pedro, Lt. Comdr. Clayton M. Opp, USCG, in command.

Following conversion work at Newport Beach, Calif., and shakedown out of San Pedro and San Diego, she departed the latter port 1 June 1944 for the Pacific war zone. Conducting antisubmarine patrol en route, she arrived at Noumea, New Caledonia, 21 June, and continued her escort and patrol duty in the waters of New Caledonia, New Guinea, and Australia until 12 October with Escort Division 43. On 17 August she bombarded enemy strongholds to support landings on Biak Island at Blue Beach, north of Wardo River by units of the 41st Infantry Division. She continued to fire until the troops

had completed their landing and secured the beach. Again, on 25 August, *Gallup* lent support to the conquest of Biak by shelling the beaches between Meneerar and Cape Warari as the Army and Navy continued the successful New Guinea offensive.

Departing Hollandia 12 October 1944, *Gallup* was part of the screen for the vast task force which returned General MacArthur to the Philippines. On the 17th she shelled the beach area of Dinagat, and the next day she swept the channel into Leyte Gulf, P.I., as U.S. forces poised for the invasion. She then began antisubmarine and antimine patrol near Black Beach, screening vessels engaged in landing operations. Stationed most of the time off Desolation Point, she collected tide and hydrographic information, served as dispatch boat and as escort through the cleared channel in Leyte Gulf, guided incoming ships and convoys through the channel, and served as harbor entrance control vessel during landing operations. She performed these duties, most of the time in gusty, stormy weather, with *Bisbee* (PF-46), *LCI(L)-343*, and *LCI(L)-344*, before being sent on an escort mission to Humboldt Bay 28 November, touching San Pedro Bay and Kossol Roads, Manus, en route. On 3 December she left for the West Coast stopping to drop men at Seeadler Harbor, Admiralty Islands, and Pearl Harbor. She arrived in San Francisco on Christmas Day 1944.

Departing San Francisco 9 January 1945, *Gallup* steamed via Seattle to Dutch Harbor, Alaska, where she arrived on the 20th. She patrolled the North Pacific until she decommissioned at Cold Bay, Alaska 26 August. The next day she was transferred to the U.S.S.R. under lend-lease, renamed *EK-19*, and patrolled the Far East.

Returned by Russia at Yokosuka, Japan 14 November 1949, *Gallup* lay at Yokosuka Navy Yard until she recommissioned 18 October 1950, Lt. Comdr. William W. Boyd, Jr. in command. After shakedown off Sagami Wan, she got under way with *Bisbee* 23 November for Hungnam, Korea. There she relieved *Hoquiam* (PF-5) as harbor entrance control vessel, escorting ships when directed, guarding the channel against unfriendly ships, preventing friendly vessels from entering mined areas, and performing search and rescue services to the many refugees flooding through there.

On 19 December *Gallup* left for Pusan where she performed antisubmarine patrol on the approaches to the harbor, before leaving 31 December for Sasebo, Japan. On 29 January 1951, she returned to Korea, this time to Kansang and Kosong, for the purpose of feinting an amphibious assault to divert Communist forces and conducting a preassault bombardment on the installation at these points.

Gallup continued to operate out of Sasebo, making screening escort, patrol, and guide tours to Pusan, Wonsan, Chonjin, Korea, and Sangley Point and Subic Bay, P.I. She helped in the bombardment of Wonsan 23-25 February 1951 as U.N. forces seized the harbor islands, and then served as harbor entrance control vessel and flycatcher (anti-small-boat, antiswimmer, anti-suicide-craft). Returning to Yokosuka 14 March, she entered drydock there for extensive hull repairs. She continued similar duty afterward until she returned to Yokosuka 6 October.

Gallup decommissioned and was transferred under M.D.A.P. to Thailand at Yokosuka, 29 October 1951 and serves the Thailand Navy as *Prasae*.

Gallup received two battle stars for World War II service and three battle stars for the Korean War.

II

(PGM-85: dp. 235 (f.); l. 164'6"; b. 23'11"; dr. 5'2"; cpl. 24; a. 1 3", 1 40mm., 4 .50 cal.; cl. *Asheville*)

The second *Gallup* was laid down 27 April 1964 by Tacoma Boatbuilding Co., Inc., Tacoma, Wash.; launched 15 June 1965; sponsored by Mrs. Goodwin Chase; and commissioned 22 October 1966, Lt. William T. Spane, Jr., in command.

From October 1966 until February 1967, the motor gunboat conducted shakedown operations under Commander Amphibious Group 3 off the West Coast as far north as Juan de Fuca. On 28 March 1967 *Gallup* was reclassified PG-85. She continues to serve as a patrol and surveillance craft in the Pacific Fleet.

Gallup, Annie E., see *Annie E. Gallup* (SP-694)

Galveston

A coastal city in southeastern Texas located on Galveston Island.

I

(Cruiser No. 17: dp. 3,200; l. 308'10"; b. 44'; dr. 15'9"; s. 16 k.; cpl. 339; a. 10 5", 8 6-pdrs., 2 1-pdrs., 4.30 cal. mg.)

The first *Galveston* was laid down 19 January 1901 by William R. Trigg Co., Richmond, Va.; launched 23 July 1903; sponsored by Miss Ella Sealey; and commissioned at Norfolk, Va., 15 February 1905, Comdr. W. G. Cutler in command.

Galveston departed Norfolk on 10 April 1905 for Galveston, Tex., where on 19 April she was presented a silver service by citizens of her namesake city. Returning to the East Coast 3 May, she departed New York 18 June for Cherbourg, France, where she arrived 30 June and took part in the ceremonies commemorating the return of the remains of John Paul Jones to the U.S. Naval Academy, reaching Annapolis on 22 July. She next joined *Dolphin* and *Mayflower* as one of the host ships for the Russo-Japanese Peace Conference (4-8 August) serving at Oyster Bay, N.Y.; Newport, R.I., and Portsmouth, N.H. During 13 August to 11 September 1905 the cruiser had special duty with Minister Plenipotentiary Hollander's State Department cruise from Norfolk to the West Indies ports of Santo Domingo and Port-au-Prince, followed by preparations for foreign service at Norfolk and New York.

Galveston departed Tompkinsville, N.Y., on 28 December 1905 for service in the Mediterranean with the European Squadron until 28 March 1906 when she set course from Port Said to join the fleet at Cavite, P.I., for service on the Asiatic Station. She was a part of the fleet reception for Secretary of War William H. Taft at Manila on 13 October 1906; served in his honor escort to Vladivostok, Siberia, the next month; and spent the following years in cruises among ports of the Philippines, China and Japan. She arrived in San Francisco, Calif., from the Philippines on 17 February 1910; was decommissioned in the Puget Sound Navy Yard on the 21st; and recommissioned there on 29 June 1912 for service that included a training cruise to Alaska. She departed the Puget Sound Navy Yard on 19 September 1913, touching San Francisco, Hawaii and Guam on her way to Cavite, P.I., where she joined the Asiatic Fleet on 2 November.

Galveston's tour on the Asiatic Station was largely taken up with convoy service for supply ships and troop transports shuttling Marines and other garrison forces and stores between the Philippines and ports of Japan and China for the protection of American lives, property, and interests with brief intervals of Yangtze River Patrol for the same purpose. She also made one convoy trip from the Philippines to British North Borneo and two trips to Guam in the Marianas. She arrived in San Diego from the Asiatic Station on 10 January 1918 and transited the Panama Canal on the 23rd, convoying British troopship *Athenic* from Cristobal, C.Z., to Norfolk, thence to New York, arriving on 11 February 1918.

Galveston was assigned to Squadron 2 of the Atlantic Fleet Cruiser Force for convoy escort duties concurrent with the training of Armed Guard crews. After one convoy run through heavy weather from Tompkinsville to Halifax, Nova Scotia, she was largely employed in repeated convoy escort voyages between New York and Norfolk until 22 September 1918 when she departed Tompkins-

ville with a 19-ship convoy bound for Ponta Delgada, Azores. On the morning of 30 September the convoy was attacked by German submarine *U-152*. Alerted by the flashing explosion to starboard, *Galveston* headed for the scene of attack and opened fire on the U-boat. Cargo ship *Ticonderoga* was shelled and sunk in the 2-hour battle with a loss of 213 lives but the remaining ships of the convoy were brought safely into Ponta Delgada 4 October 1918.

Galveston returned to Norfolk on 20 October 1918 to resume her coastal convoy escort work until the Armistice. She arrived in Plymouth, England, 26 March 1919; transported a contingent of British-American troops from Harwich to Murmansk, U.S.S.R.; then served as flagship of Squadron 3, Patrol Force, in Western European waters. She was largely concerned with the movement of prize crews and repatriation of crews of German ships until 22 June 1919 when she got underway to serve as station and flagship at Constantinople, Turkey. She arrived on station 14 July 1919 and broke the flag of Rear Admiral Mark L. Bristol; transported refugees and American Red Cross officials to Constantinople from the Russian ports of Novorossisk and Theodosia; and carried Rear Admiral N. A. McCully from Theodosia to Yalta. She was relieved as station ship at Constantinople on 15 July 1920 by cruiser *Chattanooga*.

With the initial assignment of hull classification symbols and numbers to U.S. Navy ships in 1920, *Galveston* was classified as PG-31. She then returned home by way of Suez Canal and Mediterranean ports reached Boston 17 September 1920, and became a unit of the Special Service Squadron watching over American interests in waters ranging to the Panama Canal and down the West Coast of the Central American States to Corinto, Nicaragua. On 8 August 1921 she was reclassified CL-19. She also intermittently patrolled in the Gulf of Mexico with periodic calls at ports of Florida, Texas, Alabama, and Louisiana. The end of this service was climaxed by a visit to her namesake city in Texas, where she arrived from Panama 26 August 1923 to represent the Navy at the American Legion convention. She then steamed to the Charleston Navy Yard and decommissioned 30 November 1923.

Galveston was recommissioned 5 February 1924 for duty with the Special Service Squadron. She based most of her operations out of Christobal and Balboa, Panama, in a series of patrols that took her off the coast of Honduras, Cuba, and Nicaragua. On 27 August 1926 she arrived at Bluefields, Nicaragua, landing a force of 195 men at the request of the American Consul to protect American interests during a revolutionary uprising. Thereafter much of her time was spent cruising between that port and Balboa to cooperate with the State Department in the restoration and preservation of order, and to insure the protection of American lives and property in Central America.

After a voyage north in the fall of 1929 for overhaul in the Boston Navy Yard, *Galveston* revisited her namesake 26 to 29 October for the Navy Day celebrations, then touched Cuba on her way to Haiti, where she embarked Marines for transport to the Panama Canal. She resumed her watchful cruises between Balboa and Corinto until 19 May 1930 when she transited the Panama Canal for a last courtesy visit to Galveston (24-31 May) before inactivation overhaul in the Philadelphia Navy Yard. She was decommissioned at Philadelphia on 2 September 1930; struck from the Navy List 1 November 1930, and sold for scrapping 13 September 1933 to the Northern Metal Co. of Philadelphia Pa.

II

(CL-93: dp. 14,600; l. 608'4"; b. 63'7"; dr. 25'; s. over 30 k.; cpl. 1,276; a. 6 8", 6 5", 2 Tal. mis.; cl. *Cleveland*)

The second *Galveston* (CL-93) was launched by William Cramp & Sons Shipbuilding Co., Philadelphia, Pa., 22 April 1945; and sponsored by Mrs. Clark Wallace Thompson. The cruiser's construction was suspended when nearly complete 24 June 1946; and the hull assigned

to the Philadelphia Group of the Atlantic Reserve Fleet. She was reclassified CLG-93 on 4 February 1956; then reclassified to CLG-3 on 23 May 1957; and commissioned at Philadelphia 28 May 1958, Captain J. B. Colwell in command.

The warship departed Philadelphia on 30 June 1958 for builder's trials out of Norfolk, Va., in the Virginia Capes area, that included "highly successful" tests of her new Talos missile and tracking gear. The deadly Talos supersonic surface-to-air missile weighs nearly 3000 pounds, including a 40,000 horsepower ramjet engine; with a range of over 65 miles and is designed to destroy enemy aircraft at high altitudes using either a conventional or atomic warhead. She finished out the year with operations in the Norfolk area.

Galveston arrived at San Juan, Puerto Rico, 16 January 1959 for training and evaluation operations in waters of the West Indies. She successfully fired the first Talos missile ever shot at sea 24 February 1959. Termed by Admiral Arleigh Burke as "the best antiaircraft missile in any arsenal in the world," the Talos sent its payload off in a trail of bright orange flame. *Galveston* reported the shot "hot, straight and normal" as she proudly proved her capability as one of the most mighty warships of the modern United States Navy. The cruiser set course for Norfolk 17 March and a special yard period in the Philadelphia Naval Shipyard.

In July 1959 *Galveston* conducted shakedown and acceptance trials in the Virginia Capes area, followed by a refresher training cruise to waters off Cuba and the testing of her radar and communications in war games with the U.S. Air Force. On 4 January 1960 she departed Norfolk for a visit to Charleston, S.C., and operations off the Florida coast, Puerto Rico, and the Virgin Islands. She then headed to her namesake city of Galveston, arriving on 16 February for a Silver Service presentation. Returning to Norfolk, the cruiser unloaded her ammunition for shock tests off the Bahamas, then entered the

Philadelphia Naval Shipyard on 25 March 1960 for a yard period that extended into the fall. During this time the cruiser entertained more than 30,000 visitors. She headed for the Virginia Capes 24 October 1960, successfully completing her first missile transfer at sea.

On 6 January 1961 *Galveston* departed Norfolk for more Bureau of Naval Weapons technical evaluation of her Talos missile systems, including tests of the IV Talos, its capabilities and potentials, in areas off Jacksonville, Fla., Puerto Rico and the Virgin Islands. These evaluations completed 1 March, she departed San Juan for refresher training and her final acceptance trial out of Guantanamo Bay. The cruiser returned to Norfolk on 9 April, but soon steamed to Jacksonville, Fla., where on 8 May she began duty under the Operational Technical Evaluation Force that included extensive testing of her missile system and many Talos firings. The effectiveness of the system and the weapon were demonstrated by a new, long-range record as well as a successful two-missile salvo shot. The Talos missile cruiser entertained over 17,000 visitors at Cape Canaveral on the Armed Forces weekend celebration in May; completed later phases of her evaluation exercises in the Caribbean through 21 July; then visited Bayonne, N.J., where her missile fire-control radars were removed preparatory to overhaul in the Philadelphia Naval Shipyard (30 August 1961-23 July 1962). This overhaul included modifications to the fire control system of the Talos missile.

Galveston departed Philadelphia on 23 July 1962, transited the Panama Canal for San Diego, Calif.; and joined Cruiser-Destroyer Flotilla 9, U.S. Pacific Fleet, on 24 August 1962. She operated along the West Coast until October 1963 when she sailed for the Western Pacific as flagship of the flotilla. During the next 6 months she operated in the Far East with the 7th Fleet off Japan, Taiwan, and Okinawa. She returned to San Diego 16 April 1964 and resumed West Coast training.

USS *Galveston* (CL-93) going down the ways 22 April 1945

Following a 4-month overhaul from October 1964 to February 1965, *Galveston* departed San Diego 4 June for operations off the coast of South Vietnam. She touched at Subic Bay, Philippines, 21 June, then sailed to join the 7th Fleet in the South China Sea. During the next 5 months she ranged the Southeast Asian waters from the Gulf of Thailand to the Gulf of Tonkin while supporting the American effort to repel Communist aggression in South Vietnam. She provided gunfire support during search-and-clear operations at Chu Lai and at the Vun Tuong Peninsula. In addition she provided air defense for 7th Fleet carriers in the South China Sea and conducted search and rescue operations in the Gulf of Tonkin. She departed the Philippines 2 December and arrived San Diego 18 December.

Resuming operations early in January 1966, *Galveston* operated out of San Diego to the Hawaiian Islands and along the California coast while keeping her crew and equipment in a peak state of readiness. From 31 July to 4 November she underwent modernization overhaul, then she resumed training for the remainder of 1966. Early in 1967 she departed San Diego for the East Coast, and at present she is assigned to the Atlantic Fleet for duty in the Atlantic and the Mediterranean.

Gamage

A merchant name retained.

I

(SwStr: t. 187; l. 148'6"; b. 30'3"; dph. 4'6"; a. 2 20-pdrs., 1 12-pdr.)

Gamage was built as merchant steamer *Willie Gamage* in 1864 at Cincinnati, Ohio; purchased there 22 December 1864; and converted into a gunboat by Joseph Brown of Cincinnati. She was commissioned at Mound City, Ill., 23 March 1865, Acting Master William Neil in command.

Assigned to the 5th Division of the Mississippi Squadron, *Gamage* departed Mound City 30 March 1865 and arrived Natchez, Miss., 2 April where she remained alert to intercept Confederate President Jefferson Davis, his cabinet and other Confederate leaders should they attempt to cross the Mississippi River. The President of the Confederacy and members of his staff were captured 10 May at Irwinville, Ga.

On 1 June *Gamage* entered the mouth of Red River to form with a joint expedition up that river to receive surrendered Confederate ships and men. The Union naval force of eight steamers under command of Lt. Comdr. W. E. Fitzhugh was accompanied by Army steamer *Ida May*, carrying Major General F. J. Herron and his staff. Arriving Alexandria, La., 2 June, Commander Fitzhugh took possession of Confederate ironclad *Missouri* and proceeded up river to Shreveport, La., in *Gamage*. There he seized the steamer *Cotton* and supplies at the Navy storehouse and on the 8th departed for the mouth of the river. At the request of General Herron, *Gamage* remained at Alexandria, La., to assist the Army as needed until 27 June when she departed for Natchez, Miss., arriving 7 July.

Gamage reached Mound City from Natchez 22 July. She decommissioned on the 29th and was sold at public auction 17 August 1865 to J. R. Griffith for \$11,000. She was redocumented as merchant steamer *Southern Belle* 4 October 1865 and burned 11 October 1876 at Plaquemine, La.

Gamage (IX-227) was launched as *William B. Allison* under Maritime Commission contract by California Ship Building Corp., Los Angeles, Calif. 8 March 1943. She was acquired by the Navy and renamed *Gamage* 30 July 1945 for use as floating storage for lubricants and drummed petroleum products at Ulithi. She was placed out of service 8 February 1946 and returned to WSA 5

April. She was sold to China Merchants & Engineers, Inc. 19 February 1948.

Gambier Bay

A bay in the coast of Alaska.

(CVE-73: dp. 7,800; l. 512'3"; b. 65'; t. 108'1"; dr. 22'6"; s. 19 k.; cpl. 860; a. 1 5", 16 40mm.; cl. *Casablanca*)

Gambier Bay, originally classified AVG-73, was reclassified ACV-73 on 20 August 1942 and again reclassified CVE-73 on 15 July 1943; launched under a Maritime Commission Contract by the Kaiser Shipbuilding Co., Vancouver, Wash., 22 November 1943; sponsored by Mrs. H. C. Zitzewitz of Oswego, Oreg.; and commissioned at Astoria, Oreg., 28 December 1943, Captain Hugh H. Goodwin in command.

After shakedown out of San Diego, the escort carrier sailed 7 February 1944 with 400 troops embarked for Pearl Harbor, thence to rendezvous off the Marshalls where she flew 84 replacement planes to famed carrier *Enterprise* (CV-6). She returned to San Diego via Pearl Harbor, ferrying aircraft for repairs and qualified carrier pilots off the coast of Southern California. She departed 1 May to join Rear Admiral H. B. Sallada's Carrier Support Group 2 (TG 52.11), staging in the Marshalls for the invasion of the Marianas.

Gambier Bay gave close air support to the initial landings of Marines on Saipan 15 June 1944, destroying enemy gun emplacements, troops, tanks, and trucks. On the 17th her combat air patrol shot down or turned back all but a handful of 47 enemy planes headed for her task group and her gunners shot down 2 of the 3 planes that did break through to attack her.

The following day, warning of another air attack sounded. As her fighters prepared to take off, they found intense antiaircraft fire of the entire task group covering their flight path. Nevertheless, in a harrowing feat termed by Captain Goodwin as "another shining example of the adaptability and courage of the young men of our country," eight pilots of Composite Squadron 10 did take off to help repulse the aerial onslaught.

Gambier Bay remained off Saipan, repulsing aerial raids and launching planes which strafed enemy troop concentrations, bombed gun emplacements, and supported marines and soldiers fighting ashore. Meanwhile, American carriers slashed the carrier air strength of the combined Japanese Mobile Fleet and turned it back in defeat in the Battle of the Philippine Sea. *Gambier Bay* continued close ground support operations at Tinian (19-31 July), then turned her attention to Guam, where she gave identical aid to invading troops until 11 August.

After a respite for logistics in the Marshalls, *Gambier Bay* spent 15 to 28 September supporting the amphibious attack which drove ashore and captured Peleliu and Angaur, Southern Palaus. She then steamed by way of Hollandia, New Guinea, to Manus, Admiralties, where the invasion of the Philippines was staged. Screened by four destroyer escorts, *Gambier Bay* and *Kitkun Bay* (CVE-71) escorted transports and amphibious landing ships safely to Leyte Gulf before joining Rear Admiral Clifton A. F. Sprague's escort carrier task unit 19 September off Leyte.

The task unit comprised six escort carriers, screened by three destroyers and four destroyer escorts, and was known by its voice radio call as "Taffy 3." Under the command of Rear Admiral Thomas L. Sprague, eighteen escort carriers, divided into three "Taffy" units, maintained air supremacy over Leyte Gulf and eastern Leyte. During the invasion their planes destroyed enemy airfields, supply convoys, and troop concentrations; gave troops driving inland vital close air support; and maintained combat air patrol over ships in Leyte Gulf. While "Taffy 1" and "Taffy 2" were respectively stationed off northern Mindanao and off the entrance to Leyte Gulf, "Taffy 3" steamed off Samar.

Meanwhile, the Japanese threw their entire fleet against American naval power in a desperate gamble to destroy

the large concentration of American shipping in Leyte Gulf. Powerful enemy forces, comprised of carriers, battleships, cruisers, and destroyers, converged on the Philippines in a three pronged attack to the south, center, and north. The Japanese Southern Force met disaster before dawn 25 October as it tried to drive through Surigao Strait to join the Center Force off Leyte Gulf. While steaming through the Sibuyan Sea enroute to San Bernardino Strait, the Center Force was hit hard on the 24th by hundreds of planes from Admiral Halsey's fast attack carriers. After the Battle of Sibuyan Sea, Admiral Halsey no longer considered the Center Force a serious menace, and he sent the carriers north to intercept decoy carriers of the Japanese Northern Force off Cape Engaño.

These swift moving events left the escort carriers of "Taffy 3" as lone sentinels off Samar, and unaware of the nighttime movement of the Center Force. However, shortly after sunrise 25 October, a gap in the morning mist disclosed the pagoda-like masts of enemy battleships and cruisers on the northern horizon. The still dangerous enemy force of more than 20 ships had slipped undetected through San Bernardino Strait and down the fog-shrouded coast of Samar, bound for Leyte Gulf.

Despite the probable outcome of an engagement between two so unequal surface forces, the presence of enemy ships in Leyte Gulf was unthinkable; and "Taffy 3" turned to do battle against the enemy. Immediately, an urgent call for help went out from "Taffy 3" as the escort carriers steamed eastward and launched planes that performed seemingly impossible feats: scoring hits with torpedoes, bombs, and strafing until their ammunition ran out, then making dummy runs to break the enemy formation and delay its advance. Smoke was laid down to cover their running fight as the gallant destroyers docked in and out of the mist and smoke to charge battleship, cruiser, and destroyer formations point-blank until ordered back to cover the escort carriers with more smoke. The lone 5-inch gun of *Gambier Bay* spat out at an enemy cruiser that was shelling her; and destroyer *Heerman* (DD-532) made an unsuccessful effort under the combined fire of the heavy enemy ships to save *Gambier Bay*.

Gambier Bay was soon dead in the water as three cruisers closed to point blank range. Fires raged through the riddled escort carrier. She capsized and sank at 0907, 25 October 1944 with the majority of her nearly 800 survivors rescued by landing and patrol craft dispatched from Leyte Gulf. Three other ships, gallantly fighting to the end, went down: *Hoel* (DD-533); *Samuel B. Roberts* (DE-413); and *Johnston* (DD-557). The latter used only her 5-inch guns in a dummy torpedo run that thwarted the torpedo attack of an entire Japanese Destroyer Squadron lead by a cruiser.

Aircraft from "Taffy 2" joined in the epic battle off Samar. The events that followed are best described in Admiral Sprague's own words: "At 0925 my mind was occupied with dodging torpedoes when near the bridge I heard one of the signalmen yell 'They're getting away!' I could hardly believe my eyes, but it looked as if the whole Japanese fleet was indeed retiring. However, it took a whole series of reports from circling planes to convince me. And still I could not get the fact to soak into my battle-numbed brain. At best, I had expected to be swimming by this time."

Gambier Bay and other ships of "Taffy 3," aided by planes of "Taffy 2," had stopped the powerful Japanese Center Force and inflicted a great loss. Two enemy cruisers were sunk and much damage inflicted on the other ships of this overwhelmingly powerful surface fleet, turned back in the last analysis by the indomitable spirit of the men of the escort carriers and their screen of destroyers and destroyer-escorts.

Gambier Bay received four battle stars for service in World War II and shared in the award of the Presidential Unit Citation to "Taffy 3" for extraordinary heroism in the battle off Samar.

Named jointly in honor of two brothers, heroes of the War of 1812.

Lt. Peter Gamble, was born in Bordentown, N.J.; appointed midshipman 16 January 1809; served on Macdonough's flagship *Saratoga* in the Battle of Lake Champlain, being killed in action while in the act of sighting his gun 11 September 1814. Macdonough deplored his loss and commended his gallantry in action.

Lt. Col. John M. Gamble, USMC, was born in Brooklyn, N.Y., in 1791; appointed 2d Lt. 16 January 1809; and distinguished himself by coolness and bravery in many enterprises, including critical encounters with hostile natives of the Marquesa Islands during the absence of frigate *Essex* in 1813, and sailing a prize of *Essex*, with only a four-man crew and without benefit of a chart in a remarkable 17-day voyage to the Hawaiian Islands. He was breveted a Lt. Col. 3 March 1827 and died in New York 11 September 1836.

(DD-123: dp. 1090; l. 314'5"; b. 31'9"; dr. 8'8"; s. 35 k.; epl. 113; a. 4 4", 2 3", 2 .30 cal. mg., 12 21" tt., 1 dcp, 2 dcp.)

Gamble (DD-123) was launched 11 May 1918 by the Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; sponsored by Miss Evelyn H. Jackson, relative of Secretary of the Navy Josephus Daniels; and commissioned at Norfolk 29 November 1918, Comdr. H. J. Abbett in command.

After shakedown training out of the Virginia Capes, *Gamble* sailed from New York 13 January 1919 to take part in maneuvers off Cuba; Key West, Fla.; and the New England seaboard until June 1919. Following overhaul at Norfolk, she joined the Pacific Fleet at San Diego 7 August 1919 and operated along the Pacific coast until placed in reserve status in the Mare Island Navy Yard 1 December 1919. In October 1920, she came out of reserve and assisted the flotilla in torpedo practice; maneuvered with the Battle Force; and cruised along the California coast as a training ship for reservists. She decommissioned at San Diego 17 June 1922.

Gamble recommissioned 24 May 1930; was reclassified (DM-15) on 13 June, and converted into a light minelayer in the Mare Island Navy Yard. Arriving Pearl Harbor from the West Coast, she became flagship of Mine Squadron 2 in July 1930 and later served as flagship of Mine Division 1, Mine Squadron 1. She cruised Hawaiian waters instructing Naval Reservists in mine warfare and acted as plane guard and radio tracker for seaplanes, each year participating in fleet readiness and fleet problems until she returned to San Diego where she decommissioned 22 December 1937. Recommissioning 25 September 1939 as Europe was plunged into World War II, she joined Mine Division 5 in patrol and schoolship duties out of San Francisco. In April 1941 she proceeded to Pearl Harbor for war readiness patrol in Hawaiian waters as a unit of Mine Division 2.

On 7 December 1941, *Gamble* had returned from off-shore patrol, when her peaceful Sunday morning routine was broken by the first of the Japanese carrier-based planes which pounded American ships in the harbor. *Gamble's* gunners joined the fire of other warships and had the satisfaction of seeing one enemy plane fall into the water on her port beam. After the attack she took antisubmarine patrol station in the screen of the carrier *Enterprise* (CV-6), and later guarded the approaches to Pearl Harbor. In mid-February 1942 she headed south in the escort for a convoy to Pago Pago, Samoa; then joined *Ramsey* in laying a protective mine field off Tutuila. At the end of March the two minelayers shifted to the Fiji Islands, to lay a minefield in Nandi waters 7-14 April. Returning to Pearl Harbor for heavier armament, *Gamble* helped safeguard convoys to Midway during the time of that crucial and historic battle, then headed south with *Breese* and *Tracy* to lay a defensive mine field off the

entrance to Second Channel, Espiritu Santo, New Hebrides Islands.

On 27 August 1942 *Gamble* joined a task unit headed to Guadalcanal. Although designated a destroyer-minelayer, the old four-piper still carried antisubmarine gear. On the morning of 29 August, when her lookouts spotted a large enemy submarine, she immediately went into action. After several depth charge attacks, *Gamble* ran through large oil slicks, found deck planking, and observed a large air bubble break the surface. Later her victim was identified as Japanese submarine *I-123*, whose dying radio had signaled "under heavy enemy attack." That afternoon she proceeded at full speed to Nura Island where she rescued four stranded aviators from aircraft carrier *Saratoga*. Continuing to aid in the bitter struggle for Guadalcanal, she transported 158 marines to the island 31 August, patrolled off Lunga Roads, then on 5 September assisted in freeing grounded transport *William Ward Burrows* (AP-6) and escorted her to Espiritu Santo, New Hebrides Islands. Her patrol, escort, and transport duty continued as the drive for Guadalcanal pressed on to victory.

Five minutes after midnight, 6 May 1943, *Gamble*, with minelayers *Preble* and *Breese* turned simultaneously in rain squalls which broke at times to disclose each to the other in perfect formation. Making 15 knots, each ship dropped a mine every 12 seconds, planting over 250 mines in 17 minutes across Blackett Strait, the western entrance to Kula Gulf and directly in the favorite route of the worrisome "Tokyo Express." The ships then sped north to join the protective screen of Rear Admiral Ainsworth's cruiser-destroyer force before refueling at Tulagi. On the night of 7-8 May, four Japanese destroyers entered the mined waters. One, *Kurashio*, went down, two others, *Oyashio* and *Kagero*, were badly damaged and sent out calls for help that brought the fourth destroyer *Michishio* to the scene. Aircraft, alerted by a coastwatcher, intercepted the rescue operation, sinking the two destroyers and sending *Michishio* limping back to port, badly damaged.

On 30 June 1943, during the invasion of New Georgia, *Gamble* laid a string of mines off the beachhead, before returning to Tulagi. In July welcome orders sent her back to the United States for overhaul. She headed west again 20 September 1943. Her minelaying duties then brought her to Empress Augusta Bay 1-2 November 1943 to support landing operations; Bougainville Strait, 7-8 November; Purvis Bay, Florida Island, 23-24 November, thence to the New Hebrides Islands for escort duty among the Solomons until she returned to San Francisco 12 October 1944.

After overhaul and refresher training, *Gamble* departed San Diego 7 January 1945, en route via Hawaii and the Marshalls to Iwo Jima where she arrived 17 February, to lend fire support to the various sweeping units, and to explode floating mines. During her shelling a direct hit on an ammunition dump exploded the enemy magazine like a giant firecracker at the foot of Mt. Surabachi.

On 18 February 1945 *Gamble* was hit just above the waterline by two 250-pound bombs. Both firerooms immediately flooded and she became dead in the water with two holes in her bottom as all hands fought raging fires, jettisoned topside weight and shored damaged bulkheads. Five men were killed, one missing in action, and eight wounded. As marines stormed the shores of Iwo Jima the next day, *Gamble* was taken in tow by *Dorsey* who turned her over to *LSM-126* for passage to Saipan. She arrived at Saipan 24 February and went alongside *Hamul* for repair.

Some hope remained for *Gamble* for a long time, but on 1 June 1945 she was decommissioned, and on 16 July she was towed outside Apra Harbor, Guam, and sunk.

Gamble received seven battle stars for service in World War II.

Game Cock, see *Vesuvius* (AE-15)

Gamma

The third letter in the Greek alphabet.

(ScStr: t. 36; l. 65'; b. 14'; dph. 6'; s. 12 k.; a. (Nov. 1864) 8 r., 1 torp.)

Gamma was built in 1863 as steamer *R. F. Loper* at Philadelphia, Pa.; purchased there 3 June 1864; renamed *Gamma*, but was also called *Tug Number 3* and *Picket Boat Number 3*.

Gamma was assigned as a picket boat in the James River, Ens. Henry F. Curtis in command. She arrived at New Bern, N.C., from the James River 3 April 1865. Placed at the disposal of General W. T. Sherman's quartermaster, she served in the sounds of North Carolina until close of the Civil War. She was sold by public auction at New York 25 October 1865 to D. Trundy. Redocumented as merchant steamer *Peter Smith* 13 December 1865, she burned at New York 9 May 1893.

Gammon, Sgt. Archer T., see *Sgt. Archer T. Gammon* (AK-243)

Ganadoga

Former Iroquois villages of the Oneida Tribe in upper state New York and on the Canadian shore of Lake Ontario.

(YTB-390: dp. 237; l. 100'; b. 26'; dr. 9'7" s. 12 k.; epl. 10; a. 2 .50 cal. mg.; cl. *Sassaba*)

Ganadoga, originally designated YTB-390, was reclassified YTB-390 on 15 May 1944; laid down 2 August 1944 by Consolidated Shipbuilding Corp., Morris Heights, N.Y.; launched 9 September 1944; and placed in service 15 December 1944.

Ganadoga was assigned to 5th Naval District, Norfolk, and performed miscellaneous harbor operations for the next 18 years. She was reclassified YTM-390 on 1 February 1962, and in December of that year she was transferred to the 6th Naval District at Charleston, S. C. At present *Ganadoga* is still active in the 6th Naval District.

Gandy

Seaman Second Class Andrew Jackson Gandy was born 20 October 1924 in Chattanooga, Tenn.; enlisted 21 February 1942; and gallantly gave his life on board cruiser *San Francisco* in a heroic gunnery action against Japanese torpedo planes during the Battle of Guadalcanal, 12-13 November 1942. He was posthumously awarded the Navy Cross.

(DE-764: dp. 1240; l. 306'; b. 36'8"; dr. 8'9"; s. 21 k.; epl. 186; a. 3 3", 2 40 mm. 8 20 mm., 3 tt., 2 dct, 8 dep, 2 dep. (h.h.); cl. *Cannon*)

Gandy was launched 12 December 1943 by the Tampa Shipbuilding Co., Tampa, Fla.; sponsored by Miss Ruby Gandy, sister of Seaman Gandy; and commissioned at Tampa 7 February 1944, Lt. Comdr W. A. Sessions in command.

Gandy, following shakedown training in Bermuda waters, joined Escort Division 22 at New York. After escorting *Yukon* (AF-9) to Norfolk, she departed New York 15 April 1944 as part of the escort for fast tanker convoy CU-21 bound for Northern Ireland. The second day of the voyage at 0806, 16 April, German submarine *U-550* torpedoed and sank tanker *Pan Pennsylvania*. During recovery of survivors by *Joy*, *Gandy* and *Peter-son* at 0950, *Joyce* made sound contact with the U-boat and delivered a depth charge attack. When *U-550* surfaced about 600 yards on *Gandy's* starboard bow, Comdr. Sessions ordered "Right full rudder, come to 320, open fire and stand by to ram."

Gandy headed for the submarine's conning tower but the U-boat's deft maneuvers caused the escort destroyer to hit it 30 feet from the stern. *Gandy* hauled clear, silenced the submarine's machine gun battery with a short burst of gunfire, then observed the Germans abandoning ship. *Joyce* recovered twelve survivors as *Gandy*, with nearly four feet of her bow strake gone and several plates buckled, assessed her damage. *U-550* was shaken by a muffled explosion and sank. Four of *Gandy's* men were injured in the fight.

Gandy continued with the convoy which reached Lisahally, Northern Ireland, 26 April 1944. She returned to New York 12 May and helped escort nine more convoys safely out of New York to Lisahally and Liverpool by 24 May 1945 when she returned from the last of these voyages. After repairs in the New York Naval Shipyard, she sailed 8 June for brief training in Cuban waters before proceeding to Hawaii. She departed Pearl Harbor 6 August 1945 en route to the Philippines via the Marshalls and the Carolines, then sailed from Leyte on the 24th in the escort of an occupation force convoy which entered Tokyo Bay 1 September. Following the formal signing of the surrender of Japan, the next day she escorted a convoy from Okinawa to Yokohama, Japan, and then departed 16 November to serve the Philippine Sea Frontier on weather patrol between Manila, Samar, and Manicani.

Gandy departed Samar 1 February 1946 and reached Norfolk, via Hawaii, San Pedro, and the Panama Canal, 26 March 1946. She decommissioned at Green Cove Springs, Fla., 17 June 1946. She was in reserve status until 10 January 1951 when she was transferred to Italy under the Military Assistance Program. She serves the Italian Navy under the name of *Altair*.

Gandy received one battle star for service in World War II.

Ganges

The principal river of India, flowing into the Bay of Bengal. A merchant name retained.

(Ship: t. 504; l. 116'4"; b. 31'4"; dph. 15'8"; cpl. 220; a. 26 9-pdrs.)

Originally a fast sailing merchantman, *Ganges* was built in Philadelphia in 1794 for the West Indies trade; purchased at Philadelphia 3 May 1798 when hostilities with France became imminent; and hastily fitted out to become the first man-of-war to fit out and get to sea under the second organization of the Navy.

Ganges sailed from Philadelphia 24 May 1798 under Captain Richard Dale, directed to "seize, take and bring into a port of the United States" French armed ships "committing depredations" within one marine league of the coast between the Capes of Virginia and Long Island. On 13 July further orders authorized her to take any French armed ship wherever found, but she continued patrol between Cape Henry and Long Island for the protection of the large seaport cities. On 30 July *Ganges* was directed to return to Philadelphia for refitting, but put into New York instead because of fever and plague at the former city.

In mid-September 1798 Captain Thomas Tingey relieved Captain Dale and on 7 December his ship was ordered to the Windward Passage between Cuba and Hispaniola to join the squadron protecting the Jamaican trade. Cruising in these waters with *General Pinkney* and *South Carolina*, she guarded American merchantmen from piratical seizure by armed ships of France and "all armed vessels acting without commission."

On 6 January 1799 off the Island of Tortuga, *Ganges* fell in with the sloop *Ceres*, off her course for no apparent reason and suspected of heading for illegal trade at Cap François. The captain was detained, questioned, and reported to intelligence. The incident occasioned the following passage from Tingey's letter of concern to Benjamin Stoddert, the Secretary of the Navy: "There is one

kind of business carried on here at present, which I conceive behoves us much to suppress. Many American vessels are said to have arrived here, with provisions, etc., in a day or two their papers are chang'd by a pretended sale, and they go off for French ports—in some instances, without shifting or discharging their cargoes—return here with French produce, assume their American papers, and clear from this for home. I shall endeavor to ascertain and identify some of the actors in this nefarious business and give you information."

On 21 February officers of the 44-gun English frigate *Surprise* boarded *Ganges* off Cape Nichola Mole, Hispaniola, and demanded all Englishmen aboard. Tingey firmly replied: "A public ship carries no protection but her flag. I do not expect to succeed in a contest with you; but I will die at my quarters before a man shall be taken from the ship." The crew gave three cheers, ran to quarters, and called for "Yankee Doodle"; *Surprise* departed.

Having returned home for repairs in March, *Ganges* was ordered to convoy *Kingston*, carrying American Consul General Dr. Stevens, to talk with Toussaint in Haiti. She then cruised the Caribbean from Havana to Puerto Rico, St. Thomas, St. Kitts, St. Bartholomews, Santo Domingo, Barbuda, and Jamaica.

On 16 June *Ganges*, with *Norfolk*, captured French privateer *Vainquere* (formerly British *Harlequin*) off Saint Bartholomews. Eighty-five men were taken prisoners and the prize sent to Norfolk under Captain Pitcher. In July she captured the small *Eliza*; on 5 August *La Rabateuse*, a French "letter of marque" laden with sugar and cotton; and on 16 August retook American schooner *John* from the French.

The hurricane season approached and it was thought *Ganges* should return to the United States, but Tingey proudly reported his ship could withstand the Caribbean storms: "No ship in the service . . . will be found better able to sustain this violence than the *Ganges*—nor a crew that can, with more alacrity, bring a ship to a state of preparation to bear heavy weather. . . . Believe me Sir, that she has outsailed every ship and vessel of the United States."

On 20 August *Ganges* captured a small French letter of marque off St. Thomas. She later captured *L'Eugene* with 28 men and on 2 October recaptured American schooner *Laurel*, called *L'Esperance* by the French.

Ganges returned to Philadelphia in the fall and Captain Tingey was relieved by Captain John Mulloony on 16 November. That December she sailed for the West Indies, again convoying American merchantmen until May 1800 when she returned to the States.

On 25 May 1800 Captain Mulloony received orders to proceed to Havana, and *Ganges* shortly departed Philadelphia for another eventful cruise. On 19 July she captured schooner *Prudent*; on the 20th recaptured American brigantine *Dispatch*; and the 21st, the third successful day in a row, took schooner *Phoebe*. On 28 July *Ganges* captured French privateer *La Fortune*. In September, her crew ridden with fever, she returned to the United States.

Sailing again 31 January 1801, *Ganges* proceeded with a convoy for Havana. En route she was severely damaged by a storm and put into Basseterre Roads, St. Christopher. Here, Commodore John Barry surveyed the ship on 2 March and found her "unfit for sea." Being unable to continue her voyage, *Ganges* remained on the Guadeloupe station until May, then proceeded north with a convoy which reached Philadelphia early in June. On 10 June 1801, under provision of the Peace Establishment Act, the Navy agent at Philadelphia was ordered to prepare *Ganges* for sale. She was sold prior to December 8 for \$21,000.

Gannet

A large, white, web-footed sea bird.

I

(AM-41: dp. 950; l. 187'10"; b. 35'6"; dr. 9'10"; s. 14 k.; cpl. 72; a. 2 mg.)

The first *Gannet* was laid down 1 October 1918 by the Todd Shipyard Corp., N.Y.; launched 19 March 1919; sponsored by Miss Edna Mae Fry; and commissioned at the New York Navy Yard 10 July 1919, Lt. J. E. Armstrong in command.

Gannet departed New York 11 August 1919 and reached San Diego, Calif., 2 November after training out of Guantanamo Bay, Cuba. A unit of the Train, Pacific Fleet, she based at San Diego and was subsequently assigned to Aircraft Squadron, Battle Fleet, and later to Base Force, U.S. Fleet. Serving primarily as a tender to aircraft squadrons, she also performed towing, transport, and passenger service along the western seaboard, and made periodic cruises as tender to aircraft units participating in Army-Navy exercises, fleet problems, and maneuvers off Hawaii, the Panama Canal, and in the Caribbean Sea. She spent the summer months of 1926, 1929, and 1932-35 as tender to aerial survey expeditions to Alaska and the Aleutian Islands. On 30 April 1931 *Gannet* was designated a minesweeper for duty with aircraft. She was reclassified AVP-8, 22 January 1936.

Gannet departed San Diego 18 August 1937 and based at Coco Solo, Panama, as tender for aircraft squadrons of the Scouting Force until 1 June 1939. Arriving Norfolk 9 June, she then became tender to Patrol Wing 5, Aircraft Scouting Force. In a series of cruises from Norfolk, she tended Navy patrol planes based at Key West, Bermuda, Santa Lucia, and Trinidad; then steamed north 22 September 1941 to establish an advance seaplane base at Kungnait Bay, Greenland (6-23 October). She served on plane guard station in the Davis Strait for an Iceland-Argentia ferry flight before returning to Norfolk 11 November.

Gannet was tending patrol planes at Hamilton, Bermuda, when the Japanese struck Pearl Harbor. She returned to Norfolk 12 December and sailed 21 January 1942 for Bermuda to serve as tender to Patrol Squadron 74, which provided air patrol and coverage in approaches to that base. *Gannet* also was communication center for all aircraft operations in that area.

Departing Bermuda 2 June, *Gannet* joined British ship HMS *Sumar* the next day in an unsuccessful search for the torpedoed merchantman *Westmorland*. Ordered back to base the afternoon of 6 June, the two warships became separated during the night. Before dawn 7 June, northwest of Bermuda, *Gannet* was hit by submarine torpedoes. She went down so rapidly that her decks were

awash within 4 minutes, and she carried 14 of her crew down with her. Her commanding officer, Lt. Francis E. Nuessle, fought free of the suction, joined other survivors, and ordered the life rafts tied together in the heavy seas with wounded hoisted on board and the uninjured hanging on the sides. Twenty-two men were rescued by two planes of Patrol Squadron 74 which made the daring landing in heavy seas. *Hamilton* (DMS-18), led to the scene by one of the same planes, rescued 40 others.

II

(MSC-290: dp. 378; l. 145'5"; b. 27'3"; dr. 8'6"; s. 13 k.; cpl. 37; a. 2 20mm.; cl. MSC-280)

The second *Gannet* was laid down 1 May 1959 by the Tacoma Boatbuilding Co., Inc., Tacoma, Wash.; launched 2 May 1960; sponsored by Mrs. Frank P. Luongo, Jr.; and commissioned in the Puget Sound Naval Shipyard 14 July 1961, Lt. E. L. Gaylor in command.

After shakedown, *Gannet* departed Puget Sound 4 August and arrived Long Beach, Calif., 9 August. As a unit of Mine Division 92, she operated off southern California and conducted exercises in mine countermeasures. During the first 2 weeks in June 1962 she participated in Joint Task Force 8 nuclear tests off the California coast. Local operations out of Long Beach continued until 2 July when she departed for Japan via Pearl Harbor, Midway, and Guam, arriving Sasebo 13 August.

After type training off the Japanese coast with Mine Division 32, she departed Sasebo 1 October for Chinhae, Korea, where she joined in mine force exercises with units of the Republic of Korea Navy. After returning to Sasebo 7 October, she steamed to Okinawa, Hong Kong, and Taiwan before returning to Japan early in November for additional type training that included schoolship service out of Yokosuka.

During the next 2 years *Gannet* continued operations out of Sasebo. Mine warfare exercises and training in mine countermeasures sent her to Korea, Okinawa, Taiwan, Hong Kong, and the Philippines. During July and August 1964 she performed special mine countermeasure operations in the South China Sea while supporting U.S. naval operations along the coast of Vietnam. She returned to the South China Sea in February 1965; participated in a joint amphibious exercise with ships of the Thailand Navy; then steamed to the Vietnamese coast in mid-April to resume special duty.

Gannet returned to Sasebo 24 May and for more than 6 months operated along the coast of Japan. Early in December she returned to the coast of Vietnam, where she joined Operation "Market Time" as a coastal surveil-

USS *Gannet* (AVP-8) at John Glacier, near Juneau, Alaska, in 1936

lance patrol ship. During her patrols she inspected hundreds of Vietnamese fishing boats in an effort to control the infiltration of Viet Cong troops and supplies. In addition, she provided treatment for South Vietnamese fishermen requiring medical aid. She departed Vietnam 14 January 1966 and returned to Sasebo the 29th.

She served along the Japanese coast until 10 April when she again sailed for South Vietnam, arriving 10 days later to resume "Market Time" patrols. During the remainder of the year *Gannet* made three patrol and surveillance deployments along the Vietnamese coast. In addition she participated in SEATO minesweeping exercises in the Gulf of Thailand. At present she remains assigned to the Pacific Fleet and, operating out of Sasebo, continues to support the forces of freedom against Communist aggression in Southeast Asia.

Gansevoort

Commodore Guert Gansevoort, born in Gansevoort, N.Y., 7 June 1812, was appointed a Midshipman in the Navy 4 March 1823. Subsequently he served in the Mediterranean on board *Constitution*, *North Carolina*, and *Ohio*; took part in attacks on Tuxpan and Tabasco during the Mexican War; landed seamen and marines from *Decatur* to defend Seattle, Washington Territory from hostile Indians in January 1856; was in charge of ordnance at the New York Yard 1861-63 helping fit out ships which had been acquired for blockade duty; and commanded ironclad *Roanoke* in the last year of the Civil War. He retired 28 January 1867 and died 15 July 1868 at Schenectady, N.Y.

(DD-608; dp. 1,620; l. 348'4"; b. 36'1"; dr. 17'4"; s. 37.5 k.; cpl. 276; a. 4 5", 6 20mm., 5 21" tt., 6 dp.; cl. *Benson*)

Gansevoort was laid down 16 June 1941 by the Bethlehem Steel Co., San Francisco, Calif.; launched 11 April 1942; sponsored by Mrs. Robert C. Sofio, wife of a great-grandnephew of Commodore Gansevoort; and commissioned at San Francisco 25 August 1942, Lt. Comdr. E. A. McFall in command.

After shakedown, *Gansevoort* departed San Francisco 18 November 1942 in the screen of a convoy bound via Hawaii to Noumea, New Caledonia, where she arrived 9 December. Assigned to the South Pacific forces, she spent the next three months giving convoy protection to troop and supply ships reinforcing Guadalcanal from New Caledonia; the New Hebrides; Wellington and Auckland, New Zealand.

This duty terminated 18 March 1943 when *Gansevoort* departed Espiritu Santo, New Hebrides, to become a unit of Rear Admiral Charles H. Morris' Northern Covering Group of cruisers and destroyers in the approaches to Attu, Aleutian Islands. She took part in the preinvasion bombardment of Attu 26 April; made several depth charge attacks on a Japanese submarine in that area 14 May for unconfirmed results; screened convoys on the northern and southern approaches around the Aleutian chain; and twice participated in the bombardment of Kiska (2 and 12 August).

She departed Kulka Bay 24 August for repairs in the Puget Sound Naval Shipyard until 28 September, then steamed via Hawaii with Destroyer Division 27 to Wellington, New Zealand. Here, *Gansevoort* became a unit of Rear Admiral Hill's Southern Attack Force which carried Major General Julian C. Smith's 2d Marine Division to Tarawa Atoll, Gilbert Islands.

Gansevoort provided continuous gunfire support to marines during the initial landings on Tarawa 20 November, closing the beach to blast enemy strongpoints with point-blank fire. On 24 November she sped to support Marine forces occupying Apamama Atoll. After embarking Marine wounded, she opened an accurate bombard-

ment that destroyed the entire Japanese garrison on that atoll. She conducted antisubmarine patrol around Tarawa until 4 December, then proceeded via Hawaii to San Francisco where both her high pressure turbines were replaced.

Gansevoort departed San Francisco 13 March 1944 to join the screen of a convoy bound from Hawaii to Majuro Atoll in the Marshalls where she arrived 1 April. During several months of blockade and antisubmarine patrol in waters off the bypassed enemy garrisons in the eastern Marshalls, she rescued several marine aviators. Once she closed to within 500 yards of a beach to shell shore batteries while her whaleboat picked up an aviator. She also helped reduce enemy coastal defenses by assisting in the bombardment of Mille Atoll (26 May and 9 June) and Taroa Atoll (8 August). Detached from this duty 19 August, she replenished in Pearl Harbor, then sailed via New Guinea to Manus, Admiralty Islands, to join forces staging for the liberation of the Philippine Islands.

Gansevoort joined Destroyer Squadron 48 in guarding transports of Vice Admiral T. S. Wilkinson's Southern Attack Force off the beachhead of Leyte 20-21 October. From 27 October until 13 December she escorted troop and supply convoys between New Guinea and the Philippines. On 27 December she joined a large supply convoy at Dulag, Leyte. Comprising 99 naval and merchant ships, this important supply convoy departed the 27th to carry men and material to Mindoro. Steaming via Surigao Strait, the ships came under heavy, constant attacks from Japanese bombers and torpedo and suicide planes. As the convoy steamed through the Mindinao and Sulu Seas, the enemy attacked by day and night between 28 December and 30 December and created nearly 72 hours of hell and hard work for sailors in nearly a hundred ships.

Called to General Quarters 49 times in 72 hours, *Gansevoort*'s gunners splashed 5 enemy planes and assisted in splashing 12 others. Although enemy planes sank one merchant ship and one LST and severely damaged a second merchant ship and aviation tender *Porcupine* (IX-126), their desperate attacks could not halt this powerful force.

She entered Mangarin Bay, Mindoro, with the convey the morning of 30 December 1944. That afternoon a suicide plane which crashed *Gansevoort*'s main deck to port. A terrific explosion cut steering and electric power, started several fires, and killed or wounded 34 of her crew. Damage control parties could not get aft as her main deck was blown upward.

Wilson (DD-408) and *Philip* (DD-498) helped fight her fires, then she was towed to the Mindoro PT base anchorage. Here *Gansevoort* was given the unusual assignment of knocking off the stern of the suicide-damaged aviation tender *Porcupine* with torpedoes in an attempt to extinguish a fire before it reached the aviation gasoline stowed forward. The water was too shoal for torpedoes to be effective, and in spite of one torpedo hit, fire ignited the gasoline, spreading flames across the water to endanger *Gansevoort*.

Gansevoort was towed to safety in another anchorage off White Beach. With living quarters gutted, her crew made temporary camp on shore. Her engineering officer, damage control officer, and some twenty men remained on board working to save the ship. Despite recurring air attacks and several near misses by bombs, the destroyer escaped further damage and was made seaworthy after a full month of hazardous and exhausting repairs.

Despite periodic air attacks, salvage operations continued until 2 February 1945 when *Gansevoort* was taken in tow for San Pedro Bay, thence to Ulithi where emergency repairs were completed by 21 April. Steaming via Pearl Harbor, she returned to San Francisco 19 May for battle damage repairs. She then departed San Diego for the East Coast 3 October, arriving New York 20 October.

After participating in the Navy Day celebration in New York, *Gansevoort* departed 1 November for inactivation overhaul in the Charleston Naval Shipyard. She

decommissioned there 1 February 1946 and entered the Atlantic Reserve Fleet. At present she is berthed at Orange, Tex.

Gansevoort received four battle stars for World War II service.

Gantner

Boatswain's Mate Samuel Merritt Gantner, born 24 December 1919 in Fresno, Calif., enlisted in the Navy 12 May 1937. While serving as gun captain on battleship *Nevada* he was killed in action during the attack on Pearl Harbor, 7 December 1941. He was posthumously commended for distinguished devotion to duty and extraordinary courage in action against the Japanese aerial raiders.

(DE-60: dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 23.5 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 3 21' tt.; 2 dct., 8 dcp. 1 dcp. (h.h.), cl. *Buckley*)

Gantner (DE-60) was launched 17 April 1943 by the Bethlehem Steel Co., Quincy, Mass.; sponsored by Mrs. Samuel M. Gantner, widow of Boatswain's Mate Gantner; commissioned at the Boston Navy Yard 23 July 1943, Lt. Comdr. Barklie M. Henry in command.

After shakedown out of Bermuda, *Gantner* escorted SS *George Washington* from Puerto Rico to New York, arriving 1 December 1943. She departed New York 26 December 1943 as a part of the escort for a convoy which reached Londonderry, Northern Ireland 8 January 1944. She returned to New York 24 January and by 8 October had made seven more trans-Atlantic escort voyages from that port to Londonderry.

Following repairs in the Boston Naval Shipyard and battle practice in Casco Bay, *Gantner* departed Boston 3 November 1944 escorting *Pinto* (ATF-90) and towing *ARDC-1* to Cristobal, Canal Zone. She then proceeded to Miami, Fla., to serve as floating schoolship in waters extending to the Bahamas and Guantanamo Bay, Cuba. She departed Miami 19 February 1945 for conversion to a high speed transport (APD-42) in the New York Naval Shipyard. She was reclassified (APD-42) 23 February 1945.

Gantner departed New York 14 May 1945 for amphibious warfare landing exercises in the Chesapeake Bay area until 2 June, then proceeded via the Panama Canal and San Diego to Pearl Harbor where she reported for duty with the 5th Amphibious Force, U.S. Pacific Fleet, 28 June. After training underwater demolition teams in Maalea Bay until 3 August, she embarked UDT-3 at San Diego and sailed for the Far East via Hawaii and the Marshall Islands to Japan, entering Tokyo Bay 4 September. Her frogmen reconnoitered beaches and reported on suitability of landing Army occupation forces at Shioyama Wan and Ominato Ko, Honshu, Japan. From 30 September to 7 October 1945, her swimmers made surveys for the Port Director, Otaru, Hokkaido with the help of United States Army advance parties ashore.

Gantner departed Tokyo Bay 12 October 1945 to embark a returning Marine contingent at Apra Harbor, Guam, and sailed thence via the Marshalls and Hawaii to San Diego where she disembarked military passengers 1 November 1945. For the next three years she was based at San Diego, largely employed as an amphibious warfare training ship for marines. From 26 January to 6 March 1946 she made a cruise from San Diego with the 1st Marine Division Reconnaissance Detachment for cold weather maneuvers that took her to Kodiak, Juneau, Tolstoi Bay, and Clarence Straits, Alaska. Her amphibious schedule on the California coast was again interrupted 28 October-18 November 1948 by a cruise northward to act as guard ship on weather and air-sea rescue patrol station for Navy patrol planes scouting north to Seattle, and thence back to San Francisco.

Gantner resumed her amphibious training out of San Diego until 19 January 1949 when she sailed for Shanghai, China. She reached her destination 14 February and served on station at the Chinese ports of Shanghai, Nan-

king and Tsingtao. Departing the last named port 7 April, she escorted *Rendova* (CVE-114) to Yokosuka, Japan, then sailed via Guam and Pearl Harbor for the west coast, arriving San Diego 4 May 1949. She decommissioned 2 August 1949 and was assigned to the San Diego Group, Pacific Reserve Fleet. She was struck from the Navy List 15 January 1966. On 22 February 1966 *Gantner* was sold to Nationalist China under the Military Assistance Program.

Ganymede

The third satellite of the planet Jupiter, and a shepherdess in Shakespeare's *As You Like It*.

(AK-104: dp. (t.) 14,350; 1.441'6"; b. 56'11"; dr. 28'4"; s. 13 k.; cpl. 219; a. 1 5", 4 40mm.; cl. *Crater*)

Ganymede, formerly merchant ship *James W. Nye*, was launched under Maritime Commission contract 8 June 1943, by the Permanent Metals Corp., Richmond, Calif.; sponsored by Mrs. William C. Dalby of Oakland; acquired 23 June 1943; commissioned 31 July 1943, Lt. Comdr. Glenn H. Melichar in command.

After shakedown training out of Oakland, Calif., *Ganymede* departed San Francisco 28 August 1943 carrying military cargo to Pallikulo Bay, New Hebrides, and to Queensland, Melbourne, and Sydney, Australia. Assigned to the 7th Fleet Service Force, she sailed from Queensland 29 November 1943 with fuel, supplies, and passengers for Milne and Langemak Bays, New Guinea and thence returned to Australia. During the next 12 months she transported military cargo of many types and provided limited passenger service from ports of Australia to bases in New Guinea, including Humboldt Bay, Milne Bay, Cape Sudest and Terahmerah Bay. Her itinerary was expanded in February 1945 to include Leyte, Manila, Subic Bay and Samar in the Philippines, with occasional calls at Manus, Admiralty Islands.

Ganymede continued her busy Australia-New Guinea-Philippines-Australia supply circuit until 20 November when she departed Brisbane, Australia for the United States arriving San Francisco 18 December. She remained in port until 25 February 1946 when she sailed for Pearl Harbor to take part in special explosive tests prior to her decommissioning there 15 April 1946. Towed back to San Francisco, her name was struck from the Navy List 1 August 1947 and she was returned to WSA 1 October 1947 and entered the National Defense Reserve Fleet at Suisun Bay, Calif., where she remains.

Gar

Any of certain fishes having an elongate pike-like body and long, narrow jaw.

(SS-206: dp. 1,475; 1.307'2"; b. 27'3"; dr. 13'3"; s. 20 k. (surf.), 8.75 k. (subm.); cpl. 59; a. 1 3", 2 .50 cal. mg., 2 .30 cal. mg.; 10 21' tt.; cl. *Tambor*)

Gar was launched 7 November 1940 by the Electric Boat Co., Groton, Conn.; sponsored by Mrs. George T. Pettingill, wife of Rear Admiral Pettingill; commissioned at New London 14 April 1941, Lt. D. McGregor in command.

After shakedown training along the New England seaboard from Portsmouth, N.H., and New London, Conn., *Gar* departed New London 24 November and transited the Panama Canal 3 December 1941 enroute to San Diego, where she arrived 3 days after the Pearl Harbor attack. She prepared for combat in the Mare Island Naval Shipyard, then departed San Francisco 15 January 1942 for Pearl Harbor. Her maiden patrol (2 February-28 March) was conducted around Nagoya and the Kii Channel entrance to the Inland Sea of Japan. She torpedoed and sank the 1,520 ton cargo ship *Chichibu Maru* 13 March. During her second war patrol (19 April-8 June), she scored hits on a freighter off Kwajalein atoll and a submarine decoy "Q-ship" west of Truk atoll, then termi-

nated her patrol at Fremantle, Australia. Her third war patrol (3 July–21 August) took her to the South China Sea and the Gulf of Siam, where her only contact was a hospital ship. Her fourth war patrol (17 September–7 November) took her to the northernmost waters in the Gulf of Siam, where on 19 October she laid 32 mines in the entrances to Bangkok. This was one of the strategic plants covering important Japanese shipping lanes previously patrolled by American submarines.

Gar's fifth, sixth and seventh war patrols were conducted largely in approaches to Manila, Philippine Islands, via Borneo. During her fifth (28 November–19 January 1943) she drove freighter *Heinan Maru* on the beach with six torpedo hits and scored hits on a seaplane tender. Her sixth (9 February–2 April) brought numerous contacts with targets which could not be closed to firing range because of vigilant enemy aircraft and antisubmarine patrol ships. During her seventh war patrol (23 April–27 May 1943), she sank five small craft with gunfire; torpedoed and sank 703-ton Japanese freighter *Aso Maru* south of the Negros Islands 9 May, then 6 days later attacked a convoy west of Mindoro, sinking 3,197-ton passenger-cargo ship *Meikai Maru* and 4,361-ton *Indus Maru*.

Her eighth war patrol (18 June–23 July) was spent patrolling the Flores Sea, where she torpedoed a 500-ton motorship which ran itself aground, the crew escaping into the jungle. En route from Fremantle to Pearl Harbor on her ninth war patrol (8 August–13 September), *Gar* scouted off Timor and scored hits on a freighter in Makassar Strait. Routed onward for overhaul in the Mare Island Navy Yard, she returned to Pearl Harbor 30 November 1943 to resume combat patrols in the Pacific.

The 10th war patrol of *Gar* (16 December 1943–9 February 1944) was conducted off Palau, where on 20 January she sank the 5,325-ton cargo ship *Koyu Maru*; damaged two ships of another convoy on the 22d; then attacked a third convoy the following day to sink the 3,670-ton *Taian Maru*. Her 11th war patrol (3 March–21 April) found her performing lifeguard duty for aviators making the first carrier-based air strikes on Palau. She saved eight aviators, one less than 2 miles off the beach and within range of enemy gun emplacements. Her 12th war patrol (20 May–5 July) was spent in the Bonin Islands area, where she made gunfire attacks on a convoy of Japanese sea trucks, leaving a small freighter raging in flames and dead in the water. Her 13th war patrol (14 August–9 October) was largely taken up with lifeguard duty off Yap supporting the combined fleet-shore operations that captured the Palaus. She also performed valuable recon-

naissance work off Surigao Strait. She bombarded installations on Yap 6 through 8 September and ended her patrol at Brisbane, Australia.

On her 14th war patrol (3–30 November), *Gar* landed 16 men and 25 tons of supplies at Santiago Cove, Luzon, Philippine Islands, 23 November; picked up intelligence documents, and terminated her patrol in Mios Woendi lagoon. On her 15th and final war patrol (4–27 December), she landed 35 tons of supplies on the west coast of Luzon, near Duriagaos Inlet 11 December, returning to Pearl Harbor with urgent intelligence documents including maps locating enemy gun emplacements, beach defenses, troop concentrations, and fuel and ammunition dumps on Luzon.

After overhaul in the Pearl Harbor Naval Shipyard, *Gar* put to sea 2 April 1945 to serve the remainder of the war as a target trainer for antisubmarine ships at Saipan and Guam, Marianas Islands. She departed Apra Harbor, Guam, 7 August 1945, proceeding via Hawaii, San Francisco, and the Panama Canal to Portsmouth, N.H., where she arrived 20 October. She decommissioned there 11 December 1945 and remained in reserve until September–October 1948 during which time she was overhauled in the Portsmouth Naval Shipyard for service as a reserve training submarine for the 4th Naval District at Cleveland, Ohio, arriving, via the Mississippi River and the Chicago Canal, 28 November 1948. She continued her reserve training until her name was stricken from the Navy List 29 May 1959. The submarine was sold for scrapping 18 November 1959 to Acme Scrap Iron and Metal Co.

Gar received 11 battle stars for service in World War II.

Garcia

Fernando Luis Garcia was born 14 October 1929 at Utuado, P.R., and was inducted into the Marine Corps 19 September 1951. A member of the 3d Battalion, 5th Marines, Private Garcia served valiantly in Korea—particularly on 5 September 1952 when he threw himself on an enemy grenade to save the life of a comrade. Private Garcia was posthumously awarded the Medal of Honor for heroism, the first native Puerto Rican to be so honored.

(DE-1014: dp. 2, 624 (lt.); l. 514'; b. 45'; dr. 25'; s. 27 k.; epl. 239; a. 25", 4 tt., 1 ASROC; cl. *Garcia*)

Garcia (DE-1040) one of a new and powerful class of escort vessels, was launched 31 October 1963; by Bethlehem Steel Co., San Francisco, Calif.; sponsored by Mrs.

USS *Garcia* (DE-1040) on 22 October 1964

Daisy Garcia de Alvarez, sister; and commissioned 21 December 1964, Comdr. Donald A. Smith in command.

After trials and training off the Pacific Coast, the new destroyer escort departed San Diego 22 March 1965; transited the Panama Canal; and arrived her homeport Newport, R.I., 7 April. Following ship qualification tests, she sailed for the Caribbean 7 May for shakedown. She returned Newport 16 July. For the remainder of 1965 and through 1966, *Garcia* operated out of Newport perfecting her ASW and sonar techniques.

Gardenia

A large genus of Old World tropical trees and shrubs of the madder family, having showy, fragrant, white or yellow flowers.

(ScStr: dp. 217; l. 117'; b. 20'; dr. 6'; cpl. 15)

Gardenia was a wooden lighthouse tender built in 1879 at East Deering, Maine; acquired 4 May 1917; and commissioned at New York 13 September 1917.

Assigned to the 3d Naval District, *Gardenia* served as harbor control and guard ship from her base at Rosebank, Staten Island until May 1919. She was returned to the Lighthouse Service 1 July 1919.

Gardiner

O'Toole (DE-274) (*q.v.*) was transferred to the United Kingdom under lend lease 28 September 1943 and served the British Navy as *Gardiner*.

Gardiners Bay

A bay of Block Island Sound, N.Y.

(AVP-39: dp. 2,592 (trial); l. 310'9"; b. 41'2"; dr. 13'6"; s. 18.2 k.; cpl. 215; a. 1 5", 8 40 mm; cl. *Barnegat*)

Gardiners Bay was launched 2 December 1944 by the Lake Washington Shipyard, Houghton, Wash.; sponsored by Mrs. George L. Richard; and commissioned at the Puget Sound Naval Shipyard 11 February 1945, Comdr. Carlton C. Lucas in command.

Gardiners Bay departed Seattle 1 March 1945 for shakedown out of San Diego until 20 April. She then proceeded via Pearl Harbor to Eniwetok in the Marshalls to tend planes of Patrol Bombing Squadron 19 in a 10-day training period, thence via Saipan and Guam in the Marianas to Kerama Retto, Okinawa, where she arrived 7 June 1945 with provisions and cargo for Fleet Air Wing 1. The following weeks were devoted to tending planes for various patrol bombing squadrons based on Kerama Retto. During 30 June-17 July she was flagship of an Air-Sea Rescue Unit, utilizing Rescue Squadrons 3 and 4, Motor Torpedo Boat Squadron 4 and three other small seaplane tenders. Eighteen rescue missions were accomplished while in a state of constant alert that saw her men at general quarters for 100 hours. Relieved as flagship by *Pine Island* (AV-12) on 17 July 1945, *Gardiners Bay* tended planes of Rescue Squadron 6 at Chimi Wan, Okinawa, until 15 August when she put to sea as part of the screen of the 3d Fleet en route to Japan. She entered Sagami Bay, Japan, on 28 August, shifting 2 days later to Tokyo Bay as a part of the Seaplane Base Group of the Japan Occupation Forces. On 1 September she became flagship of the Air-Sea Rescue Unit for the 3d Fleet with Rescue Squadron 4 based on board. During this service, which extended to 9 January 1946, she helped set up the Tokyo Seadrome off the Yokohama Air Station. She was then stationed at Nagoya, Japan, as tender for courier and transient seaplanes, departing 29 January 1946 for Shanghai, China. She departed Hong Kong 9 August 1946, proceeding via Yokosuka, the Marianas, the Marshalls and Pearl Harbor to the Puget Sound Naval Shipyard where she arrived 28 November 1946 for overhaul.

After Fleet exercises along the western seaboard, *Gardiners Bay* departed San Diego 7 April 1947 for tender duties in the Carolines, Marianas, Okinawa, Tsingtao and Yokosuka. She returned to Seattle 4 October 1947; made a cruise to Eniwetok in the Marshalls (15 January-5 June 1948); and another Far East cruise (15 March-14 December 1949) which included tender operations at Guam, Yokohama, Sasebo, Okinawa and Manila.

Gardiners Bay departed San Diego 27 June 1950 for the first of 4 long tours supporting United Nations forces in Korea. She established a seadrome at Iwakuni, tending 17 Mariners and 8 Royal Air Force Sunderlands for search and reconnaissance in the Tsushima Strait and Yellow Sea area, shifting in September 1950 to Inchon, Korea, where she established an advance base for seaplanes making mine reconnaissance runs off the northwest coast of Korea. The following month she established another seadrome at Chinhae, basing there to tend 7th Fleet aircraft conducting reconnaissance until 16 April 1951.

On her second Korean tour (12 September 1951-9 April 1952) she supported Far East aviation patrol units at Okinawa; Iwakuni, Japan; and Manila, Philippine Islands. Her third tour (10 July 1952-26 January 1953) was largely spent as station ship off the Pescadores and at Okinawa, with time out in October 1952 for participation in "Exercise Surprise" off the coast of Indochina, testing communications between headquarters and ships and aircraft of the United States, the United Kingdom, and France. Her fourth tour (3 April-12 December 1953) was spent in tending amphibious patrol planes at Chinhae, and on stations in the Pescadores, the Philippines, Okinawa, and Japan.

After hostilities ended in Korea, *Gardiners Bay* made three cruises to support 7th Fleet operations in the Pacific (7 July to 22 November 1954), (28 August 1956 to 14 February 1957, and (10 June to 16 November 1957). These cruises were largely spent on seaplane tending stations at Okinawa; Manila; and in the Japanese ports of Iwakuni, Sasebo, and Yokohama. She returned from her last cruise to Alameda, Calif. 16 November 1957; decommissioned 1 February 1958; and was transferred to Norway 17 May 1958 under the Military Assistance Program. She serves the Norwegian Navy under the name of *Haakon VII* (A-537).

Gardiners Bay received two battle stars for service in World War II and four battle stars for service in the Korean War.

Gardoqui

The commercial house of Joseph Gardoqui and Sons of Bilbao, Spain, represented the American Colonies in the Spanish court during the American Revolution.

(Gbt: a. 2 1-pdr.; cpl. 13)

Gardoqui, an ex-Spanish wooden gunboat, was purchased in 1898 by the Army; transferred to the Navy 9 November 1899; and commissioned 2 June 1899, Ens. John E. Lewis in command.

Although the Philippines had become American territory at the end of the Spanish-American war, the islands were torn by civil war as guerrilla rebels under Aguinaldo sought complete independence. To suppress the illegal trade of these rebels and to assist in Marine and Army landings, *Gardoqui* cruised Manila Bay and other waters in the Philippines. She was one of 13 gunboats, including *Panay*, so involved. In addition, she bombarded insurgent positions and as they began to surrender, received former rebels on board for transportation to Manila. On 29 January 1900 four Marines sent ashore from *Gardoqui* were killed in a rebel ambush; and the ship herself was shot up.

Gardoqui decommissioned at Cavite Navy Yard for repairs 12 May 1900, recommissioning 30 November that same year to continue her previous duties, Ens. W. J. Tarrant in command. She decommissioned a second time

5 February 1902 at Cavite, was placed on the yard list there 15 December 1904, and later sold.

Garfield, President, see *Thomas Jefferson* (AP-60)

Garfield County

Counties in Colorado, Montana, Nebraska, Oklahoma, Utah, and Washington.

(LST-784: dp. 1,780 (lt.); l. 328'; b. 50'; dr. 14'1"; s. 11.6 k.; cpl. 115; a. 8 40mm., 12 20mm.; cl. LST-542)

LST-784 was laid down by Dravo Corp., Neville Island, Pittsburgh, Pa., 18 June 1944; launched 29 July 1944; sponsored by Mrs. Michael Ruzic and commissioned at New Orleans 1 September 1944, Lt. Daniel H. Miner, USCG, in command.

After shakedown off Florida, LST-784 departed departed New Orleans 4 October, arriving Pearl Harbor 18 November. Following intensive amphibious training in the Hawaiian Islands, she sailed 22 January 1945 to join Pacific forces preparing for the landings at Iwo Jima. With marines of the 2d 155mm. Howitzer Battalion on board, LST-784 touched Eniwetok, Saipan, and Tinian before making her way to the enemy-held volcano fortress. She arrived off the beaches 19 February and anxiously awaited her turn to disembark her troops. For the next 3 weeks the ship remained in the area discharging cargo and performing post office duties for the fleet. Returning to Saipan 18 March, LST-784 commenced preparations for her next assignment.

In early April American forces were already engaged in the fierce campaign on Okinawa, and supplies and men to reinforce the beachhead were urgently needed. The LST arrived off the embattled island 27 April with a detachment of Seabees and equipment. Continuously at general quarters, she discharged her cargo and sailed 7 May for return to Saipan.

For the rest of the war LST-784 continued "milk runs" from the Philippines to Okinawa, transporting troops and equipment to reinforce the island. Upon the victorious conclusion of World War II, she engaged in the movement of men from the Philippines to Japan for occupation duty. She remained in the Far East until 11 November when LST-784 departed Saipan for the return cruise home. Steaming via Guam, she returned to the West Coast decommissioned in March 1946, and entered the Pacific Reserve Fleet to be berthed in the Columbia River at Astoria, Oregon. Named *Garfield County* 1 July 1955, she was used as a target ship in March 1959.

LST-784 received two battle stars for World War II service.

Garfield Thomas

William Garfield Thomas, Jr. was born in Watsontown, Pa. 13 September 1916. He enlisted in the U.S. Naval Reserve at Philadelphia 14 June. He was appointed midshipman 10 August 1940, commissioned ensign 14 November 1940, and promoted to lieutenant (j.g.) 15 June 1942. He was serving in light cruiser *Boise* (CL-47) during the Battle of Cape Esperance 11-12 October 1942. When his "turret was hit by enemy fire and danger of . . . explosions grew increasingly imminent, Lt. (j.g.) Thomas with utter disregard of his own personal safety remained behind to ensure abandonment of the perilous area . . . Despite the fact that eight of his men succeeded in getting out and that he too might easily have escaped . . . Thomas when last seen was telephoning the handling room to order the crew out." He was awarded the Navy Cross for giving up his life in the defense of his country.

(DE-193: dp. 1,240; l. 306'; b. 36'8"; dr. 8'9" (mean); s. 21 k.; cpl. 186; a. 3 3", 4 40mm., 8 20 mm., 8 dcp., 1 dcp. (h.h.), 2 dct.; cl. *Cannon*)

Garfield Thomas (DE-193) was laid down 23 September 1943 by the Federal Shipbuilding & Dry Dock Co., Newark, N.J.; launched 12 December 1943; sponsored by Lt. Betty K. Thomas, Nurse Corps, United States Army, sister of Lt. (j.g.) W. G. Thomas; and commissioned 24 January 1944, Lt. Comdr. Richard G. Werner in command.

After shakedown out of Bermuda, *Garfield Thomas* returned to New York 11 March 1944. She stood out of New York 19 March to join Task Group 27.4 as part of the screen for a convoy bound for Bizerte, North Africa, where she arrived 31 March and returned New York 13 April. She made two subsequent runs to Bizerte arriving New York from her third voyage 7 September.

After shakedown out of Bermuda, *Garfield Thomas* returned to New York 11 March 1944. She stood out of New York 19 March to join Task Group 27.4 as part of the screen for a convoy bound for Bizerte, North Africa, where she arrived 31 March and returned New York 13 April. She made two subsequent runs to Bizerte arriving New York from her third voyage 7 September.

After training out of Casco Bay, Maine, *Garfield Thomas* departed New York 14 October in the screen for a convoy bound for the United Kingdom, arriving Plymouth, England, 25 October. After returning to New York 9 November the destroyer escort made four subsequent convoy-escort voyages to the United Kingdom, the last bringing her back to New York from Cardiff, Wales, 19 May 1945. After repairs she departed New York 9 June 1945 for refresher training in the Culebra-Guantanamo Bay areas, and then proceeded to Pearl Harbor, arriving 20 July 1945. Training out of Pearl Harbor kept her busy until 8 August when she got under way with a convoy bound for the Marshalls. She arrived Eniwetok, 16 August 1945 and operated between the Marshalls and the Carolines, screening convoys and taking her turn as patrol ship until she departed Eniwetok 8 December for Pearl Harbor, arriving 8 days later.

After a month's duty as weather station ship *Garfield Thomas* departed Pearl Harbor 9 February 1946, transited the Panama Canal and arrived New York 1 March 1946. After a brief overhaul, *Garfield Thomas* departed New York 24 March for Green Cove Springs, Fla. She remained moored there until decommissioned 27 March 1947. She entered the Atlantic Reserve Fleet there where she remained until transferred to Greece under the Military Assistance Program 15 January 1951. *Garfield Thomas* now serves as *Panther* (D-67).

Garfish

Garfish (SS-30) was renamed *H-3* (SS-30) (q.v.) on 17 November 1911 prior to commissioning.

Gargoyle

A waterspout, often carved grotesquely, projecting at the upper part of a building, usually from the roof gutter.

(Str: dp. 9,360; l. 363'8"; b. 50'1"; dr. 24'0" (mean); s. 11 k.; cpl. 49; a. 2 3", 1 .30 cal mg.)

Called *Pennoil* when owned by the Vacuum Oil Co., *Gargoyle* was built in 1903 by Grangesmith Dry Dock Co., Greenock, Scotland, and commissioned 8 August, 1917. Lt. Oscar Windsor Smith, USNRF, in command.

Departing New York 20 August 1917, *Gargoyle* loaded her cargo of oil at Philadelphia and, at New York ports, fueled several battleships, including *Arkansas*, *Oklahoma*, *Nevada*, and *Arizona*. After being repaired and loaded, she sailed 1 October on the first of three trans-Atlantic voyages through the submarine-infested waters. She arrived Dover, England 19 October, via Sidney, Nova Scotia; and offloaded her cargo at Dover, Devonport; St. Helen's Road; and Plymouth, sailing from the latter for the United States 8 November. She arrived New York 23 November for repairs and cargo, and left New York 5 January 1918, arriving 21 January at Portsmouth, via

Spithead and St. Helen's Road. After discharging her cargo, *Gargoyle* left for the United States 1 February, arriving New York after a stormy passage on 18 February.

She departed New York 9 March on her third and last trans-Atlantic voyage, arriving Plymouth, 27 March, via Halifax, Nova Scotia. After discharging and loading cargo at Devonport and Plymouth, she left the latter port 21 April, arriving New York 6 May via Portsmouth, N.H.

She decommissioned at New York 22 May 1918, and was returned to her former owner that same day.

Gargoyle, see *Arethusa* (IX-135)

Garland

A wreath made of branches, flowers, or leaves. Garlands were awarded to the victor in the ancient games.

I

(Bark: t. 243; l. 92'5"; b. 24'4"; dr. 12'2"; a. none)

The first *Garland* was a bark built at Quincy, Mass., in 1815 for service as a privateer. She was rebuilt at New Bedford, Mass., in 1845 and purchased by the Navy there 28 October 1861 for the "Stone Fleet." However, she was not used as an obstruction but transferred to the Army Quartermaster Department at Hilton Head, S.C., 7 January 1862 for service as a supply ship.

II

(AM-238: dp. 625; l. 184'6"; b. 33'; dr. 10'; s. 15 k.; cpl. 104; a. 1 3", 2 40mm., 6 20mm., 2 .30 cal. mg., 2 dct., 3 dep; cl. *Admirable*)

The second *Garland* (AM-238) was launched 20 February 1944 by Winslow Marine Railway & Shipbuilding Co., Winslow, Wash.; sponsored by Miss Karen Lundberg; and commissioned 26 August 1944, Lt. Carl Carmichael in command.

After shakedown out of Puget Sound *Garland* departed San Pedro, Calif., 12 November with a convoy to Kossol Roads, Palau Islands, where she arrived 2 January 1945. The minesweeper acted as entrance control ship at Kossol Roads; escorted convoys between Peleliu and Ulithi until 20 May, then patrolled convoy routes between Ulithi and Eniwetok. She departed Ulithi 28 June escorting a 16-ship convoy bound for Buckner Bay, Okinawa, arriving 17 July.

Based at Buckner Bay, *Garland* swept mines in the East China Sea (22-31 July 1945) and (13-25 August 1945). Shifting to Ominato Ko, Honshu, she swept Japanese minefields to clear the path for Allied transports carrying occupation troops to the Empire. *Garland* departed Ominato Ko 20 October to serve as flagship of Mine Division 40 at Sasebo until 20 November when she sailed for the United States, arriving San Diego 19 December. Departing San Diego 31 January 1946, she transited the Panama Canal and steamed to Orange, Tex.; decommissioned there 2 August 1946; and joined the Atlantic Reserve Fleet. Reclassified MSF-238 7 February 1955, *Garland* remained in the Reserve Fleet until struck from the Navy List 1 April 1960. She was sold to Ships and Power, Inc. 24 October 1960.

Garland received two battle stars for World War II service.

Garlies

A British name. Lord Garlies, a British naval officer, was Captain of British frigate HMS *Lively* at St. Vincent and of British frigate HMS *Bellerophon* in 1801 during the blockade of Brest.

(DE-271: dp. 1,140; l. 289'5"; b. 35'1"; dr. 11'10"; s. 21 k.; cpl. 198; a. 3 3"; 4 1.1" 9 20 mm., 8 dcp., 1 dep. (hh.), 2 dct.; cl. *Evarts*)

Garlies (DE-271) was laid down as *Fleming* (DE-271) (q.v.) 7 April 1943 by the Boston Navy Yard, Boston, Mass.; launched 19 May; sponsored by Mrs. Michael E. Fleming; transferred to Great Britain 13 July under lend-lease; and commissioned in the British Royal Navy as HMS *Garlies* (K-475) on 13 September.

During World War II the British frigate HMS *Garlies* operated in the Atlantic on convoy escort duty, and in June 1944 she supported the Allied invasion of Europe at Normandy. She served in the Royal Navy until 20 August 1945 when she was returned to the U.S. Navy at Chatham, England, and commissioned *Garlies* (DE-271) the same day, Lt. B. H. Farwell in command.

Garlies departed Chatham 30 August for the United States, arriving Philadelphia 8 September. She decommissioned there 10 October and was sold to Thomas H. Barker 18 July 1947 for scrapping.

Garlopa

A large species of grouper found on the west coast of Mexico.

Garlopa (SS-358), a *Balao*-class submarine, was building at Electric Boat Co., Groton, Conn., but was cancelled 29 July 1944.

Garner, Mary B., see *Mary B. Garner* (SP-682)

Garnet

A brittle, often crystalline, glasslike mineral found in a variety of colors. The most precious variety, used as a gem, is of a deep red.

(PYC-15: dp. 490; l. 156'9"; b. 25'6"; dr. 9'5"; s. 12 k.; cpl. 50; a. 1 3", 4 .50 cal. mg., 2 30 cal. mg., 2 dct.)

Garnet (PYC-15), formerly steel diesel yacht *Caritas*, was built in 1925 by Krupp Iron Works, Kiel, Germany; purchased 1 December 1941 from Mr. J. Perch Bartram of New York; converted to a coastal patrol yacht by Robert Jacobs Co., Inc., New York; commissioned 4 July 1942, Comdr. Donald D. Murray in command.

Garnet departed New York 21 July 1942 for brief operations in Chesapeake Bay. After shakedown off Key West and Miami, she steamed via the Bahamas and the Panama Canal to San Diego, arriving 22 September. After coastal patrol off southern California, she departed San Diego 2 December for the Hawaiian Islands, arriving Pearl Harbor 15 December.

Except for an escort mission to Funafuti, Ellice Islands, in November 1943, *Garnet* spent the remainder of World War II on convoy escort and patrol duty between Pearl Harbor and Midway.

She returned to San Pedro, Calif., 15 November and decommissioned there 29 December 1945. She was delivered to the Maritime Commission for disposal 20 February 1947 and was sold 10 June to Mr. I. W. Lambert, Baltimore, Md.

Garonne

(Sch: t. 14; a. none)

Garonne was a small wooden schooner captured by Santee off Galveston, Tex., 30 December 1861. She was apparently used as a lighter in the Gulf Blockading Squadron before being sunk as an obstruction in Petit Bois Channel on the Gulf coast.

Garrard

A county in Kentucky.

(APA-84: dp. 4,247 (lt.); l. 426'; b. 58'; dr. 16'; s. 16.9 k.; cpl. 320; trp. 849; a. 1 5", 8 40mm., 10 20mm.; cl. *Gilliam*; T. S4-SE2-BD1)

Garrard (APA-84) was laid down under Maritime Commission contract by the Consolidated Steel Corp., Ltd., Wilmington, Calif., 28 October 1944; launched 13 January 1945; sponsored by Mrs. Stephen Royce; acquired by the Navy 2 March 1945; and commissioned at San Pedro 3 March 1945, Lt. Comdr. Walter Barnett, Jr., in command.

After shakedown and amphibious training along the California Coast, *Garrard* embarked sailors and Army Aviation Engineers and departed Seattle 3 May for the Western Pacific. Steaming via Pearl Harbor, Eniwetok, and Guam, she arrived Ulithi, Carolines, 28 May. She sailed 20 June for Okinawa and reached Hagushi Beach the 24th. As her gunners helped repel Japanese air attacks, she landed men and cargo of the 854th Aviation Engineers before departing for Leyte, Philippine Islands, 28 June.

Garrard embarked fleet-replacements, loaded cargo and mail, and departed 8 July as a logistics support ship to supply the 3d Fleet off the Japanese coast. She rendezvoused 17 July; and, after completing transfer of men and cargo by highline, she sailed 22 July for Eniwetok, where she arrived the 26th. After serving as a receiving ship, she departed 13 August to once more carry men and cargo to the 3d Fleet. She rendezvoused 17 August, embarked sailors and marines at sea for occupation duty in Japan, then steamed for Japan 20 August with Task Force 31. Arriving Tokyo Bay 27 August, she debarked her troops at Yokosuka 30 August. Between 10 and 15 September she steamed to Sendai, Japan, and back to transport liberated prisoners of war. After embarking 726 veterans, she departed Yokosuka 13 October and sailed to the United States, where she arrived Portland, Oregon, 25 October.

Assigned to "Magic-Carpet" duty, *Garrard* departed San Francisco for the Philippines 19 November. Reaching Manila 11 December, she embarked 905 homebound troops and sailed for San Francisco 14 December. Arriving 3 January 1946, she entered Mare Island Naval Shipyard before sailing for Seattle 6 February. After completing an inactivation overhaul at Puget Sound Naval Shipyard, she decommissioned at Bellingham, Wash., 21 May. Transferred to WSA 29 June, she entered the National Defense Reserve Fleet at Olympia, Wash. She was sold to Zidell Exploration Co., Inc., Portland, Oreg., for scrapping 3 June 1963.

Garrard received two battle stars for World War II service.

Garrett County

A county in western Maryland.

(LST-786: dp. 1,780; l. 328'; b. 50'; dr. 14'1"; s. 11.6 k.; cpl. 115; a. 8 40mm., 12 20mm.; cl. *LST-542*)

LST-786 was laid down by Dravo Corp., Neville Island, Pittsburgh, Pa., 21 May 1944; launched 22 July; sponsored by Mrs. E. B. Keckler; and commissioned 28 August 1944, Lt. Eli T. Ringler, USCG, in command.

After shakedown off Florida, *LST-786* departed Mobile, Ala., 30 September, and sailed for the Pacific. She loaded cargo and men of the 112th Navy Construction Battalion at Pearl Harbor before arriving Eniwetok 28 December. During January 1945, the landing ship made another cruise to Pearl Harbor for supplies, returning to the Marshall Islands 21 February.

With Iwo Jima now in American hands, *LST-786* transported a group of Seabees to that tiny volcano island in late March. While at Iwo she embarked 114 prisoners of war for transportation to Guam, arriving there 20 April. Eight days later she sailed with another detachment of Seabees bound for that last Japanese barrier—Okinawa. Arriving 8 May in the area off "Green Beach," *LST-786* unloaded her cargo under the constant threat from enemy air raids, and sailed 20 May for the Philippines.

For the rest of the war, she shuttled troops and equipment among the Philippines and to Okinawa, further

strengthening the path to Japan. On 4 August, her convoy was attacked by an enemy submarine which was sunk by *Earle V. Johnson* (DE-703) after a 3-hour duel.

After V-J Day, *LST-786* operated in the Far East, where she provided transportation services for the occupation troops in Japan, Korea, and Okinawa. The landing ship departed Sasebo 8 December and arrived San Francisco 14 January 1946. *LST-786* decommissioned at Astoria, Oreg., 9 July 1946 and was assigned to the Pacific Reserve Fleet.

She was assigned the name *Garrett County* 1 July 1955. As the American role in the Far East expanded, the need for landing craft increased to handle the large buildup of U.S. forces in Vietnam. *Garrett County* recommissioned 15 October 1966 for service in the Pacific Fleet. Early in 1967 she sailed for the Far East and for the next months operated off Vietnam supporting the struggle to thwart Communist aggression in Southeast Asia.

LST-786 received one battle star for World War II service.

Garrupa

One of various fishes of the grouper type.

Garrupa (SS-359), a *Perch*-class submarine, was built at Electric Boat Co., Groton, Con., but was canceled 29 July 1944.

Gary

DE-61 and DE-326 are named for Thomas J. Gary (*q.v.*), and CL-147 is named for a city in Indiana.

(DE-61: dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 3 21" tt., 8 dcp., 1 dcp. (h.h.), 2 dct.; cl. *Buckley*)

Gary (DE-61) was laid down 16 January 1943 by Bethlehem-Hingham Shipyard, Inc., Hingham, Mass.; launched 1 May 1943; transferred to Great Britain under lend-lease 4 August 1943; and renamed HMS *Duckworth*. During the remainder of World War II, she served as a British frigate in the Atlantic, at Normandy, and along the English coast. She was returned to the United States 17 December 1945 and sold for scrapping 29 May 1946 to Northern Metals Co., Philadelphia, Pa.

I

Gary (DE-326) was renamed *Thomas J. Gary* (*q.v.*) 1 January 1945.

The name *Gary* was assigned to CL-147 on 1 January 1945 but was cancelled 12 August 1945 prior to the start of construction.

Garza, Lake, see *Lake Garza*

Gasconade

A county in east central Missouri.

(APA-85: dp. 4,247; l. 426'; b. 58'; dr. 16'; s. 16.9 k.; cpl. 320; a. 1 5", 8 40mm., 10 20mm.; cl. *Gilliam*; T. S4-SE2-BD1)

Gasconade (APA-85) was laid down 7 November 1944 under Maritime Commission contract by the Consolidated Steel Corp., Ltd., Wilmington, Calif.; launched 23 January 1945; sponsored by Mrs. Winnie Cave, acquired by the Navy 10 March 1945; and commissioned 11 March 1945 at San Pedro, Calif., Lt. Comdr. Allen E. Stiff in command.

After shakedown, *Gasconade* departed San Francisco 8 May on a troop transport voyage to the Philippines. Steaming via Pearl Harbor, Eniwetok, and Ulithi, she

Gatling

arrived Samar 3 June. Loaded with mail and cargo, she steamed to San Francisco from 18 June to 6 July; thence transported additional troops to the Philippines. Arriving Leyte Gulf 2 August, she served as receiving ship until mid-August when she proceeded to Manila Bay to stage for the Allied occupation of Japan.

Gasconade departed Manila 25 August; and, as part of a huge transport task force carrying the first sea-borne occupation forces to Japan, she entered Tokyo Bay 2 September while surrender terms were being signed on board *Missouri* (BB-63). She debarked her troops at Yokosuka 3 September; steamed to the Philippines from 4 to 11 September; then carried more occupation troops from Mindanao to Kure, Japan, from 19 September to 6 October.

After returning to Leyte Gulf 11 October, *Gasconade* embarked military passengers and sailed for the United States 17 October as part of the "Magic-Carpet" fleet. She reached Portland, Oreg., 2 November; transported occupation troops to Nagoya, Japan, 18 November to 5 December; and sailed 8 December on another "Magic-Carpet" voyage, arriving Seattle 19 December. After carrying a garrison force to Guam from 13 to 29 January 1946, she voyaged to Pearl Harbor from 30 January to 8 February with returning veterans embarked.

Assigned to Joint Task Force 1, *Gasconade* during the next 3 months prepared for Operation "Crossroads," a program of nuclear tests in the Marshall Islands. Departing Pearl Harbor 18 May in company with Transport Division 92, she reached Bikini Atoll, Marshalls, 30 May. On 22 June her crew transferred to *Bezar* (APA-237). Designated a target ship for the experiments, she survived an atomic blast 18 July.

Gasconade decommissioned in the Marshall Islands 28 August. In December she was taken in tow at Kwajalein for transfer to the United States, where she arrived San Francisco 27 January 1947. After undergoing structural and radioactivity tests, she was redesignated a target ship in March 1948. She was sunk by torpedoes 21 July in the Pacific Ocean off lower California.

Gasper, Lake, see Lake Gasper

Gatch

Gatch (DE-1026) was renamed *Hooper* (DE-1026) (q.v.) 19 July 1956.

Gates

Brig. Gen. Horatio Gates, born in Maldon, England, around 1728 or 1729, was adjutant general of the Continental Army during the Siege of Boston. He served under the Northern Department there after, and commanded the American force which defeated Burgoyne during the Saratoga Campaign August-September 1777. This victory was the turning point in the war, and prompted France to enter the fight. Gates subsequently served as President of the Board of War, as commander of the Eastern and Southern Departments, and later in the New York Legislature. He died in New York City in 1806.

(Gy: t. 123; l. 60'6"; b. 19'; dph. 6'2"; cpl. 80;
a. 8 4-18-pdrs.)

Gates was built in 1776 on Lake Champlain, near Whitehall, N.Y., by the forces under command of Benedict Arnold. Her first commanding officer was Captain Frederick Chappell. She was one of General Arnold's flotilla but was not completed in time to take part in the battle of Lake Champlain which delayed the British invasion from Canada. The galley was blown up at Skenesboro, N.Y., in 1777 to prevent her being captured.

Richard Jordan Gatling, born in Hartford County, N.C., 12 September 1818, won fame as the inventor of machines to plant cotton, rice, and wheat; and hemp-breaker; a steam plow; and a screw propeller for steamboats. During the Civil War he designed a multibarrelled machine gun. He died in New York City 25 February 1903.

(DD-671: dp. 2,050; l. 376'5"; b. 39'7"; dr. 17'9"; s. 35 k.; cpl. 329; a. 5 5", 10 40mm., 10 21" tt.; cl. *Fletcher*).

Gatling (DD-671) was laid down 3 March 1943 by the Federal Ship Building & Dry Dock Co., Kearny, N.J.; launched 20 June 1943; sponsored by Mrs. John W. Gatling, wife of the inventor's grandson; and commissioned 19 August 1943 at New York Navy Yard, Lt. Comdr. Alvin H. Richardson in command.

After shakedown out of Bermuda and alteration at New York early November, the new destroyer called at Norfolk, Va., to conduct training cruises for crews of destroyers still under construction.

On 19 November 1943 *Gatling* proceeded to Trinidad, British West Indies, to escort carrier *Langley* to Norfolk. *Gatling* stood out from Norfolk 3 December, escorting *Intrepid* through the Panama Canal to San Francisco, arriving 22 December. The next day she sailed for Pearl Harbor.

On 16 January 1944 *Gatling* sortied with Task Force 58 to support the forthcoming invasion of the Marshall Islands; thereafter, *Gatling* was continuously with the carrier task forces as they struck Japanese outposts and finally hit the heart of Japan itself.

In February the first carrier strikes against Truk occurred. *Gatling* provided fire support during the raid and screened the flattops during raids on the Marianas a few days later. In March she joined in the attack on Emirau Island and at the beginning of April in the air strikes against the Palau Archipelago. Steaming south to strike Hollandia, Wakde, Sawar, and Sarne, New Guinea, the task force supported Army landings at Aitape, Tanahmerah Bay, and Humboldt Bay from 21 to 26 April. During this action, *Gatling* stood radar picket duty and directed fighter planes. After new attacks on Truk late April 1944, *Gatling* supported the invasion and occupation of the Marianas from 10 June to 5 July. In the Battle of the Philippine Sea, 19 and 20 July, *Gatling* was credited with shooting down or aiding in the kills of six Japanese planes.

Late that month, carrier task forces again struck the Palaus and blasted Yap and Ulithi. In early August the Bonin Islands became targets for *Gatling's* powerful guns, and in September the carriers she guarded repeatedly struck Japanese targets in the Philippines.

October saw attacks against Okinawa on the 10th and against Formosa, Luzon, and the Visayas from the 11th to the 23d. On 24 October, after enemy bombs had sunk *Princeton* in the Battle of the Sibuyan Sea, *Gatling* rescued over 300 of the light carrier's survivors. For heroism in saving these men, 4 of *Gatling's* crew were awarded the Navy-Marine Corps Medal, and 16 others received the Bronze Star.

Gatling landed the survivors at Ulithi and rejoined carrier task groups for November and December strikes against the Philippines. After a powerful typhoon in which 3 destroyers capsized, *Gatling* searched for survivors and helped to save over 100 men from the sea.

At Christmas 1944, the destroyer returned to Ulithi. The task force sortied 29 December to strike Formosa and Luzon during January 1945. Hoping to locate and destroy a Japanese fleet in that area, Admiral Halsey took the task force into the South China Sea 10 January and hit targets in Indochina and on the China coast.

In the middle of February, the carriers launched initial attacks against Honshu with Tokyo as their main target. As part of a picket line over 30 miles in advance of the main forces, *Gatling* was once within 40 miles of Honshu. On 19 and 20 February, as part of Destroyer Division 99, she escorted *North Carolina* and *Indianapolis*

to Iwo Jima to support the gallant marines who were fighting to wrest that volcanic fortress from Japan to become a base for B-29's damaged over the home islands. Rejoining the carrier task force, *Gatling* aided in new strikes against Honshu and Okinawa in late February and early March. She returned to Iwo Jima independently and throughout March blasted Japanese shore batteries to support the invasion. During this duty, the versatile and busy destroyer saved the entire crew of a B-29 forced down while returning from a mission against Nagoya.

On 29 March 1945, she stood out from Iwo Jima, escorting transports carrying victorious marines to Guam. The destroyer then sailed to the United States for well-earned overhaul and repairs, arriving San Francisco 18 April.

After repairs and refresher training, *Gatling* escorted *New Jersey* and *Biloxi* to Eniwetok, bombarding Wake Island en route. Continuing to escort *New Jersey*, she arrived at Guam 9 August. There the news came that Japan had accepted the provisions of the Potsdam Declaration and agreed to surrender. The mighty sea war was won. *Gatling* now headed for Japan escorting transports bearing the 4th Marine Division as the 3d Fleet rendezvoused off Japan. On 3 September 1945, *Gatling* steamed into Tokyo Bay as a unit of the Allied Naval Occupation Forces of Japan.

During her aggressive career in World War II, *Gatling* traveled over 175,000 miles and fired 77 tons of high ex-

plosives from her guns. She sank two enemy ships and splashed eight Japanese planes, either as kills or assist. In addition to her other rescue missions, preserving the lives of over 400 sailors, she saved 37 aviators forced to ditch at sea. Finally, these heroic exploits through two busy battle-filled years were accomplished without the loss of a single man from enemy action, sickness, or accident. *Gatling* decommissioned 16 July 1946 and entered the Atlantic Reserve Fleet at Charleston, S.C.

After Communist aggression erupted in Korea, the veteran destroyer recommissioned 4 June 1951 at Charleston, S.C., Comdr W. J. Keating in command. Until August 1952 she operated off the Atlantic coast and in the West Indies before proceeding to the Philadelphia Naval Shipyard for modernization.

In the fall of 1952 *Gatling* as a unit of the NATO forces stood out of Newport, R.I., for Europe and visited Scotland, Norway, and Belgium in Operation "Mainbrace." Later she was active in Caribbean Operation "Springboard," calling at St. Thomas and San Juan. Returning to the Far Eastern waters she knew so well, *Gatling* arrived Tokyo 3 June 1953, and joined Task Force 77 supporting United Nations forces in Korea. Then, following the sun, she steamed to Manila, Saigon, Singapore, Colombo, and, passing through the Suez Canal, called at France and Portugal. She returned to Philadelphia in late summer 1953.

After repairs and training in New England waters,

USS *Gatling* (DD-671) deployed and ready to fight while keeping the peace in the Mediterranean in 1959

Gatling sailed to Portugal, France, and Italy. Recrossing the Atlantic and transiting the Panama Canal, the destroyer arrived Guayaquil, Ecuador, 7 October 1955. The following year she visited France and Cuba as a part of her varied operating schedule.

In 1957 *Gatling* again took part in NATO exercises, calling at Spain, Greece, Turkey, and Lebanon. Further operations brought her to England, to Spain again, and in 1958 to San Juan and Cuba. Her last major operations took her to Mediterranean ports of call, Pakistan and Iran, after which *Gatling* returned to her home base at Rhode Island 11 October 1959.

Gatling, after distinguished service in war and peace, again decommissioned 2 May 1960 and entered the Atlantic Reserve Fleet. At present she is berthed at Norfolk.

Gatling received eight battle stars for World War II service and one battle star for Korean service.

Gato

A species of small shark found in waters along the west coast of Mexico.

I

(SS-212: dp. 1,526 (surf.), 2,424 (subm.); l. 311'9"; b. 27'3"; dr. 19'3"; s. 20.25 k. (surf.), 8.75 k. (subm.); cpl. 60; a. 1 3', 4 mg., 10 21" tt.; cl. *Gato*)

The first *Gato* was laid down 5 Oct 1940 by the Electric Boat Co., Groton, Conn.; launched 21 August 1941; sponsored by Mrs. Royal E. Ingersoll, and commissioned 31 December 1941, Lt. Comdr. W. G. Myers in command.

After shakedown training at New London, *Gato* departed 16 February 1942 for Pearl Harbor via the Panama Canal and San Francisco. On her first war patrol from Pearl Harbor (20 April-10 June 1942), she unsuccessfully attacked a converted aircraft carrier 3 May before being driven away by the fierce depth charging of four destroyers off the Marshalls. On 24 May she was ordered to patrol the western approaches to Midway, taking station 280 miles westward during that historic victory.

On her second war patrol (2 July-29 August 1942), she patrolled east of the Kurile Islands toward the Aleutian chain. She obtained four torpedo hits with unconfirmed damage to a ship 15 August 1942 and terminated her patrol at Dutch Harbor, Unalaska. Her third patrol (4 September-23 December 1942) included operations off Kiska; then she steamed via Midway and Pearl Harbor to Truk atoll, where her attack 6 December on a convoy was broken off by aerial bombs and a severe depth charge attack by three destroyers. This patrol terminated at Brisbane, Australia, 23 December 1942.

During her fourth war patrol (13 January 1943-26 February 1943), *Gato* torpedoed and sank transport *Keikon Maru* 21 January; cargo ship *Nichium Maru* on 29 January; and cargo ship *Suruga Maru* on 15 February—all off New Georgia, Solomon Islands. On her fifth war patrol (19 March-6 June 1943), she landed an Australian Intelligence party at Toep, Bougainville, 29 March 1943, and evacuated 27 children, 9 mothers, and 3 nuns, transferring them 31 March to *SC-531* off Ramos, Florida Island. During a submerged radar attack approach 4 April 1943, between Tanga and Lihir Islands, she was shaken so violently by three exploding depth charges that she returned to Brisbane for temporary repairs 11 to 20 April. *Gato* landed more Australian commandos at Toep Harbor 29 May, transported more evacuees to Ramos Island, and then reconnoitered off Tarawa in the Gilbert Islands before putting in at Pearl Harbor 6 June 1943.

Gato was routed onward to the Mare Island Shipyard for overhaul; returned to Pearl Harbor 22 August 1943; and conducted her sixth war patrol (6 September-28 October) via Truk and Bougainville in the Solomons to Brisbane. En route on 19 October she attacked a convoy, scoring hits for unknown damage to two large cargo ships. Her seventh war patrol (18 November 1943-10 January 1944) took her north of the Bismarck Archipelago. On 30 November she made a coordinated attack with *Ray*, sinking the cargo ship *Columbia Maru*. She rescued a

Japanese soldier from a life-raft on 16 December; then attacked a convoy in the Saipan-Massau traffic lanes 4 days later to sink cargo ship *Tsuneshima Maru* and scored damaging hits on another freighter. After 2 hours of dodging depth charges, she finally evaded her attackers; surfaced and headed for Tingmon, the most likely course of the damaged cargo ship. *Gato* discovered a live depth charge on her deck at the same time that two enemy escorts headed in her direction were sighted. She outran them while disposing of the unexploded depth charge by setting it adrift, on a rubber raft. Although she did not overtake the cargo ship, she did sight a convoy. On 29 December her chase was foiled by a float plane finally driven off by her gunners. She concluded the patrol at Milne Bay, New Guinea, 10 January 1944.

Gato departed Milne Bay 2 February 1944 to conduct her eighth war patrol in the Bismarck-New Guinea-Truk area. She sank a trawler off Truk 15 February; transport *Daigen Maru No. 3* the 26th, and cargo ship *Okinoyama Maru No. 3* 12 March. Two other trawlers were destroyed by her gunfire before she returned to Pearl Harbor 1 April 1944.

On her ninth war patrol (30 May 1944-22 June 1944), *Gato* took Vice Admiral Charles A. Lockwood to Midway; completed photographic reconnaissance of Woleai Island; served on life-guard station for air strikes on Truk 11 to 18 June; and terminated her patrol at Majuro atoll. On 15 July 1944 she was underway on her 10th war patrol, taking life-guard station for the carrier-based air strikes on Chichi Jima, during which she rescued 2 aviators. She returned to Pearl Harbor on 2 September 1944, proceeded to Mare Island for overhaul and then returned to Pearl Harbor.

On her 11th war patrol (28 January-13 March 1945) *Gato* patrolled the Yellow Sea as a unit of a coordinated attack group which included *Jallao* (SS-368) and *Sunfish* (SS-281). She sank a coast defense ship on 14 February and cargo ship *Tairiku Maru* on 21 February, then returned to Guam. She departed on her 12th war patrol 12 April 1945, taking life-guard station in support of the invasion of Okinawa. On the night of 22 to 23 April she had a brief contest with two Japanese submarines and narrowly missed destruction as well-aimed torpedoes came close. Between 27 and 30 April she rescued 10 Army aviators from shallow water near the beaches of Toi Misaki, Kyushu. She returned to Pearl Harbor 3 June 1945.

On her 13th war patrol *Gato* departed 8 July for life-guard station for air strikes on Wake Island and then off the eastern coast of Honshu. She received word of "Cease Fire" 15 August while making an attack approach on a sea truck; steamed into Tokyo Bay the 31st; remained for the signing of surrender documents on board *Missouri* 2 September; and then departed the following day via Pearl Harbor and the Panama Canal to the New York Naval Shipyard, where she decommissioned 16 March 1946. She served for a number of years as a naval reserve training ship at New York and later at Baltimore, Md., until her name was struck from the Navy List on 1 March 1960. She was sold for scrapping 25 July 1960 to the Northern Metals Co., Philadelphia, Pa.

Gato received the Presidential Unit Citation in recognition of daring exploits during war patrols four through eight, and 13 battle stars for service in World War II.

II

(SS(N)-615: dp. 3,750; l. 278'6"; b. 31'8"; dr. 24'6" s. classified; cpl. 99; a. classified; cl. *Thresher*)

The second *Gato* was launched 14 May 1964 by the Electric Boat Div., General Dynamics Corp., Groton, Conn.; sponsored by Mrs. Lawson P. Ramage; and commissioned in November 1967.

Gauger

In an oil field, an individual responsible for measuring and determining the volume of oil shipments.

(YO-55: dp. 893 (lt.); l. 235'; b. 37'; dr. 15'; s. 10 k.;
cpl. 34; a. none)

Gauger (YO-55) was laid down 7 January 1942 by RTC Shipbuilding Co., Camden, N.J., under a contract from Ira S. Bushby & Sons, Inc., Brooklyn, N.Y.; launched 28 May 1942; and commissioned 28 September 1942 at Philadelphia, Lt. C. O. Fulgham in command.

After shakedown along the New England coast, *Gauger* departed Boston 22 October for Icelandic waters. She reached Reykjavik, Iceland, 7 November after sailing via Portland, Maine, and Halifax, Nova Scotia. She supplied ships with diesel oil and aviation fuel and steamed the frigid North Atlantic, searching for mines and patrolling coastal waters. She remained in Iceland until late spring 1944 when she returned to the United States.

Gauger departed Norfolk in convoy 4 July for duty in the Mediterranean. She arrived Mers-el-Kebir, Algeria, 20 July; and during the next year operated with the 8th Fleet, carrying liquid cargo to American ships stationed in Algeria, Tunisia, Sardinia, Corsica, Sicily, and Italy. She steamed to Norfolk in July 1945, then departed 22 August for the Caribbean, where she continued to deliver gas and oil to ships stationed in the Dutch West Indies and the Canal Zone.

Gauger served in the Atlantic and Pacific Oceans off Central America until 7 September 1946 when she departed Balboa, C.Z., for Pearl Harbor. Towing *YFD-6* and steaming in company with *Bluebird* (ASR-19), *Cahuilla* (ATF-152), and *Tawakoni* (ATF-119), she reached Pearl Harbor 12 October. She provided fueling services in Hawaiian waters until 3 March 1947 when she sailed for the Western Pacific. Steaming via Palmyra Island; Kwajalein, Marshalls; and Truk, Carolines; she arrived Guam 20 April. For 3 months she served ships at Guam and made a fueling run to Truk during June.

Gauger decommissioned at Guam 21 July and was brought back to the United States late in the year, arriving San Diego, Calif., in December. She was placed in reserve under the 11th Naval District; at present she is berthed at San Diego with ships of the Pacific Reserve Fleet.

Gauger received two battle stars for World War II service.

Gavia

Any of several fish-eating diving birds including the common loon.

(AM-363: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.;
cpl. 104; a. 1 3', 4 40mm.; cl. *Admirable*)

Gavia (AM-363) was laid down as *PCE-907* on 8 July 1943 by Williamette Iron & Steel Corp., Portland, Ore.; launched 18 September 1943; sponsored by Mrs. James E. Ray; reclassified as AM-363 on 27 September 1943; and commissioned as *Gavia* (AM-363) 23 July 1945, Lt. K. P. Billhardt in command.

After trials in the Columbia River, *Gavia* departed Astoria, Ore., 10 August 1945 for mine warfare exercises at San Pedro and San Diego, Calif. She departed San Pedro 26 September and reached Honolulu 4 October 1945. After additional minesweeping training in Hawaiian waters, she departed Pearl Harbor 26 October for minesweeping operations in the Far East. Proceeding via Eniwetok and Saipan, she arrived Wakayama, Japan, 27 November.

Steaming to Sasebo 3 December, *Gavia* spent the remainder of the month sweeping for mines in Tsushima Strait, Okino Shima, Tachabana Wan. She continued minesweeping exercises at Sasebo until 17 February 1946, then sailed for Buckner Bay, Okinawa. After serving as reference ship for Japanese minesweepers clearing waters off Miyako Jima, she arrived Subic Bay 19 March and removed her ordnance gear. She departed 9 April and reached Shanghai 13 April. She decommissioned there 29 May 1946 and was turned over to the State Department

for transfer to the Chinese Maritime Customs. Her name was struck from the Navy List 19 July 1946.

Gavia received two battle stars for World War II service.

Gayety

Merriment or jollity.

(AM-239: dp. 945 (lim.); l. 184'6"; b. 33'; dr. 9'9";
s. 14.8 k.; cpl. 104; a. 1 3', 4 40mm.; cl. *Admirable*)

Gayety (AM-239) was laid down 14 November 1943 by the Winslow Marine Railway & Shipbuilding Co. of Winslow, Wash.; launched 19 March 1944; sponsored by Miss Janice Morgan; and commissioned 23 September 1945, Lt. Comdr. John R. Row in command.

After shakedown out of San Pedro and San Diego, *Gayety* arrived Pearl Harbor 4 January 1945. Following training and escort duty she sailed west for the invasion of Okinawa via Eniwetok, Saipan, and Ulithi. She sortied from Saipan 25 March with a convoy bound for Okinawa and arrived off Okinawa 1 April in time for the first amphibious assault on that strategic island, the doorway to Japan. In the ensuing weeks, *Gayety* swept minefields and made ASW patrols in the Ryukyus. On 14 April she was attacked by a Japanese torpedo bomber coming in low and fast to starboard. The plane launched a torpedo which *Gayety* left astern, but she was shaken from bow to stern when it exploded 150 yards away.

On 4 May, following a kamikaze attack on nearby *Hopkins*, another plane made a suicide run on *Gayety*, coming in from starboard. Her automatic weapons riddled the plane that passed close over her fantail before crashing into the sea 30 yards off the port quarter. Later in the same day the ship was attacked by a Japanese "Baka" bomb, a 4,700-pound bomb propelled by a rocket and guided by a human pilot at speeds up to 600 miles per hour. One of these deadly weapons thundered in at an estimated 400 knots, made a low altitude run on several of the smaller minesweepers *Gayety* was shepherding, and then turned toward *Gayety* for a suicide crash. The ship's gunners, unflinchingly manning their weapons, sent up an umbrella of automatic fire which blew off the Baka's cowling; seconds later it disintegrated rapidly, tumbling end over end through the air, and crashed into the sea 15 yards off *Gayety's* port bow. Shrapnel rained on her decks, knocking out the port 40mm. gun and wounding three men, but the ship continued her duties undaunted.

On 27 May, while continuing to support the Okinawa campaign, she suffered a near-miss from a 500-pound bomb which exploded just astern. Five men were killed and two wounded by flying debris, and the fantail burst into flames. Quick damage control, however, followed by repairs at Kerama Retto, soon put her back in fighting shape; and she resumed minesweeping off Okinawa and, subsequently, shifted operations to the approaches of the Japanese home islands.

After Japan surrendered and occupation forces had taken control of the conquered Empire, *Gayety* stood out from Japan 20 November for the United States via Eniwetok and Pearl Harbor, reaching San Diego 19 December 1945 and thence sailing via the Panama Canal to Orange, Tex., where she decommissioned 7 June 1946 and entered the Atlantic Reserve Fleet.

Gayety recommissioned 11 May 1951, Lt. Percy W. Rairden, Jr., in command, and moored at Charleston, N.C., 29 May. Until 1954 she was based at either Charleston or Norfolk, Va., as a training ship, with a visit to Vieques Island, P.R., in the fall of 1951 for exercises. She returned to Orange, Tex., 3 January 1954 and decommissioned 1 March 1954, reentering the Atlantic Reserve Fleet. *Gayety* was reclassified MSF-239, 7 February 1955 and was transferred to the Republic of Vietnam 17 April 1962. She serves the Vietnamese Navy as *Chi Lang II* (HQ-8).

Gaynier

Oswald Joseph Gaynier, born 4 March 1915 in Monroe, Mich., enlisted in the Naval Reserve as Seaman Second Class 3 October 1940 and was appointed Aviation Cadet 16 December. Commissioned Ensign 3 June 1941, he was assigned to Torpedo Squadron 8 in *Hornet* (CV-8) on 25 August. During the opening phases of the Battle of Midway 4 June 1942, Torpedo Squadron 8 launched a courageous attack against carriers of the Japanese Striking Force. Lacking fighter-plane protection and beset on all sides by enemy fighters, the valiant American pilots pressed home the attack in the face of withering antiaircraft fire from a seemingly impenetrable screen of cruisers and destroyers. All members of the squadron but one were killed during the attack. Ensign Gaynier was one of those who so gallantly sacrificed his life for his country and the American victory that followed. For his extraordinary heroism and meritorious devotion to duty, he was posthumously awarded the Navy Cross.

DE-751 was laid down 4 August 1943 by Western Pipe & Steel Co., San Pedro, Calif.; renamed *Gaynier* (DE-751) on 3 September 1943; launched 30 January 1944; and sponsored by Mrs. Ireta Gaynier, widow of Ensign Gaynier. Construction suspended 6 June 1944, and construction cancelled 1 September 1944.

Gazelle

Any of numerous small, graceful, and swift antelopes, with lustrous eyes, found especially in South Africa, northern Africa, Iran, and India.

I

(SwStr: t. 117'; l. 135'; b. 23'; dr. 4'; s. 4 k.; a. 6 12-pdr. r.)

The first *Gazelle*, a side-wheel steamer built at Madison, Ind., in 1863 as *Emma Brown*, was purchased at Cincinnati, Ohio, 21 November 1863 for duty with the Mississippi River Squadron; and commissioned by February 1864 at Cairo, Ill., Acting Master Charles Thatcher in command.

Gazelle reached the mouth of the Red River in time to join Admiral Porter's joint Army-Navy expedition of 12 March-22 May 1864. The operation was part of the campaign against Texas designed to gain a strong foothold there and to thwart the French intervention in Mexico. Serving between the mouth of the Red River and Grand Ecure, La., *Gazelle* engaged enemy shore units, convoyed Army transports, and patrolled the river while Navy gunboats assisted in the capture of Fort De Russy. For the next year the ship patrolled between the mouth of the Red River and Morganza, La., and convoyed transports. On 24 May 1865 she embarked Confederate Generals Buckner and Price at the mouth of the Red River and brought them to Baton Rouge to negotiate a surrender with General Canby. Subsequently, following repairs at New Orleans, *Gazelle* steamed upriver to Mound City, Ill., arriving 25 June. She decommissioned there 7 July 1865; she was sold 17 August 1865 to Henry Scott *et al.* She was redocumented as *Plain City* 23 October and operated until abandoned in 1869.

II

The second *Gazelle* (BAM-17), built by Savannah Machine & Foundry Co., Savannah, Ga., was transferred to the United Kingdom 28 July 1943. Returned to the United States December 1946, she was struck from the Navy List 10 June 1947.

III

(IX-116: dp. 14,500; l. 441'6"; b. 56'11"; dr. 28'4"; s. 11.5 k.; cpl. 115; a. 1 5")

The third *Gazelle* (IX-116) was launched 9 November 1943 by the California Shipbuilding Corp., Wilmington, Calif., as SS *Cyrus K. Holliday*; sponsored by Mrs. J. E.

Stewart; and acquired by the Navy and simultaneously commissioned 29 November 1943, Lt. Joseph P. Marshall in command.

Auxiliary oiler *Gazelle* sailed from Wilmington 9 January 1944 for Pearl Harbor, where she was assigned to Rear Admiral Turner's Southern Attack Force for the imminent assault on Kwajalein. Underway with the task force 28 January, she entered Kwajalein Lagoon on D-day, 2 February 1944, and began fueling operations in the midst of the furious fighting. For 2 weeks she fueled combatant ships, including battleships *New Mexico*, *Mississippi*, *Idaho*, many cruisers, escort carriers, and smaller warships.

Her mission accomplished, *Gazelle* stood out 15 February for further combat duties. She steamed into Eniwetok Lagoon on D-day, 18 February, to support the amphibious invasion of that strategic island. Here in the front line of fighting she fueled several destroyer divisions before sailing 26 February for Kwajalein, where she issued fuel to American warships until getting underway 1 April for Pearl Harbor, arriving 12 April.

One week later she sailed for Majuro, arriving 27 April, and subsequently continued fueling operations and shuttle runs through submarine-infested waters to Majuro, Roi, Kwajalein, and Eniwetok through the summer of 1944, until reaching Ulithi 15 October. *Gazelle* escaped damage when Japanese midget submarines penetrated the harbor net and patrol defenses at Ulithi 20 November and sank oiler *Mississinewa*, moored 2,000 yards away. Underway once more 10 January 1945, the ship reached Palau 2 days later and served there until arriving Leyte 28 February. While at Leyte she fueled some 100 Allied ships during the next 6 months.

Gazelle sailed 13 September for Korea, arriving Jinsen 28 September, and joined the Korean Service Group, 7th Fleet. She remained in Korea through October 1945.

Gazelle reached Norfolk 28 February 1946 and decommissioned there 9 May 1946. Returned to WSA the next day, she was stricken from the Navy List 21 May 1946. In 1948 she was sold to Intercontinental S.S. Corporation and renamed *Evistar*.

Gazelle earned one battle star for World War II service.

Gear

An accessory mechanism or machine that performs a specific function in a complete machine, as an expansion gear or a steering gear.

(BARS-4: dp. 1,530; l. 213'6"; b. 39'; dr. 14'1"; s. 14.8 k.; cpl. 120; a. 4 40mm.)

Gear (BARS-4), originally intended for the Royal Navy under terms of the Lend-Lease Program, was launched as HMS *Pacific Salvor* (BARS-4) on 24 October 1942 by the Basalt Rock Co., Napa, Calif.; acquired by the U.S. Navy and designated *Gear* (ARS-34) on 21 September 1942; and commissioned 24 September 1943, Lt. J. F. Simmons in command.

Gear departed San Diego on 6 December 1943 en route via Pearl Harbor and the Gilbert Islands to Eniwetok atoll in the Marshall Islands. Here she performed salvage, towing, and repair for ships of the fleet as a unit of Service Squadron 10 until 17 July 1944. She provided similar services at Saipan (25 July-7 August), shifting to Apra Harbor, Guam, on 8 August 1944 for various operations that included the towing and sinking of concrete barges on Calalan Bank to serve as a breakwater; pulling amphibious landing ships off various beaches; and towing a ship to Tinian and Saipan before return. She returned to Pearl Harbor from the Marianas on 6 December 1944 for overhaul, and departed on 29 January 1945 with an amphibious assault force bound for Iwo Jima.

Gear arrived in the outer transport area of Iwo Jima on 19 February 1945 to witness the landing of Marines under cover of intensive Naval gunfire and air attack. She proved invaluable in assisting the ships of the fleet,

pumping out flooded spaces, repairing mortars, making ship repairs and performing various towing assignments. She returned to Saipan on 5 March with an LSM and two LCI's intow. Four days later she was en route with a transport assault force that arrived off Okinawa on 1 April, D-day of invasion. Here she braved the day and night aerial onslaughts in a busy schedule of battle damage repairs to such gallant fighting ships as *Wichita* (CA-45), *England* (DE-635), *Aaron Ward* (DD-483), *Ingraham* (DD-694). She departed Okinawa on 15 May for repair service at Ulithi (21 May-12 June), then proceeded via Eniwetok with two tank landing ships in tow for Pearl Harbor, arriving 6 July 1945.

Gear departed Pearl Harbor on 11 July and arrived at Portland, Oregon on the 20th. After voyage repairs, she performed towing and salvage for the Alaskan Sea Frontier at Adak until 6 May 1946, returning to San Pedro on the 23d for services there until decommissioned on 13 December 1946.

Gear was assigned to the San Diego Group, U.S. Pacific Reserve Fleet until 24 February 1953. A civilian crew of the Merritt Chapman Scott Corp. then operated her for Navy towing and salvage service at San Pedro, Calif. Under contract to the Merritt Chapman Scott Corp., she continues Navy salvage and repair duties at San Pedro with occasional coast towing.

Gearing

Gearing (DD-710) was named for three generations of naval men. Henry Chalfant Gearing, born 9 June 1855 at Pittsburgh, Pa., graduated from the Naval Academy in 1876. Gearing served on various ships of the Navy during his early years, including *Lackawana*, *Tuscarora*, and *Essex*. He spent tours of duty at the Naval Academy and on board *Glacier*. After being promoted to Commander in 1905, Gearing commanded the naval stations at Cavite and Olongapo, P.I., until his retirement in 1909. He died 16 August 1926 at Charlottesville, Virginia.

Henry Chalfant Gearing, Jr., born 22 January 1887 at Boston, Massachusetts, graduated from the Naval Academy in 1907. He served on *California*, *Illinois*, and other ships besides commanding a long list of destroyers, among them *Woolsey*, *Dobbin*, and *Maury*. He was appointed Captain in 1934. Subsequently, he commanded Destroyer Squadron 4 and Naval Training Station, San Diego, before his death 24 February 1944 at San Diego Naval Hospital.

Henry Chalfant Gearing III, born 16 August 1912 at Vallejo, Calif., and graduated from the Naval Academy in 1935. After serving several ships as a young officer, he joined *Juncau* as a Lieutenant in 1942, and was lost with his ship when it was torpedoed and sunk in the Solomon Islands 13 November 1942.

(DD-710; dp. 2,425; l. 390'6"; b. 40'10"; dr. 18'6"; s. 34.6 k; cpl. 345; a. 6 5". 12 40mm., 2 21" tt., 6 dep, 2 dct. cl. *Gearing*.)

Gearing (DD-710) was launched 18 February 1945 by the Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Mrs. Thomas M. Foley, daughter of Comdr. Gearing; and commissioned 3 May 1945, Commander T. H. Copeman in command.

After shakedown off Cuba, *Gearing* reached Norfolk 22 July 1945 and trained precommissioning crews for other destroyers until putting in at Casco Bay, Maine, 5 October. Celebration of Navy Day from 26 to 29 October at New London, Conn., gave 5,000 citizens the chance to board the powerful destroyer. Subsequently *Gearing* put in at Pensacola, Fla., 4 November to screen carrier *Ranger* during carrier qualification operations.

Returning to Norfolk 21 March 1946, she conducted peacetime operations along the Atlantic coast of North and South America, in the Caribbean, visiting Montevideo, Uruguay; and Rio de Janeiro, Brazil. *Gearing* sailed 10 November 1947 on her first Mediterranean cruise, calling

at Algeria, Malta, Italy, and France before mooring again at Norfolk 11 March 1948.

Peacetime operations along the eastern seaboard and in the Caribbean prepared her for a second cruise to European waters; the destroyer visited most of the nations washed by the Mediterranean from 10 November 1947 to 11 March 1948, and duplicated this long voyage from 4 January to 23 May 1949.

During the fall of 1949 *Gearing* took part in Operation Frostbite, an Arctic cruise test and development of cold weather techniques and equipment. She continued operations off the east coast of the United States and in the Caribbean through 1950. Another voyage 10 January to 17 May 1951, brought her from Norfolk to the Mediterranean and return; the remainder of the year was occupied by training cruises as far north as Halifax and south to Cuban waters.

By now *Gearing* had established the pattern of peacetime operations she followed well into the 1960's: "Med" cruises usually once a year, and exercise in the Atlantic and Caribbean. These kept her in fighting trim for the ceaseless duties of seapower. She was modernized and overhauled late 1961 through early 1962 at Boston.

In October 1962 *Gearing* took part in the American "quarantine" patrol against Cuba as the world trembled on the brink of war. This swift and classic use of power at sea solved the crisis. On 1 November *Gearing* returned to Norfolk. Through the remainder of 1962 she continued operations in the Atlantic.

After participating in Operation "Springboard-63" early in 1963, *Gearing* sailed for the Mediterranean in March serving with the 6th Fleet during the summer. She returned to Newport in September for a "FRAM I" overhaul. Following operations in the Caribbean and North Atlantic in the spring and summer of 1964, *Gearing* entered the Mediterranean 4 October to rejoin the 6th Fleet. After returning home early in 1965, she continued operating in the Atlantic Fleet into 1967.

Gedney, Lake, see *Lake Gedney*

Geiger

Roy Stanley Geiger, born 25 January 1885 in Middleburg, Fla., enlisted in the Marine Corps 2 November 1907 and was commissioned Second Lieutenant 5 February 1909. After serving with marine detachments in *Wisconsin* (BB-9) and *Delaware* (BB-28), he proceeded in August 1912 to Nicaragua, where he participated in the bombardment, assault, and capture of Coyotepe and Barrancas. He then went to the Far East serving in the Philippines and Peking, China, where from 1913 to 1916 he was assigned to the American Legation. Returning to the United States in March 1916 for naval aviation training at Pensacola, he was designated a naval aviator in June 1917, the fifth flyer in Marine Corps history.

He travelled to France in July 1918, commanded a squadron of the 1st Marine Aviation Force, and received the Navy Cross for distinguished service in leading bombing raids against the enemy. During the next two decades he was assigned a variety of duties, which included service in Haiti; Quantico, Va.; Washington, D.C.; and London, England.

He assumed command of the 1st Marine Aircraft Wing in August 1941 and led the Wing at Guadalcanal from 3 September 1942 to 4 November. As commander of all Guadalcanal-based aircraft, he received a Gold Star in lieu of a second Navy Cross for heavy losses that American planes inflicted upon the enemy, including 268 planes shot down and 28 ships sunk or damaged.

He became Director of Marine Corps Aviation in May 1943; then he returned to the Solomons in November to command the I Marine Amphibious Corps at Bougainville. During 1944 he led the III Amphibious Corps in the capture of Guam and the Southern Palau. He

commanded this corps during the Okinawa campaign and also assumed command of the 10th Army 18 June following the death of Lieutenant General Buckner. From July 1945 to November 1946 he commanded Marine Force, Pacific Fleet.

Then he returned to the United States for duty at Marine Corps Headquarters. While on active duty, Major General Geiger died 23 January 1947 at Bethesda Naval Hospital. He was posthumously promoted to the rank of General by the 80th Congress.

(T-AP-197: dp. 11,225 (lt.); 1. 533'9"; b. 73'3"; dr. 27'1"; s. 19 k.; cpl 219; cl. *Barrett*; T. P2-S1-DN3)

Geiger (T-AP 197) was laid down as *President Adams* 1 August 1949 under Maritime Commission contract for American President Lines by New York Shipbuilding Corp., Camden, N.J.; launched 9 October 1950; sponsored by Mrs. Edward J. Hart, wife of Congressman Hart of New Jersey; renamed *Geiger* 2 January 1951 while under conversion for MSTs; acquired by the Navy 13 September 1952; and placed in service the same day.

Acquired for transport service during the Korean conflict, *Geiger* has operated under MSTs since 1952. Over the years she has made numerous runs in support of peace-keeping operations throughout the world. She has crossed the Atlantic dozens of times, deploying troops to European bases and returning troops and refugees to the United States.

Operating out of New York, *Geiger* has provided valuable support for the mighty 6th Fleet on station in the turbulent Middle East. In response to the pro-Soviet takeover of the Syrian Army in August 1957, she steamed in the Mediterranean while the 6th Fleet deployed to protect independent nations in the Middle East, including the pro-Western government of King Hussein in Jordan. In July 1958 she carried troops from European bases to Lebanon to thwart an attempted Communist coup against the government of President Chamoun.

Between 1959 and 1965 *Geiger* continued operations out of New York, steaming to Bremerhaven, Germany; Mediterranean ports in North Africa, Italy, Greece, and Turkey; and American bases in the Caribbean. Following the Cuban Missile Crisis, she made three runs between New York and Cuba to return military dependents to Guantánamo Bay Naval Base during December 1962 and January 1963. Between 6 October and 23 November 1964, she participated in the massive amphibious exercise, Operation "Steel Pike I," the largest peacetime amphibious exercise ever conducted in the Atlantic. She supported the movement of combat-ready troops from the United States to the southwest coast of Spain and took part in the largest American military landing operation since the Korean war.

After returning to Charleston, S.C., 23 November with 768 marines embarked, she resumed transport runs between New York and Bremerhaven. Arriving New York 1 June 1965, she departed the next day for the Caribbean, where from 6 to 17 June she operated off Santo Domingo to support naval forces engaged in ending civil war in the Dominican Republic.

Following two more runs to Bremerhaven, *Geiger* departed New York 16 August for the Pacific. Steaming via Pearl Harbor, she arrived Qui Nhon, South Vietnam, 19 September to bolster the Navy's transportation capabilities during the struggle to halt Communist aggression in Southeast Asia. Between 23 September and 1 October she sailed via Yokohama, Japan, to Pusan, South Korea, where she embarked Republic of Korea troops bound for Vietnam. She returned to Qui Nhon 8 October; steamed to Cam Ranh Bay the 9th; then departed the next day for the United States, arriving San Francisco 27 October. Sailing for the Far East 5 November, she reached Qui Nhon the 23d and resumed duty as a troop transport. Between 30 November and 13 December she rotated ROK troops from Vung Tau, South Vietnam, to Inchon and back. She departed Vietnam from the United States 13

December; and, steaming via Pearl Harbor and the Panama Canal, she arrived New York 13 January 1966.

Geiger resumed transatlantic service to Bremerhaven 1 February and during the next 6 months made six runs between the United States and Europe. Departing Bremerhaven 8 August, she steamed via the Panama Canal and San Francisco to resume troop-carrying duty in the Far East. During 1967 *Geiger* shuttled between San Francisco and Vietnam carrying U.S. troops to bolster Allied forces fighting for freedom in southeast Asia.

Gem

Former name retained.

(SP-41: t. 201; l. 146'6"; b. 18'; dr. 7'; s. 15 k.; a. 2 3-pdrs.)

Gem, a steam yacht, was built in 1913 by George Lawley & Sons, Neponset, Mass.; chartered 26 March 1917 from William Ziegler, Jr.; and commissioned at New York 1 June 1917, Ens. Leroy J. Small, USNRF, in command.

Gem performed harbor entrance patrol at New Haven, Conn. until 12 December 1917. She was then assigned to experimental work under the Submarine Defense Association. In this duty, carried out at New York, New London, Newport, and New Haven, she experimented with camouflage defense; tested the Bates Automatic Course Indicator; and experimented with various submarine detection devices, including the Sanborn Speed Indicator. She also performed colloidal fuel (pulverized coal) experiments at New Haven and New York. She decommissioned at New York 10 January 1919 and was returned to her owner the same day.

Gem of the Sea

A merchant name retained.

(Bark: t. 371; l. 116'; b. 26'3"; dph. 13'5"; cpl. 65; a. 6 32-pdrs.)

Gem of the Sea was purchased at New York from Galway & Teller 3 August 1861; and commissioned 15 October, Acting Volunteer Lt. Irvin B. Baxter in command. She departed New York 20 October 1861 to serve the South Atlantic Blockading Squadron off the coast of South Carolina. She ran British blockade runner *Prince of Wales* aground off Georgetown 24 December. She captured blockade runner *Fair Play* 12 March 1862, schooner *Dixie* 15 April 1862, and schooner *Mary Stewart* 3 June. Nine days later she took schooner *Seabrook* off Alligator Creek. On 1 July she took possession of four rice-laden lighters up the Waccamaw River.

Gem of the Sea returned to the Boston Navy Yard 18 October 1862 for repairs. Ordered to the East Gulf Squadron, she arrived at Key West, Fla., 18 December 1862 to guard the coast. She captured sloop *Ann* off Jupiter Inlet 30 December 1862, a small, unidentified schooner 12 January 1863, a small boat 28 January, and schooner *Charm* in the Indian River Inlet 23 February. In the same vicinity, she captured sloop *Peter*, and British blockade runners *Maggie Fulton* and *Inez*. British schooner *Georgie* was taken in the Sanibal River 29 July; and sloop *Richard* fell into her hands in Peace Creek 31 August. In an expedition up the same creek 5 September, she destroyed the buildings and four boats of noted blockade runner *Johnson*. Thereafter she captured British schooner *Director* 30 September and sloop *Matilda* 21 October. From 24 to 30 December 1863, she was part of an expedition up the Myacca River, transporting refugee rangers from Useppa Island to the mainland.

Gem of the Sea spent her remaining career patrolling off Charlotte Harbor, Fla. She joined her tender *Rosalie* in capturing steamer *Emma* off nearby Malco Inlet 11 June 1864. She departed Charlotte Harbor 2 February 1865 and entered the Philadelphia Navy Yard the 22d. She decommissioned 24 February and was sold 6 May 1865 to A. C. Purvis & Sons, Philadelphia, Pa.

Gemini

(AP-75: dp. 3555 (lim.); l. 261'; b. 43'6"; dr. 15'9" (lim.) s. 8.5 k.; epl. 365; trp 265; a. 2 3'; cl. *Gemini*)

Gemini (AP-75) a lake-type freighter, was built as *Copras* by Manitowoc Shipbuilding Co., Manitowoc, Wis. Subsequently renamed *Actna* and then *Saginaw* around 1937 while in merchant service, she was acquired by the Navy 27 September 1941. Originally designated *Matinicus* (AG-38), she was reclassified AK-52 7 January 1942 while undergoing conversion at Bethlehem Steel Company, Boston, Mass. Commissioned as *Matinicus* (AK-52) 4 August 1942, Lt. Comdr. W. L. Cain in command, she was redesignated and renamed *Gemini* (AP-75) 15 August 1942.

Gemini sailed 16 August for New York to load troops and sortied 24 October with convoy SC-107 bound for Ireland and United Kingdom ports. This, her first voyage, was also the most difficult, for the convoy ran into German submarine wolfpacks in mid-Atlantic and from 1 to 4 November no less than 15 ships, nearly half the convoy, were torpedoed and sunk in a running battle. *Gemini* arrived safely at Reykjavik, Iceland, and spent the next 10 months as a transport for troops and cargo between Icelandic ports.

The ship put in at Boston 3 September 1943 for overhaul, and then embarked troops at New York, departing 9 October bound for the west coast via Panama. After touching at San Pedro, Calif., for repairs, she reached Honolulu 11 December and commenced duty as an inter-island transport in Hawaiian waters.

In July 1944 *Gemini* shifted her operations to the Marshalls and Gilberts, carrying men and cargo to and from Kwajalein, Apamama, Tarawa, Makin, Majuro, Roi, and Eniwetok. She continued these essential transport duties in support of the allied advance until 1 June 1945 when she got underway for San Francisco via Pearl Harbor. *Gemini* remained in drydock at San Francisco until the end of the war.

Gemini sailed 28 August 1945 for the Pacific Ocean again, resuming her earlier transport runs in the Marshalls-Gilberts area and continuing the assignments until her return to San Francisco. She decommissioned at Oakland, Calif., 8 April 1946 and was turned over to the Maritime Commission 10 September 1946. Subsequently sold to Oly Fenno S.S. Co. Ltd., she operated under Finnish papers as *Ramsdal* out of Abo, Finland.

Gemsbok

A large, handsome species of straight-horned African antelope.

I

(Bark: t. 622; l. 141'7"; b. 31'; dr. 17'; a. 4 8";
2 32-pdrs.)

The first *Gemsbok* was purchased 7 September 1861 at Boston, Mass., and commissioned 30 August 1861 at the Boston Navy Yard, Acting Volunteer Lt. Lewis Drake Voorhees in command.

Assigned to the South Atlantic Blockading Squadron, *Gemsbok* sailed from Boston 6 September 1861 for her duty station off Wilmington, N.C. On 19 September she captured schooner *Harmony* off Hatteras and 3 days later took schooner *Mary E. Pindar* off Federal Point, N.C. Schooner *Beverly* fell to *Gemsbok* just outside Frying Pan Shoals 3 October while on 18 October English brig *Ariel*, loaded with salt, was captured off Wilmington.

In November *Gemsbok* reported for blockade duty at Beaufort, N.C. On 16 January 1862 her crew, with that of *Albatross*, boarded and burned *York*, grounded near Bogue Inlet, N.C., while unloading supplies from Dublin. On 25 April *Gemsbok* in company with other warships bombarded Fort Macon, N.C. In the last engagement she had much of her rigging shot away. During the capture of Fort Macon two English ships, *Alliance* and *Gondar*, were taken as prizes; *Gemsbok* convoyed them to the

Chesapeake capes, from where they sailed to New York while she put in at Hampton Roads 10 May.

Subsequently, she was ordered to Boston 27 August 1862 to fill up her complement and then to report for duty with Rear Admiral Samuel F. DuPont at Port Royal, S.C. From that port she sailed to Turtle Harbor, Fla., for the protection of colliers supplying the West Indies squadron. On 10 December Army transport *Memnonium Sanford* grounded on a reef 1½ miles south of Key West, and *Gemsbok* sent a launch and crew to kedje her off, taking on board many officers and men later debarked at Key West.

In February 1863 *Gemsbok* was attached to the West Indies Squadron to be employed as a coal and store ship. Returning to New York 19 July 1863, she decommissioned there. On 19 July 1864 she was ordered to Port Royal and, after recommissioning at New York 23 December 1864, reached that port 8 January 1865. She served on blockade duty in waters off Georgia and South Carolina and as a guard and store ship before returning to the New York Navy Yard 17 June 1865. Decommissioned there 11 July 1865, *Gemsbok* was sold at auction to Smith & Co. at New York.

II

(IX-117; dp. 14,500; l. 441'6"; b. 56'11"; dr. 28'4";
s. 11.8 k.; epl. 110; a. 15')

The second *Gemsbok* (IX-117) was launched as *Carl R. Gray* 9 November 1943 by the California Shipbuilding Corp., Wilmington, Calif.; sponsored by Miss E. Jeffers; acquired and simultaneously commissioned 3 December 1943, Commander A. H. Kooistra, USNR, in command. The ship was renamed *Gemsbok* upon acquisition.

Gemsbok sailed 12 January 1944 for the Marshall Islands and until May 1945 delivered fuel oil, aviation gasoline, and lube oil to warships in that archipelago and in the Marianas. Her principal base of operations was Eniwetok but in addition *Gemsbok* supplied fuel at Majuro and Kwajalein, and from 5 July to 16 September 1944 was at Saipan servicing ships engaged in the capture and occupation of bases in the Marianas.

She sailed from Eniwetok 11 May 1945 with fuel oil for Leyte, arriving 25 May via Ulithi. After Ulithi, she sailed from Leyte 29 September for Okinawa and Hiro Wan, Japan, where she put in 16 October. *Gemsbok* continued her fueling duties at Nagoya and subsequently sailed for the United States 20 December, reaching Norfolk 28 February 1946 via San Diego and Mobile, Ala. Decommissioned there 30 April 1946, *Gemsbok* was stricken from the Navy List 8 May 1946 and subsequently sold to Maris Transportation System Inc. and in 1948 renamed *Alpha*.

Gendreau

Elphege Alfred M. Gendreau, born in Canada 29 June 1888, was commissioned Assistant Surgeon, Medical Reserve Corps, with the rank of Lt. (j.g.) 20 August 1915. He served in *Glacier* in Mexican waters during political unrest in that neighboring country and in *Charleston* during World War I.

After distinguished service in a number of assignments afloat and ashore, Gendreau was commissioned Captain 20 September 1939. During the years 1940 and 1941, he served as Force Surgeon of Battle Force and subsequently on the staff of Admiral Nimitz, Commander in Chief, Pacific Fleet. In the summer of 1943, he was on temporary duty in the South Pacific inspecting medical facilities to improve treatment and care of battle casualties. He voluntarily embarked in *LST-343* to assist in the evacuation of the sick and wounded in Rendova. He was killed in a dive-bombing attack on *LST-343* on 21 July 1943. His unspetacular but dedicated service prompted Admiral Nimitz to recommend that a destroyer be named for Captain Gendreau.

(DE-639: dp. 1,400; l. 306'; b. 37'; dr. 13'6"; s. 23.6 k.;
epl. 213; a. 3 3", 4 1.1", 10 20mm., 3 21" tt., 8 dep, 1
dep. (h.h.), 2 dct.; cl. *Buckley*)

Gendreau (DE-639) was laid down 1 August 1943 by Bethlehem Shipbuilding Co., San Francisco; launched 12 December 1943; sponsored by Mrs. Josephine Gendreau, widow of Captain E. A. M. Gendreau, with Mrs. Chester Nimitz, wife of the Commander in Chief of Pacific Fleet, as matron of honor; and commissioned 17 March 1944, Lt. Cmdr. A. D. Kilmartin in command.

After shakedown off the California coast, *Gendreau* departed San Francisco 23 May escorting a convoy to Pearl Harbor, arriving 6 days later. She trained in Hawaiian waters and got underway 18 June 1944 on the first of two voyages, escorting convoys between Hawaii and the Marshalls. Convoy duty brought her to Eniwetok again and on 26 July *Gendreau* returned to Oahu from the second voyage in time to help welcome President Roosevelt to Hawaii. During ensuing ASW patrol out of Pearl Harbor, the destroyer escort rescued the pilot and crew of an aircraft which had ditched at sea 31 July; and 9 days later in heavy seas saved a downed fighter pilot.

Gendreau departed Pearl Harbor 8 September with a convoy for Emirau. On 13 September she collided with escort carrier *Breton* (CV-23) while fueling from her in heavy seas; but efficient emergency repairs allowed *Gendreau* to proceed with the convoy to Emirau before steaming into Manus 19 September for repairs. She sailed from the Admiralties 1 October and arrived Port Purvis, Solomon Islands, 4 October. Following intensive training with PT boats at Tulagi, she sailed 27 October for the Russell Islands and rendezvoused with a convoy of landing craft bound for New Georgia Island. Departing there 29 October, the group proceeded to Cape Torkina, Bougainville, where the landing craft debarked troops. *Gendreau* escorted the landing craft back to the Russells 1 November and returned to Port Purvis the next day.

Then in March 1945, following 3 months of escort and ASW duty shuttling between islands of the South Pacific, *Gendreau* rehearsed for the coming Okinawa invasion after which she escorted landing craft to the Russell Islands and Port Purvis, arriving Port Purvis 7 March and returning to the Russells 4 days later. Underway from the Russells 12 March, she called at Ulithi 21 March for final staging and sortied 4 days later with a task force for the Ryukyus.

On D-day, 1 April, *Gendreau* was off the southeast coast of Okinawa protecting amphibious ships. Before dawn a Japanese plane attacked the DE but was shot down and splashed a few yards to starboard. A few hours later she closed the invasion beaches and delivered the landing craft to their assigned positions well in advance of the final bombardment and initial landings. The next day she was in the destroyer screen when another enemy plane attacked her at dawn, but with the aid of other ships she managed to splash it. On the 3d, a plane strafed her and then, on its second pass, tried to crash her, but *Gendreau's* gunfire blew him out of the air and splashed him 25 yards away. On 5 April she joined a hunter-killer group.

On 6 April a torpedo bomber aimed a torpedo at the DE, but it exploded upon hitting the water. *Gendreau* splashed the bomber 500 yards astern. The following day she destroyed another attacking plane. On the 12th, without warning a torpedo bomber roared in and released a torpedo which passed just under the bow and exploded some distance beyond. On 16 April two enemy planes homed in on her, but two American fighters swooped in from behind and shot down the attackers.

Gendreau departed Okinawa 22 April with a convoy, touching at Saipan 5 days later and returning to Okinawa 2 May. She departed the next day for Ulithi, arriving 7 May. Underway again 23 May with a mixed convoy, she called at Okinawa the 29th and escorted convoys in these waters. On 10 June 1945, while supporting the American troops who were wresting the island from Japan, *Gendreau* was hit by shellfire from a hidden 150mm. gun. She lost power and began taking water, but outstanding damage control had her under control in 15 minutes and nearly restored her to normal within 2 hours. Two men were killed and two others wounded.

After repairs at Kerama Retto and later at Buckner Bay, Okinawa, she joined Vice Admiral Oldendorf's Task Force 13 July for training and minesweeping in the East China Sea. On 26 July she rescued a friendly fighter pilot who had ditched at sea, picking him up only 32 minutes after the crash. At the end of the month a bad typhoon caused her to roll nearly 60° and buckled steel plating. On 31 July 1945 she escorted damaged *Pennsylvania* (BB-38) to Guam and returned to Okinawa 12

USS *Gendreau* (DE-639) in 1959—in World War II DE's fought enemy submarines to a standstill.

September where 4 days later another typhoon parted her port anchor chain. She departed 22 September to act as courier ship during the Allied occupation of the Japanese homeland.

Thus, after a short but distinguished war career, *General A. E. Anderson* stood out of Tokyo Bay 4 November 1945 bound home via Pearl Harbor, arriving Portland, Oreg., 22 November. In February 1946 she proceeded to San Diego for training exercises and then departed the following month on a Far Eastern cruise.

General A. E. Anderson arrived Shanghai, China, 14 April and sailed to Hulutatao, Manchuria, and to Tsingtao and Chinwangtao, China. Further patrols brought her to Okinawa and Shanghai again May to June, and on 1 July she headed for California, arriving San Diego the 19th. After training and repairs she cast off on her last Far Eastern cruise, calling at Pearl Harbor and Guam en route to Japan, where she arrived 19 March 1947. In the spring and summer of 1947, *General A. E. Anderson* stood patrol duty off the Korean coast, calling at Yokosuka, Japan, 21 May, and thence returning to station. On 1 September she sailed from Japan for Pearl Harbor and San Diego, putting in at the latter port 19 September.

General A. E. Anderson decommissioned 13 March 1948 and entered the Pacific Reserve Fleet at San Diego, where she remains.

General A. E. Anderson

Alexander E. Anderson was born 23 November 1889 in New York City and enlisted in the National Guard in 1910. Promoted through the ranks, he rose in 1934 to command the regiment in which he had fought on the Western Front during World War I. In 1938 he was promoted to Brigadier General in the National Guard and commanded the 93d Brigade. At the outbreak of World War II he was appointed Major General and for a time commanded a division overseas. He became commander of the 86th Infantry Division upon its activation 15 December 1942 and died 24 December 1942 at Gainesville, Tex.

(AP-111: dp. 11,450 (lt.); l. 622'7"; b. 75'6"; dr. 25'6"; s. 20.6 k.; cpl. 507; trp. 5,289; a. 4 5", 16 1.1", 20 20mm.; cl. *General John Pope*; T. P2-S2-R2)

General A. E. Anderson (AP-111) was launched 2 May 1943 under a Maritime Commission contract by the Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Mrs. George C. Marshall; acquired by the Navy 25 August 1943; placed in partial commission the same day for transfer to Baltimore for conversion to a transport by Maryland Drydock Co.; and placed in full commission at Baltimore 5 October 1943, Cap. W. E. Miller in command.

From 25 October 1943 to 21 March 1944 *General A. E. Anderson* made four round-trip transport voyages out of Norfolk to Casablanca, French Morocco. Underway again 26 March 1944, she returned to North Africa and touched at Gourock, Scotland, before steaming to Bermuda, where British censors and their families embarked for passage to New York. The ship reached New York 7 May, and following a round-trip voyage to Belfast, Ireland, she stood out of Norfolk 29 June for Bombay, where her troops debarked 7 August. *General A. E. Anderson* returned to San Pedro, Calif., 11 September 1944 and subsequently made another long round-trip voyage thence to Bombay via Australia, returning 9 December.

Until the summer of 1945 the busy ship made two roundtrip voyages from San Francisco to Hollandia and Leyte, sailing from Leyte 24 to reach Norfolk 22 July 1945. *General A. E. Anderson* then commenced troop rotation and "Magic-Carpet" duties. From 8 August 1945 to 15 April 1946 she made eight transatlantic voyages to France (Marseilles, Le Havre), England (Southampton), and India (Karachi). Of these active voyages, six were from New York, and one each from Norfolk and Boston. The ship stood out of Norfolk 9 July 1946 for San Francisco, arriving 24 July, and commenced a pattern of troop carrying and supply runs from West Coast ports to China, Japan, the Philippines, and Guam. Assigned to MSTs in October 1949, she continued these duties until

war flared again in the Far East when Communist troops crossed the 38th Parallel to invade the Republic of Korea. The Navy moved quickly to bring American force into action to halt and push back the aggressors. *General A. E. Anderson* embarked the men and equipment of Marine Air Group 33 at Terminal Island, Calif., and headed for Japan. She reached Kobe 31 July 1950 with these Marine fliers who helped save the day for embattled Korean and American ground forces as they struggled to maintain a foothold at the southern tip of the beleaguered Korean peninsula.

Returning to San Francisco in August, she embarked 1,800 men of the 11th Airborne Division and brought them to Moji, Japan, 20 September.

Throughout the remainder of the Korean conflict *General A. E. Anderson* followed her familiar pattern of transport runs from West Coast ports to Japan and Korea as she supported United Nations forces in Korea. Thereafter she continued identical peacetime operations until she decommissioned at Oakland, Calif., 10 November 1958. After being returned to the Maritime Administration she entered the National Defense Reserve Fleet at Suisun Bay, Calif., where she remains.

General A. E. Anderson received one battle star for Korean service.

General A. W. Brewster

Andre Walker Brewster, born 9 December 1862 at Hoboken, N.J., was commissioned 2d Lieutenant of Infantry in January 1885. He served at various posts in the western states until the outbreak of the Spanish-American War. During the Cuban campaign Brewster took part in the siege of Santiago with the 9th Infantry. Later he served with the 9th Regiment in the Battle of Tientsin, and other engagements in China during the Boxer Rebellion. Brewster was awarded the Medal of Honor for conspicuous gallantry during the Battle of Tientsin 13 July 1900; and, after relative peace had been restored, he served as military attache at Peking. Returning to the United States, Brewster was Inspector General until 1917 when he was assigned to Headquarters, American Expeditionary Force. Following his service in World War I, for which he received the Distinguished Service Medal, he assumed command of the 1st Corps Area, with headquarters in Boston, where he remained until his retirement 9 December 1925. Major General Brewster died at Boston 27 March 1942.

(AP-155: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,823 a. 4 5", 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T.C4-S-A1)

General A. W. Brewster (AP-155) was laid down 16 October 1944 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; launched 21 January 1945; sponsored by Mrs. Bert Hotchkiss; acquired and commissioned 23 April 1945, Comdr. E. E. Hahn, USCG, in command.

After shakedown out of San Diego, the transport sailed 28 May from San Pedro. Transiting the Panama Canal, she arrived Avonmouth, England, 20 June and embarked troops for Pacific ports. Sailing westward, *General A. W. Brewster* passed through the canal again and arrived Humboldt Bay, New Guinea, 27 July 1945. She then sailed to the Philippines, remaining there until after the capitulation of Japan. The ship embarked veterans and returned to San Francisco 1 September.

General A. W. Brewster made three additional voyages to the Far East in the immediate postwar period, bringing home thousands of servicemen. She decommissioned at San Francisco 10 April 1946 and was transferred to the Maritime Commission and later to Army Transportation Service for Pacific duty.

The ship was reacquired by the Navy 1 March 1950 and sailed for the Military Sea Transportation Service with a civilian crew. *General A. W. Brewster* made many voyages to Korea and Japan during the next 3 years,

carrying more than 67,000 troops. In 1954 the ship was diverted to the coast of Indochina for Operation "Passage to Freedom." During September and November *General A. W. Brewster* and other navy ships brought thousands of freedom-loving refugees out of the northern sector of Vietnam as that unfortunate country was partitioned. Returning to San Francisco after this striking demonstration of the mobility of the American Navy's warships and logistic support units, the transport was placed in Reduced Operational Status in December 1954, and was returned to the Maritime Administration 26 July 1955. *General A. W. Brewster* was placed in the National Defense Reserve Fleet, Suisun Bay, Calif., where she remains.

General A. W. Greely

Adolphus Washington Greely, born 27 March 1844 in Newburyport, Mass., enlisted as a private in the 19th Massachusetts Infantry 26 July 1861 and participated in numerous battles throughout the Civil War. Appointed Second Lieutenant in 1867, between 1871 and 1881 he served in Texas and in Montana and Dakota Territories, where he helped construct 2,000 miles of telegraph lines. A pioneer in polar exploration, he studied Arctic weather and climate, and from 1881 to 1884 led an ill-fated expedition during the establishment of a chain of circumpolar research stations. In 1882 his party pushed farther northward than any previous expedition; but, suffering great hardships, only seven men, including Greely, survived the ordeal. From 1887 until 1906 he served as Chief Signal Officer and administered the Weather Bureau and Signal Corps. During the Spanish-American War he supervised the construction of more than 25,000 miles of telegraph lines in Cuba, Puerto Rico, China, and the Philippine Islands. Also a pioneer in the use of wireless communications, he established several radio stations in Alaska. Promoted to Major General 10 February 1906, he commanded military relief operations following the San Francisco Earthquake 18 to 19 April. General Greely retired 27 March 1908 and died in Washington, D.C., 20 October 1935. By special legislation of Congress, he was awarded the Medal of Honor 21 March 1935 for his life of splendid public service.

(AP-141: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 17 k.; cpl. 356; trp. 3,823; a. 4 5', 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General A. W. Greely (AP-141) was laid down under Maritime Commission contract 18 July 1944 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; launched 5 November 1944; sponsored by Mrs. Clarke Wayland; acquired by the Navy 22 March 1945; and commissioned the same day, Comdr. George W. Stedman, Jr., in command.

After shakedown, *General A. W. Greely* embarked 2,923 troops and civilians and departed San Pedro 16 April for Australia. She reached Melbourne 4 May, then sailed the next day for Fremantle and India, arriving Calcutta 20 May. After embarking homebound troops, she departed the 28th; steamed via Ceylon and Suez; and arrived Newport News, Va., 22 June. From 28 June to 7 July she sailed to Le Havre, France, where she embarked 3,000 troops before returning to New York 18 July. Between 28 July and 6 December she completed two round-trip voyages from New York to Calcutta, transporting occupation troops, mail, and cargo; and returning homebound veterans to the United States. Departing New York 14 December, she reached Karachi, India, 4 January 1946 and embarked additional returning veterans. She sailed 6 January for the West Coast; and, steaming via Ceylon, Singapore, and the Philippines, she arrived Seattle 2 February. She decommissioned at San Francisco 29 March and was transferred to WSA the same day for use as a transport in the Army Transportation Service.

Reacquired by the Navy 1 March 1950, *General A. W. Greely* was assigned to MSTTS under a civilian crew. She

departed Seattle 5 August and carried troops to the Far East in support of the effort to repel Communist aggression in Korea. Operating out of Seattle, during the next nine months she made four round-trip voyages to Japan, Korea, and Okinawa. Returning to Seattle 3 May 1951, she then sailed 24 May for duty in the Atlantic.

Operating out of New York, between 10 October and 22 February 1953 *General A. W. Greely* completed numerous transatlantic runs to Bremerhaven, Germany, and La Pallice, France. While en route to Bremerhaven in January 1952, she rescued survivors from the stricken merchantman, *Flying Enterprise*. Placed in reduced operational status from 17 April until 5 June 1953, she departed Norfolk 16 June for Thule, Greenland. Arriving 3 July, she served until 30 September as barracks ship during Operation "Blue Jay," the construction of Thule Air Force Base. She returned to New York 9 October; steamed to Bremerhaven and back between 10 November and 4 December; and was again placed in reduced operational status from 9 December until 19 July 1954.

General A. W. Greely departed New York 27 July, bound for the Pacific. Arriving San Francisco 11 August, she sailed for the Far East 7 September and operated in Korean and Japanese waters before returning to San Francisco via Adak, Alaska, 10 October. She steamed to Portland, Ore., 27 October; entered the Pacific Reserve Fleet at San Diego in March 1955; and was transferred to the National Defense Reserve Fleet at Olympia, Wash., 29 August 1959 where she remains.

General Alava

A former name retained.

(AG-5: dp. 1,390; lbp. 212'6"; b. 28'3"; dr. 13'; s. 10.5 k.; cpl. 76; a. 1 6-pdr., 2 3-pdrs.)

General Alava was built in 1895 by A. McMillan & Sons, Dumbarton, Scotland; captured during the Spanish-American War; transferred from the War Department to the Navy 21 February 1900; commissioned at Cavite, P.I., 9 March 1900, Lt. Comdr. C. E. Fox in command.

General Alava served in the Philippines as a transport and lighthouse tender. She transported marines between various garrisons in the Philippines, making a voyage to Guam November 1900 to return survivors of *Yosemite*, lost at sea during a typhoon, to Cavite. Following a tour of the Archipelago with the Army Board for selection of a leper colony site, she carried a Naval Observatory party to Pendang, Sumatra, to observe a partial eclipse of the sun 16 May 1901. During 3-26 September 1901, she cruised with Read Admiral C. C. Remey on inspection of the southern islands. She carried Governor William Howard Taft from Manila to Singapore and back, 5-22 August 1902. The transport again sailed from Manila 29 October, transporting a Forestry Commission to the southern islands, Northern Luzon, Formosa and Nagasaki, Japan. She returned to Subic Bay 30 December and decommissioned at Cavite 24 January 1903.

General Alava recommissioned 11 June 1904 for transport service between the islands until May 1905 when she departed for the coast of China. She returned to Cavite from Shanghai 21 November 1905 and decommissioned 26 February 1906.

General Alava recommissioned 18 December 1906. She was largely used to carry passengers between Cavite and Olongapo until February 1925. This service was interrupted (May-November 1919) by a cruise to Batavia, Saigon, and Celebes to show the flag. With the assignment of hull classification and numbers to ships in 1920, she was designated a miscellaneous auxiliary (AG-5). The transport departed Manila 18 February 1925 once again to show the flag at Batavia and Saigon and to proceed via Hong Kong to Shanghai, arriving 24 April.

For the next 2 years *General Alava* carried passengers between Chinese ports, twice returning to the Philippines for brief visits. In several inspection cruises from

Shanghai, she carried the Asiatic Fleet Commander to such ports as Dairen, Chefoo, Tsingtao, Tientsin, and Chinwangtao. On 24 August 1927 she became receiving ship at Shanghai for transient officers of the Yangtze Patrol and from time to time made inspection trips along the river. She returned from her last cruise on the river to Nanking 3 June 1929 and decommissioned at Shanghai 28 June 1929. Her hulk was used as a target during gunnery practice off the Asiatic coast and sunk 17 July 1929.

General Alexander M. Patch

A former name retained. Alexander McCarrell Patch, Jr., born 23 November 1889 at Fort Huachuca, Ariz., graduated from the U.S. Military Academy 12 June 1913 and was commissioned Second Lieutenant in the Infantry. Prior to World War I, he served in Texas and Arizona; and from June 1917 until May 1919 he joined the 18th Infantry in France participating in the Aisne-Marne, St. Mihiel, and Meuse-Argonne Offensives. During the next 20 years he was stationed at various posts in the United States. Assigned to the 47th Infantry at Fort Bragg, N.C., in August 1940, he was promoted to Brigadier General 4 August 1941. Following the Japanese attack on Pearl Harbor, he assumed command of Allied forces in New Caledonia 12 March 1942, and on 8 December he relieved General Vandegrift, USMC, on Guadalcanal and took command of composite American forces operating against the Japanese in the Solomon Islands. He returned to the United States in April 1943 and assumed command of the IV Corps. In March 1944 he was designated Commanding General of the 7th Army in Sicily. Promoted to Lieutenant General 7 August 1944, he served with the 7th Army in France. He then took command of the 4th Army in July 1945 and died 21 November while on duty at Fort Sam Houston, Tex.

Admiral R. E. Coontz (AP-122) (q.v.) was reacquired by the Navy from the Army Transport Service as *General Alexander M. Patch* 1 March 1950 and assigned to MSTs. Manned by a civilian crew, she operated out of New York to Bremerhaven, Germany, and Southampton, England, during the next 5 years, rotating troops, transporting military dependents, and carrying European refugees to the United States. During October and November 1956 she steamed to the Mediterranean where she supported peace-keeping operations of the mighty 6th Fleet.

Returning to New York 15 November, she resumed transatlantic service to Bremerhaven. From 1956 to 1965 she completed more than 120 voyages to Bremerhaven and back. She also deployed to the Mediterranean six more times, and, during political crises in Jordan and Lebanon, she supported counteractions by the 6th Fleet.

In response to Communist infiltration and aggression in South Vietnam, *General Alexander M. Patch* departed New York 15 August 1965 for the Far East. Sailing via Charleston, S.C., and Long Beach, Calif., she carried troops and supplies to bolster American military aid for strife-torn South Vietnam. Arriving Qui Nhon 16 September, she steamed via Cam Ranh Bay to Vung Tau before departing the 22d for the United States. She arrived San Francisco 2 October, and from 20 October to 9 November she again sailed to Vung Tau with men and military supplies. From South Vietnam she sailed via Penang, Malaysia; the Suez Canal; and Bremerhaven, Germany, to New York, arrived 15 December.

Following seven transatlantic voyages to Bremerhaven and back, *General Alexander M. Patch* resumed troop transport duty to South Vietnam. After embarking troops at Boston, she sailed 15 July 1966 and arrived Vung Tau 13 August. She departed the next day via Yokosuka, Japan, for Pusan, South Korea, where she arrived 26 August. There she embarked South Korean soldiers and sailed for Nha Trang 30 August, arriving 7 September. She continued to transport troops and sup-

plies supporting the effort to repel Communist aggression in South Vietnam until heading home 31 December. She reached New York, via Suez and Gibraltar, late in January 1967 and was placed in ready reserve status while preparing for future service.

General Arnold

Benedict Arnold was born in Norwich, Conn., 14 January 1741. At the beginning of the Revolutionary War, he served in the Connecticut Militia, captured Fort Mifflin in 1775, and was promoted to Brigadier General in 1776. After he played an important part in the pivotal battle of Saratoga in 1777, Arnold was promoted again to Major General. In 1780, while commanding West Point, he became disgruntled with the patriot cause and conspired to turn over his fort to the British. His complicity discovered, Arnold fled, and soon became a Brigadier in the British Army. He led raids on Virginia and Connecticut during the remainder of the war, and afterward retired to Canada. General Arnold died in London, England, 14 June 1801.

(Sch)

During 1776, the Marine Committee of Congress and its agents purchased a number of small craft, among them a ship named *General Arnold*. This small schooner was a packet used by the Congress to carry dispatches, etc., to Europe. She was in service at the end of 1778 when she returned to Boston from Bordeaux. She was commanded by John Ayers of Massachusetts and the Continental Navy.

General Bragg

General Braxton Bragg was born in Warrentown, N.C., and graduated from West Point in 1837. After action in the Seminole War, he served with distinction in the Mexican War, especially at Buena Vista 3 February 1847 when his field artillery broke the Mexican attack. He resigned in 1856 and became a plantation owner in Louisiana until commissioned a Brigadier General in the Confederate States Army 23 February 1861. He assisted General Johnston in the reorganization of his army; was promoted to General for bravery at Shiloh; and relieved General Beauregard as Commander of the Army of Tennessee 27 June 1862. After seeing action at Perryville, Stone River, Chickamauga, and Chattanooga, he was relieved by General Johnston 2 December 1863. As military adviser to Jefferson Davis, he was captured with the President 9 May 1865. After the war he practiced as a civil engineer until his death at Galveston 27 September 1876.

(SStr: t. 1.043; l. 208'; b. 32'8"; dph. 15'; dr. 12'; s. 10 k.; a. 1 30-pdr., 1 32-pdr., 1 12-pdr.)

General Bragg, originally river steamer *Mexico*, was built in New York City in 1851. Owned by the Southern Steamship Co. she was impressed for Confederate service as CSS *General Bragg* at New Orleans 15 January 1862 (see "Confederate Appendix," Vol. II). She was captured by the Union's Western Flotilla in an engagement near Memphis, Tenn., 6 June 1862, and transferred to the War Department 30 September 1862. Her first Commanding Officer was Lt. Joshua Bishop.

General Bragg was fitted out at Cairo, Ill., departing 9 July 1862 for Helena, Ark. She sailed 16 August 1862 as part of an escort to steamer *Iatan* carrying 500 troops to the mouth of the Yazoo for reconnaissance of Confederate batteries and guerrilla parties. For the next 15 months, except for periods of repair at Memphis, she patrolled the river from Helena to the mouth of the Yazoo River, where she guarded against Confederate movements toward Vicksburg.

With the fall of Vicksburg in July 1863, *General Bragg* remained in the vicinity until her departure 13 December, for her new station at the mouth of the Red River. Dur-

USS *General Bragg*—Lieut. C. Dominus Comd.

USS *General Bragg*—this Cottonclad Side-wheel Ram served under both flags.

ing the spring of 1864, it was her duty to guard the mouth of the river in support of the joint expedition against Shreveport on the Red. She began patrolling the river again, and 15 June engaged a Confederate battery with *Naiad* near Tunica Bend, La. For a time the ships got the worst of the action amid a hail of shot and musketry, but eventually drove off the Confederates with the help of *Winnebago*. *General Bragg* was disabled in the action.

The remainder of *General Bragg's* career was spent patrolling the Mississippi from the mouth of the Red River to Natchez, Miss. Infrequently she cruised as far south as Baton Rouge and New Orleans. The ship returned to Mound City, Ill., 2 July 1865, and decommissioned at Cairo 24 July 1865. Sold 1 September 1865, she was redocumented *Mexico*.

General Burnside

General Ambrose Everett Burnside, U.S. Army, was born 1824 at Liberty, Ind. He graduated from West Point in 1847. In the Civil War he commanded a brigade in the First Battle of Bull Run; led troops in Army-Navy expeditions against Roanoke Island, New Bern, Beaufort, and Fort Macon. He next commanded the Army of the Potomac through the Battle of Fredricksburg. After that defeat, he was replaced by General Hooker. Thereafter, he was commander of the Department of Ohio (March-December 1863). He occupied East Tennessee, took Knoxville, and repulsed Longstreet's attempt to recapture the town. In 1864 he served under Meade and Grant in Virginia. General Burnside was governor of Rhode Island (1866-68). From 1875 to his death in 1881, he served in the United States Senate.

(SwGbt: t. 201; l. 171'; b. 26'; dph. 4'9"; a. 2 20-pdrs., 3 24-pdrs. how.)

General Burnside, built in 1862 at Wilmington, Del., was sold to the War Department 1863; chartered by the

Navy; commissioned 8 August 1864 at Bridgeport, Ala., Acting Volunteer Lt. H. A. Glassford in command.

General Burnside became flagship of the upper Tennessee River Fleet, Mississippi Squadron, 15 October 1864. Based at Bridgeport, she patrolled the river to Whitesburg, Decatur, and Chattanooga. On 27 December 1864 she helped repulse Confederate attacks at Decatur. She was hulled several times while exchanging gunfire with Confederate sharpshooters. This gunboat action in concert with Union land forces brought about the evacuation of Decatur by the Confederates and left the upper Tennessee region under firm Union control. The gunboat continued river patrol until 1 June 1865 when she was returned to the War Department at Bridgeport, Ala.

General C. C. Ballou

Charles Clarendon Ballou was born 13 June 1862 at Orange, N.Y., and graduated from the Military Academy in 1886. Entering the Infantry, Ballou served at various posts in the United States until the outbreak of the Spanish-American War, when he was commissioned Major in the 7th Illinois Volunteer Infantry. He fought in the Philippines during the ensuing insurrection and was awarded the Silver Star. Following Quartermaster duty in the United States after the war, and another assignment in the Philippines, Ballou commanded the 92d Division in France during World War I. His postwar service included regimental command at Fort George Wright, Wash., 1920-23. Major General Ballou died 23 July 1928 at Spokane, Wash.

(AP-157: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,823; a. 4 5", 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General C. C. Ballou (AP-157) was launched 7 March 1945 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. Harry

J. Bernat; acquired by the Navy 20 May 1945; and commissioned 30 June 1945, Comdr. M. D. MacGregor in command.

Following shakedown off San Diego, *General C. C. Ballou* departed San Pedro 29 July 1945 for France via the Panama Canal. She arrived Marseilles after the Japanese surrender, and sailed with returning veterans 23 August bound for Hampton Roads. Then after two round-trip voyages to India and back to New York with returning soldiers and sailors, the ship sailed 13 January 1946 for a voyage that was to take her around the world visiting Calcutta, Manila, and other ports before mooring at San Francisco 8 March with over 3,000 troops. *General C. C. Ballou* completed her voyage by transiting the Panama Canal, arriving New York via San Juan 1 May. The transport decommissioned at Hoboken, N.J., 17 May, was returned to the Maritime Commission, and eventually served as a transport for Army Transportation Service.

General C. C. Ballou was reacquired by the Navy 1 March 1950 for MSTTS and for nearly 2 years sailed between Europe and the United States with refugees seeking freedom and security. Beginning in 1952 the ship began transporting troops from the West Coast to Korea to aid in the effort to repel Communist aggression there. Following the armistice, *General C. C. Ballou* continued to sail to Japan and Korea on troop rotation duty. She was placed out of service in September 1954 and placed in reserve at Orange, Tex. Later delivered to the Maritime Commission National Defense Reserve Fleet at Beaumont, Tex., she was struck from the Navy List 1 July 1960, and remains in reserve.

General C. C. Ballou received five battle stars for Korean conflict service.

General C. G. Morton

Major General Charles Gould Morton, USA, served in the Philippines in the Spanish-American War and subsequently on the Texas border.

(AP-138: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; cpl. 494; trp. 4,766; a. 45", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General C. G. Morton (APA-138) was built by the Kaiser Co. of Richmond, Calif., in 1943-44; acquired by the Navy on 18 May 1944; and commissioned 7 July 1944, Comdr. S. K. Hall in command.

After shakedown out of San Pedro, California, she stood out independently for Guadalcanal, Solomon Islands, on 1 August, arriving 16 days later and loading homeward-bound troops. On 20 August she got underway arrived San Francisco 3 September, sailed on to San Diego and departed there 16 September for the Russell Islands in the Solomons. Embarking troops, she proceeded to Espiritu Santo, New Hebrides, and thence to Noumea, New Caledonia, before putting in at San Francisco 24 October.

General C. G. Morton steamed to San Diego and departed with a convoy 10 November, calling at Pearl Harbor 6 days later and reaching Guadalcanal 29 November. On 3 December she sailed for San Francisco via New Guinea, Manus Island, and Noumea, arriving on the last day of 1944. After loading passengers at Long Beach, Calif., *General C. G. Morton* stood out 11 January 1945 bound for Calcutta, India, via Melbourne, Australia; she reached Melbourne 1 February and called at Calcutta 19 days later. Returning via Melbourne, Manus, Ulithi, Tinian, and Saipan, the transport arrived at San Francisco 25 April, only to get underway again 5 May for the Southwest Pacific, Hollandia, New Guinea, Leyte, and Manila, P.I., were ports of call. *General C. G. Morton* touched at San Francisco 5 July before sailing 3 days later for the east coast. She transited the Panama Canal 17 July and put in at Boston 6 days later.

Following drydocking, the busy ship departed 12 August for France, touching at Marseille 22 August and returning to Newport News, Va., 2 September 1945. On her next voyage, the transport sailed via the Suez Canal to Karachi,

India, and returned by the same route to New York. In early January 1946 *General C. G. Morton* repeated this trip, but sailed around the world calling at Singapore and Manila before docking at San Francisco in early March 1946.

General C. G. Morton was delivered to the War Department for use by the Army in May 1946. She was reinstated on the Navy List in March 1950 and assigned to MSTTS Reserve. She was struck from the Navy List 29 May 1958.

General C. G. Morton received three battle stars for Korean conflict service.

General C. H. Muir

Charles Henry Muir was born 18 July 1860 at Erie, Mich., and graduated from the Military Academy in 1885. Following duty at various posts in the United States, including service in the Indian Wars, he took part in the capture of Santiago during the Spanish-American War and fought in the Philippines during the insurrection which followed. Muir was also a member of the China Relief Expedition of 1901. Staff duty and service in the Philippines followed; and, with America's entrance into World War I, he was given command of the 28th Division. Muir was awarded the Distinguished Service Medal for his service during the Meuse-Argonne Offensive. After his return to the United States, Muir served on the General Staff and as Post Commander of various Army installations. Major General Muir retired in 1924 and died 8 December 1933 at Baltimore, Md.

(AP-142: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24"; s. 16 k.; cpl. 356; trp. 3,828; a. 4 5", 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General C. H. Muir (AP-142) was launched 24 November 1944 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. John H. Deasy; acquired and commissioned 12 April 1945 at Portland, Captain J. D. Conway in command.

Following shakedown off San Diego, *General C. H. Muir* departed 13 May from San Francisco for her first troop-carrying voyage to the war zones of the Pacific. The ship brought troops to Pearl Harbor, Eniwetok, Ulithi, and Leyte; served briefly as a receiving ship in the Philippines; and returned to New York via the Panama Canal 14 August 1945. The long Pacific war over, *General C. H. Muir* sailed 3 September to pick up returning veterans at Mediterranean and Indian Ocean ports. She arrived New York 1 November, and then, retracing her steps to bring home another full contingent of troops, she finally returned New York 9 January 1946. The ship made three subsequent voyages, one to New Orleans and two to Europe, before decommissioning at Baltimore 18 June 1946. She was returned to the Maritime Commission on that day and turned over to the Army Transportation Service.

Reacquired by the Navy 1 March 1950, *General C. H. Muir* began operations under MSTTS. For 2 years she supported American forces in Europe, and on eastward crossings brought back to the United States thousands of refugees under the International Refugee Organization. In late 1952 the ship sailed from New York through the Mediterranean and thence through the Suez Canal to Korea, bringing reinforcements to our fighting men who were struggling to thwart Communist aggression against that country. She made another long rotation voyage, stopping at many European and Asian ports before being placed in Reduced Operational Status at New York 30 September 1953. In August 1954 *General C. H. Muir* steamed through the Panama Canal to San Francisco and sailed once more to Korea with replacement troops. Upon her return the ship was placed in the Pacific Reserve Fleet at San Diego, Calif., 7 February 1955. She was returned to the Maritime Administration in 1960. She entered the National Defense Reserve Fleet 30 June, and at present is berthed at Suisun Bay, Calif.

General C. H. Muir received two battle stars for Korean War service.

General D. E. Aultman

Dwight Edward Aultman, born 2 February 1872 at Allegheny, Pa., graduated from the Military Academy in 1894 and was commissioned 2d Lieutenant, Field Artillery. During the Spanish-American War, he fought in the Battle of San Juan Hill and at the siege of Santiago. Aultman served at various posts until World War I when he was an artillery commander in France, participating in the Aisne-Marne and St. Mihiel offensives. He received the Distinguished Service Medal, and returned to the United States in 1919 as Commanding General, Camp Knox, Ky.

Brigadier General Aultman's last command was the Field Artillery School, Fort Sill, Okla. He died 12 December 1929 at Washington, D.C.

(AP-156: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; epl. 356; trp. 3,823; a. 4 5", 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General D. E. Aultman (AP-156) was launched 18 February 1945 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. Alma H. Aultman, widow of General Aultman; acquired by the Navy and commissioned 20 May 1945, Captain S. P. Swicegood, USCG, in command.

After shakedown out of San Diego, *General D. E. Aultman* got underway 30 June bound for France. She transited the Panama Canal and arrived Marseilles 24 July, embarking troops, nurses, and Red Cross workers for the Pacific theater. The transport sailed 26 July via the Panama Canal and found herself 1 day out of Balboa bound for New Guinea when the Japanese capitulated 15 August.

General D. E. Aultman arrived Humboldt Bay, New Guinea 4 September, and carried troops to Manila before returning to Portland 11 October 1945. She was then assigned to the "Magic-Carpet" fleet, contributing her important part to the gigantic task of returning the hundred of thousands of Pacific veterans. She made two "Magic-Carpet" voyages to the Far East before decommissioning at San Francisco 15 March 1946. She was returned to the Maritime Commission for transfer to the Army Transportation Service, serving in the Pacific.

Reacquired by the Navy 1 March 1950, *General D. E. Aultman* joined the MSTs with a civil service crew and resumed her support of American posts in the Pacific. After the outbreak of the Korean War in June 1950, the transport began the vital job of transporting troops to that strategic country. The veteran ship sailed to the western Pacific until she was returned to the Maritime Commission 4 June 1958. She entered the National Defense Reserve Fleet, Suisun Bay, Calif., where she remains.

General Daniel I. Sultan

A former name retained. Daniel Isom Sultan, born 9 December 1885 at Oxford, Miss., graduated from the U.S. Military Academy in 1907 and was commissioned Second Lieutenant in the Corps of Engineers. Prior to World War I, he served in the Philippine Islands and was in charge of the construction of fortifications on Corregidor. In 1918 he was assigned to the War Department General Staff in France. From 1929 to 1931, he commanded troops during a survey of the proposed Inter-Ocean Canal route through Nicaragua; and, from 1934 to 1938, he presided as a Commissioner of the District of Columbia. Promoted to Brigadier General 8 July 1939, he was in command of the 38th Infantry Division at the beginning of World War II. Following his command of the VIII Corps, he was ordered to the China-Burma-India Theater in 1943 to act as Deputy Commander under General Joseph Stilwell. He was promoted to Lieutenant General 2 September 1944 and on 24 October became Commander of the Burma-India

Theater. Returning to the United States 26 June 1945, he was appointed Inspector General of the Army 14 July. General Sultan died 14 January 1947 at Washington, D.C., while on active duty.

Admiral W. S. Benson (AP-120) (*q.v.*) was reacquired by the Navy from the Army Transport Service as *General Daniel I. Sultan* 1 March 1950 and assigned to MSTs. Manned by a civilian crew, she operated in the Pacific out of San Francisco. From 1950 to 1953 she steamed to the Western Pacific in support of the effort to repel Communist aggression in Korea. She made more than 20 round-trip voyages to the Far East and carried men and supplies to American bases in Japan, Okinawa, Guam, Formosa, and the Philippine Islands. Following the end of hostilities in Korea, she continued supply and troop-lift runs to the troubled Far East. During the next 13 years, she completed more than 100 deployments to the Western Pacific while supporting peace-keeping operations by American forces.

In response to America's determination to defend the independence and integrity of South Vietnam from external Communist aggression, *General Daniel I. Sultan* departed San Francisco for Southeast Asia 2 August 1965. Steaming via Japan, she embarked troops at Okinawa and reached Da Nang, South Vietnam, 28 August. She returned to San Francisco 11 September and during the remainder of 1965 completed two more round-trip voyages to Qui Nhon and Yung Tau, South Vietnam. In the first 7 months of 1966 she made four runs to Japan, Okinawa, Taiwan, and the Philippines. She operated in the Western Pacific, supporting the forces of freedom in the Far East, until arriving San Francisco late in December 1966. Early in 1967 she was placed in ready reserve status.

General Daniel I. Sultan received two battle stars for Korean war service.

General Douglas MacArthur, see *YP-479*

General E. T. Collins

Edgar Thomas Collins, born 7 March 1873 at Williamsport, Pa., graduated from the Military Academy in 1897. In the Spanish-American war he fought with the 1st Brigade in the battles of El Caney and San Juan Hill, and during the siege of Santiago. In the years that followed Collins served at various American and foreign posts, often as an instructor. He went to France in 1917 as an observer on the British and French fronts and returned in 1918 to become Chief of Staff, 85th Division. Later Collins rose to the post of Chief of Staff, 6th Corps, and was awarded the Distinguished Service Medal. Following the war, staff and infantry-instructor assignments led to his commanding the Infantry School, Fort Benning, Ga., in 1926. Retired as Assistant Chief of Staff 31 May 1932, Major General Collins died 10 February 1933 at Washington, D.C.

(AP-147: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; epl. 356; trp. 2,173 a. 4 5", 8 1.1", 16 20 mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General E. T. Collins (AP-147) was launched 22 January 1944 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. Allison J. Barnett; acquired by the Navy and commissioned 20 July 1944, Comdr. E. J. Milner in command.

Following shakedown training out of San Diego, *General E. T. Collins* departed 14 August 1944 with over 3,000 troops for the Pacific fighting, as America's island campaign increased in momentum. The ship debarked troops at Pearl Harbor, Eniwetok, Saipan, Guam, and Kwajalein before returning to San Francisco 15 October 1944. After a round-trip voyage to Pearl Harbor with additional troops, *General E. T. Collins* sailed once more 22 December bound for the islands of Micronesia. She carried troops to Eniwetok, Saipan, and Guam to support

amphibious operations in the Pacific before returning to Seattle 7 February 1945.

General E. T. Collins returned to the western Pacific in April and for the remainder of the war operated out of Fremantle, Australia, carrying troops to the Pacific islands and India. Following the Japanese surrender, the ship arrived San Pedro 22 September with returning veterans, and joined the "Magic-Carpet" fleet in the giant task of bringing home the thousands of troops from the Pacific islands. She made four such voyages in the months to come, stopping at Yokohama and Manila, and arrived San Francisco after the last passage 14 May 1946.

General E. T. Collins decommissioned there 17 June 1946 and was turned over to the Maritime Commission for transfer to the Army Transportation Service.

The veteran transport was reacquired by the Navy 1 March 1950 for use by the MSTs with a civil service crew. At the outbreak of the war in Korea, the ship began transporting American troops to that stricken land for the struggle to thwart Communist aggression. She was at Pusan 12 December 1950 when orders came to sail to Hungnam for the famous evacuation of U.N. troops from that port. *General E. T. Collins* arrived 14 December and, under an umbrella of naval gunfire provided by *Missouri* and other ships, took on more than 6,000 exhausted troops, three times her troop-carrying capacity. After these fighters were safely debarked at Pusan, the ship returned to Hungnam Christmas Eve to bring out another load of troops to Pusan.

Following this dangerous but successful operation, the transport resumed her vital troop carrying duties between the United States and the Far East. She remained on this service until late 1952; when, during October and November, she was part of the support task unit for Operation Ivy, the atomic tests at Eniwetok.

After the Korean armistice *General E. T. Collins* continued to rotate troops in Korea and Japan, keeping strong America's presence in the critical Far East. She arrived San Francisco after her final passage 6 October 1954 and was inactivated. *General E. T. Collins* was returned to the Maritime Administration 30 June 1960 and was placed in the National Defense Reserve Fleet, Suisun Bay, Calif., where she remains.

General E. T. Collins received five battle stars for Korean War service.

General Edwin D. Patrick

A former name retained. Edwin Daviess Patrick, born 11 January 1894 at Tell City, Ind., entered the Indiana National Guard 11 February 1915 and was commissioned Second Lieutenant in the Infantry 21 March 1917. After duty in Kansas, California, Oklahoma, and North Carolina, he joined the 14th Machine Gun Battalion in France to participate in the St. Mihiel and Meuse-Argonne offensives. Following his return to the United States in July 1919, he was stationed at various posts until May 1926 when he went to Tientsin, China, to serve with the 15th Infantry. He returned to the United States in July 1929 to remain until after the start of World War II. Assigned to the Southwest Pacific in December 1942, he was promoted to Brigadier General 26 April 1943, and in June was appointed Chief of Staff of the 6th Army. Appointed commander of a regimental combat team in May 1944, he participated in the conquest of New Guinea. In September he assumed command of the 6th Infantry, and in January 1945 joined in the battle to liberate Luzon. General Patrick was mortally wounded by Japanese machine gun fire near Mountain Mataba, south of Montalban, Luzon, 14 March 1945.

Admiral C. F. Hughes (AP-124) (*q.v.*) was reacquired by the Navy from the Army Transport Service as *General Edwin D. Patrick* 1 March 1950 and assigned to MSTs. Manned by a civilian crew, she operated in the Pacific out of San Francisco. She carried troops and supplies to American bases in Japan, Korea, Okinawa,

the Marianas, and the Philippines to make more than two dozen round-trip voyages to the Far East while supporting the effort to repel the Communist aggression in Korea. After the armistice in Korea, she continued transport operations in the Western Pacific; and between 1953 and 1965 she steamed to the Far East some 110 times to provide American bases with men and supplies.

In response to America's determination to protect the integrity and independence of South Vietnam from continuing Communist aggression, *General Edwin D. Patrick* departed San Francisco for Southeast Asia 16 August 1965. Steaming via Pearl Harbor and Guam, she touched at Manila Bay 4 September and reached Cam Ranh Bay, South Vietnam, 7 September. Proceeding the next day to Vung Tau, she steamed to Yokohama before returning to San Francisco 27 September. Between 1 October and 18 November she completed and deployment to the Far East that sent her to Okinawa and to Da Nang, Qui Nhon, Cam Ranh Bay, and Vung Tau, South Vietnam. During the first 7 months of 1966 she completed five Far East deployments, operated out of ports in South Vietnam, Okinawa, Japan, Korea, and Formosa while supporting the forces of freedom in the Western Pacific. *General Edwin D. Patrick* continued this vital duty until arriving San Francisco on the last day of 1966. After overhaul early in 1967, the transport was placed in ready reserve status.

General Edwin D. Patrick received three battle stars for Korean war service.

General G. M. Randall, see *General George M. Randall*

General G. O. Squier

George Owen Squier was born in Dryden, Mich., 21 March 1865 and graduated from the Military Academy in 1877. After first entering the Army as an artillery officer, Squier joined the Signal Corps, rising to Major by 1903. He commanded cable-ship *Burnside* during the laying of the Philippine cable from 1900 to 1902. He was appointed Chief Signal Officer of the Army 14 February 1917, and was promoted to Major General 6 October. He also served as Chief of the Army Air Service 1916 to 1918. General Squier was the author of numerous articles and papers on technical subjects, and is credited with several important inventions in the fields of radio and electronics. He took part in his later life in several international conferences on communications and attended the 1921 Washington Conference on Naval Limitations for the War Department. General Squier died 24 March 1934.

(AP-130: dp. 17,250; l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k; cpl. 356; trp. 3,823; a. 4 5"; cl. *General G. O. Squier*; T C4-5 A1)

General G. O. Squier (AP-130) was launched 11 November 1942 under Maritime Commission contract by the Kaiser Co., Richmond, Calif.; sponsored by Miss Mary Ann Somervell; acquired 30 August 1943 and commissioned 2 October, Captain A. E. Uehlinger in Command.

General G. O. Squier made three round-trip, troop-carrying voyages out of San Francisco from 29 October 1943 to 30 March 1944 to Noumea; Pearl Harbor, Guadalcanal, Wallis Island, Samoa, Noumea, and Honolulu, respectively. Underway again from San Francisco 7 April she brought troops to Noumea and Milne Bay before heading for Norfolk, where she arrived 2 June. On 1 July the ship departed with 3,300 troops for Italy, and debarked them at Naples. Following a voyage thence to Oran and back, *General G. O. Squier* joined Task Force 87 off Naples 13 August in preparation for Operation "Dragoon," the amphibious invasion of Southern France.

Arriving off Cap Camarat 15 August, she debarked her troops into waiting LCI's which put them ashore to become another deadly prong thrust deeply into Hitler's "Heartland." The next day she headed for Oran to bring nearly 3,000 troops back to the Cap Camarat

beachhead on the 30th. *General G. O. Squier* returned to New York 26 September with casualties and prisoners of war embarked at Naples.

From 14 October 1944 to 14 September 1945, she made 10 transatlantic, troop-carrying and rotation voyages: 7 from New York, 2 from Norfolk, and 1 from Boston, to ports in the United Kingdom (Plymouth, Southampton, and Avonmouth) and France (Le Havre and Marseilles). Between 20 September 1945 and 18 June 1946, six other round-trip, "Magic-Carpet" voyages out of New York at war's end brought home veterans from the Far East (Karachi, Calcutta, and Colombo) and Europe (Le Havre, Leghorn, and Bremerhaven). *General G. O. Squier* reached Norfolk 22 June and decommissioned 10 July 1946. Returned to WSA 18 July 1946, she entered the National Defense Reserve Fleet at James River, Va. She was sold to the Bethlehem Steel Corp. 7 April 1964, converted to a general cargo ship, and renamed *Pennmar* 27 May 1965.

General G. O. Squier was awarded one battle star for World War II service.

General G. W. Goethals

George Washington Goethals was born in Brooklyn, N.Y. 29 June 1858, and graduated from the Military Academy in 1880. As a Lt. Col. in the Engineer Corps, he was appointed by President Roosevelt in 1907 chief engineer of the Isthmian Canal Commission, and in that position bore virtually the sole responsibility for the successful completion of the Panama Canal project. General Goethals later served as first civil governor of the Panama Canal Zone, and, after retiring in 1916, was called back to duty to direct the supply and transportation system of the U.S. Army during World War I. Major General Goethals died in New York City 21 January 1928.

(Str: dp. 2,783 (n.); l. 367'; b. 48'7"; dr. 27'6";
s. 11 k.; a. none)

General G. W. Goethals was built in 1912 as *Grunewald* by Bremer Vulkan, Vegesack, Germany; taken over by the Cruiser and Transport Force from her owners, the Panama Railroad Steamship Co. of New York. Operated by the Navy under Army account, she commissioned 10 March 1919 at Hoboken, N.J., Lt. Comdr. Edward O. Roberts, USNRF, in command.

General G. W. Goethals spent the bulk of her commissioned service ferrying vital supplies to France and bringing home veterans of the A.E.F. Leaving New York 2 April 1919 for her first transatlantic voyage, she carried supplies to Bordeaux, France, returning 4 May. Subsequently she made two more voyages to Europe with supplies, and brought home nearly 3,000 troops. On 21 August 1919, *General G. W. Goethals* sailed from Charlestown, S.C., carrying supplies to New Orleans, San Cristobal, Panama, and San Juan, P.R., arriving New York 13 September 1919. On the day of her arrival in New York she decommissioned and was turned over to the War Department for return to her owners.

General Gates

General Gates, see *Gates* for biography.

(Brig: a. 18 g.)

General Gates, former British merchant brigantine *Industrious Bee*, was built in 1764 at Bristol, England, for operations by Clapman & Co.; captured 29 August 1777 by Captain John Skimmer in Continental schooner *Lee* while bound from Gibraltar for Newfoundland; purchased 19 December by the Navy Board at Boston; fitted out with 18 guns; and renamed *General Gates*, Captain John Skimmer in command.

General Gates sailed from Marblehead 24 May 1778, joining privateer brigantine *Hawk* off Cape Ann to cruise on the Newfoundland Banks. After capture of ship

Jenny and brigantines *Thomas* and *Nancy*, the two ships parted company early in August. Thereafter *General Gates* captured schooner *Polly*. On 3 August 1778 she intercepted brigantine *Montague* under Captain Nelson, who defended his ship in an epic engagement of 5 hours. After expending her ammunition, *Montague* resorted to firing "every piece of iron of all kinds that could be rammed into the tube of the cannon," including jack knives, crowbars, and even the captain's speaking tube. A double-headed shot from *General Gates* crashed into Captain Nelson's cabin. Taking it up, Nelson fired it from one of his own guns. "This shot striking a swivel gun on the *State's* brig divided, and one part of it glancing instantly killed the active and brave Captain Skimmer." It was 2 more hours before *Montague* struck her colors and capitulated to *General Gates* with Lt. Dennis in command. *General Gates* returned to Boston Harbor with prizes *Polly* and *Montague* 31 August 1778.

General Gates departed Boston 14 November in company with *Providence* for Nova Scotian waters. She captured schooner *Friendship* off Casco 4 December and 2 days later, parted by a gale from *Providence*, subsequently cruised in West Indian waters. She captured schooner *General Leslie* off Bermuda in the first part of February 1779, then joined *Hazard* at Martinique. Together they captured brigs *Active* 16 March and *Union* the following day.

General Gates returned to Boston harbor 13 April 1779, so unseaworthy from battering gales that her crew, at times, had despaired of ever reaching port. She was ordered sold 2 June 1779. In August she was loaned by the Navy Board to the Deputy Commissary of Prisoners at Boston to convey prisoners to New York. On completion of this mission, she was sold.

General Gorgas, see *General W. C. Gorgas*

General George M. Randall

George Morton Randall, born 8 October 1841 at Conneaut, Ohio, enlisted as a private in the 4th Pennsylvania Volunteer Infantry in the fall of 1861. He served in New York and Washington, and in the field with the Army of Potomac. Brevetted Captain for gallant service in the Battle of Antietam, he was brevetted Lieutenant Colonel, then Colonel for gallantry in the attack on Fort Stedman, Va. After fighting Indians on the southwestern frontier, he served with the Big Horn, Yellowstone, and Powder expeditions against Indians in the Rockies. General Randall subsequently was on duty at New York and Knoxville, Tenn., prior to commanding the Department of Luzon in the Philippines from 1903 to 1905. After further duty at St. Louis, General Randall retired 8 October 1905 and died 14 June 1918 at Denver, Colo.

(AP-115: dp. 11,828 (lt.); l. 622'7"; b. 75'6"; dr. 25'6";
s. 20.6 k.; cpl. 507; trp. 5,289; a. 4 5", 16 1.1", 20 20mm.;
cl. *General John Pope*; T. P2-S2-R2)

General George M. Randall (AP-115) was launched 30 January 1944 under a Maritime Commission contract by the Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Mrs. Robert A. Lovett, wife of the Assistant Secretary of War for Air; acquired and simultaneously commissioned 15 April 1944, Capt. Carl C. von Paulsen, USCG, in command.

General George M. Randall sailed from Norfolk 23 May 1944 with nearly 5,000 troops and casualties and put in at Bombay, India, 5 July via Panama and Australia. Underway again 6 days later, she returned to San Pedro, Calif., 12 August to debark over 2,000 wounded veterans. She made two more round-trip voyages from San Pedro to Bombay from 30 August 1944 to 28 February 1945.

Following a round-trip voyage from San Francisco to Ulithi and back, the ship stood out under the Golden Gate 8 June 1945 for Norfolk, arriving 20 June. She sailed from that port for Marseille 8 July. There she embarked

troops for redeployment in the Pacific theater, and off-loaded them at Manila before mooring at San Pedro, Calif., 21 September after the war's end.

As part of the "Magic-Carpet" fleet, *General George M. Randall* made six voyages from San Francisco and San Diego to the Far East, calling at Japan, China, Okinawa, and the Philippines. She sailed from Pearl Harbor 1 December 1946 for the east coast; and, after undergoing peacetime alterations at Philadelphia, stood out of that port 2 April 1947. Reaching San Francisco 25 April, the transport began a series of shuttle runs between West Coast ports and the Far East, completing six voyages to Guam, two to China and Japan, and two to Hawaii before she was assigned to MSTTS in October 1949.

As an MSTTS ship *General George M. Randall* made scheduled runs between the West Coast and the Orient until fighting erupted in Korea in the summer of 1950. She participated in the amphibious assault at Inchon which routed the North Korean Army and forced Communist evacuation of South Korea. After hordes of Chinese Communist troops poured into Korea and trapped American forces, she served in the evacuation of Hungnam, which saved the embattled G.I.'s enabling them to return to the fight. She moored at New York 26 May 1951, and made four voyages from New York to Bremerhaven and Southampton before returning to Yokohama 24 October 1951 via San Francisco.

For the next 3 years this far-ranging ship transported men and equipment across the Pacific between West Coast ports and Japan, Okinawa, and Formosa. In 1955 she shifted operations to the East Coast, arriving New York 8 April 1955 for shuttle runs from New York to Bremerhaven, insuring the continuous flow of troops, dependents, and supplies to American forces in Europe. During first 3 months of 1957 she cruised the Caribbean, calling at Puerto Rico, Cuba, and Jamaica before resuming her North Atlantic transport runs out of New York 15 April.

These varied duties were highlighted by *General George M. Randall's* role in the 1958 Lebanon crises. Embarking 1,255 troops of the 35th Tank Battalion at Bremerhaven, and 1,001 other at La Pallice, France, she put them ashore at Beirut, Lebanon, the morning of 3 August 1958, helping to stabilize that strategic country in this swift followup by sea of the 6th Fleet's powerful and effective action with carrier planes, surface warships, and amphibious landing of marines. *General George M. Randall* then returned to New York, arriving 16 August.

Returning to her New York-Bremerton schedule, *General George M. Randall* visited Spain, Turkey, Greece, and Italy in 1959, and called at ports in Iceland and the Caribbean Islands during the next year as well. On her last voyage, she cast off from Rota, Spain, and moored at New York 13 May 1961. *General George M. Randall* steamed thence to Bayonne, N.J., where she decommissioned 2 June 1961; she was towed to Norfolk 12 June to join the Maritime Administration National Defense Reserve Fleet 16 August, and is now berthed on James River, Va.

General Grant

Ulysses S. Grant, victorious commander of the Union Army during the Civil War, and 18th President of the United States, was born 1822 at Point Pleasant, Ohio. He graduated from West Point in 1843; served under Taylor and Scott in the Mexican War; resigned his commission 1854. On the outbreak of Civil War he was commissioned Colonel of the 21st Illinois Volunteer Infantry, later Major General of Volunteers. His wise use of power afloat in combined operations, commencing with the occupation of Paducah, Ky., won impressive victories at Fort Henry, Fort Donelson, Shiloh, Vicksburg, and Chattanooga. His determination to win prompted Lincoln to appoint him supreme commander of the Union forces. His relentless campaign against Richmond, in which he continued to take full advantage of the North's control of the sea, forced Lee to surrender at Appomattox. In 1867 Grant received an interim appointment as Secretary

of War. In 1868 he was elected to his first of two terms as President. He devoted his later years to the writing of his "memoirs," which were published in 1885, the year of his death.

(SwGbt.: t. 201; l. 171'; b. 26'; dph. 4'9"; a. 2 30-pdrs., 2 24-pdr. how.)

General Grant was built in 1863 at Monongahela, Pa.; purchased by the War Department; chartered by the Navy and commissioned at Bridgeport, Ala., 20 July 1864, Acting Ens. Joseph Watson in command.

General Grant constantly patrolled the upper Tennessee River from Bridgeport until close of the Civil War, fighting guerrillas and aiding the army in clearing Confederate troops from the region. In October 1864 she destroyed 22 small boats off Port Deposit and Crow Island. On 25 November she assisted in taking up pontoon bridges under guns of Confederate sharpshooters at Decatur, Ala. She hurled 52 shells into that town 12 December 1864 and joined *General Thomas* 15 January 1865 in the destructive bombardment of Guntersville, Ala. She decommissioned and was returned to the War Department 2 June 1865. She was lost when stranded in ice 18 March 1866 at Plattsmouth, Nebr.

General Greene

General Nathanael Greene, born in Warwick, R.I., 7 August 1742, was elected to the colonial assembly in 1770 and became a strong champion of colonial liberty and an early advocate of independence. He commanded the militia during the siege of Boston; and served with Washington at Trenton, Brandywine, Germantown, and Valley Forge. He rendered outstanding service as Quartermaster General (1778-80), then took command of southern forces in the Carolinas campaign. By cunning strategy, he divided the forces under Cornwallis and turned the tide in the Carolinas. In this feat he was aided by his lieutenants, notably Daniel Morgan, Light-Horse Harry Lee, and partisan bands under Francis Marion, Thomas Sumter and Andrew Pickens. When he sold his estates to honor personal notes given to secure supplies for the Continental Army, the grateful people of Georgia voted to give him a plantation.

I

(RC: t. 98; epl. 45; a. 10 guns)

The first *General Greene* was a revenue cutter built by William Price at Baltimore, Md., in 1797. She was fitted out at Philadelphia in the summer of 1798 to operate under orders of the Navy during the quasi-war with France. Commanded by Captain George Price, USRCS, she first searched for armed French ships between Cape Henry and Long Island Sound. Sailing from New York, she joined *Delaware* off Cuba 8 February 1799 to assist in the protection of merchantmen engaged in the Havana trade. The two ships jointly captured schooner *Marsouin (Porpoise)* 5 March 1799. *General Greene* returned to Philadelphia about eight weeks later. On 20 May 1799 she was reported too small to be useful in the Navy. She resumed operations under the Revenue Cutter Service at Philadelphia, Pa.

II

(Fr: t. 654; 124'3"; b. 34'8"; dph. 17'4"; epl. 250 a. 24 12-pdrs., 6 6-pdrs.)

The second *General Greene* was built under government contract by Benjamin Talman and James de Wolf, Warren, R. I.: launched 21 January 1799; and placed under command of Captain Christopher R. Perry. The frigate sailed 2 June 1799, joining *Governor Jay* in convoying five merchantmen bound to Havana. Damage suffered in a heavy gale caused her to put in at Havana for repairs. Her crew was struck down with yellow fever. More than 20 perished and she returned to Newport on 27 July with 37 men in various stages of recovery. After a thorough

cleaning, fumigation, and change of ballast, she departed Newport 23 September 1799 to take station at Cap Francois, San Domingo.

General Greene remained on San Domingo Station for the following 6 months. In company with *Boston* 1 December 1799, she assisted in the capture of schooner *Flying Fish* and retook the American schooner *Weymouth* captured by French privateer *Hopc*. Much of her time was spent watching over the rebellion against General Toussaint in Haiti. She blockaded the port of Jacmel to cut off supplies of the revolutionist. The frigate gave direct gunfire support to General Toussaint's army in the capture of Jacmel 27 February 1800. She remained there as a possible haven for American citizens until 27 April; then sailed with two representatives sent by General Toussaint for audience with the President of the United States. Touching New Orleans, she embarked General Wilkinson and his family for transport home. She then proceeded as escort to 12 merchantmen bound to Havana, thence to Newport, R.I., where she arrived 21 July 1800.

General Greene's crew was discharged and she remained idle at Newport until Captain Perry was retired under the Peace Establishment Act of 3 April 1801. She was laid up in ordinary at the Washington Navy Yard. The frigate served as a floating sick bay for frigate *Constellation* in 1803 and was reduced to a sheer hulk in 1805. Her hulk was destroyed by flames 24 August 1814 when the British entered Washington.

General H. B. Freeman

Henry Blanchard Freeman, born 17 January 1837 in Knox, Ohio, enlisted in the 10th Infantry 16 July 1855. Appointed Lieutenant in May 1862, he was breveted Captain in December for gallantry in the Battle of Murfreesboro, Tenn., and breveted Major in September 1863 for gallantry in the Battle of Chickamauga, Ga.; received the Medal of Honor for extraordinary heroism in the Battle of Stone's River 31 December 1862. After the close of the Civil War, much of his remaining career was spent on Indian frontiers and reservations in Wyoming, Ohio, Colorado, Utah, and Oklahoma. Promoted to Brigadier General in 1901, he received the Indian Campaign Medal. General Freeman died 16 December 1915, at Douglas, Wyo.

(AP-143: dp. 9,943; l. 522'10"; b. 71'6"; dr. 24'; s. 16.5 k.; cpl. 356; trp. 3,823; a. 4 5", 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General H. B. Freeman (AP-143) was launched 11 December 1944 under a Maritime Commission contract by the Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. Marie Wheeler; converted in the Kaiser yard at Vancouver, Wash.; acquired by the Navy 26 April 1945; and commissioned at Portland, Oreg., the same day, Comdr. Harley E. Grogan, USCG, in command.

After shakedown operations out of San Diego, *General H. B. Freeman* departed San Pedro 1 June 1945 with 3,040 troops and passengers for Calcutta, India, where she arrived 9 July with 16 additional passengers, British Royal Marines who had embarked at Brisbane, Australia. On 13 July she was underway with more than 3,000 military passengers; embarking and debarking in Ceylon, Australia, New Guinea, and the Philippines before arriving Hagushi, Okinawa, 16 August 1945, the day after hostilities ended.

More than 1,000 homeward-bound veterans boarded the transport which departed Okinawa 21 August 1945 headed via Saipan and Pearl Harbor for the West Coast, arriving San Pedro, Calif., 12 September 1945. She sailed 7 October, carrying occupation troops to Tokyo, and returned to Seattle, Wash., 5 November as the "Magic-Carpet" home for more than 3,000 fighting men from the Pacific War. *General H. B. Freeman* made a similar passenger run from Seattle to Yokohama and back (16 November-16 December 1945).

She next entered the Puget Sound Naval Shipyard, Bremerton, Wash., for inactivation overhaul and decom-

missioned there 4 March 1946. She was redelivered to the Maritime Commission for service with the Army's peacetime transport fleet.

General H. B. Freeman was reacquired by the Navy 1 March 1950 and assigned to MST'S. Manned by a civil service crew, *General H. B. Freeman* carried military passengers throughout the Korean War from the West Coast to Korea, Japan, and island bases in the Pacific.

She was in the gallant fleet that evacuated besieged Hungnam. Her distinguished service won her the "Smart Ship Award" for three consecutive years (1950-52). The transport continued to operate throughout the Pacific until 24 July 1958 when her name was again struck from the Navy List. She was returned to the Maritime Commission and to the National Defense Reserve Fleet, Olympia, Wash., where she remains.

General H. F. Hodges

Harry Foote Hodges, born at Boston 25 February 1860, graduated from the Military Academy in 1877. Between 1877 and 1901 he served as an engineer at various posts, including a tour of duty as instructor in engineering at the Military Academy. In 1901, Hodges became Chief Engineer, Department of Cuba, and later assisted in building the Panama Canal. In 1917, after the United States entered World War I, he was appointed a division commander and sailed with the American Expeditionary Force in 1918. After serving with distinction in the Ypres and Avocourt Defensive Sectors, he was awarded the Distinguished Service Medal. Following the war, General Hodges commanded divisions at several American posts before retiring in 1921. Major General Hodges died 24 September 1929 at Lake Forest, Ill.

(AP-144: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24' s. 16 k.; cpl. 356; trp. 3,823; a. 4 5", 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General H. F. Hodges (AP-144) was launched 3 January 1945 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. Hodges Dickson; acquired by the Navy and commissioned 6 April 1945, Comdr. C. H. Hilton, USCG, in command.

After shakedown training, *General H. F. Hodges* sailed from San Francisco 10 May 1945 with over 3,000 troops and a contingent of Army nurses. In the ensuing two months, she steamed to Hollandia, Manila, Leyte, and Biak in support of the accelerating push toward Japan before returning to San Francisco on Independence Day 1945. The transport departed 8 July for New York via the Panama Canal; and, after stopping there briefly, departed 5 August for Naples on a troop rotation voyage. While at sea she received word of the Japanese capitulation.

She returned to Boston 31 August with passengers from Naples. *General H. F. Hodges* then made two long voyages through the Suez Canal to India bringing home American troops, ending the second cruise when she reached New York Christmas Eve. The transport departed New York 31 January 1946 for Ceylon and India, continuing by way of the Pacific Islands to the United States, arriving 28 March 1946. She remained at Seattle until decommissioned 13 May 1946 and was returned to the Maritime Commission for transfer to the Army Transport Service.

Reacquired by the Navy 1 March 1950, *General H. F. Hodges* was assigned to the MST'S under a civil service crew. In the years that followed, the ship sailed between New York and European ports, supporting American ground units helping to deter Communist aggression in Europe, and transporting refugees from Bremerhaven to New York. She carried troops, their dependents, and supplies to most of the ports in northern Europe and the Mediterranean. In 1958, the versatile ship took time out from her busy schedule of voyages to participate in a giant amphibious exercise on the North Carolina coast, demonstrating the ease with which MST'S ships could be

integrated into regular navy combat operations when and where the need arises. After two more passages to Europe, *General H. F. Hodges* was returned to the Maritime Administration 16 June 1958, and was placed in the National Defense Reserve Fleet, Hudson River, N.Y., where she remains.

General H. H. Arnold

Henry Harley Arnold, born in Pennsylvania on 25 June 1886, graduated from the U.S. Military Academy 14 June 1907. After serving in the Infantry and the Signal Corps, Arnold became a pioneer of Army aviation. He played a major role in developing the air tactics and strategy which proved so valuable in World War II. He commanded the Army Air Forces in the fight to victory over the Axis Powers. Promoted to General of the Army in 1944, General Arnold received many decorations and honors, including three Distinguished Service Medals, the Legion of Merit, and the Air Medal. He retired in 1946 and died at Sonoma, Calif., 15 January 1950.

General R. E. Callan (AP-139) (q.v.) was reacquired by the Navy from the Air Force as *General H. H. Arnold* (T-AGM-9) 1 July 1964.

General H. L. Scott

Hugh Lenox Scott was born at Danville, Ky., 22 September 1853 and graduated from the Military Academy in 1876. He served with the cavalry at various western outposts, chiefly in Oklahoma and the Dakotas, and participated in the Indian campaigns until 1891. In 1897 he was a consultant to the Smithsonian Institution on Indian languages. After serving in various administrative posts in Cuba and the Sulu Archipelago, Philippines, 1898 to 1906, Scott was promoted to Colonel and assumed duty as Superintendent of the Military Academy. Relieved in 1910, Scott made vital contributions as a mediator and a diplomat in Indian disputes. As Brigadier General, he served on the Mexican border 1913 to 1914 and helped resolve border difficulties with Mexico. Becoming Chief of Staff of the Army in November 1914, he laid the groundwork for American participation in World War I. General Scott was a member of the Commission to Russia in 1917 and served on the Western Front with British and French divisions. Retiring from the Army in 1919, Major General Scott died 30 April 1934 at Princeton, N.J.

(AP-136: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k. cpl. 425; trp. 3,823; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squirer*; T. C4-S-A1)

General H. L. Scott (AP-136) was laid down 20 December 1942 under a Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; launched 19 September 1943; sponsored by Mrs. Walter K. Wilson; acquired by the Navy 6 March 1944; and commissioned 3 April at San Francisco, Captain John Trebes, USCG, in command.

After shakedown off San Diego, *General H. L. Scott* departed San Francisco 5 May with reinforcement troops embarked for the South Pacific. Arriving Noumea, New Caledonia, 21 May, she returned to San Francisco 7 June to continue transporting men and supplies to island bases in the Pacific. As American naval power drove nearer to the heart of the crumbling Japanese Empire, she made six voyages to the western Pacific between 10 June 1944 and 2 July 1945, carrying her passengers and cargo out of San Francisco to the Marshalls, the New Hebrides, New Caledonia, New Guinea, the Admiralties, and the Philippines. In addition, she operated for a time in the western Pacific as Pacific Fleet receiving ship. While at Ulithi, Carolines, 25 March, she embarked 1,004 officers and men from *Franklin* (CV-13), severely damaged 19 March off the coast of Japan.

General H. L. Scott departed San Francisco 7 July for New York, where she arrived 21 July. She sailed 3 Au-

gust for the Mediterranean and embarked veteran troops at Naples and Leghorn, Italy, before returning to Boston 27 August. Between 2 September and October, she steamed via the Suez Canal to Calcutta, India, and Colombo, Ceylon, on "Magic-Carpet" duty to transport troops back to the United States. She arrived New York 28 October, sailed 10 November for China, and arrived Shanghai 11 December to support Nationalist forces during the protracted struggle for control of the Chinese mainland.

General H. L. Scott returned to Seattle 30 December. On 5 February 1946 she sailed for the Far East with occupation troops embarked. After touching at Jinsen, Korea, and Shanghai, she returned to Seattle 20 March. She decommissioned 29 May and was returned to WSA 3 June.

She entered the National Defense Fleet and was berthed in Puget Sound until sold to Bethlehem Steel Corp. 31 July 1964. She was converted to a general cargo ship in 1965 and operates under the name *Yorkmar*.

General H. W. Butner

Henry W. Butner, born in Pinnacle, N.C., 6 April 1875, graduated from the Military Academy in 1898. He served in various capacities at posts at home and abroad until 1918 when he sailed for France with the A.E.F. During his service on the Western front, Butner took part in operations at St. Mihiel and Meuse-Argonne. Returning to the United States, he commanded Field Artillery School at Fort Sill, Okla., 1920 to 1923; commanded a detachment of the Philippine Scouts; and served in various capacities until appointed Commanding General, Panama Canal Department, in 1936. Major General Butner died 13 March 1937 in Washington, D.C.,

(AP-113: dp. 11,828 (lt.); l. 622'7"; b. 75'6"; dr. 25'; s. 19 k.; cpl. 477; trp. 5,289; a. 4 5", 16 1.1", 18 20mm.; cl. *General John Pope*; T. P2-S2-R2)

General H. W. Butner (AP-113) was launched by the Federal Shipbuilding & Drydock Co., Kearny, N.J., 19 September 1943 under Maritime Commission contract for the Army; sponsored by Mrs. John J. McCloy; acquired by the Navy 5 December 1943; placed in ferry commission the same day for transfer to Maryland Drydock Co., Baltimore, for conversion to a transport; and placed in full commission 11 January 1944, Captain A. P. Lawton in command.

After shakedown in Chesapeake Bay, *General H. W. Butner* sailed 23 February 1944 from Norfolk carrying troops to Morocco. Arriving Casablanca 3 March, the ship returned to Norfolk for another load of troops, and sailed again for Casablanca, arriving back at Norfolk 20 April.

After only 3 days in port *General H. W. Butner* sailed again, this time eastward to the West Coast. Her ports of call on this long voyage were Durban, South Africa; Bombay; Melbourne, Australia; and San Pedro, Calif., where she arrived 1 July. The transport then retraced her steps to Melbourne and Bombay, arriving off the Indian coast 26 August. From there she returned to Melbourne with troops and sailed for California via Noumea and Efate, New Hebrides. She arrived in San Pedro 6 October 1944.

Continuing the vital work of ferrying troops to and from the Pacific theater, *General H. W. Butner* departed San Pedro 21 October 1944, called at Melbourne, Bombay, Sidney, and Noumea, and returned to San Pedro 7 January 1945. Departing San Francisco 17 February, she brought troops to Finschafen, Hollandia, Leyte, Manus Island, Guadalcanal, and many other islands, as the amphibious advance through the Pacific reached its final phase.

She returned to San Francisco 12 May, departed 20 May for the Panama Canal, and from there steamed to Le Havre, France. The far-ranging transport departed France with troops 12 June, and arrived back in Nor-

folk 20 June. Thus she completed a circuit of the earth, though, in the meantime, she had steamed a distance equal to six times its diameter while supporting wartime operations.

General H. W. Butner made one more voyage before the end of the Pacific war, redeploying troops from the European Theater. She sailed from Marseilles 7 July, via the Panama Canal, for Ulithi and Eniwetok, finally arriving Okinawa 1 September. She then returned to the United States, arriving Seattle 24 September.

The ship also served as a troop transport during the occupation of Japan, leaving San Francisco 5 January 1946 she made four voyages carrying troops to the Pacific, stopping at Yokohama, Shanghai, Tsingtao, and other ports in support of American efforts to stabilize the China situation and to occupy Japan.

She sailed for Boston from California early in 1947 for conversion to a combination dependent and troop transport, emerging 28 June and returning to San Francisco. During the next 2 years she operated in the Pacific between Guam and San Francisco, carrying dependents and servicemen to stations in the Far East. Transferred to MSTs under Navy captain and crew in October 1949, she departed for Norfolk via the Panama Canal and Bermuda, arriving 10 January 1950. She then operated in the Caribbean until 11 April, when she departed for San Diego. *General H. W. Butner* arrived San Diego 24 April, and on 10 May made another Pacific cruise which lasted until her return to the West Coast 12 June.

Before the month ended, the Korean War broke out. Fortunately, *General H. W. Butner* was one of the handful of ships immediately available. She promptly returned to Guam with vitally needed troops; returned to the West Coast for more troops; and headed for Japan, arriving Yokohama 31 August to prepare for the Inchon landing. This daring amphibious operation took the Communist troops by surprise and forced them to abandon the ground they had taken in South Korea and to scurry north across the 38th Parallel. Arriving off the beach 16 September, troopship *General H. W. Butner* landed her troops in this important action, and then departed for Japan. The last day of the year saw her depart from Okinawa for San Francisco.

During 1951 the ship continued to sail from California to Yokohama and Guam in support of the U.N. effort in Korea until she departed San Francisco for Galveston, Texas, 29 June. From there the ship continued to Bremerhaven, Germany, and thence to New York, mooring 5 September 1951. During the next months she carried troops and dependents to the Mediterranean and back, then departed for the Pacific again 19 February 1952. Transiting the Panama Canal from New York, she arrived at Yokohama 19 March, and 3 days later began the long trip back to Panama. From the Canal Zone, *General H. W. Butner* sailed to La Pallice, France, and to Bremerhaven, where she embarked passengers for New York.

General H. W. Butner began a regular schedule from Brooklyn, N.Y., to Southampton and Bremerhaven soon afterward, supporting American military commitments in Europe. Except for occasional visits to the Mediterranean (June 1953 and September–October 1959) and to the Caribbean (November 1956 and November 1958) she continued this run until decommissioning 28 January 1960 at Bayonne, N.J. *General H. W. Butner* was turned over to the Maritime Administration, and in March 1960 entered the National Defense Reserve Fleet, berthed in James River, Va., where she remains ready for reactivation should the need arise.

General H. W. Butner received two battle stars for Korean service.

General Harry Taylor

Harry Taylor was born 26 June 1862 in Tilton, N.H., and upon graduation from the Military Academy in 1884, joined the Corps of Engineers. In the years that followed, Taylor served in the field on various projects, including East Coast defenses and the Columbia River proj-

ect. By 1916 he was Assistant Chief of Engineers in charge of the River and Harbor Division. At the start of America's participation in World War I he sailed for France as Chief Engineer Officer, American Expeditionary Force. In this capacity he supervised the construction of railways, barracks, wharves, and shelters throughout France. Awarded the Distinguished Service Medal, Taylor returned to Washington and was named Major General, Chief of Engineers, 19 June 1924. He retired in 1926 and died 27 January 1930 in Washington, D.C.

(AP-145: dp. 9,950 (lt.); l. 552'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,224; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General Harry Taylor (AP-145) was launched 10 October 1943 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. Mamie M. McHugh; acquired by the Navy 29 March 1944; placed in ferry commission 1 April 1944 for transfer to Portland, Oreg., for conversion to a transport by Kaiser Co., Inc., Vancouver, Wash.; decommissioned 10 April 1944; and commissioned in full 8 May 1944 at Portland, Captain J. L. Wyatt in command.

Following shakedown off San Diego, *General Harry Taylor* sailed from San Francisco 23 June 1944 with troop reinforcements for Milne Bay, New Guinea. After returning to San Francisco 3 August with veterans of the Guadalcanal campaign embarked, she continued transport voyages between San Francisco and island bases in the Western Pacific Ocean. During the next 10 months she steamed to New Guinea, the Solomons, New Caledonia, the Marianas, the New Hebrides, the Palau, and the Philippines, carrying troops and supplies for America's vast amphibious sweep across the ocean to Japan until 29 June 1945 when she departed San Francisco for duty in the Atlantic.

General Harry Taylor made two "Magic-Carpet" voyages to Marseilles and returned, carrying veterans of the European fighting. Next she sailed twice to Karachi, India, via the Suez Canal. Returning to New York 3 January 1946, the transport then began the first of four voyages to Bremerhaven, Germany, and Le Havre, France. She reached New York again 21 May 1946 and decommissioned 13 June at Baltimore.

The transport served for a time with the Army Transport Service, and was reacquired by the Navy 1 March 1950 for use by MSTs. Her early duties consisted mainly of carrying troops, dependents, and large numbers of European refugees. *General Harry Taylor* operated in a typical year to the Caribbean, Mediterranean, and to northern Europe. In 1957 the ship took part in the Hungarian Relief program, transporting several thousand refugees of the valiant but abortive Hungarian Revolution to Australia. She was placed in ready reserve 19 September 1957; transferred back to the Maritime Administration 10 July 1958; and placed in the National Defense Reserve Fleet, Beaumont, Tex. *General Harry Taylor* was transferred to the Air Force 15 July 1961 and renamed *General Hoyt S. Vandenberg* (T-AGM-10). On 1 July 1964 she was acquired by the Navy and now is operated by MSTs in the Atlantic.

General Henry Knox, see *Picket* (ACM-8)

General Hoyt S. Vandenberg

Hoyt Sanford Vandenberg, born in Wisconsin 24 January 1899, graduated from the U.S. Military Academy 12 June 1923. He played a major role in developing air tactics and strategy. He was Chief of Staff of the Air Force from 1948 to 1953 when he was retired for physical disability. General Vandenberg died in Washington, D.C., 2 April 1954.

General Harry Taylor (AP-145) (*q.v.*) was reacquired by the Navy from the Air Force as *General Hoyt S. Vandenberg* (T-AGM-10) 13 July 1964.

General Hugh J. Gaffey

A former name retained. Hugh Joseph Gaffey, born 18 November 1895, in Harford, Conn., attended Officers Training School at Fort Niagara, N.Y., and was commissioned Second Lieutenant in the Field Artillery Reserve 15 August 1917. Assigned to the 312th Field Artillery at Fort Meade, Md., he went to Europe in August 1918 and served in France and Germany before returning to the United States in August 1919. During the next two decades he served at various posts in the United States and served with the 15th and 18th Field Artillery and the 7th Cavalry Brigade. Assigned to the I Armored Corps in July 1940, he served with them until July 1942 when he was assigned to the 2d Armored Division. Appointed Brigadier General 5 August 1942, he was sent to the European Theater in November; and, in April 1944, he was designated Chief of Staff for General Patton's 3d Army fighting in France. He then assumed command of the 4th Armored Division in December. Major General Gaffey was killed in a B-25 crash at Goodman Field, Ky., 16 June 1946.

Admiral W. D. Capps (AP-121) (q.v.) was reacquired by the Navy from the Army Transport Service as *General Hugh J. Gaffey* 1 March 1950 and assigned to MSTs. With a civilian crew on board, she operated on West Coast-Far East cruises and throughout the Korean conflict transported troops and equipment to the Pacific staging areas.

After the hostilities in Korea ceased, *General Hugh J. Gaffey* continued runs to Japan, Korea, Taiwan, Okinawa, and the Philippines. From 1954 to 1965 the transport made almost 100 cruises to these countries. In the summer 1965 she made her first cruise to Cam Ranh Bay, South Vietnam, during the intensified American buildup in Southeast Asia. Continuing her Pacific crossing, *General Hugh J. Gaffey* made seven more voyages throughout 1966. After carrying Korean troops to Vietnam in January, 1967 to join the fight against Communist aggression, she arrived San Francisco late in February for overhaul to prepare for future action.

General J. C. Breckinridge

James Carson Breckinridge was born 13 September 1877 at Memphis, Tenn., and was commissioned a Second Lieutenant for the Spanish American War in 1898. He saw service in the Philippines, China, and Central America in the years that followed, and commanded a Marine detachment on *Utah* at the capture of Vera Cruz in 1914. General Breckinridge commanded the Washington Marine Barracks 1923-25 and the Marine detachment at the American Legation at Peking, China, 1930-32. He also commanded Marine Corps schools at Quantico, Va., and Parris Island, S.C. Breckinridge retired a Lieutenant General 1 October 1941 and died 2 March 1942 at Summit Point, W. Va.

(AP-176: dp. 11,830; l. 622'; b. 76'; dr. 25'6"; s. 21 k.; cpl. 466; trp. 5,289; a. 4 5', 4 40mm., 20 20mm.; cl. *General John Pope*; T. P2-S2-R2)

General J. C. Breckinridge (AP-176) was launched 18 March 1945 by the Federal Shipbuilding & Drydock Co. of Kearny, N.J.; sponsored by Mrs. Dorothy T. Breckinridge; and commissioned 30 June 1945 at Bayonne, N.J., Capt. H. S. Berdine, USCG, commanding.

Operated under the Coast Guard, *General J. C. Breckinridge* was commissioned too late to take an active part in the fighting in Europe, but after shakedown in July and August 1945 proceeded to Marseilles. Arriving there 14 August, she loaded over 5,000 troops and their equipment and proceeded to Manila. Word of the surrender of Japan came next day, however, and *General J. C. Breckinridge* proceeded to New York, where she unloaded her troops 24 August.

During the next 4 months, the transport made four more

voyages, three to Marseilles and one to Le Havre, bringing home American troops and their supplies. At Marseilles 18 November, she had the honor of embarking the 2 millionth American veteran to be taken home from Europe since VE day. Arriving at Boston 26 November, she was soon underway for California, via the Panama Canal, and duty in the Pacific.

General J. C. Breckinridge arrived at San Francisco 20 January 1946, where a Navy crew took over 10 February. She departed San Francisco 25 February on one of five trips to the western Pacific in which she carried troops and cargo to and from Saipan, Guam, Shanghai, China, and Tsingtao. Departing Taku, China, on the last of these voyages 4 September 1946, she transited the Panama Canal and arrived 3 October at Philadelphia. At the shipyard *General J. C. Breckinridge* underwent conversion into a dependent transport, with modern nursery, kitchen, and medical facilities for dependents of military men.

Following completion of conversion, the ship again took up her Pacific schedule, leaving Philadelphia 11 January 1947 via the Panama Canal for San Francisco and Pacific ports. For the next 2½ years, the transport was a regular visitor at Pearl Harbor, Guam, Shanghai, Okinawa, Tsingtao, Manila, and other cities of the Pacific, transporting military and civilian passengers. In June 1947 she carried convicted Japanese war criminals from Manila to Japan, and from time to time performed missions of mercy and conducted underway training exercises. During this time *General J. C. Breckinridge* spent almost 80 percent of her time underway in support of America's far-flung installations in the Pacific.

General J. C. Breckinridge was transferred to the Military Sea Transportation Service 1 October 1949 and sailed thereafter with a Navy captain and crew as T-AP-176. She made one more trip to the Pacific in November 1949, after which she sailed to New York to transport dependents to San Francisco. At the outbreak of the Korean war 30 June 1950 the ship returned to San Francisco 19 July, and put in at Mare Island Shipyard for conversion to a troop transport.

Ready for duty as a troop transport, *General J. C. Breckinridge* carried fresh troops from Seattle to Yokosuka, arriving 14 August 1950, and from there stopped at Pusan, Korea, to return a load of casualties to Yokohama. The transport started to return to San Francisco, but was called back to participate in the pivotal Inchon amphibious landing. Arriving there with troops the day after the assault, the transport helped support the landing and consolidate the gains made.

After returning to San Francisco, arriving 7 October, *General J. C. Breckinridge* again sailed for Japan, and arrived at Sasebo 14 November. She immediately was dispatched with other available transports to Wonsan, where she assisted in the evacuation of troops at that port 22 November. After taking troops and casualties to Japan, "*Breckinridge*" returned to Korea, this time to help in the evacuation of Hungnam 15 December. The hard-working transport made two more troop voyages during the actual fighting in Korea.

Subsequent to the Korean War, *General J. C. Breckinridge* has again been active as an MSTs transport carrying military and civilian passengers on a regular schedule of visits to Pacific ports—the already familiar Guam, Yokosuka, Okinawa, and Inchon, as well as Adak, Alaska, and Midway Island. She operated out of San Francisco on this duty until returned to the Maritime Administration and placed in the National Defense Reserve Fleet at Suisun Bay, Calif., 1 December 1966.

General J. C. Breckinridge received four battle stars for Korean conflict service.

General J. H. McRae

Major General James H. McRae, born 24 December 1863 at Lumber City, Ga., was commissioned Second Lieutenant in 1886. He was awarded Silver Stars for

gallantry in the Spanish-American War and in the Philippine Instruction; and received the Distinguished Service Medal as Commander of the 78th Division in the Meuse-Argonne Offensive of World War I. Later service included command of the V Corps, the Philippine Department at Manila, the IX Corps and the II Corps. General McRae died 1 May 1940 at Berkeley, Calif.

(AP-149: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,343; a. 4 5', 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General J. H. McRae (AP-149) was launched under Maritime Commission contract 26 April 1944 by the Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. Doris May Stallongo of San Francisco; acquired by the Navy 19 June 1944; and commissioned 8 August 1944 at Richmond, Calif., Comdr. T. R. Cowie in command.

After shakedown out of San Francisco and Los Angeles, *General J. H. McRae* sailed from Seattle 20 September 1944 with more than 2,800 fighting men for Honolulu. She returned to San Francisco with veterans 7 October and made another voyage to Honolulu, returning to San Francisco on the 29th with 3,000 passengers, of whom 240 were Japanese prisoners of war.

General J. H. McRae departed San Francisco 19 November with fighting men bound for Finschhafen, New Guinea, arriving there 7 December and returning to San Pedro, Calif., the 31st with more Pacific veterans. *General J. H. McRae* departed Long Beach 11 January 1945 for India via Melbourne, Australia, and reached Calcutta 20 February. Departing Calcutta 1 March with more troops, she proceeded at full speed to Melbourne and Townsville, lifted a contingent of RAAF troops to Madang Harbor, New Guinea; thence sailed via the Admiralty and Caroline Islands to the Marianas, reaching Saipan 10 April 1945.

The busy transport returned to Townsville, Australia, for 3,100 Australian troops, landing a small contingent at Biak Island and the remainder at Morotai Island 1 May and returned to San Francisco 30 May. *General J. H. McRae* sailed 19 June 1945 and transited the Panama Canal for Le Havre, France, where she embarked more than 4,000 troops and returned with them to Newport News. She made one subsequent voyage to France, which ended at Hampton Roads 28 August 1945.

Standing out from Norfolk 1 September 1945, *General J. H. McRae* transited the Suez Canal for Karachi, India, where she embarked 3,000 troops and returned there to New York 15 October. Departing New York 26 October *General J. H. McRae* made subsequent voyages to Khorramshahr, Iran, and Karachi, India, the latter terminating at New York on Christmas Eve of 1945. She decommissioned at New York 27 February 1946 and was returned to WSA for peacetime operations as an Army transport.

General J. H. McRae was reacquired 1 March 1950 and assigned to MSTs. Manned by civilians, she operated between New York and the United Kingdom until February 1953, then shifted her base to San Francisco for runs to Japan. On 29 October 1954 *General J. H. McRae* was inactivated at San Diego and placed in the Pacific Reserve Fleet. She was transferred to the Maritime Administration 30 June 1960 and entered the National Defense Reserve Fleet. At present she is berthed at Suisun Bay, Calif.

General J. H. McRae received four battle stars for Korean war service.

General J. R. Brooke

John Rutter Brooke, born in Montgomery County, Pa., 21 July 1838, was educated at Freeland Seminary. He served in the Army briefly at the start of the Civil War, was mustered out, but returned as a Colonel in the 53d Pennsylvania Infantry. Colonel Brooke fought in the Peninsular Campaign and at Antietam, Fredericksburg, Chancellorsville, and Gettysburg, earning a reputation as

an exceptional commander. He was appointed Brigadier General of Volunteers 12 May 1864, was severely wounded at Cold Harbor the following month, and returned to duty in 1865 with the Army of the Shenandoah. Entering the regular Army after the war, Brooke rose to the rank of Major General in 1897 and served in Puerto Rico during the Spanish-American War. After the armistice, he was military governor of both Puerto Rico and Cuba before returning home to take command of the Department of the East. General Brooke died in Philadelphia 5 September 1926 after a long and distinguished career.

(AP-132: dp. 9,877 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k.; cpl. 471; trp. 3,444; a. 4 5', 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General J. R. Brooke (AP-132) was laid down under a Maritime Commission contract 29 June 1942 by the Kaiser Co., Inc., Yard 3, Richmond, Calif.; launched 21 February 1943; sponsored by Mrs. Helen Thompson; acquired by the Navy 10 December 1943; converted to a transport by Matson Navigation Co., San Francisco; and commissioned 20 January 1944 at San Francisco, Captain David L. Nutter in command.

On her maiden voyage, *General J. R. Brooke* sailed from Port Hueneme 24 February 1944 with more than 3,600 troops, mostly Seabees, for Pearl Harbor and returned to San Francisco 8 March. From 19 March to 23 April she made a round-trip voyage out of San Francisco to bring 3,600 men to Noumea and Espiritu Santo. Following her return, the ship sailed again 12 May for New Guinea to debark 3,400 troops at Oro Bay, and steamed thence to New York, where she arrived 3 July 1944.

Convoyed by ships and planes and under constant threat of submarine attack, *General J. R. Brooke* operated in the Atlantic throughout the remainder of the war. In her unflagging efforts to insure an even flow of men from the United States to the European theater, she made 12 transatlantic voyages (8 from New York, 2 from Boston, and 2 from Norfolk) to the United Kingdom (Plymouth, Liverpool, and Southampton); Italy (Naples); France (Cherbourg, Marseilles, and Le Havre); and North Africa (Oran) from 26 July 1944 to 5 September 1945. She brought to the European ports tens of thousands of American and Allied fighting men and thousands of tons of vital supplies; and she brought to the United States countless German prisoners of war.

After the war's end, *General J. R. Brooke* made two "Magic-Carpet" and troop-rotation voyages from New York to Calcutta and Ceylon via the Suez Canal from 11 September 1945 to 3 January 1946. Subsequently, she made five identical troop-carrying voyages from New York to Le Havre between 19 January and 10 June 1946. In May 1946 she transported over 2,700 German POW's back to France. *General J. R. Brooke* moored at Norfolk 13 June and decommissioned at Newport News 3 July 1946. Returned to WSA 18 July 1946, she entered the National Defense Reserve Fleet, James River, Va. She was sold to Bethlehem Steel Corp., Wilmington, Del., in April 1964 and renamed *Marymar*.

General John Pope

John Pope, born 18 March 1822 at Louisville, Ky., graduated from the Military Academy in 1842 and joined the Topographical Engineers. After serving in Florida and helping survey the northeastern boundary line between the United States and Canada, he fought gallantly at Monterey and Buena Vista during the war with Mexico. At the beginning of the Civil War he served as mustering officer at Chicago but was soon appointed Brigadier General of Volunteers. In May 1861 General Pope assumed command of the District of North and Central Missouri and forced the Confederates to retreat southward. He cooperated with Flag Officer Foot in taking New Madrid and Island No. 10. Subsequently he commanded the Army of the Mississippi during the siege of Corinth, winning a promotion to Major General. He headed the newly formed

Army of Virginia after the collapse of the Peninsular Campaign. He was relieved after the Second Battle of Bull Run. Following the Civil War, he served with distinction in the Indian wars. General Pope retired in 1886 and died 23 September 1892 at the Ohio Soldiers' Home near Sandusky, Ohio.

(AP-110: dp. 11,450 (lt.); l. 622'7"; b. 75'6"; dr. 25'6"; s. 21 k.; cpl. 466; trp. 5,289; a. 4 5", 16 1.1", 16 20mm.; cl. *General John Pope*; T. P2-S2-R2)

General John Pope (AP-110) was launched under a Maritime Commission contract 21 March 1943 by the Federal Shipbuilding and Dry Dock Co., Kearny, N.J.; sponsored by Mrs. Charles P. Gross; acquired by the Navy 2 July 1943; placed in ferry commission the same day for transfer to Baltimore for conversion to a transport by Maryland Drydock Co., and commissioned in full 5 August 1943, Captain George D. Lyon in command.

After shakedown *General John Pope* sailed for Newport News 5 September 1943 with over 6,000 troops and civilians bound for Greenock, Scotland; and, after disembarking her passengers there, returned to Norfolk 25 September. From 6 October to 19 November she made a troop-carrying voyage to Brisbane, Australia; and, after touching Townsville and Milne Bay, put in at San Francisco on the latter date. Underway again 10 December with over 5,000 troops for the Pacific fighting, *General John Pope* debarked them at Noumea 23 December and returned via Pago Pago to San Francisco 10 January 1944 with 2,500 veterans.

In the months that followed, *General John Pope* sailed in support of the giant amphibious offensive on New Guinea's northern coast, spearheaded by Rear Admiral Barbey's famed VII Amphibious Force. On a 3-month round-trip voyage out of San Francisco, beginning 23 January, she took troops to Guadalcanal, Auckland, and Noumea, and brought 1,300 men back to San Francisco 9 March. *General John Pope* then embarked another full complement of troops, including the 1st Filipino Infantry Regiment, and sailed 6 April for Noumea and Oro Bay, New Guinea. Returning via Noumea to embark casualties, the ship reached San Francisco 18 May 1944. During the summer of 1944, the far-ranging transport made two round-trip voyages from San Francisco: on the first she got underway 27 May for New Guinean ports, Guadalcanal, and the Russell Islands, debarking 3,800 men of the famous 1st Marine Division at San Diego before returning to San Francisco; and on the second she departed 26 July for Honolulu and returned 8 August.

In the early fall, another voyage out of San Francisco 14 August brought *General John Pope* on a troop rotation run to New Guinean ports; and subsequently, after embarking 5,000 Army troops at San Pedro, Calif., she sailed via Melbourne for Bombay. Nearly 4,000 fighting men, mainly troops of the New Zealand Expeditionary Forces, were embarked and delivered safely to Melbourne and Wellington before the ship moored again at San Pedro 16 January 1945.

The spring of 1945 saw a round-trip troop-carrying voyage begin in San Francisco 26 March, which took her to Manila, Leyte, and Biak before returning 21 May. *General John Pope* next stood out from the Golden Gate once more 2 June 1945, this time bound for Marseilles, where 5,242 troops were embarked and taken to Manila. The transport returned to Seattle 17 August following this long voyage, but she was underway again 11 days later via Ulithi, Cebu, and Leyte for Yokohama, returning to San Francisco 8 October with over 5,000 veterans.

From 19 October 1945 to 7 May 1946, four more "Magic-Carpet" and troop-rotation voyages were made, two from San Francisco and two from Seattle, to the Philippines and Yokohama. Finally, missions accomplished, *General John Pope* departed San Francisco 15 May bound for New York, where she decommissioned 12 June 1946 and was returned to WSA.

Reinstated on the Navy List 20 July 1950, *General John Pope* was assigned to MSTs 1 August. During the Korean fighting she carried American troops to Japan and Korea to take part in the giant effort to hold back Communist

aggression. Following the war, *General John Pope* continued to sail to Japanese and Korean ports on troop rotation duties, finally being placed in reduced operational status at Seattle 14 May 1955. The veteran transport was returned to the Maritime Administration and entered the National Defense Reserve Fleet at Olympia, Wash., 5 September 1958.

General John Pope reactivated 17 August 1965 to serve again as a civilian-manned ship of MSTs, operating from San Francisco. She carries troops to bases in the Pacific and Far East, supporting the fight to stop Communist aggression in Vietnam. Mid-1967 found this veteran transport still performing this vital duty, and scheduled to continue to support the fight for freedom in southeast Asia.

General John Pope received six battle stars for Korean service.

General Knox

A former name retained.

(SchBar: t. 1,587; l. 251'1" (b.p.); b. 42'5"; dr. 23'6")

General Knox, a wooden, schooner-rigged barge, built in 1881 by E. O'Brien of Thomaston, Maine, was commandeered by the Navy soon after the United States entered World War I; purchased from Luckenbach S.S. Co., 18 October 1917; and commissioned 8 November 1917.

Early in 1918, *General Knox* was assigned to the 1st Naval District, carrying coal in the Boston-Bar Harbor area until assigned to NOTS 8 August 1918. With eight other ex-Luckenbach barges towed by various tugs, *General Knox* loaded coal, usually at Norfolk, for delivery to New England ports and to Key West.

She was detached from NOTS at Norfolk 15 March 1919 and assigned to the 5th Naval District until struck from the Navy List 13 June. She was sold 11 September to the Neptune Co. of New York City.

General LeRoy Eltinge

LeRoy Eltinge, born 17 September 1872 in Ulster County, N.Y., graduated from the Military Academy in 1896 and served in the Philippines 1898-99, for which service he received the Silver Star. He served in the Operations Section of the A.E.F. General Staff Headquarters during World War I and later became Deputy Chief of Staff of A.E.F. He was awarded the Distinguished Service Medal for outstanding service in World War I. Brigadier General Eltinge died 13 May 1931 at Omaha, Neb.

(AP-154: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24"; s. 16 k.; cpl. 356; trp. 3,823; a. 4 5", 4 40mm.; 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General LeRoy Eltinge (AP-154) was launched 20 September 1944 by Kaiser Shipbuilding Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. James McCloud; acquired by the Navy and commissioned 21 February 1945, Capt. W. Wakefield in command.

After shakedown out of San Diego, *General LeRoy Eltinge* departed San Pedro 23 March with 3,100 troops for Calcutta, India, arriving 27 April via Melbourne, Australia. Underway 7 May with more troops, she debarked some at Tinian and others at Guam, before arriving San Francisco 27 June with 1,161 troops embarked at Pearl Harbor. She sailed 20 June for "Magic-Carpet" duty in the Atlantic, arriving Norfolk 14 July. Between 30 July and 14 September she made two round trips from Norfolk to Marseilles, France, to transport 6,206 home-bound veterans. And on 29 September she departed Norfolk for Karachi, India, where she embarked veterans for "Magic-Carpet" passage to the United States, arriving New York 11 November.

Clearing New York 29 November for further duty in the Pacific, *General LeRoy Eltinge* carried replacement troops to the Canal Zone, proceeded to Shanghai and the

Philippines and returned to Seattle, Wash., 26 January 1946 with veterans embarked at Manila. On a voyage from 3 March to 6 April she carried rotation troops to Korea and returned veterans to Seattle, before departing 27 April for New York. She arrived 13 May, decommissioned 29 May, was returned to the Maritime Commission and stricken from the Navy List June 1946.

Reacquired 20 July 1950, from Maritime Commission *General LeRoy Eltinge* joined MSTs 1 August while operating in the Western Pacific. Since joining MSTs, she has participated in several major troop and refugee operations. For more than a year she transported troops from Seattle and San Francisco to Japan and Korea. In October 1951 she supported the International Refugee Program, making two trips from New York to Bremerhaven, Germany. The following year she made several runs for the United Nations, including the transportation of Dutch troops from Rotterdam to Korea. During 1953 she carried additional refugees from Bremerhaven to New York and transported Ethiopian and Greek troops to Korea. Her MSTs service continued until she was placed in reduced operational status 26 November 1955 at New York.

General LeRoy Eltinge resumed operations between the United States and Europe 18 May 1956. Following the gallant Hungarian Revolution 23 October-4 November, she supported the refugee relief program; and during December she embarked several thousand refugees at Bremerhaven for passage to the United States. From May to September 1957 she made U.N. runs to Turkey and Thailand. After the Lebanon crisis of July 1958, she conducted two voyages to Beirut during October to return troops to France and Germany. She continued to operate in support of U.N. programs through 1959. While enroute from New York to Izmir, Turkey, 24 August 1960 she assisted in the rescue of 26 survivors from SS *Haleyon Mediterranean*, which had collided with SS *Esso Switzerland* off the coast of Spain. Returning to New York 1 September, she again assumed reduced operational status 26 September.

Following the outbreak of violence in the Belgium Congo in July 1960, *General LeRoy Eltinge* departed New York 20 February 1961 to support the U.N. peace mission. After lifting a cargo of famine relief supplies to Pointe Noire, Congo Republic 11 March; she steamed, via Capetown, South Africa, to Port Swettenham, Malaya and Bombay, India to embark 1207 troops for the U.N. Congo operations. Departing Bombay 15 April, she debarked troops and supplies at Mombasa, Kenya, and Dar-es-Salaam, Tanganyika. After operating along the African coast from Nigeria to South Africa, she was released from U.N. operations and departed Capetown for the United States 13 May, arriving New York 30 May. She returned to reduced operational status 29 June. Departing New York 16 July 1962, she sailed via the Panama Canal to San Francisco where she arrived 1 August to resume reserve status.

In response to the mounting crisis in Vietnam, she returned to service 13 May 1965 and embarked 2,497 troops for Southeast Asia. During 1966 *General LeRoy Eltinge* supported America's determination to contain Communism in Vietnam and Southeast Asia through sealifts of men and supplies from west coast ports to the Far East. She returned to San Francisco from Vietnam in January 1967, underwent overhaul, and was placed in ready reserve status.

General Lyon

General Nathaniel Lyon was born in Ashford, Conn., 14 July 1818 and graduated from the U.S. Military Academy in 1841. He served in the Seminole War, the Mexican War, and was promoted to Captain in 1851. After several years duty in California and Kansas he was assigned to the St. Louis Arsenal in February 1861 and promoted to Brigadier General in May 1861. When the Civil War broke out, he armed volunteers and seized

Camp Jackson. After an unsuccessful attempt to compromise with Sterling Price and Governor Claiborne F. Jackson, General Lyon pushed up the Mississippi River and captured Jefferson City and Boonville, Mo. Although his troops were badly outnumbered, he attacked the main secessionist forces at Wilson's Creek on 10 August. He was defeated and killed in this battle but not before he had helped to save Missouri for the Union.

(SwStr 2 : t. 468 ; a. 2-12 pdr. r.)

General Lyon was built at New Albany, Ind., in 1860, and operated out of New Orleans, La., as *De Soto*. Taken into service by the Confederacy as a gunboat in 1861 (see vol II, Confederate Appendix), she was captured at Island No. 10 on 7 April 1862. The ship was taken into the Union Army as transport *De Soto*. Transferred to the Navy 30 September 1862, she was renamed *General Lyon* on 24 October 1862, Master John R. Neeld in command.

After undergoing extensive repairs at Cairo, Ill., *General Lyon* saw duty as ordnance, stores, and dispatch ship for the Mississippi Squadron. Leaving Cairo 2 February 1863, she operated for the next two and a half years on the western waters. In April 1863 she was briefly flagship of Rear Admiral D. D. Porter. *General Lyon* returned to Mound City, Ill., 17 February 1865, decommissioned 3 August, and was sold to H. L. Lee 17 August 1865. She redocumented as *Alabama*, and was destroyed by fire at Grand View, La., 1 April 1867.

General M. B. Stewart

Merch Bradt Stewart, born 24 June 1875 at Mitchell Station, Va., graduated from the Military Academy in 1896. During the Spanish-American War he fought in the Battles of El Caney, San Juan Hill, and the Siege of Santiago. In the years that followed, Stewart served at various posts, including duty in Puerto Rico, the Canal Zone, and the Philippine Islands, and a tour as instructor at the Military Academy. He commanded the 175th Brigade, A.E.F., during World War I, earning the Distinguished Service Medal for his exceptional services both at home and at the front. After his return in May 1919, General Stewart served with the General Staff in Washington and completed his military career as Commandant of the Military Academy. He died 3 July 1934 in St. Augustine, Fla.

(AP-140 : dp. 9,950 (lt.) ; l. 522'10'' ; b. 71'6'' ; dr. 24' ; s. 16.5 k. ; cpl. 356 ; trp. 3,595 ; a. 4 5'', 4 40mm., 16 20mm. ; cl. *General G. O. Squier* ; T. C4-S-A1)

General M. B. Stewart (AP-140) was launched 15 October 1944 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. M. B. Stewart; acquired by the Navy and simultaneously commissioned at San Francisco 3 March 1945, Captain Minor C. Heine in command.

Following shakedown out of San Diego, *General M. B. Stewart* sailed from San Francisco 2 April 1945 with more than 3,000 troops for Pearl Harbor. After returning to San Francisco 18 April with 1,500 veterans embarked, she made a round-trip voyage out of San Francisco from 26 April to 19 June to transport troops to Pearl Harbor; the Admiralty Islands; and Leyte, Philippine Islands. She then departed San Francisco 26 June for Atlantic operations. Reaching Norfolk 11 July, she sailed the 122d to Leghorn, Italy, where she arrived 5 August to embark troops for redeployment in the Pacific. Underway 7 August for the Panama Canal, *General M. B. Stewart* steamed for the East Coast after the Japanese capitulation and arrived 19 August to debark her passengers.

Between late August and early November, *General M. B. Stewart* made two round-trip "Magic-Carpet" voyages to France and a third voyage to India and Ceylon. Departing New York 7 December, she sailed via the Suez Canal to India where she arrived Karachi 28 December to embark 3,300 returning veterans. She sailed 30 December for the United States and arrived Seattle 25 Jan-

uary 1946. From 5 March to 4 April she sailed to Japan with occupation troops and returned to Seattle with military passengers. Sailing for New York 22 April, *General M. B. Stewart* arrived 11 May, decommissioned 24 May, and was turned over to WSA for duty in Army Transport Service.

The transport was reacquired by the Navy 1 March 1950 for use by MSTs. During the rest of 1950 she made two voyages to the Far East, carrying U.S. troops to Japan and Korea. Between 1951 and 1955 *General M. B. Stewart* also sailed from New York to Bremerhaven, Germany, transporting thousands of European refugees to the United States under the International Refugee Organization. In 1953 she made another voyage to Korea and transported home veteran troops before returning to her regular Bremerhaven-New York schedule. She maintained this pattern until being placed in Reduced Operational Status at New York 29 April 1955. She was finally transferred back to the Maritime Administration 21 May 1958 and was placed in the National Defense Reserve Fleet, Hudson River, N.Y., where she remains.

General M. B. Stewart received one battle star for Korean War service.

General M. C. Meigs

Montgomery Cunningham Meigs, born in Augusta, Ga., 3 May 1816, graduated from the U.S. Military Academy in 1836. He served with the Corps of Engineers for a quarter of a century and in 1861 became Quartermaster General. In addition to equipping and supplying the Union Armies during the Civil War, General Meigs supervised the construction of the Washington Aqueduct and the dome and wings of the United States Capitol. After the Civil War, he was a member of the Commission for the Reform and Reorganization of the Army. General Meigs retired in 1882 and died in Washington, D.C., 2 January 1892.

(AP-116: dp. 11,450 (lt.); l. 622'7"; b. 75'6"; dr. 25'6"; s. 21 k.; cyl. 418; trp. 5,289; a. 4 5", 16 1.1", 20 20mm.; cl. *General John Popc*; T. P2-S2-R2)

General M. C. Meigs (AP-116) was launched 13 March 1944 under a Maritime Commission contract by the Federal Shipbuilding & Drydock Co., Kearny, N.J., sponsored by Mrs. Henry R. Arnold; acquired by the Navy 2 June 1944; and commissioned at Bayonne, N.J., 3 June 1944, Captain George W. McKean, USCG, in command.

After two round-trip, troop-carrying voyages between Newport News, Va., and Naples, Italy, from 10 July to 1 September, *General M. C. Meigs* departed 5 September for Rio de Janeiro, Brazil. Arriving 18 September, she was visited by Brazilian President Getulio Vargas and embarked 5,200 troops of the Brazilian Expeditionary Force, the first Brazilian troops to be carried by an American transport. She sailed 22 September for the Mediterranean; arrived Naples 6 October; and there embarked troops, civilians, and 460 German prisoners of war for transportation to the United States. Departing Naples 10 October, she embarked additional troops at Bizerte, Tunisia, and at Oran, French Morocco, before returning to New York 22 October.

Between 7 November and 8 March 1945 *General M. C. Meigs* made two similar round-trip voyages from the United States to Italy and North Africa via Brazil, carrying thousands of American and Brazilian troops to Europe for the remaining drive against Nazi Germany and returning several thousand others to the United States and Brazil.

General M. C. Meigs deployed troops to Panama and Puerto Rico from 25 March to 7 April before departing New York 16 April to carry troops to Le Havre, France. There she embarked homebound troops 28 April, sailed for the United States 30 April via Southampton, England, and reached Newport News 14 May. Between 22 May and 14 June she steamed to Naples and returned to Newport News with 5,100 veterans. Sailing again 23 June, she transported occupation troops to Naples, where she then embarked Brazilian troops 4 July and sailed the 6th for Rio de Janeiro. She reached Brazil 18 July and steamed to Bahia and Recife, Brazil, before arriving Newport News 12 August. Between 23 August and 17 September she cruised to Naples and returned additional troops to Brazil.

USS *General M. C. Meigs* (AP-116) on 10 July 1944

Departing Rio de Janeiro 20 September, *General M. C. Meigs* steamed via Recife to Marseilles, France, where she arrived 2 October to begin duty with the "Magic-Carpet" fleet. She cruised to the Mediterranean, the Middle East, and the Far East and contributed significantly to the giant task of returning to the United States the veterans of the long, bitter fighting of World War II. After returning to Newport News from Marseilles 12 October, between 21 October and 3 December she steamed from Norfolk to Naples and Karachi, India, to return troops to New York. On 8 December she departed New York for the Far East. Steaming via the Philippines, she arrived Nagoya, Japan, 10 January 1946; embarked a full load of troops; then sailed the 14th for the United States. She reached San Francisco 24 January, decommissioned there 4 March, and was turned over to WSA for transfer to the American President Lines, Ltd., as a passenger ship in the Pacific.

After the outbreak of Communist aggression in Korea 25 June 1950, *General M. C. Meigs* was taken over from the Maritime Commission 21 July and assigned to MSTs. Manned by a civilian crew, she made 19 cruises to the Far East during the fighting in Korea and carried thousands of American troops from the West Coast to ports in Japan and South Korea. Following the uncertain armistice 27 July 1953, she continued to support American readiness in the Far East with troop-rotation cruises during the remainder of 1953 and through 1954. Placed in Reduced Operational Status in 1955, she was transferred to the Maritime Administration 1 October 1958 and entered the National Defense Reserve Fleet at Olympia, Wash., where she remains.

General M. C. Meigs received six battle stars for Korean War service.

General M. L. Hersey

Mark Leslie Hersey, born in Stetson, Maine, 1 December 1863, graduated from the U.S. Military Academy in 1887 and served with the 9th Infantry in Arizona until 1891. He was Professor of Military Science and Tactics at the University of Maine during the next 4 years. He fought in Cuba during the Spanish-American War and again served with the 9th Infantry in the Philippines during the hostilities in China during the Boxer Rebellion. After participating in the Samar Campaign in the Philippines, he returned to the United States in 1902. During World War I, as commander of the 4th Division, A.E.F., he participated in the St. Mihiel and Meuse-Argonne Offensives and was awarded the Distinguished Service Medal, the French Legion of Honor, and the Croix de Guerre with Palm. Promoted to Major General 20 September 1924, he retired from active duty 2 November. Major General Hersey died at Tampa, Fla., 22 January 1934.

(AP-148: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,823; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General M. L. Hersey (AP-148) was launched under a Maritime Commission contract 1 April 1944 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. Alice Hersey Wicks, General Hersey's daughter; acquired by the Navy 31 May 1944; and commissioned 29 July 1944; Captain James W. Smith in command.

After shakedown off San Pedro, *General M. L. Hersey* sailed from San Francisco 5 September 1944 with troops and cargo for garrisons in the Southwest Pacific. She reached Milne Bay, New Guinea, 21 September and subsequently carried troops and supplies to the Admiralty Islands, the Russell Islands, and the Solomon Islands, before departing Guadalcanal for the United States 6 October. Arriving San Francisco 19 October, she brought home more than 3,000 veterans of the bitter Pacific fighting. Between 7 November 1944 and 14 August 1945 the transport made four round-trip voyages from San Fran-

cisco and Seattle to the Western Pacific, carrying troops to New Guinea, the Philippines, the Palaus, and the Marianas during the final amphibious offensive against Japan. At Leyte in November *General M. L. Hersey* endured frequent air attacks.

Following the surrender, the veteran ship departed Seattle 31 August; and, steaming via the Philippines, she arrived Yokohama 24 September with occupation troops. There she embarked 3,052 troops and departed 5 days later as a unit of Operation "Magic-Carpet," a giant sea-lift designed to return hundreds of thousands of American fighting men to the United States as quickly as possible. Between 3 December and 3 March 1946 she steamed twice to the Far East where she embarked returning veterans at Yokohama and Manila and transported them to San Pedro and San Francisco. Departing San Francisco 23 March, she then steamed via Manila and Singapore to Calcutta, India, and Colombo, Ceylon, where she embarked "Magic-Carpet" troops. She departed Colombo 28 April, sailed via the Suez Canal, and arrived New York 21 May. She decommissioned at New York 1 June and was turned over to WSA 6 June for eventual use as a transport by the Army Transportation Service.

Reacquired by the Navy 1 March 1950, *General M. L. Hersey* was placed in service and assigned to MSTs under a civilian crew. Operating out of New York, she carried European refugees to the United States in support of the International Refugee Organization. During 1952 and 1953 she made four round-trips from San Francisco to the Far East in support of the struggle to repel Communist aggression in Korea. She was placed out of service 11 June 1954 and placed in the Pacific Reserve Fleet at San Diego. Later transferred to the Maritime Administration, on 3 September 1959 she entered the National Defense Reserve Fleet, Suisun Bay, Calif., where she remains.

General M. L. Hersey received one battle star for World War II service and two battle stars for Korean War service.

General M. M. Patrick

Mason Mathews Patrick, born in Lewisburg, W. Va., 13 December 1863, graduated from the U.S. Military Academy in 1886 and was commissioned Second Lieutenant in the Corps of Engineers. During the next three decades he served in a variety of positions. Twice he taught practical military engineering at the Military Academy. He assisted in river and harbor improvements in the Mississippi and Ohio Rivers and in Norfolk Harbor. He commanded the 2d Battalion of Engineers in Cuba during operations prior to the raising of battleship *Maine*. In 1914 he assisted in building Davis Lock, Sault Sainte Marie Canals, Mich. After commanding the 1st Regiment of Engineers on the Mexican border, he joined the A.E.F. during World War I in France, where he took active charge of all construction work and forestry operations. Promoted to Major General in 1918, he was appointed Chief of Air Service. After the Armistice, he represented the A.E.F. at the Paris Peace Conference. In 1921 he became Chief of the Army Air Service, the position he held until his retirement in 1927. Major General Patrick died in Washington, D.C., 20 January 1942.

(AP-150: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k.; cpl. 425; trp. 3,343; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General M. M. Patrick (AP-150) was launched under Maritime Commission contract 21 June 1944 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. William E. Lynd; acquired by the Navy 4 September 1944; and commissioned at San Francisco the same day, Captain George W. Stott in command.

After shakedown, *General M. M. Patrick* departed San Francisco 14 October and transported nearly 3,000 troops to Pearl Harbor and Guam before returning to San Fran-

cisco 18 January 1945 with military passengers. Between 19 February and 6 March she carried more troops from Seattle to Hawaii and returned sailors to San Francisco. With a full load of troops embarked, she then sailed 16 March for the Southwest Pacific, where she arrived San Pedro Bay, Philippines, 18 April. After shuttling troops from Allied bases along the northern coast of New Guinea to Luzon, she departed Manila 16 May and brought home returning veterans, arriving San Francisco 12 June. Once again departing San Francisco 28 June, she transported 3,000 troops and passengers to Fremantle, Australia; steamed to Calcutta, India, to embark passengers; then sailed via the Suez Canal to New York, where she arrived 3 September.

On the 22d *General M. M. Patrick* departed on another "Magic-Carpet" voyage to Calcutta and back to New York, arriving 16 November. Departing New York 9 days later, she embarked still more troops at Calcutta, Karachi, and Tuticorin, India; steamed via Ceylon and Singapore for the West Coast; and arrived San Pedro 28 January 1946. She decommissioned 8 March and was returned to WSA 11 March for use as an Army transport under the Army Transportation Service.

General M. M. Patrick was reacquired by the Navy 1 March 1950 and assigned to duty as an overseas transport under MSTs. Manned by a civilian crew, during the Korean war she operated between Seattle and the Far East and carried tens of thousands of combat troops in support of the effort to repel Communist aggression in Korea. After the armistice, she continued steaming from Seattle to Yokohama, Japan, and back, returning veterans of the Korean fighting to the United States and deploying troops to the Far East. She was returned to the Maritime Administration 17 October 1958 and entered the National Defense Reserve Fleet at Olympia, Wash., where she remains.

General M. M. Patrick received two battle stars for Korean conflict service.

General Maurice Rose

A former name retained. Maurice Rose, born 26 November 1899 at Middletown, Conn., enlisted as a private in the Colorado National Guard in June 1916; attended Officers Training School at Fort Riley, Kans., in 1917; and was commissioned Second Lieutenant in the Infantry 15 August. In May 1918 he sailed with the 333d Infantry for duty in France, where he participated in the St. Mihiel Offensive. After his return to the United States in January 1920, he served during the next two decades at various posts in the United States and at Corozal, C.Z. Following the Japanese attack on Pearl Harbor, he became Chief of Staff of the 2d Armored Division in January 1942. Promoted to Brigadier General 2 June 1943, he assumed command of the 3d Armored Division in France 7 August 1944. He was promoted to Major General 5 September and was killed in action in Germany 31 March 1945.

Admiral Hugh Rodman (AP-126) (*q.v.*) was reacquired by the Navy from the Army Transport Service as *General Maurice Rose* 1 March 1950 and assigned to MSTs. Manned by a civilian crew, she operated out of New York in the Atlantic and the Mediterranean during the next 15 years. Steaming primarily between New York and Bremerhaven, Germany, she completed more than 150 round-trip voyages while carrying military dependents and European refugees and rotating combat-ready troops. In addition she deployed to the Mediterranean 17 times to support peace-keeping operations of the mighty 6th Fleet.

Following the gallant but abortive Hungarian Revolution in October 1956, *General Maurice Rose* completed three runs to Bremerhaven and back between 12 January and 27 March 1957 in support of the operation to transport Hungarian refugees to the United States. On three deployments to the Eastern Mediterranean between 1 April and 5 October, she supported units of the 6th Fleet during

Communist-inspired political crises that threatened the pro-Western government of Jordan.

After completing nine voyages to Bremerhaven and back between 16 January and 4 August, *General Maurice Rose* departed New York 14 August for transport duty to Southeast Asia. In response to America's determination to defend the integrity and independence of South Vietnam from external Communist aggression, she sailed via Long Beach, Calif., and Pearl Harbor to Qui Nhon, South Vietnam, arriving 14 September, and debarking troops and supplies. Departing the 19th, she steamed via Okinawa and the West Coast and reached New York 18 October. During the first 8 months of 1966, she made eight round-trip runs to Europe and back. On 8 September she again departed New York for trooplift duty to South Vietnam. She operated in the Western Pacific, supporting the forces of freedom in Southeast Asia through the end of 1966. She returned to New York late in January 1967 for overhaul and was placed in ready reserve status.

General Mifflin

Thomas Mifflin, born in Philadelphia, Pa., 10 January 1744, graduated from the College of Philadelphia at age 16 to become one of the youngest members of the First Continental Congress. He became Aide-de-Camp to Washington in 1775 and in August of that year was appointed Quartermaster General of the Continental Army. General Mifflin fought at the battles of Princeton and Trenton, in the defense of Philadelphia, and was promoted to Major General in 1777. Resigning from the Army after the war, he served in Congress from 1782 to 1784, presiding over it the last year. He then was elected Governor of Pennsylvania for three terms. A member of the state legislature from then on, he died 20 January 1800.

(Slp)

General Mifflin was a small sloop procured by General Washington in the spring of 1776. Upon arrival in New York in April, the general fitted out a small fleet of vessels for the protection of the local waters, *General Mifflin* among them. She cruised in the neighborhood of Long Island, often in company with sloop *Montgomery*, and captured several vessels, before her final disposition.

General Nelson M. Walker

A former name retained. Nelson Macy Walker, born 27 September 1891 at Pittsfield, Mass., attended Officers Training Camp, Plattsburg, N.Y., and was commissioned Second Lieutenant in the Infantry Reserve 15 August 1917. He went to France with the 47th Infantry Regiment in April 1918 and participated in the Aisne-Marne, St. Mihiel, and Meuse-Argonne Offensives. He was wounded in action 5 July 1918. He continued action with the American forces in Germany until July 1919 when he returned to the United States. During the next 18 years he was stationed at various Army posts in the United States. From July 1937 until August 1938, he served with the 15th Infantry in Tientsin, China. After the entry of the United States into World War II, he was assigned to Headquarters, Army Ground Forces, in Washington, D.C. Promoted Brigadier General 11 September 1942, he became Assistant Division Commander, 8th Infantry Division, in November 1943. He was killed in France 10 July 1944 during the invasion of Western Europe.

Admiral H. T. Mayo (AP-125) (*q.v.*) was reacquired by the Navy from the Army Transport Service as *General Nelson M. Walker* 1 March 1950 and assigned to MSTs.

After the outbreak of the Korean conflict, *General Nelson M. Walker* transported men and equipment from the West Coast to the Pacific staging areas. On 31 May 1952 her Pacific runs were interrupted when she sailed for the East Coast, arriving Norfolk 14 June. Following two cruises to Bremerhaven, *General Nelson M. Walker* returned to her West Coast-Far East cruises.

She continued these operations until 28 November 1955 when she was placed in a reduced operational status. Departing San Francisco 9 January 1957, she sailed through the Panama Canal and on to Bremerhaven, where she embarked Hungarian refugees for transport to New York. Arriving there 14 February, *General Nelson M. Walker* was transferred to the Maritime Administration and placed in ready reserve status. Berthed in the Hudson River, she joined the National Defense Reserve Fleet 20 January 1959.

During the rapid buildup of American forces in Vietnam, it was necessary to reactivate additional ships to facilitate the flow of troops and equipment to Southeast Asia. *General Nelson M. Walker* was transferred to MSTs 14 August 1965, and from December 1965 to August 1966 she made five cruises from San Francisco to Japan, Okinawa, and Vietnam. She continued this vital duty carrying troops to Vietnam to bolster Allied forces fighting Communism through mid-1967 and is scheduled to carry on the task through the end of the year.

General O. H. Ernst

Oswald Herbert Ernst, born near Cincinnati, Ohio 27 June 1842, graduated from the U.S. Military Academy in 1864 and served at various posts with the Corps of Engineers and then as a member of the astronomical expedition to Spain in 1870. He served as Superintendent of the Military Academy from 1893 until 1898. During the Spanish-American War, he commanded a brigade in Puerto Rico, then served as Inspector General of Cuba until 1899. Later a member of the original Isthmian Canal Commission and in charge of river and harbor improvements at Baltimore, Galveston, and Chicago, General Ernst retired from active duty in 1906. Promoted to Major General in 1916, he died in Washington, D.C., 21 March 1926.

(AP-133: dp 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 16 k.; cpl. 426; trp. 3,343; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General O. H. Ernst (AP-133) was laid down under Maritime Commission contract 29 June 1942 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; launched 14 April 1943; sponsored by Mrs. L. M. Giannini; acquired by the Navy 31 March 1944; commissioned 22 April 1944, Comdr. R. W. Dole in command; transferred to Portland, Oreg., for conversion to a transport by Commercial Iron Works, Portland; decommissioned 13 May 1944; and recommissioned 15 July 1944.

General O. H. Ernst sailed from Seattle 27 August 1944; and, after embarking more than 3,000 fighting men at Honolulu, she transported troops to Guadalcanal, Manus, and Ulithi before returning to San Diego 4 December. Underway again 10 days later, she carried troops to Guadalcanal and promptly returned to the West Coast, reaching Seattle 20 January 1945. Following a round-trip voyage during February to Honolulu and back to San Francisco, the busy transport made a round-trip voyage between 17 March and 22 May, carrying troops from San Francisco to New Hebrides, New Caledonia, New Guinea, Leyte, and the Admiralties.

General O. H. Ernst departed San Francisco 30 May for the Panama Canal and Europe; and, after embarking veterans at Le Havre, France, she steamed to Norfolk, arriving 2 July. A week later she departed for Naples, Italy, and carried troops thence via the Panama Canal to Hollandia, New Guinea, where she arrived 27 August. Touching Manila 2 September, the ship departed Tacloban 15 September for San Pedro, Calif., arriving 1 October. As part of the post-war "Magic-Carpet" fleet, she between 1 November and 29 July 1946, made six troop-rotation voyages out of San Pedro and Seattle to Japan, Korea, Okinawa, and Pearl Harbor.

General O. H. Ernst returned to San Francisco from the Far East 29 July 1946, decommissioned there 15 August. Returned to WSA the same day, she entered

the National Defense Reserve Fleet at Suisun Bay, Calif. She was sold to Bethlehem Steel Corp., Wilmington, Del., in April 1964 and renamed *Calmar*.

General Omar Bundy

Omar Bundy, born 17 June 1861 at New Castle, Ind., graduated from the Military Academy in 1883 and served on the American frontier, participating in campaigns against Crow and Sioux Indians. During the Spanish-American War he fought with the 5th Army Corps in Cuba and received the Silver Star for gallantry at El Caney. From 1899 to 1902 he served in the Philippines during the insurrection and subsequently, after teaching law at Fort Leavenworth, Kans., fought the Moros in the Philippines in 1905-06. General Bundy served within the continental United States until 1917 when he assumed command of the 1st Brigade, 1st Expeditionary Division, and sailed for France in June 1917. As a division and corps commander during World War I he participated in the occupation of the Toulon Rupt, and Troyon Sectors and served in the Aisne-Marne Operations and in the occupations of the Chateau-Thierry and Pas Fini Sectors. Following the war he commanded Camp Lee, Va., the VII Corps Area, the Philippine Division, and the V Corps Area. For his services in World War I, General Bundy was awarded the French Legion of Honor, Commander, and the French Croix de Guerre with Palm. He died in Washington, D.C., 20 January 1940.

(AP-152: dp. 17,250; l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k.; cpl. 356; trp. 3, 823; a. 4 5", 4 40mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General Omar Bundy (AP-152) was launched 5 August 1944 under a Maritime Commission contract by the Kaiser Co., Richmond, Calif.; sponsored by Mrs. Lawrence of Richmond; acquired and simultaneously commissioned 6 January 1945, Captain L. Wainwright in command.

General Bundy stood out of San Francisco Bay 10 March 1945 with 2,700 sailors and marines bound for the Southwest Pacific, and after delivering them to Pearl Harbor, Ulithi, and Guam, returned to San Diego 11 May with over 1,700 homeward-bound troops after debarking 200 Japanese POW's at Pearl Harbor on 3 May. Six days later she sailed for the Atlantic via the Panama Canal and put in at Norfolk, Va., 31 May. Underway again on 9 June, she touched Marseille to embark 2,800 troops for redeployment to the Pacific theater and brought them safely to Manila on 6 August 1945 via Panama. She brought nearly 500 officers and men from Manila to Tacloban, Leyte, Philippine Islands, and after embarking 1,500 veterans there, sailed via Ulithi and Guam to off-load her passengers at Seattle, Wash., on 4 September. Continuing her Magic Carpet duties, *General Bundy* transported 3,000 replacement troops from Seattle to Okinawa in late September and October, returning to Portland, Oreg., on 2 November 1945 with nearly 3,000 victorious soldiers. The ship returned to the Philippines in November to embark 3,300 returning veterans, and brought them home to San Francisco on 19 December 1945.

In 1946 *General Bundy* continued her "Magic-Carpet" and troop rotation duties, homeported at San Francisco and calling at Japan and Manila in February and at the Philippines again in April, returning to San Francisco after this last round-trip voyage and sailed from that port 17 May 1946 bound for New York via the Panama Canal. She decommissioned 14 June 1946 and was delivered to the Maritime Commission the next day. *General Omar Bundy* was struck from the Navy list on 8 October 1946.

The transport was transferred to the War Department 30 August 1946 and carried troops for the Army until returned to the Maritime Commission 12 December 1949. *General Omar Bundy* entered the National Defense Reserve Fleet and was berthed in the James River until delivered to the Bethlehem Steel Corp. 10 April 1964. Converted to a freighter, she operates under the name *Portmar*.

General Pike

Zebulon Montgomery Pike, born in 1779 at Lamberton (now a part of Trenton), N.J., was the son of Zebulon Pike, a captain in the Continental Army. In 1794 young Pike entered his father's company as a cadet to be commissioned Second Lieutenant 3 March 1799. In 1805 President Jefferson chose Pike to command an expedition to the upper Mississippi region of the Louisiana Territory. When he returned to St. Louis in April 1806, he was sent to explore the sources of the Arkansas and Red Rivers. During this expedition he discovered the mountain peak in Colorado which now bears his name. Pike was captured by the Spanish 26 February 1807 but was released a few months later. In the ensuing years he rose through the ranks rapidly, reaching Brigadier General 12 March 1813. He served as Adjutant and Inspector General in the campaign against York (now Toronto), Canada. He commanded American troops sent ashore during a successful assault 27 April 1813 but was killed by the explosion of a British magazine, which was ignited by retreating troops as American forces stormed the garrison.

(Ship: t. 875; lbp. 145'; b. 37'; dph. 15'; cpl. 300; a. 26 24-pdrs.)

General Pike was laid down by Henry Eckford, a New York City shipbuilder who supervised the construction of warships on Lake Ontario, at Sackett's Harbor 9 April 1813. Set on fire 29 May during a British attack on Sackett's Harbor, the unfinished ship was saved and launched 12 June 1813, Master Commandant Arthur Sinclair in command. She was made ready to sail by July and on 21 July she joined Commodore Isaac Chauncey's squadron. She sailed to the head of Lake Ontario, arriving off Niagara 27 July. While cruising the lake, she engaged British ships under Commodore Yeo in an indecisive battle on 10 and 11 August.

General Pike returned to Sackett's Harbor 13 August and provisioned before returning to the head of the lake to search out British ships. After almost a month of maneuvering and stalking to gain an advantage over the British, she joined Chauncey's ships in a brief encounter against the British off the mouth of the Genesee River 11 September. On 28 September the two forces again met at York Bay, Ontario, and engaged in a fierce, but still indecisive, battle. During heated exchanges of gunfire between American and British ships *General Pike* fought in heavy action against British ship *Royal George* and rendered gallant service throughout the encounter.

After returning to Sackett's Harbor early in October, *General Pike* supported troop movements against the British at the lower end of Lake Ontario until mid-November when she returned to the Niagara Peninsula to cover the transfer of American troops from Fort Niagara to Sackett's Harbor. She remained at Sackett's Harbor during the winter months.

Throughout the remainder of the War of 1812, *General Pike* continued to operate with Chauncey's squadron. After the British withdrew blockading ships off Sackett's Harbor early in June 1814, she joined other American ships in a blockade of British ships at Kingston, Ontario. The American forces kept Yeo's ships within Kingston harbor, and *General Pike* cruised Lake Ontario freely from the head of the St. Lawrence to Sackett's Harbor. Following the end of the war, she was laid up at Sackett's Harbor and was sold in 1825.

General Pillow

Gideon J. Pillow, born in Williamson County, Tenn., 8 June 1806, graduated from the University of Nashville in 1827. He became a successful criminal lawyer, practicing for a time with James K. Polk, and was active in national politics. Appointed Brigadier General of Volunteers in 1846, he served with General Taylor on the Rio Grande and with General Scott at Vera Cruz, Cerro Gordo, Contreras, and Chapultepec. At the beginning of the Civil

War, he accepted a commission as Brigadier General in the Confederate Army. General Pillow fought at Belmont, Mo., in 1861 and was second in command at Fort Donelson in February 1862 when it fell to General Grant. He escaped but held no important command after that time. When the war ended, Pillow returned to his law practice until his death at Helena, Ark., 8 October 1878.

(SwStr: t. 38; l. 81'5"; b. 17'1"; dph. 3'8"; a. 2 12-pdr. how.)

General Pillow (Gunboat No. 20) was originally Confederate steamer *B. M. Moore* (see *DANFS* II, 502) and served the South as a gunboat until she was captured on the Hatchee River, Tenn., by *Pittsburg* 9 June 1862. She was transferred to the Union Navy by the War Department; and after outfitting and repairs at Cairo, Ill., *General Pillow* departed Cairo 23 August for duty with the Mississippi Squadron, Lt. LeRoy Fitch in command.

General Pillow became part of the light draft squadron on the Tennessee and Cumberland Rivers, and for the next several months conveyed troop transports and fought guerrillas on the riverbanks. February 1863 saw her again at Cairo guarding mortar ships and ammunition barges, in addition to making occasional visits to Mound City, Ill., and the mouth of the Tennessee River. She continued this duty until July 1865 when she was turned over to the Commandant of the Naval Station, Mound City, for disposal. *General Pillow* was sold at Mound City 26 November 1865 to Wetzel and Hallerburg.

General Price, see *General Sterling Price*

General Putnam

A former name retained. See *William G. Putnam* for biography.

(SP-2284: t. 205; l. 122'6"; b. 28'; dr. 9'; s. 12 k.; cpl. 13; a. none)

General Putnam (SP-2284), a ferry boat, was built in 1902 by Pusey & Jones, Wilmington, Del.; acquired under charter by the Navy 6 February 1918 from her owner, John E. Moore & Co., New York City; taken over 16 July 1918; and placed in service at New York City 29 July 1919.

Assigned to the 3d Naval District, *General Putnam* was manned by the owner's civilian crew and was used as a ferry boat between New York Navy Yard and Ellis Island. After the Armistice, she was returned to her owner 2 October 1919.

General R. E. Callan

Robert Emmet Callan, born 24 March 1874 at Baltimore, Md., graduated from the Military Academy and was assigned to the 5th Artillery. Following service in Cuba, Puerto Rico, West Point, and Washington, D.C., he became Chief of Staff of the Philippine Department in 1917. During WWI he was on duty in France and was Chief of Staff of the 1st Army Artillery, Commanding General of the 33d Artillery Brigade, and participated in the Montdidier-Noyon Defensive and in the Aisne-Marne Offensive. General Callan served in New York, Panama, and Hawaii before his promotion to Major General in 1931. He commanded the 3d Corps Area, Baltimore, Md., until retiring at his own request in 1936 after 40 years of service. General Callan was awarded the Distinguished Service Medal for his services during WWI. He died 20 November 1936 at Washington, D.C.

(AP-139: dp. 17,250; l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k; cpl. 449; a. 4 5")

General R. E. Callan (AP-139) was launched 27 April 1944 under a Maritime Commission contract by Kaiser Inc., Richmond, Calif; sponsored by Mrs. Robert E. Callan, wife of General Callan; acquired 7 July 1944;

and commissioned 17 August 1944, Comdr. Robert C. Starkey in command.

General Callan sailed from San Francisco 25 September 1944 with Army troops and debarked them at Oro Bay and Langemak Bay New Guinea, on-loading at the latter port 2,700 troops and casualties which she put ashore at San Francisco 1 November on her return. She embarked over 2,600 fighting men at San Diego and after touching San Francisco 13 November, got underway from that port 3 days later for Kahului Harbor, Hawaii, where she debarked the troops and returned to San Francisco 2 December with over 250 homeward-bound veterans. From 20 December 1944-8 February 1945 the transport carried 2,500 troops from San Francisco to Eniwetok and Guam, returning to Los Angeles the latter date with 2,500 troops embarked at Pearl Harbor. *General Callan* then stood out 23 March 1945 with more than 3,000 fighting men bound for Melbourne, Australia; Calcutta, India; and Trincomalee, Ceylon; returning via Fremantle, Australia; Manus, Tinian, Saipan, Guam, and Pearl Harbor to moor at San Francisco 28 June.

Two days later the busy ship steamed under the Golden Gate bound for Norfolk, Va., closing that port 15 July and getting underway again 25 July for France. She embarked over 3,000 troops at Marseille 6 August and returned to Norfolk 18 August to debark her war-weary passengers. From 20 August-12 September the ship made another voyage to Marseille and put in at Boston 12 September with over 4,000 troops. On 26 September she stood out to eastward, touching Karachi, India, via the Suez and returning to New York with a full load of veterans on 21 November. After a round-the-world troop rotation cruise which brought the ship to Karachi, Singapore and Hawaii after her departure 7 December 1945 from New York, *General Callan* moored at Seattle on 30 January 1946. Following a voyage to Leyte, she returned to San Francisco in early April, and subsequently sailed thence via Panama for Boston, where on 24 May 1946 she was placed out of commission and turned over to the Maritime Commission for peacetime operations as an Army transport. Her name was struck from the Navy List on 19 June 1946.

General R. E. Callan was reacquired from the Army on 28 April 1950 and manned by a Civil Service crew for transatlantic passenger service under the MSTs until 29 May 1958 when her name was again struck from the Navy List. Returned to the Maritime Commission, she was assigned to the Maritime Reserve Defense Fleet in the Hudson River, N.Y.

General R. E. Callan was transferred to the Air Force 15 July 1961 and renamed *General H. H. Arnold*. On 1 July she was acquired by the Navy and designated T-AGM-9. *General R. E. Callan* now operates in the Atlantic under MSTs as a missile range instrumentation ship.

General R. L. Howze

Robert Lee Howze, born in Rusk County, Tex., 22 August 1864, graduated from the Military Academy in 1888. As a young officer he fought in the Indian Wars and earned the Medal of Honor fighting off a Sioux attack 1 January 1891. In the Spanish-American War Howze served in Cuba and later the Philippines. Following a tour of duty in Puerto Rico, he was Commandant of Cadets at the Military Academy 1905 to 1909. This brought him staff posts in several major commands, and command of a cavalry unit with Pershing on the Mexican border. At the outbreak of World War I, Howze was appointed Major General and commanded the 38th Division. He took part in the Meuse-Argonne fighting and marched to the Rhine as Commander, 3d Division. He received the Distinguish Service Medal for World War I service. Returning from France, Howze was appointed Major General in the regular Army in 1922. He died at Columbus, Ohio 19 September 1926.

(AP-134: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,530; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. CA-S-A1)

General R. L. Howze (AP-134) was laid down under Maritime Commission contract 22 July 1942 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; launched 23 May 1943; sponsored by Mrs. W. C. Gardenshire; acquired by the Navy 31 December 1943; converted to a transport by Matson Navigation Co., San Francisco; and commissioned at San Francisco 7 February 1944, Captain L. H. Baker, USCG, in command.

After shakedown off San Diego, the transport loaded supplies, embarked troops at San Francisco, and sailed 20 March 1944 for New Guinea. *General R. L. Howze* carried troops to Milne Bay and Lae to support the American buildup of pressure in the southwest Pacific returning to San Francisco 2 May 1944. Subsequently, the ship steamed to Guadalcanal, Manus, Eniwetok, and many other islands as the rising tide of the Navy's amphibious offensive swept toward Japan. She carried troops, supplies, and even Japanese prisoners of war on a total of 11 voyages to the combat areas of the Pacific, before returning to San Francisco 15 October 1945, after the Japanese surrender.

In November, *General R. L. Howze* steamed to the Philippines to bring home veterans, and sailed 10 January 1946 for England with 3,400 German prisoners. After touching at Liverpool 31 January, she brought American troops from Le Harve to New York 16 February, and made a final voyage to France for more returning veterans. *General R. L. Howze* decommissioned at New York 1 April 1946 and was returned to WSA for transfer to the War Department. She was placed in reserve in the James River 6 August 1947, and returned to the War Department as an Army Transport in 1948.

The veteran transport was reacquired by the Navy 1 March 1950 and joined MSTs with a civilian crew. For the next year *General R. L. Howze* sailed to and from Europe for the International Refugee Organization, bringing displaced persons from Eastern Europe to the United States. In mid-1951, she was transferred to the Pacific, and steamed between San Francisco and the Far East with troop replacements for U.N. fighting in Korea. She continued this vital role helping to defend freedom in Korea, both during the active fighting and after the armistice.

However, in September 1954, *General R. L. Howze* was diverted from her normal pattern of sailings to take part in Operation "Passage to Freedom." For 5 months she and other Navy ships brought tens of thousands of refugees from North to South Vietnam as that unfortunate country was partitioned.

General R. L. Howze made two more voyages to the Far East supporting America's important readiness forces before returning to Seattle 31 December 1955. She remained inactive until entering the reserve fleet at Astoria, Ore., 15 July 1957. The ship was finally returned to the Maritime Administration 17 July 1958 and placed in the Maritime Defense Reserve Fleet at Astoria, where she remains.

General R. L. Howze received six battle stars for Korean War service.

General R. M. Blatchford

Richard M. Blatchford, born 17 August 1859 at Fort Hamilton, N.Y., served on the American frontier in Dakota Territory, Kansas, and Arizona. Following two tours of duty in Puerto Rico he served both in the field and in garrison in the Philippines from 1901-04. After frontier and border patrol assignments, General Blatchford sailed for France in July 1917 and during World War I was commanding general of the Line of Communications, A.E.F. Following his return to the United States he served in Panama, Ohio, California, and Washington, retiring from active service 1 December 1922. He died 31 August 1934 at San Francisco, Calif.

(AP-153: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k; cpl. 256; trp. 3,823; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General R. M. Blatchford (AP-153) was launched 27 August 1944 under a Maritime Commission contract by the Kaiser Co., Richmond, Calif.; sponsored by Mrs. William Anderson of San Francisco; acquired and simultaneously commissioned 26 January 1945, Comdr. Allen H. Guthrie in command.

General R. M. Blatchford sailed from San Francisco 12 March 1945 with over 3000 fighting men and debarked them at Manila 13 April, returning to San Francisco 22 May to off-load 2000 troops taken on board at Biak and Finschhafen. She sailed 30 May for France via the Panama Canal, touched at Le Havre 20 June, and debarked more than 3,000 returning troops at Boston 1 July. Five days later the transport sailed to redeploy troops from the European to the Pacific theater, embarking 3000 soldiers at Leghorn, Italy, and bringing them safely to Luzon and Manila in August 1945. *General R. M. Blatchford* embarked more than 1,000 troops and casualties at San Pedro, Philippine Islands, and put in at Seattle 30 September 1945.

Continuing her Magic Carpet assignments, the ship sailed from Seattle 16 October with 2,800 rotation troops and debarked them at Nagoya, Japan, where 3,000 home-ward veterans were loaded and put ashore at San Francisco 20 November. From 28 November 1945-7 May 1946 three more round trip voyages from Seattle to the Far East were made, the transport bringing near-capacity loads of troops to and from Nagoya, Yokohama, and Shanghai and mooring at San Francisco 7 May 1946 with completion of these duties.

On 9 May *General R. M. Blatchford* departed for Norfolk, Va., via the Panama Canal and moored at that port 24 May. She was decommissioned at Baltimore, Md., on 12 June 1946 and returned to the Maritime Commission for operations as an Army transport. She was reacquired by the Navy on 1 March 1950 for operations by a Civil Service crew under the MSTs transported thousands of troops from the West Coast in support of United Nations Forces in Korea.

On 11 February 1961 she sailed from New York for two and a half years overseas service in the United Nations Congo sealfit. Earning her the nickname of "Ambassador Ship," her crew cemented goodwill relations for the United States in the best traditions of the People-to-People Program while helping to keep the peace in the Congo. The veteran transport travelled 174,000 nautical miles in ferrying 36,809 passengers to and from the Congo, Morocco, India, Pakistan, Malaya, and Indonesia. She circumnavigated the African continent several times and criss-crossed the Indian Ocean repeatedly while rotating United Nations soldiers, doctors, nurses, and technicians assigned to the Congo. *General R. M. Blatchford* arrived New York on 11 August 1963 with high praise from her government and United Nations Secretary General U Thant who said, "The ship and her devoted master and crew have been a mainstay of the United Nations Operations in the Congo, and they have never failed us, even when their duties must have seemed arduous and incessant."

She continued to operate in the Atlantic supporting U.S. Forces in Europe until transferred to the Pacific in 1965 to carry troops to Vietnam. She continued this vital task until overhauled at San Francisco in January 1967 and entering ready reserve status.

General R. M. Blatchford received two battle stars for service during the Korean war.

General S. D. Sturgis

Samuel Davis Sturgis, born 1 August 1861 at St. Louis, Mo., graduated from the Military Academy in 1884 and served in the Artillery. Following duty in San Francisco, New York, Missouri, Maryland, and Kansas, he served in the Philippines, Dakota Territory, and Cuba. He returned to the Philippines in 1901 and subsequently was on

duty in Utah, Wyoming, Texas, and Hawaii. General Sturgis served with the AEF in France during World War I commanding in turn the 87th and 80th Divisions. He participated in the Meuse-Argonne Offensive and in the occupation of the 1st Army Defensive Sector. After the war he served in Georgia, Arkansas, Illinois, Ohio, Panama, and Maryland before retiring 1 August 1925. General Sturgis died 6 March 1933 at Washington, D.C.

(AP-137: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,343; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A2)

General S. D. Sturgis (AP-137) was launched under Maritime Commission contract 12 November 1943 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Miss Rio Ivanhoe; acquired by the Navy 31 March 1944; placed in ferry commission 24 April 1944 for transfer to Portland, Oreg.; decommissioned 25 May 1944; converted to a transport by Kaiser Co., Inc., Vancouver, Wash.; and placed in full commission at Portland, Oreg., 10 July 1944, Comdr. D. S. Baker in command.

After shakedown calls at San Francisco and Los Angeles, *General S. D. Sturgis* arrived Seattle 10 August 1944 to embark cargo, troops, and passengers before getting underway 8 days later. She debarked troops and supplies at Honolulu 24 August and returned to San Francisco 2 September with hospital patients. From 27 September to 6 November the ship made one round-trip voyage from San Francisco to Pearl Harbor and one from Seattle before returning to San Francisco. She sailed from that port 16 November with troops and supplies bound for the Southwest Pacific. Touching Eniwetok 4 December and arriving at Ulithi 5 days later, she assumed duty there as a station receiving ship. *General S. D. Sturgis* carried part of Admiral Halsey's 3d Fleet staff via Eniwetok to Pearl Harbor, finally reaching Seattle 19 February 1945. From 6 April to 2 June she made a round-trip, troop-carrying voyage from San Francisco to Langemak Bay and Hollandia, New Guinea; and San Pedro, Leyte as the Pacific campaigns reached a climax.

She now headed for Europe, departing San Francisco 16 June for France. After embarking troops at Marseilles 9 July, she departed the next day to redeploy them in the Pacific.

Debarking her passengers at Manila 20 August, *General S. D. Sturgis* sailed from that port 6 days later with officers and officials of the United States, Australia, Canada, Netherlands East Indies, China, and the Philippines, delivering them to Tokyo Bay 31 August to witness the historic Japanese surrender ceremonies there 2 September. The ship got underway 26 September for Seattle, arriving there 8 October. She then made three round-trip voyages from the West Coast to Japanese ports, supporting occupation troops before departing San Francisco on an around-the-world voyage calling at Manila, Singapore, Calcutta, and Port Said, and arriving New York 10 May 1946. She decommissioned 24 May 1946 and was delivered to WSA for peacetime operation as an Army transport.

Reacquired by the Navy 1 March 1950, she was assigned to MSTs and manned by civilians. As war broke out in Korea, *General S. D. Sturgis* took up the vital job of carrying U.N. troops to and from the Korean fighting. For the Korean War period, she sailed from New York to Bremerhaven and Mediterranean ports, embarking allied troops, and transported them to Pusan.

Following the Armistice, the transport rotated Greek, Turkish, Ethiopian, and Philippine troops in Korea, helping to maintain the high state of readiness among U.N. forces in that volatile land. During 1955, the ship made three voyages from New York to Bremerhaven, supporting American troops in Europe. She was placed in reduced operational status at New York 28 May 1955. *General S. D. Sturgis* was later returned to the Maritime Administration and was placed in the National Defense Reserve Fleet, Beaumont, Tex., 22 August 1958, where she remains.

General S. D. Sturgis received three battle stars for Korean War service.

General Schuyler

Philip John Schuyler, born 11 November 1733 in Albany, N.Y., served as a colonial officer in the British Army from 1755 to 1758. He represented Albany in the New York Assembly from 1768 to 1775 and served as a delegate to the Second Continental Congress in May 1775. Appointed Major General 19 June, he took command of the Northern Department of New York to plan for the invasion of Canada. Marching northward from Ticonderoga 28 August, his force began a successful 5-week siege against St. John's 6 September. A week later, ill health forced General Schuyler to give actual command to Brigadier General Richard Montgomery. The expedition occupied Montreal 13 November; but, after a combined assault with Arnold's troops against Quebec 31 December, during which Montgomery was killed, the American army retreated to Crown Point, N.Y., the following spring. General Horatio Gates, who took command from General John Sullivan, blamed General Schuyler for the disastrous Canadian expedition; and, engaging in military intrigue, he brought about Schuyler's dismissal in August 1777. After resigning from the Army in April 1779, Schuyler served during the next decade as a member of the Continental Congress and as a state senator from western New York. In 1788 he joined his son-in-law, Alexander Hamilton; John Jay; and other Federalists in leading the movement for ratification by New York of the Federal Constitution. He served in the United States Senate from 1789 to 1791 and from 1797 to 1798. General Schuyler died in Albany 18 November 1804.

General Schuyler, a small sloop, was purchased by the New York Committee of Safety early in 1776; fitted out by March; and commissioned in the State Navy, James Smith in command. After the British evacuated Boston 17 March, General Washington transferred his forces to New York which soon became the focal point of the war. After his arrival in April, he requested the use of the New York fleet, and *General Schuyler* was transferred to his control. Commissioned as a Continental privateer in April, she patrolled local waters to suppress illicit trading.

While cruising off New York in June, *General Schuyler* recaptured a transport that had been taken originally by Continental brig *Andrew Doria* and then recaptured by British frigate *Cerberus*. During the same month and under the command of Lt. Joseph Davidson she recaptured four prizes of British frigate *Greyhound*, while cruising with *Montgomery*. Later that year *General Schuyler* recaptured *Crawford*, another prize of *Cerberus*. She operated in Long Island Sound and the Hudson River until the British captured New York in August 1776, but her subsequent career and final disposition are unknown.

General Sherman

William Tecumseh Sherman, born in Lancaster, Ohio, 8 February 1820, graduated from the U.S. Military Academy in 1840. After serving at various posts and in California during the Mexican War, Sherman resigned from the Army in 1853 to become superintendent of a military school at Alexandria, La. When secession of southern States escalated into Civil War, Sherman was appointed Colonel, commanding the newly formed 13th U.S. Infantry. During the first Battle of Bull Run, he commanded a brigade under McDowell. Soon he commanded Union forces in Kentucky and later led a new division under Grant in the Battle of Shiloh which won him promotion to Major General of Volunteers. His service at Vicksburg helped reduce that Southern stronghold. Given command of the Army of the Tennessee in September 1863, Sherman replaced Grant in supreme command in the West in spring 1864 and began his advance on Atlanta. General Sherman took Atlanta 1 September and began his famous march through Georgia, occupying Savannah 21 December 1864. He was advanced to Lieutenant General in 1866, and became General upon succeeding Grant in 1869 in

command of the Army. He retired 1 November 1883, after over 40 years of brilliant service. General Sherman died in New York 14 February 1891.

(SwStr: t. 187; l. 168' b. 26'; dph. 4'6''; a. 2 20-pdr. P.r., 3 24-pdr. how.)

General Sherman was one of four light wooden gunboats built at Chattanooga, Tenn., for the War Department in 1864. She commissioned at Bridgeport, Ala., 27 July 1864, Acting Master Joseph W. Morehead in command.

General Sherman was assigned to the 11th District, Mississippi Squadron, and became part of Lt. Moreau Forrest's gunboat fleet on the upper Tennessee River. Leaving Bridgeport 22 August, she patrolled with other gunboats between Decatur, Ala., and Mussel Shoals, controlling guerrilla attacks and working to prevent major elements of Confederate General Hood's army from crossing the river into Tennessee. *General Sherman* continued to patrol until she returned to Bridgeport for repairs 17 December.

Returning to the upper Tennessee River, *General Sherman* lent vital artillery support to the forces of General Steedman at Decatur, 27 December, shelling Confederate emplacements as Union troops crossed the river. She again patrolled the river, attempting to cut off the withdrawal of Hood's army from Tennessee and conveying Union supply ships, until the war ended. She was returned to the Army Quartermaster Department at Chattanooga, Tenn., 3 June 1865.

General Simon B. Buckner

Former name retained.

Simon Bolivar Buckner, born 18 July 1886, in Munfordville, Ky., attended the U.S. Military Academy, West Point, and was commissioned Second Lieutenant of Infantry 14 February 1908. From 1908 to 1918 he served both in the United States and the Philippines, then assumed administrative demobilization duties following World War I. During the next two decades he served as instructor and administrator at various posts throughout the United States, including the U.S. Military Academy. In October 1939 he was assigned to the 6th Division as Chief of Staff, and appointed Brigadier General 1 September 1940. During World War II he commanded American troops in Alaska, with headquarters at Fort Richardson, Anchorage. He was promoted to Lieutenant General 4 May 1943 to assume command of the 10th Army August 1944. With overall command of the landing forces on the doorstep of Japan, General Simon B. Buckner was killed in action on Okinawa 18 June 1945.

Admiral E. W. Eberle (AP-123) (g.v.) was reacquired by the Navy from the Army Transport Service as *General Simon B. Buckner* 1 March 1950 and assigned to MSTs. With a civilian crew on board, the transport steamed across the Pacific throughout the Korean conflict, transporting troops and equipment to Japan and other staging areas. *General Simon B. Buckner* continued operations in the Pacific until February 1955, departing San Francisco on the 15th for New York.

Upon arrival 2 weeks later, she was assigned to the New York-Bremerhaven runs. During the next 10 years *General Simon B. Buckner* made over 130 Atlantic cruises from New York to Bremerhaven, Southampton, and the Mediterranean.

Departing New York 11 August 1965, she returned to the West Coast, arriving Long Beach on the 27th to assist in the movement of troops and equipment to Southeast Asia. After two cruises to Vietnam, the veteran transport resumed operation in the Atlantic, arriving New York 3 December.

During the next 8 months, she steamed across the Atlantic 10 times, making stops at Bremerhaven and Southampton. Returning to the West Coast in August

1966, *General Simon B. Buckner* was once again pressed into service to carry war material to Vietnam. She departed San Francisco 8 September and reached Da Nang, Vietnam, 20 days later. Following her return to San Francisco 16 October, she made another round-trip voyage to Vietnam before returning to the Atlantic and entering ready reserve status.

General Sterling Price

Sterling Price, born in Prince Edward County, Va., 20 September 1809, attended Hampton-Sydney College 1826-27, and studied law under Creed Taylor. He was Chairton County's representative in the state legislature 1836-38 and 1840-44, and was elected Speaker of the House in 1840. Price was elected to Congress in 1844 but resigned in 1846 to enter the Mexican War as a Colonel. He later became a Brigadier General and served as Military Governor of Chihuahua. General Price then moved to Missouri and was elected Governor in 1852. He was president of the State Convention of 1860 and was placed in command of the state militia. After collecting 5,000 troops, General Price united with the forces of Confederate General McCulloch and won the battle of Wilson's Creek 10 August 1861. After capturing 3,000 Federal troops at Lexington in September, Price retreated into Arkansas and officially joined the Confederate Army in April 1862. He met setbacks at Corinth, Miss., in 1862 and at Helena, Ark., in 1864 before defeating Union General Steele at Red River. He withdrew into Texas in 1864 and in 1865 after the defeat of the Confederacy, he escaped to Mexico. Following the collapse of Maximilian's empire, General Price returned to Missouri, where he died 29 September 1867.

(SwRam: t. 633; l. 182'; b. 30'; dph. 9'3"; a. 4 9" D.R.)

General Sterling Price (also called *Sterling Price* and *General Price*) was a wooden, river steamer built at Cincinnati, Ohio, in 1856 as *Laurent Millaudon*. She was taken into the Confederate service, renamed *General Sterling Price* (see "Confederate Appendix." DANFS II, 525), converted to a ram, and saw action in the defense of Fort Pillow and Memphis, Tenn. In the Battle of

Memphis, on 6 June 1862, *General Sterling Price* was sunk and captured by naval forces under Flag Officer C. H. Davis. Raised by the Army soon after the battle, she was moved into the Union service under Lt. LeRoy Fitch 16 June 1862 and was moved to Cairo, Ill., for repairs. The ram was formerly transferred to the Navy by Quartermaster H. A. Wise at Cairo 30 September 1862. Although at that time she was renamed *General Price*, she continued to be referred to as *General Sterling Price* in dispatches.

Completing repairs and conversion at Cairo 11 March 1863, *General Sterling Price* departed for duty with the Mississippi Squadron. Rear Admiral Porter was at that time attempting to transit shallow and overgrown Steele's Bayou in a move to cut off Vicksburg from the rear, and *General Sterling Price* joined the expedition. After several days of slow and difficult progress, harassed by Confederate troops, the gunboats were forced to withdraw 22 March 1863. *General Sterling Price* dashed past the formidable Confederate defenses at Vicksburg with Admiral Porter's flotilla 17 April 1863. Lashed to the starboard side of *Lafayette* during the daring run, she suffered little damage. Porter was then in a position to assault Grand Gulf, Miss., and, during the heavy engagement with the batteries there 29 April and 3 May 1863, *General Sterling Price* carried troops and conveyed transports under fire. The South was forced to evacuate this vital point to the river.

General Sterling Price departed Grand Gulf for the Red River 3 May and took part in the capture of Alexandria, La., and the partial destruction of Fort De Russy, La., 3 to 17 May. During this period, *General Sterling Price* acted briefly as Admiral Porter's flagship, and on 10 May she was sent on a reconnaissance up the Black River, where she engaged strong Confederate batteries at Harrisonburg, La.

As Union pressure against Vicksburg mounted, *General Sterling Price* played a major part in the continuing bombardment of the city and gunfire support of the Union troops until the Confederacy's river stronghold finally surrendered 4 July. She was at Memphis 16 July and left there for Cairo and much-needed repairs, which were not completed until about 19 November.

General Sterling Price rejoined the squadron at Memphis 2 December 1863 and soon became part of Rear Ad-

USS *General Sterling Price*

miral Porter's planned expedition up the Red River. Before joining Porter, she accidentally rammed *Conestoga* 8 March 1864 after a confusion in whistle signals, causing the latter ship to sink quickly, a total loss. Accompanying the Red River expedition as far as Alexandria, *General Sterling Price* returned to the mouth of the river 6 April conveying transports.

She then took up regular cruising station on the lower Mississippi River, protecting transports, landing reconnaissance parties, and keeping the river free from Confederate guerrillas. While on this duty, she engaged a Southern battery off Tunica Bend, La., 19 May, forced it to withdraw, and landed a shore party which burned the Confederate headquarters. *General Sterling Price* continued her patrol duties between New Orleans and Donaldsonville, La., until the end of the war. She decommissioned at Mound City, Ill., 24 July 1865 and was sold 3 October 1865 to W. H. Harrison.

General Stuart Heintzelman

Stuart Heintzelman, born in New York, N.Y., 19 November 1876, graduated from the U.S. Military Academy in 1899. He served with the 6th Cavalry in China during the Boxer Rebellion and in the Philippines during the insurrection. Subsequently stationed in South Dakota, the Philippines, and at Princeton University, during World War I he served with the A.E.F. in France and Italy. He participated in the French Chemin des Dames Offensive in French operations in Italy, and as Chief of Staff, 2d Army Zone. After the war, General Heintzelman was on duty at Washington, D.C., Illinois, Hawaii, New York, and Kansas until his death at Hot Springs, Ark., 6 July 1935. For his services during World War I, General Heintzelman was awarded the Distinguished Service Medal, the French Legion of Honor, and Croix de Guerre with Palm, and the Order of the Crown of Italy (Commendatore).

(AP-159; dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k.; cpl. 356; trp. 3,823; a. 4 5". 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General Stuart Heintzelman (AP-159) was launched under a Maritime Commission contract 21 April 1945 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. C. H. Wright; acquired by the Navy and simultaneously commissioned 12 September 1945, Comdr. M. S. Clark in command.

After shakedown out of San Diego, *General Stuart Heintzelman* departed San Pedro, Calif., 9 October 1945 and carried more than 3,000 occupation troops to Yokohama. Returning to Seattle 6 November with 3,100 veteran passengers, she made a similar voyage from Seattle to Japan and back again between 13 November and 9 December. On 28 December she sailed from Seattle on another "Magic-Carpet" run to Manila and Yokohama and returned to San Francisco 3 March 1946 with a full load of homeward-bound troops. Following a round-trip voyage from San Francisco to Manila and return, *General Stuart Heintzelman* steamed from the West Coast via Panama to New York, where she arrived 27 May. She decommissioned there 12 June and was returned to WSA for use as an Army transport by the Army Transport Service.

General Stuart Heintzelman was reacquired by the Navy 1 March 1950 and assigned to overseas transport duty under MSTs. Manned by a civilian crew, between July 1950 and December 1951 she operated out of San Francisco and steamed to the Far East carrying combat troops in support of the struggle to repel Communist aggression in Korea. In December 1951 she steamed from San Francisco to New York for transport duty in the Atlantic and the Caribbean. For more than 2 years she made passenger runs out of New York to Bremerhaven, Germany; La Pallice, France; Southampton, England; Argentina, Newfoundland; Reykjavik, Iceland; and San Juan, P.R.

On 24 June 1954 *General Stuart Heintzelman* was deactivated and assigned to the Atlantic Reserve Fleet, Orange, Tex. She was returned to the Maritime Adminis-

tration in June 1960. At present, she is berthed with the National Defense Fleet, Beaumont, Tex.

General T. H. Bliss

Tasker Howard Bliss, born in Lewisburg, Pa., 31 December 1853, graduated from the U.S. Military Academy in 1875. In Spain at the outbreak of the Spanish-American War, he was assigned to General Wilson as Chief of Staff. He fought in all major engagements in Puerto Rico and was breveted a Colonel for outstanding service. After the war, Bliss served as Collector of Customs for Cuba and negotiated the treaty of reciprocity with Cuba in 1902. After several important administrative appointments in the United States and the Philippines, he was named Assistant Chief of Staff of the Army in 1915 and Chief of Staff in 1917. A scholarly yet energetic officer, General Bliss helped greatly to work out plans for American mobilization for World War I. In 1917 he was appointed to the Supreme War Council in Paris and had much to do with the negotiations leading up to the Versailles Treaty. Subsequently, he was a commissioner and a signer of the treaty. During the last years of his life, General Bliss was devoted to historical study, and was awarded many honorary degrees and the Distinguished Service Medal. He died in Washington, D.C., 9 November 1930.

(AP-131; dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k.; cpl. 366; trp. 3,522, a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General T. H. Bliss (AP-131) was laid down under a Maritime Commission contract 22 May 1942 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; launched 19 December 1942; sponsored by Mrs. Eleanor Bliss Knopf; acquired by the Navy 3 November 1943; and commissioned 24 February 1944, Captain Burton Davis in command.

After shakedown, *General T. H. Bliss* embarked more than 3,600 sailors and marines, sailed from San Francisco 27 March 1944 for New Caledonia, and subsequently returned to San Francisco 1 May with veterans embarked at Efate and Espiritu Santo. Underway again 10 May, she carried 3,500 soldiers to Oro Bay, New Guinea, before sailing via the Panama Canal to New York, where she put in 4 July with over 2,000 men and patients embarked at Balboa.

From 28 July 1944 to 4 September 1945, *General T. H. Bliss* made 11, round-trip transatlantic, troop-carrying voyages (2 from Newport, 3 from Boston, and 6 from New York) to ports in the United Kingdom (Avonmouth, Plymouth, and Southampton); France (Marseilles and Le Havre); Italy (Naples); and North Africa (Oran). She sailed from Boston 11 September 1945 for Karachi, India, on her first "Magic-Carpet" voyage and returned to New York 23 October carrying veterans of the Pacific fighting. Following a similar voyage from New York to Calcutta and back during November and December, she made a round-the-world voyage from New York eastward to Calcutta and thence via Guam to San Francisco, where she arrived 15 March 1946. Departing San Francisco 5 April, she carried occupation troops to Yokohama, Japan; then steamed back to the United States, arriving Seattle 6 May. *General T. H. Bliss* decommissioned at Seattle 28 June, was returned to WSA 2 July, and was placed in the National Defense Reserve Fleet at Olympia, Wash. She was sold to Bethlehem Steel Corp., Wilmington, Del., in April 1964 and renamed *Seamar*.

General Taylor

Zachary Taylor, born at Montebello, in Orange County, Va., 24 November 1784, was educated by a tutor. He saw brief Army service as a volunteer in 1806, was appointed First Lieutenant in 1808, and defended Fort Knox against Indian attack in 1812. After serving as Commander of Fort Winnebago, Wis., he was appointed Colonel 4 April 1832 and commanded a detachment of regulars in the

Black Hawk War. In 1836, Taylor was placed in command of operations against the Seminoles. After a long and difficult campaign, he won a decisive victory over the Indians on Christmas Day in 1837, for which he was breveted Brigadier General. Following 4 more hard years in Florida, he was transferred to Louisiana.

Taylor was at New Orleans in the spring of 1845 when President Polk ordered him to move his troops to the mouth of the Sabine River or to some other position convenient for a speedy advance to the southwestern border of Texas as soon as that State accepted the terms of annexation proposed. That summer he marched his men to Corpus Christi and the following spring advanced to the Rio Grande, where hostilities soon precipitated the Mexican War. He defeated Mexican General Arista 8 May 1846 at Palo Alto and won another victory the next day at Resaca de la Palma. Thereafter, his victories in the Mexican War, especially at Monterrey and Buena Vista, won him nationwide acclaim. General Taylor was the Whig candidate for President in 1848 and was elected. On 9 July 1850, while still in office, he died of cholera morbus.

(SwStr: t. 152; l. 105'; b. 17'6"; dph. 8'6"; a. 1 gun)

General Taylor was purchased at New York by the War Department in 1840 and was used as a transport and supply ship during the Seminole War in Florida. She was transferred to the Navy in 1842, and used for a time in the Gulf of Mexico.

Converted to a tug in 1845, *General Taylor* operated out of the Pensacola Navy Yard, and in 1846 was accidentally burnt to the water's edge at the Yard. She was subsequently rebuilt at Pensacola with the same dimensions but new machinery.

General Taylor was employed as a dispatch vessel at the Navy Yard until April 1852, when, needing extensive repairs, she was sold at public auction at Pensacola.

General Thomas

George Henry Thomas, born in Southampton County, Va., 31 July 1816, graduated from the U.S. Military Academy in 1840 and was breveted a First Lieutenant for gallantry in the Seminole War. Later he taught at West Point, and served with distinction under Taylor in the Mexican War. At the outbreak of the Civil War, Thomas, then a Colonel, chose to stay with the Union and took command of a brigade in the Shenandoah Valley. He became Brigadier General of Volunteers 3 August 1861, and was given command of a division in the Army of the Ohio. When the army was reorganized as the Army of the Cumberland, Thomas was given command of the XIV Corps, and at the Battle of Chickamauga in September 1863 earned his famous nickname "The Rock of Chickamauga." Taking overall command of the Army of the Cumberland, he then fought successfully at Chattanooga, Lookout Mountain, and Missionary Ridge. Sent to oppose Hood's invasion of Tennessee in late 1864, he achieved perhaps his greatest success at the Battle of Nashville 15 to 16 December and was promoted to Major General 15 December 1864. General Thomas assumed command of the Military Division of the Pacific in June 1869, and died in San Francisco 28 March 1870.

(SwStr: t. 184; l. 165'; b. 26'; dph. 4'6"; a. 2 20-pdr. P.r., 4 24-pdr. how.)

General Thomas was one of four light wooden gunboats built at Chattanooga, Tenn., for the War Department in 1864. After cruising on the Ohio River without being formally commissioned in June and July 1864, she commissioned 8 August 1864 at Bridgeport, Ala., Acting Master Gilbert Morton in command.

Assigned to the 11th district of the Mississippi Squadron, commanded by Lt. Moreau Forrest, *General Thomas* served as a patrol vessel on the Tennessee River, above Muscle Shoals. During this period Confederate General Hood was mounting his campaign into Tennessee to divert

Sherman's march on Atlanta and *General Thomas* patrolled the river unceasingly to prevent the Southern troops from crossing. At Decatur, Ala., 28 October 1864, the gunboat engaged strong batteries from Hood's army. After passing the batteries downstream and sustaining several hits, *General Thomas* rounded to and, with Army gunboat *Stone River*, poured such a withering crossfire into the emplacements that the Confederates were forced to withdraw. After Hood's repulse at Nashville in December, *General Thomas* was used on the upper Tennessee River to block his escape route. She aided General Steedman in his successful attack on Decatur 27 December by giving his army concentrated gunfire support, and attempted to pass over Elk River Shoals to prevent a Southern crossing of the river. The Tennessee was too low, however, and Forrest and his gunboats could not cross.

General Thomas returned to Bridgeport 30 December 1864, but was soon active again. On 26 February 1865 she joined the other gunboats of the 11th district and, taking advantage of unusually high water, crossed Elk River Shoals. The ships destroyed the camp of Southern General Roddey, captured a quantity of supplies and destroyed communications at Lamb's Ferry before returning to Bridgeport 4 March. *General Thomas* continued to patrol between Bridgeport and Decatur, Ala., until she was turned over to the War Department at Bridgeport 3 June 1865.

General Vallejo, see *Megrez* (AK-126)

General W. A. Mann

Named in honor of Major General William Abram Mann, USA, who served in the Sioux Indian, Spanish-American, and First World Wars.

(AP-112: dp. 11,450 (lt.); l. 622'7"; b. 75'6"; dr. 25'6"; s. 20.6 k.; cpl. 465; trp. 5,142; a. 4 5", 16 1.1", 20 20-mm.; cl. *General John Pope*; T. P2-S2-R2)

General W. A. Mann, a P2-type troopship, was built by the Federal Shipbuilding & Dry Dock Co. of Kearny, N.J., in 1942-43 and commissioned on the date of acquisition, 13 October 1943, Comdr. Paul S. Maguire, USNR, in command.

Operating out of Norfolk, Va., *General W. A. Mann* delivered troops and supplies to the North African theater, making four successive round-trip voyages to Casablanca and one to Oran before mid-May 1944. She stood out 5 June 1944 for Oran again and after touching North Africa sailed thence to Rio de Janeiro, Brazil, to load troops bound for Naples, Italy. *General W. A. Mann* subsequently visited Oran and Liverpool before returning to New York 14 August. On 2 September the transport got underway for Rio de Janeiro and Naples, returning to Norfolk on 21 October. Eleven days later she sailed for Bombay, India, via Gibraltar, Algiers and the Suez Canal and returned to the west coast of the United States via Brisbane, Australia, and New Guinea, thence to San Pedro, Calif., arriving 13 January 1945. She made another passage to India and visited Melbourne and Noumea on the return voyage, arriving Los Angeles 15 April and thereafter steaming north to San Francisco. The ship journeyed from San Francisco to the Philippines, touching Manila and Leyte, and after reaching Pearl Harbor in early June sailed thence to Norfolk via the Panama Canal.

General W. A. Mann departed Norfolk 4 July 1945 for Marseilles, France, to redeploy troops to the Pacific. Re-entering the vast Pacific, she called at Okinawa via Eniwetok and Ulithi in September and returned to Seattle, Washington 28 October.

From 2 November 1945 to 5 January 1946 she made a round trip voyage from Seattle to Nagasaki and Wakayama, Japan, setting the pattern of a series of "Magic-Carpet" passages and "Diaper Runs" in which servicemen and their families were carried to and from the Far

East. She stood duty as a "Guam Ferry" and continued to transport men and material until transferred to MSTS in October, 1949.

During the Korean war, *General W. A. Mann* carried precious ROK government cargo, including gold and silver bullion valued at a million and a half dollars as well as the private papers of Korean President Rhee, from Pusan to San Francisco, 1 to 15 August 1950. On 16 June 1951, she sailed on a round-the-world voyage which took her from San Francisco via the Panama Canal to New Orleans and thence via Dover, England, to Bremerhaven, Germany. From this latter port, she returned to New York and thence steamed back to Bremerhaven via Dover as before, getting underway for Morocco, Suez, Colombo, Indochina, and finally to San Francisco 22 September 1951 via Guam and Hawaii.

From 1952 to 1962 *General W. A. Mann* made frequent trans-Pacific runs to Japan, Korea, Okinawa, Guam, the Philippines, and Formosa out of west coast ports, and occasional passages to Alaska.

In October 1962 during the Cuban crisis, *General W. A. Mann* sailed from San Diego for the Caribbean with 55,000 pounds of provisions in case these supplies should be needed. When relative calm came to the Caribbean, *General W. A. Mann* returned to the Pacific and continued her important transportation runs from the West Coast to the Far East.

General W. A. Mann was struck 1 December 1966; transferred to the Maritime Administration; and placed in the National Defense Reserve Fleet at Hudson River, N.Y., where she remains.

General W. C. Gorgas

William Crawford Gorgas, born in Mobile, Ala., 3 October 1854, was educated at the University of the South and graduated from Bellevue Hospital Medical College in 1879. He entered the Army Medical Corps in 1880. During the Spanish-American War, he was sent to Cuba and permanently rid Havana of yellow fever. In 1904 he was sent to the Isthmus of Panama, where his successful fight against yellow fever and malaria insured completion of the canal. He served (1914-18) as Surgeon General of the United States and in 1916 was promoted to Major General. After he retired from the Army in 1918, General Gorgas was active throughout the world fighting tropical disease until he died in London 3 July 1920.

(Str.: dp. 8,000; l. 386'; b. 45'3"; dr. 24'4"; s. 10 k.; cpl. 154; trp. 1,200; a. none)

General W. C. Gorgas, former Hamburg-America Lines *Prinz Sigismund*, was built in 1902 by Neptun Aktiengesellschaft, Schiffswerft & Maschinenfabrik, Rostock, Germany. Seized by USSB on entry of the United States in World War I, she carried troops and cargo to Europe under charter operations of the Panama Railroad & Steamship Co., New York. After conversion to a troop transport, she was turned over to the Navy and commissioned 8 March 1919, Lt. Comdr. James Edward Stone, USNRF, in command.

General W. C. Gorgas, assigned to the Crusier and Transport Force, departed New York 25 April 1919 to embark Army troops and load cargo at Bordeaux, France, and return to Philadelphia 2 June 1919. She again sailed for Bordeaux 5 June 1919, returning to Newport News, Va., 4 July 1919. She brought home 2,063 troops from France in these two transatlantic voyages.

General W. C. Gorgas decommissioned at New York 28 July 1919 and returned the same date to USSB. Prior to World War II, she was operated on commercial routes by Libby, McNeill & Libby. In November 1941 she was chartered by the War Department for troop transport service between Seattle and Alaskan ports. She continued her Army troopship duties to Alaska until returned to WSA at Seattle in January 1945. Transferred by that agency to Soviet Russia in 1945, she was renamed *Mikhail Lomonosov*.

General W. C. Langfitt

William Campbell Langfitt, born in Wellsburg, Va., 10 August 1860, graduated from the U.S. Military Academy in 1883 and until May 1898 served with the Corps of Engineers in New York, Texas, and Ohio. During the Spanish-American War he organized the 3d Battalion at San Francisco and served as Commanding Officer of American Forces in Hawaii. General Langfitt served in Oregon and Cuba before sailing for France in July 1917. During World War I he was Chief of Staff, Lines of Communications; Chief of Utilities; and Chief Engineer; and he participated in the Cambrai Operations, Somme Defensive, and St. Mihiel and Meuse-Argonne Offensives. Upon his return to the United States in July 1919, he served as Division Engineer at New York until retiring 31 May 1920. General Langfitt died in Washington, D.C., 20 April 1934.

(AP-151: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,343; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General W. C. Langfitt (AP-151) was launched under Maritime Commission contract 17 July 1944 by the Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. William E. Lynd; acquired by the Navy and simultaneously commissioned 30 September 1944, Captain Kenneth O. Ekelund in command.

After shakedown, *General W. C. Langfitt* embarked marines and departed San Diego 10 November 1944 for Eniwetok and Saipan via Pearl Harbor. Returning to San Francisco 5 January 1945, she embarked troops and sailed 19 January for the Western Pacific where she shuttled troops to Finschhafen and Hollandia, New Guinea; Leyte, Philippines; Ulithi, Carolines; and Kossol Roads, Palaus. Loaded with medical patients and returning veterans, she departed Hollandia for the United States 22 March and arrived San Francisco 10 April. On the 21st, the busy ship again sailed for the Western Pacific; and, after steaming via Pearl Harbor to the Admiralties, the Philippines, and the Marshalls, she returned 2,302 passengers to San Francisco, arriving 11 June. Having contributed so much to the rising tide of victory in the Pacific, she sailed 15 June for Norfolk, reaching there 30 June.

General W. C. Langfitt departed 16 July for France, where on the 26th she embarked troops at Marseilles for redeployment to the Pacific. She departed 28 July and sailed via the Panama Canal to Hollandia and points in the Philippines. As a unit of the "Magic-Carpet" fleet, she departed Leyte 18 September, arriving Seattle 3 October. The transport departed again for the Western Pacific 25 October; carried occupation troops to Nagoya, Japan; and steamed to the Philippines before returning to San Francisco 10 December. Between 22 December and 16 April 1946 *General W. C. Langfitt* made two more "Magic-Carpet" voyages to the Philippines and back bringing home thousands of veterans. After returning to San Francisco 16 April, she steamed to New York where she arrived 20 May. She decommissioned there 6 June 1946 and was returned to WSA for use by the Army Transport Service.

General W. C. Langfitt was reacquired by the Navy 1 March 1950 for assignment as an overseas transport under MSTS. She undertook the job of carrying troops, dependents, and even refugees to the far corners of the world, making round-the-world voyages in 1952 and 1953. Between 24 November 1954 and 30 April 1957 she made 32 voyages from New York to Bremerhaven, Germany, and back, carrying European refugees to the United States under the Refugee Relief Act. Following the valiant, but abortive, Hungarian Revolution, she operated with MSTS transport *General Harry Taylor* and brought over 45,000 Hungarian refugees to the United States.

After carrying additional refugees from Europe to Australia during May and June 1957, *General W. C. Langfitt* arrived New York 13 July and was inactivated there 30 September. Transferred to the Maritime Administration

13 May 1958, at present she is berthed with the National Defense Reserve Fleet, James River, Va.

General W. F. Hase

William Frederick Hase, born in Milwaukee, Wis., 31 August 1874, was commissioned Second Lieutenant 9 July 1898 and served with the Coast Artillery in Virginia, New York, Florida, Massachusetts, California, and Washington, D.C. During World War I he served with the A.E.F. in France as Commanding Officer, 45th Regiment; Acting Chief of Staff, Headquarters G-1 and G-3; and Assistant, G-4 Services of Supply, to July 1919. Following his return to the United States, General Hase was on duty in Kansas, Washington, D.C., Hawaii, California, and the Philippines, serving as Chief of Coast Artillery until his death in Washington, D.C., 20 January 1935. For his services in World War I, General Hase won the Distinguished Service Medal.

(AP-146: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 6,086; a. 4 5", 8 1.1", 16 20 mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General W. F. Hase (AP-146) was launched under a Maritime Commission contract 15 December 1943 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Mrs. John E. Wood, Jr.; acquired by the Navy and simultaneously placed in a ferry commission 22 April 1944 during transfer for conversion to a transport by Kaiser Co., Inc., Vancouver, Wash.; and placed in full commission at Portland, Oreg., 6 June 1944, Comdr. W. W. Keller in command.

After shakedown out of San Pedro, *General W. F. Hase* departed San Francisco 15 July 1944 with 3,000 troops and \$29 million in military currency. After touching at Pearl Harbor, she debarked the fighting men at Eniwetok, returning to San Francisco 26 August with 2,100 soldiers. Between 20 September and 1 November the transport steamed out of Seattle, carrying more than 2,000 troops to Pearl Harbor and 2,800 thence to Manus, Admiralties, before returning to San Francisco with 2,500 veterans of the New Guinea campaign on board. Continuing to support the westward drive of naval forces in the Western Pacific, between 23 November and 20 April 1945, she made two round trips out of San Francisco, shuttling troops to New Guinea and the Philippines and bringing home veterans from New Caledonia and Manus.

During the next 12 months *General W. F. Hase* made six round-trip voyages, including two circumnavigations of the earth, while deploying troops to and from the United States. Departing San Pedro 9 May, she carried 2,600 troops to Melbourne, Australia, where she arrived 27 May. After steaming to Freemantle, Australia, she reached Calcutta, India, 14 June and embarked 2,500 homebound soldiers. She then sailed for the United States via Ceylon and the Suez Canal and arrived Norfolk 20 July. She departed Norfolk 5 August for the Mediterranean; and as part of the "Magic-Carpet" Fleet, she embarked more than 3,000 troops at Marseilles, France, before returning to New York 27 August. Operating out of New York between 1 September and 27 December, she sailed twice to Calcutta and back with more than 6,000 troops. On 11 January 1946 she again departed New York for Calcutta; and, after embarking 2,900 troops 8 February, she steamed via Manila to the West Coast, arriving San Francisco 8 March. Between 1 and 15 April she carried 1,000 occupation troops to Yokohama, Japan; and on her final "Magic-Carpet" voyage she returned 2,800 veterans to Seattle 28 April.

General W. F. Hase steamed to San Francisco 3 to 4 May decommissioned there 6 June, and, simultaneously, was returned to WSA for use as a transport by the Army Transportation Service. She was reacquired by the Navy 1 March 1950 and assigned to duty with MSTs. Manned by a civilian crew, she operated out of San Francisco, carrying more than 75,000 troops and their combat cargo to the Far East in support of the struggle to repel Communist aggression in Korea. Between 1950 and 1953 she

made 19 round-trip voyages to Japan and Korea, and she returned to San Francisco from her final Far East deployment 29 August 1953. Towed to San Diego in June 1954, she was placed out of service in reserve in July and remained inactive until returned to the Maritime Administration 8 January 1960. At present she is berthed in the National Defense Reserve Fleet at Suisun Bay, Calif.

General W. F. Hase received eight battle stars for Korean war service.

General W. G. Haan

William George Haan, born at Crown Point, Ind., 4 October 1863, graduated from the U.S. Military Academy in 1889. Commissioned Second Lieutenant of Artillery, he served at various posts until 1898 when he fought in the Philippines against the insurrectionists. Returning to the United States in 1901, Haan commanded artillery units and performed staff work until the American entry into World War I. During the war he commanded the 32d Division in France; and, after the Armistice, he headed the VII Corps on occupation duty in Germany. General Haan received the Distinguished Service Medal for World War I service; and, upon his return to the United States, he served on the General Staff in Washington until his retirement in 1922. Major General Haan died in Washington, D.C., 26 October 1924.

(AP-158; dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 24'; s. 16 k.; cpl. 356; trp. 3,823; a. 4 5", 4 40mm., 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General W. G. Haan (AP-158) was launched 20 March 1945 under Maritime Commission contract by Kaiser Co., Inc., Yard 3, Richmond, Calif.; sponsored by Miss Helen Coxhead; acquired by the Navy and simultaneously commissioned 2 August 1945, Comdr. J. V. Rylander in command.

General W. G. Haan conducted shakedown training out of San Diego until after the surrender of Japan. Departing 4 September 1945 for the southwest Pacific, the transport touched at Eniwetok, Leyte, and Manila before returning to Seattle with homecoming veterans 22 October. Subsequently, the ship made two voyages to Japan and the Philippines, bringing occupation troops and embarking returning servicemen. She returned to San Francisco after her last passage, and departed 30 April 1946 for the East Coast via the Panama Canal. Arriving Baltimore 25 May, *General W. G. Haan* decommissioned there 7 June 1946 and was returned to WSA for further transfer to the Army Transport Service.

Reacquired by the Navy 1 March 1950, *General W. G. Haan* was assigned to MSTs under a civilian crew. Until 1953 she operated under the International Refugee Organization and carried displaced East Europeans from northern European ports to the United States. In 1952 *General W. G. Haan* also made two support voyages to the American bases at Thule, Greenland, and Goose Bay, Labrador. Following this demanding duty, the ship made several voyages to Europe in support of American units. She continued this steaming schedule until March 1955 when she was placed in Reduced Operational Status at New York.

In December 1956 *General W. G. Haan* resumed duty as a refugee transport. Steaming from New York to Bremerhaven, Germany, she embarked refugees from the gallant, but ill-fated Hungarian Revolution and brought them to New York. On 7 January 1957 she was again placed in Reduced Operational Status. *General W. G. Haan* was subsequently placed in the Atlantic Reserve Fleet, Orange, Tex., and was returned to the Maritime Administration 22 October 1958. She entered the National Defense Reserve Fleet at nearby Beaumont, where she remains.

General W. H. Gordon

Walter Henry Gordon, born at Artonish, Miss., 24 June 1863, graduated from the Military Academy and was

commissioned in the infantry in 1886. During the early part of this century, after fighting in the Spanish-American War and the Philippine Insurrection, Gordon served on the General Staff and in the Philippines. In 1917 he commanded the 15th Infantry in China, and, following America's entry into World War I, he commanded the 10th Brigade in France. General Gordon participated in the Meuse-Argonne offensive, and ended the war as commanding officer, 6th Division. Following the war, for which he received the Distinguished Service Medal, Gordon commanded Infantry units in the United States, and, prior to his retirement in 1924, served as Deputy Chief of Staff. Major General Gordon died in Washington, D.C., 26 April 1924.

(AP-117: dp. 11,450 (lt.); l. 622'7"; b. 75'6"; dr. 25'6"; s. 21 k.; cpl. 533; trp. 5,244; a. 4 5", 16 1.1", 20 20mm.; c. *General John Pope*; T. P2-S2-R2)

General W. H. Gordon (AP-117) was launched under Maritime Commission contract by Federal Shipbuilding & Dry Dock Co., Kearny, N.J., 7 May 1944; sponsored by Mrs. Leslie J. McNair; and commissioned, after being acquired by the Navy, 29 June 1944, Captain R. E. Wood, USCG, in command.

Following her shakedown cruise in Chesapeake Bay, *General W. H. Gordon* proceeded to Boston and sailed 5 September in convoy for France. She arrived Cherbourg with troop reinforcements 15 September and returned to New York via Plymouth 30 September 1944. Subsequently, the transport made 12 voyages to various European and African ports in support of the accelerating Allied effort against the Axis. She carried vital supplies, troops, and returned large numbers of German prisoners of war to the United States.

General W. H. Gordon sailed to Panama from France 5 August 1945, bringing replacement troops for the Pacific campaigns. She stopped at Ulithi and Manila to debark troops and steamed into San Francisco Bay 25 September 1945. The war over, the veteran transport sailed again 13 October with over 4,000 occupation troops for Japan and Korea. After one more voyage to Japan, the ship returned to San Francisco 29 January 1946 and decommissioned at Oakland 11 March. She was returned to the Maritime Commission for use by Army Transport Service.

General W. H. Gordon was required by the Navy 8 November 1951 for assignment to the Military Sea Transportation Service under a civil service crew. She began an arduous schedule of Pacific cruises in support of the struggle to repel Communist aggression in Korea, bringing troops and supplies to that embattled peninsula. From October 1954 to November 1956 she was in Reduced Operational Status in Seattle, and was subsequently placed in reserve in the Hudson River fleet, New York. Redelivered to the Maritime Administration 20 June 1958, she was stricken from the Navy List for a time, but reacquired in May 1961 and returned to MSTs. *General W. H. Gordon* then began a regular schedule of voyages from New York to Bremerhaven, transporting servicemen, dependents, and military passengers to Europe in support of America's vital defense units there.

After sailing in December 1966 for the Far East to bring home Korean veterans, *General W. H. Gordon* began transporting troops to Vietnam in January 1967.

General W. M. Black

William Murray Black, born in Lancaster County, Pa., 8 December 1855, graduated from the U.S. Military Academy in 1877 and entered the Corps of Engineers. He advanced steadily and was appointed Chief of Engineers for the District of Columbia in 1897. During and after the Spanish-American War, he served as Commander, Department of Engineers, in both Cuba and Puerto Rico. In 1906 he was appointed Senior Member of the board for raising the famous battleship *Maine*, and in 1909 he was promoted to Brigadier General to become Chief of Engineers, De-

partment of the East. In 1916 he was appointed Chief of Engineers, United States Army. His accomplishments were many, including river and harbor improvements in Florida ports and fortification and railroad construction in Cuba. General Black retired a Major General 31 October 1919 and died in Washington, D.C., 24 September 1933.

(AP-135: dp. 9,950 (lt.); l. 522'10"; b. 71'6"; dr. 26'6"; s. 16.5 k.; cpl. 512; trp. 3,823; a. 4 5", 8 1.1", 16 20mm.; cl. *General G. O. Squier*; T. C4-S-A1)

General W. M. Black (AP-135) was laid down under a Maritime Commission contract 26 November 1942 by Kaiser Co., Inc., Yard 3, Richmond, Calif.; launched 23 July 1943; sponsored by Mrs. Decatur S. Higgins; acquired by the Navy 26 January 1944; converted to a transport by Matson Navigation Co., San Francisco; and commissioned 24 February 1944, Captain J. P. Murray, USCG, in command.

One of the most active ships of her type, *General W. M. Black* plied the world's oceans and touched many distant ports in completing her varied missions as a troopship. On her first voyage she embarked 3,500 Army troops and sailed from San Francisco 26 March 1944, delivering them at Pearl Harbor before returning to San Francisco 9 April with nearly 500 veterans. Underway again 22 April, *General W. M. Black* carried 3,500 troops from San Francisco to New Caledonia and Guadalcanal. She departed Guadalcanal 14 May, embarked 2,700 at Balboa, Canal Zone, and reached New Orleans 8 June. The transport subsequently steamed to Kingston, Jamaica, where she embarked 2,400 passengers and sailed to Norfolk, arriving 26 June.

General W. M. Black began the first of 13 transatlantic, round-trip voyages when she departed Norfolk 28 July with 2,700 fighting men bound for Naples, and returned to New York 31 August with 3,000 homeward-bound troops and casualties. From 12 September to 19 August 1945 the busy transport made 10 similar round-trip troop-carrying voyages (5 from New York, 3 from Boston, and 2 from Norfolk) to the United Kingdom (Plymouth, Liverpool, Southampton); France (Cherbourg, Le Havre, Marseilles); North Africa (Oran); and Germany (Bremerhaven). In addition to carrying German prisoners of war to the United States, she rotated tens of thousands of troops and patients to and from the European theater in this period of nearly a year. Departing Boston 31 August 1945, *General W. M. Black* sailed for India via the Suez Canal. A unit of the "Magic-Carpet" fleet, she returned to Boston in October with 3,000 veterans of the South Pacific fighting. After making a similar voyage during November and December, she moored at New York 5 January 1946. She decommissioned there 28 February 1946 and was returned to service as an Army transport.

General W. M. Black was reacquired by the Navy 1 March 1950 and assigned to MSTs. Manned by a civilian crew, she operated out of New York in the Atlantic until 1 September when she shifted her homeport to San Francisco. Between 1950 and 1953 she steamed to the Far East and transported more than 65,000 troops and their combat equipment in support of the struggle to repel Communist aggression in Korea. After the Korean armistice, she continued transpacific voyages, deploying troops to Japan, Korea, and Alaska and returning veterans of the Korean fighting to the United States. In June 1955 she carried troops and cargo to the Bering Sea during Operation "Mona Lisa." Following her return to San Francisco, she was placed out of service 26 August and was transferred back to the Maritime Administration. At present, she is berthed in the National Defense Reserve Fleet at Suisun Bay, Calif.

General W. M. Black received six battle stars for Korean War service.

General W. P. Richardson

Wilds Preston Richardson, born in Texas 20 March 1861, graduated from the U.S. Military Academy in 1884 and

served on the American frontier and in Alaska. During World War I, he commanded the 155th Depot Brigade, Camp Lee, Va., and later the 78th Infantry Brigade, Camp Beauregard, La. He sailed in August 1918 for France where he led in turn the 78th Infantry Brigade, 39th Division and the 55th Brigade, 28th Division to March 1919. General Richardson participated in the Meuse-Argonne Sector and commanded the A.E.F. in northern Russia, receiving the Distinguished Service Medal for the latter duty. Following his return to the United States in 1919 he served in Georgia, Washington, D.C., and the state of Washington. He died in Washington, D.C., 20 May 1929.

(AP-118: dp. 11,450 (lt.); l. 622'7"; b. 75'6"; dr. 25'6"; s. 21 k.; cpl. 466; trp. 5,289; a. 4 5", 16 1.1", 20 20mm.; cl. *General John Pope*; T. P2-S2-R2)

AP-118 was laid down under Maritime Commission contract 2 February 1944 by Federal Shipbuilding & Dry Dock Co., Kearny, N.J.; named *General R. M. Blatchford* (AP-118) on 15 April 1944; renamed *General W. P. Richardson* (AP-118) on 1 July 1944; launched 6 August 1944; sponsored by Mrs. Brebon B. Somervell; acquired by the Navy 31 October 1944; and commissioned at Bayonne, N.J., 2 November 1944, Captain Joseph S. Rosenthal, USCG, in command.

General W. P. Richardson sailed from Boston 10 December 1944 with over 5,000 fighting men; and, after delivering them to Southampton, England, 21 December, returned to New York 4 January 1945 with troops and casualties. Ten days later the busy ship got underway from Newport News, Va., with 5,000 soldiers bound for Naples, Italy, debarking them 25 January and returning to Newport News 9 February with rotation troops and casualties. Underway again 18 February with 5,000 more soldiers, she debarked them at Naples 1 March and subsequently carried 5,500 British troops thence to Marseilles, returning to Naples 9 March to embark 4,600 homeward-bound American casualties and troops who were delivered safely at Boston 21 March. *General W. P. Richardson* returned to Le Havre in April with 2,500 men and carried over 1,000 liberated American prisoners of war from France, and 2,900 troops and casualties from Southampton, home to New York on 28 April 1945. Following a troop-carrying run from New York to Naples and Trinidad and back, she sailed from New York to Southampton, putting in at Boston 26 June with 4,300 wounded and other troops. Through the summer and fall of 1945 the transport made four round-trip voyages from Boston to France, two to Le Havre and two to Marseilles to help insure an even flow of men and supplies from the New World to the Old.

On 14 October 1945 she sailed from Boston to Karachi, India, via the Suez Canal and returned to New York 24 November with over 5,000 veterans. On 30 November she embarked 4,500 rotation troops at New York and delivered them to Naples 10 December 1945, steaming thence via Suez to Khorramshahr, Iran, to take on board 3,800 men of the Persian Gulf Command, returning via Naples and Casablanca to New York 23 January 1946.

General W. P. Richardson decommissioned at New York 14 February 1946 and returned to the Maritime Administration for peacetime operations as an Army transport until 10 March 1948. Returned to the Maritime Administration by the Army, she was subsequently chartered 6 May 1949 to operate as SS *La Guardia* for the American Export Lines until 4 January 1952. Following brief charter service under the American President Lines and the Havana Steamship Co., she was purchased 10 July 1956 by Textian, Inc., and renamed *Leilani*.

General Washington

George Washington was born 22 February 1732 in Westmoreland County, Va. He was commissioned in the Virginia Militia in 1753, rose to the rank of Lieutenant Colonel the next year, and fought brilliantly in the French and Indian War. Entering the Virginia House of Bur-

gesses in 1759, Washington was a strong champion of colonial rights. In 1775 he was appointed Commander in Chief of the Continental Army, and demonstrated a profound appreciation of sea power as well as great military genius. After years of hardship and arduous struggle, he finally gained the decisive victory of Yorktown. This was one of the great strategic operations of our history in which Washington brilliantly employed the French Navy to cut off Lord Cornwallis from help by sea.

The Treaty of Paris recognized American independence 20 January 1783. After attending the Annapolis Convention of 1786 and presiding over the Continental Convention of 1787, Washington was unanimously elected first president under the new Constitution, and was inaugurated 30 April 1789. His two terms in office laid the foundations for strong government under the Constitution. Returning to his home at Mount Vernon in 1797, Washington was recalled briefly to command the American army when war with France threatened in 1798. He died at Mount Vernon 14 December 1799.

(Ship: l. 130'9"; b. 32'8"; a. 24 9-pdrs.)

General Washington, a swift sailing ship, was commissioned as a privateer by the state of Rhode Island in 1780, Captain Silas Talbot in command. She was captured later in that year by a British squadron and taken into the Royal Navy as *General Monk*. While in British service, she assisted in the capture of over 60 American vessels. Because of her successes, the merchants of Philadelphia purchased *Hyder Ally*, in March 1782, armed her, and placed her under the command of Lt. Joshua Barney of the Continental Navy. Barney encountered *General Monk* 8 April 1782 at the entrance to Delaware Bay; and, after a furious engagement of nearly half an hour, captured her. Restored to her original name, *General Washington* was taken into the service of the state of Pennsylvania with Barney in command. She sailed 18 May 1782 for Havana and brought back \$600,000 in much-needed specie for the Continental Congress.

Robert Morris, then Agent of Marine, purchased *General Washington* for the Continental Navy in August 1782 for use as a packet between the United States and France. She made three voyages to France, under the command of Lt. Barney. Sailing in October 1782 with important dispatches for the peace negotiations, she returned to Philadelphia 12 March 1783 with a preliminary copy of the treaty. *General Washington* again sailed for France in June and returned to Philadelphia 20 September. On her third voyage, she carried John Paul Jones to Europe to seek payment for prizes he had captured in European waters, leaving 10 November 1783 and returning in March 1784.

General Washington was sold in the summer of 1784.

General William Mitchell

William Lendrum Mitchell, born in 1879 in Nice, France, enlisted in the Army as a private in 1898 and served in the Philippines during the Spanish-American War. After return to the United States, he led in the precarious construction of a telegraph network in Alaska, and then pioneered in U.S. Army aviation. He rapidly rose in rank, and, when he commanded the U.S. air forces in France in World War I, he was promoted Brigadier General. After the war, General "Billy" Mitchell was made Director of Military Aviation in the U.S. Army and argued violently for a large, independent air force. His caustic-public criticism of military and naval leaders led to his court-martial in 1926. After resignation, General Mitchell remained a bitter critic of Army and government policy. He died in 1936.

(AP-114; dp. 11,450 (lt.); 622'7"; b. 75'6"; dr. 25'6"; s. 20.6 k.; cpl. 452; trp. 5,289; a. 4 5", 16 1.1", 20 20mm.; cl. *General John Pope*; T. P2-S2-R2)

General William Mitchell (AP-114) was launched 31 October 1943 under a Maritime Commission contract by

the Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Mrs. William Mitchell, the namesake's widow; acquired 15 January 1944 and commissioned 4 days later, Captain Henry Coyle, USCG, in command.

From 3 March-20 August 1944 *General William Mitchell* made five round trip transport voyages out of Norfolk and New York to Casablanca and Liverpool, carrying fighting men to the North African theater and participating in the buildup prior to the Allied invasion of Northern France. On the return leg of these frequent voyages, she carried casualties and rotation troops home to the United States, insuring a steady flow of men and equipment between America and war-torn Europe.

During the autumn of 1944 and through the spring of 1945, *General William Mitchell* called twice at Bombay, India, as she redeployed and rotated troops in the China-Burma-India theater. On the first of these voyages she sailed from New York via Panama and Australia, putting in at Bombay 7 October and embarking veterans for passage to Australia and America, and finally mooring at San Diego 17 November 1944. Her second passage to India took her from San Pedro via Tasmania to embark Allied troops and Italian prisoners of war at Bombay; she subsequently off-loaded the POW's at Melbourne and returned to San Pedro 3 March 1945.

The ship then brought troops from San Francisco to Espiritu Santo, Guadalcanal, Manus, and Leyte as the European war neared conclusion and the Pacific theater gained priority. *General William Mitchell* sailed to Leghorn and Naples, Italy, to transport seasoned fighting men and redeploy them for the anticipated assault on Japan's homeland. These troops debarked at Ulithi and the Philippines in the summer of 1945, and the ship returned to San Francisco 6 December 1945 at war's end filled with homeward-bound warriors.

As part of the "Magic-Carpet" fleet, this busy transport carried bluejackets from San Francisco to the Philippines, returning servicemen from Hollandia to Seattle, and troops from the Philippines and Guam to San Francisco, through the spring of 1946. Subsequently, from April 1946 until 1949 *General Mitchell* sailed from West Coast ports and shuttled troops and supplies to and from Japan, China, Guam, and Hawaii. She underwent alterations for peacetime service at the Philadelphia Navy Yard in March 1947 and then returned to San Francisco and her transpacific schedule.

In October 1949 she was transferred to MSTs and in 1950 continued her West Coast-Orient travels. In that year, too, two round trip voyages from New Orleans and New York were made to Bremerhaven to rotate and supply troops in Europe. She made an around-the-world cruise out of New York in the summer of 1951, visiting Germany, North Africa, Ceylon, Indochina, Korea, and Japan before mooring at San Francisco 26 September 1951.

General William Mitchell continued to transport men and material from West Coast ports to Japan and Korea, supporting the United Nations forces in the latter country. Her frequent shuttle runs followed this pattern with the addition of numerous calls at Formosa and Pacific Islands until returned to the Maritime Administration 1 December 1966. *General William Mitchell* entered the National Defense Reserve Fleet and is berthed in Suisan Bay, Calif.

General William O. Darby

A former name retained. William Orlando Darby, born 8 February 1911 at Fort Smith, Ark., graduated from the U.S. Military Academy 13 June 1933 and was commissioned Second Lieutenant in the Field Artillery. Prior to the beginning of World War II, he served with the 82d, 3d, and 80th Field Artillery Divisions and with the 1st Cavalry. In 1942 he assumed command of the 1st Ranger Battalion and distinguished himself during operations in North Africa, Sicily, and Italy. Promoted

to Colonel 11 December 1943, he returned to the United States in April 1944 for duty with the Army Ground Forces and later with the Operations Division, War Department General Staff. He returned to Europe in March 1945, and became Assistant Commander of the 10th Mountain Division the following month. He was killed by an exploding shell 30 April 1945 and was posthumously promoted to Brigadier General.

Admiral W. S. Sims (AP-127) (q.v.) was reacquired by the Navy from the Army Transport Service as *General William O. Darby* 1 March 1950 and assigned to MSTs. Manned by a civilian crew, she operated out of New York and, between 1950 and 1953, completed more than 20 round-trip voyages to Bremerhaven and back to rotate troops and transport military dependents and civilian refugees. She departed New York 20 June 1953 and steamed via the Panama Canal to Yokosuka, Japan, where she arrived 17 July to embark homebound veterans of the Korean conflict. After returning to Seattle, Wash., 29 July, she made five more trooplift voyages to Japan and back during the next 5 months. Arriving San Francisco 23 January 1954, she sailed for the East Coast the 25th and reached New York 8 February.

General William O. Darby resumed transatlantic transport duty 18 February and during the next 2 years completed 32 voyages to Bremerhaven and back. Departing New York 5 July 1956, she deployed to the Mediterranean and steamed from North Africa to Turkey while supporting peace-keeping operations of the 6th Fleet. She returned to New York 6 August and during the next 10 years completed 135 transport voyages to Europe and back plus nine additional deployments to the Mediterranean.

In response to America's determination to defend the integrity and independence of South Vietnam from external Communist aggression, *General William O. Darby* departed New York 12 August 1965 for transport duty in the Western Pacific. After embarking troops at Charleston, S.C., she steamed via the Panama Canal and reached Qui Nhon, South Vietnam, 12 September. On the 15th she sailed for the United States; and, steaming via Subic Bay, the Suez Canal, and Bremerhaven, she arrived New York 22 October. Between 11 November and 8 July 1966 she made nine more runs to Europe before resuming trooplifts to Southeast Asia. After embarking almost 1,600 troops at Boston, she sailed 15 July; touched at Long Beach, and Okinawa; and arrived Vung Tau, South Vietnam, 14 August. Departing the next day, she steamed via Yokosuka, Japan, to Pusan, South Korea, where she arrived 28 August to embark 1,800 Vietnam-bound South Korean troops. She sailed the 31st arriving Nha Trang 6 September, then departed 9 September to embark more South Korean soldiers at Pusan. She continued operating in the Western Pacific, supporting the forces for freedom in Southeast Asia until steaming to New York in February 1967 for overhaul. On 1 July 1967 she was in ready reserve status.

General William Weigel

William Weigel born in New Brunswick, N.J., 25 August 1863, graduated from the U.S. Military Academy in 1887. After fighting in the Indian Wars as a junior officer, he took part in the Cuban campaign during the Spanish-American War and was active in the Philippine Insurrection. As a division commander during World War I, he commanded troops in the Aisne-Marne offensive and the Meuse-Argonne campaign. Following the war he was awarded the Distinguished Service Medal, and served as Chief of Staff, Department of the East. Weigel later was a divisional commander and in 1927 headed the Philippine Department. He retired as a Major General 25 August 1927 and filled various civic and patriotic posts until his death in New York 4 March 1936.

(AP-119; dp. 11,450 (lt.); l. 622'7"; b. 75'6"; dr. 25'6"; s. 21 k.; cpl. 466; trp. 4,896; a. 4 5", 8 40mm., 20 20mm.; cl. *General John Pope*; T. P2-S2-R2)

AP-119 was laid down under Maritime Commission contract 15 March 1944 by the Federal Shipbuilding & Dry Dock Co., Kearny, N.J.; named *General C. H. Barth* (AP-119) on 15 April 1944; renamed *General William Weigel* 24 August 1944; launched 3 September 1944; sponsored by Mrs. Earl L. Mann, a niece of Major General Weigel; acquired by the Navy 4 January 1945; and commissioned at Bayonne, N.J., 6 January 1945, Captain Thomas Y. Awalt, USCG, in command.

General William Weigel sailed from New York 11 February 1945 with 5,000 rotation troops; and, after delivering them safely to Le Havre, embarked American and French veterans at Southampton and returned to New York 19 April. Underway again 1 May with Navy men bound for Puerto Rico, the troopship touched at San Juan to debark them and to take on 5,000 Army fighting men for passage to Hawaii.

As *General William Weigel* was steaming toward Pearl Harbor, one of her passengers became critically ill. To save his life, strict radio silence was broken to arrange a mid-ocean rendezvous with a seaplane out of Balboa. He was transferred to the seaplane 19 May and flown to a hospital; *General William Weigel* reached Honolulu 6 days later.

This far ranging ship sailed 28 May for Marseille to embark 5,000 soldiers and transferred them to Eniwetok and Manila to take part in the climactic Pacific battles. Subsequently she loaded passengers at Leyte and returned via Ulithi to moor at San Pedro, Calif., 25 August 1945. As part of the "Magic-Carpet" fleet, she stood out from San Diego 11 September with rotation troops for Pearl Harbor and returned to San Francisco 24 September with 5,000 veterans. From 6 October 1945 to 8 February 1946, she made three round-trip transpacific voyages (two out of San Francisco and the third from Seattle) to bring occupation troops to Yokohama. Following a "Magic-Carpet" voyage to Manila and back to San Francisco 11 April 1946, the transport departed San Francisco 16 April for New York, arriving 1 May. Decommissioned there 10 May 1946, she was transferred to the War Department for peacetime operations as an Army transport and made shuttle runs with troops and supplies from San Francisco to garrisons in the Pacific until reacquired by the Navy 20 July 1950. *General William Weigel* was assigned to MSTs 1 August 1950.

During this phase of her career, the ship sailed from the Pacific coast to Japan and Korea carrying troops for duty in Korean fighting. She continued to rotate American troops to strengthen the United Nations position in Korea until she was placed in Reduced Operational Status in 1955. *General William Weigel* was returned to the Maritime Commission 12 June 1958 and entered the National Defense Reserve Fleet at Olympia, Wash. She was reacquired by the Navy 18 August 1965 and assigned to MSTs as the Navy bolstered its support forces for the struggle against Communist aggression in Southeast Asia. She carried troops to Vietnam through 1967.

General William Weigel received seven battle stars for Korean conflict service.

Genesee

Towns in Idaho, Michigan, New York, and Pennsylvania; and a river in Pennsylvania and New York. *Genesee* is an Indian word meaning a beautiful valley.

I

(SwStr: dp. 803; l. 1,209'; b. 34'11"; dr. 10'6"; s. 8.5k.; a. 1X'D., 1 100 pdr. P.r., 6 24-pdr. how.)

The first *Genesee* was launched 2 April 1862 by the Boston Navy Yard; sponsored by Miss Emily Dorr; and commissioned 3 July 1862, Comdr. William M. Macomb in command.

Assigned to the North Atlantic Blockading Squadron, *Genesee* sailed from Boston 6 July 1862 for Hampton Roads, where she convoyed U.S. mail steamers in the

James River until departing 19 October for blockade duty off North Carolina. For over 3 months she helped seal Wilmington and Beaufort from Confederate blockade runners. She got underway 19 February 1863 to join the West Gulf Blockading Squadron, arriving New Orleans 7 March in time to join Rear Admiral Farragut's expedition up the Mississippi past Port Hudson to cut off Confederate supplies from the Red River and to join Porter and Grant in operations against Vicksburg. For the dangerous passage, Farragut lashed gunboats to the sides of his large steamers to protect the heavy ships from enemy fire and to improve their maneuverability. *Genesee* was paired off with *Richmond* when the Union Fleet moved upstream on the night of 14 March and came within range of the Confederate guns. In the ensuing fight Farragut's losses were greater than those he had suffered in taking New Orleans. *Richmond's* steam line was severed, forcing her to drop down out of range. *Genesee* fought on; but a 6-inch shot pierced her hull and detonated a 10-inch shell which, in turn, wrecked havoc below; and the murderous fire shredded her rigging. Only *Hartford* and her consort *Albatross* made it past the Southern batteries.

Following needed repairs, *Genesee* continued to patrol the Mississippi until after the fall of Vicksburg 4 July 1863. Then, she was ordered to the Gulf for blockade duty on 11 September. She discovered blockade-running steamer *Fanny* bound for Mobile 11 September, and with *Jackson* and *Calhoun* gave chase. As they closed, the blockade runner's captain burned his ship to the waterline rather than allow her capture.

Genesee continued to operate off Mobile with Admiral Farragut and assisted in several captures as the Navy prepared for the assault on Mobile Bay. When the fleet steamed boldly into the bay on 5 August to engage the forts and Confederate squadron, *Genesee* remained outside until the passage was effected, then steamed up to open fire on Fort Morgan.

Genesee was used subsequently as a store ship, and for the next several months was occupied supplying ships of the fleet and helping to drag Mobile Bay for dangerous torpedoes, a duty in which several ships were lost. She sailed 11 July 1865 for Philadelphia, arrived at the Navy Yard 20 July, and decommissioned there 31 July. *Genesee* was sold 3 October 1867 to Purvis and Son.

II

(AT-55: dp. 688; l. 170'; b. 29'; dr. 16'; s. 15 k.; a. 1 3")

The second *Genesee* (AT-55), formerly *Monocacy*, was built in 1905 by the Maryland Steel Co., Sparrow's Point, Md.; acquired 27 July 1917; and commissioned 10 November 1917, Lt. C. H. T. B. Tissell, USNR, in command.

Genesee sailed from Philadelphia 20 November 1917 and, after joining a convoy at New London, reached Queens-town, Ireland, 27 January 1918. Until the end of World War I she operated in the Bremerhaven-Queenstown areas patrolling, towing, and serving as standby for deep sea rescue work. After towing *Luella* from Queenstown to Brest, *Genesee* arrived Ponta Delgada, Portugal, 31 December 1918 and served as a tug at that port until 1 April 1919 when she sailed for Brest. She provided tug services and aid to stricken ships and finally got underway 30 September for a 7-month tour of duty off Spalato, Dalmatia, and in Castella Bay.

Next assigned to the Far East, *Genesee* arrived Cavite, Luzon, 7 September 1920 for permanent duty on the Asiatic Station. She spent the summer of 1921 with the fleet at Chefoo, China, and returned to Cavite 19 September. Subsequently she operated as a tug, a ferry, and a target tow in the Philippines until she was scuttled at Corregidor 5 May 1942 to avoid capture.

Genesee was awarded one battle star for World War II service.

III

(AOG-8: dp. 4,335; l. 310'9"; b. 48'6"; dr. 15'8"; s. 14 k.; cpl. 127; a. 4 3")

The third *Genessee* (AOG-8) was launched 23 September 1943 by Cargill, Inc., Savage, Minn., sponsored by Mrs. Helen Rae Clark; and commissioned 27 May 1944, Lt. C. R. Heath in command.

After shakedown, *Genessee* loaded her first cargo of high octane aviation gasoline at Aruba, Netherlands West Indies, 14 July 1944 and entered Pearl Harbor 11 August. Until the spring of 1945, she made five voyages from Pearl Harbor to Canton, Phoenix Islands, a vital refueling base for planes flying to the South Pacific, and numerous inter-island runs. She reached Eniwetok 5 March 1945 and, after loading a maximum cargo of diesel oil and freight, sailed for Ulithi and Leyte to discharge her oil. Following her return to Ulithi and a round-trip voyage thence to Hollandia, *Genessee* loaded motor gasoline at Ulithi and steamed to Okinawa, arriving 20 May 1945. She served the fleet through the summer, getting underway 26 August with motor and aviation gasoline for Tokyo Bay. She moored to the Yokohama Oil Docks 2 September 1945, the day of Japan's formal surrender ceremony on board battleship *Missouri*. One of the first Allied tankers to anchor in Japanese homeland waters since 1941, *Genessee* delivered oil and gasoline to different Japanese ports until departing 14 December 1945 for Long Beach, Calif., arriving 19 January 1946.

Until the winter of 1949 *Genessee* operated in the Pacific, visiting such distant ports as Samoa; Guam; Jinsen, Korea; Yokosuka; Tsingtao, China; Seattle, Kwajalein; and Kodiak, Alaska, while operating out of San Francisco, Pearl Harbor, and San Diego. She decommissioned at San Francisco 14 December, but the Korean conflict soon restored her to active duty.

Recommissioned 28 July 1950, *Genessee* put in at San Diego 25 August and subsequently reached Pearl Harbor 5 October. Following voyages thence to Midway, Eniwetok, and Samoa, she sailed for Japan 8 January 1952, arriving Sasebo 23 January, and made frequent fuel-carrying voyages to Korea supporting U.N. forces.

Genessee reached Guam 2 May and operated there until returning to Pearl Harbor 3 August 1952. Based at Pearl Harbor until the spring of 1960, *Genessee* cruised thence to Eniwetok, Guam, Subic Bay, Melbourne, Long Beach, and Yokosuka. She sailed 31 May 1960 for her new home port of Sasebo, Japan, arriving 17 June, and continued operations in Far Eastern waters. On 3 January 1961 she got underway for Subic Bay, where she stood by during the Laotian crisis until 25 January, and returned to Sasebo when the danger of combat passed. Her home port was changed to Subic Bay early in 1962 and, through June

1964, *Genessee* was occupied with demanding training exercises and cruises in the Philippine, Korean, Japanese, and Okinawan waters. She arrived Pearl Harbor, her new home port, 26 July 1964 and made a run to Midway in August to deliver jet fuel. She then headed for the West Coast in the fall for Operation "Hardnose" off the Camp Pendleton area. The gasoline tanker next made a run to Pearl Harbor with gasoline and diesel fuel, arriving 31 October. She began a much needed yard overhaul at Pearl Harbor 15 December which was completed in March 1965.

While *Genessee* was being overhauled, Communist aggression in Vietnam was intensified. Repairs completed, the tanker headed for the fighting zone where her outstanding service won her the Navy Unit Citation. She "contributed materially to the success of military operations by delivering over 9.8 million gallons of petroleum fuel, pumping over 2 million gallons of salt water to aid in air strip construction, delivering diesel fuel from her bunkers and maintaining bottom lay fuel lines on a most demanding schedule and frequently under most adverse weather conditions in an open sea anchorage."

Genessee returned to Pearl Harbor 16 November for upkeep and operations in Hawaiian waters. She sailed for the Far East once more 2 May 1966 and 3 June was again off Da Nang, South Vietnam, supporting the 3d Marine Amphibious Force. Late in October she left the war zone and steamed, via the Philippines and Japan to Pearl Harbor, where early in 1967 she prepared for future action.

Genessee was awarded one battle star for World War II service.

Geneva

A county in Alabama.

(APA-86: dp. 4,270 (lt.); l. 426'; b. 58'; dr. 16'; s. 17 k.; cpl. 230; trp. 849; a. 1 5", 8 40mm., 10 20mm.; cl. *Gilliam*; T. S4-SE2-BD1)

Geneva (APA-86) was launched under Maritime Commission contract 31 January 1945 by the Consolidated Steel Corp., Ltd., Wilmington, Calif.; sponsored by Mrs. Leonard Firestone; acquired by the Navy 21 March 1945; and commissioned the following day, Comdr. Peter J. Neimo in command.

Following shakedown out of San Diego, *Geneva* departed that port 19 May 1945 with over 500 marines and sailors for Pearl Harbor and Majuro atoll, Marshall

USS *Genessee* (AOG-8)

Islands, where she arrived 7 June. After embarking marines and Japanese prisoners of war, there she picked up additional passengers at Kwajalein for passage to Pearl Harbor. There she picked up veterans whom she landed at San Francisco 27 June. Proceeding to Seattle, she embarked nearly a thousand soldiers for the garrison forces on Okinawa, debarking them at Buckner Bay 12 August. She sailed from Okinawa 5 September for Korea and landed Army units at Inchon 8 September.

Geneva returned to Okinawa 15 September, weathered a typhoon, and embarked the 11th Artillery Regiment of the 4th Marine Battalion and their cargo for passage to Taku, China, where she arrived 5 October. There she received 21 European repatriates on board, embarked 302 others at Tsingtao 7 October, and carried her passengers to Hong Kong on the 13th. Here she received Chinese troops and equipment, transported them to Chiuwangtao 30 October, and returned to Hong Kong to embark more Chinese troops for passage to Tsingtao, arriving 14 November.

Geneva departed Tsingtao on 23 November, embarked over a thousand homeward-bound veterans at Luzon, Philippines, and reached San Francisco 19 December. On 11 January 1946, she began a troop-transport voyage from San Francisco to Pearl Harbor and returned to San Diego 7 February. The attack transport returned to Pearl Harbor 2 March for training in the Hawaiian area until she departed 17 May to serve in Operation "Crossroads," a joint atomic bomb experiment of the Army and Navy in the Marshall Islands at Bikini. More than 200 ships, 150 aircraft, and some 42,000 men were involved in this vast experiment directed by Vice Admiral William H. P. Blandy. Seventy-five target ships—American, German, and Japanese—were moored in the target area.

Geneva arrived off Bikini on 30 May 1945 and rode at anchor for a month. Her crew then transferred to *Appling* (APA-58) since *Geneva* was to be one of the target ships in "Test Able" on the morning of 1 July 1946 when the fourth atomic bomb was to be exploded and the first ever detonated over water was to be dropped from a B-29. The attack transport survived the explosion and the huge column of water and steam that rose to 35,000 feet and formed a mushroom-shaped cloud.

Geneva was declared free of radioactivity the following day. She also survived "Test Baker" 25 July. That morning at 0835 atomic bomb suspended below LSM-60 was exploded—the first to be detonated under water. *Geneva* was in normal operation 4 days after that explosion, steaming to Kwajalein 25 August, then proceeding via Hawaii to San Francisco, where she arrived 5 November.

Geneva departed San Francisco on 4 December, touched San Diego and transited the Panama Canal for Norfolk, Va., where she arrived on the 27th. She was decommissioned at Norfolk 23 January 1947; and her name was struck from the Navy List on 25 February. She was returned to the Maritime Commission on 2 April and entered in the National Defense Reserve Fleet at James River, Va. She was transferred to Wilmington, N.C., in July 1955 and sold for scrap by the Maritime Administration 2 November 1966.

Geneva, Lake, see Lake Geneva

Genevieve

A former name retained.

(SP-459: dp. 95; l. 82'; b. 16'; dr. 5'; s. 12 k.; a. none)

Genevieve was a wooden steam yacht build in 1895 at New Bedford Mass.; later converted to use for charter fishing parties; purchased by the Navy 19 September 1918 from F. H. Myer & A. S. Smith of New York; placed in service 19 September and commissioned 9 December 1918, Ens. C. J. Johnson, USNRF, in command.

Genevieve spent her entire career as a water taxi in New York harbor. Assigned to NOTS of the 3d Naval District, she often carried civilian working parties and their gear from dock to dock and ship to shore accommodating up to 73 passengers at a time. She decommissioned 9 August 1919 and was sold 20 November 1919 to Marvin Briggs, Inc., New York.

Gentry

Wayne Roy Gentry, born in Twin Falls, Idaho, 25 August 1920, enlisted in the Naval Reserve 18 June 1941 and was appointed an Aviation Cadet 18 September 1941. Commissioned a Second Lieutenant in the Marine Corps Reserve 27 May 1942, he served at Corpus Christi, Tex., and San Diego, Calif., before being ordered to duty in the Pacific. Lieutenant Gentry was killed in action 2 November 1942 in the Solomon Islands area while serving as a pilot in a Marine Scout-Bombing Squadron and was posthumously awarded the Air Medal.

(DE-349: dp. 1,350; l. 306'; b. 36'8"; dr. 13'4"; s. 24 k.; cpl. 222; a. 2 5", 4 40mm., 10 20mm., 3 21", 8 dcp., 1 dcp. (h.h.), 2 dct; cl. *John C. Butler*)

Gentry (DE-349) was laid down 13 December 1943 by the Consolidated Steel Corp., Orange, Tex., launched 15 February 1944; sponsored by Miss Jean Maxine Gentry, Lt. Gentry's sister; and commissioned 14 June 1944, Lt. Comdr. D. A. Smith in command.

Following shakedown off Bermuda and duty as a school ship at Norfolk, *Gentry* arrived New York 25 September 1944. Between 6 October and 23 December, she made two round-trip, convoy-escort voyages out of New York to Marseilles, France, and Oran, Algeria. *Gentry* then sailed from New London, Conn., 9 January 1945; escorted submarines *Bullhead* (SS-332) and *Lionfish* (SS-298) to Key West, Fla.; and continued via the Panama Canal to the Western Pacific, arriving Manus, Admiralties 20 February. During the next 4 months *Gentry* escorted convoys between New Guinea and the Philippines, throughout the Philippine Archipelago, and from Manila Bay and Leyte Gulf to the Palaus and Western Carolines. In July she escorted a convoy to Okinawa and served on picket duty before returning Leyte late in the month.

After the Japanese capitulation 15 August, *Gentry* continued escorting convoys out of Leyte Gulf to New Guinea, Manila Bay, and Okinawa. In addition, she served on air-sea rescue patrol in Leyte Gulf until 27 November when she departed Leyte for the United States. Arriving Los Angeles 18 December, she was towed to San Diego 6 April 1946. *Gentry* decommissioned there 2 July 1946 and entered the Pacific Reserve Fleet at Stockton, Calif. She was later transferred to Mare Island, Calif., where she remains.

Geoanna

A former name retained.

(IX-61: l. 111'6"; b. 22'6"; dr. 14'9"; s. 8 k.)

Geoanna (IX-61), a steel auxiliary schooner, was built in 1934 by Craig Shipbuilding Co., Long Beach, Calif., and acquired by the Navy from the Maritime Commission 1 February 1942. She was placed in service 19 February 1942.

Assigned to the 11th Naval District, *Geoanna* performed miscellaneous duties for Port Director, San Pedro, until turned over to the Coast Guard on a temporary basis 2 July 1943. She served as a Coast Guard operational training ship until being redelivered to the Maritime Commission by the Navy 28 August 1943. She was subsequently turned over to the Army 3 September 1943.

George

Eugene Frank George, born in Grand Rapids, Mich., 23 April 1925, enlisted in the Navy 18 May 1942 and re-

ported for duty in *San Francisco* (CA-38) at Pearl Harbor 17 July. As an anti-aircraft gunner, he participated in the bitterly-fought naval engagements against the Japanese off the Solomon Islands following the American invasion of Guadalcanal 7 August. On 12 November *San Francisco* and other ships of Rear Admiral Richard K. Turner's Task Force 67 formed a protective screen off Lunga Point while troop reinforcements debarked from the transports and landed on Guadalcanal. During early afternoon a force of enemy fighters and bombers attacked the ships, but effective anti-aircraft fire and air cover repelled the attack and inflicted heavy losses on the enemy planes. One torpedo-bomber, damaged by anti-aircraft fire from the screening ships, crashed *San Francisco*, destroying the after control station and demolishing three 20mm. gunmounts. Seaman George, who courageously refused to abandon his gun in spite of the onrushing plane, blazed away at the attacker until killed by the doomed aircraft. For his grim perseverance and relentless devotion to duty in the face of certain death, he was posthumously awarded the Navy Cross.

(DE-276; dp. 1,150; l. 289'5"; b. 35'; dr. 10'5"; s. 19.5 k.; cpl. 198; a. 3 3", 4 1.1"; 9 20mm., 8 dep., 1 dep. (h.h.), 2 dct.; cl. *Everts*)

DE-276 was laid down as *George* 20 May 1943 by Boston Navy Yard; assigned to the United Kingdom under the lend-lease 22 June 1943; launched 8 July 1943; transferred to the United Kingdom 9 October 1943; and commissioned in the British Royal Navy as HMS *Goodson*. During the remainder of World War II, she served on escort and patrol duty in the Atlantic and along the English coast. She supported the Allied Invasion of Europe at Normandy 6 June 1944. Damaged late in August, she was returned to the United States 21 October. On 9 January 1947 she was sold to John Lee of Belfast, N.I.

(DE-697; dp. 1,400; l. 306'; b. 37'; dr. 13'6"; s. 23.6 k.; cpl. 213; a. 3 5", 4 1.1", 8 20mm., 3 21" tt., 8 dep., 1 dep. (h.h.), 2 dct.; cl. *Buckley*)

George (DE-697) was laid down 22 May 1943 by the Defoe Shipbuilding Co., Bay City, Mich.; launched 14 August 1943; sponsored by Mrs. Harlow F. George, the mother of Seaman Second Class George; and commissioned at New Orleans, La., 20 November 1943, Lt. Comdr. J. E. Page in command.

After shakedown off Bermuda, *George* sailed from Boston 11 January 1944 to escort a merchantman from Norfolk to Noumea, New Caledonia, where she arrived 19 February. Until the spring of 1944 *George* escorted transports to the Admiralties, the New Hebrides, and the Solomons during consolidation operations in the Solomons. On 16 May she sailed from Florida Island, Solomons, in a hunter-killer group with *England* (DE-635) and *Raby* (DE-698) on what was to become one of the most successful antisubmarine actions in the Pacific war.

During this patrol from 19 to 31 May the three-ship team sank six Japanese submarines (*I-16*, *RO-106*, *RO-104*, *RO-116*, *RO-108*, and *RO-105*) in waters north of the Bismark Archipelago—a truly remarkable achievement. *George* arrived Manus 4 June after this feat, and during the next 3 months she conducted antisubmarine patrols and escorted merchantmen to the New Hebrides, the Solomons, and the Marshalls. After serving briefly as station-ship at Funafuti, Ellice Islands, she steamed to Australia, arriving Sydney 12 October.

After returning to Purvis Bay, Florida Island, 28 October, *George* resumed antisubmarine patrols and escorted convoys to New Guinea, Manus, Guam, and Saipan. During the liberation of the Philippines she escorted convoys out of Ulithi and in February 1945 she escorted ships from Guam to Iwo Jima during the invasion and occupation of that embattled island. In addition she served as air-sea rescue station, and on 18 April 1945 she rescued three survivors from a B-29 forced to ditch off Iwo Jima.

During the summer of 1945, she made two escort voyages to Okinawa, one each from Ulithi and Guam; and, after the Japanese surrender, she delivered surrender terms 12 September to the Japanese garrison stationed on Truk, Carolines. She departed Guam 18 September and sailed for the United States, where she arrived San Pedro, Calif., 5 October.

Between 10 March 1946 and 9 April 1947 *George* deployed with the 7th Fleet in the Western Pacific. She operated along the Japanese coast and steamed to Tsingtao and Shanghai, China, where she supported American and Chinese Nationalist troops during occupation operations against the Communists in North China. From 1947 to 1951 she served with Escort Division 31, attached to the Fleet Sonar School at Pearl Harbor. *George* moved to San Diego with the Fleet Sonar School in 1951 and served there until undergoing overhaul at Peal Harbor in the spring of 1953. Following return to San Diego in September 1953, she sailed for Sasebo, Japan, 10 November and conducted hunter-killer and screening operations in Japanese, Korean, and Okinawan waters. She returned to San Diego 25 June 1954, and for more than a year she operated out of San Diego along the coast of southern California.

George sailed on her next WestPac cruise 4 October 1955. She operated out of Guam for more than 2 months and conducted surveillances of the Carolines, Marianas, Bonin, and Volcano Islands before reaching Yokosuka, Japan, 17 January 1956. She participated in convoy, antisubmarine warfare, and gunnery exercises until 10 March when she sailed for the West Coast, arriving San Diego 31 March. Subsequently, she resumed operations out of San Diego, highlighted by an October 1956 cruise to British Columbia. On 3 January 1957 she again sailed to join the 7th Fleet, the force for peace in the Far East. After steaming to New Zealand and Japan, she served as station ship at Hong Kong; participated in SEATO maneuvers off the Philippines; and operated out of Guam on island surveillance patrols in the Marianas. Departing Guam 10 June she returned to San Diego 7 July. On 18 September 1957 *George* was assigned to duty as a reserve training ship out of San Francisco. She decommissioned at San Francisco 8 October 1958 and entered the Pacific Reserve Fleet at Stockton, Calif., where she remains.

George received two battle stars for World War II service.

George A. Johnson

George Alfred Johnson, born in Fleetwood, Pa., 26 September 1922, enlisted in the Marine Corps 23 January 1942. He served at Parris Island, S.C., and Quantico, Va., before sailing for the Pacific in April 1942. Attached to the 1st Marine Raider Battalion, Private Johnson participated in the invasion of Tulagi, Solomon Islands, 7 August 1942. During mop-up operations 2 days later, his squad came under rifle fire from a sniper's nest in a nearby cave. Private Johnson rushed to the mouth of the cave and continued to throw in grenades until he was killed, allowing his squad to advance. For his indomitable fighting spirit and outstanding bravery, Private Johnson was posthumously awarded the Silver Star.

(DE-583; dp. 1,450; l. 306'; b. 37'; dr. 9'8"; s. 24k.; cpl. 186; a. 25", 4 40mm., 10 20mm., 3 21" tt., 8 dep., 1 dep. (h.h.), 2 dct.; cl. *Rudderow*)

George A. Johnson (DE-583) was laid down by Bethlehem-Hingham Shipyard, Hingham, Mass., 24 November 1943; launched 12 January 1944; sponsored by Mrs. Alfred R. Johnson, Private Johnson's mother; and commissioned 15 April 1944, Lt. Comdr. Alvin Robinson in command.

After shakedown off Bermuda, *George A. Johnson* departed New York 24 June 1944 to escort a convoy bound for Bizerte, Tunisia. Despite several encounters with German aircraft off the North African coast, the convoy reached Bizerte 14 July. She then returned to New York

for exercises and upkeep before departing Norfolk 2 September and joining another Mediterranean-bound convoy. This time the ships steamed to Palermo, Sicily, arriving 23 September. She next joined a westbound convoy 28 September and arrived New York 17 October.

After preparing for duty in the Pacific, she departed New York 3 November and steamed via the Panama Canal to Hollandia, New Guinea, where she arrived 24 December. *George A. Johnson* carried out vital tasks of escorting and protecting supply convoys from New Guinea to Allied bases in the Philippines. Departing Mois Woendi 4 January 1945, she joined cargo ships bound for Lingayan Gulf, Luzon. Four Japanese suicide planes attacked the convoy 12 January; but, under cover of excellent anti-aircraft fire of *George A. Johnson* and other escorts, the entire convoy reached Lingayan Gulf the next day.

George A. Johnson engaged in patrol and convoy duties in the Philippines until 26 January 1945, when she supported landings at San Antonio, Luzon. After this operation, she resumed convoy escort duty out of Leyte Gulf, steaming to Ulithi, Hollandia, and Manus. Arriving Hollandia from Leyte Gulf 27 April, she remained there until August.

Returning to the Philippines after the Japanese capitulation, *George A. Johnson* departed Manila 4 September for Jinsen, Korea, to join Admiral Kinkaid in *Rocky Mount* (AGC-3). The force then set course for the Yangtze River 15 September and on 19 September were the first American ships since 1941 to enter this great portal to China. Continuing to Shanghai, *George A. Johnson* and other units of the 7th Fleet were greeted enthusiastically by the Chinese people as they aided in the reoccupation of Shanghai and establishment of the Yangtze Patrol.

Her war service completed, *George A. Johnson* departed for Okinawa 11 October. From there she steamed via Pearl Harbor to San Diego, arriving 5 November. She remained at San Diego and decommissioned 31 May 1946. In August, however, she was assigned to the 12th Naval District as a training ship. She served out of commission in this capacity until 29 September 1950 when she was placed in commission in reserve as a training ship. Until late 1957 *George A. Johnson* trained reservists, making occasional cruises off the California coast. She decommissioned in September 1957, and entered the Pacific Reserve Fleet at Mare Island, Calif. Her name was struck from the Navy List 1 November 1965. At present she is berthed at Mare Island, awaiting sale for scrapping.

George B. Cortelyou, see *Cetus* (AK-77)

George Bancroft

See *Bancroft* (DANFS I, 90) for biography of George Bancroft.

(SSB(N)-643: dp. 7,320 (surf.), 8,250 (subm.); l. 425'; b. 33'; s. over 20 k.; cpl. 140; a. 16 A-3 Pol. mis.; cl. *Lafayette*)

George Bancroft (SSB(N)-643) was laid down by the Electric Boat Division of General Dynamics Corp., Groton, Conn., 24 August 1963; launched 20 March 1965; sponsored by Mrs. Jean B. Langdon, great, great granddaughter of Secretary Bancroft, and Mrs. Anita C. Irvine, great, great, great granddaughter; and commissioned 22

USS *George Bancroft* (SSB(N)-643)—down the ways 20 March 1965

January 1966, Captain Joseph Williams (blue crew) and Comdr. Walter M. Douglas (gold crew) in command.

The new Polaris submarine was assigned to Submarine Squadron 14 of Submarine Flotilla 6 with New London as home port. Her first deployment began 26 July 1966. Soon after the patrol was successfully completed at Holy Loch, Scotland, the gold crew relieved the blue. A few weeks later, *George Bancroft* got underway for her second patrol which ended toward the close of the year. Early in 1967, *George Bancroft* began her third patrol. She silently and invisibly roves the seas as a mighty deterrent against aggression, preserving the peace and protecting freedom.

George Burton

Original name retained.

(Tr: t. 443; l. 127'; b. 21.5'; dr. 14.3'; s. 9.5 k.; cl. *Strath*)

George Burton, a British trawler chartered by the U.S. Navy in the spring of 1919 to help clear the North Sea of mines, was taken over at Grimsby Naval Base. She commissioned 26 May 1919, and was assigned to the Minesweeping Detachment, Mine Force, U.S. Naval Forces in European Waters. The Detachment was based at Kirkwall, Scotland, and began sweeping the vast area in April. Ships of the trawler division followed in the wake of the minesweepers to make sure that no mines remained and accounted for a larger number of mines than had been expected.

However, following the loss of trawler *Richard Buckley*, it was decided that these light ships were not strong enough to withstand the shock of exploding mines. The majority were, therefore, returned to the Admiralty. *George Burton* was dispatched to Brightlingsea, England; decommissioned 5 August; and was returned 30 September 1919.

George C. Marshall

George Catlett Marshall, born at Uniontown, Pa., 31 December 1880, was commissioned Second Lieutenant 2 February 1901 upon graduation from the Virginia Military Institute. After serving in the Philippines from 1902 to 1903 and at various posts in the Western United States, he went to the Army Staff College at Fort Leavenworth, Kans., in 1908. Graduating at the head of his class, he instructed in the school until 1910.

Assignments with the Massachusetts National Guard and the 4th Infantry in Arkansas and Texas preceded his return to the Philippines in 1913. There his brilliance on maneuvers won him prophetic praise from General James Franklin Bell, who called him: "one of those rare men who live and dream in their profession—a soldier who is not satisfied with daily duty superbly done. . . the greatest military genius of America since Stonewall Jackson."

When the United States entered World War I, Marshall accompanied the 1st Division to France in July 1917. In the summer of 1918, he was transferred to the A.E.F. Headquarters where he helped to formulate plans for the St. Mihiel offensive and to transfer some 500,000 troops to the Argonne front in 2 weeks without the enemy's knowledge. In October Marshall became Chief of Operations of the 1st Army during the final action on the Meuse-Argonne sector, which helped greatly to force Germany to capitulate.

Outstanding service in a number of important assignments during the years between the wars won Marshall appointment as Chief of Staff of the Army in September 1939 when Nazi aggression plunged the world into World War II. He directed the mobilization of an army of some 10 million men which operated with the Navy and Allied forces in crushing the Axis powers. He was appointed General of the Army 16 December 1944.

After World War II, Marshall served as Secretary of State from 21 January 1945 to 21 January 1949 and was

Secretary of Defense from 12 September 1950 to 12 September 1951. He died in Washington 16 October 1959.

(SSB(N)-654; dp. 7,320 (surf.), 8,250 (sub.); l. 425'; b. 33'; s. over 20 k.; cpl. 140; a. 16 A-3 Pol. mis.; cl. *Lafayette*)

George C. Marshall (SSB(N)-654) was laid down by Newport News Shipbuilding & Dry Dock Co. 2 March 1964; launched 21 May 1965; sponsored by Mrs. George C. Marshall, widow; and commissioned 29 April 1966, Comdr. Warran Rich Cobean (blue crew) and Comdr. Willard Edward Johnson (gold crew) in command.

Following shakedown, *George C. Marshall* prepared for duty as one of the Navy's nuclear powered Polaris submarines silently and invisibly roving the seas as a mighty deterrent against aggression, preserving peace and protecting freedom. At her launching former Secretary of State Dean Acheson eloquently described the mighty submarine's role in the turbulent cold war: ". . . the waves set up by this launching will go to the furthest reaches of our foreign relations. The very existence of this ship, her power, her mission, her orders, her competence to execute them, will effect more computations, more decisions, than we can readily imagine. Far beyond the Pentagon, the State Department, and the White House she will add a new factor, a new magnitude, to the correlation of forces by which the communists determine their decisions."

George C. Yount, see *Ascella* (AK-137)

George Clarke

A former name retained.

(Tr: t. 500; l. 135'; b. 22'; dr. 14.5'; s. 10 k.; cl. *Castle*)

George Clarke, a British trawler chartered by the U.S. Navy in the spring of 1919 to help clear the North Sea of mines, was taken over at Grimsley Naval Base, and commissioned 15 May 1919, Lt. (j.g.) E. V. Wilder in command.

George Clarke was assigned to the Minesweeping Detachment, U.S. Naval Forces in Europe, and departed Kirkwall, Scotland, 7 July 1919 to begin the dangerous and arduous task of taking up the mine barrage. On 11 July *George Clarke* had a close call when an exploding mine damaged her sweep. The next day, shortly before sunset, she was some 400 yards from *Richard Bulkeley*, when a mine explosion ripped a hole in that ill-fated trawler. *George Clarke* steamed to the rescue but was still over 100 yards away when the stricken ship went down. *George Clarke* picked 12 survivors and returned to Kirkwall.

The next day at a conference on board *George Clarke*, Rear Admiral Strauss decided that the trawlers were not strong enough to withstand the shock of mine explosions close aboard. Most of the trawlers were, therefore, detached from minesweeping duty. *George Clarke* was sent to Brighton, England, where she was decommissioned and was returned to the Admiralty 11 August.

George Clymer

George Clymer, born in Philadelphia, Pa., 16 March 1739, was a Philadelphia merchant and prominent American patriot. Among the first to advocate complete independence from Great Britain, he became a member of the Pennsylvania Committee of Correspondence in 1774 and was elected to the Continental Congress, serving as one of two treasurers from July 1775 to August 1776. He signed the Declaration of Independence 2 August 1776. During the War of Independence, he fought in the Battle of Princeton and served on many commissions that dealt with the war and financial matters. He joined Robert Morris and others in founding the Bank of Pennsylvania

in 1780. He again served in the Continental Congress from 1780 to 1783 and was an influential member of the Pennsylvania Assembly from 1785 until 1789. He was a delegate to the Constitutional Convention of 1787 and from 1789 to 1791 served in the First Congress. President Washington appointed him Supervisor of Internal Revenue for Pennsylvania in 1791, but he resigned after the Whisky Rebellion in 1794. In 1796 he served on a special commission that negotiated a treaty with the Creek and Cherokee Indians in Georgia. George Clymer enjoyed a wide reputation for patriotism, learning, and ability in financial matters. He died in Morrisville, Pa., 23 January 1813.

(AP-57: dp. 11,058; l. 489'; b. 69'6"; dr. 27'4"; s. 18.4 k.; cpl. 512; trp. 1,304; a. 1 5", 4 3", 8 20mm., 4 .50 cal. mg.; cl. Arthur Middleton; T. C3-P)

George Clymer (AP-57) was laid down as *African Planet* under Maritime Commission contract 28 October 1940 by Ingalls Shipbuilding Co., Pascagoula, Miss.; launched 27 September 1941; sponsored by Mrs. Kathryn Stapleton; renamed *George Clymer* 9 January 1942; acquired by the Navy 15 June 1942; and commissioned the same day, Captain Arthur T. Moen in command.

George Clymer sailed 21 June via Charleston to Norfolk where she arrived 30 July for training in Chesapeake Bay. She embarked 1,400 men of the 9th Infantry Division and departed 23 October for the amphibious invasion of French Morocco. After joining Rear Admiral Monroe Kelley's Northern Attack Group off the Moroccan coast 7 November, at midnight 8 November she debarked assault troops on special net-cutting and scouting missions against garrisons at Mehedia and the fortress Kasba. Just before dawn the first wave of troops hit the beach and encountered resistance from the Vichy French. Enemy shore batteries fired on the assembled transports and straddled *George Clymer* before she opened the range. Hard fighting continued ashore until 11 November. *George Clymer* debarked troops, unloaded cargo, and treated casualties until 15 November when she sailed to Casablanca to complete off-loading cargo. She departed for the United States the 17th, arriving Norfolk 30 November.

After embarking more than 1,300 Seabees, *George Clymer* sailed 17 December for the Pacific. One of the first transports to serve in both the Atlantic and Pacific, she reached Noumea, New Caledonia, 18 January 1943; sailed 23 January for the Fiji Islands; and arrived Espiritu Santo, New Hebrides, 30 January. Redesignated (APA-27) on 1 February, she sailed in convoy 5 February for Guadalcanal, Solomons, where she arrived the 7th to debark reinforcements and embark casualties and Japanese prisoners of war. During almost the next 9 months she sailed the Southwest Pacific, carrying cargo and rotating troops from bases in New Zealand, New Caledonia, the New Hebrides, and the Fijis to Guadalcanal. On 19 April she evacuated 38 Chinese and Fijian women and children, who had hidden from the Japanese for more than a year, from Guadalcanal and transported them to Noumea.

As flagship of Rear Admiral T. S. Wilkinson's 3d Amphibious Force, *George Clymer* departed Guadalcanal 30 October for the invasion of Bougainville. Closing Cape Torokina 1 November, she debarked men of the 2d Marine Raider Battalion before joining other transports in a combined bombardment of enemy positions on Cape Torokina. She returned to Port Purvis, Florida Island, 3 November; and during the next 2 months she made three runs to Bougainville, carrying reinforcements and cargo from the Fijis and Guadalcanal.

George Clymer continued troop-carrying and supply runs in the Southwest Pacific until 4 June when she departed Guadalcanal for the invasion of the Marianas. Steaming via Kwajalein, she operated off Saipan from 17 to 30 June while serving as flagship of Rear Admiral L. R. Reifsnider's Southern Attack Group. She reached Eniwetok 4 July; departed 17 July for the assault against Guam; and arrived off Agat 21 July. After debarking assault troops, she served as receiving ship, boat pool tender, and medical

station for the Southern Transport Group. She remained at Guam until 20 August; steamed via Saipan to Hawaii; and arrived Pearl Harbor 31 August.

Underway again 15 September, *George Clymer* steamed via Eniwetok and Manus, Admiralties, to the Philippines, where she landed nearly 1,000 troops at Dulag 21 October during the invasion of Leyte. She returned to Manus 28 October; and, following a troop and cargo-carrying mission to New Britain and back, she sailed 11 November for the United States and arrived San Francisco 3 December for overhaul. Sailing 26 January 1945, she reached Guadalcanal 11 February and for more than a month trained for the invasion of Okinawa. She departed Ulithi, Carolines, in convoy 27 March; arrived off Hagushi 1 April; then debarked troops and unloaded cargo before departing 5 April. Steaming via Saipan and Pearl Harbor, she arrived San Francisco 9 May.

After conversion to a transport squadron and relief amphibious force flagship, she transported 1,200 Seabees to Pearl Harbor from 21 to 27 July. After returning to San Francisco 5 August with wounded veterans embarked, she sailed 12 August for the Philippines. She reached Manila 7 September; embarked nearly 1,000 occupation troops of the 33d Infantry Division; and transported them to Japan, arriving Wakayama 25 September. Between 3 and 21 October she made a similar voyage from Leyte to Japan; then, as part of the "Magic-Carpet" fleet, between 31 October and 14 November she carried more than 1,200 veterans from Saipan to San Francisco. Between 27 November and 28 December she cruised to Guam and Saipan and returned to San Pedro with homebound troops.

Prior to the outbreak of Communist aggression in Korea, *George Clymer* supported various naval operations in the Pacific. From 1 June to 20 August she served at Bikini Atoll as flagship for Transport Division 11 during atomic bomb tests in the Marshall Islands. She conducted training operations along the Pacific coast until 15 December 1947 when she departed San Pedro for the Far East. Arriving Tsingtao, China, 20 January 1948, for more than 6 months she operated along the Chinese coast supporting the Nationalist Chinese troops during the Chinese Civil War. She departed Tsingtao 5 August; embarked troops at Guam; and transported them via the Panama Canal to Morehead City, N.C., where she arrived 17 September.

George Clymer returned to San Diego 4 October, and during the next 19 months she operated off the coast of Alaska, the West Coast, and in Hawaiian waters. After the invasion of South Korea by North Korean troops, she departed San Diego 14 July and carried units of the 5th Provisional Marine Brigade to Pusan, South Korea, where she debarked them 2 August to help stem the Communist advance at Masan. After returning to Yokosuka, Japan, 7 August, she embarked men of the 1st Marine Division at Kobe for the amphibious invasion at Inchon 15 September. Following the successful landings, she served as amphibious control and hospital ship before returning to Sasebo 29 September with casualties. She returned to Inchon 8 October to embark marines, and on 17 October she sailed for Wonsan, where she landed troops the 25th. Departing Wonsan 30 October, she steamed via Yokosuka to the United States and arrived San Diego 24 November.

George Clymer departed San Diego 4 June 1951; and, after embarking troops at San Francisco, she sailed 6 June for the Far East, arriving Yokosuka 20 June. During the next 10 months she supported the effort to repel Communist aggression in Korea; participated in amphibious landings along the Korean coast; rotated troops between Japan and Korea; and cruised Far Eastern waters from the Sea of Japan to the South China Sea to meet the demands of military forces in Asia. On 15 October she rescued nearly 500 survivors from the Japanese merchantman, *Kongo Maru*, caught during a typhoon at Uku Shima, Japan. She departed Yokosuka 1 April 1952; returned to the United States for 7 months; then sailed from San Diego 12 November for a third deployment off Korea. After reaching Yokosuka 29 November,

she took part in troop-rotation runs between Korea and bases in Japan, Okinawa, and the Philippines. On 27 July 1953, as the armistice which brought an uncertain peace to Korea was signed at Panmunjom, she departed Yokosuka for the United States, arriving San Diego 22 August.

Since the termination of hostilities in Korea, *George Clymer* has deployed to the Far East on numerous occasions as an important unit of the always-ready force for peace, the 7th Fleet. Capable of carrying combat-ready troops to any beach in the Western Pacific and Southeast Asia, she had provided vital support during the continuing struggle to meet and repel Communist aggression. Whether in the Strait of Formosa, the Gulf of Tonkin, or along the coast of Vietnam, she has remained ready to intervene promptly and powerfully whenever needed. In August 1964 she cruised the South China Sea in an advanced state of readiness following the Gulf of Tonkin incident. During the summer of 1965 she deployed to South Vietnam, where she participated in amphibious landings at Da Nang and Chu Lai. At present she continues to bolster the American effort to thwart Communist aggression in South Vietnam.

George Clymer received five battle stars for World War II and seven battle stars for Korean conflict service.

George Cochrane

A former name retained.

(Tr: dp. 500'; l. 135'; b. 22'; dr. 14'; s. 10 k.; cl. *Castle*)

George Cochrane, one of a group of 20 trawlers chartered from British civilians to help clear the North Sea Mine Barrage, was acquired and commissioned 28 May 1919 at Grimsby Naval Base, Lt. (j.g.) R. C. Thompson, USNRF, in command.

Departing Falmouth 29 May, *George Cochrane* commenced her minesweeping duties with the North Sea Minesweeping Detachment, based in Kirkwall Bay. She and other converted trawlers swept behind the main line, picking up stray mines and dropping buoys for 5 weeks. Since the hulls of the trawlers were not enough to withstand repeated underwater shocks from the exploding mines, most of them were returned to the Admiralty. After remaining at Kirkwall Bay towing during July 1919, *George Cochrane* departed for Brightlingsea, arriving 9 August, where she was decommissioned and returned to the British 11 August 1919.

George E. Badger

George Edmund Badger, born in New Bern, N.C., 13 April 1795, graduated from Yale in 1813 and studied law in Raleigh, N.C. Elected to the State legislature in 1816, he was judge of the Superior Court at Raleigh from 1820 to 1825. Appointed Secretary of the Navy by President Harrison in 1841, he resigned after Harrison's death. Elected to the Senate in 1846 and again in 1848, at the expiration of his term in 1854 he retired from public life and devoted himself completely to his law practice. An active opponent of secession, after his state passed its 1861 ordinance of secession he continued to be known as a member of the conservative element and attempted to exert a moderating influence. He died in Raleigh 11 May 1866. A vigorous speaker and debater, Badger was known for the depth of his research.

(DD-196: dp. 1,190; l. 314'5"; b. 31'9"; dr. 9'4"; s. 35 k.; cpl. 101; a. 4 4', 3 3', 1 .30 cal. mg., 12 21' tt.; cl. *Clemson*.)

George E. Badger (DD-196) was laid down 24 September 1918 by the Newport News Shipbuilding Co., Newport News, Va.; launched 6 March 1920; sponsored by Miss Mary B. Wilson, the namesake's granddaughter; and commissioned 28 July 1920, Lt. Comdr. Albert Gleaves Berry, Jr., in command.

After shakedown, *George E. Badger* based at Charleston, S.C., while operating in Caribbean waters and along the eastern seaboard from Jacksonville, Fla., to Boston. Returning to Philadelphia 6 June 1922, she decommissioned there 11 August 1922 and was subsequently transferred to the Treasury Department 1 October 1930 for use by the Coast Guard. She was reacquired by the Navy 21 May 1934 and redesignated (AVP-16) on 1 October 1939.

George E. Badger recommissioned at Philadelphia 8 January 1940, Lt. Comdr. Frank Akers in command. During the next year she engaged in training operations in the Caribbean. Redesignated AVD-3 on 2 August 1940, she returned to Norfolk 12 January 1941 and subsequently tended planes while based at Argentia, Newfoundland, and Reykjavik, Iceland, until the spring of 1942.

Ordered to Charleston, N.C., 26 May 1942, *George E. Badger* escorted convoys along the eastern seaboard, in the Gulf of Mexico, and to Recife and Rio de Janeiro, Brazil, until returning to Norfolk 15 January 1943 to be fitted out for Atlantic convoy duty. Through the spring of 1943 she operated out of Argentia shepherding convoys bound for the United Kingdom. In June she underwent overhaul at Norfolk, then sailed 13 July for North Africa. Steaming with escort carrier *Bogue* (CVE-9) and destroyer *Clemson* (DD-186), she made her first kill 23 July 1943 after four depth charge attacks broke up deep-running *U-613* southwest of São Miguel, Azores. This victory came just a few hours before planes from *Bogue* attacked and sent *U-527* to the bottom not far away.

After touching Casablanca, *George E. Badger* returned to New York 23 August. During the next 2 months she made another escort voyage from New York to Casablanca, then returned to New York 21 October. Departing Hampton Roads 14 November, she sailed for North Africa with *Bogue* and destroyers *Dupont*, *Osmond Ingram* and *Clemson* on an offensive antisubmarine patrol. This patrol was aggressively and successfully conducted, blasting *U-172* on 12 December 1943 after a 24-hour game of cat-and-mouse which the German submarine lost.

After escorting another convoy from Norfolk to North Africa and back *George E. Badger* underwent conversion to high speed transport at Charleston and was redesignated APD-33 on 19 May 1944. Sailing for duty in the Pacific, she steamed via the West Coast and Pearl Harbor to Guadalcanal where she arrived 12 August. From there she carried to the Palau Islands. Reaching Angaur Island 12 September, *George E. Badger* screened warships bombarding the island and from 14 to 16 September sent her hardy frogmen ashore for reconnaissance and demolition work. Intelligence was gathered and obstacles on the beach removed before the ship got underway 12 October for Leyte, where until 18 October she supported the reconnaissance and bombardment of the east coast of that strategic island and again landed her frogmen.

Departing 21 October, she called at Kossol Passage, Manus, and Noumea before participating in the Lingayen landings of 5-11 January 1945. In these she lent her effective fire support as requested, and on D-day, 5 January, blew an attacking Japanese torpedo plane out of the air. Her frogmen hit the beaches 2 days later; and, despite frequent air attacks, *George E. Badger* continued screening during landings 7 January until sailing 11 January for Leyte and Ulithi.

Until the spring of 1945 the veteran warship was overhauled at Ulithi; patrolled off Iwo Jima while the fighting raged; and escorted ships from Guam to Guadalcanal, Noumea, and Manus. She sailed from Ulithi 2 April 1945 for Okinawa with carriers delivering replacement aircraft, and subsequently escorted convoys from Saipan to Okinawa. *George E. Badger* sailed from Eniwetok 24 June for Pearl Harbor. Ordered thence to San Francisco for reconversion, she reverted to DD-196 on 20 July 1945 and later decommissioned at that port 3 October 1945. *George E. Badger* was scrapped 3 June 1946.

George E. Badger received eight battle stars for World War II service in addition to the Presidential Unit Citation.

George E. Davis

George Elliot Davis, Jr., born in Martin, Pa., 5 December 1913, graduated from the Naval Academy in 1935. Until 1937 he served in *Maryland* (BB-46) as an aircraft gunnery observer; and, subsequently, until June 1938, he was on duty in *West Virginia* (BB-48). Transferred 15 June 1938 to *Houston* (CA-30), flagship of the Asiatic Fleet, Lt. Davis served in her until 4 February 1942 when he was killed in action by enemy aircraft near Madoera Strait, Borneo.

(DE-357; dp. 1,350; l. 306'; b. 36'7"; dr. 13'4"; s. 24.3 k; cpl. 222; a. 2 5', 4 40mm., 10 20mm., 3 21" tt., 8 dcp., 1 dcp. (h.h.), 2 dct.; cl. *John C. Butler*)

George E. Davis (DE-357) was laid down 15 February 1944 by the Consolidated Steel Corp., Orange, Tex.; launched 8 April 1944; sponsored by Mrs. George E. Davis, Jr., widow; and commissioned 11 August 1944, Lt. Comd. Frederick L. Lincoln in command.

After shakedown off Bermuda, *George E. Davis* departed Norfolk for the Pacific 21 October and arrived Hollandia, New Guinea, 28 November. As a convoy escort, she sailed 7 December for the Philippines where she arrived San Pedro Bay, Leyte, 12 December. Assigned to the Philippine Sea Frontier, during the remaining months of fighting in the Pacific she served in the Southwest Pacific on convoy escort and antisubmarine patrols.

Until March 1945 *George E. Davis* operated out of San Pedro Bay, Leyte, escorting troop and supply convoys to and from New Guinea, the Admiralties, and the Palaus. On 23 March she departed Leyte for the western Philippines; and, steaming via Mindoro, she arrived Subic Bay, Luzon, the 30th. During the next 2 months she patrolled the convoy lanes west of Mindoro and Luzon, sweeping the South China Sea in search of Japanese submarines. Between 3 and 7 June she steamed from Subic Bay to Ulithi, Western Carolines, returning to Subic Bay the 12th as escort for a convoy. Departing 16 June, she returned to Ulithi the 20th; and between 27 and 30 June, she escorted a supply convoy to Leyte Gulf.

During July *George E. Davis* escorted convoys between the Philippines and Okinawa. After the Japanese capitulation 15 August, she continued escort and patrol duties in the Philippines and in the East China Sea. In September she guarded convoys carrying occupation troops from the Philippines to Japan. Early in December she sailed from the Philippines to the coast of China where she supported American and Chinese Nationalist troops during reoccupation operations along the coast of northern China. During January and February 1946 she operated along the coast of Japan before returning to Tsingtao, China, 20 February. She patrolled the East China and Yellow Seas off mainland China until 16 April when she departed for the United States. She arrived San Pedro, Calif., 11 May decommissioned at San Diego 26 August, and entered the Pacific Reserve Fleet.

George E. Davis recommissioned at San Diego 11 July 1951, and departed San Diego 11 October. She steamed via the Panama Canal to the East Coast, where she arrived Newport, R.I., 27 October. Assigned to the Atlantic Fleet, during the next 3 years she operated out of Newport, providing valuable service as a training ship for Naval Reserves. This unheralded but important duty carried her along the eastern seaboard and in the Caribbean and she continued this service until June 1954. She decommissioned 11 November 1954 at Green Cove Springs, Fla., and entered the Atlantic Reserve Fleet. At present she is berthed with the Atlantic Reserve Fleet at Orange, Tex.

George Eastman

George Eastman, born in Waterville, N.Y., 12 July 1854, was educated at the University of Rochester, Rochester, N.Y. An avid photographer, he stimulated photography as a popular hobby by developing and mass-producing his photographic inventions. He invented a process for coat-

ing dry plates and began their manufacture at Rochester in 1880. Four years later he developed the first flexible roll film; in 1888 he invented and marketed the "Kodak," the first portable, compact camera, and the following year he perfected a transparent film for amateur use. The George Eastman Co. introduced a daylight-loading film in 1891. Reorganized into the Eastman Kodak Co in 1893, his firm became one of the first in the country to produce a standardized product on a large scale. Eastman established excellent research and chemical laboratories, and under his direction his firm later pioneered the development of many allied photographic products and processes, including amateur motion-picture cameras and a process for color photography. Building Eastman Kodak Co. into a world wide organization, Eastman amassed a great fortune, well over \$75 million of which he donated for the advancement of education. His philanthropies established and endowed the Eastman School of Music; and he gave millions of dollars to the University of Rochester, Massachusetts Institute of Technology, Tuskegee and Hampton Institutes, and to various scientific and medical institutions in the United States and Europe. George Eastman died in Rochester, N.Y., 14 March 1932.

(YAG-39; dp. 3,890 (lt.); l. 442'; b. 57'; dr. 30'; s. 10 k.; cpl 100; a. none; T. EC2-S-C1)

George Eastman, a "Liberty-type" cargo ship, was laid down under Maritime Commission contract 24 March 1943 by Permanente Metals Corp., Yard 2, Richmond, Calif.; launched 20 April 1943; sponsored by Mrs. Ann Troutman; and delivered under charter from WSA to Pacific-Atlantic Steamship Co., Vancouver, Wash., 5 May 1943.

She operated as a merchant cargo carrier until placed in the National Defense Reserve Fleet at Suisun Bay, Calif., 24 June 1948. Later taken out of reserve, she was chartered to Pacific Far East Line, Inc., San Francisco, 24 December 1951 and operated as a merchantman in the Far East during the Korean War. On 2 June 1952 she was transferred by the Maritime Administration to the custody of the Navy at Suisun Bay.

Acquired by the Navy 2 April 1953, she was designated YAG-39 the following month. She was then fitted out with numerous scientific instruments, including nuclear detection and measurement devices, which enabled her to conduct contamination and fallout measurement tests after nuclear explosions. Manned by an experimental crew in a specially protected control cubicle, she also was fitted with electronic remote-control gear that enabled her to serve as a robot ship.

Following extensive conversion, YAG-39 was placed in service at San Francisco 20 October 1953, Lt. Comdr. Hugh W. Anglin in command. Assigned to Joint Task Force 7, she steamed to Eniwetok, Marshall Islands, where from March through May 1954 she participated in atomic tests at the Pacific Proving Grounds. During Operation Castle, a nuclear underwater test, she gathered fallout data and carried out experimental ship protection studies. After returning to San Francisco, she was placed out of service from June until February 1955.

In May, YAG-39 again served with Joint Task Force 7 during Operation "Wigwam," the deep underwater nuclear test carried out in the Eastern Pacific. During the next 10 months she operated between the West Coast and Hawaii, and conducted various experimental tests before returning to Eniwetok 8 April 1956 to participate in additional nuclear tests. From 21 May to 23 July she took part in four nuclear-proving tests and gathered scientific data to advance our knowledge of the atom and the effects of nuclear fission.

Departing Eniwetok 28 July, YAG-39 steamed via Pearl Harbor to San Francisco where she arrived 16 August. After receiving additional scientific equipment, she departed San Francisco 6 February 1957 to resume experimental operations off the California coast. During the next few months she steamed with YAG-40 while testing advanced weapons and ship protection systems. Towed to San Diego 21 October for inactivation, she was placed

out of service 1 November and assigned to the Pacific Reserve Fleet at San Diego.

Reactivated in 1962, *YAG-39* commissioned at San Francisco 20 October, Lt. Comdr. William G. Sternberg in command. With her sister ship, *YAG-40*, she departed San Francisco 15 November for Pearl Harbor, where she arrived 24 November for underway training. Assigned to Service Squadron 5, she operated off Hawaii and carried out extensive experimental tests in the fields of ship protection systems and scientific warfare analysis. On 3 July 1963 she was assigned her former merchant name, *George Eastman*.

Since 1963, *George Eastman* has operated as a research ship between the Hawaiian sea frontier and the equatorial area of the mid-Pacific, providing valuable support for various scientific research and defense projects of the Department of Defense. She sailed to the West Coast in April 1966 for a 3-month overhaul; and, following her return to Pearl Harbor 18 August, she resumed research cruises in Hawaiian waters. Her support activities continued through 1966 into 1967.

George F. Elliott

George F. Elliott, born 30 November 1846 in Alabama, graduated from the U.S. Military Academy in 1870 and was commissioned a Second Lieutenant in the Marine Corps. After serving at Washington, D.C., he fought in the Spanish-American War; in a spirited engagement with the enemy near Cuzco Valley Marines led by Captain Elliott were victorious and returned to their camp at Guantanamo Bay. On 21 May 1908 he was appointed Major General and Commandant of the Marine Corps, a position he filled with distinction until his retirement 30 November 1910. General Elliott died 4 November 1931 in Washington, D.C.

I

(AP-13: dp. 7630; l. 507'; b. 56'; dr. 23'8"; s. 16 k; cpl. 550; trp. 1,278; a. 1 5", 4 3", 8.50 cal.; cl. *Heywood*)

George F. Elliott (AP-13), formerly *City of Los Angeles*, was built in 1918 by the Bethlehem Steel Co., Alameda, Calif.; acquired 30 October 1940; and commissioned 10 January 1941, Captain H. G. Patrick in command.

George F. Elliott sailed for Norfolk 16 January 1941 and for the next year carried units of the 1st Marine Brigade to the Caribbean for training exercises and operated out of Norfolk before departing New York 19 February 1942 with over 1,100 men bound for Europe. After joining a convoy off Halifax, Nova Scotia, she reached Belfast, Ireland, 3 March to debark her passengers and subsequently returned to New York 25 March.

After embarking 1,229 fighting men, the ship got underway 9 April with a convoy bound for Tongatabu, arriving 1 month later and debarking her troops. *George F. Elliott* sailed 19 May and arrived San Francisco 5 June for repairs.

Soon ready for sea, she embarked 1,300 men of the 2d Battalion, 1st Marines, and stood out under the Golden Gate 22 June in convoy, reaching Wellington, New Zealand, 11 July where combat gear and stores were loaded. As part of Task Force 62 she departed 22 July for the 1st Marine Division's amphibious assault on Guadalcanal. After conducting landing maneuvers in the Fiji Islands, she proceeded to Guadalcanal.

Closing Lunga Point on D-day, 7 August, *George F. Elliott* sent her boats away at 0733 and simultaneously began discharging cargo. Despite enemy air attacks she continued to work far into the night, ceasing unloading only when the beach head became too congested. The next day, 8 August, she got underway at 1056 to avoid an imminent air attack and at 1159 opened fire on Japanese twin-engined bombers coming in very low and fast over Florida Island. Her antiaircraft guns made repeated hits on a plane approaching the starboard beam only 30 feet off the water; suddenly it swerved and

crashed into the ship amidships, spreading raging flames and rupturing the water mains. In spite of the crew's valiant efforts, the fires continued out of control. As salvage was impossible the gutted ship was sunk the same day.

George F. Elliott was struck from the Navy List 2 October 1942. She was awarded one battle star for World War II service.

II

(AP-105: dp. 14,247; l. 491'; b. 65'; dr. 25'8"; s. 17.8 k; cpl. 302; trp. 1,908; a. 1 5", 4 3", 16 20mm., 10 .50 cal.; cl. *George F. Elliott*)

The second *George F. Elliott* (AP-105), formerly *SS Delbrasil*, was built in 1939 by Bethlehem Steel, Sparrows Point, Md.; acquired 25 August 1943; and commissioned 23 September 1943, Comdr. A. J. Couble in command.

From 3 October 1943 to 31 January 1944 two troop-carrying voyages out of San Diego brought fighting men to Noumea, Guadalcanal, and Espiritu Santo. Subsequently, *George F. Elliott* left San Francisco 18 February to embark cargo and over 1,700 sailors and marines at Port Hueneme. She steamed thence to Havannah Harbor, New Hebrides, arriving 9 March, and for the next 2 months made troop shuttle voyages between Espiritu Santo, Guadalcanal, the Russell Islands, Manus, and New Guinea before putting in at Pearl Harbor 7 May 1944.

On 29 May *George F. Elliott* departed with attack Group 1 of Task Force 52 for the invasion of the strategic island of Saipan and closed the island's west coast 15 June for D-day. She was ordered to join a diversionary assault force staging a demonstration landing to the northwest to divert the enemy from the real landing beaches. Despite air attack she sent troops away and unloaded cargo until getting underway 22 June for Makin Atoll, Tarawa, Apamama, Pearl Harbor, and finally San Diego, reaching there 17 July.

Following a troop transport voyage to Pearl Harbor and return, *George F. Elliott* made another trip to Pearl Harbor, she sailed from there 15 September for Eniwetok, Manus, and Leyte, reaching the latter port in time for D-day, 20 October 1944. She debarked troops and cargo though harrassed by air attacks, getting underway 24 October with mission accomplished and closing Hollandia the 29th. *George F. Elliott* brought troops and supplies from Wakde Island, New Guinea; and Hollandia in early November, and after embarking more cargo and passengers at Cape Gloucester, New Britain, reached Manus 21 December. She sailed for Lingayen Gulf 31 December and, after witnessing a kamikaze crash carrier *Kitkun Bay* and numerous attacks on other ships off Luzon, reached her destination 9 January 1945 as part of the D-day invasion of Lingayen Gulf.

Discharging men and equipment, the ship sailed at once for Leyte, Manus, and Wake Island, loaded the 33d Infantry Division at the latter port, and debarked it at Lingayen Gulf 10 February. Subsequently steaming to Ulithi she embarked Marine reinforcements destined for Iwo Jima and closed that island 18 March. Loading veterans, she sailed for Pearl Harbor and San Francisco, steaming under the Golden Gate 22 April 1945 to commence repairs.

A round-trip voyage out of San Francisco brought seabees from Port Huemene to Okinawa from 30 May-15 August 1945. As part of the "Magic Carpet" fleet, *George F. Elliott* subsequently made three more round trips from San Francisco, respectively to Pearl Harbor, Yokosuka, and Korea, from 27 August 1945 to 18 January 1946, and her return to Seattle. Underway for Guam 14 February, she touched there 1 March and soon sailed for Norfolk, where she put in 3 April 1946 via the Panama Canal.

Decommissioned there 10 June 1946, she was delivered to the WSA the next day and struck from the Navy List 19 June 1946. *George F. Elliott* was sold to the Farrell Lines of New York in 1948 and renamed *African Endeavor*.

George F. Elliott was awarded four battle stars for World War II service.

George F. Pierce

A former name retained.

(SP-648: t. 252; l. 121'3"; b. 24'; dr. 8'; s. 12 k.)

George F. Pierce, a wooden passenger and freight steamer, was built by William G. Abbot in 1914; purchased by the Navy from the Milford and Philadelphia Freight Line Co., Philadelphia; and delivered at the Philadelphia Navy Yard 1 February 1918. She served the 4th Naval District as a passenger and supply boat in the Philadelphia area until decommissioning at Philadelphia Navy Yard 17 March 1922. *George F. Pierce* was sold to L. N. Hearn, Milford, Del., 5 June 1922.

George G. Henry

A former name retained.

I

(ID-1560: dp. 13,179 (n.); l. 435'; b. 56'; dr. 26'6"; s. 11 k.; cpl. 59; a. 1 5'; 1 3')

George G. Henry was built in 1917 by the Union Iron Works of San Francisco; chartered by the Navy from the Los Angeles Petroleum Transportation Co., 23 August 1918; and commissioned at New York the same day, Lt. Comdr. Henry F. Weeden, USNRF, in command.

Assigned to NOTS, *George G. Henry* departed New York 29 August 1918 with aviation gasoline and Army medical stores which she delivered at Le Havre, France, then touched Spithead and Plymouth, England, on returning to New York.

In the mid-Atlantic on the morning of 29 September, the tanker spotted a German submarine off her port beam and opened fire on *U-152* some 5,000 yards away, then raced away at flank speed, maneuvering radically to evade the enemy shells; nevertheless, a hit which destroyed her aftermagazine enveloped her stern in flames, and left only two powder charges for her afterdeck gun. As the crew worked to control the fires, the tanker sheered to bring her forward gun to bear on the pursuer, keeping the U-boat just out of range with well-placed salvos, and dropped six smoke screens that hid her from the enemy for some 20 minutes.

The U-boat soon passed to the weather side of the smoke and renewed the action. Shrapnel hit the tanker, inflicting minor injuries on 14 men. Two shells which had survived the explosion of the after magazine were fired from the tanker's after gun at 10:15 a.m.; and ten minutes later the submarine gave up the chase. Credit for her survival was shared by her gunners and her engine room force under Ens. George F. Thompson, USNRF, who, despite flames and dense, acrid smoke, stayed at the posts to maintain speed throughout the running fight.

Having escaped one danger, *George G. Henry* encountered another before reaching New York. Shortly after midnight of 3 October 1918, about 110 miles east of Cape Sable, she made an emergency turn to avoid an oncoming convoy; but, before she could swerve to safety, a red light and mast headlight came close under her port bow and the tanker cut into Navy collier *Herman Frasch* forward of the poop deck and below the water line. Within minutes *Herman Frasch's* bow rose high out of the water, fell back crushing down on *George G. Henry's* port rail, hung suspended for a moment, then slid off and sank. The tanker lowered life rafts and boats and swept the sea with her searchlights looking for survivors. By dawn 65 members of the ill-fated collier's crew had been hauled from the sea to safety.

George G. Henry arrived at New York on 6 October for repairs and sailed on 11 November with gasoline and quartermaster supplies which were unloaded at Le Havre, and Rouen, France. She returned by way of England to New York on 21 December 1918, then made three transatlantic voyages from Avondale, La., with cargoes of gasoline and military stores delivered to the French ports of

Paulliac, Furth, Blaye, Le Havre, and Rouen. She returned to New York 5 May 1919; was overhauled in the Shewans Dry Dock; decommissioned and was returned to her owner 21 May 1919.

George G. Henry continued operations under her original owner until 1932 when she was acquired by the Standard Oil Co. of New Jersey. In July 1940, due to passage of the Neutrality Act, she transferred to Panamanian registry and operated by the Panama Transport Co. On 15 December 1941 she was time-chartered by the U.S. Navy to visit Balikpapan and Surabaya, N.E.I.; and Port Darwin and Fremantle, Australia. On 14 April 1942 while off Melbourne, Australia, *George G. Henry* reverted back to Standard Oil Co. ownership; and the next day was taken over by the U.S. Navy on a bareboat basis and placed in commission, Lt. Comdr. Jens G. Olsen, USNR, in command.

On 20 April, erroneous word was received to name the ship *Victor*. She sailed for Sydney, Australia, 22 April for conversion to a naval oiler, arriving 25 April to learn her correct name to be *Victoria*. Conversion completed November 1942, *Victoria* (AO-46) (q.v.) was placed in service, Lt. Comdr. Jens G. Olsen, USNR, in command.

George H. Bradley

A former name retained.

(SP-327: t. 99; l. 104'; b. 19'; dr. 10'; s. 9 k.; cpl. 26; a. 1 1-pdr.)

George H. Bradley, a wood steamer, was built at Bath, Maine, in 1871; purchased by the Navy 18 May 1917 from her owner, Captain Ocran Humphries of Reedville, Va.; and commissioned the same day at Norfolk, Boatswain S. C. Headley, USNRF, in command.

Assigned to the 5th Naval District, *George H. Bradley* patrolled local waters out of Norfolk until 19 March 1918 when she received minesweeping gear. During the next 3 months she patrolled and swept for mines from Cape Henry to Sea Basque. On 13 June she joined the minesweeping squadron in Chesapeake Bay and swept waters from Norfolk Gate to Baltimore Gate. Her name was struck from the Navy List 6 May 1919 when she was sold to her former owner.

George K. MacKenzie

George K. MacKenzie, born 30 May 1910 in Brooklyn, N.Y., graduated from the Naval Academy in 1931. He attended the Submarine School and Deep Sea Diving School and the advanced course in the Submarine Officers' School in addition to serving in *Raleigh*, *Bonita*, and *Plunger* and commanding *Falcon* and *Triton*. Lt. Comdr. MacKenzie was killed in action 15 March 1943 when three Japanese destroyers sank *Triton* in waters just north of the Admiralty Islands. For heroism and courageous devotion to duty he received the Navy Cross.

(DD-836: dp. 1,620; l. 347'9"; b. 36'1"; dr. 17'4"; s. 37.6 k.; cpl. 276; a. 6 5", 16 40mm., 10 20mm., 5 21" tt., 6 dep., 2 dct.; cl. *Gearing*)

George K. MacKenzie (DD-836) was launched 13 May 1945 by the Bath Iron Works, Bath, Maine; sponsored by Miss Donna MacKenzie, daughter; and commissioned 13 July 1945, Comdr. Alvin W. Slayden in command.

After shakedown off Cuba, *MacKenzie* returned to Boston 15 September 1945 and subsequently participated in the Navy Day celebrations 27 October at Savannah, Ga. She served with the Operational Development Force at Norfolk, her home port, and conducted training exercises and escort duties along the Atlantic seaboard until sailing 5 January 1948 on a goodwill tour to Buenos Aires, Argentina.

MacKenzie returned to Norfolk 9 February after these duties as a "steel grey diplomat" and continued peacetime operations, highlighted by a Midshipman cruise June to

July 1948 to Portugal, Italy, North Africa, and Cuba. In October 1948 the destroyer sailed for the Near East, where she supported the United Nations Palestine Patrol and the allied occupation of Trieste, returning to Newport for Christmas.

After overhaul at Boston until April 1949, *George K. MacKenzie* continued peacetime training on the eastern seaboard, and made a "Med" cruise from January to May 1950. When the uneasy truce in the Far East was shattered by the North Korean aggression, *George K. MacKenzie* was transferred to the Pacific. She arrived Pearl Harbor 1 July 1950 to prepare for wartime service.

During her first tour in Korea, 26 July 1950 to 30 January 1951, she screened attack carriers during strikes on North Korean targets and provided close support for advancing Allied armies. After a repair period at San Diego 15 February to 17 July 1951, she returned to perform the same vital screening and support duties until April 1952.

George K. MacKenzie provided antisubmarine screening and fired several important bombardment missions at Wonsan Harbor, 16 to 17 January and again 23 February to 21 March 1953 in support of United Nations forces. She lent effective fire support to troops in the vicinity of Suwon Dan 15-19 April 1953 in company with *Los Angeles* and demolished sections of the enemy's railroad along the eastern coast of Korea in May.

Homeported in San Diego and Long Beach, Calif., she completed a total of nine tours of duty in the Far East, including training exercises and duty with the Taiwan patrol between 1953 and 1959.

George K. MacKenzie's homeport was changed to Yokosuka, Japan, 15 February 1960 as she continued her peacetime training duties, visiting Hong Kong, the Philippines and other Far Eastern ports, including those in Japan. In 1961 *George K. MacKenzie* sailed from Subic Bay, P.I., 23 March to rendezvous with carriers *Midway* and *Lexington* in the South China Sea to act during the Laos crisis as a powerful on-the-spot force, if needed. Fortunately, the crisis passed; and after further operations *George K. MacKenzie* put in at her new home port of New York 11 December 1962. She entered Brooklyn Navy Yard for modernization, returning to sea in October 1963. *George K. MacKenzie* then made preparations to return to her new homeport of Long Beach, Calif., where she arrived 28 January 1964 to prepare for extended duty in the Far East. She left the West Coast 26 May and reached Yokosuka, Japan, 13 June to begin over 2 years of continuous service in Oriental waters operating alternately in Japanese waters and off Vietnam fighting to repel Communist aggression. She specialized in screening aircraft carriers and shelling Communist positions ashore. The battle-tested destroyer returned to Long Beach 3 August 1966 for a major overhaul to prepare for future action. In mid-1967 she was again in the Far East aiding in the struggle to save Southeast Asia. On 29 July she was screening *Forrestal* (CVA-59) when fire broke out on the carrier's flight deck. After helping to put out the flames, she escorted the stricken flattop to Subic Bay for repairs.

George K. MacKenzie was awarded six battle stars for Korean service.

George M. Bibb

A former name retained. George Motier Bibb, born 30 October 1776 in Prine Edward County, Va., was a prominent lawyer and jurist in Kentucky. He served in the United States Senate from 1811 to 1814 and from 1829 to 1835. He later served as Secretary of the Treasury under President John Tyler from 4 July 1844 until 3 March 1845. He died in Georgetown, D.C., 14 April 1859.

(Swtr: t. 409; l. 160'; b. 24'; dr. 6'9"; a. 4 32-pdrs., 14-pdr).

George M. Bibb, a side-wheel steamer, was launched at Pittsburgh, Pa., 10 April 1845 and ordered to New Or-

leans, La., for duty with the U.S. Revenue Cutter Service, Captain Winslow Foster, USRCS, in command. She operated out of New Orleans until 18 May 1846 when she sailed with 10 other cutters for duty in the Gulf of Mexico during the Mexican War. Ordered to cooperate with the Navy and Army, during the next several months she supported the blockade; scouted coastal waters; carried mail and supplies; and convoyed and towed ships. After returning to New Orleans later in the year, she departed South West Pass, La., for Boston 31 May 1847. She arrived 11 July and was transferred to the U.S. Coast Survey.

George M. Campbell

George Marvin Campbell, born 7 January 1907 in Madras, Oreg., enlisted in the Navy 27 June 1928. In 1942 he underwent flight training and was appointed Lieutenant (j.g.) 2 April 1942. Campbell joined Torpedo Squadron 8 on board famous carrier *Hornet* just in time to take part in the historic Battle of Midway. With his squadron Campbell took off 4 June to intercept the Japanese fleet, and without fighter cover attacked the enemy dispositions against murderous opposition. Knowing full well that they had insufficient fuel to return to the carrier, the torpedo planes pressed the attack gallantly until all were shot down. Lt. (j.g.) Campbell was presumed dead 5 June 1942 and was awarded the Navy Cross for his heroic actions.

George M. Campbell (DE-773) a *Cannon*-class destroyer escort, was building at Tampa Shipbuilding Co., Tampa, Fla., but was cancelled 11 September 1944. The unfinished ship was later accepted 25 October 1944 and placed in service for towing. She was taken to Charleston Navy Yard and used for spare parts.

George Mangham

A former name retained.

(Sch: t. 274; l. 110'; b. 28'; dph. 10'; s. 10 k.; a. 1 13' mor., 2 32-pdrs.)

George Mangham was a wooden schooner built in 1854; purchased by the Navy at Philadelphia 21 September 1861; and commissioned at the Philadelphia Navy Yard 11 January 1862, Acting Master John Collins, Jr., in command.

George Mangham departed Chester Pa., 13 January for duty with Comdr. D. D. Porter's Mortar Flotilla, a part of the West Gulf Blockading Squadron. Sailing via Hampton Roads, Va., she arrived Key West, Fla., 13 February. From there she sailed 6 March with Porter's ships to the mouth of the Mississippi to prepare for the important assault on Forts Jackson and St. Philip, which guarded the approaches to New Orleans. *George Mangham* and the other mortar boats crossed the bar into the Mississippi 18 March. After Farragut's meticulous preparations had been completed, the Mortar Flotilla, including *George Mangham*, began the bombardment of Fort Jackson 18 April and sustained the fierce cannonade for 5 days. *George Mangham* was with the second division, anchored on the east bank of the river. As the swift current slackened 24 April, Farragut's fleet steamed boldly through the gap in the obstructions and past the forts through a hail of shell, engaging and capturing a large Confederate flotilla.

The mortar schooners shelled the forts at rapid fire to support the movement, and *George Mangham* received a shot through her hull in the engagement. Flag Officer Farragut, having passed the major Confederate defenses on the river below New Orleans, captured that city 25 April, opening the way for Union naval forces to sweep up the Mississippi. *George Mangham* and the rest of the mortar ships remained below the battered forts, which surrendered 28 April.

George Mangham, however, departed for Florida 27 April and spent the next month cruising the Pensacola area. Comdr. Porter again assembled his fleet at Pensacola and sailed 3 June to support the Union movement up the Mississippi; arriving off Vicksburg 20 June, she assisted in the passage of the batteries there. Supported strongly by the mortar bombardment, Farragut steamed past the formidable Confederate works 28 June to join with Commodore Davis further up the river. Subsequently, *George Mangham* returned downriver, engaging Confederate artillery on the riverbank from time to time. After passing Grand Gulf, Miss., she arrived Baton Rouge, La. 12 July. From there she proceeded to Hampton Roads, Va., where she moored 30 July.

Remaining at Hampton Roads until 29 August, *George Mangham* first proceeded to Baltimore, then served as a guard ship on the Potomac River at Piney Point, Md. The schooner was assigned to the Potomac Flotilla 22 December; and until 10 July 1863, she suppressed blockade runners, capturing four prizes in the lower Potomac. She was then taken to the Washington Navy Yard and fitted out for cruising in the Gulf of St. Lawrence.

Authorities in Washington were greatly concerned about the attacks of Confederate raiders, and *George Mangham* was chosen to protect American merchantmen and fishing craft. Leaving Washington 5 August, she cruised off the Magdalen Islands and Prince Edward Island; without detecting any Confederate ships, she departed Georgetown, Prince Edward Island, 5 November for New York Navy Yard.

After repairs at New York, *George Mangham* sailed 9 December to join the South Atlantic Blockading Squadron for blockading duty off Murrell's Inlet, S.C. While engaged in this work, on 7 January 1864 she moved close to shore and destroyed *Dare*, a beached blockade runner driven ashore by larger Union ships. She then steamed to Charleston 21 March and continued the vital work of blockading the South Carolina coast in the vicinity of Cape Romain, St. Helena Sound, and Bull's Bay during the remainder of the year.

Returning to Port Royal, S.C., 5 January 1865, *George Mangham* was reassigned temporarily to Key West in March. Subsequently, she returned to the New York Navy Yard 9 August; decommissioned 9 September; and was sold at public auction to D. T. Trundy 27 September.

George P. Squires

A former name retained.

(SP-303: t. 218; l. 142'6"; b. 22'; dr. 12'; s. 10 k; cpl. 27; a. none)

George P. Squires, a fishing steamer, was built by Henry Brusster, Baltimore, Md., in 1900; purchased by the Navy from her owner, Bellows & Squires, Inc., Ocran, Va., 12 May 1917; taken over at Norfolk 21 May 1917; and commissioned the same day, Ens. James B. McKenny, USNRF, in command.

Assigned to the 5th Naval District, *George P. Squires* served as a harbor patrol boat in Norfolk. In addition she swept for mines in the defensive sea area of Chesapeake Bay and patrolled the Virginia coast off Cape Henry. She decommissioned at Norfolk 27 July 1918 and was sold to James Dietrich of New York City 23 October.

George P. Upshur

(Sch.)

George P. Upshur was a wooden schooner purchased at Baltimore 13 August 1861 for service in the "Stone Fleet" and was sunk to obstruct an inlet at Ocracoke, N.C.

George W. Cable, see *Heeuba* (AKS-12)

George W. Codrington, see *Mankato* (YN-40)

George W. Goethals

An Army name retained. *George W. Goethals*, see *General G. W. Goethals*.

(T-AP-182: dp. 10,418; l. 489'; b. 69'6"; dr. 27'4"; s. 16.5 k.; trp. 1,976; a. none; T. C3-IN P & C)

George W. Goethals (T-AP-182) was laid down under Maritime Commission contract 7 January 1941 by Ingall Shipbuilding Corp., Pascagoula, Miss.; launched as *Paseagoula* 23 January 1942; sponsored by Mrs. Hermes F. Cautier; delivered to the Army 18 September 1942; and renamed *George W. Goethals*.

During World War II *George W. Goethals* operated as an Army transport out of New York, Boston, and Gulf Coast ports to ports in North Africa, France, and the United Kingdom. After the war, she continued transatlantic runs carrying military dependents between the United States and Europe.

Acquired by the Navy 1 March 1950, the transport was assigned to MSTs. Manned by a civilian crew, *George W. Goethals* continued trooplift and passenger voyages out of New York. During the Korean conflict she helped to maintain American military strength in Europe and the Middle East. Transporting troops and military cargo, she steamed to England, Germany, North Africa, Italy, Greece, and Turkey during European and Mediterranean deployments. In addition, she rotated troops to American bases in the Caribbean. In 1953, for example, she completed 12 round-trip voyages out of New York to Cuba, Puerto Rico, and the Canal Zone.

Between 1955 and 1959 *George W. Goethals* continued a busy, far-ranging deployment schedule. During this period she deployed 18 times to ports in Western Europe and three times to the Mediterranean, and she completed 30 round trips to the Caribbean. Placed in a ready reserve status from 15 December 1958 to 21 February 1959, she made a run to Bremerhaven and back during February and March. In the next 6 months, she deployed to the Caribbean seven times. After returning to New York 29 September 1959, she was inactivated. Transferred to the Maritime Administration 20 November 1960, she entered the National Defense Reserve Fleet. At present she is berthed in the Hudson River at Jones Point, N.Y.

George W. Ingram

George Washington Ingram, born in Rockport, Ga., 22 February 1918, enlisted in the Navy as Apprentice Seaman at Birmingham, Ala., 18 March 1941. Assigned to the Naval Training Station, Norfolk, Va., he transferred to Naval Air Station, Pensacola, Fla., 30 May and was advanced to Seaman Second Class 18 July. He was assigned to duty with Patrol Wing 2 on 26 September and was stationed at the Naval Air Station, Kaneohe Bay, Oahu, when the Japanese attacked Pearl Harbor 7 December. The main center for land-based patrol bombers, Kaneohe Bay was hit hard by several waves of enemy planes which bombed and strafed planes, hangers, and men. As the first attack occurred, Seaman Second Class Ingram was among the first to rush to action. In utter disregard of personal danger, he fought to repel the enemy and died during the attack. He was commended by Admiral Nimitz, Commander in Chief, Pacific Fleet, for his heroism in the defense of Kaneohe Bay Naval Air Station.

(DE-62: dp. 1,400; l. 306'; b. 37'; dr. 12'7"; s. 23.5 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 3 21" tt., 8 dep., 1 dep. (h.h.), 2 det.; cl. *Buckley*)

George Washington Ingram (DE-62) was laid down 6 February 1943 by the Bethlehem-Hingham Shipyard, Inc., Hingham, Mass.; launched 8 May 1943; sponsored by Mrs. James L. Ingram, mother of Seaman Second Class Ingram; and commissioned 11 August 1943, Lt. Comdr. Ernest R. Perry in command.

After shakedown off Bermuda, *George W. Ingram* departed New York 13 October for convoy escort duty in the

Atlantic. Steaming via the West Indies, she escorted a supply convoy to North Africa, where she arrived Algiers, Algeria, 7 November. She departed 4 days later as convoy escort and returned via the West Indies and the Canal Zone to New York, arriving 4 December. Between 26 December and 12 July 1944, she made five round-trip transatlantic escort voyages (four from New York and one from Boston) to Northern Ireland.

After additional escort duty along the eastern seaboard, she departed Charleston, S.C., 6 November to escort slow-towing convoy CK-4 to Plymouth, England. She arrived 5 December, then sailed a week later escorting ships and landing craft damaged during the Normandy Invasion back to the United States. On the 20th, U-870 attacked the slow-moving convoy northeast of the Azores, sinking LST-359 and damaging *Fogg* (DE-57); but prompt action by the escorts drove off the U-boat, preventing further damage. *George W. Ingram* reached New York 12 January 1945.

After escorting a captured Italian submarine from Portsmouth, N.H., to New London, Conn., *George W. Ingram* was redesignated APD-43 on 23 February. During the next few months she underwent conversion to a high-speed transport at Tompkinsville, N.Y. Shortly after V-E Day, she departed New York and sailed via the Panama Canal and San Diego to Pearl Harbor, where she arrived 20 June for training with underwater demolition teams.

With UDT-26 embarked, she departed Pearl Harbor 24 August and sailed via Eniwetok and Okinawa to Jinsen, Korea, where on 8 September she supported the initial landings of American occupation troops in Korea. She steamed to Taka Bar, China, 26 September; and from 29 September to 1 October UDT-26 surveyed and sounded the approaches of the Peking River in preparation for landings by the III Marine Amphibious Corps. She supported additional landings by American troops at Chefoo and Tsingtao, China, before departing Tsingtao 17 October. She steamed via Okinawa, Eniwetok, and Pearl Harbor to the West Coast, arriving San Diego 11 November. Remaining at San Diego, *George W. Ingram* decommissioned 15 January 1947 and entered the Pacific Reserve Fleet at Bremerton, Wash. *George W. Ingram* was struck from the Navy list 1 January 1967.

George W. Rodgers

George Washington Rodgers, born 20 October 1822 in Brooklyn, N.Y., was commissioned Midshipman 14 October 1839. Prior to the Civil War, he served in various ships in foreign squadrons and was Commandant of Midshipmen at Annapolis in 1861. Promoted to Commander 16 July 1862, he took command of *Catskill*, a single-turreted monitor, 24 February 1863 and joined the South Atlantic Blockading Squadron off the South Carolina coast. With Rear Admiral J. A. Dahlgren embarked, *Catskill* led a furious naval bombardment 10 July against Confederate defenses on Morris Island, Charleston harbor. During the attack, withering Confederate fire hit *Catskill* more than 60 times, piercing the deck in several places. Despite her "severe" damage, Rodgers renewed the attack the following day to "prevent reinforcements and ammunition" from reaching Fort Wagner. Appointed Fleet Captain 20 July, Rodgers resumed command of *Catskill* 17 August as Union forces continued the attack against Fort Wagner. Early in the bombardment, a Confederate shot struck the top of *Catskill's* pilot house, bursting the plates and killing Captain Rodgers instantly. The only officer during the Civil War to lose his life in a monitor as a result of enemy gunfire, "he fell," wrote Admiral Dahlgren, "as a brave man, at his post in battle, and for the flag to which he had devoted his whole life."

(Sch : t. 87 ; l. 76' ; b. 22' ; dph. 6' ; a. 2 20-pdr. D.r.)

George W. Rodgers, originally blockade runner *Shark*, was captured by the screw steamer *South Carolina* off Galveston, Tex., 4 July 1861 and sent to the East Coast.

Arriving New York 24 August, she was sold to a private purchaser 5 November. Later chartered by the Navy under a civilian master, *Shark* served during 1862 and 1863 as a dispatch ship with the South Atlantic Blockading Squadron until taken over by the Navy off Charleston 5 September 1863 by order of Admiral Dahlgren. Although *Shark* was purchased to be sunken obstruction at Charleston, she was retained. Renamed *George W. Rodgers*, she sailed to Port Royal, S.C., for arming and repairs, and commissioned there 17 January 1865, Acting Master Loring G. Emerson in command.

During the remainder of the war, *George W. Rodgers* served as a picket boat along the coast of Georgia in Wassaw and Ossabaw Sounds and on the Vernon and Great Ogeechee Rivers. Occasionally used for special dispatch service, between February and May she joined Coast Survey steamer *Bibb* on an important coastal survey in the sounds and rivers of the Georgia coast. She resumed picket duty 2 May and operated along the Georgia and Florida coasts until departing Ossabaw Sound for Boston 25 July. She arrived Boston Navy Yard 7 August; decommissioned 16 August; and was sold to C. H. Miller by public auction 8 September.

George Washington

George Washington was born 22 February 1732 in Westmoreland County, Va. He was commissioned in the Virginia Militia in 1753, rose to the rank of Lieutenant Colonel the next year, and fought brilliantly in the French and Indian War. Entering the Virginia House of Burgesses in 1759, Washington was an early advocate of independence. In 1775 he was appointed Commander in Chief of the Continental Army, and demonstrated a profound appreciation of sea power as well as great military genius. After years of hardship and arduous struggle, he finally won a decisive victory at Yorktown. In directing Allied movements during this campaign, one of the great strategic operations of our history, Washington brilliantly employed the French Navy to cut off Lord Cornwallis from help by sea. He had sought a decisive combined operation like this for years, for he wrote "In any operations, and under all circumstances a decisive Naval superiority is to be considered as a fundamental principle and the focus upon which every hope of success must ultimately depend."

The Treaty of Paris recognized American independence 20 January 1783. After attending the Annapolis Convention of 1786 and presiding over the Continental Convention of 1787, Washington was unanimously elected first President under the new Constitution and inaugurated 30 April 1789. His two terms in office laid the foundations for strong government under the Constitution. Returning to his home at Mount Vernon in 1797, Washington was recalled briefly to command the American army when war with France threatened in 1798. He died at Mount Vernon 14 December 1799.

I

(Slp: t. 624 ; l. 108' ; b. 32'6" ; dph. 14' ; cpl. 220 ; a. 24 9-pdrs. ; 8 6-pdrs.)

The first *George Washington* was built as a merchant vessel at Providence, R.I., in 1793; purchased by the Congress at Providence 12 October 1798 from John Brown and John Francis for use in the developing undeclared war with France; and converted to a warship under the supervision of Captain Silas Talbot, Captain Patrick Fletcher in command.

George Washington proceeded in early December to Dominica, West Indies, to join Commodore Barry's squadron for the protection of American commercial interests in the area. She rendezvoused with Barry in *United States* at sea 29 December and arrived Dominica next day. For the next months she convoyed American ships in the West Indies, sailing from St. Christopher's Island to Tobago. During this time, in company with revenue cutter *Pick-*

President Wilson—homeward bound in USS *George Washington*—giving his Fourth of July Address in 1919

ering, she recaptured two American ships from the French—brig *Fair American* 29 April 1799, and schooner *Francis* 1 May 1799.

The ship departed the Caribbean in mid-1799, arriving Newport, R.I., 12 June 1799, and after a short stay sailed again 2 July. On this cruise she searched the coast for French privateers as far south as Charleston, and then took station off Santo Domingo protecting American commerce. *George Washington* returned to the United States in October 1799 for extensive repairs.

George Washington was taken to Philadelphia in April 1800 and there prepared for sea under the command of Captain William Bainbridge. Lacking a strong Navy, the United States accepted the questionable alternative of trying to protect its commerce from the Barbary pirates with tribute. Bainbridge sailed with a load of stores and timber for the Dey of Algiers 8 August. *George Washington* arrived safely in September, the first American warship to enter the Mediterranean. Unhappily, Bainbridge had to accede to threats and carry the Dey's presents to the Sultan at Constantinople. He protested vigorously; but, in the face of concentrated guns ashore and the threat of retaliation on American shipping he departed 20 October. *George Washington* returned to Algiers 21 January 1801, and after a visit to Alicante, France, arrived back in the United States 19 April 1801.

The ship underwent repairs and was again fitted to carry stores and timber to Algiers. Manned with only a

partial crew, she sailed 20 July 1801 and arrived Algiers via Malaga, Spain, 5 October 1801. After calling at Italian and French ports she returned to Philadelphia about 15 April 1802. *George Washington* was sold in May 1802 by the Philadelphia Navy Agent, George Harrison.

II

(AP: dp. 33,000; l. 722'5"; b. 78'; dr. 36'; s. 19 k.; epl. 749; a. 4 5")

The second *George Washington* was built as German passenger liner *George Washington* by the Vulcan Works, Stettin, Germany; and launched 10 November 1908. She was operated by the North Germany Lloyd Line until World War I when she sought refuge in New York, a neutral port in 1914. With the American entry into the war in 1917, *George Washington* was taken over 6 April and towed to the New York Navy Yard for conversion into a transport. She commissioned 6 September 1917, Captain Edwin T. Pollock in command.

George Washington sailed with her first load of troops 4 December 1917 and during the next 2 years made 18 round trip voyages in support of the A.E.F. During this period she also made several special voyages. President Wilson and the American representatives to the Paris Peace Conference sailed for Europe in *George Washington* 4 December 1918. On this crossing she was protected by

USS *George Washington*, bearing President Wilson, enters New York Harbor 8 July 1919.

Pennsylvania, and was escorted into Brest, France, 13 December by nine battleships and several divisions of destroyers in an impressive demonstration of American naval strength. *George Washington* also carried Assistant Secretary of the Navy Franklin Roosevelt and the Chinese and Mexican peace commissions to France in January 1919 and on 24 February returned President Wilson to the United States. The President again embarked on board *George Washington* in March 1919; arriving France 13 March, and returned at the conclusion of the historic conference 8 July 1919.

During the fall of 1919, *George Washington* carried another group of distinguished passengers—the King and Queen of Belgium and their party. Arriving New York 2 October, the royal couple paid a visit before returning to Brest 12 November. Subsequently, the ship decommissioned 28 November 1919 after having transported some 48,000 passengers to Europe and 34,000 back to the United States. *George Washington* was turned over to USSB 28 January 1920 and in 1921 was used to transport 250 members of the American Legion to France as guests of the French Government. The vessel was then reconditioned by USSB for transatlantic service, and chartered by the U.S. Mail Steamship Company, for whom she made one voyage to Europe in March 1921. The company was taken over by the Government August 1921 and its name changed to the United States Lines. *George Washington* served the Line on the transatlantic route until 1931 when she was laid up in the Patuxent River, Md.

George Washington was reacquired for Navy use from the Maritime Commission 28 January 1941 and commis-

sioned *Catlin* (AP-19) 13 March 1941 in honor of Brigadier General Albertus W. Catlin, USMC. It was found, however, that the coal-burning engines did not give the required speed for protection against submarines, and she decommissioned 26 September 1941. Because of their great need for ships in 1941, Great Britain took the ship over under lend lease 29 September 1941 as *George Washington*, but they too found after one voyage to Newfoundland that her engines rendered her unfit for combat service and returned her to the WSA 17 April 1942.

The ship was next operated under General Agency Agreement by the Waterman Steamship Co., Mobile, Ala., and made a voyage to Panama. After her return 5 September 1942 the WSA assigned *George Washington* to be converted to an oil-burner at Todd Shipbuilding's Brooklyn Yard. When she emerged 17 April 1943, the transport was chartered by the Army and made a voyage to Casablanca and back to New York with troops April to May 1943. In July she sailed from New York to the Panama Canal, thence to Los Angeles and Brisbane, Australia. Returning to Los Angeles, she sailed again in September to Bombay, India, Capetown, and arrived at New York to complete her round-the-world voyage in December 1943. In January 1944 *George Washington* began regular service to the United Kingdom and the Mediterranean, again carrying troops in support of the decisive Allied onslaught on Europe from the sea. She made frequent stops at Le Havre, Southampton, and Liverpool.

George Washington was taken out of service and returned to the Maritime Commission 21 April 1947. She

remained tied to a pier at Baltimore, Md., until a fire damaged her 16 January 1951 and she was subsequently sold for scrap to Boston Metals Corp. 13 February 1951.

III

(SSB(N)-598: dp. 5600; l. 382'; b. 33'; dr. 29'; s. over 20 k.; cpl. 120 a. 16 Pol. mis.; cl. *George Washington*)

George Washington (SSB(N)-598) was originally *Scorpion* (SS(N)-589). She was lengthened by the insertion of a 130-foot missile section. Renamed *George Washington*, she was launched 9 June 1959 by the Electric Boat Division of General Dynamics Corp., Groton, Conn.; sponsored by Mrs. Robert B. Anderson, and commissioned 30 December 1959, Cdr. James B. Osborn (blue crew) and Cdr. John L. From, Jr. (gold crew) in command.

The first of a new class, *George Washington* sailed from Groton 28 June 1960 for Cape Canaveral, Fla., where she loaded two solid propellant Polaris missiles. Standing out into the Atlantic Missile Test Range with Rear Admiral W. F. Raborn, head of the phenomenal Polaris Submarine development program on board as an observer, the nuclear submarine made history 20 July 1960 when she successfully launched the first Polaris missile from a submerged submarine—the free world everywhere had gained a weapon of utmost importance to the protection of civilization. At 1239 *George Washington's* commanding officer sent President Eisenhower the historic message: "Polaris—from out of the deep to target. Perfect."

Less than 2 hours later another missile from the submerged submarine homed in on the impact area 1,100 miles down range. A new and mighty weapon had been added to the vast power of the sea.

George Washington returned to Cape Canaveral to embark her gold crew, and 30 July 1960 duplicated her earlier successes by launching two more missiles while submerged. Shakedown for the gold crew ended at Groton 30 August and the submarine got underway from that port 28 October for Charleston, S.C., to load her full complement of 16 Polaris missiles. There she was awarded the Navy Unit Commendation, after which her blue crew took over; and *George Washington* embarked on her first patrol.

The submarine completed her first patrol after 66 days of submerged running 21 January 1961 and put in at New London, Conn. The gold crew took over; and she departed on her next patrol 14 February. After the patrol *George Washington* entered Holy Loch Scotland, 25 April 1961. Through 1964 she continued to conduct classified deterrent patrols from that port, alternating her two crews. An incredible four years after her initial departure from Groton she put in to refuel, having cruised some 100,000 miles guarding the seas for America. Her powerful missiles are recognized everywhere as an important factor in the maintenance of peace and freedom throughout the world.

After overhaul and refueling at the Electric Boat Co. in Groton, *George Washington* resumed her patrols and once

USS *George Washington* (SSB(N)-598), the world's first fleet ballistic missile submarine, was operational two years ahead of schedule.

Captain Osborn reporting on success of the first missile firing

again was on the line in her role as a deterrent to war in European waters. She ended her 16th patrol at Holy Loch, Scotland, in August 1966 and departed on her 17th patrol late in September, continuing her proud record of service in the interest of peace and freedom.

George Washington Carver

George Washington Carver was born in 1864 on a plantation near Diamond, Mo. His parents were Negro slaves owned by Moses Carver. When he was only a few months

Marion Anderson christening, USS *George Washington Carver* (SSB(N)-656) on 14 August 1965

USS *George Washington Carver*—down the ways

old, he and his mother were stolen by raiders and taken to Arkansas. After the end of the Civil War, he was recovered by his owner with whose family he remained until he set out to make his own way in the world at about the age of 9.

Overcoming prejudice and poverty, he eagerly seized every opportunity to acquire an education. He studied agricultural science at Iowa State College, graduating in 1894 and receiving a Master of Science degree 2 years later. After serving briefly on the faculty there, he joined Booker T. Washington at Tuskegee Normal and Industrial Institute, where he headed the Agricultural Department.

In the ensuing years, his achievements in the fields of soil conservation, crop diversification, and utilization of southern plants and crops won him worldwide acclaim. He is remembered for the ingenuity which enabled him

to discover some 300 new and useful products from the peanut, over 100 from the sweet potato, and about 60 from the pecan. He also found new uses from cotton, cowpeas and wild plums. He selflessly refused offers of fortunes for the commercial exploitation of his discoveries, choosing rather to give them freely to mankind.

An indefatigable researcher and inventor, George Washington Carver died in Tuskegee, Ala., 5 January 1943.

(SSB(N)-656: dp. 7,250; l. 425; b. 33'; dr. 33'; s. over 20 k.; cpl. 100; a. 16 A-3 Pol. mis., 4 21'' tt.; cl. *Benjamin Franklin*)

George Washington Carver (SSB(N)-656) was laid down by Newport News Shipbuilding & Dry Dock Co. 24 August 1964; launched 14 August 1965; sponsored by Miss

Marian Anderson; and commissioned 15 June 1966, Captain R. D. Donovan (blue crew) and Lt. Comdr. Carl J. Lidel (gold crew) in command.

Following shakedown, *George Washington Carver* prepared for her role as one of the Navy's nuclear-powered Polaris submarines silently and invisibly roving the seas as a mighty deterrent against aggression, preserving peace and protecting freedom. Her first patrol began 12 December 1966.

George Washington Parke Custis

George Washington Parke Custis, born in 1781 at Mount Airy, Md., was the son of John P. Custis, George Washington's stepson, and the father-in-law of General Robert E. Lee. Custis won fame as a writer and producer of plays. His best known work was *Pocahontas, or the Settlers of Virginia*. He died at Arlington in 1857.

(Bar: t. 120 (net) : b. 14'6" ; dph. 5'6")

George Washington Parke Custis, a coal barge built in the mid-1850's, was purchased by the Navy in August 1861; fitted out with a gas-generating apparatus developed by Thaddeus Lowe; and modified by John A. Dahlgren at the Washington Navy Yard for her service as a balloon boat.

Early in the morning of 10 November 1861, steamer *Coeur de Lion* towed *George Washington Parke Custis* out of the Navy Yard and down the Potomac. The next day Lowe, accompanied by General Daniel E. Sickles and others, ascended in his trial balloon from the barge off Mattawomen Creek to observe Confederate forces on the Virginia shore some 3 miles away.

On the 12th Lowe reported: "We had a fine view of the enemy camp fires during the evening and saw the rebels constructing batteries at Freestone Point." This operation and John La Mountain's earlier ascension from *Fanny* began the widespread use of balloons for reconnaissance work during the Civil War and foreshadowed the Navy's future use of the air to extend its effective use of sea power.

George Whitlock, see YO-57

Georgetown

Communities in 22 States.

(AG-165: dp. 8,345 (lt.); l. 441'6"; b. 56'11"; dr. 22'9"; s. 11 k.; cpl. 213; a. none; cl. *Oxford*; T. Z-EC2-S-C-5)

Georgetown (AG-165), a converted "Liberty-type" cargo ship, was laid down as *Robert W. Hart* under Maritime Commission contract 4 May 1945 by New England Shipbuilding Corp., South Portland, Maine; launched 10 July 1945; sponsored by Mrs. Fred W. Woolsey; and delivered under General Agency Agreement from WSA to Agwilines, New York, N.Y., 2 August 1945.

Robert W. Hart sailed in merchant service until entering the National Defense Reserve Fleet, Wilmington, N.C., in December 1946. She was chartered by Waterman Steamship Corp., Mobile, Ala., 31 January 1947 and operated under bareboat charter until 29 October when she entered the National Defense Reserve Fleet, Jamestown, Va. Acquired by the Navy 10 August 1962, she was taken to Newport News Shipbuilding & Dry Dock Co., Newport News, Va., for conversion to a technical research ship; renamed *Georgetown* (AG-165) 6 March 1963; and commissioned at Norfolk 9 November 1963, Comdr. W. A. Gleason in command.

Equipped with the latest communications and electromagnetic research installations, *Georgetown* sailed for shakedown at Guantanamo Bay, Cuba, 2 January 1964. She was reclassified AGTR-2 on 1 April 1964 and began her operational service 13 April. Assigned to Service Squadron 8, she operated in the Caribbean until June, then departed Norfolk 30 June on a 4-month deployment along the eastern coast of South America. After participating in electronic research programs, she returned to Norfolk 26 October.

Departing Norfolk 5 January 1965, *Georgetown* steamed via the Panama Canal to the Southeast Pacific for research operations off the coast of Chile. Before returning to Norfolk 14 May, she also operated in the Caribbean. Between 20 July and 13 October she again operated off the eastern coast of South America; and, after returning to Norfolk, she received new electronics equipment, including a Communications Moon Relay System. She departed Norfolk 14 December and resumed important research and test equipment operations in the Caribbean and equatorial Pacific. The year 1966 was a busy one for *Georgetown*. Besides an outstanding performance gathering valuable information about the ocean, she made two rescues at sea, transited the Panama Canal four times, passed through the eye of a hurricane, and won the Battle Efficiency "E."

At present *Georgetown* continues a long-standing Navy tradition of maintaining the highest standards in scientific research requirements.

Georgetown, see *Linnet* (IX-166)

Georgia

One of the 13 original colonies.

(BB-15: dp. 14,948 (n.); l. 441' 3"; b. 76' 3"; s. 19 k.; cpl. 812; a. 4 12", 8 8", 12 6")

Georgia was launched by the Bath Iron Works of Bath, Maine, 11 October 1904, sponsored by Miss Stella Tate, and commissioned at Boston Navy Yard 24 September 1906, Captain R. G. Davenport in command.

After *Georgia* was fitted out and completed a short shakedown cruise, she joined the Atlantic Fleet as flagship of Division 2, Squadron 1. *Georgia* departed Hampton Roads 26 March 1907 for Guantanamo Bay, Cuba, where she participated in gunnery practice with the fleet. After returning briefly to Boston Navy Yard for repairs, *Georgia* joined with other ships of the Atlantic Fleet in ceremonies opening the Jamestown Exposition. President Roosevelt and dignitaries present reviewed the fleet 10 June 1907, and 11 June was proclaimed "Georgia Day" at the exposition in special ceremonies aboard *Georgia*.

Georgia next sailed with the fleet for target practice in Cape Cod Bay, arriving 15 June. During these drills 15 July, a powder charge ignited prematurely in her aft 8" turret, killing 10 officers and men and injuring 11. Condolences for the loss from this tragic accident were received from all over the world.

The powerful battleship then participated in the tercentenary of the landing of the first English Colonists 16 to 21 August 1907, after which she rejoined the fleet for battle maneuvers before mooring at League Island, N.Y., 24 September, for overhaul.

Arriving in Hampton Roads 7 December 1907, *Georgia* gathered with 15 other battleships, a torpedo boat squadron, and transports for the great naval review preceding the cruise of the Atlantic Fleet to the West Coast. On 16 December President Roosevelt reviewed the assembled "Great White Fleet" and sent it on the first leg of an around-the-world voyage of training, and building of American prestige and good will. Visiting many South American countries on their highly successful cruise, the fleet met with ships of the Pacific Fleet in another review in San Francisco Bay for the Secretary of the Navy 8 May 1908. Then *Georgia*, in company with other battleships and supply vessels, departed San Francisco 7 July 1908 for the second leg of the cruise, showing the flag and bringing the message of American sea power to many parts of the world, including the Philippine Islands, Australia, Japan, and Mediterranean ports. The fleet returned to Hampton Roads 22 February 1909.

Georgia continued to serve with the Atlantic Fleet in exercises and battle maneuvers, with periods of overhaul interspersed, until 2 November 1910 when President Taft reviewed the fleet prior to its departure for France. In

USS *George Washington Parke Custis*, a Civil War balloon boat

an elaborate battle and scouting problem, *Georgia* and the other battleships continued their training, visiting Weymouth, England, and returning to Guantanamo Bay, Cuba, 13 March 1911.

From 1911 to 1913, *Georgia* continued to train and serve as a ceremonial ship, and 5 June 1913 participated in a 2-month practice cruise for Naval Academy Midshipmen. After a long overhaul period in Boston Navy Yard, *Georgia* arrived off the coast of Mexico 14 January 1914 with other fleet units to protect American interests in the troubled Vera Cruz-Tampico area. The busy battleship returned briefly to Norfolk, Va., in March, but was soon back cruising Mexican waters, and from August to October 1914 cruised off Haiti for the protection of American civilians in that country.

After another period of overhaul, *Georgia* joined the fleet off Cuba 25 February 1915 for winter maneuvers, and spent the rest of the year in training and ceremonial duties with the Atlantic Fleet Battleship Force. She arrived at Boston Navy Yard for overhaul 20 December 1915 and decommissioned 27 January 1916.

Assigned as a receiving ship at Boston, *Georgia* was called to duty at the outbreak of World War I, and commissioned again 6 April 1917. For the next 18 months, she operated with the 3d Division, Battleship Force, in fleet tactical exercises and merchant crew gunnery training, based in the York River, Va. She joined with Cruiser Force Atlantic briefly in September 1918 to escort convoys to meet their eastern escorts, and beginning 10 December 1918 was fitted out as a transport and attached to the Cruiser and Transport Force for the purpose of

returning troops of the A.E.F. to the United States. *Georgia* made five voyages to France from December 1918 to June 1919 and brought home nearly 6,000 soldiers.

Georgia was next transferred to the Pacific Fleet as flagship of Division 2, Squadron 1. She left Boston for San Diego, via the Panama Canal, 16 July 1919, and after participating in ceremonial operations for 2 months, entered Mare Island Naval Shipyard for repairs 20 September 1919. Here *Georgia* stayed until decommissioning 15 July 1920. She was eventually sold for scrap 1 November 1923 in accordance with the Washington Treaty for the limitation of naval armaments, and her name was struck from the Navy List 10 November 1923.

Georgia Packet

(Sch)

Georgia Packet, a small schooner, was used by the Marine Committee of the Continental Congress during the Revolutionary War to carry messages and cargo between Philadelphia and the State of Georgia. Records indicate that she was fitted out and ready for sea at Philadelphia in November 1776, and was sent under Lt. Isaac Buck to Savannah, Ga., where she delivered messages and supplies to Continental Agent John Wreath. *Georgia Packet* returned to Philadelphia 6 January 1777, and by 19 February had loaded another cargo to be taken to Georgia. She was also instructed by the Marine Committee to take prizes, but so far as is known made no captures.

Husband E. Kimmel

USS *Georgia* (BB-15)—Admiral Husband E. Kimmel served in her 1907 to 1908.

Georgiana

A British name retained.

(Ship: t. 280; cpl. 42; a. 16 guns)

The British whaler *Georgiana* was captured off the Galapagos Islands 29 April 1813 by boats from frigate *Essex*, flagship of Captain David Porter. One of three prizes taken that day during Porter's campaign to destroy British whaling ships found in the equatorial Pacific, she was thought a fast sailer and apparently well-calculated for a cruiser. She had been built for service of the English East India Company. Referred to by Captain Porter as a "letter of marque ship, armed with 6 18-pdrs., 4 swivels, and 6 long blunderbusses," she was fitted as a cruiser and commissioned 8 May 1813, Lt. John Downes in command.

Departing 12 May, *Georgiana* cruised off the Galapagos in search of British whaling ships. While sailing near James' Island 28 May, she met *Catherine* and *Rose* and captured them with no resistance. She then chased a third whaler *Hector* and engaged in a brief, but sharp, combat which brought down the whaler's main-topmast and most of her standing and running rigging. After capturing *Hector*, *Georgiana* placed the whaling crews in *Rose* and ordered them under parole to St. Helena in the south Atlantic. Escorting her other two prizes, she rejoined *Essex* at Tumbes, Peru, 24 June.

Georgiana departed Tumbes 30 June and sailed for the Galapagos with *Essex* and her prizes. On 13 July she aided *Greenwich* during a spirited encounter with *Seringapatam*, a 357-ton whaler-cruiser. One of three whalers taken that day, *Seringapatam* was fitted out to replace *Georgiana*. Despite her valuable captures, *Georgiana* had proved to be a dull sailer. She was loaded with a full cargo of sperm oil; and, manned by a prize crew under Lt. James Wilson, she departed the Galapagos for the United States 25 July. While sailing off the East Coast early in 1814, she was recaptured by the British frigate *Barrosa*.

Georgiana III

A former name retained.

(SP-83: t. 82; l. 95'; b. 15'; dr. 6'; s. 15 k.; cpl. 18; a. 2 3-pdrs., 1 .30 cal. mg.)

Georgiana III, an iron-hulled yacht, was built in 1916 by Harlan & Hollingsworth Corp., Wilmington, Del.; acquired by the Navy 3 May 1917 from her owner, Edward T. Stotesbury, Philadelphia; taken over 11 May 1917; and commissioned at Philadelphia the same day, Lt. J. H. R. Cromwell, USNRF, in command.

Assigned to the 4th Naval District, *Georgiana III* steamed to Wilmington 26 May for conversion to a section patrol boat by Harlan & Hollingsworth. On 25 July she reported for harbor entrance patrol duty at Cape May, N.J.; and during World War I she patrolled the entrance to Delaware Bay, cruising between Cold Spring Harbor, N.J., and Lewes, Del. Fitted with underwater listening gear in July 1918, she also escorted ships through the Defensive Sea Area of Delaware Bay. After the Armistice, *Georgiana III* decommissioned at Essington, Pa., 30 November and was returned to her owner.

Geraldine

A former name retained.

(SP-1011: t. 22; l. 67'; b. 13'; dr. 4'; s. 11 k.; cpl. 8; a. 1 3-pdr., 1 1-pdr.)

Geraldine, a motor patrol boat, was built as *Albion* in 1916 by George Lawley & Sons, Neponset, Mass.; acquired by the Navy 24 July 1917 from her owner, Frederick S. Fish, South Bend, Ind.; taken over at Chicago 8 September 1917; and commissioned 13 September 1917, Ens. F. S. Fish, USNRF, in command.

Assigned to the 9th Naval District, *Geraldine* operated

as a section patrol boat out of Great Lakes, Ill., and cruised Lake Michigan until winter 1917 when she was laid up at Chicago. Returning to Lake Michigan 6 April 1918, *Geraldine* resumed her patrol and guard duties, and served as a dispatch boat in the Sault St. Marie area from 12 May to 19 August. After the Armistice, her name was struck from the Navy List 17 December; and she was returned to her owner 7 January 1919.

Geranium

Any of numerous plants or flowers of the allied genus *Pclargonium*, usually having red, pink, or purple flowers and leaves with a pungent odor.

(SwTug: t. 223; l. 128'6"; b. 23'3"; dph. 8'; s. 10 k.; cpl. 39; a. 1 20-pdr. P.r., 2 12-pdr. r.)

Geranium, formerly *John A. Dix*, was built at Newburgh, N.Y., in 1863; purchased by the Navy at New York City 5 September 1863; and commissioned at New York Navy Yard 15 October 1863, Acting Ens. G. A. Winsor in command.

Geranium departed New York 20 October for duty off Charleston, S.C., with Rear Admiral J. A. Dahlgren's South Atlantic Blockading Squadron. Arriving 4 November, for the next 6 months she operated as a picket boat and was frequently employed as a dispatch boat and light transport to such diverse stations as Ossabaw Sound, S.C., and St. John's River, Fla. Occasionally, she transported Admiral Dahlgren during visits to various ships of his squadron.

Between 3 and 10 July 1864, *Geranium* participated in a diversionary expedition up the Stono and North Edisto Rivers south of Charleston to divert Confederate attention from the Charleston blockade and to cut the important Charleston and Savannah Railroad. She supported the movement of troops under General Birney up the North Edisto River, towing and transporting supplies for the expedition. On 3 July she contacted and engaged a strong Confederate battery at the mouth of the Dawhoo River, a bombardment which Admiral Dahlgren reported was "done very handsomely." After completing demonstration operations, she supported the withdrawal of Federal troops from the tidewater islands south of Charleston.

Continuing her picket, dispatch, and transport duties from 12 to 17 February 1865, *Geranium* participated in joint Army-Navy operations at Bull's Bay north of Charleston, and on the 16th and 17th she supported diversionary amphibious landings which hastened the Confederate evacuation of Charleston the following day. Admiral Dahlgren then ordered her to the mouth of the Santee River, where she supported naval operations against Georgetown, S.C., before departing 28 February on a reconnaissance mission up the Santee. With launches *Lilly* and *Eva* in tow she ascended as far as Black Oak Island and gained valuable information about the depth and navigability of the river. As a result of this intelligence, General Sherman's troops could be supplied from transports on the Santee rather than solely by railroad.

Geranium remained along the South Carolina coast until after the end of the war. Departing Charleston 17 June, she steamed with *Iris* and *Pawnee* (Admiral Dahlgren embarked) and arrived Washington 21 June. *Geranium* decommissioned there 15 July and was sold 18 October to the Treasury Department for use in the Lighthouse Service.

Germ

That from which anything springs or starts.

(HwStr: l. 60'; b. 9'; dr. 2'; s. 9 k.)

Germ, a small experimental steamer, was built privately at Gosport Navy Yard in 1841, apparently through the cooperation and assistance of the Navy Department. Designed to illustrate Lt. William W. Hunter's idea of

propelling a ship by submerged horizontal paddle wheels, she made a trial trip around Norfolk harbor in March 1841. Locally, it was reported that the efficacy of Hunter's horizontal wheels was "practically proven." After two test voyages to the Dismal Swamp Canal during June, she steamed to Washington, where she was examined during the summer by interested government officials. She returned to Norfolk, then steamed to Philadelphia, New York City, and via the Erie Canal to Lake Ontario. In July 1842 *Germ* was reported as "running successfully as a packet" on Albermarle Sound, N.C.

Apparently convinced that Hunter's idea merited a full-size trial, the Navy Department detailed Hunter to superintend the construction of *Union* (q.v.). Launched at Norfolk 12 May 1842, she was propelled by a refined version of the two submerged horizontal paddle wheels. Subsequently, the Navy built the steamer *Water Witch* (q.v.) and the steam gunboat *Alleghany* (q.v.) on the same principle; but by 1849, the Navy had abandoned Hunter's wheels as an inefficient method of ship propulsion.

Germantown

A town in Pennsylvania, now a residential section of Philadelphia, and the scene of the Revolutionary War battle 4 October 1777 between General Washington's troops and the British under Sir William Howe.

(SlpW: t. 939; 1. 150°00'' (bp.); b. 36°00'' (md.); dph. 16'8''; s. 11 k.; cpl. 210; a. 4 8', 18 32-pdrs.)

Germantown, a sloop-of-war, was launched at the Philadelphia Navy Yard 22 August 1846; sponsored by Miss Lavinia Fanning Watson; because of damaging ice, transferred 18 December to Norfolk Navy Yard for fitting out; and commissioned 9 March 1847, Comdr. Franklin Buchanan in command.

Germantown departed Norfolk 15 March for service during the Mexican War with Commodore M. C. Perry's Home Squadron. Reaching Sacrificios Island 1 April, she stood off Alvarado the following day when that town surrendered "without firing a gun." She then sailed with the squadron to Tuxpan, which Perry described as the "only fortified place of importance situated on the gulf coast not in our possession." With the landing force of seamen and marines her detachment crossed the bar 18 April and successfully stormed the Mexican fortifications. As "a point of honor as well as duty," they reclaimed guns and ordnance stores, seized by the enemy from the wrecked brig *Truettun*.

After cruising the coast of Lobos Island, *Germantown* furnished 130 men to assist in the second expedition against Tobasco. Between 13 and 16 June the force under Commodore Perry razed the defenses and occupied the town. During the next 6 months she cruised the Mexican coast from Vera Cruz to Tuxpan, blockading Mexican ports on the Gulf Coast; and between 9 August and 10 November she served as Commodore Perry's flagship. Returning to Sacrificios Island 8 January 1848, she took on board the remains of gallant American dead and departed for the United States 15 January. Steaming via Havana Cuba she arrived Norfolk 16 February and decommissioned for repairs 25 February.

Germantown recommissioned 8 April, Comdr. Charles Lowndes in command. Departing Norfolk 25 April, she returned to Vera Cruz 19 May to again serve with Commodore Perry's Home Squadron. While off Laguna de Terminos 3 June, she received news of the ratification of the Treaty of Guadalupe Hidalgo. She returned to Vera Cruz 9 July; and, after receiving government dispatches, she departed Punta de Anton Lizardo 29 August and sailed to Pensacola, Fla., where she arrived 12 September.

Departing 1 October, *Germantown* sailed to the West Indies and arrived on station at St. Thomas, Virgin Islands, 28 October. She actively cruised off the Virgin Islands until 30 June 1849 when she sailed for the United States. After touching at Key West and Norfolk, she

resumed her station off St. Thomas 10 February 1850 and protected American commerce until again ordered to the United States 8 August. She reached New York 11 September and decommissioned 21 September.

Recommissioned 23 December, Comdr. J. D. Knight in command, *Germantown* was assigned as flagship of Commodore E. A. F. Lavallette's African Squadron 10 January 1851. She departed 12 April; sailed via the Madeira Islands to the Cape Verde Islands; and arrived Porto Praya 14 May to relieve sloop-of-war *Plymouth*. Operating out of Porto Praya with sloops *Dalc* and *John Adams* and brigs *Perry* and *Porpoise*, she spent almost the next 2 years cruising the South Atlantic to St. Helena Island and along the African coast from Cape Mesurado to Loando, Portuguese West Africa. During this time the squadron "rendered aid to our countrymen, gave protection to our commerce and security to the emigrants and missionaries located on the coast, and as far as practicable," reported Commodore Lavallette, "checked the slave traders in their abominable traffic." On 8 February 1853 she seized the American schooner *Rachel P. Brown* and sent the suspected slave ship to Norfolk. Relieved on station by famed frigate *Constitution*, she departed Porto Praya 4 March; during her homeward voyage, she collected data for Lt. M. F. Maury's world-wide wind and current survey. She reached Boston 30 March and decommissioned 9 April.

Germantown recommissioned 23 November, Comdr. W. F. Lynch in command, and sailed 3 December for service in Commodore W. D. Salter's Brazil Squadron. Arriving Rio de Janeiro, Brazil, 16 January 1854, she joined frigate *Savannah*, brig *Bainbrige*, and storeship *Relief* and cruised the South Atlantic from Bahia, Brazil, to Buenos Aires, Argentina. During much of 1855 she maintained station off Montevideo, Uruguay, where political disturbances and revolutionary activities threatened the lives and property of foreign nationals. Comdr. Lynch sent a Marine detachment ashore 28 August to protect American interests; during an insurrection 3 months later a landing party of sailors and marines under Lt. A. S. Nicholson assisted forces from ships of three other nations in guarding consulates and the customhouse. After completing duty with the Brazil Squadron, she departed Bahia 8 January 1857; reached Hampton Roads 9 February; and decommissioned 3 days later.

Germantown again recommissioned 15 July, Comdr. R. L. Page in command, for duty in the Far East. Departing Norfolk 4 August, she sailed via the Cape of Good Hope to Ceylon, where in 22 December she joined Flag Officer Josiah Tattnall's East India Squadron off Point de Gala. For 2 years she cruised Far Eastern waters and visited the principal ports of China and Japan, where she found "uniform friendly reception" as the squadron guarded American interests in the Orient. Sailing via the Cape of Good Hope, she returned to Norfolk in April 1860 and decommissioned the 18th.

Completely equipped for sea and awaiting a crew, *Germantown* was scuttled at Gosport Navy Yard 20 April 1861 as Union forces evacuated Norfolk. The Confederates raised her in June; fitted her out as a floating battery to serve near Craney Island for the protection of Norfolk; then sank her as an obstruction in the Elizabeth River shortly before evacuating Norfolk 10 May 1862. Raised by Union forces 22 April 1863, *Germantown* saw no further service. Her hulk was sold by auction at Norfolk 8 February 1864.

Geronimo

Geronimo, the great Chief of a Chiricahua band of Apache Indians, was born about 1829 in the Territory of Arizona. A champion of his people and fighter against restrictions placed upon them, he escaped from custody time and time again to lead bands of Apaches in retaliatory actions until he finally agreed to surrender to General Nelson A. Miles in 1886. Geronimo was later settled in Alabama with a number of his tribe, finally transferring to Fort Sill in present Oklahoma. He died in 1909.

I

(YT-119: dp. 270; l. 110' 6"; b. 24'; dr. 8' 1")

The first *Geronimo* (YT-119), a harbor tug, was built at the Navy Yard, Boston, Mass., and commissioned at Boston 7 March 1933 as YT-119. She was named *Geronimo* and reclassified YTM-119, 15 May 1944. She served in the 14th Naval District at Pearl Harbor as a service craft until being placed out of service at Honolulu 30 August 1946. *Geronimo* was struck from the Navy List 30 December 1946 and was sold by the War Assets Administration to John Hanson 13 July 1948.

II

(ATA-207: dp. 835; l. 143'; b. 33' 10"; dr. 13' 2"; s. 13 k., cpl. 45; a. 1 3")

The second *Geronimo* (ATA-207) an auxiliary ocean tug, was built by the Gulfport Boiler and Welding Works of Port Arthur, Tex., and originally designated *ATR-134*. Launched 4 January 1945 as *ATA-207*, she commissioned 1 March 1945, Lt. Joseph K. Hawkins in command. Her name was assigned 16 July 1948.

ATA-207 completed shakedown training off Galveston, Tex., and then reported to Tampa, Fla., to pick up a barracks ship to be towed to the Pacific. She transited the Panama Canal with her tow 15 April, and arrived Leyte, P.I., via Pearl Harbor, 25 June 1945. She departed for Guadalcanal 2 July to serve as harbor and rescue tug at Lunga Point Naval Base. On 21 July she departed Lunga Point for Leyte with cargo lighters in tow, arriving just after the surrender of Japan.

After the close of the Pacific war, *ATA-207* was active throughout the islands towing and performing rescue work. She carried sections of a dock to Eniwetok, Marshall Islands, in October, and served as a general harbor and towing tug at Noumea, New Caledonia. Later, she performed as a cargo tug, carrying RAAF equipment to Brisbane, where she arrived 29 April 1946. *ATA-207* then steamed to Pearl Harbor, arriving 13 June to assist SS *John Miller* from a reef at the entrance to the harbor. On her way back to California, the ship discovered disabled USAT *Peter M. Anderson* and brought her safely to San Pedro.

ATA-207 soon departed for Charleston, S.C., via the Panama Canal, and from there moved to her new base, New Orleans, arriving in September 1946. She spent nearly a year in numerous towing voyages in the Gulf region before decommissioning 19 September 1947 at Orange, Tex.

Assigned to the Reserve Fleet, *Geronimo* was taken to Chelsea, Mass., 20 September 1962 to be fitted out as an oceanographic and marine biological research ship. On loan from the Navy, she serves the Biological Laboratory, Bureau of Commercial Fisheries, Department of the Interior.

Gertrude

A former name retained.

(SeStr. t. 350; l. 156'; b. 21'; dph. 11'; a. 2 12-pdr. r., 6 24-pdr. how.)

Iron steamer *Gertrude*, a British blockade runner, was built in Greenock, Scotland, in 1863. She was captured 16 April 1863 by *Vanderbilt* off Eleuthera Island and purchased from the New York Prize Court by the Navy 4 June 1863. *Gertrude* was fitted out at New York Navy Yard and commissioned there 22 July 1863, Acting Master Walter K. Cressy in command.

Assigned to the West Gulf Blockading Squadron under Rear Admiral Farragut, *Gertrude* arrived off Mobile in early August and on 16 August captured Confederate blockade runner *Warrior* following a 9-hour chase. After taking her prize to New Orleans, *Gertrude* was assigned blockade duty off that port. She served as a blockading ship, alternating between New Orleans and Mobile, until May 1864, and was credited with the capture of schooner

Ellen 16 January 1864. During this period she also spent short periods at Ship Island, Miss., and New Orleans for repairs.

Beginning in May 1864, *Gertrude* was assigned to blockade the Texas coast, and spent most of the next year off Galveston. She visited blockading stations off Sabine Pass and Velasco, and took blockade runner *Eco* off Galveston 19 February 1865. *Gertrude* also captured over 50 bales of cotton 19 April 1865 which were thrown overboard by famous Confederate blockade runner *Denbigh* during her escape from the blockading fleet.

Gertrude decommissioned 11 August 1865 at the Philadelphia Navy Yard and was sold 30 November at New York to George Wright. She was redocumented *Gussie Telfair* in 1866 and sailed as a merchantman until 1878.

Get There

A former name retained.

(SP-579: t. 15; l. 58' 2"; b. 10' 6"; dr. 3' 6"; s. 28 k., cpl. 8; a. 1 1-pdr., 2.30 cal. mg.)

Get There, a motor yacht, was built in 1916 by Wood & McClure of City Island, N.Y.; acquired by the Navy 28 June 1917 under free lease from her owners, J. S. Bache and F. L. Richards, New York City; taken over at New York 14 July 1917; and commissioned 10 August 1917, Boatswain F. L. Richards, USNRF, in command.

Assigned to the 3d Naval District, *Get There* served as a section patrol boat during World War I. She patrolled New York harbor and in wintertime laid up at the New York Navy Yard marine basin. After the Armistice, she decommissioned at New York 6 March 1919, and was returned to her owner, J. S. Bache, 1 October.

Gettysburg

A city in southern Pennsylvania, site of one of the most important battles of the Civil War 1-3 July 1863. It was at the dedication of the National Cemetery on the battleground 19 November 1863 that President Lincoln delivered his immortal Gettysburg Address.

(SwStr: t. 950; l. 221'; b. 26' 3"; dph. 13' 6"; s. 15 k., cpl. 96; a. 1 30-pdr. Parrott r., 2 12-pdr. r., 4 24-pdr. how.)

The first *Gettysburg*, formerly *Douglass*, then *Margaret and Jessie*, was built at Glasgow, Scotland, in 1858, and was captured as a blockade runner 5 November 1863 by *Fulton*, *Keystone State*, and *Nansemond* off Wilmington, N.C. She was purchased from the New York Prize Court by the Navy and commissioned *Gettysburg* at New York Navy Yard, 2 May 1864, Lieutenant Roswell H. Lamson commanding.

A fast, strong steamer, *Gettysburg* was assigned blockading duty with the North Atlantic Blockading Squadron, and departed New York 7 May 1864. She arrived at Beaufort, N.C., 14 May and from there took station at the entrance to the Cape Fear River.

For the next 7 months, *Gettysburg* was engaged in the vital business of capturing blockade runners carrying supplies to the strangling South. She captured several ships, and occasionally performed other duties. On 8 October, for instance, she rescued six survivors from schooner *Horne*, which had capsized in a squall.

Gettysburg took part in the attack on Fort Fisher 24-25 December 1864. *Gettysburg* assisted with the devastating bombardment prior to the landings by Army troops, and during the actual landings stood in close to shore to furnish cover for the assault. *Gettysburg's* boats were used to help transport troops to the beaches.

With the failure of the first attack on the formidable Confederate works, plans were laid for a second assault, this time including a landing force of sailors and marines to assault the sea face of the fort. In this attack, 15 January 1865, *Gettysburg* again engaged the fort in the

preliminary bombardment, and furnished a detachment of sailors under Lieutenant Lamson and other officers in a gallant assault, which was stopped under the very ramparts of Fort Fisher. Lamson and a group of officers and men were forced to spend the night in a ditch under Confederate guns before they could escape. Though failing to take the sea face of Fort Fisher, the attack by the Navy diverted enough of the defenders to make the Army assault successful and insure victory. *Gettysburg* suffered two men killed and six wounded in the assault.

Gettysburg spent the remaining months of the war on blockade duty off Wilmington, and operated from April to June between Boston and Norfolk carrying freight and passengers. She decommissioned 23 June 1865 at New York Navy Yard.

Recommissioning 3 December 1866, *Gettysburg* made a cruise to the Caribbean Sea, returning to Washington 18 February, where she decommissioned again 1 March 1867.

Gettysburg went back into commission 3 March 1868 at Norfolk and put to sea 28 March on special service in the Caribbean. Until July 1868, she visited various ports in the area protecting American interests, among them Kingston, Jamaica, Havana, Cuba, and ports of Haiti. Between 3 July and 13 August, *Gettysburg* assisted in the laying of a telegraph cable from Key West to Havana, and joined with scientists from the Hydrographic Office in a cruise to determine the longitudes of West Indian points using the electric telegraph. From 13 August 1868 to 1 October 1869, she cruised between various Haitian ports and Key West, again helping to maintain peace in the area and protecting American interests. *Gettysburg* arrived New York Navy Yard 8 October 1869, decommissioned the same day, and entered the Yard for repairs.

Gettysburg was laid up in ordinary until 6 November 1873, when she again commissioned at Washington Navy Yard. She spent several months transporting men and supplies to the various Navy Yards on the Atlantic coast, and 25 February 1874 anchored in Pensacola harbor to embark members of the survey team seeking routes for an inter-oceanic canal in Nicaragua. *Gettysburg* transported the engineers to Aspinwall Panama and Greystone, Nicaragua, and returned them to Norfolk 10 May 1874. After several more trips on the Atlantic coast with passengers and supplies, the ship again decommissioned 9 April 1875 at Washington Navy Yard.

Recommissioned 21 September 1875, *Gettysburg* departed Washington for Norfolk, where she arrived 14 October. Assigned to assist in another of the important Hydrographic Office expeditions in the Caribbean, she departed Norfolk 7 November. During the next few months she contributed markedly to safe navigation in the West Indies in surveys that led to precise charts. She returned to Washington with the scientific team 14 June, decommissioning 26 June.

Gettysburg recommissioned 20 September 1876, for special duty to the Mediterranean, where she was to obtain navigational information about the coasts and islands of the area. *Gettysburg* departed Norfolk 17 October for Europe. During the next two years, she visited nearly every port in the Mediterranean, taking soundings and making observations on the southern coast of France, the entire coastline of Italy, and the Adriatic Islands. *Gettysburg* continued to the coast of Turkey, and from there made soundings on the coast of Egypt and other North African points, Sicily and Sardinia.

While visiting Genoa, 22 April 1879, *Gettysburg* rescued the crew of a small vessel which had run upon the rocks outside the breakwater. Her iron plates corroded from years of almost uninterrupted service and her machinery weakened, *Gettysburg* decommissioned 6 May 1879 and was sold 8 May 1879.

II

(PCE-904: dp. 640; l. 184'6"; b. 33'1"; dr. 9'5"; s. 15.7 k.; epl. 99; a. 1 3", 4 20mm., 4 dcp., 1 dcp. (h.h.), 2 dct.; cl. PCE-842)

The second *Gettysburg* (PCE-904) was laid down 18

February 1943 by Willamette Iron & Steel Corp., Portland, Oregon; launched 9 September 1943; sponsored by Mrs. Margaret Mashofsky; and commissioned USS PCE-904 31 May 1945, Lt. Lloyd N. Emory in command.

PCE-904 was originally assigned to the Service Force, Pacific Fleet. Following the end of World War II, she operated out of Pearl Harbor, training naval reservists in the 14th Naval District. She decommissioned 5 January 1950 and recommissioned at New York 21 November. Assigned to the 3d Naval District as a Naval Reserve Training ship, she operated out of New York and later out of New London, Conn. PCE-904 decommissioned at New London 2 September 1955 and entered the Atlantic Reserve Fleet.

PCE-904 was named *Gettysburg* 15 February 1956. She was sold for scrapping to Boston Metals Co., Baltimore, Md., 23 June 1960.

Ghent

A former name retained.

(Sch: t. 50; l. 50'; b. 16'; dph. 6'; a. 1 12-pdr.)

Ghent, a schooner, was built by Thomas B. Eyre at Presque Isle, now Erie, Pa., in 1815; purchased by the Navy in 1815. Little is known about this ship except that she made occasional cruises with naval forces on Lake Erie. Probably she went into ordinary with the other lake vessels in 1821. It is known that *Ghent* was sold at Erie 20 March 1826 to Mr. T. Wendell.

Gherardi

Bancroft Gherardi was born 10 November 1832 at Jackson, La., 10 November 1832. He was appointed Acting Midshipman 26 June 1846 and served in *Ohio*, during the War with Mexico. He entered the Naval Academy in 1851 and graduated the next year. Ordered to *St. Louis*, he cruised the Mediterranean and after promotion to Lieutenant in 1855 he was ordered to the *Saratoga*.

At the outbreak of the Civil War he served in the steam sloop *Lancaster* and later became the executive officer of the *Chippewa* in the North Atlantic Blockading Squadron. He commanded gunboats *Chocura* and *Port Royal*, and was commended for his conduct in the Battle of Mobile Bay under Admiral Farragut 5 August 1864.

In later years he commanded receiving ships *Colorado* and *Lancaster* and was present at the bombardment of Alexandria. He served as President of the Naval Examining Board, as Governor of the Naval Asylum at Philadelphia, and as Commandant of the New York Navy Yard. He was promoted to Rear Admiral 25 August 1887. In 1893 he was made Commander-in-Chief of the Naval Review Fleet on the Hudson River and then Commandant of the New York Navy Yard. He retired 10 November 1894 and died at his home in Stratford, Conn., 10 December 1903.

(DD-637: dp. 1,630; l. 348'4"; b. 36'; dr. 12'6"; s. 35 k.; epl. 275; a. 4 5", 1 21" tt.; cl. *Gleaves*)

Gherardi (DD-637) was launched 12 February 1942 by the Philadelphia Navy Yard; sponsored by Mrs. Christopher Robinson, granddaughter of Rear Admiral Bancroft Gherardi; and commissioned 15 September 1942, Lieutenant Commander J. W. Schmidt, USN, in command.

After trial runs and shakedown training out of Casco Bay, Maine and Newport, Rhode Island *Gherardi* departed Philadelphia 1 January 1943 making convoy escort voyages to Guantanamo Bay, Cuba, Port Arthur and Galveston, Tex., returning to New York 7 February 1943. She departed New York 15 February on what was to be the first of 10 transatlantic convoy escort voyages. *Gherardi* returned to New York from Casablanca 14 April 1943. After a voyage to Newfoundland in May she departed Lynnhaven Roads, Va., 8 June en route to the Mediterranean to become part of Admiral Hewitt's "Western Naval Task

Force" for the occupation of Sicily (9-15 July 1943). Assigned the duty of protecting troop transports, she helped defeat many bombing attacks and was credited with shooting down one plane after undergoing 11 near bomb misses.

Gherardi saw her first surface action when late in July and early August she participated in several offensive sweeps along the northern coast of Sicily, and around the port of Palermo. On the night of 3-4 August *Gherardi* and *Rhind* were making a night offensive sweep along the coast, when at 2215, a few miles off Cape Calava, they picked up a small convoy consisting of one of the German MFP lighters escorted by two motor torpedo boats. At a range of 4,000 yards the destroyers illuminated the convoy with star shell and opened up with main batteries. The F-boat blew up at 2225 and one of the escorting boats was sunk; the other fired at least one torpedo, which missed. It was later found that the German lighter had been loaded with land mines.

Gherardi returned to New York 22 August 1943 and commenced a series of fast convoy escort voyages to Northern Ireland and England, touching at Belfast and Londonderry, Ireland and Swansea, Wales. She returned to New York from her last voyage on 13 February 1944. After intensive training out of Casco Bay, Maine, *Gherardi* made a voyage to Gibraltar with a large scouting force between 23 March and 22 April 1944. On 6 May 1944 *Gherardi* departed New York en route to Northern Ireland for rehearsals for the invasion of Normandy. On the morning of D-Day, June 6, 1944 she maneuvered into the fire support area as a unit of Admiral Moon's Assault Force "U" for Utah Beach. She delivered calls from fire-control parties ashore clearing the way for troops by prompt and accurate fire on railroads, houses, shore batteries and other targets. This drew dangerous return fire and she had one hot duel during the afternoon. Having expended all her ammunition, *Gherardi* was forced to retire that afternoon to Plymouth, England, to replenish.

Returning to Utah Beach *Gherardi* was assigned screening duty. This lasted until 25 June when she joined Admiral Deyo's bombardment group in the support of the first Army assault on Cherbourg France.

Departing the Normandy area 16 July 1944 *Gherardi* steamed to Malta where she joined a British-American escort carrier task force which trained for the Invasion of Southern France 15 August. On 9 August 1944 *Gherardi* rendezvoused with the carrier strike group and maneuvered into the launching areas. For two weeks *Gherardi* screened the carriers while strike after strike was made in support of the invasion. Southern France now secured, *Gherardi* departed for the states, reaching New York 16 September. Immediately work started to convert her to a high speed minesweeper. On 15 November 1944 *Gherardi's* classification changed to DMS-30. After many tests and calibrations she joined Mine Division 60 and steamed to the Pacific, touching at San Diego, Pearl Harbor, and Eniwetok. She reached Ulithi in early March. Departing Ulithi she proceeded to Okinawa where she arrived 25 March 1945. Here *Gherardi* participated in minesweeping operations prior to the invasion of Okinawa 1 April under the overall command of Admiral R. A. Spruance, Commander Fifth Fleet. After the initial assault she screened the heavier surface fire support units and rendered assistance as needed. For three months of continuous screening duty she fought off many suicide planes. Near the end of the battle for Okinawa the versatile *Gherardi* participated in day shore bombardment and night illumination of the southern coast of the island, contributing to the advance of the troops.

Early in July *Gherardi* became flagship of Commander Mine Division 60, then took up duty as fire-support ship for a group of smaller fleet minesweepers in the China Sea. This duty lasted until 19 August 1945 when she joined the Third Fleet and went to work clearing Tokoyo Bay preparatory to the final surrender and occupation of Japan. The surrender documents having been signed on board the battleship *Missouri* 2 September 1945, *Gherardi* began a series of high speed minesweeping operations to

help clear the waters around Southern Kyushu and Korea. This duty continued until 5 December 1945 when she departed Sasebo, Kyushu en route to San Diego where she arrived 23 December.

Three days later *Gherardi* departed San Diego via the Panama Canal for Norfolk, Va., arriving 9 January 1946. She now became a unit of Mine Division 6, Atlantic Fleet and based at Norfolk until June when her home port changed to Charleston, South Carolina. From June 1946 until October 1947 *Gherardi* operated out of Charleston when she sailed for Bermuda for towing duty. Afterward she steamed to Newfoundland for cold weather training in Placentia Bay, returning to Charleston 29 November. *Gherardi* spent the remainder of the year at Charleston. In 1948 *Gherardi* continued to base out of Charleston, keeping busy with minesweeping exercises and steaming to Newfoundland again in November for cold weather training.

On 3 January 1949 *Gherardi* departed Charleston for her first tour with the 6th Fleet in the Mediterranean. She returned to Charleston 2 April. After a visit to Port au Prince, Haiti, in May and a trip to New London in June *Gherardi* went in for overhaul, then to Guantanamo Bay for type training. For the next 2 years *Gherardi* conducted operations up and down the eastern seaboard and in the Caribbean, participating in Atlantic Fleet Exercise "Operation Observant" off Vieques, P.R. then on to Onslow Beach, N.C. for amphibious exercises.

On 8 January 1952 *Gherardi* got underway from Charleston for her second tour with the 6th Fleet returning to the States 26 June. Two months later she steamed out of Charleston again, this time to take part in NATO Exercise "Operation Mainbrace" in the North Atlantic. With the exception of duty with the 6th Fleet *Gherardi* conducted type training and held exercises out of Charleston and along the eastern seaboard for the next two years.

In January and February of 1955 *Gherardi* took part in "Operation Springboard" in the Caribbean, and in March and April she participated in Atlantic Fleet Exercise "LANTMINEX". On 15 July 1955, *Gherardi* was redesignated DD-637. Shortly thereafter she went into the Charleston Naval Shipyard for preinactivation overhaul where she was decommissioned 17 December 1955. She entered the Atlantic Reserve Fleet there and at present is berthed at Philadelphia.

Gherardi received five battle stars for World War II service.

Giansar

A star of 4.1 magnitude in the constellation Draconis.

(AK-111: dp. 4023; l. 441'6"; b. 56'11"; dr. 28'4"; s. 12.5 k.; cpl. 254; a. 15'; cl. *Crater*)

Giansar was launched under Maritime Commission contract 19 January 1943 by the Oregon Shipbuilding Corp., Portland, Oreg.; sponsored by Mrs. Harry A. Dick; acquired 5 October 1943; commissioned 29 October 1943. Lt. Comdr. C. J. King, USNR, commanding.

Giansar sailed from Los Angeles 10 November 1943 to deliver aircraft to Pago Pago, Samoa, and general cargo to Funafuti atoll, Ellice Islands. She then proceeded with 500 pound bombs to Namomea in the Gilberts. After transport of landing craft from Apamama to Tarawa, she returned to Pearl Harbor 1 February 1944. She departed 10 February with tanks, guns, trucks and gasoline for Majuro, returning 12 March with more than 125 passengers. She made a similar voyage (13 March-19 May) carrying general cargo and mail to Majuro and Kwajalein.

Giansar departed Pearl Harbor 21 May 1944 and put in at San Francisco 8 days later with salvaged aviation material and 123 passengers. In a round trip voyage from San Francisco (9 June-28 September), she transported vehicles, supplies and other cargo to Pearl Harbor, Eniwetok, Saipan and Guam. A similar voyage was made (31 October 1944 to 9 February 1945) for delivery of provisions to Hawaii, Ulithi and Guam. She returned to Los Angeles 9 February with 130 bluejackets.

Giansar departed Los Angeles on her last logistic cruise 1 March 1945. Proceeding via Hawaii and the Marshalls, she unloaded cargo at Ulithi, thence to San Pedro Bay in the Philippines where she arrived 25 May 1945. She remained there 3 months, discharging foodstuffs, store stock and medical supplies are required. After a voyage to Ulithi and return (13-25 August), she departed San Pedro Bay 28 August for return to Seattle, Wash., 28 September 1945.

Giansar arrived at San Francisco 18 October, departing 2 days later for Norfolk. She moored at Hampton Roads 8 November and decommissioned at Norfolk 28 November 1945. She was returned to the Maritime Commission in the same day. Her name was struck from the Navy List 19 December 1945.

Gibbins, Henry, see *Henry Gibbins* (AP-183)

Gibson County

Counties in Indiana and Tennessee.

(LST-794; dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 11.6 k.; cpl. 119; a' 8 40mm., 12 20mm.; cl. LST-511)

LST-794 was laid down by Dravo Corp., Pittsburgh, Pa., 12 July 1944; launched 16 September; sponsored by Mrs. B. H. Gommel and commissioned 16 October 1944, Lt. W. C. Cain, USCGR, in command.

Following shakedown, LST-794 departed New Orleans 15 November, en route to the Pacific. After embarking Army and Navy passengers at Pearl Harbor, she steamed to the New Hebrides, arriving Espiritu Santo 16 January 1945. Proceeding to the Russell Islands she debarked passengers and cargo before sailing to Guadalcanal for assignment. During the next 4 weeks she transported troops and cargo between Guadalcanal and the Russell Islands.

As the invasion of Okinawa approached, LST-794 engaged in intensive amphibious exercises in the Solomons, then steamed for the Ulithi staging area. After taking on marines and vehicles, the landing ship departed Ulithi 25 March, and 1 week later arrived off Okinawa. On 1 April her troops stormed ashore in small boats and LVT's as the Marine established a beachhead in the emperor's private sea. She remained in the assault area until 11 April when she sailed to Saipan for reinforcements.

For the rest of the war, LST-794 transported troops and cargo to Okinawa and the Philippines. Following the victorious conclusion of the war, she remained in the Far East, assisting the occupation forces in Japan, Korea, and Okinawa. Returning to the United States in early 1946, LST-794 decommissioned 9 July 1946 and joined the Pacific Reserve Fleet, berthed in the Columbia River.

Named *Gibson County* 1 July 1955, she was used as a target and sunk 23 May 1959.

LST-794 received one battle star for World War II service.

Gigi, see YP-461

Gila River

A river in southwestern New Mexico and southern Arizona that empties into the Colorado River near Yuma, Arizona.

(LSMR-504; dp. 790; l. 206'3"; b. 34'6"; dr. 7'2"; s. 13 k.; cpl. 138; a. 1 5", 4 40mm., 8 20mm., 4 4.2" m., 10 rkt.; cl. LSMR-401)

LSMR-504 was laid down 24 March 1945 by Brown Shipbuilding Co., Houston, Texas; launched 21 April 1945; and commissioned 11 June 1945, Lt. Leslie W. Bolon in command.

Departing Houston 18 June, LSMR-504 steamed via Galveston to Charleston, S.C., where she arrived 28 June. She proceeded to Little Creek, Va., 16 July and operated in Chesapeake Bay and along the Virginia coast until sailing for the West Coast 7 August. She reached San Diego 29 August, was assigned to LSMR Squadron 3, and operated along the coast of southern California during the next 6 months. She joined the 19th Fleet 4 March 1946 and between 18 and 22 March steamed to Astoria, Oreg., for duty with the Columbia River Group. She decommissioned 11 May 1946 and entered the Pacific Reserve Fleet in the Columbia River. LSMR-504 was named *Gila River* 1 October 1955. On 1 February 1960 she was struck from the Navy List and on 7 July sold to the Zidell Exploration Corp., Portland, Oreg.

Gilbert Islands

An island group containing 16 atolls in the western Pacific Ocean on the equator, southeast of the Marshalls and northeast of the Solomons. On 20 November 1943 Marines made an amphibious assault on Makin and Tarawa Islands, seizing the former without difficulty, but winning Tarawa only after a 100-hour battle in which over 3,500 Americans were killed or wounded.

(CVE-107; dp. 10,900; l. 557'1"; b. 75'; dr. 32'; s. 19.1 k.; cpl. 1,066; a. 2 5"; cl. *Commencement Bay*)

Gilbert Islands (CVE-107) was launched 20 July 1944 the Todd-Pacific Shipyards, Inc., Tacina, Wash.; sponsored by Mrs. Edwin D. McMorries; and commissioned 5 February 1945, Captain L. K. Rice in command.

After shakedown training, *Gilbert Islands* departed San Diego 12 April 1945 for exercises in Hawaiian waters. She sailed 2 May with an escort carrier force that closed Okinawa 21 May. Her aircraft (24-31 May) blasted and strafed concrete dugouts, troop concentrations, ammunition and fuel dumps on Okinawa. In the following days she helped neutralize outlying Japanese airfields and installations with repeated bomb and rocket attacks. Five of her Marine pilots were killed in action. She departed Okinawa 16 June to replenish at San Pedro Bay, thence to Balikpapan, Borneo. She gave air cover to Australians storming that shore 1 July and remained 4 days to attack all targets in sight. With the Australians securely established, she returned to Leyte 6 July.

Gilbert Islands departed San Pedro Bay 29 July to screen logistic ships replenishing 3d Fleet striking forces along the coast of Japan. On that station 15 August she joined a task group that included nearly all the 3d Fleet and heard Admiral Halsey's laconic direction: "Apparently the war is over and you are ordered to cease firing; so, if you see any Jap planes in the air, you will just have to shoot them down in a friendly manner." After replenishment at Okinawa, she departed 14 October to participate in a show of air strength during occupation of Formosa by the Chinese 70th Army. She was then routed onward via Siapan and Pearl Harbor to San Diego, arriving 4 December 1945. She remained in port until 21 January 1946, then set course for Norfolk where she decommissioned 21 May 1946 and was placed in reserve.

Towed to Philadelphia in November 1949, *Gilbert Islands* recommissioned 7 September 1951 and put in at Boston 25 November for overhaul. She joined the Atlantic Fleet 1 August 1952, sailed 8 days later with a cargo of jets for Yokohama, Japan, arriving 18 September, and returned to her homeport of Quonset Point, R.I., 22 October. She sailed 5 January 1953 for the Caribbean to conduct training exercises off Cuba and returned to New England waters to continue these duties through the summer and fall of the year. Following a cruise to Halifax and overhaul at Boston, the escort carrier stood out 5 January 1954 for a Mediterranean cruise, returning to Quonset Point 12 March 1954 for reserve training and other exercises. She became the first of her class to have jets make touch-and-go landings on the flight deck while she had no way on, a dangerous experiment successfully conducted 9 June 1954.

She left Rhode Island 25 June for Boston and decommissioned there 15 January 1955.

Reclassified AKV-39 7 May 1959, *Gilbert Islands* remained in reserve until her name was struck from the Navy List June 1961. She was reclassified (AGMR-1) 1 June 1963 and renamed *Annapolis* 22 June 1963. *Annapolis* recommissioned 7 March 1964, Captain John J. Rowan in command. As the Navy's first major communication relay ship, *Annapolis* was busy with acceptance trials for the rest of the year. In the fall she handled communications during Operation "Teamwork" and "Steel Pike" before final acceptance into the fleet 16 December.

After operations out of Norfolk during the first half of 1965, *Annapolis* was assigned Long Beach as home port 28 June 1965. In September she was sent to Viet Nam to assist communications between naval units fighting Communist aggression. With the exception of periodic visits to Hong Kong, Formosa, and the Philippines for upkeep and training, she continued this important service into 1967 assuring a smooth, steady and speed flow of information and orders so necessary to effective conduct of the war.

Gilbert Islands received three battle stars for World War II service.

Gillen, Edward E., see *YMT-21*

Gillespie

Major Archibald H. Gillespie, USMC, was born 14 August 1810 in New York City, and was commissioned in the Marine Corps in 1832. After commanding the Marine Guard in *Fairfield*, *Vincennes*, *North Carolina*, and *Brandywine* Lt. Gillespie was sent by President Polk in 1845 with secret messages to the U.S. Consul in Monterey, Commodore Sloat, and General Fremont in California. He joined the Fremont volunteers and participated in the first American occupation of southern California, following the Bear Flag revolt of 14 June 1846. Gillespie fought in the battles of San Pasqual, San Bernardo, and San Gabriel with volunteers striving to wrest California from Mexico. Returning to Washington, D.C., in 1847, he subsequently served there and at Pensacola, Fla., until resigning from the Marine Corps 14 October 1854. For his distinguished service in California, he was promoted to Captain, and then Major, by brevet. He died 16 August 1873 in San Francisco, Calif.

(DD-609: dp. 1,620; l. 348'4"; b. 36'1"; dr. 11'9"; s. 35 k; cpl. 261, a. 4 5"/.38 cal, 7 20mm, 5 21" tt.; ASW 6 dep.; cl. *Benson*)

Gillespie (DD-609) was launched 1 November 1942 by the Bethlehem Steep Corp., San Francisco, Calif.; sponsored by Mrs. Hugo W. Osterhaus, wife of Rear Admiral H. W. Osterhaus; and commissioned 18 September 1942, Lt. Comdr. C. L. Clement in command.

After shakedown the destroyer sailed from San Francisco 28 December 1942 for the fog-shrouded Aleutians and reached Sand Bay, Great Sitkin Island, 9 January 1943. After conducting escort, ASW, and patrolling duties among the scattered Aleutians, she saw her first action 18 February when, with *Indianapolis* and *Richmond*, she bombarded Attu Island, without return fire. The destroyer poured over 400 rounds of 5-inch into enemy installations at Holtz Bay and Chicagof Harbor, and on the evening of the same day began an anti-shipping patrol southwest of Attu with *Indianapolis* and *Coglan*. At 2225 *Coglan's* lookouts spotted smoke on the horizon and *Gillespie* went into action. The smoking ship was *Akagane Maru*, a 3100-ton cargo ship bound for Attu with troops, munitions, and supplies, but she was not to close her port of call. The game was up when she answered *Indianapolis's* challenge in Japanese Morse Code; the American warships opened fire at 2316 and scored repeatedly. Within 3 minutes the cargo ship was burning forward; a coup de

grace single turret salvo by *Indianapolis* set her afire from stem to stern. Malfunctioning torpedoes failed to sink the gutted *maru*, but she finally slid under at 0126 20 February in 53-05 N, 171-22 E.

After further patrolling, *Gillespie* returned to San Francisco 4 March for overhaul and subsequently sailed via San Diego and the Panama Canal to moor at New York 11 April 1943. Through the spring, summer, and fall of 1943 the destroyer made four round-trip transatlantic escort voyages to Casablanca, French Morocco, and return, shepherding troop and cargo ships to the North African theater. On 2 January 1944 she departed Norfolk for the Pacific, reaching Funafuti atoll 20 days later, and escorting troop ships thence to Milne Bay, New Guinea, where she put in 7 February. As part of the 7th Fleet the destroyer supported the consolidation of Saidor in late February and escorted LST's from Cape Sudest, New Guinea, to Cape Gloucester, New Britain, and Los Negros in the Admiralties. On 6 March the LST's made landings in Hayne Bay, Los Negros, while *Gillespie* patrolled from five to fifteen miles off the northeast coast. While acting as a call fire ship for Army forces in Seeadler Harbor, Manus Island, she bombarded the eastern tip of Pityilu Island on 14 March and until the 16th continued to support the Manus assault by bombarding installations and gun emplacements on Manus. On 24-25 March *Gillespie* plastered targets on Pityilu, Manus, and Rambutyo Islands, returning to Oro Bay, New Guinea, 26 March.

Training exercises and patrolling occupied her until 27 May, when she lent fire support for the initial landings on Biak Island. From 31 May to 2 June 1944 she served as a fighter director and warning picket off Biak, and bombarded that island again to soften up Japanese defenses. *Gillespie* came under repeated air attacks, but escaped damage or casualties. Duties in New Guinean waters continued; 5-6 July she blasted enemy positions on the west coast of Noemfoor Island to speed the advance of the 6th Army toward the Namber Drone area, and 20 July her 5-inchers laid waste Insoemeken Point and Arimi Island on the east coast of Noemfoor during the mopping up following the initial landings.

Through the summer of 1944 the destroyer continued patrolling and training exercises off New Guinea and the Solomons, and was on hand from 15 September-14 October for screening activities during the amphibious assault on Peleliu in the Palau Islands. With success assured, *Gillespie* sailed 14 October 1944 for overhaul at Bremerton, Wash., mooring there 5 November, and after refresher training, sailed from San Diego 3 January 1945. She conducted training exercises at Pearl Harbor and closed Ulithi 8 February, and subsequently as part of the Logistic Support Forces she escorted supply ships and units of the 5th Fleet during the seizure of Iwo Jima.

From 13 March-28 May 1945 *Gillespie* participated in the landings and occupation of Okinawa and adjacent islands of the Nansei-Shoto group. 8 April the destroyer came under attack by two Japanese planes, the first of which tried to kamikaze her. At dawn, just before 0600, an enemy fighter swooped down and *Gillespie's* 5-inch battery opened fire at a range of 9,800 yards. As the plane closed the 2,500 yards, her automatic weapons took up the hail of fire and the destroyer turned hard to port to keep the batteries unmasked. The smoking plane passed low over the fantail and made an abrupt wingover in an attempt to crash the ship, but *Gillespie's* fire had been too accurate and the plane spun off into the sea. Minutes later, another plane came in and was quickly splashed. The destroyer put in at Ulithi 31 May and from 1 July to 15 August 1945 screened other warships during the pre-invasion softening up of the Japanese home islands. From 16 August to 2 September she continued her escort and patrolling duties, and anchored triumphantly in Tokyo Bay 10 September 1945. Underway once more 12 October, she sailed via Manila and Pearl Harbor to moor at San Diego 23 November, and steamed thence to close Boston 11 December. Following overhaul there, she reached Charleston, S.C., 14 January 1946 and she

decommissioned at that port 17 April 1946. In reserve since that time, she is now assigned to the Texas Group, U.S. Atlantic Reserve Fleet, Orange, Tex.

Gillespie earned nine battle stars during World War II.

Gillette

Douglas Wiley Gillette, born 10 September 1918 in Wilmington, N.C., enlisted in the Naval Reserve 5 March 1936. After serving at Norfolk, in *McDonag*, and after studying at the Naval Academy and Northwestern University, he was commissioned Ensign 12 September 1941. Ordered to active duty in carrier *Hornet* 17 November 1941, he was appointed Lieutenant (j.g.) (temporary). He was killed in enemy action in the Battle of Santa Cruz Islands 26 October 1942 while serving in *Hornet*.

I

(DE-270: dp. 1,140; l. 289'5"; b. 35'1"; dr. 11'; s. 21 k.; cpl. 156; a. 3 3", 8 dep., 1 dep. (h.h.), 2 dct.; cl. *Evarts*)

The first *Gillette* (DE-270) was built by the Boston Navy Yard; sponsored by Mrs. Thomas O'Dea; and commissioned 8 September 1943. Leased to the United Kingdom eight days later and renamed HMS *Folcy* (q.v.), she was returned to the United States after World War II and scrapped 19 June 1946.

II

(DE-681: dp. 1,400; l. 306'; b. 37'; dr. 13'6"; s. 23.6 k.; cpl. 213; a. 3 3", 4 1.1", 4 40 mm., 8 20 mm., 8 dep., 1 dep. (h.h.), 2 dct.; el. *Buckley*.)

The second *Gillette* (DE-681) was launched 25 September 1943 by the Bethlehem Steel Co., Quincy, Mass.; sponsored by Mrs. Pearl M. Gillette, the namesake's mother; and commissioned 27 October 1943, Comdr. T. G. Murrell, USNR, commanding.

After shakedown off Bermuda, *Gillette* sailed from Boston 2 January 1944 for Balboa, C.Z., where for 4 months she conducted intensive exercises with submarines and escorted a convoy to Guantanamo Bay, Cuba, and returned. She sailed 9 May for Puerto Limon, Costa Rica, on a good will tour and visited Barranquilla, Colombia, as well before returning to Boston 2 June.

From 4 July 1944 to 18 February 1945 *Gillette* made four round trip transatlantic escort voyages—three out of Hampton Roads and one from New York—to Oran and United Kingdom ports protecting Allied shipping. She subsequently served as a submarine training ship at New London, Conn., until 14 April 1945. That date she sailed for Hollandia via Borabora and Manus, and escorted a convoy thence to Manila, where she put in 17 June. Patrol and escort duties in the Philippines and to Ulithi occupied the busy ship until 6 August, when she sailed for Okinawa and returned as convoy escort to Subie Bay 17 August. Following a round trip escort voyage from Subie Bay to Tokyo and return, *Gillette* continued patrol and logistics duties in the Philippines until departing Subie Bay 26 November for San Diego, where she moored 17 December 1945.

Gillette remained at San Diego until decommissioned there 3 February 1947 and placed in reserve with the Pacific group at San Diego.

Gilliam

A county in the State of Oregon.

(APA-57: dp. 4,247; l. 426'; b. 58'; dr. 16'; s. 16.9 k; cpl. 283; a. 1 5"; el. *Gilliam*)

Gilliam (APA-57) was launched 28 March 1944 under a Maritime Commission contract by the Consolidated Steel Corp., Wilmington, Calif.; sponsored by Mrs. A. O. Williams of Wilmington; acquired 31 July 1944; and commissioned 1 August 1944, Comdr. H. B. Olsen in command.

The first of a new type of attack transport, *Gilliam* stood out of San Francisco Bay 16 October 1944 with 750 Army troops for Oro Bay, New Guinea, and delivered them to that port 4 November. Embarking nearly 1000 troops of the 11th Airborne Division, she sailed a week later and off-loaded her passengers at Leyte, subsequently returning to Humboldt Bay, New Guinea, 22 November. *Gilliam* got underway again 29 November under orders to steam to Leyte Gulf and embark elements of the 6th Army Headquarters for passage to Lingayen Gulf.

Gilliam was part of a 36-ship convoy enurning toward the Philippines when 5 December 1944 the convoy came under heavy air attack while 100 miles from Leyte Gulf. At 1218 *Gilliam* spotted a plane coming in low on the water at deck level, headed for the middle of the convoy. Coming under limited fire, the Japanese plane released a torpedo 2 minutes later which smashed into SS *Anton Saugraine*. Just after 1230 two more planes came in low and fast, and one got another torpedo into the stricken merchantman, which was then dead in the water. Intense fire from the convoy drove the planes off, but later that afternoon another Japanese aircraft dove in at 1530, and after running into heavy fire, made a suicide crash on SS *Marcus Daly*. The Japanese caught her on the bow at waterline and started fires and explosions. A second kamikaze tried his luck but missed and crashed into the sea after repeated hits from the convoy's gunners. *Anton Saugraine* and *Marcus Daly* were kept afloat by quick damage control, but the former ship was attacked again the next day while under tow and was finally sunk. During this engagement, *Gilliam*'s unflinching crew stood at General Quarters for nearly 12 hours and the ship reached Leyte 6 December without damage.

At Leyte *Gilliam* acted as receiving ship for the crews of damaged warships and undertook medical and salvage operations in spite of continued air alerts. After embarking over 500 soldiers at Taeloban, she sailed from that port 7 January 1945 bringing troops to Lingayen Gulf in support of the invasion. She returned to Leyte on 14 January to embark elements of the 32d Infantry Division and brought them safely back to Lingayen Gulf 27 January. After loading casualties for passage to Leyte, *Gilliam* sailed from that port 2 February to embark Marines of the 3d Amphibious Corps at Guadalcanal and conducted training exercises in preparation for the coming invasion of Okinawa.

Gilliam elosed Okinawa on 1 April and in the face of kamikaze attacks debarked reconnaissance parties of the 3d Amphibious Corps and unloaded vital cargo. On 5 April she sailed for the United States via Saipan and Pearl Harbor, mooring at San Francisco 27 April for drydock repairs.

Subsequently *Gilliam* embarked men of the 6th Seabee Battalion a Port Hueneme, Calif., and sailed 28 May 1945 for Okinawa via Eniwetok and Ulithi. She off-loaded cargo and passengers at Okinawa and returned to San Francisco 10 August, where nearly 1,000 troops were embarked and brought to Pearl Harbor on 27 August. Men of the Headquarters and Service Battalions, 5th Amphibious Corps came on board at Hawaii, and *Gilliam* sailed 1 September for Sasebo, Japan, and put her occupation troops ashore 3 weeks later.

On 25 September 1945 she got underway for Manila, and after embarking more than 450 veterans of the 32d Infantry Division at Lingayen Gulf, she carried them to Sasebo, arriving 15 October. After returning to Cebu in the Philippines 29 October, she became part of the "Magic-Carpet" fleet and sailed 2 November with 1,000 blue-jackets and soldiers, debarking them at Portland, Oreg., 21 November 1945.

Following a voyage to Samar, *Gilliam* moored at Pearl Harbor 16 February 1946 and prepared to participate in the atomic bomb tests at Bikini atoll in the summer of 1946. On the morning of 1 July 1946, *Gilliam*, a target ship for Test Able, was sunk in Bikini lagoon.

Gilliam received two battle stars for World War II service.

Gilligan

John Joseph Gilliagn, Jr., born 17 June 1923 at Newark, N.J., enlisted in the Marine Corps Reserve 8 January 1942 and served at Parris Island, S.C., and Quantico, Va. Private Gilligan was mortally wounded in action while serving with the First Marine Raider Battalion at Tulagi, Solomon Islands, on 7 August 1942 and died the next day. For his heroism under fire, he was posthumously awarded the Silver Star.

(DE-508; dp. 1,350; l. 306'; b. 36'10"; dr. 13'4"; s. 24.3 k; cpl. 222; a. 2.5", 4 40 mm., 10 20 mm., 8 dep., 1 dep. (h.h.), 2 dct.; cl. *John C. Butler*)

Gilligan (DE-508) was launched 22 February 1944 by the Federal Shipbuilding & Drydock Co., Newark, N.J.; sponsored by Mrs. John J. Gilligan, the namesake's mother; and commissioned 12 May 1944, Lt. Comdr. Carl E. Bull, USNR, commanding.

Following shakedown off Bermuda, *Gilligan* escorted a troopship from New York to Maine and sailed from Norfolk 5 August 1944 to escort an LSD to Pearl Harbor, arriving 30 August. Underway 29 September to escort merchantmen to Eniwetok, she put in at Majuro 13 October and from 16-27 October 1944 escorted merchantmen to Kwajalein, bombarded Mille atoll and Jaluit Island, and sank a 50-foot Japanese schooner, before returning to Majuro the latter date. *Gilligan* sailed 1 November to escort merchantmen to Eniwetok and Saipan, subsequently mooring at Ulithi 17 November. Three days later, on 20 November, fleet oiler *Mississinewa*—loaded with more than 400,000 gallons of aviation gasoline—was torpedoed inside Ulithi lagoon with a loss of 50 officers and men. Seconds later, *Gilligan* saw a miniature Japanese submarine pass close alongside; with other ships she depth-charged within the lagoon and possibly damaged one midget. Destroyer *Casc* rammed and sank another outside the harbor, and Marine planes finished off a third the same day.

Gilligan sailed 4 December as a steamship escort to Manus and conducted patrols off Bougainville from that port until 31 December 1944 when she departed Manus to escort troopships bound for Lingayen Gulf, arriving in time for D-Day, 9 January 1945. Although in constant danger from enemy air attacks, the destroyer escort supported the assault, screened for Attack Group Able of VADM Wilkinson's Task Force 79, and made smoke. *Gilligan* came under kamikaze attack 12 January. A bluejacket under fire from the attacking plane leaped from his post onto the main battery director and threw it off target, a mistake which prevented the 5-inch guns from getting off more than 14 rounds. The kamikaze crashed directly into the muzzles of *Gilligan's* No. 2 40mm. gun, killing 12 men and wounding 12, and started raging fires. Outstanding damage control kept the ship seaworthy; she put in at Leyte 17 January for repairs, subsequently reaching Pearl Harbor 21 February for overhaul.

Gilligan sailed again 29 March 1945 as an antisubmarine convoy escort and closed the western beaches of Okinawa 17 April to commence antiaircraft and antisubmarine screening around the transport anchorage. The Japanese were at this time using every conceivable means—kamikazes, submarines, swimmers, and motor boats—to destroy the assembled ships. In spite of heavy air attacks she engaged in screening and escort duties for transports, splashed at least five attacking planes, and possibly damaged a submarine. On 27 May her luck almost ran out; a torpedo bomber hit her solidly with a torpedo, which fortunately was a dud. *Gilligan* returned to Ulithi 25 June and sailed again 6 July on merchantmen escort duty to Leyte and Hollandia and subsequently closed Manila where she was attached to the Philippine Sea Frontier. On 16 August she sailed to escort merchantmen to Okinawa, returning to Manila 27 August, and repeated this voyage 29 August-25 September 1945. Underway from Manila 5 November, *Gilligan* reached San Pedro, Calif., 26 November for overhaul. She was towed to San

Diego 14 April 1946 and was placed out of commission in reserve at that port 2 July 1946.

Gilligan recommissioned in reserve 15 July 1950 at Seattle and conducting reserve cruises in Pacific Northwest waters, and voyages thence to the Fleet Sonar School at San Diego. Training cruises brought her twice to Hawaii, once to Acapulco, Mexico, and once to the Canal Zone before she decommissioned 31 March 1959 at Point Astoria, Oreg. *Gilligan* remains out of commission in reserve at Bremerton, Wash.

Gilligan earned one battle star for World War II service.

Gillis

Gillis was named for two naval men.

John P. Gillis, born 6 September 1803 in Wilmington, Del., was appointed Midshipman in 1825. He served with distinction in the Mexican War at the capture of Tusanpan and in 1853-54 sailed with Commodore Perry's expedition to open Japan to the West. During the Civil War he commanded *Monticello*, *Seminole*, and *Ossipee* in the Union blockade and subsequently was on duty at New York until retiring in 1866. Commodore Gillis died 25 February 1873 in the city of his birth.

James Henry Gillis, born 14 May 1831 in Ridgway, Pa., graduated from the Naval Academy in 1854. Three years later, while serving in store ship *Supply* he rescued the crew of a floundered Argentine ship during a violent storm. During the Civil War he served with Union Squadrons blockading the Confederacy and subsequently commanded *Michigan*, *Franklin* (Flagship European Station), *Lackawanna*, *Minnesota*, and *Hartford* (Flagship Pacific Station). Appointed Rear Admiral in 1888, he retired on 14 May 1893. Known as the "Sailor with a charmed life" because he never lost a man at sea, Rear Admiral Gillis died 6 December 1910 at Melbourne Beach, Fla.

(DD-260: dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k; cpl. 120; a. 4 4", 2 3", 4 21" tt.; cl. *Belknap*)

Gillis (DD-260) was launched 29 May 1919 by the Bethlehem Shipbuilding Corp., Quincy, Mass.; sponsored by Miss Helen Irvine Murray, granddaughter of Admiral Gillis; and Mrs. Josephine T. Smith, niece of Commodore Gillis; commissioned 3 September 1919, Lt. Comdr. Webb Trammell in command.

Gillis sailed from Newport, R.I., 17 December 1919 and moored at San Diego 20 January 1920. She joined the Pacific Fleet Destroyer Force in tactics and maneuvers along the West Coast until decommissioned at San Diego 26 May 1922. Recommissioned in ordinary 28 June 1940, she was reclassified 2 August as seaplane tender destroyer AVD-12. Following conversion she was placed in full commission at San Francisco, 25 March 1941.

Gillis was assigned as tender to Patrol Wing 4, Aircraft Scouting Force, U.S. Pacific Fleet. In the following months she performed plane guard patrol between San Diego and Seattle with time out for aircraft tending duties at Sitka, Alaska (14-17 June); Dutch Harbor and Kodiak (15-31 July). After overhaul in the Puget Sound Naval Shipyard she returned to Kodiak 16 October 1941 to resume tending of amphibious patrol planes in Alaskan waters. She was serving at Kodiak when the Japanese attacked Pearl Harbor and returned to the Puget Sound Naval Shipyard 9 February 1942 for overhaul.

Gillis resumed tender duties at Kodiak 26 May 1942. She was stationed at Atka (11-13 June) tending amphibious patrol aircraft bombing the Japanese on Kiska Island. On air-sea rescue patrol 6 June 1942, she made three depth charge runs on an underwater sound contact. A Japanese submarine violently broached the surface revealing its conning tower and propeller, then disappeared. *Gillis* was unable to regain contact. She was credited with damaging this underseas raider in the combat area off Umak Island. She was attacked by three Japanese patrol bombers while at Adak 20 July. One bomb, fortunately a dud, splashed within 10 feet alongside. Other bombs rained about her ahead and astern. She was drenched

by water thrown up by the explosions but escaped damage or casualties.

Gillis continued her varied duties as aircraft tender and air-sea rescue patrol ship throughout the Aleutian Campaign. Brief intervals of repair were accomplished in the Puget Sound Naval Shipyard. She terminated this service 19 April 1944 when she departed Dutch Harbor for overhaul in the Puget Sound Naval Shipyard. She arrived at San Diego 13 June and spent the following months as plane guard for aircraft carriers training along the California coast. She was then routed on to Pearl Harbor, arriving 8 December 1944. She operated in Hawaiian waters as plane guard for escort carrier *Makassar Strait* (CVE-91) until 20 February 1945. She then sailed with Rear Admiral M. L. Deyo's Gunfire and Covering Force, enroute via the Marshalls, Marianas and Ulithi for the Invasion of Okinawa.

Gillis arrived off Kerama Retto 25 March 1945. She guarded minesweepers to the west, then stood by underwater demolition teams clearing approaches to the western beaches of Okinawa. After invasion forces stormed ashore 1 April, she tended observation and patrol planes at Kerama Retto and performed air-sea rescue patrol. On 28 April she departed Okinawa in the screen of *Makassar Strait*, bound via Guam to San Pedro Bay, Philippine Islands. She returned by the same route in the escort screen of *Wake Island* (CVE-65). That carrier launched planes 29 June to land bases on Okinawa and *Gillis* helped escort her back to Guam 3 July 1945.

Gillis departed Guam for home 8 July 1945. She arrived at San Pedro, Calif., 28 July and decommissioned there 15 October 1945. Her name was struck from the Navy List 1 November 1945. She was sold for scrapping 29 January 1946.

Gillis received two battle stars for service in World War II.

Gillis, James M., see *James M. Gillis* (AGS-13)

Gilmer

Thomas Walker Gilmer, born 6 April 1802 in Albemarle County, Va., served for many years in the Virginia House of Delegates, became Governor of Virginia in 1840, and was elected to Congress in 1841. He was appointed Secretary of the Navy by President Tyler 15 February 1844 but was killed 28 February 1844 by the bursting of a gun while on board USS *Princeton*.

I

(DD-233: dp. 1,215; l. 314'4½"; b. 30'11½"; dr. 9'4"; s. 33.82 k; cpl. 130; a. 4 5"; cl. *Clemson*)

The first *Gilmer* (DD-233) was launched 24 May 1919 by the New York Shipbuilding Corp., Camden, N.J.; sponsored by Mrs. Elizabeth Gilmer Miles, Secretary Gilmer's granddaughter; and commissioned 30 April 1920, Lt. (j.g.) Harold J. Wright commanding.

From 27 August 1920 to 11 August 1923 *Gilmer* made two round trip transatlantic voyages out of New York to European and Mediterranean ports. She subsequently engaged in training exercises along the Eastern seaboard, in the Caribbean, and out of West Coast ports until 1938. This varied duty was highlighted by a cruise to Nicaragua in 1926 to protect American lives and property during a civil war, an escort voyage to Havana guarding President Coolidge in battleship *Texas* in 1928, and disaster relief work in the Caribbean during the same year. Decommissioned at Philadelphia 31 August 1938, *Gilmer* recommissioned 25 September 1939 following the outbreak of World War II and was attached to the Atlantic Fleet Destroyer Division as flagship. She conducted patrols and exercises in the Atlantic and Caribbean until reaching San Diego 4 November 1940 and continued these duties along the Pacific coast until the United States entered the war.

Gilmer was at sea off Puget Sound when the Japanese

attacked Pearl Harbor 7 December 1941. She immediately began antisubmarine patrol and escort duties and continued her missions until entering drydock 13 November 1942. She was redesignated APD-11 on 22 January 1943 following conversion. She sailed from Seattle 29 January via San Diego for Pearl Harbor, arriving 13 February, and subsequently escorted merchantmen to Espiritu Santo, where she moored 9 March and commenced amphibious training exercises with the 4th Marine Raider Battalion.

On 5 April *Gilmer* sailed from Tulagi and as flagship of Transport Division 16 engaged in antisubmarine patrols in those waters. She called at Noumea 22 April and put in at Townsville, Australia, 8 May, making two round trip escort voyages thence to Brisbane 13 May-22 June 1943. Escort and patrolling from Australia to New Guinea continued until 4 September 1943 when *Gilmer* participated in the Allied assault on the Huon Peninsula near Lae, New Guinea, and patrolled off Buna Island which she also bombarded. She supported American and Australian forces in the New Guinea campaign and made frequent escort voyages thence to Australia and return. On 26 December 1943 she landed troops of the famous 1st Marine Division at Cape Gloucester, New Britain, and stood by to support landings at Finschhafen 3 days later. On 2 January 1944 elements of the 126th Infantry were landed at Saidon. *Gilmer* engaged in patrols of Buna, Cape Sudest, and Australia and bombarded Humboldt Bay, New Guinea, 22 April 1944 when Army forces stormed ashore that D-day.

On 12 May the ship sailed from Hollandia to embark UDT teams at Pearl Harbor and debarked them 14 June 1944 at the initial assault on Saipan. Two days later she discovered and sank four Japanese cargo ships, taking 24 prisoners, and escaping serious damage. Tinian Town was bombarded 23 June and UDT operations off that island continued until 14 July when *Gilmer* with *William C. Miller* formed a hunter-killer group and sank Japanese submarine *I-6* in 18°18' N, 146°26' E. *Gilmer* sailed from Tinian 12 August for Pearl Harbor and until January 1945 conducted demolition and reconnaissance training with UDT teams in Hawaiian waters. She sailed 10 January as flagship for rehearsal exercises at Ulithi, and on 16 February closed Iwo Jima for the initial amphibious assaults. UDT teams were landed on the eastern and western beaches and *Gilmer* screened battleship *Tennessee* as the big ship blasted Japanese defenses on Iwo Jima. Patrolling and screening activities continued through 24 February, when *Gilmer* sailed for Leyte, arriving four days later. After touching Ulithi, she took part in the Okinawa operation, closing that island 25 March 1945 as flagship of the UDT's. The next day a kamikaze took off her galley deckhouse on its way overboard, killing one and wounding three crewmen. *Gilmer* supported the invasion until 9 April when she sailed for repairs at Pearl Harbor, but returned to Okinawa 4 July to recommence patrolling duties.

Following antisubmarine screening assignments for convoys bound from the Philippines to Okinawa, *Gilmer* moored at Nagasaki 13 September after Japan's surrender to carry POW's thence to Okinawa. She sailed from that island 15 October to escort a convoy to Hong Kong, arriving 22 October, and sailed again 2 days later to escort troopships carrying the Chinese 13th Army to Chinwangtao. After further escort and patrol voyages along the China coast, *Gilmer* sailed from Tsingtao 26 November for the United States and finally moored in the U.S. again at Philadelphia 11 January 1946. Decommissioned 5 February 1946, her name was struck from the Navy list 25 February 1946. She was sold for scrapping 3 December 1946.

Gilmer received seven battle stars for World War II service.

II

(PC-565: dp. 295; l. 173'8"; b. 23'; dr. 10'10"; s. 20 k.; cpl. 59; a. 1 3", 1 40mm., 3 20mm., 2 rkt., 4 dcp., 2 dct.; cl. *PC-461*)

The second *Gilmer* (PC-565) was laid down as *PC-565* by Brown Shipbuilding Co., Houston, Tex., 14 August 1941; launched 27 February 1942; sponsored by Miss Jacqueline B. Perry; and commissioned 25 April, Lt. Walter T. Flynn in command.

After shakedown off Florida, *PC-565* engaged in ASW training, then performed convoy escort and patrol duty in the Gulf of Mexico and Caribbean. On 2 June while escorting a southbound convoy from New York to Cuba, she made an underwater sound contact and immediately attacked. After *PC-565* dropped a depth charge barrage the submarine *U-521* surfaced to be met with 20mm. gunfire. Several hits were scored and the enemy U-boat went under only to be met with another depth charge barrage. Large oil slicks and debris resulted, proving the destruction of the German U-boat. A survivor of the submarine was rescued and his testimony substantiated *PC-565's* victorious encounter.

Departing New York 25 March 1944, *PC-565* sailed enroute to England where she joined the amphibious forces in preparation for the landing in Northern France. On 4 June she sailed from England arriving off the Normandy beaches 2 days later. There she effectively performed ASW patrols, anti-aircraft defense, and shuttle control duties.

Throughout the rest of the war, *PC-565* remained in Europe on escort and patrol missions in the North Sea-English Channel area. Departing Bremerhaven 4 October 1945, the submarine chaser steamed for the United States, arriving Norfolk on the 22d. Two months later she arrived Green Cove Springs, Fla., and decommissioned 26 April 1946, joining the Atlantic Reserve Fleet. *PC-565* was named *Gilmer* 15 February 1956. She was stricken from the Navy List 1 July 1960, and sold to Venezuela.

PC-565 received two battle stars during World War II service.

Gilmore

Commander Walter William Gilmore, Supply Corp., U.S. Navy, was born 10 February 1895 in Williamsport, Pennsylvania; commissioned Ensign 29 June 1917; his duty assignments first taking him to a Naval Air Station in France, followed by alternation of duties at supply stations, air stations, operating bases, and cruisers until 2 September 1940 when he became Supply Officer of *Lexington* (CV-2). He was serving in the famed aircraft carrier during her Pacific raids on Rabaul, and on Lae and Salamaua, and perished with his ship in the Battle of the Coral Sea (7-8 May 1942). Commander Gilmore was posthumously commended by Secretary of the Navy Frank Knox for his superlative leadership and efficiency so vital to the high state of morale of *Lexington's* crew during the Battle of the Coral Sea.

(DE-18: dp. 1140; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; cpl. 156; a. 3 3", 2 40mm.; 9 20mm.; 8 dcp., 1 dcp. (h.h.), 2 dct.; cl. *Evarts*)

Gilmore, originally allocated to England under terms of the Lend-Lease Program, was launched as HMS *Halder* (BDE-18) on 22 October 1942 by the Mare Island Naval Shipyard, California; sponsored by Mrs. Otis J. Boyer, wife of a Quartermaster Rigger of the Mare Island Naval Shipyard; reallocated to the United States Navy and named *Gilmore* (DE-18) on 19 February 1943; commissioned 17 April 1943, Lt. Cmdr. S. C. Small commanding.

Gilmore conducted shakedown training at San Diego; escorted troopships from San Francisco to Pearl Harbor and return (28 June-8 July 1943), then departed San Francisco on 20 September in the escort screen of *Beaver* (AS-5), bound for Attu. A unit of Escort Division 14, she served as escort and control ship for U.S. Coast and Geodetic Survey Ship *Surveyor* (18-29 October) for survey operations east of Attu; completed 11 escort missions between Alaskan and Aleutian ports until 20 January 1944, then took air-sea rescue station off Attu for aircraft of Fleet Air Wing 4 until 1 February. Three days later she departed Attu to escort a merchantman to Adak,

thence in the escort screen of *Tippecanoe* (AO-21) and *SS Henry Failing* to the Puget Sound Naval Shipyard, Bremerton, Wash., arriving 16 February 1944. She returned to Dutch Harbor on 1 March and completed nine escort missions between that port and Attu by 20 April 1944. She departed Dutch Harbor on 23 April to assist *Edward D. Daley* (DE-17) in the escort of merchantmen bound for Kodiak. Near midnight of 25 April her radar picked up a surfaced submarine which dived.

Gilmore gained underwater sound contact, made two depth charge attacks, then regained contact at 0010, 26 April. She exploded six depth charges near the submarine and 5 minutes later six others were dropped directly over the target. A violent underwater explosion caused minor damage in the after motor room of *Gilmore* as the 1,630-ton Japanese submarine *I-180* settled to the bottom in latitude 50°10' North; longitude 155°40' West.

Gilmore arrived at Kodiak on 29 April; returned to Dutch Harbor with Army transport *Otsego* on 9 May, and made five escort voyages between that port and Adak before serving on air-sea rescue station for pilots of Fleet Air Wing Four (1-4 July 1944). Fourteen more escort missions for troop transports were made to Kodiak, Adak, Attu, Kiska, and Amchitka by 8 September 1944 followed by plane guard patrol west of Attu for Fleet Air Wing Four until 1 October. She then resumed escort missions between various Alaskan and Aleutian ports.

Gilmore departed Dutch Harbor on 13 January 1945 for overhaul in the Mare Island Naval Shipyard until 4 March, then sailed for Hawaii. She entered Pearl Harbor on 10 March, became flagship of Escort Division 14, and departed Pearl Harbor on 20 March as screen commander for a troopship convoy escorted safely to Eniwetok atoll in the Marshalls on 29 March. After guarding escort aircraft carrier *Long Island* (CVE-1) to Apra Harbor, Guam, she touched at Saipan on 13 April to act as station guide for a task element of tank landing ships that arrived off Iwo Jima on the 18th. After joining *Cassin* (DD-372) in the escort of two merchantmen to Guam, she departed Saipan on 1 May 1945 with another convoy of amphibious assault ships that arrived off Iwo Jima on the 4th. Assigned to rescue station, she closed within 12 miles of Mount Suribachi that afternoon to rescue an Army aviator from his crashed plane. On the 10th she sent her medical officer to *Jallao* (SS-368) for treatment of injured airmen rescued by that submarine. She escorted *Jallao* into Tanapag Harbor, Saipan, on 12 May and was relieved as division flagship by *Doherty* (DE-14) 20 July 1945.

Gilmore made an escort voyage for troopships to Okinawa and return (22 July-7 August 1945), then joined an antisubmarine warfare task group built around escort carrier *Kasaan Bay* (CVE-69) for an unrewarded search for enemy submarines in waters extending some 250 miles southwest of Guam. She returned to Saipan from this mission on 17 August 1945, made two escort voyages for troop convoys to Okinawa and return by 11 September, proceeded off Marcus Island for patrol (13-28 September), thence to Apra Harbor, Guam. She sailed for home on 12 October via Pearl Harbor to San Pedro, Calif., arriving 27 October 1945. *Gilmore* decommissioned 29 December 1945 and remained in the San Diego Group, U.S. Pacific Reserve Fleet, until sold for scrapping on 1 February 1947.

Gilmore received one battle star for the sinking of Japanese submarine *I-180*.

Gilmore, Howard W., see *Howard W. Gilmore* (AS-16)

Ginko

A handsome gymnospermous tree with yellow fruit and fan-shaped leaves, native to eastern China.

Ginko (YN-65) was renamed *Mastic* (YN-65) (q.v.) on 17 April 1943.

USS *Gilmore* (DE-18) in San Francisco Bay 27 February 1945

Gipsey

A former name retained.

Operations of a schooner *Gipsey* are briefly mentioned in the reports of the North Atlantic Blockading Squadron early in 1862, but no other record of her service has been found.

Giraffe

A large ruminant mammal of Africa, having a very long neck. It is the tallest of quadrupeds.

(IX-118: dp. 14,245; l. 441'6"; b. 56'11"; dr. 28'4"; s. 11 k.; cpl. 108; a. 15")

Giraffe (IX-118), formerly tanker *Sanford B. Dole*, was launched 11 November 1943 by the California Shipbuilding Corp., Wilmington, Calif.; sponsored by Miss Mary F. Leddy; acquired and simultaneously commissioned 12 December 1943; Lt. Comdr. Frederick F. Daly, USNR, commanding.

Following shakedown, *Giraffe* put in at Funafuti, Ellice Islands, 10 February 1944 and subsequently refueled warships at Eniwetok, Saipan, Guam, Ulithi, and Palau before reaching Okinawa 21 July 1945. She entered Sasebo, Japan, 20 November at war's end and served the occupation fleet until departing Yokosuka 21 February 1946 for Pearl Harbor and Norfolk. *Giraffe* reached Norfolk 3 May and decommissioned there 17 June 1946. Returned to the War Department that date, she was stricken from the Navy List 3 July 1946. She was subsequently sold to Metro Petroleum Shipping Co., Inc.

Giraffe was awarded two battle stars for World War II service.

Girasol

A bluish-white translucent opal with reddish reflections.

(PY-27: dp. 700; l. 170'; b. 27'1½"; dr. 10'10"; s. 12 k; cpl. 55; a. 13")

Girasol (PY-27), formerly yacht *Firenze*, was built in 1926 by the Krupp Iron Works, Kiel, Germany; acquired 16 March 1942; and commissioned 19 March 1942, Lieutenant Herbert M. Jones, USNR, commanding.

Girasol sailed from Norfolk 10 August 1942 for shakedown off Guantanamo Bay, Cuba, and subsequently steamed via San Diego to reach Pearl Harbor 26 December. Attached to the Hawaiian Sea Frontier through

October, 1945, she patrolled Hawaiian waters and made frequent voyages to Midway in addition to exacting duties as plane guard and station ship.

Detached from the Hawaiian Sea Frontier 7 November 1945 at war's end, *Girasol* decommissioned at Mare Island, Calif., 26 January 1946. Stricken from the Navy List 1 month later, she was transferred to the Maritime Commission 14 July 1947.

Citana, see YP-598

Glacier

A field or body of ice formed in a region where snowfall exceeds melting; it moves slowly down a mountainside or valley. The second and fourth *Glacier* were named for Glacier Bay, Alaska; the third *Glacier* for Glacier County, Montana.

I

(AF-4: dp. 8325; l. 388'7"; b. 46'1"; dr. 25'4"; s. 12.3 k.; cpl. 98; a. 43")

The first *Glacier* was built as the merchant ship, SS *Port Chalmers*, in 1891 by J. L. Thompson & Son, Sunderland, England; purchased from the Federal Line, London, July 1898; commissioned at New York 5 July 1898, Comdr. J. P. Merrill, USN, commanding; had her name changed to *Delmonico* 6 July 1898, and to *Glacier* 6 days later.

Glacier departed Hampton Roads 15 August, and for the following 5 months she supplied ice, meat, and stores to ships of the North Atlantic Fleet operating in the West Indies during the Spanish-American War. Sailing from San Juan 3 January 1899, she arrived at New York 1 week later, and decommissioned there 6 March.

Glacier recommissioned at New York 31 March 1899, assigned to the Asiatic Station, she stood out of Hampton Roads 24 May and arrived 15 July at Manila Bay via the Mediterranean and Suez Canal. Operating in the Philippines during these troubled years, she supplied Army and Navy forces with ice, meat, and stores; delivered stores to reconstructed gunboats at Hongkong; and transported large quantities of meat and provisions from Australia to Manila. Sailing out of Manila Bay 22 April 1903, *Glacier* arrived at Norfolk 29 June, and decommissioned there 1 August.

Recommissioning there 15 December, she loaded sup-

plies and provisions at New York and delivered her cargo to ships at Guantanamo, Pensacola, and the Canal Zone (14 Feb-7 July 1904). Arriving at Boston 17 July, *Glacier* decommissioned there on the 30th and, following repairs, recommissioned 15 September and fitted out for special duty. *Glacier* became a unit of the Special Service Squadron composed of *Brutus*, *Cacсар*, and *Potomac*, assigned to tow the floating dry dock *Dewey* from Sparrows Point, Md. to the Philippine Islands. Departing Solomons, Md. on the Patuxent River 28 December 1905, the squadron arrived at Olongapo, Philippines, via Los Palmas in the Canaries, Port Said, Suez, and Singapore, 10 July 1906. Following delivery of the dock, *Glacier* proceeded to Cavite for discharge of cargo and repairs. She stood out of Cavite 16 August, and arrived at Boston 14 November via the Suez Canal, the Mediterranean, and New York.

Departing Boston 4 January 1907, *Glacier* became a unit of the Atlantic Fleet, and engaged in supplying fresh provisions to ships operating in the Atlantic and Caribbean area until returning to New York 14 October.

As a storeship, she departed New York 5 December and accompanied the Atlantic Fleet on its good will and training cruise to the Pacific, stopping at various ports in the Caribbean, South America, and Mexico en route. Arriving 14 April 1908 at San Francisco. *Glacier* cruised with the Fleet on the California coast until departing San Francisco 29 June. She continued as supply ship to the Atlantic Fleet on its famous voyage around the world, visiting Honolulu, the Fiji Islands, New Zealand, Australia, and the Philippines. On 21 October, while at Cavite, she became detached from the Atlantic Fleet and assigned to the Pacific Fleet in her former capacity. The Commander in Chief of the Atlantic Fleet reports in 1908: "The storeships *Culogoa* and *Glacier* have been in constant attendance on the fleet, and have most successfully met all demands upon them. They have made the fleet absolutely independent of the local resources at the ports visited, which was necessary in view of the large number of men to be subsisted."

Loading provisions at Manila and Sydney (10 Nov-5 Dec), *Glacier* joined the Pacific Fleet at Talcahuano, Chile, 1 January 1909, and accompanied the fleet on a cruise to South and Central American ports and to Magdalena Bay. They arrived at Mare Island 2 June for repairs.

Continuing in her service as supply ship to the Pacific Fleet until 1918, *Glacier* was employed in delivering fresh provisions, stores, ammunition, target material, and mail; transporting personnel; and towing target rafts and coal barges. Her principal area of operations was on the West Coast, Mexico, and Central America. She made two trips to Asiatic waters (22 Sep 1909-14 Feb 1910 and 8 Apr-17 Aug 1912) to supply ships operating in the Hawaiian area, the Philippines, and the China and Japan coasts. From 1913 to 1917 she operated between California and Mexico and Nicaragua, delivering stores, mail and men to the Fleet, investigating conditions at Mexican ports, and giving refuge to United States and other foreign citizens during the unsettled conditions in Mexico. She loaded stores, fresh meats, and ammunition at San Francisco 9 to 14 May 1917, arrived 30 June at Rio de Janeiro and, through March 1918, delivered her cargo to ships operating on the east coast of South America.

Departing Rio de Janeiro 2 April, *Glacier* arrived at New York on the 24th, and became assigned to NOTS. As a Naval Overseas Transport Ship, she made three trips to Europe carrying fresh meats and general stores to naval forces operating in European waters. The first two trips were made from New York to the British Isles, 2 June-26 July 1918 and 13 August-20 October 1918, and the third trip from New York to Brest, 4 Nov 1918-4 January 1919, returning to Norfolk with a cargo of aviation material and high explosives for New York.

Standing in at New York 10 January 1919, she was detached from NOTS and assigned to the Train Squadron, Atlantic Fleet. From 6 May to 25 June 1919, she issued

stores to the Atlantic Fleet and engaged in target practice with the fleet on the East Coast.

Glacier departed New York 24 July, arrived 17 August at San Pedro, and became attached to the Train Squadron, Pacific Fleet. Until 1921 she was engaged in transporting stores, ammunition, and personnel to ships operating off the California coast and Canal Zone area.

Arriving 31 October 1921 at Mare Island, *Glacier* decommissioned there 6 March 1922 and was sold 17 August to Barde Steel & Machinery Co., Seattle, Wash., for \$22,000.

II

(ACV-33: dp. 7800; l. 495'8"; b. 69'6"; ew. 111'6"; s. 18 k.; cpl. 890; a. 2 5"; cl. *Prince William*)

The second *Glacier* was originally designated AVG-33, and changed to AVC-33 on 20 August 1942. She was built by the Seattle-Tacoma Shipbuilding Co. (later Todd-Pacific Shipbuilding) of Tacoma, Wash., under Maritime Commission Contract. *Glacier* was launched 7 September 1942, sponsored by Mrs. Richard P. Luker, and commissioned 12 July 1943, Comdr. Ward C. Gilbert in command. Her designation was changed to CVE-33 on 15 July 1943.

Glacier was one of a large group of escort carriers transferred to Great Britain under lend-lease. She was transferred 31 July 1943 at Vancouver, B.C. and served during World War II as *Atheling*. *Atheling* put in to Norfolk, Va., 6 December 1946 for return to the United States. Her name was stricken from the Navy List 7 February 1947 and she was sold to National Bulk Carriers, Inc., 26 November 1947.

III

(AK-183: dp. 7,450; l. 338'6"; b. 50'; dr. 21'1"; s. 11.5 k.; cpl. 85; a. 1 3'.)

The third *Glacier* (AK-183) was launched 22 April 1944 under a Maritime Commission contract by Walter Butler Shipbuilding, Inc., Superior, Wis.; sponsored by Miss Agnes Kennedy; acquired 29 March 1945 and commissioned 14 April 1945, Lt. C. L. Hitchcock, USNR, in command.

Following shakedown off Galveston, Tex., *Glacier* loaded lumber and metal drums at New Orleans and sailed 18 May 1945 for Pearl Harbor, where she put in 12 June to off-load her cargo. Underway 29 June with building supplies for Kwajalein, she returned via Eniwetok to San Francisco 5 August. Subsequently, a 5-month voyage out of San Francisco brought general cargo to Pearl Harbor, Tarawa, Majuro, Eniwetok, Guam, and Saipan before *Glacier* moored at Norfolk 1 February 1946, her missions accomplished. Decommissioned there 19 February 1946, she was returned to the Maritime Commission 3 days later and stricken from the Navy List 12 March 1946.

IV

(AGB-4: dp. 8,650; l. 310'; b. 74'; dr. 29'; s. 16 k.; cpl. 339; a. 2 5"; cl. *Glacier*.)

The fourth *Glacier* (AGB-4) was launched 27 August 1954 by the Ingalls Shipbuilding Corp., Pascagoula, Miss.; sponsored by Mrs. Roscoe F. Good; and commissioned 27 May 1955, Comdr. E. H. Mater in command.

Icebreaker *Glacier's* shakedown cruise and maiden voyage were combined in her important role in Operation Deep Freeze I. Her first encounter with the ice came in December 1955, when after breaking through the Ross Ice Pack, she carved out an ice harbor in Kainan Bay to permit the offloading of cargo ships at the site for Little America V. *Glacier* subsequently continued 400 miles west to break ice into an offloading site for the establishment of the Naval Air Facility at McMurdo Sound. In March 1956 an exploratory voyage around the Weddel Sea was completed; the icebreaker surveyed Vincennes Bay in Wilkes Land and made the first landing in history on the Princess Martha and Princess Astrid coasts. *Glacier* returned to Boston, her home port, 6 May 1956 after these accomplishments.

The ship returned to McMurdo Sound 28 October 1956 as spearhead for Deep Freeze II, having made the earliest

seasonal penetration in history through the dangerous ice belt. After supply deliveries there and at Little America, she led seven other Navy ships from New Zealand through the ice pack to the two Antarctic base sites. In January 1947 she led two cargo ships into Vincennes Bay where the last of the seven American bases for the International Geophysical Year was to be constructed. *Glacier* departed Wilkes Station 17 February for the United States via Melbourne with the termination of the operation.

During Deep Freeze III and the IGY of 1957-58, *Glacier* participated as a launching platform for extensive "rockoon" tests during which balloon-lifted rockets gained information useful to the "Explorer" space satellite program. In addition, the icebreaker continued her usual ice clearing and escort duties and conducted oceanographic studies in the Ross Sea.

The summer of 1958 found *Glacier* at the opposite end of the earth as she escorted ships participating in Operation Sunec for the resupply of North Polar radar and weather stations. By November of that year, however, she was again near the South Pole at McMurdo Sound, and after supplying the base steamed to Little America V to begin deactivation of that station. Subsequently, while operating in the Terra Nova Bay on the coast of Victoria Land, she discovered two previously unknown islands and what was possibly the largest Emperor penguin rookery in the Antarctic, home of over 50,000 of the large birds. *Glacier* came to the assistance of the Belgian expedition ship *Polarhav* near Breid Bay, halfway around the Antarctic continent from the Ross Sea area.

Fifth of the Navy's Antarctic support operations, Deep Freeze 60 (for the season 1959-60) took the ship once more to McMurdo and on a tour of exploration into the Bellingshausen Sea. Oceanographic and cartographic studies were discontinued in late February 1960 when *Glacier* steamed to assist Argentine icebreaker *General San Martin* and Danish cargo ship *Kista Dan*. With these missions accomplished, *Glacier* sailed for Boston via Rio de Janeiro, and while at that port provided emer-

gency assistance to flooded areas in Brazil, finally sailing for Boston 17 April 1960.

The icebreaker departed Boston 13 October 1960 on her sixth Antarctic voyage and reached Port Lyttelton, N.Z., 21 November to unload cargo. Most of December was spent in breaking a 21-mile channel through McMurdo Sound to open the way for the thin-hulled supply ships. Following a return voyage to Wellington for repairs and to receive the Navy Unit Commendation for her Bellingshausen achievement of the preceding expedition, she again entered the ice-choked Amundsen and Bellingshausen Seas on a voyage of exploration and discovery. Oceanographic work continued until March 1961 when she sailed for Boston, arriving 27 April.

Underway again 8 October 1961 for Deep Freeze 62, she loaded cargo at Port Lyttelton in early November and encountered the Ross Sea ice pack 13 November, reaching McMurdo Sound by the end of the month. After repairs at Wellington *Glacier* returned to McMurdo and pressed on to the site of Little America V for cartographic studies. She returned to New Zealand 6 March 1962 and subsequently put in at Boston 5 May after steaming 36,000 miles.

The busy ship stood out of Boston 17 September for Deep Freeze 63, entering the pack ice 6 November and reaching the edge of the fast bay ice of McMurdo Sound a week later. The thickness of the ice necessitated repairs at Wellington, by 31 December 1962 *Glacier* was again churning through McMurdo Sound enroute to McMurdo Station. She continued operations off McMurdo Station through 1965. One of her many duties was to keep the channel open for supply ships. On 29 December 1965 *Atka* (AGB-3) and *Burton Island* (AGB-1) assisted her in pushing an iceberg out of the shipping lane. After further participation in her 11th Operation "Deep Freeze," *Glacier* returned to her home port, Boston, Mass., in the late spring of 1966. On 1 July 1966 *Glacier* was struck from the Navy List after transfer to the Coast Guard 30 June.

USS *Burton Island* (AGB-1), USS *Atka* (AGB-3), and USS *Glacier* (AGB-4) pushing an iceberg out of the channel in the "Silent Land" near McMurdo Station, Antarctica, 29 December 1965

Gladiator

A man who fought with deadly weapons, as in the amphitheater, for popular amusement. Hence, one who engages in any kind of spirited contest.

I

(Tug: t. 67; l. 76'1"; b. 19'4"; dr. 7'4".)

The first *Gladiator* was built in 1876 at St. Mary's, Ga.; chartered from the Wilmington Towing Co., Wilmington, N.C.; commissioned 19 April 1918; and assigned to the 5th Naval District. On 20 August 1918 tug *Emily B.* owned by the same company, was substituted for *Gladiator*, and on 20 December 1918 *Gladiator* decommissioned and was returned to her owners.

II

(AM-319: dp 890; l. 221'2"; b. 32'; dr. 10'; s. 18 k.; a. 13')

The second *Gladiator*, originally BAM-6, was launched 7 May 1943 as AM-319 by the General Engineering & Drydock Co., Alameda, Calif.; sponsored by Mrs. Madeline A. Silva; and acquired and simultaneously commissioned 25 February 1944, Lt. Comdr. Robert W. Costello in command.

Gladiator sailed from San Francisco 1 May 1944 with a convoy for Pearl Harbor and subsequently made four round trip escort voyages from Hawaii—one to Kwajalein and three to Eniwetok—from 22 May–11 September 1944. Underway again 16 October, she reached Ulithi 12 November and commenced patrol and escort duty in those waters. Voyages to Eniwetok, Kossol Roads, and Saipan, were frequently made to shepherd merchantmen to and from those strategic ports until *Gladiator* sailed from Ulithi 19 March 1945 for combat at Okinawa.

Closing the beaches of Okinawa 24 March when Vice Admiral Lee's battle ships were bombarding the island, *Gladiator* began minesweeping operations and screening duties. On April 6 she came under attack from a Japanese bomber and shot it down with the help of four American fighters that were on the bomber's tail during its approach. Another plane was splashed 6 days later when *Gladiator's* automatic weapons brought it down close aboard on the starboard beam; debris rained about the ship. A third enemy plane was shot down 22 April, crashing into the sea after passing just fifty feet above the ship's deck; but one man was killed and five wounded by the plane's strafing. *Gladiator* continued minesweeping duties off Okinawa until sailing 19 May with a convoy for Saipan and Guam, subsequently returning to Okinawa 21 June. From 8–25 July 1945 she conducted minesweeping operations in the East China Sea, destroying six mines, and put in at Guam 11 August for major overhaul.

Gladiator departed Guam 24 November and reached San Francisco 15 December 1945. She steamed to San Pedro, Calif., 30 May 1946 and after being towed to San Diego 2 October 1946 decommissioned at that port 2 days later.

Recommissioned 29 February 1952 at Long Beach, Calif., *Gladiator* sailed 2 September for Japan, closing Sasebo 1 month later, and steaming to Wonsan, Korea, 27 October. She swept mines in those dangerous waters until returning to Sasebo 10 November and subsequently, until the spring of 1953, divided her time between minesweeping operations at Wonsan, Inchon, and Hungnam and replenishment and training exercises in Sasebo and Yokosuka.

Gladiator departed Sasebo 19 March 1953 and put in at Long Beach 10 April. She engaged in peacetime activities—overhaul at San Francisco, training exercises off southern California, a round trip cruise from Long Beach to Acapulco and Balboa (15 January–12 February 1954), and a cruise to Bellingham, Wash., and return (28 June–10 July 1954)—before decommissioning at

Long Beach 15 March 1955. Redesignated MSF-319, *Gladiator* entered the reserve fleet berthed at Green Cove Springs, Fla. She was later transferred to the Pacific Reserve Fleet at San Diego, Calif., where she remains.

Gladiator received two battle stars for World War II service.

Gladiola

A flowering plant of a genus closely related to the iris.

(SP-184: t. 43; l. 68'8"; b. 14'5"; dr. 2'7"; s. 10 k.; a. 1 1-pdr, 1 mg.)

Gladiola, a yacht used as a motor patrol boat, was built in 1911 by the Hudson Yacht & Building Co. of Nyack, N.Y. She was acquired by the Navy from Coburn Haskell, 17 April 1917; and commissioned 1 May 1917, Ens. John S. Baker, USNRF, in command.

Gladiola was operational control of the 5th Naval District and served in the Norfolk-Hampton Roads, Va., area as a Naval Port Guard craft and as a customs boat. She decommissioned and was simultaneously returned to her owner 25 February 1919.

Gladiolus

A plant of the iris family.

(Sc Tug: t. 81; l. 88'; b. 18'6"; dph. 7'9"; a. 2 12-pdr. r. 1 24-pdr. how.)

Gladiolus, formerly tug *Sallie Bishop*, was purchased at Philadelphia 2 June 1864 by Commodore C. K. Stribling. She commissioned 15 June 1864, Acting Master J. C. Hamlin in command.

Gladiolus departed Philadelphia 17 June 1864 to join Rear Admiral Dahlgren's South Atlantic Blockading Squadron, and was assigned to Charleston station, arriving 25 June. For the next six months she was actively engaged in towing and coaling ships of the squadron, and served as a night picket boat protecting the powerful ironclads from torpedo and boarding attack. During this period she was also assisted in the capture of several blockade runners.

After the capture of Charleston in February 1865, *Gladiolus* worked in the harbor clearing obstructions and searching for torpedoes. She subsequently served as a dispatch boat for the squadron between Florida ports and Port Royal until she sailed for Washington from Charleston 17 August 1865. She decommissioned at Washington Navy Yard 30 August 1865, and was sold 15 September to S. M. and J. M. Flanagan. *Gladiolus* returned to merchant service under the same name and was lost in 1887.

Gladwin

A county in Michigan.

Gladwin (APA-106) was renamed *Hansford* (APA-106) (q.v.) on 25 August 1944.

Gladwyne

A city in Pennsylvania.

(PF-62: dp. 1,264; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20.3 k.; cpl. 214; a. 3 3"/50 cal. cl. *Tacoma*)

Gladwyne (PF-62), formerly *Worcester*, was launched 7 January 1944 by the Globe Shipbuilding Co., Superior, Wis.; sponsored by Mrs. Phyllis M. Bennett; and commissioned 21 November 1944, Lt. Comdr. R. G. Miller, USCG, in command.

After shakedown, *Gladwyne* sailed from Philadelphia 21 January 1945 for Casco Bay, Maine, arriving 2 days later. Following training exercises there, she made two round

trip transatlantic convoy escort voyages to Oran, Algeria, one each from New York and Norfolk, from 6 February-14 May 1945, returning to Boston each time. Refresher training at Casco Bay occupied June, and on 31 July *Gladwyne* sailed from Boston via Panama to reach Majoro 5 September. She served as plane guard there and at Kwajalein until putting in at Pearl Harbor 27 December 1945. Underway again 23 February 1946, *Gladwyne* patrolled on weather station until mooring at San Francisco 9 April. Decommissioned there 15 April 1946, she was stricken from the Navy List 8 October 1946 and sold to the Mexican Government 24 November 1947. She served Mexico as *Papaloapan* until disposed of in 1965.

Glance

A rapid oblique movement; an oblique or indirect hit or thrust.

(StTug: t. 81; l. 75'; b. 17'; dr. 8'; s. 8 k.)

Glance was built in 1863 as the merchant tug *Glide* by Reany, Archibald & Sons, Philadelphia, Pa.; purchased by Rear Admiral S. H. Stringham at Boston 2 June 1864, and placed under command of Acting Ensign H. Wheeler.

Glance arrived at Hampton Roads, Va., on 20 July 1864 for service as yard tug until 13 July 1865 when ordered to Philadelphia for identical duty. She continued yard tug duties at Philadelphia until sold on 27 September 1883 to Mr. W. H. Swift, Boston, Mass.

Glasgow

(SwStr: t. 252; dr. 6'9"; a. 1 12-pdr. how., 1 12-pdr. r.)

Glasgow was originally blockade runner *Eugenic*, captured off Mobile Bay 6 May 1863 by *R. R. Cuyler*. She was purchased from the Key West Prize Court and commissioned 9 July 1863, Acting Ensign N. M. Dyer in command.

Assigned to the West Gulf Blockading Squadron, *Eugenic* served as a dispatch and supply ship for the squadron between Mobile Bay and Pensacola, Fla. *Eugenic* sent an expedition to Mermentau Lake, La., 22 December 1863, for the capture of two British blockade runners. Schooner *Derby* was captured, but had to be burnt because of heavy enemy shore fire on the attacking party.

Eugenic was renamed *Glasgow* 21 January 1864, and after a week repairing at New Orleans in early February, was back on station with the blockading fleet off Mobile. Serving mainly as dispatch boat, *Glasgow* aided in the destruction of blockade runner *Ivanhoe* under the fire of Fort Morgan 30 May 1864, and fired at an unknown blockade runner under the guns of the fort 1 July. She was present off Fort Gaines 8 August when the fort surrendered to Union forces after Admiral Farragut's historic victory at Mobile Bay, and received the Admiral on board for a brief visit 26 November.

During 1865, *Glasgow* continued her regular duties, and in addition served occasionally, because of her speed and light draft, as flagship of the West Gulf Squadron. She struck an obstruction and sank in shoal water off Mobile 8 May 1865, and was not raised until 19 June. *Glasgow* was taken to Pensacola for repairs and returned to duty 1 July 1866. Chosen to be retained for the post-war cruising squadron in the Gulf, *Glasgow* served as store-ship and visited New Orleans, Lakeport, La., and Mexican ports until she entered the Pensacola Navy Yard for repairs 23 January 1868. Departing Pensacola 10 March, she spent another five months cruising with the squadron on the lower Mississippi River and off Pensacola, returning there 6 August 1868. She decommissioned 17 October 1868 at Pensacola and was sold 4 June 1869 to Thomas McClellan.

Glass, Admiral, see Admiral Glass

Glaucus

A sea God in Greek mythology.

(ScStr: t. 1,244; l. 209'; b. 35'6"; dph. 20'8"; s. 10k.; a. 1 100-pdr. P. r., 2 30-pdr. r. 8'8")

Glaucus, a screw steamer, was built in New York in 1863; purchased 17 July 1863 by Rear Admiral F. H. Gregory; and commissioned 18 February 1864, Comdr. C. H. B. Caldwell in command.

Glaucus was assigned to the North Atlantic Blockading Squadron, but before assuming her duties she was chosen to transport Senor Manuel Murillo, newly elected President of Columbia, to Cartagena. She departed 5 March from New York and arrived Cartagena 16 March. Returning to Beaufort, N.C., 3 May 1864, *Glaucus* took up blockading station off Cape Fear River. On 28 May, while pursuing a blockade runner off the Western Bar, *Glaucus* caught fire and was nearly destroyed. The crew managed to control the flames, however; and she proceeded to Philadelphia for repairs, arriving 9 June 1864 and decommissioning 11 June. Repaired and recommissioned 22 August 1864, she broke down on her way to New York, and had to again undergo extensive repairs. Sailing to join the West India Convey Fleet, she grounded near Molasses Reef in the Bahamas, and had to be towed 30 May 1865. She was decommissioned 6 June sold 12 June 1865 to John Henderson. Renamed *Worcester*, she had an active merchant career before being scrapped at Boston in 1894.

Gleaves

Albert Gleaves, born 1 January 1858 in Nashville, Tenn., graduated from the Naval Academy in 1877. After serving on board *Hartford* and *Trenton*, he was appointed an Ensign in 1881. Assigned to many ships and stations, he commanded *Cushing* during the Spanish-American War and later *North Dakota*. Promoted to Rear Admiral in 1915, in World War I he commanded the Cruiser and Transport Force. For his outstanding contribution he was awarded the Army and Navy Distinguished Service Medals.

In 1919 he was promoted to Admiral. While serving at the Naval Ordnance Proving Ground, Admiral Gleaves made outstanding contributions in the field of gunnery and torpedoes. While carrying out some tests on torpedo steering devices he changed these weapons from instruments of luck into instruments of precision. The gear which he tested in *Cushing* provided the imprints which made the torpedo the "terrible weapon" of World War I. In spite of a life of constant action in war and peace, he found time to write a biography on Captain Lawrence; the "History of the Cruiser and Transport Force," and the "Life of an American Sailor, William Hensley Emory, Rear Admiral, USN." After a most distinguished career, he retired in 1921. Admiral Gleaves died 6 January 1937 at Haverford, Pa.

(DD-423: dp. 1,630; l. 348'4"; b. 36'1"; dr. 13'6"; s. 37 k.; cpl. 276; a. 4 5"; cl. *Gleaves*)

Gleaves was launched by the Bath Iron Works, Bath, Maine, 9 December 1939; sponsored jointly by Miss Evelina Gleaves Van Metre and Miss Clotilda Florence Cohe, granddaughters of Admiral Gleaves; and commissioned 14 June 1940, at Boston Navy Yard, Lt. Comdr. E. H. Pierce in command.

Departing for shakedown training soon after commissioning, *Gleaves* operated off the Atlantic coast and in Caribbean waters until returning to Boston 19 March 1941 to prepare for convoy duty. She departed Newport on her first voyage 23 June 1941, and saw her convoy arrive safely at Iceland. After patrolling in Icelandic waters for a time, she returned to Boston 23 July.

Subsequently, *Gleaves* made four other convoy voyages to Iceland, Ireland, and North Africa protecting the vital flow of supplies to the European Theater. As the pace of German submarine attacks increased, she made more and

more attacks on U-boats, but recorded no confirmed kills. On 11 to 12 May 1942, despite the efforts of *Gleaves* and the other escort vessels, seven ships of the convoy were lost in two separate attacks by a large wolfpack.

After returning to Boston 31 March 1942, *Gleaves* departed 10 May for participation in the Allied landings in Sicily. After engaging in support and convoy operations in the battle zone, *Gleaves* and *Plunkett* accepted the surrender of the Italian garrison on the island of Utica 5 August 1943, and later landed occupation troops on the island. She also drove off a group of five enemy E-boats attempting to attack shipping in the harbor of Palermo, Sicily.

As Allied preparations for the invasion of Italy reached a climax, *Gleaves* bombarded the Italian mainland. In September 1943 she helped clear the way for the Alerno landing forces. Following the assault, *Gleaves* convoyed shipping in the Mediterranean area in support of the drive north from Salerno.

When German air and land forces combined in a determined attempt to stop the landings at Anzio in January 1944, *Gleaves* was again on hand to lend decisive gunfire support and antiaircraft cover. In May of that year she attempted to search out and destroy German submarine *U-616* but other ships of the group sank the U-boat. Survivors from the sunken U-boat were picked up by *Gleaves* 17 May.

Gleaves next took part in the invasion of southern France in August 1944. She escorted the Rangers in their

initial landings; bombarded shore installations in support of the main assault; and screened heavier units of the fleet off shore.

Sent to San Remo on patrol and support duty, *Gleaves* helped in the bombardment of shore installations there 1 October firing on shipping in the harbor of Oneglio, Italy, with hits on two cargo ships. On the night of 1 to 2 October, *Gleaves* was attacked and succeeded in destroying one of three small explosives-laden German motor boats moving down the coast to San Remo. The other two were temporarily driven off. Returning to her station off San Remo, *Gleaves* was attacked two more times before she, by violent maneuvering, depth charges, and well-placed gunfire, left five boats sunk in her wake. The following morning she returned to the area to find a sixth boat disabled; and captured it with two operators on board, who provided the Allies much valuable information.

In December 1944, *Gleaves* was assigned as fire support ship near Allied positions on the Franco-Italian frontier, and ably performed this duty until sailing for the United States in February 1945. After a period of outfitting at New York and training activities in the Caribbean, she departed 30 June 1945 from Guantanamo Bay, Cuba, for the Pacific, arriving at Pearl Harbor 4 August. After the war's end, *Gleaves* proceeded westward to Saipan and Nagasaki, Japan, with the occupation forces. She distinguished herself for outstanding rescue and salvage work during the powerful typhoon which swept

USS *Gleaves* (DD-423) leaves the building ways 9 December 1939.

through the Philippine Sea during September and October.

While repairing her machinery at Adak, Alaska, 23 November, *Gleaves* received word that steamer *Adabelle Lykes* in the Pacific was suffering from a smallpox epidemic. The veteran "can do" destroyer put to sea at top speed from Adak on 25 November with the vital vaccine. She met the stricken steamer next day and transferred the life-saving supplies.

Her duty in the North Pacific terminated, *Gleaves* transported 300 veterans from the Aleutians to Seattle, Wash., on "Magic-Carpet" duty, arriving 10 December 1945. She then moved to San Francisco and on 2 January 1946 departed for Charleston, S.C. At Charleston, where she arrived 18 January 1946, *Gleaves* decommissioned 8 May 1946, and was placed in reserve at Philadelphia, Pa. She was later moved to the Reserve Fleet at Orange, Tex., where she remains in 1967.

Gleaves received five battle stars for World War II service.

Glen White

A merchant name retained.

(AK; dp. 12,163; l. 395'; b. 55'; dr. 27'; s. 12 k.; cpl. 73; a. 15', 16-pdr.)

Glen White was built as *Tidewater* by the New York Shipbuilding Co., Camden, N.J., for the American-Italian Steam Ship Co., New York; launched 20 April 1918; renamed *Glen White*; acquired from the United States Shipping Board at Philadelphia on 22 July 1918; commissioned the same day, Lt. Comdr. Eugene Lane, USNRF, in command.

Glen White was assigned to NOTS and departed Philadelphia on 25 July 1918 to load 6,149 tons of general Army cargo at New York, then proceeding to Hampton Roads on 5 August to join a convoy that reached St. Nazaire, France, on the 26th. She returned to New York on 29 September. After two similar voyage carrying a total of 12,458 tons of Army cargo to Brest and St. Nazaire, France, she decommissioned at Baltimore 6 March 1919 and returned to USSB.

Glendale

A city in California.

(PF-36; dp. 1,264; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20.3 k.; cpl. 190; a. 3 3"; cl. *Tacoma*)

Glendale (PF-36) was launched 28 May 1943, by Consolidated Steel Corp., Los Angeles, Calif.; sponsored by Miss Shirley Schlichtman; and commissioned 1 October 1943, Lt. Comdr. Harold J. Doebler, USCG, in command.

Following shakedown off Southern California, *Glendale* sailed from San Diego 12 January 1944 and reached Cairns, Australia, 17 February. Until the fall of 1944, she served as an antisubmarine and antiaircraft escort ship based in New Guinea protecting arriving and departing merchantmen.

In September the frigate took part in the assault on Morotai Island, N.W.I., sailing from Humboldt Bay, N.G., 14 September to escort merchant ships to the island. She returned to Humboldt Bay 24 September to continue escort assignments between New Guinea and the Philippines.

On 5 December 1944, *Glendale* was escorting a convoy from Hollandia to Leyte when attacking Japanese planes sank SS *Antoine Saugrain*, a cargo ship laden with valuable radar material, and severely damaged SS *Marcus Daly*. She brought the rest of the convoy safely into Leyte the next day.

Glendale departed Leyte 8 December bound for the Atlantic and moored at Boston 24 January 1945. After overhaul, she got underway from Casco Bay, Maine, 28 March for Seattle, arriving 26 April, before she sailed for Cold Bay, Alaska. Decommissioning there 12 June 1945, she was simultaneously transferred to the Soviet Navy.

Renamed *EK-42* she then served as a patrol vessel in the Far East.

Glendale was returned to the United States by the Soviet Union 16 November 1949 at Yokosuka, Japan, and recommissioned 11 October 1950. In December, 1950, the ship patrolled off Hungnam, Pusan, and Inchon, Korea, in support of United Nations forces fighting aggression ashore. For her actions in Korean waters, *Glendale* was awarded the Korean Presidential Unit Citation. On 29 October 1951, she was decommissioned again and transferred to the Government of Thailand to serve as *Tuchin* (PF-1) *Glendale* was struck from the Navy List 20 November 1951.

Glendale was awarded five battle stars for World War II service and four battle stars for Korean service.

Glendoveer

A former name retained.

(SP-292; t. 33; l. 74'; b. 12'; dr. 4'6"; s. 12 k.; a. 2 3-pdr.)

Glendoveer (SP-292) was built in 1907 by Jahnce Navigation Co., New Orleans, and was purchased by the Navy from her former owner, Ernest L. Jahnce, 3 May 1917. *Glendoveer* commissioned 9 May 1917 at New Orleans, Boatswain Jacob Hansen, USNRF, in command.

Assigned to the 8th Naval District as a patrol craft, *Glendoveer* served in Pensacola Harbor, New Orleans, and Biloxi, Miss. as section patrol boat and inspection boat for merchant craft. Her duties included occasional use as a mail boat and even rescue missions. She responded to a distress call from a seaplane lost in the fog off Pensacola 14 February 1918 and succeeded in towing it into the safety of the harbor.

Glendoveer continued her patrolling duties until she decommissioned 8 February 1919 at New Orleans. She was struck from the Navy List 17 June 1919 and sold to Charles DeLerno 2 September 1919.

Glennon

James Henry Glennon, born 11 February 1857 at French Gulch, Calif., was appointed a cadet midshipman on 24 September 1874. He served as a midshipman in *Lackawanna*, *Alaska* and *Pensacola*, and later as an officer in *Ranger* (1881-85) and *Constellation* (1885-88). He commanded a forward gun turret in *Massachusetts* when that battleship on 4 July 1898 joined *Texas* in sinking the *Reina Mercedes*. While executive officer and navigator in *Vicksburg*, he participated in the actions against the Philippine Insurgents. During 1912 to 1913 he was President of the Board of Naval Ordnance and of the Joint Army-Navy Board on Smokeless Powder.

He served as Commandant of the Washington Navy Yard and Superintendent of the Naval Gun Factory from 1915 to early 1917 when he was appointed the Navy Department representative in a special mission under Elihu Root sent to Russia. At the risk of his life, he persuaded mutinous Russian sailors who had taken over command of Russian ships-of-war in waters of Sevastopol, to restore authority to the officers of the men-of-war. After completing the mission to Russia, he took command of Battleship Division 5 with his flag in battleship *Connecticut*. He was awarded the Navy Cross for meritorious service in this command, including the instruction of midshipmen and thousands of recruits for duty as armed guard crews of merchant ships. Detached from this duty on 17 September 1918, he became Commandant of the 13th Naval District until 3 January 1919, then was Commandant of the 3d Naval District at New York. Having reached the statutory age for retirement, he was transferred to the Retired List on 1 February 1921. Rear Admiral James Henry Glennon died at Washington, D.C., 29 May 1940.

I

(DD-620: dp. 1,620; l. 348'4"; b. 36'1"; dr. 17'4"; s. 37.5 k.; cpl. 270; a. 4 5", 2 40mm., 5 20mm., 5 21" tt., 6 dep., 2 dct.; cl. *Gleaves*)

The first *Glennon* (DD-620) was launched 26 August 1942 by the Federal Shipbuilding & Dry Dock Co., Kearny, N.J.; sponsored by Miss Jeanne Lejeune Glennon, granddaughter; and commissioned 8 October 1942, Lt. Comdr. Floyd C. Camp in command.

After shakedown training along the New England coast, *Glennon* guarded troops and supply convoys for the occupation of Sicily (9-15 July 1943). It was here that the giant assault on Europe began sweeping in from the sea. She returned to New York on 3 December 1943, then made two round-trip convoy escort voyages to the British Isles and one to Gibraltar. She arrived in New York from Gibraltar on 22 April 1944 and stood out of that port 5 May with a task group which arrived Belfast, Ireland, on the 14th. Assigned to Assault Force "U" of the Western Naval Task Force, she arrived in the Baie de la Seine, France, on 6 June. After patrolling around the bombardment group for submarines and fast German torpedo boats, she joined in gunfire support of troops ashore.

On 7 June she hurled in 430 5-inch shells ashore in support of troops advancing north toward Quineville. Under command of Comdr. Clifford A. Johnson, she was again approaching her gunfire support station at 0830, 8 June, when her stern struck a mine. A whaleboat picked up survivors while minesweepers *Staff* and *Threat* arrived on the scene, one passing a towline while the other swept ahead of the damaged destroyer. Destroyer escort *Rich* closed in the wake of the minesweepers to assist, then felt a heavy explosion as she slowly rounded *Glennon's* stern to clear the area. Minutes later a second explosion blew off a 50-foot section of *Rich's* stern, followed by a third mine explosion under her forecastle. She went under within 15 minutes of the first explosion.

Minesweeper *Staff* found she could not budge *Glennon* whose fantail seemed to be firmly anchored to the bottom by her starboard propeller. Most of her crew boarded *Staff* and those remaining on *Glennon* lightened her stern by pumping fuel forward and jettisoning depth charges and topside gear. On 9 June salvage equipment was assembled; and some 60 officers and men of the *Glennon* came back on board. The following morning, just as Comdr. Johnson was preparing to resume efforts to save his ship, a German battery near Quineville found her range. A second salvo hit *Glennon* amidships and cut off all power. After a third hit, Commander Johnson ordered abandon ship and the men were taken off in a landing craft. *Glennon* floated until 2145, 10 June 1944; then rolled over and sank. She suffered 25 lost and 38 wounded.

Glennon was awarded two battle stars for services in World War II.

II

(DD-840: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35 k.; cpl. 367; a. 6 5"; cl. *Gearing*.)

The second *Glennon* (DD-840) was launched 14 July 1945 by the Bath Iron Works, Bath, Maine; sponsored by Miss Frances Reading Glennon, granddaughter; and commissioned 4 October 1945, Comdr. George W. Pressey in command.

After shakedown off Cuba, *Glennon* sailed from Boston 12 February 1946 for Europe and visited many of the nations washed by the North Sea before returning to New York in August of the same year. Undergoing upkeep at Boston and overhaul at Newport, *Glennon* conducted refresher training out of Guantanamo Bay during April and May 1947. For the next 12 months she engaged in a rigorous schedule of tactics along the New England coast and down the eastern seaboard to ports of Florida. In February and March 1948 she took part in combat fleet exercises and maneuvers in waters ranging from Cuba to Trinidad and the Panama Canal.

Sailing from Norfolk in June 1948, *Glennon* served with the Midshipman Practice Squadron and made calls at Portugal, Italy, and French Morocco. She joined the 6th Fleet in August 1948 for Mediterranean duty, returning stateside in January 1949 for overhaul at Boston. In the winter of 1949-50 she was part of Operation "Frostbite," a cold weather exercise near the Davis Strait, subsequently to sail from Newport 4 January 1950 for another "Med" cruise.

Upon return to the United States, she made a series of reserve training cruises along the eastern seaboard and engaged in type training along the New England coast and into the Caribbean Sea. Underway from Newport 8 January 1951, she embarked on another "Med" cruise, returning to Boston in May for overhaul followed by refresher training out of Cuba.

Glennon spent January and February 1952 with a carrier task force conducting cold weather training in waters ranging northward to the Davis Straits. From April to October she was flagship of Destroyer Squadron 8, and stood out in June for the Mediterranean, returning to Annapolis in September 1952. For more than a decade the destroyer continued her already established peacetime operation pattern. Highlights of this exacting duty included participation as a recovery station ship in the 1961 and 1962 Project Mercury flights, and in the search for the lost nuclear powered submarine *Thresher*. In August 1961 *Glennon* was called away suddenly to join the task force for the Project Mercury space shot carrying Major Grissom. In early 1962 she was again chosen to man an Atlantic recovery station for the historic three orbit flight of Maj. John Glenn. An extensive overhaul at Boston terminated 24 July 1963, and through the remainder of that year *Glennon* trained in the Caribbean, acted as school ship for the Antisubmarine Warfare School at Key West, Fla., and put in at Boston in November for refitting. The years 1964 and 1965 found *Glennon* continuing her ASW work. In September 1964 she was chosen to carry guests to the America's Cup Races. Later in May 1965 she conducted exercises called "Mule 65" in which U.S. Army cadets from West Point were given shipboard indoctrination. Through 1967 *Glennon* continued to operate with the U.S. Atlantic Fleet.

Glennolden

A borough in southeastern Pennsylvania.

(PC-782: dp. 280; l. 173'8"; b. 23'; dr. 10'10"; s. 22 k.; cpl. 65; a. 1 3", 1 40mm., 5 20mm., 2 rkt., 2 dep., 2 dct.; cl. *PC-461*)

PC-782 was laid down 26 November 1942 by Commercial Iron Works, Portland, Ore.; launched 31 December 1942; sponsored by Mrs. G. B. Wallace; and commissioned 19 July 1943, Lt. (j.g.) M. W. Thomas in command.

After shakedown, *PC-782* conducted 3 months of patrol and escort duty while assigned to the Northern Sector, Western Sea Frontier, for ASW training. Sailing 4 December for duty in the Aleutian Islands, she steamed via Dutch Harbor, Alaska, to Attu Island. During the next 10 months she served on local patrol and escort duty throughout the Aleutian chain.

Departing Attu 25 October 1944, *PC-782* returned to the West Coast 11 November for overhaul at Puget Sound Navy Yard, Bremerton, Wash. Between 6 and 10 March 1945 she sailed to San Francisco, and on 15 March she departed for Pearl Harbor as escort for *LST-845*. Arriving 24 March, she was assigned to the Hawaiian Sea Frontier and during the next 5 months operated as a patrol and escort ship.

PC-782 departed Pearl Harbor 12 September and arrived San Pedro the 21st. She sailed for the East Coast 5 October; transited the Panama Canal the 16th; and arrived Key West several days later. Following inactivation overhaul, she sailed 17 November for Green Cove Springs, Fla., arriving 20 November. After serving as Naval Reserve Training ship, *PC-782* decommissioned in October

1949 and joined the Atlantic Reserve Fleet. While berthed in Norfolk, Va., she was named *Glenolden* 15 February 1956. Her name was struck from the Naval Register 1 April 1959, and she was sold 14 September 1959 to Hughes Bros., Inc.

Glenora, see *Regulus* (AK-14)

Glenville

A former name retained.

(Tug: t. 268; l. 120'6"; b. 27'; dph. 8'; s. 10 k.)

Glenville, a wooden ferry tug, was built in 1886 by Lawrence and Lolks of Brooklyn, N.Y., and was chartered by the Navy from Portchester Transportation Co., Portchester, N.Y. She was delivered at New York 10 April 1918.

Glenville performed general harbor duties in New York harbor and was used as a ferry between New York Navy Yard and Ellis Island until she was returned to her owners 11 September 1919.

Glenwood

Cities in Mills County, southwest Iowa, and in Pope County, west-central Minnesota.

(PC-1140: dp. 280; l. 173'8"; b. 23'; dr. 10'10"; s. 22 k.; cpl. 65; a. 1 3", 1 40mm., 3 20mm., 2 rkt., 4 dp., 2 dct.; cl. PC-553)

PC-1140 was laid down by Defoe Shipbuilding Corp., Bay City, Mich., 8 February 1943; launched 14 June; and commissioned 22 January 1944, Lt. F. H. Beardsley, Jr., in command.

After shakedown at Miami, PC-1140 escorted convoy runs in the Gulf of Mexico and the Caribbean until early June. Following an overhaul at Norfolk she sailed 4 July for the Mediterranean, arriving Bizerte on the 23d. Assigned to patrol duties, she operated along the coast of Italy until 14 August when she departed Ajaccio, Corsica, to escort a convoy en route to the invasion of Southern France. PC-1140 patrolled in the assault area on the 15th, with subsequent runs conveying rear echelon and service troops to the newly opened front. The submarine-chaser returned to Naples 17 August.

For the rest of the war she operated on patrol and escort duty off the Italian and French coasts. After VE-Day, PC-1140 sailed for the United States, arriving Key West 14 June. She was scheduled for Pacific operations; however, the war came to a victorious conclusion before deployment to the Far East. Following training exercises off Florida, the submarine chaser arrived Norfolk 6 November. PC-1140 decommissioned in January 1947 and entered the Atlantic Reserve Fleet. While berthed at Green Cove Springs, Fla., she was named *Glenwood* (PC-1140) 15 February 1956. Her name was struck from the Navy List 1 July 1960, and she was disposed of by Navy sale in March 1961.

PC-1140 received one battle star for World War II service.

Glide

To flow smoothly and easily.

I

(StwStr: t. 137; a. 6 24-pdr. how.)

The first *Glide* was a sternwheel tinclad originally built in Shousetown, Pa., in 1862 and purchased by Rear Admiral D. D. Porter at Pittsburgh, Pa., 17 November 1862. She was taken to Cairo, Ill., for fitting out and commissioned 3 December 1862, Acting Lt. Selim E. Woodworth in command.

After fitting out, *Glide* departed 3 January 1863 for the

lower Mississippi as part of the Mississippi Squadron. She participated in the fierce engagement at Fort Hindman, or Arkansas Post, 11 January as part of the division of light draft gunboats under the overall command of Lt. Comdr. Watson Smith. As army forces launched the assault, *Glide* and the other gunboats helped to silence the powerful batteries. She passed the fort under heavy fire and proceeded upstream to cut off possible escape routes for the garrison.

After aiding in the important victory at Fort Hindman, helping to open the White River, *Glide* served briefly there as a gunboat and supply ship until she was sent to Cairo for repairs in early February 1863. While she was repairing there, on 7 February an unexplained fire broke out forward and within a few minutes the tinclad was entirely destroyed.

II

(SwStr: t. 232; a. 2 32-pdrs.; 4 24-pdr. how.)

The second *Glide* was a wooden sidewheeler built at Murraysville, Va., in 1863 and purchased 30 November 1863 at Pittsburgh, Pa., by Rear Admiral Porter. She was converted to Navy use and sent to New Orleans for duty with the Western Gulf Blockading Squadron, Acting Ens. L. S. Fickett in command.

From March 1864 to August 1865, *Glide* served as a blockading ship in Berwick Bay, La. During this period she made numerous short expeditions in the bayous surrounding the bay, suppressing guerrilla activity and capturing small blockade runners. *Glide* decommissioned 1 August 1865 and was sold at public auction at New Orleans 12 August to J. W. Young. Returning to merchant service, *Glide* was destroyed by an explosion on 1 January 1869 near New Orleans.

Glide, see *Glance*

Globe No. 15, see *YSR-15*

Gloria Dalton

A former name retained.

(IX-70: dp. 86; l. 87'; b. 21')

Gloria Dalton (IX-70) was built in 1925 by Craig Shipbuilding Co., Long Beach, Calif., and was purchased by the Navy 11 May 1942. She commissioned 30 May 1942 Lt. (j.g.) W. H. Sutherland in command.

Gloria Dalton performed coastal patrol duties with home port San Diego, Calif., under Commandant, 11th Naval District until 16 November 1942, then under Commander, Western Sea Frontier. She was laid up and decommissioned because of a need for too extensive repairs 1 October 1943, struck from the Navy List 28 June 1944, and was transferred to the WSA for disposal. She was eventually returned to her owner.

Gloucester

A city and port of Essex County, Mass., and a fishing station since 1624.

I

(Gbt: dp. 786; l. 240'8"; b. 27'2"; dr. 12'; s. 17 k.; a. 4 6-pdrs.)

The first *Gloucester*, formerly J. Pierpont Morgan's yacht *Corsair*, was built in 1891 by Neafie & Levy, Philadelphia, Pa.; acquired 23 April 1898; and commissioned 16 May 1898, Lt. Comdr. Richard Wainwright in command.

Under her far-seeing and brilliant commanding officer, *Gloucester* made a name for daring starting with her first service in Cuban waters in 1898 with the North Atlantic Fleet, Blockading Station. She participated in

the Battle of Santiago 3 July 1898 against Cervera's fleet—a remarkable victory with no casualties attributed to "The accuracy and rapidity of her fire, making the proper service of the guns on the Spanish ships impossible." On 25 July 1898, she entered the harbor before the fleet at Guanica, Puerto Rico, and, single-handed, captured the place for the Army. The skillful handling and gallant fighting of *Gloucester* excited the admiration of all who witnessed the action, and merited the commendation of the Navy Department. As the Army was anxious to transfer the place of disembarkation to the harbor of Ponce, the Fleet was directed to proceed to Ponce to reconnoiter; capture all lighters found there; and occupy such positions necessary for holding the port until the arrival of the Army. On 1 August 1898, with assistance of *Wasp*, *Gloucester* took possession of Arroyo, and hoisting the U.S. flag, Lt. Comdr. Wainwright held it until arrival of the Army, a day later.

Subsequently *Gloucester* cruised along the Eastern seaboard from New York to Provincetown in the fall of 1898, and from 1899 to 1902 served as schoolship at Annapolis. Recommissioned at Norfolk 15 November 1902, she served as tender to the Commander in Chief, South Atlantic Squadron, and cruised to ports in the West Indies and along the east coast of South America. Decommissioned 8 February 1905 at Pensacola, Fla., the ship was on duty with the Massachusetts and New York Naval Militias at New York City until recommissioned 7 April 1917 at Brooklyn.

Gloucester conducted harbor patrols at New York until her name was struck from the Navy List 12 August 1919, and she was sold 21 November 1919.

II

(PF-22: dp. 1430; l. 304'; b. 37'6"; dr. 15'; s. 20 k.; cpl. 190; a. 3 3", 4 40mm., 9 20mm., 8 dcp., 1 dcp. (h. h.); cl. *Tacoma*)

The second *Gloucester* (PF-22) a frigate, was launched 12 July 1943 by the Walter Butler Shipbuilding Co., Superior, Wis., under a Maritime Commission contract; sponsored by Mrs. Emily K. Ross; acquired and simultaneously commissioned 10 December 1943.

Following shakedown, *Gloucester* was employed in training frigate crews at Galveston, Texas. On 16 June 1944 she was attached to Escort Division 38 and was later ordered to the Alaskan Sea Frontier for transfer to Russia under lend-lease legislation. Leased to Russia 4 September 1945 and renamed *EK-26*, she served as a patrol vessel in the Far East. *Gloucester* was returned to the United States at Yokosuka, Japan, 31 October 1949 and recommissioned 11 October 1950.

She sailed from Yokosuka 27 November 1950 for Korea and conducted patrol and antisubmarine warfare duties at Wonsan, Pusan, Inchon, and Kusan until returning to Yokosuka 21 January 1951. *Gloucester* subsequently engaged in patrol and escort duties at Wonsan and saw combat 18 June 1951 when with other ships she blasted gun emplacements at Wonsan. She continued her duties in Korean waters through the fall of 1951. On 11 November 1951 while cruising off Kojo in a duel with shore batteries, *Gloucester* took a direct hit that killed 1 man and wounded 11. Following repairs at Japan, she returned to Korean waters to continue effective support of U.N. forces ashore. Arriving at Yokosuka 5 September 1952, she decommissioned there 15 September 1952. *Gloucester* was loaned to Japan 1 October 1953, struck from the Navy List 1 December 1961, and transferred to Japan in March 1962 where she serves as *Tsuge* (PF-292).

Gloucester, see YP-442

Glover

John Glover, born 5 November 1732 at Salem, Mass., became a wealthy merchant and shipowner in Marblehead,

Mass., prior to the outbreak of the Revolutionary War. A leading member of the Marblehead committee of correspondence, in 1775 he formed a local militia to defend the area. Made up of sailing men, his unit also trained as infantrymen and later became known as the "amphibious regiment." Soon after taking formal command of the Continental Army 3 July, General George Washington placed Glover in command of equipping and manning armed merchant ships for the defense of the colonies, thus forming our first deep water force, "George Washington's Navy." Following the British evacuation of Boston 17 March 1776, he was ordered to New York where his regiment transported troops during their evacuation from Long Island. In December they transported Washington's troops across the Delaware River, and, during the successful attack on Trenton 26 December, his regiment led the advance. Promoted to Brigadier General in February 1777, he participated in the campaign against Burgoyne's forces. After the British surrender 17 October, he returned prisoners to Boston for shipment back to England. While stationed at West Point in 1780, General Glover served on the court that convicted Major John Andre 29 September of spying. Early in 1782 he was dispatched to Massachusetts to take charge of mustering recruits, but failing health forced him to retire from active duty. He remained in Massachusetts after the war and during January and February 1788 served as a member of the Massachusetts convention which ratified the Federal Constitution. He died at Marblehead 30 January 1797.

(AGDE-1: dp. 3,426; l. 414'6"; b. 44'1"; dr. 24'2"; s. 27.5 k.; cpl. 239; a. 1 5", 4 21" tt., 2 Tar. mis.; cl. *Glover*)

Glover (AGDE-1) was laid down 29 July 1963 by Bath Iron Works, Bath, Maine; launched 17 April 1965; sponsored by Mrs. William S. Pederson, Sr., and Mrs. Claude V. Signor, great-great-granddaughters of General Glover; and commissioned at Boston 13 November 1965, Comdr. William W. Wilson in command.

Fitted out with advanced sonar and antisubmarine weapons, *Glover* is designed to serve as an experimental research escort for developing and testing the latest antisubmarine weapons systems. As a research ship, she will test equipment designed to more readily detect and track enemy submarines, and she will evaluate tactics and procedures which may be used on future classes of escorts. Capable of participating in offensive operations against submarines, she will provide valuable support for hunter-killer groups, amphibious forces, and ocean convoys.

Glover joined the U.S. Atlantic Fleet in 1966 as a unit of Cruiser-Destroyer Forces and operated along the Atlantic Coast and in the Caribbean. September she entered Boston Naval Shipyard for modifications.

Glynn

A county of Georgia.

(APA-239: dp. 6,720; l. 455'; b. 62'; dr. 24'; s. 17.7 k.; cpl 536; a. 1 5"; cl. *Haskell*)

Glynn (APA 239) was launched 25 August 1945 under a Maritime Commission contract by the Oregon Shipbuilding Corp., Portland, Oreg.; sponsored by Mrs. Homer D. Angell; and acquired and simultaneously commissioned 17 October 1945, Comdr. Ben Koerner, USNR, command.

Glynn sailed from San Diego 21 December 1945 on a "Magic-Carpet" voyage to the Philippines and reached Samar 8 January 1946. After touching Guam and Saipan, she returned to San Pedro, P.I., and sailed thence for battle-scarred Okinawa, arriving 14 April. Underway the next day for the United States, *Glynn* rode into San Diego Harbor again 30 April at voyage's end.

Two more round trip voyages, both out of San Francisco, brought the busy ship to Kwajalein, Bikini, the Philippines, and Okinawa from 21 May to 28 June 1946, and to Pearl Harbor, returning to the Golden Gate 26 July 1946.

Decommissioned 12 December 1946, *Glynn* remained in

Under her brilliant Captain Richard Wainwright, USS *Gloucester* gained world fame in the Spanish-American War.

reserve until recommissioned 3 March 1951 at San Francisco. Training exercises off southern California occupied her until she steamed for the Atlantic, reaching Norfolk 25 July 1951. Subsequently she conducted peacetime training exercises in the Caribbean and Atlantic, exacting duty which included voyages to Greenland, Nova Scotia, Caribbean islands, and operations along the whole length of the Eastern seaboard. In addition, she conducted training cruises for Midshipmen.

Glynn put in at Charleston, S.C., 8 June 1955 following inactivation overhaul at New York. Decommissioned there 9 September 1955, she remained in reserve until stricken from the Navy List 1 July 1960, and returned to the Maritime Administration. She was placed in the National Defense Reserve Fleet and is at present berthed in the James River.

Gnat

A gnat is any of various small dipterous insects or flies, with biting mandibles; term chiefly applied in America to smaller forms, as buffalo gnats, black flies (genus *Simulium*) or fungus gnats.

Gnat was one of five ship's boats equipped with sails and double banked oars for duty with Captain David Porter's West India Squadron which was fitted out under an act of Congress approved 20 December 1822 to cruise "in the West Indies and Gulf of Mexico for the suppression of piracy." When fully organized the squadron comprised *Sca Gull*, eight small schooners, *Gnat*, and five other barges. The squadron was assisted by ships already on the West India Station including *John Adams*, *Peacock*, *Hornet*, *Spark*, *Grampus*, and *Shark*.

On 14 February 1823, ships of the squadron sailed from

Hampton Roads to fight it out with buccaneers and rout them in hand-to-hand combat amidst the shallows and mangrove swamps of the Caribbean. *Gnat* and the other barges were loaded on two chartered schooners and proceeded directly to Porter's base established at Thompson's Island (later named Key West), Fla. From there, the small squadron was used convoying American merchantmen in the Gulf of Mexico, chasing the pirates who dared to venture out, and mounting boat and barge expeditions which scoured the coasts of all the islands to the north of Puerto Rico, including Santo Domingo and Cuba. Every bay and inlet and key of all this region was carefully searched. On 8 April 1823 the pirate schooner *Pilot* was run ashore near Havana; two pirates were killed and one captured. In July the expedition encountered the pirate schooner *Catilina* near Sigaumpa Bay, Cuba. After a running sea fight, pirates jumped overboard while others put off in a launch for shore. *Catilina's* commander, the notorious pirate Diabolete, was killed in the action. Those pirates not drowned or killed in the sea fight were rounded up ashore and taken prisoners. On 25 March 1825 a pirate's lair was destroyed east of Matanzas, Cuba. Two pirate schooners were captured, at least 8 pirates were killed and 19 were taken prisoner.

Commodore David Porter was succeeded in command by Commodore Lewis Warrington in flagship *Constellation*. Warrington continued the same system that had been established by Porter, constantly watching the coasts and protecting merchantmen until the freedom of the seas had been assured. In his message of December 1826, the President was able to report to Congress, that piracy had been totally suppressed. From Florida to Cape Horn and even into the Pacific, the Navy had put a stop to outrages by resolute show of force.

USS *Glover* (AGDE-1) awaiting launch at Bath, Maine, 17 April 1965

The fate of *Gnat* is unknown. By the close of 1826, it had been reported that one of the five barges had been lost at sea. Some had fallen victim to decay, and the remainder cruised on the Florida Station for the remainder of their careers.

Goff

Nathan Goff of West Virginia was appointed Secretary of the Navy by President Rutherford B. Hayes in 1880 to fill out the unexpired term of Richard W. Thompson. He was elected to the United States Senate from West Vir-

ginia in 1884 and reelected in 1886. The former Secretary of the Navy and Senator died on 23 April 1920.

(DD-247: dp. 1215; l. 314'4"; b. 30'11"; dr. 9'4"; cpl. 122; a. 4.4"; cl. *Clemson*)

Goff, built by the New York Shipbuilding Co., Camden, N.J., was launched 2 June 1920; sponsored by Mrs. Nathan Goff, widow of the former Secretary of the Navy; and commissioned at the Philadelphia Navy Yard on 19 January 1921, Lt. (j.g.) Rodman D. deKay in command.

For the first 2 years of her long service, *Goff* operated along the Atlantic coast, conducting battle practice and exercises in the yearly Caribbean fleet maneuvers as well as off the East Coast. In September 1922 the destroyer was detached from this duty and assigned to the Atlantic Fleet, European Waters. Departing Norfolk on 14 October 1922, she cruised primarily in the eastern Mediterranean, putting in at ports in Turkey, Bulgaria, Russia, Egypt, Palestine, Syria, Greece, and Roumania. It was a period of great unrest in the Balkans and eastern Mediterranean: Greece and Turkey were embroiled in another

bitter war, various powers were scrambling to consolidate their gains from World War I and grab pieces of the crumbling Ottoman empire, and Russia, although still wracked by the Revolution and its aftermath, was seeking further territory and an outlet to the Mediterranean. The presence of American men-of-war amidst this tension helped bring stability and assisted various relief agencies working to heal the wounds of past and present wars as well as protect American lives, interests, and property. Refugees from the Greek and Turkish conflict were frequently evacuated and cared for by the American fleet, and *Goff* participated in this humanitarian service, particularly at Marsina, where from 18 to 20 July 1923 she supervised evacuation of hundreds of Turkish refugees.

Returning to the United States on 11 August, *Goff* engaged in battle problems and tactical exercises off the East Coast and then on 3 January 1924 joined the Scouting Fleet for winter battle practice with the combined fleets in the Caribbean. *Goff* returned to Norfolk for further exercises and on 5 January 1925 sailed for Pearl Harbor, arriving 24 April for fleet battle exercises. She returned to New York 17 July. This established pattern of coast-wise exercises and fleet maneuvers was broken in the fall of 1926 as *Goff* and the light cruiser *Milwaukee* engaged in rescue work on the Isle of Pines, Cuba, which had been devastated by the hurricane of 19-20 October. Flying in stores via *Milwaukee's* planes and sending their own doctors and medical supplies ashore, the two American ships rendered invaluable aid to the stricken island and its predominantly American population.

After overhaul, *Goff* returned to the Caribbean in January 1927 with the Special Service Squadron. Civil war was raging in Nicaragua, and ships of the American fleet cruised along the coast to protect American lives and property, and to evacuate American citizens if necessary. From Nicaragua, *Goff* returned to her regular routine along the Atlantic coast, tactical exercises spiced by winter maneuvers in the Caribbean, a pattern which held true for several years.

Routine was interrupted by occasional special tasks, the most notable of which came in June 1927. *Goff* was part of the flotilla which steamed out from the East Coast to greet and escort cruiser *Memphis* and her special passenger, Charles "Lucky" Lindburgh, as the Lone Eagle returned from his transatlantic flight to a hero's welcome in New York. *Goff* also in June 1930 carried the President-elect of Colombia from Newport to West Point. She decommissioned at the Philadelphia Navy Yard on 13 January 1931.

Recommissioning 2 March 1932, Lt. Comdr. Walter M. Wynne commanding, *Goff* spent the following year cruising along the East Coast training naval reserve crews. Revolution again flared up in the Caribbean, and *Goff* returned there 5 October 1933 to protect Americans in Cuba, the scene of conflict this time. Departing Cuba 2 April 1934, *Goff* resumed maneuvers along the East Coast until 9 November 1935, when she joined the Pacific fleet at San Diego. She remained in the Pacific, operating along the coast and taking part in Hawaiian exercises, until 4 January 1939, when she departed San Diego for New York. Arriving there 20 April, *Goff* again cruised the East Coast training reserves until 8 September, when she entered New England waters on Neutrality Patrol.

After overhaul and refitting for European duty at New York, *Goff* joined Destroyer Division 55 at Ponta Delgada, Azores, on 29 June 1940 to take her place as flagship of the division. Cruising to Portugal, *Goff* and her division operated out of Lisbon, engaging in various exercises before returning to Norfolk 21 September.

Joining DesDiv 67 as flagship, *Goff* escorted the new submarine *Scoutwolf* from New London to Balboa, Canal Zone, arriving 31 October to take up Caribbean patrol and guard duty for the Panama Canal. After America's entry into the war in December 1941, *Goff* remained in the Caribbean to do double duty as both convoy escort and patrol vessel. The mild southern waters were infested by German U-boats, and the undermanned Allied convoys—as many as 25 merchantmen with only four es-

corts—frequently provided easy targets. Night attacks by German submarines cost convoys which *Goff* was escorting a total of eight merchantmen sunk and several others seriously damaged. The hard worked destroyer was out on patrol and convoy duty 10 days at a time and then in port only long enough to refuel and resupply; when this could be done at sea, it was. Escorts were at a premium as the Allies struggled to maintain their supply lines.

Goff finally had her chance to inflict real damage on the German U-boats as she left the Caribbean on 16 June 1943 and put in at New York for a long-needed overhaul. At Norfolk on 27 July, she joined the carrier *Card* and destroyers *Barry* and *Boris* to form a hunter-killer team which conducted two highly successful anti-submarine patrols across the Atlantic. The close coordination between the carrier's planes and her destroyer screen exacted a heavy toll from marauding U-boats and wolfpacks: during the period *Goff* was with the carrier, 27 July-9 November 1943, they made two voyages from Norfolk to Casablanca and were credited with sinking no fewer than eight U-boats. High drama and tragedy capped these patrols as on 1 November *Boric* rammed and sunk a U-boat, but was herself fatally hulled in the process. For these two patrols *Goff* was awarded the coveted Presidential Unit Citation.

After brief overhaul at New York, *Goff* returned to Atlantic escort duty as on 28 November she and *Barry* convoyed the seaplane tender *Albemarle*, loaded with aeronautical supplies and personnel, from Norfolk to Casablanca and then on to Reykjavik, Iceland, returning to New York on 31 December. *Goff* spent the first 7 months of 1944 with *Albemarle*, shepherding the tender safely to San Juan, Trinidad, Casablanca, Recife, Brazil, and Avonmouth, England, before putting in at Boston on 13 July 1944 for overhaul.

Repairs completed, *Goff* engaged in antisubmarine practice at Casco Bay, Maine, and then on 28 August sailed for Key West, arriving 3 days later. At the Florida port she was attached to the Fleet Sound school and served in a variety of duties, including antisubmarine work, harbor guard, and target vessel for ships and planes in training. The destroyer departed Key West for Philadelphia on 9 June 1945, arriving there 2 days later. *Goff* decommissioned at Philadelphia on 21 July 1945, after 24 years of service, and was stricken from the Navy Register on 13 August 1945. Sold to the Boston Metal Salvage Co., Baltimore, on 30 November 1945, she was resold to the Northern Metal Co., Philadelphia, on 31 December 1945 and scrapped in November 1947.

Goff received two battle stars for service in World War II.

Go-Getter, see YT-346

Gold Heels, see *Carondelet* (IX-136)

Gold Shell

A former name retained.

(AO: dp. 12,000; l. 411'6"; b. 50'1"; d. 24'8"; s. 12 k; cpl. 65; a. 2 4")

Gold Shell was built in 1916 by Harlan and Hollingsworth, Wilmington, Del.; chartered from Shell Oil Co.; and commissioned 8 August 1917, Comdr. David R. Fleming in command.

Gold Shell departed Philadelphia 26 August 1917 for Plymouth, England, and until 10 December 1918 carried fuel oil to various European ports in support of Allied forces. She made a total of nine voyages to such ports as Spithead, Scapa Flow, Tobermory, and Brest, arriving at New York after her last crossing 10 December 1918. *Gold Shell* entered the New York Navy Yard to be simultaneously decommissioned and returned to her former owner 5 March 1919.

Gold Star

A former name retained.

(AK-12: dp. 4,860; l. 391'9"; b. 52'2"; dr. 11'10"; s. 12 k.; cpl. 52; a. none)

Gold Star (AK-12) was built in 1920 by Bethlehem Shipbuilding Corp., Wilmington, Del.: taken over by the Navy as *Areturus* from the USSB 8 November 1921; commissioned as *Areturus* (AK-12) 1 February 1922 at Philadelphia, Lt. Comdr. J. Katterfield, USNRF, in command and 5 days later renamed *Gold Star* (AK-12) on 6 February. The ship was reclassified AG-12, 12 May 1922.

Renamed *Gold Star* sailed from Philadelphia 18 March 1922, arriving Seattle 1 July via the Canal Zone and California ports. During the next 2 years she served as a cargo ship on the West Coast, making three voyages with supplies for Alaskan radio stations. The ship steamed out of San Francisco 9 October 1924 to assume her duties as station ship at Guam, arriving 3 November.

During the 1920's and 1930's *Gold Star* became a familiar sight in the far-flung ports of Asia. Though assigned as flagship at Guam she made frequent voyages to Japan, China, and the Philippines with cargo and passengers. Prior to World War II, much of her crew was made up of Chamorros, natives of Guam.

When the Japanese attacked Pearl Harbor, 7 December 1941, *Gold Star* was coaling at Malangas, P.I. She sailed for Manila 8 December, but was ordered by Commander, Asiatic Fleet, to proceed to Balikpapan, Borneo. She arrived 14 December as the Japanese advanced quickly southward; and after issuing urgently-needed provisions to units of the Asiatic Fleet there, steamed by way of Macassar, Celebes, to Darwin, Australia. Following her arrival at Darwin 28 December, *Gold Star* served as a coastal cargo carrier, steaming between such Australian ports as Brisbane, Sydney, and Fremantle. She thus contributed importantly to strengthening Australia and to checking the Japanese advance in New Guinea. After 15 August 1943 the veteran ship continued her coastal

operations in Australia, but also began a series of cargo voyages to New Guinea and the Admiralty Islands. *Gold Star* brought many loads of vital supplies to Milne Bay as the Allies began the push toward the Philippines.

The ship arrived Manus Island 6 January 1945 for repairs and conversion to squadron flagship for Service Squadron 9. Operating in this capacity the old ship supported the mounting American advance toward Japan, sailing to Leyte and Morotai. While conducting cargo operations at Morotai 28 June *Gold Star* was attacked by enemy aircraft but sustained no damage. She arrived Manila 26 July via Tawitawi and remained there issuing supplies until the surrender of Japan 15 August 1945.

After supporting occupation forces in Japan, *Gold Star* sailed to Seattle in February 1946 and decommissioned there 17 April 1946. She had served over 21 years in the Western Pacific without once returning to the United States, and had carried countless tons of supplies, items large and small, for the warships of the fleet. The old ship was delivered to the Maritime Commission 30 June 1946, and was sold for scrap 1 December 1947 to Dulien Steel Products, Inc.

Gold Star received one battle star for World War II service.

Goldcrest

A small European bird of the genus *Regulus*.

Stella Polaris, a yacht acquired by the Navy 27 October 1940, was classified a minesweeper; designated AM-78 on 2 November 1940; and named *Goldcrest* 14 November 1940. However, she was reclassified a coastal yacht 23 November 1940, redesignated PYc-4, and renamed *Agate* 19 December 1940.

I

(AM-80: dp. 400; l. 122'6"; b. 23'; dr. 11; s. 11 k.; a. 13')

The first *Goldcrest* (AM-80), a steel merchant trawler built as *Shawmut* in 1928 by the Bethlehem Shipbuilding

USS *Gold Star* (AG-12) at Sitka, Alaska, in September 1922

Corp., Quincy, Mass., was acquired by the Navy from the Massachusetts Trawling Co. of Boston; and commissioned at the Boston Navy Yard 15 May 1941, Lt. Conrad H. Koopman in command.

Following shakedown training at Mine Warfare School, Yorktown, Va., *Goldcrest* arrived New York 10 August 1942 to base at Staten Island while serving as an inshore patrol and NROTC cadet schoolship under the 3d Naval District. On 24 August, she became flagship of Division 1 of the Inshore Patrol Force. In Sandy Hook Bay, N.J., while on patrol 11 March 1943, she sank by gunfire three mines that had drifted from defensive minefields. On 29 March, she assisted a damaged merchantman off Staten Island.

Her patrol and schoolship duties continued until 5 August 1945 when she transferred to Charleston for mine-sweeping duty. She decommissioned 12 December 1945 and was sold 20 June 1946 to her former owner.

II

(LCI(L)-869: dp. 209; l. 159'; b. 24'; dr. 5'8"; s. 14 k.; cpl. 21; a. 5 20mm.; cl. LCI(L)-351)

LCI(L)-869 was laid down by the New Jersey S. B. Corp., Barber, N.J., 31 August 1944; launched 29 September 1944; and commissioned 7 October 1944, Lt. (j.g.) J. C. Smith in command.

With shakedown in Chesapeake Bay, the new large infantry landing craft departed Key West, Fla., 12 November for the Pacific, transited the Panama Canal on the 19th, and arrived San Diego 1 December. There she joined LCI Group 57, sailed for Hawaii 29 January 1945, and arrived Pearl Harbor 7 February.

LCI(L)-869 got underway for the war zone on the 15th, refueled at Johnston Island 5 days later, and reached the Palaus, via Majuro, Kwajalein, Eniwetok, and Guam, 7 April. There she joined a picket line which had been formed to seal off by-passed Japanese-held islands in the area from reinforcements and to protect American bases from invasion. While on picket station, LCI(L)-869 repulsed a suicide swimming attack, sank several floating mines which threatened American ships, and heard countless mortar shells whine overhead.

On the afternoon of 2 September, the Japanese forces in the Palaus surrendered. With her mission accomplished, LCI(L)-869 returned to the United States, decommissioned at Norfolk in March 1947, and entered the Atlantic Reserve Fleet.

The landing craft was named *Goldcrest* and redesignated AMc(U)-24 on 7 March 1952. *Goldcrest* was converted at the Charleston Navy Yard, assigned to the 6th Naval District, and operated out of Key West, Fla. She decommissioned at Charleston in March 1955 and reentered the Atlantic Reserve Fleet at Charleston. There she was reclassified a coastal minehunter and redesignated MHC-24. *Goldcrest* was struck from the Navy List 1 January 1960 and scrapped.

Golden City

A 19th century clipper ship in the Pacific trade.

(AP-169: dp. 13,910 (trial); l. 459'; b. 63'; dr. 23'; s. 16 k.; a. 1 5", 4 3")

Golden City (AP-169), was launched under Maritime Commission contract 28 October 1943 by Moore Drydock Co., Oakland, Calif.; sponsored by Mrs. Roger Lapham. She was transferred to the Navy on a bareboat charter and commissioned 29 May 1944, Captain C. M. Furlow, Jr., commanding.

After a brief shakedown cruise, *Golden City* departed San Francisco for Pearl Harbor. Arriving there 23 June, the ship prepared to take part in the Navy's giant sweep across the Pacific. As the Marianas campaign was then underway, she sailed via Eniwetok to Guam and upon her arrival 21 July disembarked much-needed reserves for the

Marine Brigade helping to lead the assault on that island.

Golden City returned to Eniwetok 1 August 1944, and from there sailed to Pearl Harbor. She steamed into that port 10 August and took part in amphibious exercises until 15 September, exercises which would make her a more effective fighting unit in the upcoming invasion of the Philippines. Sailing 15 September, she stopped at Eniwetok and Manus and arrived off Leyte 20 October 1944. By this time the initial landings had begun and *Golden City* put ashore units of the 7th Division to consolidate the successful assault. She then departed 22 October to bring in more troops, arriving Oro Bay, New Guinea, via Manus 4 November, and discharging another load of troops at Leyte Gulf 18 November.

With the conquest of the Philippines continuing apace, *Golden City* arrived Manus 24 November and sailed to Aitape, New Guinea, where she arrived 6 days later. There she loaded for the important landings in Lingayen Gulf, western Luzon. She departed 28 December 1944 with Admiral Barbey's San Fabian Attack Force and made her way through the Philippines under severe kamikaze attack, helping to fight off raids every day from 5 to 9 January 1945. *Golden City* arrived off Lingayen Gulf 9 January and discharged her troops during the initial assault. The Japanese were so unprepared for this quick deep penetration by sea on the west side of the archipelago that the only important defense they could quickly assemble was by kamikaze. Hence the landing was virtually unopposed on the beaches. Surprise is not the least of the advantages of the swift mobility and long reach of attack by sea.

Next day *Golden City* departed for Leyte Gulf, loaded troops and supplies there 12-26 January, and got underway little more than 2 weeks from D-day at Lingayen for a secondary invasion in the Luzon campaign, in Zambales. Arriving off San Narciso and San Antonio, in Zambales province, 29 January, *Golden City* and the other ships of Amphibious Group 9 landed 30,000 troops to secure the Japanese escape route from Manila to the Bataan peninsula.

After the successful conclusion of the Luzon operation, *Golden City* sailed on a troop-ferrying voyage to Ulithi, Iwo Jima, Eniwetok, and finally Pearl Harbor, where she arrived 12 April 1945. From there the transport sailed for the United States, arriving 22 April, and loaded more troops for the Pacific fighting, then nearing its climax. *Golden City* sailed again 1 June, stopping at Eniwetok, Ulithi, and Okinawa, bringing troops out of the forward areas. She sailed into Guam 14 July and continued next day to San Francisco, where she arrived 29 July. The ship then made another similar voyage to and from the Pacific, returning to San Francisco 22 September with a load of veterans, after which she sailed to Pearl Harbor.

The war over, *Golden City* departed 23 October 1945 to support the landings of American forces in China, aiding in the occupation and helping to stabilize the volatile situation there. Arriving 10 November, she discharged cargo and passengers and sailed for Jinsen, Korea, where she loaded troops bound for the United States. They were disembarked at Seattle 19 December 1945.

Subsequently, *Golden City* made two voyages from the West Coast to Japan and the Pacific islands, stopping at Manus, Truk, Guam, Saipan, and other islands to embark returning soldiers and sailors. She arrived Seattle after the second of these "Magic-Carpet" voyages 27 June 1946, decommissioned 10 August 1946, and was returned to the Maritime Commission. She later became *Ocean Eva* in 1955 and *Overscas Eva* in 1961 while in commercial service.

Golden City received four battle stars for World War II service.

Golden Eagle

A former name retained.

(T-AF-52: dp. 6,319 (lt.); l. 459'; b. 63; dr. 26'; s. 15 k.; cpl. 64; a. none; T. C2-S-B1 (R))

Golden Eagle (T-AF-52) was laid down under Maritime Commission contract 8 December 1941 by Moore Dry Dock Co., Oakland, Calif.; launched 15 March 1942; sponsored by Mrs. John B. McKee; and delivered to WSA 23 April 1943. As a merchant ship, she operated under charter to United Fruit Co. from 1944 to 1946 and to United States Lines from 1947 to 1948. Transferred from the Maritime Commission, she was acquired by the Navy 1 March 1950 and assigned to MSTs.

Manned by a civilian crew, *Golden Eagle* operated out of New York, carrying supplies to American bases in the North Atlantic, Europe, and the Mediterranean. During November and December 1950 she deployed to the Mediterranean for provisioning operations, and during the first 6 months of 1951 she transported cargo to Bremerhaven and Liverpool. Following a second deployment to the Mediterranean, she departed New York 3 August for logistics duty off Thule, Greenland. Returning to New York 13 September, she resumed transatlantic service the 19th. While steaming to Liverpool 2 January 1952, she participated in the rescue of seamen from the stricken merchant ship *Flying Dutchman*.

Between 1952 and 1961 *Golden Eagle* maintained a constant schedule of runs to ports in Western Europe. Operating out of New York, Boston, Baltimore, and Norfolk, she steamed to Bremerhaven, Liverpool, and Rotterdam. During August and September of 1952 and 1953 she supplied ships participating in Operation "Blue Jay" at Thule, and cargo runs in the North Atlantic have sent her to Newfoundland, Iceland, and Baffin Island. In addition to provisioning and cargo duties, she carried sealed atomic wastes from Bremerhaven and disposed of the material in the mid-Atlantic while returning to the East Coast.

After returning to New York 10 August 1961, *Golden Eagle* entered New York Navy Yard 14 August. Renamed *Arcturus* 18 October, she commissioned 18 November, Captain M. B. Davis in command. After shakedown in the Caribbean, she departed her homeport, Norfolk, for the Mediterranean in June 1962. While deployed with the 6th Fleet, she provisioned 51 ships, both at sea and in Spanish and Italian ports. She returned to the Mediterranean in December; and between 1963 and 1965 she has deployed six times to replenish ships of the 6th Fleet.

When not operating in the Mediterranean, *Arcturus* has supported exercises in the Atlantic and the Caribbean. During February 1966 she provisioned ships during Operation "Springboard" in the Caribbean. After deploying to the Mediterranean in April, she steamed to the northwestern coast of Europe and touched ports in Holland, Germany, and Denmark during June. Two months later she departed Norfolk on her 10th deployment to the Mediterranean. At present she continues to support the mighty 6th Fleet and provides valuable aid for the continuing struggle to defend the cause of freedom in that troubled part of the world.

Golden Gate

A United States Coast Guard name retained.

(Tug: dp. 240; l. 110'; b. 20'6"; dr. 9'10"; s. 12 k.; cpl. 11)

Coast Guard tug *Golden Gate*, a harbor and customs tug operating in San Francisco Bay, was taken into the Navy under authority of an Act of Congress dated 28 January 1915, directing that in time of war the Coast Guard should operate as part of the Navy. Accordingly, *Golden Gate* was taken into the service 7 April 1917, already in commission, 1st Lieutenant C. C. McMillan, USCG, commanding.

Golden Gate continued to operate in San Francisco Bay, patrolling between Fort and Lima Points, until March 1918. From March to August 1918, she was engaged in transporting Armed Guard Details to merchant vessels in the bay, making photographs of ships in the harbor, and acting as dispatch and mail boat. 1 August *Golden Gate* returned to Harbor Entrance Patrol duty.

In December 1918, *Golden Gate* assumed the duty of removing Armed Guard details from ships in the area, and on 14 December she responded to a distress signal from SS *Lehone*, taking off all hands from the rapidly sinking ship. She had the honor of transporting officials to SS *Tenyo* to receive the Japanese peace delegation.

Golden Gate continued conveying men, supplies and dispatches in the area until detached and returned to the Coast Guard 15 February 1919.

Golden Rocket, see *Zelima* (AF-49)

Goldfinch

An American lemon-yellow finch with black cap, wings, and tail.

(AM-77: dp. 455; l. 132'4"; b. 24'; dr. 9'8"; s. 10 k.; a. 1 3'')

Goldfinch (AM-77) was built as trawler *Fordham* in 1929 by Bath Iron Works of Bath, Maine, and purchased by the Navy 18 September 1940 from F. J. O'Hara & Sons, Inc., Boston, Mass. She was converted to a minesweeper at Bethlehem Atlantic Yard, Boston, and commissioned at Boston Navy Yard 30 January 1941, Lt. Comdr. W. R. McCaleb in command.

Goldfinch was first assigned to Inshore Patrol Force, 1st Naval District, then shifted her operations to Chesapeake Bay, where she conducted minesweeping operations off Norfolk and Yorktown, Va. Reporting to Newport, R.I., 1 July, *Goldfinch* joined Squadron 9 for minesweeping operations ranging from Argentia, Newfoundland, to Norfolk. She became flagship of the Squadron 29 September at Portland, Maine.

Transferred to duty in Newfoundland, *Goldfinch* based her operations during the period 1 December 1942 to May 1944 at Fort McAndrew and Argentia, Newfoundland, constantly patrolling for mines to protect merchant shipping and warships alike as they plied those waters. She arrived Boston June 1944 for conversion to civilian use as a trawler and decommissioned 18 August 1944. Delivered to the Maritime Commission, *Goldfinch* was sold 9 January 1946 to the Norwegian Shipping and Trade Commission of New York.

II

(YMS-306: dp. 270; l. 136'; b. 24'6"; dr. 8'; s. 13 k.; cpl. 50; a. 1 3"; cl. YMS-136)

The second *Goldfinch* (YMS-306), a wooden-hulled motor minesweeper, was built as *YMS-306* by Rice Brothers Corp., East Boothbay, Maine, and commissioned 20 January 1944, Lt. (j.g.) K. B. Roberts in command.

YMS-306 departed Boston 6 February for shakedown training off Norfolk, Va., and upon completion reported to Bermuda for minesweeping duty, arriving 16 April 1944. Returning to Norfolk, the ship prepared for Pacific duty and departed for California 18 July 1945. She arrived San Pedro via the Canal 14 August, and after undergoing extensive repairs departed for Pearl Harbor, arriving 2 January 1946.

The minesweeper returned to the United States a month later, 5 February, and sailed 7 April for the East Coast via the Panama Canal. She arrived Charleston harbor 1 May 1946, and began a regular schedule of training and readiness operations with Mine Force, Atlantic Fleet. Her operations during the next years took her from Charleston to Panama City and Key West, Fla., and occasionally as far north as Argentia, Newfoundland. She participated in both individual and fleet training exercises, including amphibious operations in the Caribbean in February 1950 and off Onslow Bay, N.C., November 1954.

She was named *Goldfinch* (AMS-12) 17 February 1947. Her designation was changed to MSO(O)-12, 7 February 1955. The ship continued her schedule of sweeping operations until 15 July 1957 when she sailed from Charleston

to Philadelphia. Arriving 18 July, she decommissioned 11 October 1957 and was placed in the Philadelphia Group. Atlantic Reserve Fleet until struck from the Navy List 1 November 1957 and sold 2 June 1960 to the Maine Vocational Technical Institute.

Goldfinch (AM-395), authorized 16 May 1945, was to be built by Defoe Shipbuilding Co., Bay City, Mich. Her contract was cancelled 1 November 1945.

Goldring

An edible fish of the Mississippi.

Goldring (SS-360), a *Perch* class submarine, was being built at Electric Boat Co., Groton, Conn., but construction was cancelled 29 July 1944.

Goldsborough

Louis Malesherbes Goldsborough, born 18 February 1805 in Washington, D.C., was appointed Midshipman 28 June 1812, but did not serve until 13 February 1816 when he reported for duty at the Washington Navy Yard. He led a four-boat night expedition from *Porpoise* in September 1827 to rescue British merchant brig *Comet* from Mediterranean pirates. In 1830 he was appointed first officer in charge of the newly created Depot of Charts and Instruments at Washington, the rude beginning of the United States Hydrographic Office. It was Goldsborough who suggested creation of the depot and initiated the collection and centralization of the instruments, books and charts that were scattered among several Navy yards. After 2 years he was relieved by Lt. Charles Wilkes.

Goldsborough led German emigrants to Wirt's Estates near Monticello, Fla., in 1833; then took leave from the Navy to command a steamboat expedition and later mounted volunteers in the Seminole War. After cruising the Pacific in frigate *United States*, he participated in the bombardment of Vera Cruz in *Ohio*. He served consecutively as: commander of a detachment in the expedition against Tuxpan; senior officer of a commission which explored California and Oregon (1849-1850); Superintendent of the Naval Academy (1853-1857); and commander of the Brazil Squadron (1859-1861). During his command of the North Atlantic Blockading Squadron October 1861 to September 1862, he led his fleet off North Carolina, where in cooperation with troops under General Burnside, he captured Roanoke Island and destroyed a small Confederate fleet. After special administrative duties in Washington, D.C., he took command of the European Squadron in the last year of the Civil War. Returning to Washington in 1868 to serve as Commander of the Washington Navy Yard until his retirement in 1873. Rear Admiral Goldsborough died 20 February 1877.

I

(TB-20; dp. 255; l. 198'; b. 20'7"; dr. 6'10"; s. 27 k.; cpl. 59; a. 2 18' tt., 4 6-pdr.)

The first *Goldsborough* was launched 29 July 1899 by the Wolf & Zwicker Iron Works, Portland, Ore.; sponsored by Miss Gertrude Ballin; commissioned in the Puget Sound Navy Yard 9 April 1908, Lt. Daniel T. Ghent in command.

Goldsborough based at San Diego, Calif., as a unit of the Pacific Torpedo Fleet, cruising for 6 years along the coast of California and the Pacific Coast of Mexico in a schedule of torpedo practice, and joint fleet exercises and maneuvers. She was placed in ordinary at the Mare Island Navy Yard 26 March 1914; served the Oregon State Naval Militia at Portland (December 1914-April 1917); and again fully commissioned 7 April 1917 for Pacific coast patrol throughout World War I. She was designated *Coast Torpedo Boat Number 7* 1 August 1918, her name being assigned to a new destroyer under construc-

tion. The torpedo boat decommissioned in the Puget Sound Navy Yard, Bremerton, Wash., 12 March 1919 and sold for scrapping on 8 September 1919.

II

(DD-188; dp. 1,215; l. 314'5"; b. 31'9"; dr. 9'4"; s. 35 k.; cpl. 101; a. 4 4", 1 3", 12 21" tt.; cl. *Clemson*)

The second *Goldsborough* was launched 20 November 1918 by the Newport News Shipbuilding and Dry Dock Co., Newport News, Va.; sponsored by Miss Lucetta Pennington Goldsborough, daughter; commissioned at Norfolk 26 January 1920, Comdr. Francis M. Robinson in command.

Goldsborough joined Division 25, Squadron 3, U.S. Atlantic Fleet, departing Norfolk 25 February 1920 for training at Guantanamo Bay, Cuba, and returning to New York 1 May 1920 for maneuvers and tactics off the New England Coast. She stood out of Hampton Roads 1 September 1920 on a practice cruise in the Gulf of Mexico, returning to Norfolk 10 October for operations along the seaboard to New York until 5 January 1921 when she sailed to join the combined Battle Fleet off Cuba; thence she steamed through the Panama Canal to Callao, Peru, and back to Guantanamo Bay for further battle practice before return to Norfolk 27 April. She entered Philadelphia Navy Yard 28 April for inactivation and decommissioned 14 July 1922. She was redesignated AVP-18 15 November 1939. She was converted in the New York Navy Yard, recommissioned 1 July 1940; and redesignated AVD-5 on 2 August 1940.

Goldsborough departed New York 12 August 1940, to tend amphibious planes on neutrality patrol in waters ranging from Puerto Rico, Cuba, and the Virgin Islands, to Trinidad, British West Indies. She returned to Norfolk 23 January 1941 for repairs; conducted a cruise to the coast of Mexico and returned (3 March-3 April), then served the Patrol Wing Support Force, Patrol Squadrons, U.S. Atlantic Fleet, at Argentina, Newfoundland; Reykjavik, Iceland; and Gungnat Bay, Greenland. She arrived at Norfolk from Greenland 13 October 1941 for repairs, then proceeded to Seamount Bay, Galapagos Islands, arriving 23 December 1941. Here she tended amphibious patrol planes of Patrol Squadron 3, sometimes steaming down the coast of the Americas as far as Valparaiso, Chile, with time-out for service as a simulated target in Panama Bay.

She transited the Panama Canal 17 June 1942 and entered Trujillo Bay, Honduras, the 21st with Commander Patrol Squadron 3 embarked to direct operations of the squadron on special patrols in conjunction with other naval units attempting to locate Axis submarine bases. After being contacted by patrol planes, a party from *Goldsborough* boarded Honduran merchant ship *Laguna* 25 June, and Honduran merchant ship *Racer* the following day. Both were turned over to British authorities at Belize. On 3 July *Goldsborough* departed Puerto Castilla for Portland Bight, Jamaica. Here she tended aircraft on special patrols in the protection of convoys between Cuba and the Panama Canal. She arrived at the Charleston Navy Yard from Jamaica 2 October 1942 for repairs, followed by gunnery practice in the Chesapeake Bay.

Goldsborough departed Norfolk 30 October 1942 to escort seaplane tender *Pocomoke* (AV-9) to Panama and seaplane tender *Albemarle* (AV-5) to aviation patrol bases at San Juan, P.R.; Trinidad, B.W.I.; and Bermuda, Fla. She returned to Norfolk 30 November 1942 to spend the following year as escort for *Albemarle* while carrying men, aeronautical cargo, and aircraft of Fleet Air Wings of the U.S. Atlantic Fleet to Guantanamo Bay; Trinidad; Bermuda; San Juan; and Recife, Brazil. She returned to Norfolk on the last of these missions 5 September 1943. After patrol with *Corc* (CVE-13) antisubmarine warfare task group 5 October-15 November 1943, *Goldsborough* was redesignated DD-188 on 1 December 1943.

On 4 December 1943, *Goldsborough* sailed with the *Corc* task group. Near midnight of 2 January 1944, she made visual contact with a surfaced U-boat off the Azores, fought through heavy seas in an attempt to ram amidships. She just missed the U-boat's stern as it slid under

the sea. After two depth charge attacks, *Goldsborough* lost contact. She then screened *Core* to Norfolk 18 January and proceeded to New York Navy Yard for voyage repairs. Thereafter, she escorted *Aucilla* (AO-56) to Trinidad, returning to Norfolk as escort of *Nitro* (AE-2) then entered the Charleston Navy Yard on 21 February 1944 for conversion to a high speed transport, and redesignation as APD-32, 7 March 1944.

Goldsborough departed Charleston 10 April and reached Pearl Harbor, via the Panama Canal and San Diego, 9 May for amphibious assault training in Hanalei and Kawaihae Bay. She sailed 29 May to rendezvous with a transport force proceeding via Ulithi to arrive off the invasion beaches of Saipan 15 June 1944. An aerial bomb exploded 400 yards to starboard as she assisted in repelling a raid of enemy dive bombers. The following day she landed the 2d Company, 1st Battalion, 2d Marines, just south of Charon Kanoa. During the next 5 weeks she escorted supply and troop convoys between the Marshalls and Saipan, taking time out for direct gunfire support of troops on Saipan the nights of 29 June and 7 July. She departed Saipan 28 July to train Underwater Demolition Team 4 in Hawaiian waters, then joined a Beach Demolition Task Group that sailed from Manus, Admiralty Islands, 12 October to destroy enemy facilities and installations in the vicinity of the proposed invasion beaches of eastern Leyte as well as on the entrance islands of Leyte Gulf. The afternoon of 18 October 1944 she poured a withering fire into concealed enemy positions at Dulag, covering underwater demolition teams headed for the shore. Two 75mm. shells straddled the high speed transport; and a third hit her number one stack, killing 2 and wounding 16 men. She screened the battleships and cruisers, carrying out a relentless bombardment through the night of the 19th and supporting troops that launched the invasion the morning of 20 October 1944. She departed the following day to embark troops at Noemfoor, Schouten Islands, landing them on the beaches at Tolasa, Leyte, 18 November 1944. She again arrived off Noemfoor 19 December for transport of troops to Mios Woendi, Padiados Islands, thence via Morofai with six merchant ships escorted into Leyte Gulf 6 January 1945. Her next assignment was patrolling the entrance of Lingayen Gulf. She dispatched a medical team to damaged *Gilligan* 12 January, picked up two survivors, then put her rudder full left as she opened fire on a suicide plane which just missed the stern of *Scuscens* before crashing into the sea. *Goldsborough* continued patrol in the Gulf and off San Fabian until 18 January 1945.

After voyage repairs at Ulithi, *Goldsborough* landed troops at Iwo Jima (3-6 March), thence via the Marianas to Tulagi harbor in the Solomons and back to Ulithi, where she joined transports bound for Okinawa. She arrived off Okinawa 11 April, fought off aerial raids near Hagushi beaches the following day and rescued a Navy fighter pilot whose plane was damaged in aerial combat. She departed Okinawa 14 April for voyage repairs at Guam, returning 15 May 1945 to patrol off Hagushi beaches until the 31st. *Goldsborough* was then routed via the Marianas, Marshalls, and Pearl Harbor to San Pedro, Calif., where she arrived 1 July 1945. Redesignated again as destroyer (DD-188) 10 July, she decommissioned there 11 October 1945. Her name was struck from the Navy List 24 October 1945 and she was sold for scrapping 21 November 1946 to Hugo Nuef Corporation, New York, N.Y.

Goldsborough received five battle stars for service in World War II.

III

(DDG-20: dp. 4,500 (f.); l. 437'; b. 47'; dr. 22'; s. over 30 k.; cpl. 354; a. Tar. mis. 2 5'; cl. *Charles F. Adams*)

The third *Goldsborough* was launched 15 December 1961 by the Puget Sound Bridge and Drydock Co., Seattle, Wash.; sponsored by Mrs. Alan Bibb, wife of U.S. Senator Bibb of Nevada; commissioned in the Puget Sound Naval Shipyard 9 November 1963, Captain Charles D. Allen, Jr., in command.

Goldsborough joined the U.S. Pacific Fleet 25 December 1963, as a unit of Cruiser-Destroyer Force with homeport at Pearl Harbor.

After shakedown out of Puget Sound, the new guided missile destroyer arrived Pearl Harbor 14 February 1964. Following qualification and acceptance tests, she sailed 18 April for Sydney, Australia, for the Coral Sea celebration and returned Pearl Harbor 1 June. She operated in Hawaiian waters in the summer and early fall, then got underway 23 November for Yokosuka and her first West-Pac deployment. After operations strengthening the 7th Fleet during the escalating war in Vietnam, *Goldsborough* returned to Pearl for ASW training.

The guided missile destroyer headed for the Orient once more 9 February 1966 to bolster the 7th Fleet. In April she provided gunfire support for Operation "Binh Phu I" firing 594 rounds of 5" ammunition at Viet Cong troop concentration and buildings. During the last half of the month she screened attack carriers at Yankee Station. Next came SEATO exercises in May and duty as station ship at Hong Kong in June. On 26 June *Goldsborough* was again off Vietnam on picket station. She sailed for Hawaii 16 July and reach Pearl Harbor on the 23d.

A month later she entered the Pearl Harbor Naval Shipyard for overhaul and extensive modification to prepare for resumed action in 1967.

Goodwill, see *Palomas* (IX-91)

Golet

A trout of the scientific name *Salvelinus malma*, fish family *Salmonidae*; voracious, feeding mostly on other fishes when adult.

(SS-31: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20.25 k. (surf.), 8.75 k. (submerged); cpl. 80; a. 1 3', 2 .30 cal. mg. 10 21" tt.; cl. *Balao*)

Golet was launched 1 August 1943 by the Manitowoc Shipbuilding Co., Manitowoc, Wis.; sponsored by Mrs. Alexander Wiley, wife of U.S. Senator Wiley of Wisconsin; commissioned 30 November 1943, Lt. Cmdr. James M. Clement in command.

Golet departed Manitowoc 19 December 1943 via the Mississippi River for New Orleans, arriving the 28th. After shakedown training at Panama and final battle practice in Hawaiian waters, she departed Pearl Harbor 18 March 1944 for her maiden war patrol off the Kurile Island chain, Southern Hokkaido and Eastern Honshu, Japan. Severe combinations of fog, rain and ice were encountered and only one ship worth a torpedo came into view. This enemy proved too fast for *Golet* to gain torpedo range; she returned to Midway, 3 May 1944.

Lt. James S. Clark took command of *Golet* and departed Midway 28 May 1944 to patrol off northern Honshu, Japan. A door of silence closed behind her and *Golet* was never heard from again. She had been scheduled to depart her area on 5 July and expected at Midway about 12 or 13 July. She failed to acknowledge a message sent her on 9 July and was presumed lost 26 July 1944.

Japanese antisubmarine records available after the war revealed that *Golet* was the probable victim of a Japanese antisubmarine attack made 14 June 1944 in latitude 41°04' North; longitude 14°30' East. These records mention that the attack brought up corks, rafts, and other debris and a heavy pool of oil, all evidence of the sinking of a submarine. Eighty-two gallant men of the Navy's "Silent Service" perished with *Golet*.

Goliah

A former name retained.

(SP-1494: t. 414; l. 135'; b. 27'1"; dr. 16'; s. 13; a. 1 3', 2 mg.)

Goliath, a steam tug, was built in 1907 by John H. Dialogue and Son, Camden, N.J., and was purchased by the Navy from her owners, the Puget Sound Tug Co. of Seattle, Wash., 6 December 1917. She commissioned 31 January 1918 at Mare Island, Calif., Lt. Werner Tornroth, USNRF, commanding.

Following shakedown, *Goliath* towed coal barges between San Diego, Mare Island, and San Pedro until 3 March when she departed San Diego for the East Coast. She arrived Norfolk 8 April 1918 and for the next month made four voyages between New London and New York with stores and ammunition. After a voyage to Bermuda and the Azores 18 May-24 June as an escort tug, she arrived at New York for overhaul, where she stayed until 8 August 1918.

Departing New London, Conn., where she had briefly served as a patrol craft, 6 September 1918, *Goliath* operated as a towing ship between San Miguel, Bermuda, and New London until arriving at Brest, France, 26 November 1918. There she took up new duties as rescue and towing tug for convoys operating out of Brest to English ports and occasionally to Copenhagen and Lisbon until she arrived back in Brest 24 April 1919. *Goliath* performed harbor towing work there until decommissioning 29 November 1919. She was loaned to the United States Shipping Board 30 November and transferred to the Board's permanent custody and control 7 October 1921.

Goliath

The Philistine giant killed by David with a sling.

The monitor *Catskill* (q.v.) was renamed *Goliath* 15 June 1869.

Goodhue

A county in Minnesota.

(APA-107: dp. 8,100; l. 492'; b. 69'6"; dr. 26'6"; s. 18 k.; cpl. 546; a. 2 5"; cl. *Bayfield*)

Goodhue (APA-107), formerly *Sea Wren*, was launched under Maritime Commission contract by Western Pipe & Steel Co., San Francisco, Calif., 31 May 1944; sponsored by Mrs. Charles R. Purcell; transferred to the Navy and commissioned 11 November 1944, Captain L. D. Sharp, Jr., in command.

Goodhue underwent shakedown training off San Pedro and took part in amphibious training exercises 8-21 December off San Diego, preparing for her part in the massive landings still to come in the Pacific war. The ship loaded vehicles at San Diego and sailed 4 January 1945 for Seeadler Harbor, Admiralty Islands, where she arrived 21 January. There the transport loaded passengers and cargo and sailed for Hollandia, New Guinea, anchoring 4 February.

After steaming to Leyte Gulf 4-12 February, *Goodhue* carried supplies to various bases in the area and took part in amphibious training until 25 February. She then began to load troops and supplies for the Okinawa invasion, as American forces neared the last stop in their victorious sweep across the Pacific. More landing drills followed, after which the transport got underway in convoy for Okinawa 21 March. Arriving off Kerama Retto 26 March, *Goodhue* and the other transports put ashore troops to secure the island group as a base for the coming invasion of nearby Okinawa.

Goodhue remained at Kerama Retto during the initial landings 1 April and while returning to sea the evening of 2 April underwent a heavy air attack. As gunners from *Goodhue*, screen ships, and other transports fired furiously, suicide planes attempted to crash the loaded ships. *Henrico* (APA-45) took a kamikaze hit on her bridge, and *Dickerson* (APD-21) was also crashed. *Goodhue's* gunners splashed a plane on the starboard quarter, but another headed directly for her from dead ahead. Unable

to bring her full firepower to bear in that direction, *Goodhue* could not divert the attacker, which hit the mainmast and fell astern of the ship. Exploding bombs from the aircraft caused many casualties and fires, killing 27 and wounding 117, but the ship did not suffer serious structural damage and was able to continue. Subsequently, *Goodhue* was based at Kerama Retto repairing battle damage, and rejoined her transport squadron 10 April. She transferred her Army Medical Detachment to Ie Shima by LST 17 April and landed the main body of her embarked troops 20 April. Nearing the beaches in a pre-dawn operation, she landed her reinforcements and retired, undergoing air attack again that afternoon. Cargo was off loaded under cover of smokescreens by 24 April and 2 days later *Goodhue* joined a convoy bound for Ulithi.

The transport arrived Ulithi 30 April after a grueling month at Okinawa, and departed 22 May for San Francisco. There she loaded additional troops for the Pacific fighting and sailed again 25 June. Steaming by way of Eniwetok and Ulithi, *Goodhue* arrived Manila 21 July and disembarked troops. She then sailed for Lingayen Gulf, loading troops, and engaged in training operations 7-13 August. Word of the Japanese surrender arrived 15 August as another assault was about to take place.

Goodhue's next assignment was to carry occupation troops to Japan, and she loaded soldiers at Subic Bay and Cebu, Philippine Islands. The convoy arrived Sagami Bay, Japan, 8 September. Unloading her troops, the transport brought on board nearly 1,000 liberated prisoners of war—English, Dutch, and Norwegian as well as American. She sailed for Manila 12 September and disembarked the men 6 days later. From there *Goodhue* visited Cebu and Subic Bay to load veterans on operation "Magic-Carpet", the giant task of transporting the veteran soldiers and sailors back to the United States. Sailing 11 October, the ship arrived San Pedro, Calif., via Pearl Harbor 3 November 1945. She made one more voyage to the Pacific bringing back veterans of the fighting in the Philippines, and sailed from San Francisco 2 February 1946 for Hampton Roads, Va., via the Panama Canal. *Goodhue* arrived 19 February and decommissioned 5 April 1946. She was turned over to the Maritime Commission and eventually sold to Matson Navigation Co., where she serves as freighter *Hawaiian Citizen*.

Goodhue received one battle star for World War II service.

Goodrich

Goodrich is named after two men, father and son.

Caspar Frederick Goodrich was born 7 January 1847 in Philadelphia. Graduating from the Naval Academy in 1864, he spent 2 years in *Colorado* and *Frolic*; 3 years in *Portsmouth* and *Lancaster*; and 3 years at the Naval Academy. Between 1874 and 1881 he had duty on board *Tennessee* and *Kearsarge* followed by a tour at the Naval Torpedo Station, Newport, R.I. After serving as executive officer of *Lancaster*, flagship for the European Squadron, and Inspector of Ordnance at the Washington Navy Yard, Goodrich became Officer in Charge of the Newport Torpedo Station in 1886. From 1891 until 1896, he commanded successively *Jamestown*, *Constellation*, and *Concord* before he spent a year as President of the Naval War College at Newport. Originating the Coast Signal Service in 1898, he then served as Director. During the Spanish-American War in 1898, he commanded *St. Louis* and *Newark*, and received the surrender of Manzanillo, Cuba, following that city's bombardment 12 August. In the years following, Goodrich commanded *Iowa*, *Richmond*, *Minneapolis*, and *Puritan* at sea and served as Commandant of the Philadelphia Navy Yard (1900) and the Portsmouth Navy Yard (1903) on land before his promotion to the rank of Rear Admiral 17 February 1904 and his appointment for 3 years as the Commander-in-Chief of the Pacific Squadron. After duty as commandant of the New York Navy Yard 1907 to 1909, he retired 7 January 1909. Recalled to active duty in World War I,

Admiral Goodrich served as officer-in-charge of the Pay Officers' Material School at Princeton until 8 November 1919 when he again stepped down from active duty, ending a 50-year naval career. He died in Princeton 26 January 1925.

Caspar Goodrich, son of the Admiral, was born in Italy. Appointed a Midshipman from Connecticut 7 September 1897, he was designated a Naval Cadet 10 June 1901 and reported to *Lancaster* for duty. From 1903 to 1905 Goodrich served in *Maine*, *Cleveland*, and *Chicago*. Assigned to *Georgia* on the Atlantic Station in June 1906, Goodrich was killed 15 July 1907 as the result of a turret explosion.

(DD-831; d. 2,425 t.; l. 390'6"; b. 41'4"; dr. 18'6"; sp. 35 k.; cpl. 367; a. 6 5", 4 21" tt.; cl. *Gearing*)

Goodrich (DD-831) was launched 25 February 1945 by the Bath Iron Works Co., Bath, Maine; sponsored by Mrs. Caspar F. Goodrich, widow of Admiral Goodrich and mother of Lt. Goodrich; and commissioned 24 April 1945, Comdr. Dale R. Frankes in command.

After shakedown training in the Caribbean, *Goodrich* transited the Panama Canal 12 November 1945 to support the occupation of Japan. She patrolled between principal Japanese ports until October 1946; then she based at Tsingtao, China, for patrol along the coast of Korea. The destroyer returned to San Francisco 21 December 1946 and departed 7 January 1947 to base at Newport, R.I., as a unit of the U.S. Atlantic Fleet.

Goodrich overhauled in the New York Naval Shipyard, then served in the Mediterranean Sea (2 February-22 May 1948). This was her first of many annual tours with the "steel gray stabilizers" of the 6th Fleet, of actively countering the repeated threats of the Soviets to overrun the defenseless nations of the Balkans and the Middle East and exploit them for Red Imperialism. Her service included patrol along the Israeli-Egyptian border of the Red Sea in February 1956 to help stem the Mid-East crisis that finally culminated in the nationalization of the Suez Canal. When fighting erupted, she sped back to the Mediterranean in November 1956 to protect Americans in that area and serve notice that the United States was determined to contain and terminate the conflict. The destroyer supported the landing of Marines at Beirut, Lebanon, 14 July 1958, as the Navy again met and checked a Communist thrust against the Western democracies.

Goodrich shifted her home port in June 1959 from Newport to Mayport, Fla. Thereafter her annual deployments to the Mediterranean included intensive training in all forms of naval warfare with NATO units and a constant readiness with the 6th Fleet to meet any threat to peace in the Mediterranean region. She interrupted her schedule in January 1960, entering the Norfolk Navy Yard for an 8-month modernization overhaul which included complete renovation and latest weapons and shipboard equipment. She was on Project Mercury recovery station 12 February 1962 as Lieutenant Colonel John H. Glenn, USMC, made his successful orbital space flight.

Goodrich went on alert again with the 6th Fleet during 24 October to 20 November 1962 when the Navy responded to President Kennedy's call for a quarantine of Cuba that choked off the flow of military supplies and enforced the American demands for the withdrawal of the Soviet missile experts and equipment. On 22 July 1966 the destroyer got underway from Mayport on her 13th 6th Fleet deployment. She cruised throughout the Mediterranean for 5 months, unobtrusively patrolling with the 6th Fleet and taking part in combined naval warfare exercises with units of the Turkish, Greek, British, and Italian Navies. She returned to Mayport 20 December 1966 for upkeep and type training.

Goodson

A British name retained. William Goodson, a captain in the British Navy, commanded *Entrance* in 1653.

George (DE-276) (*q.v.*) was renamed HMS *Goodson* upon transfer to the United Kingdom under lend lease 9 October 1943.

Goodwill

(MB: l. 26'10"; b. 9'0")

Goodwill, a wooden launch, was built in 1917 and taken over from the Panama Canal Co. for use as a shore and harbor patrol vessel in the 15th Naval District during World War I. She was returned to her owner 31 December 1918.

Gopher

Any of an order of burrowing rodents, having small eyes, short ears, very large cheek pouches, and strong claws on the forelimbs.

The gunboat *Fern* (*q.v.*) was renamed *Gopher* 27 December 1905 while under repair at Detroit for duty with the Minnesota Naval Militia.

Gordius

In mythology, first king of Phrygia. He tied a knot, known as the Gordian Knot, so intricate that an oracle declared that he who loosed it should be master of Asia. Alexander the Great cut it with his sword.

(ARL-36; dp. 2,125; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 262; a. 1 3"; cl. *Achelous*)

Gordius (ARL-36), originally LST-1145, was redesignated ARL-36 and named 27 October 1944 while building at Chicago Bridge & Iron Works, Seneca, Ill. She was launched 7 May 1945, sponsored by Mrs. Helen H. Davis. Placed in reduced commission 18 May 1945, the ship steamed to Baltimore, Md., where she decommissioned 11 June. She was then converted to landing craft repair vessel at Key Shipyard, Bethlehem Steel Co. *Gordius* was placed in full commission 14 September 1945 at Baltimore, Lt. Roy L. Guy, commanding.

Operating out of Amphibious Base, Little Creek, Va., *Gordius* took up a regular schedule of exercises in Chesapeake Bay, and along the Virginia-North Carolina coast, supporting the myriad landing craft during amphibious operations. She also participated in winter maneuvers in the Caribbean. The ship occasionally sailed to the north Atlantic, taking part in training exercises off Argentina, Newfoundland, and Labrador in 1948 and 1949. *Gordius* also was a member of the annual resupply convoy to Thule, Greenland, 11 June-27 August 1952, drawing special praise for her repair of *LST-938* during adverse weather on the operation.

Gordius continued her work in support of amphibious training until steaming into Green Cove Springs, Fla., 10 November 1955. She decommissioned 21 December 1955, and was placed in reserve. Taken out of reserve in early 1961, she was stricken from the Navy List 1 February and loaned to Iran under the Military Assistance Program 7 September 1961, where she serves as *Sohrab*.

Gordon, General W. H., see General W. H. Gordon (AP-117)

Gordonia

Former name retained.

(AF-43; dp. 7,435; l. 338'6"; b. 50; dr. 21'1"; s. 12 k.; cpl. 79; a. 1 3"; cl. *Adria*)

USS *Gopher* circa 1906

Gordonia, a provision stores ship, was launched 30 November 1944 by Pennsylvania Shipyards of Beaumont, Tex. under Maritime Commission contract; sponsored by Mrs. B. S. Matthews; and commissioned 14 May 1945 at Galveston, Tex., Lt. Ira V. Chapman in command.

Gordonia conducted a brief shakedown cruise in the Gulf of Mexico before departing for the Pacific. She loaded refrigerated cargo at Mobile, Ala., transited the Panama Canal, and arrived Pearl Harbor 1 July 1945. There the ship reloaded stores for fleet issue and steamed westward 10 July to bring supplies to the fleet off Okinawa. After stopping at Ulithi she spent 6-23 August in the Okinawa area dispensing much-needed stores then returned to Pearl Harbor, arriving 13 September.

In the months that followed, *Gordonia* made three more voyages to the Far East, carrying precious refrigerated cargo. Her first passage was 23 October to 27 November, and on the second, beginning January 1946, the ship visited Okinawa, Jinsen, and Taku in support of American Marines in China. She arrived San Francisco 4 March. After one more voyage, this time to the Philippines, *Gordonia* arrived San Francisco 13 June. There she decommissioned 8 July 1946 and was returned to the Maritime Commission the same day. *Gordonia* was subsequently renamed *Whale Knot* and is berthed with the National Defense Reserve Fleet in Suisun Bay, Calif.

Gore

A British name retained. Sir Thomas Gore, a captain in the Royal Navy, commanded HMS *Triton* from 1796 to 1801.

Herzog (DE-277) (*q.v.*) was renamed HMS *Gore* upon transfer to the United Kingdom under lend lease 14 October 1943.

Gorgas, General, see *General W. C. Gorgas Gorgon*

In Greek mythology one of three snaky-haired sisters, whose terrifying appearance turned the beholder to stone. The second *Gorgon* is a British name retained.

I

The gunboat *Naubuc* (*q.v.*) was renamed *Gorgon* 15 June 1869 while laid up at League Island, Pa.

II

(BAM-18: dp. 890; l. 220'6"; b. 32'; dr. 9'6"; s. 18 k.; cpl. 80; a. 1 3", 6 20mm.; cl. HMS *Catherine*)

BAM-18 was laid down 15 August 1942 by Savannah Machine & Foundry Co., Savannah, Ga.; launched 24 January 1943; transferred to the United Kingdom under lend lease 28 August 1943; and named HMS *Gorgon*. During World War II, she served the Royal Navy as a mine sweeper off the English coast and along the English Channel. After the war, she was returned to the custody of the United States Navy 12 November 1946 and sold to the government of Greece in January 1947.

Gorgona

A former name retained: one of three sisters, Stheno, Eurayle, and Medusa, with snaky hair, who turned the beholder to stone.

(SP-2164: dp. 732 t.; l. 112'; b. 30'; dr. 15'6"; s. 12 k.; cpl. 27; a. none)

Gorgona was built in 1915 by the Staten Island Steam Boat Co., Staten Island, N.Y.; she was commissioned 23

July 1917 at Portsmouth, Va., Ens. T. Gustav Freudentorf in command.

After fitting out at Arundel Cove, Md., until 21 October, *Gorgona* served with the Atlantic Fleet out of Norfolk, towing target rafts for fleet gunnery practice. She remained on this duty until 24 January 1919 when she sailed to Guantanamo, Cuba, where she towed target rafts for Battleship Forces 1 and 2. From there she sailed to New Orleans, towing two barges on her return, and on 5 April she departed Cuba for Norfolk.

Brief duty at New York, on the Potomac River torpedo range, and at Norfolk ended 4 June when *Gorgona* departed Hoboken, N.J., for the Panama Canal. Arriving at Coco Solo, C.Z., she decommissioned 20 June 1919 and was turned over to the Panama Canal authority.

Gorka, Walter S., see *Walter S. Gorka* (DE-204)

Gorman, Arthur P., see *Tuituila* (ARG-4)

Gorontalo

A Dutch merchant name retained.

(AP: t. 5,884; l. 395'8"; b. 51'5"; dr. 20'10"; s. 9.5 k.; a. 1 4')

Gorontalo was a Dutch cargo ship built by Bonn and Nees, Rotterdam, for Rotterdamsche Lloyd in 1908 and was among Dutch ships taken over by Customs officials in Hampton Roads 20 March 1918. She was turned over to the Shipping Board for transfer to the Navy. *Gorontalo* was operated on Army account by the Navy, commissioned at Newport News, Va., 4 April 1918, Lt. Comdr. John E. Powell, USNRF, in command.

Assigned to NOTS, *Gorontalo* proceeded to New York where she drydocked until 26 April, and then sailed for Baltimore to join a cargo convoy to Europe. Sailing 17 May, she arrived at St. Nazaire, France, 2 June 1918 with vital supplies for the Army. *Gorontalo* returned to Baltimore 12 July to prepare for another voyage.

Subsequently, she made three trips to France with supplies. On her second voyage, she returned to Baltimore with over 90 tons of captured German artillery. *Gorontalo* was then converted into an animal transport and on her third voyage carried over 500 horses to Bordeaux. Her last voyage to Europe was out of New Orleans, and, after arriving with a load of foodstuffs at Hamburg 27 March 1919, she returned to Rotterdam and was turned over to her original owners. *Gorontalo* decommissioned 14 May 1919.

Goshawk

A large, short-winged hawk noted for its powerful flight, activity, and courage.

Goshawk (AM-42) was authorized for construction 6 October 1917, but construction was cancelled in 1918.

I

(AM-79: dp. 585; l. 150' b. 25'; dr. 10'3"; s. 10 k. a. 1 3'.)

Goshawk, formerly *Penobscot*, was built by the Foundation Co., Savannah, Ga., 1919, and purchased by the Navy from W. F. Henningsen of Seattle, Wash., 3 September 1940. She was converted to a minesweeper by Winslow Marine, Winslow, Wash., and commissioned at Seattle, Wash., 3 March 1941, Lt. (j.g.) Allan Dwight Curtis in command. Her designation was changed to AM-79 from AMc-4 on 25 November 1940.

After shakedown, *Goshawk* took up minesweeping duties in Puget Sound and the San Juan de Fuca Straits, operating out of Seattle. She sailed for Alaska 6 October

1941 and swept the channels between Sitka, Ketchikan, Adak, Seward, and Kodiak Island until 30 March 1942, when she returned to Seattle for extensive refitting.

Goshawk resumed duty 18 August in the Seattle and Puget Sound area and in late 1943 returned to Alaska as a combination minesweeper and small cargo vessel. Her classification was officially changed to IX-195, 10 October 1944. *Goshawk* returned to Seattle 9 June 1945 and decommissioned there 1 August, but continued to perform in an "in service" status, transporting condemned ammunition for the 13th Naval District. Her name was stricken from the Navy List 3 January 1946 and she was transferred to Maritime for disposal 7 May 1946. *Goshawk* was subsequently sold to Alvin T. Davies of Tacoma, Wash. and renamed *Bering Sea*.

Goshen

A county in Wyoming.

(APA-108: dp. 8,100; l. 492'; b. 69'6"; dr. 24'; s. 16 k.; cpl. 356; a. 2 5", 4 40mm., 18 20mm.; cl. *Bayfield*; T. C3-S-A2)

Goshen (APA-108), originally *Sea Hare*, was laid down by Western Pipe & Steel Co. under a Maritime commission contract on 31 January 1944; launched 29 June; sponsored by Mrs. James B. Black; acquired by the Navy 13 December 1944; and commissioned the same day Captain Carroll T. Bonney in command.

After shakedown along the California coast, *Goshen* departed Long Beach 4 February 1945, for additional combat and amphibious training in the Hawaiian Islands. Embarking over 1,400 troops and officers at Honolulu, she departed there for duty in the Western Pacific. *Goshen* made brief stops at Ulithi and Eniwetok before proceeding to the Okinawa area where the bitter campaign to secure that Japanese-held fortress was already underway.

The transport arrived off Hagushi beaches on 17 April and immediately commenced disembarking troops and unloading cargo. *Goshen* completed her task 5 days later and sailed for Saipan arriving there on the 27th. After loading mail and passengers at Saipan, Russell, Florida, and New Hebrides Islands, she sailed for the United States 18 May, arrived San Francisco 3 June.

Goshen made another cruise to the Western Pacific in July carrying troops and cargo for the final month of the war. She was at Saipan when news of the Japanese acceptance of surrender terms was received. After the war *Goshen* operated between the Philippines and Japan for the next 4 months as she shuttled occupation troops and cargo among the Islands.

During December the transport joined the growing number of ships engaged in Operation "Magic Carpet"—an organized project to bring the war veterans back home immediately. On 10 December she steamed out of Sasebo with over 1,400 America bound Marines, finally arriving San Diego on the 28th.

In late January 1946 *Goshen* departed the West Coast arriving Lynnhaven Roads, Va., 12 February. She decommissioned at Norfolk 20 April and was delivered to WSA 2 May 1946. She was sold in 1947 to American Mail Line, Ltd., and renamed *Canada Mail*.

Goshen received one battle star for World War II service.

Gosper

A county in southern Nebraska.

(APA-170: dp. 6720; l. 455'; b. 62'; dr. 24'; s. 18 k.; cpl. 692; a. 1 5"; cl. *Haskell*)

Gosper (APA-170) was launched under Maritime Commission contract by Oregon Shipbuilding Corp., Portland, Oreg., 20 October 1944; sponsored by Mrs. E. P. Nelson; transferred to the Navy and commissioned 18 November 1944, Comdr. F. W. McCann in command.

Gosper sailed for Seattle to load supplies 29 November

and arrived San Francisco 6 December to take on landing craft. The ship then departed for shakedown training off the coast of southern California followed by amphibious exercises, and return to San Diego 6 January 1945. Loading troops and supplies, the transport sailed for Pearl Harbor on two voyages to aid in the Navy's great push across the Pacific, arriving there for the second time 27 February.

At Pearl Harbor it was decided to convert *Gosper* into a much-needed casualty evacuation transport, and she was furnished with operating rooms and other hospital facilities. The ship was to take part in the historic Okinawa invasion, and departed Pearl Harbor 18 March for Ulithi, where she arrived 31 March.

Gosper arrived Kerama Retto 6 April, just 5 days after the initial landings on nearby Okinawa. During that grim day the ship was almost constantly under suicide attack as the Japanese tried desperately to stop the invasion. *Gosper* shot down at least one attacker that day, while transports *Hobbs Victory* and *Logan Victory* and *LST-447* were sunk. The ship remained at Kerama Retto caring for casualties of the bitter fighting ashore until 17 April, after which she sailed to Ulithi and Guam, unloading her wounded at the Naval Hospital 24 April.

Sailing to Saipan, *Gosper* loaded over 1,000 reserve combat troops and got underway for Okinawa again, arriving off the beaches 1 May. Until 10 July she stayed at anchor at Kerama Retto, caring for the casualties and helping to fight off the air raids incessantly mounted by the Japanese. She sailed to Buckner Bay, on the east side of Okinawa, 10 July, and from there joined a convoy to Ulithi, Pearl Harbor, and San Francisco, where she arrived 7 August 1945.

Under repair when the war ended, *Gosper* was pressed into use carrying occupation forces to the Far East. She sailed 26 August for the Philippines, anchoring at Manila 15 September. There she took on board, because of her medical facilities, a large group of American, British, and Canadian servicemen who had been prisoners of war on Japanese-held islands, some since 1941. She carried these veterans via Pearl Harbor to Seattle, where she arrived 12 October. *Gosper* then joined the "Magic Carpet" fleet for the gigantic task of bringing home the combat-weary soldiers from the Pacific, sailing from Seattle 26 October. She made two passages to Pearl Harbor and back, carrying veterans, and departed 8 February 1946 for the East Coast, via the Panama Canal. *Gosper* arrived Newport News, Va., 24 February 1946, and decommissioned 10 April 1946. She was subsequently returned to the Maritime Commission and placed in the National Defense Reserve Fleet in the James River, Va., where she remains.

Gosper received one battle star for World War II service.

Goss

Angus R. Goss born 8 January 1910 at Tampa, Fla., enlisted in the United States Marine Corps 12 September 1930. Marine Gunner Goss was awarded the Navy Cross and Britain's Conspicuous Gallantry Medal for extraordinary heroism in combat on Tulagi 10 August 1942. Although severely wounded by a grenade explosion, Goss ignored enemy machine-gun and rifle fire, charging into a cave where the enemy was entrenched and singlehandedly destroyed the Japanese with a sub-machine gun.

(DE-444: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5" (mean); s. 24 k.; cpl. 222; a. 2 5", 2 40mm., 3 21" tt.; cl. *John C. Butler*)

Goss (DE-444) was laid down 16 December 1943 by the Federal Shipbuilding & Dry Dock Co., Newark, N.J.; launched 19 March 1944; sponsored by Mrs. Jamie S. Goss, sister-in-law of Marine Gunner Goss; and commissioned 26 August 1944, Lt. Comdr. Claude A. Kirkpatrick in command.

After shakedown out of Bermuda, *Goss* departed Norfolk 30 October and steamed via the Canal Zone and San

Francisco to Pearl Harbor, where she arrived 2 December and reported for duty. *Goss* was underway 5 December 1944 from Pearl Harbor via Eniwetok to Kossel Roads, Palau Islands, where she joined *Tulagi* (CVE-72) and four other destroyer escorts to form a hunter-killer group which operated off the Palau Islands.

As a unit of Vice Admiral Oldendorf's Bombardment and Fire Support Group, *Goss* sortied from Kossel Roads 1 January 1945 bound for Lingayen Gulf. In the early hours of 5 January, as Oldendorf's ships steamed within 150 miles of Japanese airfields on Luzon, they were spotted by scout planes. At 0758 combat air patrol intercepted 15 to 20 enemy planes 35 miles from the formation, shot down 9, and turned the others back. At noon another raid was intercepted and turned back about 45 miles from the ships. The last and heaviest air attack of the day came at 1650 about 100 miles off Corregidor. Sixteen kamikazes with four escorts broke through combat air patrol to dive at the ships. They succeeded in hitting heavy cruisers *Louisville*, and HMAS *Australia*; escort carrier *Manila Bay*; and destroyer escort *Stafford*. In the fierce fight to repel this deadly threat, *Goss* was credited with shooting down two kamikazes.

Next day, cruising about 60 miles off Lingayen Gulf, the formation began breaking up into units with the battleships, cruisers, Beach Demolition Group and their escorts starting their separate missions. *Goss*, as part of the screen for Rear Admiral Durgin's Lingayen Carrier Group, gallantly carried out her mission in support of the Lingayen Landings until 20 January. Retiring from the area, she reached Mindoro dawn 21 January.

From 21 February to 6 June 1945 *Goss* operated as a unit of Admiral Stump's Task Group 52.1 under 5th Fleet as part of the close air support for the invasion of Iwo Jima. *Goss* continued her escort duties, next taking part in the Okinawa operations, last stop on the island road to Japan. This duty lasted until 30 June 1945.

Goss sortied from Ulithi 3 July as part of the screen for Admiral D. B. Beary's Logistic Support Group (TG 30.8). This group acted as the replenishment group for Admiral Mitscher's Carrier Task Force 38 as they struck the main islands of Japan with carrier planes and battleship guns. The Logistics Group operated in an area from 250 to 500 miles east of Honshu, fueling the fast carrier strike force and furnishing replacement aircraft. Late in July *Goss* joined Task Group 94.17, a hunter-killer team, to operate along the shipping lanes southeast of Okinawa. From 7 through 24 August she operated with Task Group 75.19 as hunter-killer group east of Formosa. With the war over, *Goss* retired to San Pedro Bay 25 August and cleared that port 2 days later as part of the screen for Task Force 32 and 33, landing units of the 8th Army in Tokyo Bay 2 September.

Goss continued her duties until 5 November when she departed Tokyo Bay for home. After touching at Pearl Harbor *Goss* arrived Los Angeles 22 November 1945. She remained on the West Coast and decommissioned at San Diego 15 June 1946 and joined the Pacific Reserve Fleet.

Goss recommissioned 27 December 1950 at San Diego, Lt. Comdr. L. R. Hayes, commanding. *Goss* was assigned duty under Commandant, 11th Naval District as a reserve training ship. Her operations consisted of readiness and tactical cruises on the west coast from Alaska to South America as well as visits to Hawaii, Cuba and Panama. *Goss* decommissioned at Astoria, Ore., 10 October 1958 and again joined the Pacific Reserve Fleet. She was later transferred to Bremerton, Wash., where she remains.

Goss received four battle stars for World War II service.

Gosselin

Edward Webb Gosselin, born 1 May 1917 at Hamden, Conn., was educated at Yale University. He enlisted as an Apprentice Seaman 30 September 1940 and was commissioned 14 March 1941. Ensign Gosselin's first duty station was battleship *Arizona*. He reported on board

3 May 1941 as an Engineer when she was sunk at Pearl Harbor. Ensign Gosselin was officially declared dead as of 7 December 1941.

(APD-126: dp. 1650; l. 306'; b. 37'; dr. 12'7"; s. 24 k.; cpl. 204; a. 1 5" .38 cal., 3 twin 40mm. AA.; cl. *Rudderow*)

Gosselin (APD-126), launched 17 February 1944 by the Defoe Shipbuilding Co., Bay City, Mich., was laid down and partially completed as destroyer escort DE-710; sponsored by Mrs. E. N. Gosselin, mother of Ensign Gosselin; and commissioned 31 December 1944, Lt. Comdr. Joseph B. Fyffe in command.

After shakedown in Bermuda and Chesapeake Bay waters, *Gosselin* cleared Norfolk 16 February 1945 bound for the Pacific via the Panama Canal. Touching at Pearl Harbor, Eniwetok, and Ulithi, she arrived 6 April in the Okinawa area where she was employed as a screen vessel until 10 April. *Gosselin* then began convoy duty which took her to Guam and Saipan, returning to Okinawa 27 April.

From 27 April until the end of May *Gosselin* was assigned at the Okinawa screen protecting the invasion area, shooting down one Japanese plane, taking several others under fire and rescuing a number of survivors and casualties from ships hit by suicide planes.

From 1 June *Gosselin* was in an upkeep status, mostly in Leyte Gulf, returning to Okinawa 17 July to form part of the reduced screen still being maintained. *Gosselin* departed Okinawa 17 August 1945 in company with *Reeves* to rendezvous with the 3d Fleet, then cruising south of Honshu. Joining the fleet, she was assigned to carry part of a Naval Assault Battalion for the occupation of Yokosuka Naval Base. Later this assignment was changed to duty carrying press representatives and Navy photographers during the initial entrance into Sagami Wan and Tokyo Bay. *Gosselin* was one of the first group of ships, including *Missouri* (Admiral Halsey), *Iowa* (Rear Admiral Badger), and H.M.S. *Duke of York* (Admiral Sir Bruce Fraser, R.N.) to enter Sagami Wan 27 August. The next day she accompanied *San Diego* into Tokyo Bay to begin the official occupation.

Gosselin was transferred 29 August to the task group commanded by Commodore R. W. Simpson, USN, assigned to liberate and evacuate prisoners of war. That same day her boats were the first to reach Omori Camp, from which the first prisoners were evacuated, and brought out the first boatloads of prisoners. 27 September 1945 *Gosselin* was berthed in front of the Port Director's office, Yokosuka, and used as a barracks ship for shore-based and transient personnel. She remained there until 15 December when she got underway for San Francisco via Eniwetok and Pearl Harbor. *Gosselin* discharged her passengers at San Francisco 28 December.

Gosselin remained in the United States until 22 August 1946 when she cleared San Diego with Navy and Marine replacements bound for Yokosuka via Pearl Harbor and Eniwetok. Discharging her passengers at Yokosuka 13 December *Gosselin* returned to San Diego 16 November 1946. She operated out of here until 16 July 1948 when she departed again for the Orient. Arriving Tsingtao, China, 14 August 1948 *Gosselin* made this her base of operations. She visited such ports as Shanghai and Nanking and occasionally operated in the Yangtze River during American efforts to stabilize the situation in China.

Gosselin departed Shanghai 18 February 1949 and reached San Diego 11 March. She decommissioned there 11 July 1949 and was placed out of commission in reserve. She berthed with the San Diego Group, Pacific Reserve Fleet, until struck from the Navy List 1 April 1964 and sold for scrapping.

Gosselin received one battle star for World War II service.

Gotham, see *Asquith* (YFB-42)

Gould Island

An island in Narragansett Bay.

(YFB-31: dp. 569; l. 171'9"; b. 54'; dr. 9'6"; s. 13 k.)

Gould Island (YFB-31) a steel diesel-powered ferry, was built as *Hudson* by General Ship & Engineering Works, East Boston, Mass., in 1941, and acquired from Electric Ferries, Inc., of New York City, 4 April 1942. She was placed in service at Newport, R.I., 14 April 1942, and named *Gould Island*.

Gould Island was converted for Navy use at New London, Conn., and used during the Second World War as a ferry boat at Naval Torpedo Station, Newport, R.I. She was returned to her former owners 25 May 1946 and stricken from the Navy List 28 January 1947.

Governor

The chief executive of a State or territory.

(AMc-82: dp. 195; l. 97'1"; b. 22'; dr. 9'; s. 10 k.; cpl. 17; a. 2 mg.)

Governor a wooden-hulled coastal minesweeper, was launched by Camden Shipbuilding & Marine Railway Co., Camden, Maine, 26 July 1941; sponsored by Mrs. Richard Lyman; and placed in service 29 January 1942 at Boston Navy Yard, Lt. Alfred F. Page, Jr., in command.

After briefly acting as an escort vessel in Massachusetts Bay, *Governor* sailed 8 March 1942 for Yorktown, Va., where she conducted shakedown training in conjunction with the Mine Warfare School. She was assigned briefly to the 7th Naval District, and 11 November 1942 attached to the 8th Naval District for her wartime duty. *Governor* arrived at Naval Section Base, Burrwood, La., 29 December 1942, and remained there conducting minesweeping operations in the area until August 1945. After a brief tour during that month with Mine Countermeasures Station, Panama City, Fla., *Governor* was placed out of service and transferred to the Maritime Commission for disposal 11 April 1947. She was subsequently sold to a private purchaser.

Governor Buckingham

Name retained. (Probably named for the Governor of Connecticut.)

(ScStr: t. 886; l. 177'6"; b. 32' 2"; dph. 17'; mdr. 12'; sp. 8 k.; a. 1 100-pdr., 1 20-pdr., 4 30-pdrs.)

Built under contract by Messrs Maxon Fish & Co., Mystic, Conn., the hermaphrodite brig was offered for sale to the Navy while on the ways; purchased at Stonington, Conn., 29 July 1863 by Isaac Henderson for \$110,000; delivered at New York Navy Yard 30 September 1863; and commissioned 13 November 1863, Acting Volunteer Lt. W. G. Saltonstall in command. She was assigned to the North Atlantic Blockading Squadron, with instructions to report at Hampton Roads to Acting Rear Admiral S. P. Lee.

On 20 November she stood out to sea, arriving off Fortress Monroe on the 23d, thence to Norfolk Navy Yard. She departed Hampton Roads 5 December to join the Fleet off Wilmington, N.C., for active blockading duty.

Governor Buckingham lost no time in getting experience with the problem of tracking blockade runners. On 20 December with the assistance of *Aries* she captured the notorious blockade runner *Antonica* of Nassau, which ran ashore. *Antonica's* captain and crew attempted to get away in two small boats; but when fired upon they gave themselves up, and the 26 men were taken aboard as

prisoners. After boarding and taking possession of the prize in early morning of 21 December, *Aries* and the tug *Violet* sent out boats to assist, without success, as the tide had left her fast.

On 3 January 1864, *Governor Buckingham* was with the flagship *Fuhkee* when the blockade runner *Bendigo* ran aground during the chase, after efforts at salvage failed on 11 January *Bendigo* was destroyed.

That same day the British blockade runner *Ranger* was discovered after landing her passengers from Bermuda at Merrill's Inlet, 5 miles NE. She was intercepted by *Minnesota*, *Governor Buckingham*, *Daylight*, and *Aries* when she approached the Western Bar, and was beached and fired by her crew. Attempts by the squadron to extinguish the fire and haul her off were frustrated by Confederate sharpshooters, whose fire completely commanded her decks.

Later *Governor Buckingham* proceeded to Norfolk Navy Yard, for overhaul. She sailed from Hampton Roads on 3 July 1864 to return to blockade duty off Wilmington, and soon after was attached to the 1st Division off New Inlet. From 11 to 25 September she was at Beaufort, S.C., then back on her old station, she chased a blockade runner ashore on 25 September, fired five shots, three of which took effect as the target drove high and dry on the beach. One of the crew was killed, three wounded, and the steamer sent the surgeon and steward to their relief. Next day the blockade runner was set afire, but 20 bales of cotton, part of her cargo, were salvaged.

Governor Buckingham on 30 September took part off Fort Fisher in the destruction of the blockade runner *Black Hawk* from Britain. Having been damaged in several accidental collisions, she entered Norfolk Navy Yard for drydocking on 27 October, and returned off New Inlet on 3 December. Later that month she took part in the first engagement of the Fleet against Fort Fisher, renewing the engagement for 2 days; then her boats were sent in to reembark troops.

The second attack upon Fort Fisher 13 to 16 January 1865, resulted in its capture. *Governor Buckingham* was stationed on the 13th off Half Moon Battery, assisting troops from the transports to land, also landing provisions, ammunition and entrenching tools. After the battle on 16-17 January she was employed in carrying the wounded to the transports. On several occasions, in obedience to orders, she shelled the woods near Half Moon Battery. She remained in the area of Fort Fisher through January, dispersing bands of Confederate troops, and on the 19th shelled them out of entrenchments near the beach until Union forces advanced and captured a number of prisoners.

On 4 February *Governor Buckingham* stood out to sea, arriving Norfolk Navy Yard on the 8th. As her boilers and machinery were out of repair, she was decommissioned 27 March and on 12 July 1865 was sold at public auction at New York.

Governor Davie

William Richardson Davie, born in England 20 June 1756, came to Colonial America in 1763, and graduated from Princeton College, N.J., in 1776. Joining the Army during the revolution, he served under Casimir Pulaski and later took an active part in the Carolina campaign, becoming General Nathaniel Greene's Commissary General. After the war he settled in Halifax, N.C., and became successively a prominent lawyer, State legislator, and founder of the University of North Carolina. In 1798 Davie was elected Governor of North Carolina. He was appointed a Brigadier General during the Quasi-War with France; and became a peace commissioner to Paris in 1799, sent there by President John Adams after the XYZ affair. Governor Davie retired to his South Carolina plantation in 1805 and died there 29 November 1820.

(Gy: 1. 52'; b. 15'; dph. 5'8"; cpl. 28; a. 1 24-pdr., 5 to 6 how.)

Governor Davie was built at Wilmington, N.C., as one of a group of galleys authorized by act of Congress 4 May 1798. The small vessels were built and equipped by the Navy Department but operated under the War Department as a kind of Naval Militia.

Governor Davie was assigned to cruise the coast and inlets of North Carolina under Captain William McKerrall (or McKerrall) during the Quasi-War with France 1798 to 1801. Late in 1801 she was ordered turned over to the Revenue Cutter Service, but believed to have been sold instead, probably about 1 February 1802 at Wilmington, N.C.

Governor Jay

John Jay was born in New York City 12 December 1745, and attended the First and Second Continental Congresses. In 1777 he guided the drafting of the New York State Constitution, and became Chief Justice of the State supreme court the same year. Jay left that post to become President of the Continental Congress in 1778, and was sent to Spain in 1779 as a minister plenipotentiary to seek aid for the revolutionary cause. He was chosen to accompany Benjamin Franklin to Paris for the successful peace negotiations, and became Minister of Foreign Affairs under the Articles of Confederation 1784-89. An early supporter of the proposed new constitution, Jay was the author of five of the famous Federalist Papers, and became Chief Justice of the Supreme Court under the new form of government. When war with Britain loomed in 1794, he successfully negotiated "Jay's Treaty." His last public post was the governorship of New York, 1795 to 1801, after which he retired to his home in Bedford, New York, where he died 17 May 1829.

(RC: t. 187; l. 58'; b. 20'; cpl. 70; a. 14 guns)

Schooner *Governor Jay* was built at New York in 1797 for the Treasury Department Revenue Cutter Service. By arrangement between the Secretary of the Navy and the Secretary of the Treasury, July 1798, *Governor Jay* was put under the direction of the Navy for use as a cruiser in the developing war with France. With Captain J. W. Leonard commanding, she received orders to cruise out of New York between Cape Henry and Long Island with *Ganges* 20 July 1798.

Governor Jay made several cruises in protection of American commerce during the undeclared war with France. September saw her cruising with *Retaliation*, under Bainbridge, and 11 December 1798 she was ordered by the Secretary of the Navy to convoy ship *America*, in company with *General Green*, to the West Indies. This accomplished, the two ships joined Captain Decatur in *Delaware* and patrolled the waters north of Cuba from Matanzas to Havana capturing French privateers and protecting merchant vessels.

Returning to New York in May 1799, *Governor Jay* was determined by the Navy Department to be unfit for further service and shortly thereafter was returned to the Revenue Service.

Governor R. M. McLane

A former name retained.

(SP-1328: dp. 144; l. 120'; b. 22'; dr. 6'9"; s. 13 k.; a. 1 1-pdr)

Governor R. M. McLane, a steamboat, was built in 1884 by Neafie and Levy, Philadelphia, Pa., and was acquired by the Navy from the Maryland State Conservation Commission in August 1917. She commissioned 6 August 1917 at Norfolk, Va., Ens. S. Earle, USNRF, in command.

Governor R. M. McLane was assigned to the 5th Naval District, and served as a patrol craft in Chesapeake Bay. Her cruising grounds included Baltimore Harbor, the Patuxent and Severn Rivers, and Tangier Sound. During November 1918 she was used briefly as a towing boat by

Naval Proving Ground, Indian Head, Md., and was returned to her owner 30 November 1918.

Governor Russell

William Eustis Russell was elected governor of Massachusetts three times, in 1890, 1891, and 1892, although he was a Democrat in what was then a normally Republican state; he died in 1896.

(Gbt: t. 485; l. 157'; b. 57'; dr. 9'4"; sp. 12 k.; cpl. 58; a. 1 5'', 1 3'', 4 3-pdr. Hotchkiss gun)

Governor Russell, a wooden bridge ferry converted to auxiliary gunboat, was built by William McKie, East Boston, and launched in 1898; purchased 11 May, she commissioned 24 June 1898, Lt. Charles H. Grant commanding.

Sailing to New York 16 July, *Governor Russell* departed for Port Royal, S.C., 23 July; however she ran into a heavy storm 26-27 July and had to put into port at Beaufort, N.C. From there she went to Moorehead City, N.C., and then sailed for Port Royal, arriving 7 August. After extensive repairs in drydock, *Governor Russell* sailed for New York 7 September with a cargo of ammunition; however, a second severe storm forced her to put in at Hampton Roads. Damaged by weather for which she was not built, *Governor Russell* was declared unfit for service and decommissioned 28 September 1898. Her name was struck from the Navy List 3 July 1899.

Governor Saltonstall, see *Kingbird* (AMc-56)

Governor Tompkins

Daniel D. Tompkins, born 21 June 1774 in Scarsdale, N.Y., graduated from Columbia College in 1795 and took up the practice of law in New York City. He later entered politics as a Republican. He was a member of the state constitutional convention in 1801 and of the Assembly in 1803; was elected to Congress in 1804, but resigned to accept appointment as an associate justice of the New York Supreme Court. Daniel Tompkins was elected to New York governorship in 1807, 1810, 1813, and 1816. He served as Vice President of the United States from 1817 to 1825, presiding over the state constitutional convention in 1821. He died at his home on Staten Island 11 June 1825.

(Sch: t. 96; cpl. 40; a. 6 g.)

Governor Tompkins was purchased in October 1812 at Oswego, N.Y., as the merchant ship *Charles & Ann*.

Governor Tompkins appeared on Lake Ontario 8 November 1812 as a unit of Commodore Isaac Chauncey's squadron which transported and lent fire support to the Army landings for the raid on Kingston 9 December 1812, the capture of York 27 April 1813, and the capture of Fort George, 27 May 1813. The effect of the latter victory caused the British to evacuate the whole Niagara river frontier. This allowed Captain Oliver Hazard Perry, up above Niagara Falls, to get brig *Caledonia* and four schooners past the British batteries and into Lake Erie, a most important addition to Perry's fleet.

Governor Tompkins joined Chauncey's squadron in running engagements with the British squadron 7 and 11 August 1813; and, in a long-range engagement 11 September. The two squadrons again joined battle in York Bay 28 September 1813 and the British squadron was forced to flee. The victory established Chauncey's supremacy in control over the lakes. He continued to blockade the British squadron at Kingston while dispatching Lt. Jesse D. Elliott to Lake Erie to establish a naval base there. Elliott's hard work until winter closed the Lakes to navigation, laid the groundwork for Commodore Perry's great victory in the Battle of Lake Erie the following year.

Governor Tompkins was laid up at Sacket's Harbor on close of the War of 1812. She was sold 15 May 1815.

Governor Williams

Benjamin Williams was born near Smithfield, N.C., 1 January 1751. He served in the North Carolina Provincial Congress 1774-75 and was a captain during the Revolutionary War. After serving in the North Carolina Senate, he was elected to the House of Representatives of the United States, serving 1793-1795. Williams was elected governor of North Carolina 1799-1802 and 1807-1808, died in Moore County, N.C., 20 July 1814.

(Gy: l. 52'; b. 15'; dph. 5'8"; cpl. 28; a. 1 24-pdr., 5-6 how.)

Governor Williams was one of a group of galleys built at Wilmington, N.C. in 1798. These small vessels, authorized by Congress 4 May 1798, were built and equipped by the Navy Department but operated by the War Department as a kind of Naval Militia.

During the Quasi-War with France 1798-1801 *Governor Williams* cruised the coasts and inlets of North Carolina under Lawrence Dorsey, who held the rank of "Captain of a Galley." After this service in defense of the coast of North Carolina, she was transferred to the Department of the Treasury Revenue Cutter Service in 1802.

Gozo

A British name retained.

(AM-330: dp. 850; l. 225'; b. 35'6"; dr. 8'6"; s. 16.5 k.; cpl. 85; a. 1 4'', 8 20mm.; cl. HMS *Algerine*)

AM-330 was laid down 5 August 1942 by Toronto Shipbuilding Co., Ltd., Toronto, Canada; launched 27 January 1943; transferred to the United Kingdom under lend lease 2 October 1943; and named HMS *Gozo*. She served as a mine sweeper in the Royal Navy during World War II and was returned to the custody of the U.S. Navy 10 December 1946. She was sold to the government of Greece 2 October 1948.

Gracie S.

(SP-919: t. 91; l. 83'0"; b. 24'7"; dr. 10'7"; s. 9 k.)

Gracie S. (SP-919), a wooden, two-masted auxiliary schooner built in 1893 by the Union Iron Works, San Francisco, was purchased by the Navy from the San Francisco Bar Pilot's Association; and assigned to the 12th Naval District. However, she saw no active service and was returned to her owner in 1918 shortly after being taken over.

Grackle

An American blackbird.

I

(AM-73: dp. 755; l. 132'4"; b. 24'; dr. 11'6"; s. 10 k.; cpl. 36; a. 1 3''/50 cal.)

The first *Grackle* (AM-73), formerly merchant fisherman *Notre Dame*, was launched in 1919 by the Bath Iron Works, Bath, Maine; acquired 16 September 1940; and commissioned 4 February 1941, Lt. Comdr. George W. Allen in command.

Following shakedown out of Yorktown and Newport, *Grackle* departed Portland, Maine, 25 September 1941 for service in Newfoundland as a unit of Minesweeper Division 25, Squadron 9 of the Atlantic Fleet. Upon reaching Argentia 2 October she conducted minesweeping patrols out that port until 15 January 1942, and following repairs at Boston, returned to her sweeping duties at Argentia until the spring of 1944.

Grackle put in at Boston 17 May and decommissioned there 25 August 1944. Stricken from the Navy List 16 September 1944, she was transferred to the Maritime Commission for disposal 9 September 1946.

II

(YMS-312: dp. 270; l. 136'; b. 24'6"; dr. 10'; s. 14 k.; cpl. 32; a. 1 40mm.; cl. YMS-136)

The second *Grackle* was launched 9 November 1943 by Henry B. Nevins, Inc., City Island, N.Y.; sponsored by Mrs. W. G. Kroepke; and commissioned as YMS-312, 6 December 1943, Lt. (j.g.) Ray G. Huling in command. She was redesignated *Grackle* (AMS-13) 18 February 1947.

YMS-312 put in at Key West 4 February 1944 after shakedown and following sound training there steamed to Curacao, arriving 17 February. Escort, minesweeping, and patrol duties in Caribbean waters occupied her until she got underway 1 September 1945 for San Pedro, Calif., and Hawaii.

Her duty in the Pacific terminated 9 April 1946 when YMS-312 steamed eastward through the Panama Canal for overhaul at Charleston, S.C. On 15 May the minesweeper arrived Norfolk for operations in the Chesapeake Bay until November 1947 when she shifted her base to Charleston. Operations out of this base included tours of service for the Naval Schools Mine Warfare at Yorktown, Va., and the U.S. Naval Mine Countermeasures Station at Panama City, Fla. Periodically *Grackle* engaged in minesweeping operations off Massachusetts near Martha's Vineyard, completing this duty 27 June 1951 when she reported to the Mine Warfare School at Yorktown for duty as a school ship.

On 1 March 1952 she sailed for the Caribbean to join the Mine Force in combined fleet maneuvers off Puerto Rico, Cuba, and the Virgin Islands, and returned to Yorktown near the end of March. Subsequent years were spent in alternate periods of operations that included school ship duties at Yorktown, amphibious exercises along the coast of North Carolina, and mine countermeasures operations along the Eastern seaboard.

Redesignated coastal minesweeper (MSC(O)-13) in February 1955, *Grackle* was placed in service in reserve 16 September 1957 and was stricken from the Navy List 1 March 1963. After conversion to coastal minehunter, she was transferred to the government of Brazil 19 April 1963 under terms of the Military Assistance Program. *Grackle* serves the Brazilian Navy as *Jurvena* (M-14).

III

The third *Grackle* (AM-396) was under construction at the Defoe Shipbuilding Co., Bay City, Mich., when her contract was terminated 12 August 1945.

Grady

George Francis Grady was born 28 April 1920 in New York City and enlisted in the Marine Corps 11 October 1938. Assigned to the 1st Marine Division, Private First Class Grady was killed in action on Gavutu, Solomon Islands, 7 August 1942. Although aware that his weapon was not functioning, Grady rushed three of the enemy who were firing on his squad, engaged them in hand-to-hand combat, and succeeded in overpowering two of them before he himself was killed. For his courage and self-sacrifice, Grady was posthumously awarded the Navy Cross.

(DE-445; dp. 1350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 2 dcp., 8 dep., 1 dcp. (h.h.); 3 21" tt.; cl. John C. Butler)

Grady (DE-445) was launched by Federal Shipbuilding & Dry Dock Co., Newark, N.J., 2 April 1944; sponsored by Miss Margaret Grady, sister of the namesake; and commissioned 11 September 1944, Lt. Comdr. Francis R. King in command.

Grady conducted her shakedown training at Bermuda 2 October-2 November. Returning to Boston, the ship sailed 17 November for Norfolk, Va., escorting transport *Chilton*, and from Norfolk continued through the Panama

Canal to San Diego, where she arrived 4 December. *Grady* sailed immediately via San Francisco for Pearl Harbor, where she arrived 15 December 1944. Until 23 December she operated with carrier *Saratoga* during flight qualifications, rescuing three downed aviators.

With the American offensive in the Pacific then entering its climactic phase, *Grady* departed 26 December 1944 for Eniwetok and Ulithi, arriving the latter base 10 January 1945. For the next month the ship acted as escort to a vital tanker group engaged in refueling units of the 3d Fleet at sea, units then engaged in air strikes against Formosa and the Chinese mainland. She then proceeded off Iwo Jima 10 February to screen escort carriers during the pre-invasion bombardment. During the assault 19 February *Grady* patrolled in an anti-submarine screen, and departed the area 2 March en route to Saipan.

Arriving at Saipan 5 March, *Grady* refueled and departed the next day for Espiritu Santo. Upon her arrival 19 March, the ship joined in preparations for the upcoming Okinawa invasion, last giant step on the long sea road to Japan. She got underway in convoy 25 March, and after stopping at Ulithi arrived off the invasion beaches 9 April. As the bloody fighting raged ashore, *Grady* and the other ships engaged in equally fierce radar and anti-submarine picket duty were savagely attacked by Japanese suicide planes. *Grady* and *Metcalf* downed one of the kamikazes 16 April while at station D-37 off Okinawa. The escort vessel escorted five fast transports to Saipan 5-16 May, and then returned to the picket stations off Okinawa, occasionally helping to provide anti-aircraft fire in the huge transport anchorages. *Grady* continued this arduous duty until 28 June, when she sailed for Leyte Gulf. Arriving 1 July in the Philippines, she was assigned as off-shore patrol vessel and remained in the islands until 5 November 1945, twice making convoy voyages to Okinawa.

Grady began the long voyage home 5 November, 2 months after the surrender of Japan. Cruising via Manila Bay and Pearl Harbor, she arrived at San Pedro, Calif., 26 November. Scheduled for deactivation, the ship was towed to San Diego and decommissioned 2 July 1946. Placed in the San Diego Group, Pacific Reserve Fleet, *Grady* remained inactive until 27 April 1947, when she was placed in an "In Service in Reserve" status. For the next 3 years the ship served as a Naval Reserve Training vessel under the 13th Naval District. Based at Bellingham, Wash., she cruised for 2 or 3 week periods training reservists. *Grady* was placed in an "In Commission In Reserve" status 1 August 1950, and recommissioned in the active fleet 21 November 1950. The ship was placed under the 12th Naval District at San Francisco, continuing her important role as training ship for reserve officers and men, and as school ship for Fleet Sonar School, San Diego, Calif. *Grady* decommissioned a second time 18 December 1957 and was placed in reserve at Stockton, California.

Grady received three battle stars for World War II Service.

Graf Waldersee

Original name retained. Named for General Alfred Graf von Waldersee, born in Germany in 1832. In 1881 he became chief assistant to the elder von Moltke to succeed him in 1888 as Chief of the General Staff. He commanded the foreign armies sent to Peking in 1900 to quell the Boxer Rebellion. General von Waldersee died in 1904.

(AP: dp. 25,000; l. 585'; b. 62'; dr. 32'3"; s. 13 k.; cpl. 553)

Graf Waldersee, a Hamburg-America liner built in 1896 to 1899 by Blohm & Voss, Hamburg, Germany, was taken over from Germany at the close of World War I; and commissioned at Spithead, England, 28 March 1919, Comdr. Lemuel M. Stevens in command.

Graf Waldersee was assigned to the Cruiser and Transport Division, NOTS. She arrived at Brest, France, 30 March, and embarked 1,526 passengers, mostly homeward-

bound veterans; departed 7 April and arrived New York 20 April 1919. In two subsequent voyages from New York to Brest (18 May-2 June and 7-30 August), she returned 4,108 additional civilians and troops to the United States. She decommissioned at Stapleton, N.Y. 25 November 1919 and returned to the USSB.

Graffias

Common name of the Star Beta Scorpii in the constellation Scorpio.

(AF-29: d. 7,770 t.; l. 468'11"; b. 63'; dr. 25'11"; sp. 16 k.; cpl. 319; a. 1 5", 4 3"; cl. *Hyades* T C-2-5-E1)

Graffias, ex-*Topa Topa*, was built in 1943 by the Gulf Shipbuilding Corp., Chickasaw, Ala.; acquired by the Navy 19 February 1944; converted by the Bethlehem Steel Co., Baltimore, Md.; and commissioned at Baltimore 28 October 1944, Lt. Comdr. B. P. Caraher in command.

After a brief shakedown along the East Coast, *Graffias* sailed for the Pacific 25 November as a unit of ServRon Ten. Reaching Ulithi 31 December, she discharged her valuable cargo of provisions and returned to San Francisco a month later. Laden with foodstuffs and provisions for the staging areas and the front, *Graffias* made two more San Francisco-Ulithi voyages through May 1945.

The refrigerator-cargo ship returned to Pearl Harbor 31 May and from there sailed again to Ulithi with provisions, returning to Hawaii 14 July. After repairs at Pearl Harbor, *Graffias* sailed to Adak, Alaska, reaching port 18 August. With the Japanese capitulation, she began a new task—bringing desperately needed provisions to the starving island and to American occupation forces. *Graffias* reached Ominato, Honshu, 9 September, and after replenishing American bases at Wakayama, Nagasaki, and Sasebo, sailed for the States with home and discharge-bound passengers. Putting in at Seattle 26 October, she disembarked her passengers and checked into Bremerton Navy Yard for overhaul.

By January 1946 *Graffias* was well embarked on the routine which she was to follow until the Korean War, replenishing scattered American bases across the Pacific. Taking on cargo at Seattle or San Francisco, she would discharge provisions at such far-flung points as Wake, Eniwetok, Kwajalein, Bikini, Okinawa, the Philippines, Guam, Saipan, Formosa, Shanghai, Hong Kong, and Yokosuka. These Pacific replenishment cruises, whose duration was 2½ months on the average, were supplemented by periodic overhauls and participation in various fleet exercises.

When war broke out in Korea in June 1950, *Graffias* sailed to Sasebo, Japan, her new home port, to begin the vital task of provisioning United States and United Nations ships and troops. For three hectic years she shuttled between Sasebo and various at-sea replenishment areas to effect cargo transfer, as well as making frequent stops along the Korean coast.

As the conflict ended with an uneasy armistice in August 1953, *Graffias* remained on duty with the 7th Fleet to continue her essential but unheralded task of replenishing ships and troops. Replenishment cruises took her across the ocean to Hong Kong and Formosa as well as Okinawa and the Philippines. During the intensification of the Quemoy-Matsu situation in the summer of 1955, and thereafter, *Graffias* made frequent stops at Formosa to provision American and Chinese Nationalist forces as well as a beefed-up 7th Fleet.

In the decade that followed, *Graffias* operated almost continuously out of Sasebo supplying American naval ships in Far Eastern ports especially, in the Philippines, Formosa, Hong Kong and Vietnam. She departed Sasebo 26 February 1964 for her new home port San Francisco.

Following a thorough overhaul, she headed westward again 27 June and reached Yokosuka 13 July. On the last day of July, she sailed for Subic Bay, P.I. When North Vietnamese motor torpedo boats attacked U.S. destroyers

Maddox (DD-731) and *Turner Joy* (DD-951) in the Gulf of Tonkin 4 August, *Graffias* was ordered to the area to provide logistic support. A week after the attack she replenished the two destroyers and subsequently supplied many other ships of the 7th Fleet. After setting a replenishment record during the deployment by transferring supplies at an average rate of 168.9 short tons per hour, *Graffias* steamed home via Hong Kong, Yokosuka and Pearl Harbor, arriving San Francisco 12 October.

Following two deployments to the Far East in 1965, supporting the Allied struggle in Vietnam, *Graffias* operated along the Pacific Coast in 1966 until sailing for Oriental waters 10 December. On the last day of 1966 she departed Yokosuka to resume underway replenishment operations supplying ships of the 7th Fleet fighting off Vietnam in 1967.

A unit of ServRon 7, she remains today in the Pacific performing this supply and replenishment duty so necessary to the Navy.

Grafton

A county in New Hampshire.

I

(APA-109: dp. 8576 light; l. 492'; b. 69'6"; dr. 26'6"; cpl. 553; s. 17 k.; a. 2 5"; cl. *Bayfield*)

The first *Grafton* (APA-109), formerly *Sea Sparrow*, was launched under Maritime Commission contract by Western Pipe & Steel Co., San Francisco, Calif., 10 August 1944; sponsored by Mrs. S. Belither; and commissioned and acquired simultaneously 5 January 1945, Captain C. D. Emory in command.

After a 10-day period loading supplies and landing craft at Oakland, Calif., *Grafton* conducted her shakedown training off San Pedro. Subsequently, the ship underwent amphibious training 3-19 February before sailing for the great Pacific assaults to come. She departed 10 April with 1,000 Seabees and arrived Pearl Harbor 6 days later. Loading another group of Seabees at Pearl Harbor, *Grafton* sailed 27 April for Samar, Philippine Islands, via Eniwetok and Kossol Roads, and unloaded her Seabees on that busy island 17 May 1945.

Victory was then in sight on battle-scarred Okinawa, and *Grafton* departed Samar 23 May to pick up a B-24 bomber service group in the Palaus. The group was delivered at Okinawa 24 June as the transport anchored off the Hagushi beaches. During the next 4 nights *Grafton* experienced heavy air attacks, assisting the defense of the assault fleet with her anti-aircraft battery. She loaded 1000 Japanese POW's 28 June and sailed for Saipan and Pearl Harbor, where she arrived 13 July and unloaded her prisoners. Three days later *Grafton* was on her way back to San Francisco with wounded, arriving there 22 July 1945.

After a short stay in the United States, *Grafton* got underway 7 August for Pearl Harbor. She arrived 6 days later with fresh troops for the Pacific fighting, then drawing to its close. With the surrender of Japan the transport embarked 5th Marine Division occupation forces and sailed for Japan 1 September 1945. She arrived off Sasebo 22 September after a stop at Saipan and unloaded both the Marines and their equipment. She then sailed for Lingayen Gulf, via Manila, to embark additional occupation troops. Arriving 3 October, the ship loaded troops and steamed toward Japan, passing Okinawa only two days after the great typhoon had devastated the island. She arrived Sasebo 15 October and disembarked her troops.

Grafton was assigned 22 October to the "Magic Carpet" fleet, and departed for Saipan to begin the gigantic task of returning the thousands of veterans to the United States. Arriving 27 October, she loaded 1,700 troops and sailed for San Francisco, arriving 11 November. Subsequently, the ship made two more voyages, both to Guam, and arrived Seattle with her final load of veterans 11 February 1946.

Designated for return to the Maritime Commission,

Grafton sailed for Norfolk, via San Francisco and the Panama Canal, arriving in Hampton Roads 21 March 1946. Decommissioned 16 May, she was returned the next day and subsequently sold to American Mail Lines in 1947, where she serves as *Java Mail*.

II

(PCS-1431: dp. 251; l. 136'; b. 25'; dr. 9'; s. 14 k.; epl. 59; a. 1 40mm., 2 20mm., 2 rkt., 2 dep., 2 dct.; cl. PCS-1413)

The second *Grafton* was laid down as PCS-1431 by Gibbs Gas Engine Corp., Jacksonville, Fla.; 12 May 1943; launched 2 November; sponsored by Mrs. John R. Thompson; and commissioned 24 March 1944, Lt. George J. Meyer in command.

After shakedown off the coast of Florida PCS-1431 was assigned to the Fleet Sonar School, Key West, Fla., where she assisted future submariners in learning the skills of offensive and defensive undersea warfare. She remained off Key West throughout the war years, and continued similar services out of Florida from 1946 to 1955.

During May 1955, PCS-1431 was designated a Naval Reserve training ship. She decommissioned 13 July 1955, and for the next 10 years she performed reserve operations along the Ohio River, including Wheeling, W. Va., and Louisville, Ky. PCS-1431 was named *Grafton* 15 February 1956. She was struck from the Navy List 1 July 1965, and was sold in April 1966.

Graham

Secretary of the Navy William A. Graham was born in 1804 and died 1875. Graduating from University of North Carolina 1824, he was admitted to the bar 1826. From 1833 he repeatedly was elected to House of Commons, of which he was speaker 1839-40. From 1840-43 he was in the U.S. Senate, and 1844 and 1846, elected Whig governor of North Carolina, declining a third term. From 1850-52, he was Secretary of the Navy, when he organized Perry's Expedition to Japan, during the administration of President Fillmore.

(DD-192: dp. 1,215; l. 310'0"; b. 30'11½"; dr. 9'4"; s. 35 k.; epl. 122; a. 4 4"; 1 3" AA; 12 21" tt.)

Graham (DD-192), Torpedo Boat Destroyer, was launched 22 March 1919 by the Newport News Shipbuilding & Drydock Co., Newport News, Va., sponsored by Mrs. Robert F. Smallwood, granddaughter of Secretary of Navy William A. Graham; and commissioned at Norfolk, Va., Navy Yard, 13 March 1920, Lt. Comdr. Paulus P. Powell in command.

Assigned to the Atlantic Fleet, after several trial runs on East Coast, *Graham* was at first given the special duty, together with two other U.S. Destroyers, of a moving picture boat carrying the moving picture photographers, in connection with the International Cup Race, under the auspices of the New York Yacht Club, beginning 15 July 1920 and on alternate days thereafter until 27 July, when the Race was completed.

Graham then joined the Atlantic Torpedo Fleet at Newport, R.I., for exercises and training along the east coast, and for neutrality patrol and exercises off Guantanamo Bay and in Canal Zone. In 1921, she participated in combined division, squadron and fleet maneuvers off South America, visiting Callao, Peru, and Balboa, C.Z., before returning to Hampton Roads, where she took part in the Presidential Fleet Review at Norfolk, Va., in April 1921. She also participated in the historic bombing tests on former German ships off the Virginia coast that summer. 27 October, in company with the 20th Division, she escorted S.S. *Paris*, on which General Foch was a passenger, to New York, and conveyed that up Ambrose Channel, N.Y. Then she commenced anti-aircraft practice. On 12 November 1921 she had a change of status from operative commission to reduced complement. She was en route to New York from Charleston, S.C., when on 16 December she

collided with SS *Panama* off the New Jersey coast and had to return to New York.

Graham decommissioned at New York Navy Yard 31 March 1922, and was sold for scrapping, 19 September 1922.

Graham County

Counties in Arizona, Kansas, and North Carolina.

(LST-1176: dp. 3,560 (lt); l. 445'; b. 62'; dr. 16'8"; s. 17 k.; epl. 172; a. 4 3"; cl. *Suffolk County*)

Graham County (LST-1176) was laid down by Newport News shipbuilding & Drydock Co., Newport News, Va., 4 February 1957; launched 9 September; sponsored by Mrs. Ralph Otis Davis; and commissioned 17 April 1958, Lt. Comdr. Gordon H. McCreia in command.

After shakedown *Graham County* continued tests and repairs throughout 1958. Assigned to the Atlantic amphibious force, the LST engaged in training exercises along the Atlantic coast until late November 1960 when she embarked a detachment of marines and sailed for her first extended deployment. Touching ports in the Caribbean and Brazil, she sailed on to Africa, arriving Monrovia, Liberia, 5 January 1961. She stopped at other ports in Africa including the Congo, where she embarked 500 Guinean troops of the U.N. peacekeeping force for transport to their country. *Graham County* returned to Little Creek, Va., 17 May.

Following the assassination of Dominican Republic President Trujillo in early June, the LST, together with units of the fleet, steamed toward the Caribbean ready to assist if needed. Returning in early July, she resumed training operations for the next 2 years.

On 10 January 1964, *Graham County* with 170 marines on board departed Little Creek for amphibious exercises in the Mediterranean. Training was postponed, however, when the Cyprus crisis erupted; and *Graham County*, along with other units of Amphibious Squadron 4, rushed to the scene prepared for any mission. After 78 consecutive days in the area, she resumed her training exercises with the fleet. Returning home 21 June, *Graham County* resumed amphibious operations in the Atlantic and Caribbean for the rest of the year.

Grainger

A county in Tennessee.

(AK-184: dp. 7,125; l. 338'6"; b. 50'; dr. 21'1"; s. 11.5 k.; epl. 85; a. 1 3" 50 cal.; cl. *Alamosa*)

Grainger, ex-M.C. Hull 2115, was launched under Maritime Commission contract 7 May 1944 by the Walter Butler Shipbuilding Co., Inc., Superior, Wis.; sponsored by Mrs. Carl Bong; and commissioned 26 January 1945, Lt. Henry J. Johnson in command.

After shakedown training out of Westwego, La., and Galveston, Tex., *Grainger* was assigned to the Naval Training Center, Miami, Fla., for duty as a school ship. She trained personnel in cargo handling and ship operation and maintenance until 14 September when she departed New Orleans and proceeded by way of the Canal Zone to arrive at San Pedro, Calif., 12 October. Departing San Francisco 31 October *Grainger* sailed for Saipan, Tinian, Guam, and Seeadler Harbor, Manus Island. Having discharged all her cargo she left Manus Island 17 February 1946 and after touching at Pearl Harbor reached San Francisco 13 May. Ten days later *Grainger* proceeded to Seattle, Wash., and arrived there 26 May and began her inactivation overhaul. She was decommissioned there 25 July 1946 and returned to the Maritime Commission the next day. Her name was stricken from the Navy List 15 August 1946.

Grainger was taken into the Navy again 9 May 1947 and commissioned 12 June 1947 at the Puget Sound Naval Shipyard, Bremerton, Wash.; Lt. Comdr. Ralph E. Deckwa, USN, in command, and her name reinstated on

the Navy List 23 June. Departing Bremerton she reached San Diego 18 July then sailed for Port Hueneme, Calif.

Departing Port Hueneme 21 August 1947 *Grainger* touched at Pearl Harbor before she arrived at Guam 19 October to take up duty there. *Grainger* supplied the islands of the Marianas and the Eastern Carolines, with occasional trips to the Palau Islands until 9 April 1949 when she arrived Pearl Harbor. After overhaul *Grainger* cleared Pearl Harbor 13 July and touched at San Francisco before reaching Seattle 16 August. Departing Seattle 28 August she carried out cargo operations at Kodiak and Adak, Alaska, before returning to Seattle 2 October 1949.

Grainger cleared Seattle a week later to take up her duty at Guam again, arriving there 20 December. She carried out her operations for the next 6 months supplying the Marshalls and the Marianas.

With the outbreak of hostilities in Korea and shortage of ammunition ships in the Far East *Grainger* loaded with aircraft ammunition and cleared Guam 14 July 1950. She was to rendezvous with Admiral Struble's Task Force 77 on the 23d and rearm the carrier *Valley Forge*, but due to weather conditions had to complete her mission in Sasebo, Japan, the next day. Here *Grainger* was assigned to the Logistics Support Group (Captain B. L. Austin) for the 7th Fleet as a replenishing ammunition ship. She continued this important job until 15 September when she got underway for the objective area in support of the landings at Inchon, one of the most successful amphibious operations in history. *Grainger* participated in the landings 16 September and after landing her cargo remained in Inchon Harbor until 7 October, when she retired to Sasebo.

Departing Sasebo 21 October 1950 *Grainger* returned to Guam on the 28th and resumed her task of logistic support to the Marianas and the Carolines. Departing Kwajalein 2 March 1951 *Grainger* sailed for Pearl Harbor arriving 13 March. Here she took up duty contributing logistic support to Midway Island and Kwajalein atoll until 18 June 1953. The ship then cleared Pearl Harbor to take up duty in Sasebo, where she arrived 12 July. With the exception of a voyage to Inchon, Korea, with refrigerated and dry stores for occupation troops (6-13 October) *Grainger* steamed between Sasebo and Yokosuka until 19 March 1954, returning to Pearl Harbor 2 April to take up her familiar runs to Kwajalein and Midway. 5 March 1955 found *Grainger* again rotating to Sasebo where she arrived 29 March. Her visits included Buckner Bay, Okinawa; Subic Bay, P.I.; Kaohsiung, Formosa; and Hong Kong.

Grainger departed Yokosuka 11 September and going by way of Pearl Harbor reached Long Beach, California

20 October 1955; 2 days later she shifted to San Diego to undergo inactivation overhaul. *Grainger* decommissioned there 7 February 1956 and was turned over to the San Diego Group, Pacific Reserve Fleet. *Grainger* remained out of commission in reserve there until she was disposed of and her name stricken from the Navy List 1 April 1960.

Grainger received two battle stars for Korean service.

Grampus

A species of dolphin.

I

(Sch: dp. 171½; l. 97'; b. 23'6"; dph. 9'6"; cpl. 64; a. 12 guns)

The first *Grampus*, a schooner built at Washington Navy Yard under the supervision of naval constructor William Doughty on a design by Henry Eckford was laid down in 1820 on a 73-foot keel; and launched in early August 1821. The necessity of suppressing piracy and of maintaining ships to catch slavers led to the building of five such schooners, largest of which was *Grampus*. This was the first building program undertaken by the Navy since the War of 1812.

Lt. F. H. Gregory commanded *Grampus* on her first cruise, which took her to the West Indies in pursuit of pirates. In the company of *Hornet*, *Enterprise*, *Spark*, *Porpoise*, and *Shark*, *Grampus* engaged in convoying merchant vessels throughout 1821, the presence of the squadron having a marked effect on piratical activity among the islands.

On 16 August 1822, *Grampus* gave chase to a brig flying Spanish colors, but which Lt. Gregory suspected was a pirate. When he called upon her commander to surrender, he was met with cannon and small arms fire. To this rebutt, *Grampus* answered in turn, and reduced the bogus Spaniard to a floating wreck in 3½ minutes. The brig struck her colors and Lt. Gregory discovered that she was *Palmyra*, a Puerto Rico-based pirate carrying the papers of a privateer as a subterfuge.

Grampus continued her duties in the protection of shipping in the Caribbean Sea and in the South Atlantic Ocean until August 1841, when she was detached from the African Squadron while lying at Boston Navy Yard. Attached to the Home Squadron at Norfolk, Va., 23 January 1843, *Grampus* was lost at sea in March, presumably after having foundered in a gale off Charleston, S.C.

II

(SwStr: t. 230; l. 180' b. 27'; dph. 5')

Rear Admiral D. D. Porter purchased *Grampus*, formerly *Ion*, for the U.S. Navy on 22 July 1863 at Cincinnati, Ohio, for \$9,750.00. She was utilized as a receiving ship in the Mississippi Squadron, and stationed at Cincinnati, Ohio. By 14 November 1863, Acting Master Elijah Sells in command, she was recognized as a "nice little receiving vessel in first-rate order," but contained no furnishings or weapons other than 10 cutlasses and revolvers.

Acting Ens. C. W. Litherbury in command, *Grampus* at Cincinnati, Ohio, assisted in stripping of certain ships for conversion to gunboats, and effected their delivery to fleet staging points for the Mississippi Squadron, principally Cairo and Mound City, Ill. *Grampus* was sold to D. D. Holliday & Bros on 1 September 1868 at Mound City, Ill.

III

The third *Grampus* (SS-4), commissioned 9 June 1908 and was renamed A-3 (q.v.) 17 November 1911.

IV

(SP-1708: l. 126')

The fourth *Grampus*, originally *Boothbay*, was built by Neafie and Levy, Philadelphia; purchased from the Eastern Steamship Line of Boston; and commissioned 14 December 1917 at the Boston Navy Yard. Her name was changed to *Grampus* November 1920. Assigned to ferry service between the Washington Navy Yard, Indian Head, Md., and Dahlgren, Va., *Grampus* decommissioned 11 December 1930. Her name was struck from the Navy List on 30 December 1930 and she was later sold to the Buxton Line of Norfolk, Va.

V

(SS-207: dp. 1,475 t.; l. 307'2"; b. 27'3"; dr. 13'3"; s. 20 k.; a. 10 tt., 1 3"; cpl. 59; cl. *Tambor*)

The fifth *Grampus* (SS-207), built by the Electric Boat Co. of Groton, Conn., was launched 23 December 1940;

sponsored by Mrs. Clark H. Woodward; and commissioned 23 May 1941 at New London, Lt. Comdr. Edward S. Hutchinson in command.

After shakedown in Long Island Sound, *Grampus* sailed to the Caribbean with *Grayback* on 8 September to conduct a modified war patrol, returning to New London 28 September. The Japanese attack on Pearl Harbor found *Grampus* undergoing post-shakedown overhaul at Portsmouth, N.H., but soon ready for war on 22 December, she sailed for the Pacific, reaching Pearl Harbor on 1 February 1942 via the Panama Canal and Mare Island.

On her first war patrol (8 February-4 April 1942) *Grampus* sank an 8,636-ton tanker, the only kill of her short career, and reconnoitered Kwajalein and Wotje atolls, later the scene of bloody but successful landings. *Grampus*'s second and third patrols were marred by a heavy number of antisubmarine patrol craft off Truk and poor visibility as heavy rains haunted her path along the Luzon and Mindoro coasts. Both patrols terminated at Fremantle, Australia.

Taking aboard four coast watchers, the courageous men who were stationed on Japanese-held islands to radio back vital information on shipping, military buildup, and weather, *Grampus* sailed on 2 October 1942 for her fourth war patrol. Despite the presence of Japanese destroyers, she landed the coast watchers on Vella Lavella and Choiseul Islands while conducting her patrol. This patrol, during the height of the Guadalcanal campaign, took *Grampus* into waters teeming with Japanese men-of-war. She sighted a total of four enemy cruisers and 79 destroyers in five different convoys. Although she conducted a series of aggressive attacks on the Japanese ships, receiving 104 depth charges for her work, *Grampus* was not credited with sinking any ships. She returned to Australia 23 November.

Grampus' fifth war patrol (14 December 1942-19 January 1943) took her across access lanes frequented by Japanese submarines and other ships. Air and water patrol of this area was extremely heavy and although she conducted several daring attacks on the 41 contacts she sighted, *Grampus* again was denied a kill.

In company with *Grayback*, *Grampus* departed Brisbane on 11 February 1943 for her sixth war patrol from

USS *Grampus* (SS-4), renamed A-3 on 17 November 1911

which she failed to return; the manner of her loss still remains a mystery today. Japanese seaplanes reported sinking a submarine on 18 February in *Grampus*' patrol area, but *Grayback* reported seeing *Grampus* in that same area on 4 March. On 5 March two Japanese destroyers, themselves lost 2 days later, conducted an attack in Blakett Strait, where a heavy oil slick was sighted the following day, indicating *Grampus* may have been lost there in a night attack or gun battle against the DD's. When repeated attempts failed to contact *Grampus*, the valiant submarine was reluctantly declared missing and presumed lost with all hands. Her name was struck from the Navy list on 21 June 1943.

Grampus received three battle stars for World War II service. Her first, fourth, and fifth war patrols were designated successful.

VI

(SS-523: dp. 1,570; l. 311'8"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 76; a. 1021" tt.; cl. *Tench*)

Built at the Naval Shipyard, Boston, *Grampus* (SS-523) was begun in 1944 but left uncompleted at the end of the war. Construction was resumed in 1948, and *Grampus* launched 26 October 1949, Mrs. Clark H. Woodward, who also sponsored the previous *Grampus*, sponsor. She commissioned the same day, Comdr. George F. Sharp in command.

With her new snorkeling equipment, which permitted her to remain submerged for periods far longer than the World War II fleet class ships, *Grampus* served as a prototype for the "Guppy" class submarines and also incorporated many features to appear later in nuclear submarines. Attached to SubDiv 61 at Norfolk, she has participated in a variety of exercises along the East Coast and in the Caribbean, including torpedo and attack exercises, snorkeling tests and demonstrations, and antisubmarine training. *Grampus* also did a great deal of work with the early HUK (Hunter-Killer) antisubmarine patrols, now a vital part of American defenses, to whose development she greatly contributed.

From 5 January to 2 April 1955 *Grampus* proceeded independently to the Mediterranean, where she "showed the flag" at Algiers, Naples, Barcelona, Malta, Beirut, Monaco, and Gibraltar before returning to Norfolk and her routine of exercises and tests, spaced with regular overhauls at Portsmouth and Philadelphia. During the late 1950's and early 1960's *Grampus* operated out of Norfolk in the North Atlantic.

Under the command of Lt. Comdr. D. A. Kilmer, *Grampus* sailed with Task Force "Alfa" for 6 weeks prior to 13 February 1964. On 3 April, she deployed with the 6th Fleet in the Mediterranean Sea until 3 August.

She operated out of the Virginia Capes until entering Philadelphia Naval Shipyard in mid-April 1965 for overhaul. After refresher training and shakedown in the fall, *Grampus* operated along the East Coast engaging primarily in ASW exercises.

She departed Norfolk 13 May 1966 for the eastern Atlantic and Northern European countries to participate in NATO ASW exercises. Back in Norfolk 30 August, she resumed operations in the Virginia Capes area and Caribbean until sailing 29 December to Philadelphia for repairs in the naval shipyard. Shipshape again, she resumed operations with the Atlantic Fleet.

Grand Canyon

A western landmark, the grand canyon of the Colorado River.

(AD-28: dp. 11,755; l. 492'; b. 69'6"; dr. 27'6"; s. 18 k.; cpl. 977; a. 2 5", 8 40mm., 12.20mm.; cl. *Shenandoah*)

Grand Canyon (AD-28) was launched 27 April 1945 by Todd-Pacific Shipyard, Inc., Tacoma, Wash.; sponsored by Mrs. W. L. Mann; and commissioned 5 April 1946. Captain W. D. Hoover in command.

After brief shakedown off the coast of southern California *Grand Canyon* departed Port Townsend, Wash., 26 June 1946 en route Newport, R.I., via the Canal Zone. She arrived Newport 20 July. Assigned the task of keeping our destroyers in operation, *Grand Canyon* cleared Newport 17 September 1946 for her first tour with the 6th Fleet in the Mediterranean. After a visit to Palermo, Sicily, and a 4½-month stay at Naples she returned to the States, arriving Norfolk 1 March 1947.

Between 1 November 1947 and 12 November 1954 *Grand Canyon* continued her support of 6th Fleet destroyers, making six Mediterranean deployments. During this time she participated in some of the largest peacetime service operations ever undertaken.

Grand Canyon continued her tender duties in the U.S. until 24 September 1956 when she again departed for the Mediterranean for her eighth tour. By 20 October the Suez Crisis had reached the serious stage and the majority of the 6th Fleet proceeded into the Eastern Mediterranean. During this period *Grand Canyon*, as flagship, took part in fleet exercises and visited the ports of August Bay, Sicily; Messina, Sicily and Taranto, Italy. As the Suez problem subsided she sailed for Cannes, France, 20 December, in time for the Christmas holidays. *Grand Canyon* returned to Fall River, Mass., 13 March 1957.

The third of September 1957 found *Grand Canyon* underway with other units of the Atlantic Fleet, this time to participate in NATO fall exercises. By the 16th she had crossed the Arctic Circle operating west of Norway. After visits to Tromsø, Norway and Portland, England, *Grand Canyon* returned Newport, R.I. 21 October.

Grand Canyon continued her tender duties out of Fall River, Mass., until 1 August 1958 when she sailed for Suda Bay, Crete, to support the 6th Fleet in operations off Lebanon. For the next 4 months she supported destroyers and other types while helping to stabilize the situation and block aggression in Asia Minor. Besides Suda Bay, *Grand Canyon* visited Izmir, Turkey; Athens, Greece; Naples, Italy; and Barcelona, Spain, before returning home in December.

Grand Canyon spent most of 1959 with tender duties at Newport except for duty at Charleston, S.C., between 29 August 1959 and 11 January 1960. She cleared Charleston 11 January 1960 to participate in Operation "Springboard," returning to Newport 7 February; thence to Bermuda and New York before returning to Newport. Between October 1960 and August 1961 *Grand Canyon* tended ships at Newport, Boston, and Norfolk.

After her ninth Mediterranean tour August 1961 to March 1962 *Grand Canyon* returned to Newport and again took up her duties there until the fall. She proceeded to San Juan, P.R., arriving 3 November 1961 to start tending ships of the South Atlantic Blockading Fleet during the Cuban missile crisis and subsequent quarantine. *Grand Canyon* again helped demonstrate the mobility and versatility of sea power. She returned to Newport 5 December.

Grand Canyon made her tenth deployment to the Mediterranean between 6 February and 27 June 1963. The ship entered Bethlehem Steel Yards, East Boston, Mass., for modernization and refitting. With the completion of modernization 3 January 1964, *Grand Canyon* sailed for Guantanamo Bay and San Juan, P.R., on training cruises. Returning to Mayport, Fla., 11 May, she tended destroyers there until her departure for Newport, R.I., 20 June for similar duties at that station.

On 27 November, *Grand Canyon*, departed Newport for her 11th Mediterranean cruise, relieving *Shenandoah* (AD-26) as 6th Fleet tender. She reached Palma, Mallorca, 11 December and until 16 April 1965 tended ships in French, Italian, and Spanish ports. After returning to Newport 27 April, she served there and at Norfolk, Va., during the next 11 months. Between 29 March 1966 and 12 August she again served ships of the 6th Fleet in the Mediterranean. During the remainder of the year she operated out of Newport. Into 1967 *Grand Canyon* continued to provide tender and repair facilities for destroy-

er-type ships of the Atlantic Fleet and the mighty 6th Fleet.

Grand Forks

A city in North Dakota.

(PF-11: dp. 1,246; l. 304'; b. 38'; dr. 12'; s. 20 k.; cpl. 141 a. 3 3'' 2 40mm.; cl. *Tacoma*)

Grand Forks was launched by Kaiser Co., Richmond, Calif.; 27 November 1943, Mrs. T. H. Thoreson sponsor. She commissioned 18 March 1944, Lt. Comdr. Christian W. Peterson, USCG, in command.

After shakedown, 7 August 1944 *Grand Forks* sailed from San Francisco to take station in the Northern Pacific off the California coast as a plane guard ship, returning to San Francisco 3 September. She continued on this duty until decommissioning, spending an average of 3 weeks at sea and 2 in port. Late in the night 11 October 1944 *Grand Forks* picked up a distress call from a PB2Y about to make an emergency landing. Sending up flares and star shells to guide the plane through the dark, *Grand Forks* rescued 15 crewmen and passengers from the sea, as well as 114 sacks of mail.

While in port from guard duty on 31 May 1945, *Grand Forks* was toured by several members of the American delegation to the San Francisco Peace Conference, including Secretary of State and Mrs. Edward Stettinius, Nelson Rockefeller, and Alger Hiss.

She continued on plane guard duty until 19 March 1946 and then sailed from San Francisco to Charleston, S.C., where she decommissioned 16 May 1946. *Grand Forks* was stricken from the Navy Register 19 June 1946; sold to J. C. Berkwit & Co. of New York 19 May 1947, and scrapped 1 November 1947.

Grand Gulf

A Confederate stronghold on the Mississippi below Vicksburg, Va.

(ScStr: t. 1200; l. 210'4''; b. 34'6''; dph. 20'6''; s. 11.5 k.; a. 1 100-pdr., 2 30-pdrs., 3 8''.)

Grand Gulf was purchased in New York as *Onward* 14 September 1863 from her builders, Cornelius and Richard Poillon; and commissioned 28 September 1863, Comdr. George Ransom in command.

Grand Gulf stood to sea from New York on 11 October and 9 days later joined the North Atlantic Blockading Squadron off Wilmington, N.C. Her two exits to the sea at Beaufort and the Cape Fear River made Wilmington one of the most important and most difficult to blockade of all Confederate ports. She remained on blockade duty there, with intervals for repair at the New York and Norfolk Navy Yards, until 4 October 1864.

On 21 November 1863, assisted by Army Transport *Fulton*, *Grand Gulf* took blockade runner *Banshee* with a general cargo of contraband from Nassau. Off the Carolina coast, *Grand Gulf*, 6 March 1864, captured the British steamer *Mary Ann* trying to run the blockade with a cargo of cotton and tobacco; seizing the cargo and 82 passengers and crew members, *Grand Gulf* put a prize crew on the steamer and sent her to Boston. A second British ship, *Young Republic*, fell captive to *Grand Gulf* after a wild chase 6 May 1864, with both ships steaming at full speed and the blockade runner throwing overboard bale after bale of precious cotton and even the anchor chain in a futile attempt to lighten ship. *Grand Gulf* garnered some 253 bales of cotton as well as 54 prisoners from this prize. Two weeks later, Rear Admiral S. P. Lee wrote Ransom congratulating him on taking the prize; "Every capture made by blockaders deprives the enemy of so much of the 'sinews of war,' and is equal to the taking of two supply trains from the rebel Army."

Returning to New York 4 August 1864, she was ordered out in search of the Confederate raider *Tallahassee*, reported in Long Island Sound. However, 17 August she gave over the search to tow into port demasted brig *Billow*, and claim her as a prize. *Billow* had been captured by *Tallahassee*; scuttled but did not sink. *Grand Gulf* left New York 23 September to convoy California steamer *Ocean Queen* to Aspinwall (now Colon), Panama, arriving

USS *Soley* (DD-707) alongside USS *Grand Canyon* (AD-28) at Augusta, Sicily, 16 December 1950

there 3 October and returning to New York 16 October. From 24 October to 16 November she and *Ocean Queen* repeated the voyage. One day from New York on the outward passage, *Grand Gulf*, herself leaking badly, took into tow sinking British bark *Lindcn*. She then put into New York Navy Yard for extensive repairs.

With the ironclad *Casco* in tow, *Grand Gulf* put to sea 8 March 1865; arriving at Hampton Roads 12 March, she left *Casco* there and 17 March sailed to join the West Gulf Blockading Fleet off Galveston. She reached Galveston 4 April and remained on blockade duty until 25 June, when she steamed up the Mississippi to New Orleans. There she served as a prison ship and site for courts martial until 18 October, when she cleared New Orleans for New York.

Arriving in New York 2 November, *Grand Gulf* decommissioned 10 November and was sold 30 November to C. Comstock & Co. She was later resold to William F. Feld & Co. of Boston; renamed *General Grant*; and put in service in their Merchants of Boston SS. Co. operating between Boston and New Orleans. She burned and sank at a wharf in New Orleans 19 April 1869.

Grand Island

A city in Nebraska.

(PF-14: dp. 1,430; l. 304'; b. 38'; dr. 12'; s. 20 k.; a. 3 3'', 240mm.; cl. *Tacoma*)

Grand Island, a patrol frigate, was originally PG-122 and launched by Kaiser Cargo, Inc., Richmond, Calif., 19 February 1944; as PF-14; sponsored by Mrs. William Shackleton; and commissioned 27 May 1944, Lt. Comdr. H. L. Morgan in command.

After completing her shakedown cruise off the coast of southern California, *Grand Island* reported for duty with the 12th Naval District 12 September 1944. She subsequently performed weather station and plane guard duty out of San Francisco and participated in several training exercises with patrol forces on the West Coast. She also was engaged from time to time in antisubmarine escort duty. *Grand Island* departed San Francisco 26 March 1946, arrived Charleston, S.C., 13 April 1946 via the Canal Zone, and was turned over to the 6th Naval District for disposal. She decommissioned 21 May 1946 and was stricken from the Navy Register 19 June. Declared not essential to the defense of the United States, the frigate was turned over to the State Department Foreign Liquidation Corporation and finally transferred to Cuba 16 June 1947, where she serves as *Maximo Gomez*.

Grand Rapids

A city in Michigan.

(PF-31: dp. 1,430; l. 303'11''; b. 37'6''; dr. 13'8''; s. 20 k.; cpl. 190; a. 3 3'', 240mm.; cl. *Tacoma*)

Grand Rapids (PF-31), formerly designated PG-139, was launched by Walter Butler Shipbuilders, Inc., Superior, Wis., 10 September 1943; sponsored by Mrs. Ted Booth; and commissioned 10 October 1944, Lt. Comdr. T. F. Knoll, USCG, in command. The ship had been taken down the Mississippi River and outfitted at Plaquemine, La., before being commissioned at New Orleans.

Outfitted as a weather ship, *Grand Rapids* sailed 17 October for Bermuda and her shakedown cruise, but was damaged at sea by a hurricane and returned to Algiers, La. for repairs. She proceeded toward Bermuda again 27 October, and after her shakedown training put in at Boston, 4 December 1944. *Grand Rapids* steamed out of Boston 6 January 1945 for duty as a weather picket ship off Newfoundland.

Grand Rapids operated as a weather ship out of Argentina until returning to Boston 6 June 1945. The ship soon sailed for her station 7 July, and continued sending vital weather reports for the north Atlantic area until finally

returning to Boston 15 January 1946. *Grand Rapids* decommissioned at Boston 10 April 1946, was sold to Sun Shipbuilding & Dry Dock Co., Chester, Pa., 14 April 1947, and subsequently scrapped.

Grand River

Rivers in Louisiana, Michigan, Iowa, Missouri, South Dakota; formerly the name of the Colorado River from its source to its junction with the Green River in southeastern Utah.

(LSMR-505: dp. 790; l. 206'3''; b. 34'6''; dr. 7'2''; s. 13 k.; cpl. 138; a. 1 15'', 440mm., 8 20mm., 4 4.2'' m., 10 rkt.; cl. *LSMR-401*)

Grand River (LSMR-505) was laid down as *LSMR-505* on 31 March 1945 by Brown Shipbuilding Co., Inc., Houston, Tex.; launched 28 April 1945; and commissioned 14 June 1945, Lt. Hall B. Wessinger in command.

After shakedown along the East Coast, *LSMR-505* departed Portsmouth, Va., 7 August for duty in the Pacific. As World War II came to an end, *LSMR-505* was assigned to Squadron 3 operating along the West Coast. Based at San Diego, she engaged in training exercises off California until March 1946. Arriving Astoria, Oreg., 22 March, *LSMR-505* reported for duty in an inactive status. She decommissioned 20 May 1946 and entered the Pacific Reserve Fleet. While berthed in the Columbia River Reserve Group, she was named *Grand River* 1 October 1955. Her name was struck from the Navy List 1 October 1958.

Grange Victory, see *Pvt. Joseph F. Merrill* (AKV-4)

Granite

Natural igneous rock formation, usually white, red, or grey, very hard and durable. Figuratively, unyielding firmness or endurance.

(Slp: t. 75; a. 1 32-pdr.; 1 30-pdr.)

Granite, wooden sailing sloop, was transferred from Light House Board 19 January 1862, and assigned in North Atlantic Blockading Station to Sound of North Carolina in Goldsborough's Expedition to Roanoke Island, Acting Master's Mate Ephraim Boomer in command.

She participated in the capture of Confederate works on Roanoke Island, N.C., 7-8 February 1862. For the remainder of the Civil War, she operated in the sounds of North Carolina.

Granite decommissioned at Washington 29 June 1865 and was returned to the Lighthouse Board.

Granite City

A city in Illinois.

(SwStr: t. 450; l. 160'; b. 23'; dph. 9'2''; a. 6 24-pdr. howitzers, 1 12-pdr. rifle)

Granite City was originally a Confederate blockade runner, and was captured in the Bahama Islands 22 March 1863 by U.S.S. *Tioga*. She was bought by the United States from the New York Prize Court for \$55,000 and delivered to the Navy at New York 16 April 1863, Acting Master Charles W. Lamson in command.

Assigned to the Western Gulf Blockading Squadron, *Granite City* arrived in New Orleans for duty 27 August 1863. She was detained for a time in quarantine because of sickness on board, but departed 4 September to take part in the ill-fated Sabine Pass Expedition, which was intended to provide a Union lodgement in Texas and prevent possible French moves into that State from Mexico. *Granite City* was ideally suited to help support the troop landings because her shallow draft allowed her to cross the bar and lie close to shore. She crossed the bar in

company with *Sachem*, *Clifton*, and *Arizona* on 8 September, but the withering fire of Confederate batteries forced the gunboats and their transports to withdraw. *Sachem* and *Clifton* were disabled and captured in the action, though *Granite City* suffered no damage.

For the next 8 months, *Granite City*, though often in need of repairs to her weak machinery, actively participated in the blockade of the Texas coast. She captured schooner *Anita* 27 October 1863, schooner *Amelia Ann* 16 November, and bark *Teresita* 17 November. In addition, the steamer supported two landings of troops on the Texas coast. With *Sciota*, she shelled Confederate cavalry off Pass Cavallo 31 December 1863, allowing Union reconnaissance forces to land successfully. Again on 19 January 1864, the two ships covered the landing of several hundred troops near Smiths Landing, Tex., and defended them by shelling shore positions.

After 3 more months of grueling blockade duty, *Granite City* was dispatched with steamer *Wave* to Calcasieu Pass, La., to receive refugees. While engaged in this duty, 28 April 1864, the ships were attacked by Confederate troops and shore batteries. After an hour's sharp engagement, both ships surrendered, placing *Granite City* in Confederate hands for the second time.

Fitted out as a Confederate blockade runner, her original occupation, *Granite City* was loaded at Galveston and ran out of Velasco, Tex., 20 January 1865. The night was foggy and she succeeded in eluding the blockading squadron for a time, but the next day she was chased ashore by steamer *Penguin*, and soon broke up on the beach.

Granite State

A sobriquet applied to the State of New Hampshire.

Ship-of-the-line *New Hampshire* (g.v.) was renamed *Granite State* 30 November 1904 while out of commission at New York City.

Grant

A Coast Guard name retained.

Grant was a revenue cutter built in 1870 and 1871 by Pusey & Jones Corp., Wilmington, Del. She served the Revenue Cutter Service in both the Atlantic and Pacific preventing smuggling and protecting shipping. At the outbreak of the War with Spain, she was ordered to cooperate with the Navy 11 April 1898. Throughout the conflict, she patrolled the Pacific coast and was returned to the Treasury Department 15 August 1898. *Grant* continued to serve the Revenue Cutter Service in the Pacific until sold to A. A. Cragin of Seattle, Wash., 28 November 1906.

Grant, Albert W., see *Albert W. Grant* (DD-649)

Grant, President, see *Harris* (AP-8)

Grant, U. S., see *U. S. Grant* (AP-29)

Grant County

Counties in Arkansas, Indiana, Kansas, Kentucky, Louisiana, Minnesota, Nebraska, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Washington, West Virginia, and Wisconsin.

(LST-1174: dp. 3,560 (lt.); l. 445'; b. 62'; dr. 16'8"; s. 17 k.; cpl. 172; a. 4 3'; cl. *Suffolk County*)

Grant County (LST-1174) was laid down by Avondale Marine Ways, Inc., Avondale, La., 15 March 1956; launched 12 October 1956; sponsored by Mrs. John Martin Higgins;

and commissioned 17 December 1957, Lt. Comdr. R. B. Nichols in command.

After shakedown, *Grant County* performed amphibious exercises along the Atlantic coast and in the Caribbean throughout 1958. From 1958 to 1962 the LST excelled in training and experimental amphibious operations in the Atlantic, Caribbean, and on two occasions the Mediterranean (1958, 1961).

Following operations with Marines at Camp Pendleton in October 1962, *Grant County* was dispatched to Florida for assignment during the Cuban missile crisis. Her constant training paid dividends, for the show of strength displayed by the Navy averted an atomic catastrophe, and once again left undisputed America's claim to superiority of the sea. When the crisis eased, *Grant County* resumed her training, and remained on alert in the event of another flare-up.

In May 1965, the Communist threat to the Western Hemisphere struck again, this time in the Dominican Republic. President Johnson ordered Marines to the Caribbean island to protect American interests and help stabilize the government. When the situation showed signs of diminishing, *Grant County* departed Little Creek, Va., 1 June for the Caribbean. She embarked Marines and Seabees stationed in the Dominican Republic and returned them to the United States. On 3 October she sailed for another Mediterranean deployment and participated in amphibious exercises before returning home 31 March 1966.

During the next 4 months *Grant County* participated in intermittent amphibious exercises along the Atlantic Coast and in the Caribbean. During August she made two runs to the Dominican Republic to return troops and equipment to the United States. She continued shuttle runs along the East Coast until 1 December when she began a 3-month overhaul. In March 1967 she resumed training and readiness operations with amphibious forces, and at present she ranges the seas from the Virginia Capes to the Caribbean while maintaining the efficiency and readiness of her crew and equipment.

Granville

A county in North Carolina.

(APA-171: dp. 12,450; l. 455'; b. 62'; dr. 24'; s. 18 k.; cpl. 536; a. 1 5'; cl. *Haskell*)

Granville (APA-171) was launched 23 October 1944 by the Oregon Shipbuilding Corp., Portland, Ore., under a Maritime Commission contract; sponsored by Mrs. Lowell Stockman; transferred to the Navy 21 November 1944 and commissioned the same day, Captain R. A. MacKeracher in command.

Granville began her transport duties when she cleared San Francisco 26 January 1945 carrying passengers to Pearl Harbor, the Marshalls, Carolines and Marianas. Departing Honolulu 18 April 1945 *Granville* sortied from Saipan 2 May to land 1,350 troops of the 10th Army on Okinawa 6-8 May. Already begun, Okinawa was the climax of America's amphibious sweep across the Pacific.

Departing Okinawa 15 May 1945 *Granville* delivered casualties to San Francisco 10 June via Ulithi, Guam and Pearl Harbor. Clearing San Francisco 26 June she called again at Okinawa with more troops. *Granville* departed Okinawa 23 August and loaded occupation troops at Lingayen Gulf 10-20 September 1945. Putting her troops ashore at Wakayama, Japan, 25 September she called at Mindanao, P.I., 9-14 October to embark 1,447 troops of the 2d Battalion, 34th Infantry Regiment. *Granville* sailed from Mindanao 15 October and landed her troops at Matsuyama 21-24 October 1945; part of the 5th Fleet landing of X Corps (Central Occupation Group), 6th Army in Kyushu and western Honshu.

Departing Matsuyama, Japan 28 October 1945, *Granville* was assigned to the "Magic-Carpet" fleet carrying veteran troops to the United States from the Solomons, New Guinea, Admiralties, New Hebrides, and New Cale-

donia. She returned to San Francisco from her last voyage 25 January 1946, sailed from San Francisco 15 February and reached Norfolk 9 March 1946 via the Canal Zone.

Granville decommissioned there 10 May 1946. She was returned to the Maritime Commission the next day and her name stricken from the Navy List 21 May 1946. Placed in the National Defense Reserve Fleet, she is now berthed in James River, Va.

Granville earned one battle star for World War II service.

Granville S. Hall

Granville Stanley Hall was born in 1846 at Ashfield, Mass., and graduated from Williams College in 1867. After teaching at Antioch and Harvard and studying psychology in Germany, Hall organized a psychological laboratory at Johns Hopkins in 1882. Soon becoming a leader in his field, he founded the "American Journal of Psychology" in 1887; authored numerous books and articles; and served as first President of Clark University 1889 to 1920. He died in 1924.

(YAG-40: dp. 11,600; l. 442'; b. 57'; dr. 28'; s. 10 k.; cpl. 8 to 15)

Granville S. Hall (YAG-40), a Liberty ship, was launched under Maritime Commission contract 24 October 1944 by J. A. Jones Construction Co., Inc., Panama City, Fla.; sponsored by Mrs. Isabelle Gabriel; and placed in service in October 1944 for Coast-Wise Lines. She operated as a general merchant cargo vessel until entering the National Defense Reserve Fleet, Suisun Bay, Calif., June 1952.

Taken out of reserve in May 1953, *Granville S. Hall* was transferred to the Navy and designated YAG-40. The ship was fitted out with scientific instruments of all kinds, including nuclear detection and measurement devices. These enabled her to explore fallout areas and carry out ship decontamination tests. *Granville S. Hall* was also equipped with remote control devices which allowed her to be operated by a small crew in a sealed hold, and thus making her able to explore fallout areas of heavy concentration.

Granville S. Hall operated in an "Inservice" category until 1957, taking part in Operation "Castle," atomic bomb tests March-May 1954 and other radioactivity and remote control tests designed to enrich the Navy's and mankind's knowledge of these scientific areas. She was placed in the San Diego Reserve Fleet in late 1957.

The ship was reactivated in May 1962 and commissioned 20 October 1962, at Triple A Machine Shop, San Francisco, Calif., Lt. Comdr. H. W. Kepler in command. With her sister ship, *George Eastman*, she arrived Pearl Harbor 24 November for underway training, and following completion resumed her scientific work. Since 1962 she has operated in waters off Hawaii carrying on experiments in ship protection and scientific warfare, and at present continues her vital role.

Grapeshot

Acquired in January 1877, *Grapeshot* served as an ordnance tug at New York until she was sold 1 January 1880.

Grapple

To take hold of.

(ARS-7: dp. 1,897; l. 213'6"; b. 39'; dr. 14'1"; s. 14.8 k.; cpl. 120; a. 4 40mm.; cl. *Diver*)

Grapple (ARS-7) was launched by Basalt Rock Co., Napa, Calif., 31 December 1942; sponsored by Mrs. Thomas D. Rose; and commissioned 16 December 1943 at Vallejo, Calif., Lt. Robert Fisher in command.

One of the first ships designed to operate as a combat-salvage vessel, *Grapple* conducted shakedown off the California coast until 15 February 1944 when she sailed for

Pearl Harbor with barge YW-69 in tow. With three barges in tow, she departed Pearl 21 March 1944, proceeded via Majuro and Tarawa to Espiritu Santo, New Hebrides, Florida Island, and Guadalcanal. There *Grapple* performed miscellaneous screening exercises and readied for her part in the upcoming invasion of Guam, another step in America's sweep to victory across the Pacific. On 15 June she came under enemy attack for the first time as three Japanese dive bombers came out of the sun in a surprise attack. Alert antiaircraft crews shot down one of them and seriously damaged another.

Grapple cleared Kwajalein, staging area for the Guam assault, on 15 July, then 6 days later was standing off Guam in support of the first wave of assault troops. Her vital salvage work at Guam included pulling stranded landing craft off the beaches and repairing damaged ships, usually within range of enemy fire. Demolition crews from *Grapple* also performed the important work of clearing the Apra Harbor entrance of a Japanese freighter sunk by American bombers. After the consolidation of Guam, *Grapple* returned to Espiritu Santo via Eniwetok for repairs and preparation for next major assault.

Rendezvousing with a convoy at Florida Island, *Grapple* sailed 4 September for the initial assault phase on Peleliu Island, Palaus, which began 15 September. Under constant fire from enemy shore batteries, she laid small-craft mooring buoys inside Peleliu's protective reef before being dispatched to aid *Wadleigh* (DD-689), badly damaged in a mine field. While working on the disabled destroyer, a project which lasted over 2 weeks, *Grapple* also assisted a number of beached landing craft and effected temporary repairs on others.

On 24 December *Grapple* entered Leyte Gulf, late the scene of one of the war's bloodiest and most decisive naval battles, for further salvage work. Four days later she sailed into Mindanao Gulf to salvage *William Sharon*, an abandoned Liberty ship still smoldering from kamikaze attacks. The salvage ship, with *Sharon* in tow, and her two destroyer escorts were attacked by Japanese fighter planes in the pre-dawn hours of 30 December, but the planes were driven off.

From Leyte *Grapple* headed north as the invasion of the Philippines unfolded deep into enemy held territory at Lingayen Gulf, again in the initial assault phase. Brilliant salvage work at Lingayen Gulf from 6 January to 26 February 1945 earned *Grapple* and her crew the Navy Unit Citation.

She remained on fire-fighting, rescue, and salvage station at Ulithi and Saipan through 7 May, distinguishing herself in fire-fighting efforts on the carrier *Randolph*, hit by kamikazes on 11 March. After towing a derrick and a lighter to Leyte, *Grapple* sailed for Pearl Harbor. On 6 June she was diverted to assist *William Hawkins*, adrift near Johnston Island; taking the merchantman in tow, she reached Hawaii 11 June, stopping only long enough to disengage her tow before continuing to Portland, Oreg., where she docked 22 June.

Japan surrendered before *Grapple* reached Hawaii again on 19 October. There she performed various duties until returning to the coast. She reached San Diego 15 May, decommissioned there 30 August 1946 and went in reserve.

With the outbreak of hostilities in Korea, *Grapple* recommissioned 26 December 1951 at San Diego, Lt. Roy Coniam in command. After training exercises, she sailed to Pearl Harbor and from there to Japan, reaching Sasebo 8 May 1952. Five days later she sailed for Korea and joined British units of the United Nations Fleet off Daido Ko 17 May. Later she sailed to Ullong Do and was temporarily converted into a floating laboratory as Navy doctors frantically tried to stem a typhoid epidemic sweeping the peninsula.

On 8 August *Grapple* began "flycatcher" duty off the Korean coast, patrolling at night to thwart enemy sampans laying mines in the shallows. While at anchor near Wonsan 12 August, *Grapple* came under heavy fire from shore batteries, and before she could clear the area was hit just below the water line. Her damage control party

removed the unexploded projectile and patched up the 6" by 15" hole. Three days later, still on patrol, *Grapple* received more serious injuries—this time at the hands of a friend. Because of a mistake in identification signals, *Chief* opened fire on *Grapple* at a range of about 900 yards. Several shells fell short or exploded above the ship, but one 3" projectile hit just above the pilot house, killing 2 men, injuring 11 others, 3 critically, and doing extensive damage to pilot house and gun deck. After repairs at Sasebo, *Grapple* returned to Korea, making three more "flycatcher" patrols to protect U.S. ships operating off shore before returning to Pearl Harbor 9 December 1952. She then sailed for overhaul at Seattle.

Subsequently, *Grapple* has based at Pearl Harbor, performing a variety of salvage duties in the mid-Pacific and other areas. In 1953, 1955, 1956, and 1957, late summer Arctic supply cruises took her through Aleutian waters and into the hazardous ice floes of the Arctic Circle to repair and supply units of the fleet stationed there. In nine Western Pacific cruises to date, *Grapple* has crossed the Pacific to Korea, Japan, Formosa, the Philippines, South Vietnam, and Hong Kong. On these, *Grapple* extensively trained ROK and Nationalist Chinese divers in newest salvage techniques.

Extraordinary duties for *Grapple* included blasting the coral reef to widen the harbor entrance at Johnston Island in April 1954 prior to nuclear testing. In addition while prepared to act during a flare-up in the Quemoy-Matsu area in August and September 1958, she assisted Hilo, Hawaii, in mopping up after a devastating tidal wave May 1960. During July and August 1964 she participated in the successful salvage operation of freeing *Frank Knox* (DDR-742), grounded on Pratas Reef in the South China Sea.

Departing Pearl Harbor 16 November 1966, *Grapple* reached waters off South Vietnam 10 December for salvage and rescue operations. Late in the month she prepared to salvage a grounded tug from a reef north of Hue, South Vietnam. *Grapple* is still on station in the Pacific, providing valuable salvage and rescue work for planes and ships as well as participating in a variety of miscellaneous duties and exercises.

Grapple received one battle star for World War II service and one for Korean service.

Grasp

To make the motion of seizing or trying to seize; to clutch; to grip.

(ARS-24: dp. 1,360; l. 213'6"; b. 39'; dr. 14'4"; s. 15 k.; cpl. 120; a. 4 40mm. 4 .50 cal. mg.; cl. *Diver*)

Grasp (ARS-24) was launched 31 July 1943 by the Basalt Rock Co., Napa, Calif.; sponsored by Mrs. J. B. McDonough; and commissioned 22 August 1944, Lt. Comdr. Jacob F. Lawson, in command.

After fitting out at San Francisco and shakedown along the California coast out of San Diego, *Grasp* sailed for the Pacific, reaching Hawaii 27 October 1944. From Pearl Harbor she headed for combat, reaching Manus, Admiralty Islands, 24 December to prepare for her role in the upcoming Lingayen Gulf operations. Joining the battle group, under the overall command of Admiral T. C. Kincaid, *Grasp* sailed for the Philippines 1 January 1945. Enroute the ships were attacked by heavy concentrations of Japanese aircraft, including the suicidal kamikazes. Overcoming all attacks in which *Grasp* shot down one plane and assisted against others, the fleet forced its way deep into enemy waters and landed General MacArthur's troops at Lingayen Gulf 9 January. *Grasp* was there to assist battle-damaged ships, and clear the harbor of sunken craft. In addition to aiding *Warhawk* and *Otis Skinner*, damaged by the Japanese, *Grasp* pulled two landing craft off the beaches and salvaged an enemy cargo submarine hazardous to shipping.

From Lingayen Gulf, *Grasp* sailed to Tacloban Harbor, Philippines, with an injured APD, *Brooks*, in tow.

There she joined TG 78 and on 29 January 1945 participated in the initial landings at Zambales, Luzon. After helping to make this another of the fleet's long role of successful amphibious assaults, *Grasp* sailed to Manila Harbor 2 March. As part of the harbor clearance force under Commodore W. A. Sullivan, she remained in the Manila area for over a year. *Grasp* salvaged sunken ships in the harbor and also made emergency repairs to various naval and merchant ships. Departing the Philippines 27 April 1946, she reached San Pedro, Calif., via Pearl Harbor and Astoria, Oreg., 5 June. *Grasp* decommissioned there 12 December 1946 and was placed in reserve.

When the Korean war broke, ships again immediately became in short supply. *Grasp* recommissioned at San Diego 10 October 1950 and prepared for combat. Reaching Sasebo, Japan, via Pearl Harbor 12 February 1951, *Grasp* at once proceeded on to Wonsan, Korea, for salvage and patrol work. As she patrolled the coast between Wonsan and Songjin, both under blockade and siege by the fleet, *Grasp* came frequently under fire from Communist North Korean shore batteries, but was never hit. The two Korean ports were under siege with daily bombardment and minesweeping because of their value as a ditching place for pilots who could not make it back to the carriers steaming off the coast. With the heavy sea protection these pilots could ditch at Wonsan with some confidence of rescue. After 2 months on the line off Korea, *Grasp* returned to Sasebo 15 April to continue repair work on damaged ships.

After two more cruises along the Korean coast, interspersed with repair work in Japan, *Grasp* returned to Pearl Harbor 10 October and remained there until sailing for the States 29 January 1952. After quick repairs at San Diego, *Grasp* returned to Pearl Harbor 12 March and from there steamed to Subic Bay, Philippines, for salvage operations. She reach Sasebo again via Pearl Harbor 16 August and immediately returned to her duties of a month of patrol and rescue work along the Korean coast followed by a month of salvage and repair work in Japan. Returning to San Diego 22 May 1953 for local operations and repair work, *Grasp* sailed to Pearl Harbor 19 July and was there when the armistice came 27 July.

Despite the termination of open warfare Korea was to remain an important port of call for *Grasp* as the salvage ship's peacetime duties settled into a pattern of yearly WesPac cruises out of Pearl Harbor intermixed with local operations and salvage work out of the Hawaiian port. As she sailed each year to join the 7th Fleet in its massive peacekeeping and patrol work in the western Pacific, *Grasp* visited such Asian ports as Yokosuka, Taiwan, Hong Kong, Manila, Okinawa, and Eniwetok. America's participation in the struggle against communism in Vietnam added Saigon to this list in 1963, and *Grasp* was also at Johnston Island in the spring of 1962 in connection with nuclear weapons tests being conducted there. Another break in the pattern came in 1956 and again in 1957 as *Grasp* sailed north to participate in Arctic resupply and salvage operations in the icy Alaskan waters. Between October 1964 and March 1965 she conducted yet another deployment to the Western Pacific for salvage operations out of the Marianas and the Philippines. After returning to Pearl Harbor in mid-March, she was assigned to salvage and towing duty out of Guam, Marianas. Departing Pearl Harbor 2 November, she reached Guam the 27th. Since that time she has operated out of Guam to the Philippines and Southeast Asian waters and has continued to provide rescue and salvage facilities to ships of the powerful 7th Fleet.

Grasp was awarded two battle stars for World War II service.

Gratia

An astronomical body.

(AKS-11: dp. 14,350; l. 441'6"; b. 56'11"; dr. 28'4"; s. 12.5 k.; cpl. 195; a. 1 5", 1 3", 8 20mm; cl. *Acubens* T. EC2-S-C1)

Gratia (AKS-11) was launched under Maritime Commission contract by Delta Shipbuilding Co., New Orleans, La., 21 October 1944; sponsored by Mrs. John W. Boatwright; acquired by the Navy 20 November 1944; and commissioned the same day, Lt. Charles B. Gray in command.

She remained in commission only long enough to sail to Galveston, where she decommissioned 23 November to undergo conversion. She recommissioned 5 May 1945, Lt. Comdr. William Jonelli in command, and sailed for the Pacific as part of Service Squadron 8. Operating out of Manila, *Gratia* carried stores and passengers to ports in the Philippines, the Admiralties, and New Guinea. In January 1946, she departed Manila the final time, reaching San Francisco 4 April via various Japanese ports and Pearl Harbor. After returning to Pearl Harbor 30 May, *Gratia* decommissioned there 1 July 1946, and was towed to San Francisco. Her name was struck from the Navy Register 17 July 1947; and she was transferred to the Maritime Commission. *Gratia* was part of the National Defense Reserve Fleet, berthed in Suisun Bay Calif., until the fall of 1964 when she was scrapped.

Gratitude

A merchant name retained.

(SP-3054: dp. 214; l. 133'8"; b. 20'; dph. 7'; s. 13 k.)

Gratitude (SP-3054), was built as a freight and passenger steamer at Philadelphia in 1880 and acquired by the Navy from her owners, Bennett's North Carolina Line, in April 1918, at Portsmouth, Va.

Gratitude operated as a passenger and freight steamer with a civilian crew in the Hampton Roads area. She was taken over by a Navy Captain and crew on a bare boat basis in October 1918, and continued her operations in the Norfolk area under the 5th Naval District. *Gratitude* was returned to her owner 15 September 1919 at Norfolk.

Gray

Ross Franklin Gray, born 1 August 1920 at Talledego Springs, Ala., enlisted in the U.S. Marine Corps 22 July 1942. Following training at Parris Island, S.C., and New River, N.C., he was sent to the Pacific where he participated with the 4th Marine Division in the invasions of Roi-Namur, Marshalls, and Saipan and Tinian, Marianas. Promoted to Sergeant in August 1944, he returned to the United States for specialized training in the installation, reconnaissance, and neutralization of mine fields. After rejoining the 4th Division, he took part in the bloody invasion of Iwo Jima 19 February 1945. On 21 February his platoon came under heavy enemy fire while advancing toward high ground northeast of Number 1 airfield. After withdrawing his men from the field of fire, he advanced alone through a heavily mined area; though assailed by furious enemy fire, he cleared a path through the field to a network of strongly fortified gun emplacements. Armed only with satchel charges, Sergeant Gray systematically approached, attacked, and destroyed six Japanese gun positions by boldly hurling short-fused explosives while under continuous vicious fire. Singlehandedly, he wiped out a strong enemy garrison and completely disarmed a large mine field before rejoining his unit. Fatally wounded by an enemy shell 27 February, Sergeant Gray was posthumously awarded the Medal of Honor for his great personal valor, daring tactics, and tenacious perseverance in the face of extreme peril.

(DE-1054: dp. 2,624; l. 414'6"; b. 44'; dr. 18'; s. 27.4 k.; cpl. 247; a. 1 5", 4 21" tt., ASROC, DASH; cl. *Knox*)

Gray (DE-1054) was laid down 19 November 1966 by Todd Shipyards Corp., Seattle, Wash., with her completion planned for the winter of 1969. Once completed and commissioned, she will screen attack and support ships and operate against submarines. Operating either alone

or with a hunter-killer group, she will be able to seek out and destroy enemy submarines with the latest and most advanced ASW equipment. Moreover, her ability to perform blockade, surveillance, and search and evacuation missions at a moment's notice will add to the Navy's deterrent force and aid in the continuing task of "keeping the peace."

Grayback

Lake herring, a small fish of great commercial importance in the Great Lakes.

I

(SS-208: dp. 1,475; l. 307'2"; b. 27'3"; dr. 13'3"; s. 20.9 k. (surf.), 8.75 k. (subm.); cpl. 65; a. 1 3", 10 21" tt.; cl. *Tambor*)

Grayback (SS-208) was launched by the Electric Boat Co., Groton, Conn., 31 January 1941; sponsored by Mrs. Wilson Brown, wife of Rear Admiral Wilson Brown, Superintendent of the Naval Academy; and commissioned 30 June 1941 at New London, Lt. Willard A. Saunders in command.

Attached to the Atlantic Fleet *Grayback* conducted her shakedown cruise in Long Island Sound out of Newport, New London, and New York. In company with *Grampus* she departed New London 8 September for patrol duty in the Caribbean and Chesapeake Bay; then arrived Portsmouth, N.H., 30 November for overhaul. With America's entry into the war *Grayback* sailed for the Pacific 12 January 1942 and arrived Pearl Harbor 8 February. There she joined the submarine fleet which was to wreak such havoc on the vital shipping lanes of the Japanese Empire.

Grayback's first war patrol from 15 February to 10 April took her along the coast of Saipan and Guam. There she participated in a deadly 4-day game of hide-and-seek with an enemy submarine; the enemy I-boat fired two torpedoes at *Grayback* on the morning of 22 February, then continued to trail her across the Pacific. *Grayback* spotted the enemy conning tower a couple of times, and the Japanese ship broached once; but *Grayback* could not get into position to attack. After 4 nerve-racking days, *Grayback* shook the other sub and continued on patrol. First blood for her came on 17 March as she sank a 3,291-ton cargo ship off Port Lloyd.

Grayback's second war patrol met a dearth of targets although she even took the unusual and risky measure of patrolling surfaced during the day. On 22 June she arrived Fremantle, Australia, which was to remain her home base for most of the war. Her third and fourth war patrols, in the South China Sea and St. George's Passage, were equally frustrating as *Grayback* was hampered by bright moonlight, shallow and treacherous water, and enemy patrol craft. Despite these hazards, she damaged several freighters and also got in a shot at another Japanese submarine. However, the very presence of *Grayback* and her sister ships in these waters—the threat they presented to shipping and the number of enemy escorts they tied up—was an important factor in the successful conclusion of the Guadalcanal campaign. America's first offensive campaign in the Pacific war.

The fifth war patrol began as *Grayback* sailed from Australia 7 December 1942. Only a week out of port, Pharmacist's Mate Harry B. Roby was called upon to perform an emergency appendectomy, the second to be done on a patrolling submarine. With *Grayback* running silent and steady a hundred feet beneath the surface, the

untutored Roby successfully removed the infected appendix, and his patient was back standing watch by the end of the patrol. Then 25 December, *Grayback* enjoyed "a Jap appetizer for Christmas dinner," as she battle surfaced to sink four landing barges with her deck guns. Four days later she was again fired on by an enemy submarine but maneuvered to avoid the torpedoes. On 3 January 1943 she gained her revenge by sending to the bottom I-18 one of 25 Japanese submarines chalked up by the Pacific submarines.

On 5 January *Grayback* served as beacon ship for the bombardment of Munda Bay and also indulged in some hair-raising rescue work. Lying off Munda early in the morning of 5 January, she received word that six survivors of a crashed B-26 were holed up on the island. *Grayback* sent ashore two men, then submerged at dawn to avoid enemy aircraft. The submariners located the downed aviators, three of whom were injured, and hid out with them in the jungle. As night fell, *Grayback* surfaced off-shore and by coded light signals directed the small boat "home safe" with the rescued aviators. For this episode skipper Edward C. Stephan received the Navy Cross.

Grayback continued on patrol, torpedoing and damaging several Japanese ships. On 17 January she attacked a destroyer escorting a large maru, hoping to disable the escort and then sink the freighter with her deck guns. However, the destroyer evaded the torpedoes and dropped 19 depth charges on *Grayback*. One blew a gasket on a manhole cover; and the submarine, leaking seriously, was ordered back to Brisbane where she arrived 23 February.

On her sixth war patrol from 16 February to 4 April, *Grayback* again had a run of bad luck and returned empty-handed from the Bismarck-Solomons area. Her newly installed SJ radar had failed to function; and although she had taken several shots at marus, none were sunk.

The seventh patrol was more successful. Departing Brisbane 25 April, *Grayback* intercepted a convoy whose position had been radioed to her by *Albacore* 11 May. In a night surface attack *Grayback* fired a spread of six torpedoes at the seven freighters and their three escorts. The three escorts charged and she had to go deep to elude the attacking enemy. She was credited with the sinking of cargo ship *Yodogawa Maru*. On 16 May she torpedoed and seriously damaged a destroyer. The following day *Grayback* intercepted four marus with one escort and sank freighter *England Maru* and damaged two others before she was forced to dive. She arrived Pearl Harbor 30 May, then proceeded to San Francisco for a much needed overhaul.

Arriving Pearl Harbor 12 September, *Grayback* prepared for her eighth war patrol. Sailing 26 September with *Shad*, she rendezvoused with *Cero* at Midway to form the first of the Submarine Force's highly successful wolfpacks. The three submarines under Captain C. B. Momsen in *Cero*, cruised the China Sea and returned to base with claims of 38,000 tons sunk and 63,300 damaged. *Grayback* accounted for two ships, a passenger-cargo vessel torpedoed 14 October and a former light cruiser, *Awata Maru*, torpedoed after an end-around run on a fast convoy 22 October. Wolfpack tactics came into play 27 October as *Grayback* closed a convoy already attacked by *Shad* and administered the coup de grace to a 9,000 ton transport listing from two of *Shad's* torpedoes. The submarines had now expended all torpedoes, and on 10 November they returned to Midway.

With almost a quarter of her crew untested in battle, *Grayback* departed Pearl Harbor for the East China Sea 2 December for her ninth war patrol. Within 5 days of her first contact with Japanese ships, she had expended all her torpedoes in a brilliant series of attacks which netted four ships for a total of over 10,000 tons. On the night of 18 to 19 December *Grayback* wreaked havoc on a convoy of four freighters and three escorts. She sent freighter *Gyokurei Maru* and escort *Numakaze* to the bottom and damaged several others in surface attack.

Two nights later, 20 to 21 December, she spotted another convoy of six ships; and, after an end-around run she fired a spread of nine torpedoes into the heart of the Japanese formation. This first attack sunk one freighter and damaged another before *Grayback* dived to elude depth charges. Three hours later she surfaced and sank a second freighter. After an unsuccessful attack the following night had exhausted her torpedo supply, *Grayback* headed home. Undaunted by lack of torpedoes, the submarine battled surfaced 27 December and sank a good-sized fishing boat with deck guns before reaching Pearl Harbor 4 January 1944.

Grayback's tenth patrol, her most successful in terms of tonnage sunk, was also to be her last. She sailed from Pearl Harbor 28 January 1944, for the East China Sea. On 24 February *Grayback* radioed that she had sunk two cargo ships 19 February and had damaged two others. On 25 February she transmitted her second and final report. That morning she had sunk tanker *Toshin Maru* and severely damaged another. With only two torpedoes remaining, she was ordered home from patrol. Due to reach Midway on 7 March, *Grayback* did not arrive. On 30 March ComSubPac reluctantly listed her as missing and presumed lost with all hands.

From captured Japanese records the gallant submarine's last few days can be pieced together. Heading home through the East China Sea, on 27 February *Grayback* used her last two torpedoes to sink the freighter *Ceylon Maru*. That same day, a Japanese carrier-based plane spotted a submarine on the surface in the East China Sea and attacked. According to Japanese reports the submarine "exploded and sank immediately," but antisubmarine craft were called in to depth-charge the area, clearly marked by a trail of air bubbles, until at last a heavy oil slick swelled to the surface. *Grayback* had ended her last patrol, one which cost the enemy some 21,594 tons of shipping.

The fighting submarine's career, so tragically ended, had been an illustrious one. *Grayback* ranked 20th among all submarines in total tonnage sunk with 63,835 tons and 24th in number of ships sunk with 14. Submarine and crew had received two Navy Unit Commendations for their 7th, 8th, 9th, and 10th war patrols.

Grayback received eight battle stars for World War II service.

II

(SSG-574: dp. 2,768; l. 317'7"; b. 27'2"; dr. 19'; s. 14 k.; cpl. 87; a. 8 tt., 1 Regulus launcher; cl. *Grayback*)

The second *Grayback* (SSG-574) was launched by the Mare Island Navy Yard, Vallejo, Calif., 2 July 1957; sponsored by Mrs. John A. Moore, widow of the last skipper of the first *Grayback*; and commissioned at Mare Island 7 March 1958, Lt. Comdr. Hugh G. Nott in command.

The first of the Navy's guided missile submarines to carry the Regulus II sea-to-surface missiles, *Grayback* conducted tests and shakedown along the West Coast. While operating out of Port Hueneme, Calif., in September she carried out the first successful launching of a Regulus II missile from a submarine, which pointed the way to a revolutionary advance in the power of navies to attack land bases. Departing San Diego 30 October, *Grayback* arrived Pearl Harbor 8 November for a month of exercises and maneuvers before returning to Mare Island for her "10,000-mile checkup."

On 9 February 1959, *Grayback* departed Mare Island to make Pearl Harbor her permanent home base, reaching Hawaii 7 March via Port Hueneme, and Long Beach, Calif., and Mazatlan, Mexico. After a series of exercises there, she cruised to Dutch Harbor, Unmak and Sequam Islands, and Kodiak, Alaska, for further missile exercises from 3 to 31 July. This was followed by the first of her nine deterrent missile strike missions to date, as from 21 September to 12 November she patrolled secretly through Pacific waters with a full load of missiles ready for retaliation 1000 miles inland in event of war. *Gray-*

USS *Grayback* (SS-208)

back's first patrol terminated at Yokosuka, Japan, as did two others. She returned to Pearl Harbor 8 December.

On 22 February 1960, *Grayback* modified her missile launching system and simplified her complex electrical circuits. After this, she again took up deterrent missile strike missions. Over the next 2½ years she completed seven missions for a total of nearly 18 months at sea, much of this time submerged. In addition to Yokosuka both Adak, Alaska and Pearl Harbor also served as termination points for these patrols. On her nine patrols she spent more than 20 months at sea and logged well over 130,000 miles on deterrent missile strike missions.

As more and more Polaris submarines became operational, they assumed the deterrent functions previously assigned to *Grayback* and her sister ships. She decommissioned at Mare Island 25 May 1964. At present she is being converted to a submarine troop transport and will serve the Navy as *Grayback* (APSS-574). Conversion is scheduled to be completed in December 1968.

Graylag

A common gray goose.

(AM-364: dp. 720; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; a. 1 3"; cl. *Admirable*)

Graylag (AM-364), a steel-hulled fleet minesweeper, was launched by Willamette Iron & Steel Corp., Astoria, Oreg., 4 December 1943; and commissioned 31 August 1945, Lt. S. M. Janney in command.

After steaming to San Diego 11 October, *Graylag* got underway 1 November for Pearl Harbor, where she arrived eight days later. The ship picked up passengers and returned to San Diego 29 November. *Graylag* then steamed by way of the Panama Canal to New Orleans 7 to 26 December 1945, and arrived 27 March 1946 at Orange, Tex., after overhaul. She decommissioned 12 August 1946, was placed in reserve, and remains there

through 1967. *Graylag's* designation was changed to MSF-364 on 7 February 1955.

Grayling

A fresh water game fish closely related to the trout.

I

The first *Grayling* (SS-18) was renamed *D-2* (*q.v.*) 17 November 1911 while on duty with the Atlantic Torpedo Fleet.

II

(SP-1259: t. 4; l. 33'6"; b. 7'; dr. 2'10"; s. 14 k.; a. 1 mg.)

The second *Grayling* (SP-1259) was built by Boyden of Amesburg, Mass., in 1915 and acquired by the Navy from her owner, E. E. Gray, 7 May 1917. She commissioned 22 May 1917 and was used by the 1st Naval District as a patrol craft in Boston harbor until returned to her owner 30 November 1918.

III

(SP-289: t. 4; l. 50'; b. 10'3"; dr. 3'; s. 10 k.; a. 1 1-pdr.)

The third *Grayling* (SP-289) was built by Peterson, Hudson River, N.Y.; acquired by the Navy from her owner, Myer Resebush, 22 May 1917; and commissioned the same day, Boatswain Robert L. Kemp, USNRF, in command. She served as a patrol boat on local and coastal waters around Norfolk, Va., during the remainder of World War I. She decommissioned 15 January 1919 and was returned to her owner the same day.

IV

(SS-209: dp. 1,475; l. 307'2"; b. 27'3"; dr. 13'3"; s. 20 k.; cpl. 59; a. 1 3", 10 21" tt.; cl. *Tambor*)

USS *Grayling* (SS-18) was renamed D-2 on 17 November 1911.

The fourth *Grayling* (SS-209) was laid down at the Navy Yard, Portsmouth, N.H., 15 December 1939; launched 4 September 1940; sponsored by Mrs. Herbert F. Leary; and commissioned 1 March 1941, Lt. Comdr. E. Olson in command.

After conducting tests and sea trials, she was called upon 20 June 1941 to assist in the search for submarine O-9, which had failed to surface after a practice dive off Isle of Shoals. O-9 was subsequently discovered on the bottom, but rescue efforts failed; *Grayling* participated 22 June in the memorial services for those lost.

Joining the Atlantic Fleet, *Grayling* sailed on shake-down cruise 4 August to Morehead City, N.C., and St. Thomas, Virgin Islands, returning to Portsmouth 29 August. After final acceptance, she departed 17 November, armed at Newport, R.I., and sailed for duty with the Pacific Fleet. *Grayling* transited the Panama Canal 3 December and moored at San Diego 10 December.

Grayling sailed for Pearl Harbor 17 December, arrived 24 December, and had the honor of being chosen for the Pacific Fleet change of command ceremony 31 December 1941. On that day Admiral C. W. Nimitz hoisted his flag aboard *Grayling* as Commander Pacific Fleet and began the Navy's long fighting road back in the Pacific.

After the ceremonies, *Grayling* stood out of Pearl Harbor on her first war patrol 5 January 1942. Cruising the Northern Gilbert Islands, *Grayling* failed to register a

kill, but gained much in training and readiness, returning to Pearl Harbor 7 March.

Her second patrol, beginning 27 March, was more successful. Cruising off the coast of Japan itself, *Grayling* sank her first ship 13 April, sending the cargo freighter *Ryujin Maru* to the bottom. She returned to Hawaii 16 May.

Grayling returned to action in June as all available ships were pressed into service to oppose the Japanese advance on Midway. As part of Task Group 7.1, *Grayling* and her sister submarines were arranged in a fan-like reconnaissance deployment west of Midway, helping to provide knowledge of Japanese movements.

As Naval planners established a submarine blockade of Truk in connection with the offensive in the Solomons, *Grayling* began her third war patrol 14 July 1942 around the Japanese stronghold. She damaged a Japanese submarine tender 13 August, but was forced to return to Pearl Harbor 26 August by fuel leaks.

At Pearl Harbor *Grayling* repaired and was fitted with surface radar, after which she began her fourth patrol 19 October. Although attacked by gunfire and six separate depth charge runs by Japanese destroyers, *Grayling* succeeded 10 November in sinking a 4,000-ton cargo ship southwest of Truk. She also destroyed an enemy schooner 4 December before putting into Fremantle, Australia, 13 December.

Changing her base of operations to Australia, *Grayling* stood out of Fremantle 7 January 1943 on her fifth patrol, this time in Philippine waters. She sank cargo ship *Ushio Maru* west of Luzon 26 January and damaged another Japanese ship the next day. After sinking a schooner 24 February, *Grayling* returned to Fremantle.

Grayling left Australian waters 18 March on her sixth war patrol and cruised in the Tarakan area and the Verde Island Passage. There she attacked and sunk cargo ship *Shanghai Maru* 9 April and damaged four other ships before returning to Fremantle 25 April.

Her seventh war patrol, commencing 18 May, took *Grayling* into the waters off northwest Borneo, where she damaged a freighter and two smaller ships before returning to her base 6 July.

Grayling began her eighth and last war patrol in July from Fremantle. She made two visits to the coast of the Philippines delivering supplies and equipment to guerrillas at Pucio Point, Pandan Bay, Panay, 31 July and 23 August 1943. Cruising in the Philippines area, *Grayling* recorded her last kill, the passenger-cargo *Meizan Maru* 27 August in the Tablas Strait, but was not heard from again after 9 September. *Grayling* was officially reported "lost with all hands" 30 September 1943, after having recorded five major kills totalling 20,575 tons. All but the first of *Grayling's* eight war patrols were declared "successful."

Grayling received six battle stars for World War II service.

The name *Grayling* was assigned to SS-492 on 29 August 1944, but was cancelled 12 August 1945 prior to construction.

V

(SS(N)-646: dp. 4,140; l. 292'3"; b. 31'8"; s. 16 k.; cpl. 107; a. 4 tt.; cl. *Sturgeon*)

The fifth *Grayling* was laid down at the Portsmouth Naval Shipyard, Portsmouth, N.H., 12 May 1964; launched 22 June 1967; sponsored by Miss Lori Brinker, daughter of Lt. Comdr. Robert Brinker, who commanded *Grayling* (SS-209) when she was lost in action; and is to commission in the spring of 1968. Once commissioned, she will become a key element in the under-water deterrent force of the Navy and will contribute to the vital, continuing task of "keeping the peace" over the vast reaches of global waters. Designed to attack and destroy all types of enemy ships, she can operate for long periods at great depths and at high submerged speeds, making her a potent and effective challenge to enemy submarines. Operating under nuclear power, she can conduct long-range reconnaissance patrols and surveillance missions without risking detection by surface ships. Moreover, she is designed to carry out extensive ASW operations, either alone or with other fleet submarines and destroyer-type surface ships.

Grayson

Cary Travers Grayson was born in Culpeper, Va., 11 October 1878. After completing his medical studies, he was appointed Acting Assistant Surgeon, USN, 14 July 1903. A variety of posts led Grayson to Washington, where on 12 December 1912 he was assigned to the Bureau of Medicine and Surgery with additional duty as aide to the White House. Commissioned Rear Admiral 29 August 1916, he served as personal physician and aide to President Woodrow Wilson during World War I. Before transferring to the Retired List 20 December 1928, Admiral Grayson received the Navy Cross for exceptionally meritorious service as aide and physician to President Wilson. He was also made Commander of the National Order of the Legion of Honor by the French government. Admiral Grayson served as chairman of the American Red Cross from 1935 until his death 15 February 1938.

(DD 435: dp. 2,525; l. 348'4"; b. 36'1"; dr. 13'6"; s. 37.4 k.; cpl. 276; a. 4 5", 5 21" tt.; cl. *Gleaves*)

Grayson (DD 435) was laid down 17 July 1939 by the Charleston Navy Yard, S.C.; launched 7 August 1940; sponsored by Mrs. Alice Gertrude Gordon Grayson Harrison (Mrs. George Leslie Harrison), widow of Rear Admiral Grayson; and commissioned 14 February 1941, Lt. Comdr. Thomas M. Stokes in command.

After shakedown along the New England coast and in Chesapeake Bay, *Grayson* joined Destroyer Division 22 of the Atlantic Fleet. On 28 August the new destroyer became flagship of DesRon 11 operating in the Caribbean out of Guantanamo Bay. She reported for neutrality patrol in the North Atlantic waters between Newfoundland and Iceland 26 October.

After 10 months patrolling and protecting convoys in the icy North Atlantic, *Grayson* was ordered to the Pacific to join an American fleet battered but resolutely carrying the war to the enemy. She sailed from San Diego 2 April 1942 as part of *Hornet's* escort and rendezvoused at sea 13 April with *Enterprise* under Admiral William "Bull" Halsey. From this fast carrier force, steaming less than 800 miles from the Japanese home islands, General "Jimmy" Doolittle launched his famed B-25 raid on Tokyo 18 April, bringing war to the enemy's own land.

The task group sailed into Pearl Harbor 25 April. *Grayson* departed almost immediately for repairs in California, but soon returned to the Pacific war.

Grayson again found herself with a fast carrier force as she sailed from Pearl Harbor 15 July to escort *Enterprise* and *Hornet*. Reaching Guadalcanal via Tongatabu 7 August 1942, the carriers launched their planes to cover Marine landings there, America's first major blow of the war on the road to Japan; and then operated in the area to block Japanese reinforcements. As they maneuvered off Guadalcanal, *Enterprise* was hit by Japanese bombs 24 August in an action-filled half-hour which saw *Grayson* down two planes and damage a third. The task group dispersed, *Enterprise* returning to Pearl Harbor for repairs, and *Grayson* joined TF 11, built around *Saratoga* under Admiral Fletcher. Action soon followed. Sighting a Japanese submarine on the surface the next day, 25 August, *Grayson* closed for the kill. After expending 46 depth charges, her entire supply, in a series of five attacks, the destroyer finally had the satisfaction of seeing a huge air bubble and oil slick rise to the surface indicating the death of another Imperial submarine.

The battle-proven ship and crew remained in the bitterly contested waters around Guadalcanal for nearly 8 months in a variety of duties. The versatile *Grayson* convoyed troop transports loaded with reinforcements from Noumea and other staging areas to Guadalcanal, patrolled in "The Slot", served as a radar picket ship, and performed valuable rescue work. On 18 October she picked up 75 survivors from DD *Meredith*, sunk by aerial torpedo 15 October, and helped escort the barge *Vireo*, loaded with desperately needed fuel and ammunition, to Guadalcanal.

Returning to Pearl Harbor 15 April 1943 for overhaul, *Grayson* continued on to the States for further repairs and finally sailed to New Caledonia, arriving 24 September. She accounted for at least four and possible two more Japanese barges loaded with evacuees from Kolombangara during three nights of action, 30 September-3 October, with DesRon 21 under Commander A. D. Chandler. After 3 months of patrol duty, *Grayson* sailed for Puget Sound Navy Yard 16 December for overhaul.

Grayson soon returned to the Pacific, putting in at Majuro Atoll, Marshall Islands, 10 February 1944. Patrol duty in the Solomons, Carolines, and Marshalls occupied her the following 6 months. On 30 March *Grayson* supported initial assault landings on Pityliu Island Admiralties; from 22 to 24 April she was fighter-director ship for the landings at Tanahmerah Bay, Dutch New Guinea. She bombarded Biak Island 27 May and Nemfoor Island 2 July prior to invasion landings.

Assigned the name *Grayson* on 19 May 1938, DD-429 was renamed *Livermore* (q.v.) on 23 December 1938 prior to being laid down.

On 1 September 1944 *Grayson* joined TG 38, for carrier strikes against the enemy in the Palau Islands, scene of the next major invasion. She returned to Seeadler Harbor 31 September. She again sailed 2 October for a major strike against Okinawa and the Philippines. Japanese planes harassed the withdrawal, and on 15 October *Grayson* rescued 194 men from the torpedoed light cruiser *Houston*, who was towed safely to Ulithi.

From Ulithi, *Grayson* sailed straight to Saipan, where on 3 November she took up radar picket and lifeguard duty. Finally *Grayson* was ordered home, reaching Seattle 9 June 1945 for her first real rest since the war began.

Grayson returned to Pearl Harbor 1 September 1945, the day of the signing of the Articles of Surrender in Tokyo Bay. After brief training she sailed for the United States. Transiting the Panama Canal 8 October, she put in at Charleston, S.C., 16 October. Eleven days later the battle-scarred "tin can" hosted over 5,000 visitors as a grateful and jubilant public paid tribute on Navy Day. *Grayson* remained at Charleston until decommissioned, 4 February 1947, and was placed in reserve. At present she is berthed at Orange, Tex.

Grayson received 13 battle stars for World War II service.

Greasy Mary No. 9, see YC-965

Great Lakes

The region of the Canadian-United States borderland containing and surrounding Lakes Superior, Michigan, Huron, Erie, and Ontario drained by the St. Lawrence River.

Great Lakes (AD-30) was building at the Todd Pacific Shipyards, Inc., Seattle, Wash., but was cancelled 7 January 1946.

Great Northern

Former name retained.

(AG-9: t. 8,255; l. 509'6"; b. 63'1"; dph. 21'; s. 23 k.; cpl. 559; a. 4 6")

Great Northern (AG-9), was built by William Cramp & Sons in 1915; acquired from her owners, Great Northern Pacific Steamship Co. 19 September 1917 by the USSB; converted to a transport at the Puget Sound Navy Yard; and commissioned there 1 November 1917, Captain W. W. Phelps in command.

Embarking nearly 1,400 passengers at Puget Sound, including 500 "enemy aliens," women and children as well as men, *Great Northern* sailed for the East Coast 21 January 1918, reaching New York 9 February via the Panama Canal and Charleston. On 7 March she sailed from Hoboken, N.J., for Brest, France, with 1,500 members of the AEF. *Great Northern* returned to Hoboken 30 March with wounded veterans. From then until August 1919 she made a total of 18 transatlantic voyages, first carrying troops to the fighting zones and then bringing home the victorious "doughboys." *Great Northern* decommissioned at New York 15 August 1919 and was transferred to the U.S. Army Transportation Service the same day.

While in the USATS, *Great Northern* was based mainly in the Pacific. In late 1919 and early 1920 she made two long trips from Honolulu to Vladivostok to pick up approximately 3,000 American officers and men returning from the Allies' campaign against the Russian Communists. *Great Northern* also took a Congressional party on a long Pacific inspection, touching at Hong Kong, Honolulu, Cavite, and then returning to San Francisco, in the summer of 1920.

The transport's varied career took another turn when she was acquired by the Navy from the War Department 3 August 1921. *Great Northern* recommissioned at Mare Island 11 August 1921, Captain J. K. Taussig commanding, and sailed almost immediately for the East Coast. After disembarking passengers at the Canal Zone, Santo Domingo, Haiti, and Hampton Roads, she put into New York 7 October. Nine days later, 16 October 1921, Admiral Hilary P. Jones, Commander-in-Chief Atlantic Fleet, and his staff reported on board *Great Northern* to make her the flagship for the Atlantic Fleet.

On 19 November 1921 *Great Northern's* name was changed by Presidential order to *Columbia* (q.v.) to honor a name long famous in Navy annals. She remained in New York harbor, functioning as a floating command post, through the rest of 1921. *Columbia* sailed for the Caribbean to join the annual Atlantic Fleet winter exercises 7 January 1922, reaching Guacanayabo, Cuba, via Charleston and Key West 18 January. Three days later she joined the battleships *Wyoming*, *Arkansas*, *North Dakota*, and *Delaware* at Guantanamo Bay.

Columbia sailed north 24 February, reaching New York 3 days later. That same day, 27 February 1922, Admiral Jones shifted his flag to *Maryland*, and *Columbia* sailed for Chester, Pa. She decommissioned there 4 March 1922 and was transferred to the U.S. Shipping Board. Returning to merchant service, she was renamed *H. F. Alexander* with Canadian Pacific Lines until 1942, when she was taken over by the War Shipping Administration for use as a troop transport. Renamed *George S. Simonds*, she served through World War II, was laid up in the Maritime Commission reserve fleet for a time, and then scrapped.

Great Republic, see *Pietor* (AF-54)

Great Sitkin

A volcano in the Aleutian Islands.

(AE-17: dp. 13,910; l. 459'2"; b. 63'; dr. 28'3"; s. 16 k.; cpl. 267; a. 1 5', 4 3', 4 40mm., 16 20mm.; cl. *Wrangell*; T. C2-S-AJ1)

Great Sitkin (AE-17) was launched under Maritime Commission contract by North Carolina Shipbuilding Co., Wilmington, N.C., 20 January 1945; sponsored by Miss Anne L. Dimon; and commissioned at Charleston, S.C., 11 August 1945, Lt. Comdr. William F. Smith in command.

After shakedown out of Norfolk, *Great Sitkin* sailed to New York 25 November to begin dumping condemned ammunition in an assigned area off Sandy Hook, N.J. She continued this duty for nearly a year, returning to Norfolk in November 1946. *Great Sitkin's* pattern of operations for the next few years took her to the Caribbean and the Canal Zone on ammunition replenishment trips, as well as twice to Gibraltar. In addition, she participated in local operations.

Since 1951 *Great Sitkin* has served as a mobile ready reserve source of ammunition for the Fleet. She has regularly deployed to the Mediterranean to support the 6th Fleet, a bulwark of freedom in the region, and has served the Fleet during crises in trouble spots such as Lebanon and Suez. When not deployed in the Mediterranean, she has operated out of New York, participating in various fleet maneuvers in the Atlantic and the Caribbean.

During the Cuban missile crisis in 1962, she sailed for the Caribbean 23 October, following President Kennedy's announcement of a naval quarantine around the Communist island. She cruised the Caribbean during the next several weeks carrying reserve ammunition for American ships on quarantine duty off Cuba. Departing the Caribbean 16 December, she returned to New York and resumed her pattern of operations in the Atlantic and the Mediterranean.

Between August 1963 and July 1966 *Great Sitkin* has deployed three times with the 6th Fleet, and during these tours she has participated in several Fleet and NATO

USS *Great Northern* held the record for speedy "Turn-Arounds" during World War I.

exercises. After a 3-month overhaul *Great Sitkin* left Bethlehem Steel Shipyard, Hoboken, N.J., in December 1966 for training exercises off Guantanamo Bay, Cuba. At present she continues to support American ships in the Atlantic and the Mediterranean, and she stands ready to supply ammunition necessary for the continuing task of "keeping the peace."

Great Western

A former name retained.

(SwStr: t. 429; a. 1 12-pdr., 1 32-pdr., 1 6-pdr.)

Great Western, a sidewheel steamer, was built at Cincinnati, Ohio, in 1857 and was purchased by the War Department 10 February 1862. She was transferred to the Navy 30 September 1862, but had been used since her purchase by the Western Flotilla.

Great Western was used as an ordnance boat for the Navy on the western waters, and in that capacity operated from Cairo, Ill., to various points on the Mississippi and its tributaries. She supplied ships at the mouths of the White and Arkansas Rivers with ammunition and ordnance, and occasionally fired at Confederate batteries ashore in the almost daily engagements in keeping open the far-spreading river highway system by which the Union divided and destroyed the South. While with the Mortar Flotilla 30 July 1862 she fired on cavalry attacking the boats near the mouth of the Arkansas River and succeeded in driving them off.

During 1862 and the first half of 1863, the overriding concern of Union forces was the capture of Vicksburg, and *Great Western* spent much of her time during this period near the mouth of the Yazoo River above the city in support of combined operations there. She provided support for the joint attacks of December 1862 above the city, and remained in the area until the Confederate stronghold fell in July 1863.

Following the fall of Vicksburg, *Great Western* continued her duties as supply ship for the squadron, being stationed at Skipwith's Landing, Miss., and Goodrich's Landing, La. In July 1864 she was sent to Cairo, Ill., the great Union naval base in the west, to act as a receiving ship. *Great Western* was transferred as receiving ship, Mound City, Ill., in March 1865, and was subsequently sold at auction there to John Riley 29 November 1865.

Greater Buffalo, see *Sable* (IX-81)

Grebe

A swimming bird closely related to the loon but with lobate rather than webbed toes.

(AM-43: dp. 950; l. 187'10"; b. 35'6"; dr. 9'9"; s. 14 k.; cpl. 59; a. 2 3")

Grebe, built by the Staten Island Steam Boat Co., launched 17 December 1918; was sponsored by Miss Emma Youmans and commissioned at the Brooklyn Navy Yard 1 May 1919, Lt. Niels Dustrup in command.

From 9 July 1919 until 1 October, *Grebe*, based at Kirkwall, Orkneys, was part of a minesweeper flotilla clearing the North Sea of mines laid by the Allies during World War I. She returned to Portsmouth, N.H., 28 November 1919 via Davenport, Brest, Lisbon, the Azores, Bermuda, and New York. After extensive repairs, *Grebe* moved to the Boston Navy Yard 4 November 1920; from there she sailed the coast from Maine to New Jersey calibrating radio compass stations and doing miscellaneous towing and rescue work. On 29 April 1921 she rescued 139 passengers from the Portuguese steamer *Mormugao*, which had run aground off the Massachusetts coast.

Grebe's next duty took her to Newport, R.I., on 2 June; she escorted submarine *G-1* in diving trials until 23 June when *G-1* sank in 16 fathoms. After participating in salvation operations, *Grebe* returned to Boston on 22 July

to resume radio compass station calibration and other duties. From there she made a round trip to Norfolk, Guantanamo, and the Canal Zone which occupied her from 1 December 1921 until 18 March 1922, when she returned to Portsmouth. There she decommissioned 12 May 1922.

Grebe recommissioned 15 November 1922, Chief Boat-swain Albert C. Fraenzel commanding. On 16 December she sailed for St. Thomas, capital of the Virgin Islands, where she served as station ship until 1931. *Grebe* made an average of a trip a week between St. Thomas, St. Croix, and San Juan carrying stores and passengers, both military and civilian; she also towed coal barges and dredges to San Juan, Fort de France, Martinique, and other Caribbean ports. While at St. Thomas, *Grebe* was invaluable in assisting disabled ships, mainly those grounded on coral reefs, and in searches for missing ships. This work was interrupted by a yearly 5-week repair period at Charleston, S.C.

Grebe's finest moment came in 1930. A hurricane laid waste large parts of the Dominican Republic and killed thousands in September. Carrying trained medical men and emergency supplies *Grebe* was the first ship to reach devastated Santo Domingo. She remained there 2 weeks, helping unload other ships and clear debris.

17 March 1931 *Grebe* brought Dr. Paul M. Pearson, Governor-appointee, and his staff from San Juan to St. Thomas; nucleus of the Virgin Island's first civilian government.

Grebe then returned to Boston. There on 12 July 1931 she took in tow historic *Constitution*. A long campaign had resulted in restoration of the famed ship to its original condition, and *Grebe* was to spend the next 3 years as her tender and towing ship as they visited every major American port, East and West Coast. Millions of Americans thrilled to their heritage touring "Old Ironsides" in New York, Norfolk, Key West, Galveston, Guantanamo, Los Angeles, Seattle, Portland, and the Canal Zone.

12 May 1934 *Grebe* relinquished her duties with *Constitution*, entering the Philadelphia Navy Yard for overhaul. After a brief tour of duty at Norfolk, 21 August to 14 September, she sailed for Guantanamo towed for fleet gunnery practice until 12 October, then sailed to San Pedro, arriving 19 November. Operating there until mid-1940; she performed a variety of tasks, including towing for target practice, participating in fleet problems, mine-sweeping exercises, training squadron details, and harbor service. Her tour there was interrupted by two voyages, the first to Pearl Harbor 6-31 May 1935 for fleet problems and the second to Guantanamo and Norfolk 26 December to 7 May 1939 for gunnery exercises.

Sailing from San Pedro 3 June 1940, *Grebe* arrived Pearl Harbor 17 June to tow for gunnery and bombing practice, and participate in minesweeping training. Two trips back to the mainland, 1 August to 9 September and 27 September to 13 October 1941, in company with *Bobolink* on passenger and stores runs interrupted her Hawaiian duty.

Grebe was in yard availability at Pearl Harbor 7 December 1941. Her 3" guns had been dismantled for the overhaul so she could fight only with rifles and pistols. She was credited with shooting down one of three unidentified planes flying low over the Navy Yard. On 24 January *Grebe* departed for Palmyra Island with YO-43 in tow where she arrived 5 days later. She returned to Honolulu 5 February and continued from there until autumn. Her classification was changed to AT-134 on 1 June 1941.

On 30 September *Grebe* joined a convoy for Johnston Island and returned 9 October. On 9 November 1942 *Grebe* was underway again with YC-737 and YB-9 in tow and accompanying YO-44, for Canton Island. Calling there 25 November she proceeded to Pago Pago, Samoa arriving 28 November.

On 6 December 1942 *Grebe* grounded while attempting to float SS *Thomas A. Edison* at Vuata Vatoa, Fiji Islands. Salvage operations were broken up by a hurri-

cane that destroyed both ships 1-2 January 1943. Her name was struck from the Navy List 28 July 1943.

Grebe earned one battle star for World War II service.

Greecian

A British name retained.

(BAM-19: dp. 890; l. 220'6"; b. 32'; dr. 9'6"; s. 18 k.; cpl. 80; a. 1 3", 6 20mm.; cl. HMS *Catherine*)

BAM-19 was laid down 7 September 1942 by Savannah Machine & Foundry Co., Savannah, Ga.; launched 10 March 1943; transferred to the United Kingdom under lend-lease 22 September 1943; and named HMS *Greecian*. Returned to the United States Navy in England after the war, the mine sweeper was transferred to the government of Turkey under the Military Assistance Program in January 1947. She serves the Turkish Navy as *Edincik* (M-509).

Greely, General A. W., see *General A. W. Greely* (AP-141)

Green, William F., see *William F. Green* (No. 3664)

Green Dragon

(SP-742: t. 17; l. 60'; b. 10'3"; dr. 4'2"; s. 10 k.; a. 1 1-pdr., 1 mg.)

Green Dragon was built in 1901 by J. Smith of Port Washington, Long Island, and acquired 19 July 1917 from Edward German of Newport, R.I. During World War I she served as a coastal patrol boat in the Second Naval District along the New England coast from Chatham, Mass., to New London, Conn. She was sold 25 February 1922 to George E. Clement & Son of Philadelphia.

Green Island

An island off the coast of Maine.

(YFB-32: dp. 167; l. 117'; b. 24'; dr. 8'9"; s. 9 k.)

Green Island (YFB-32), a wooden steam ferryboat, was built as *Aucoiseo* in 1897 by South Portland Shipbuilding Co., South Portland, Maine, and was acquired 3 April 1942 from her owner, Casco Bay Lines, Inc., Portland, Maine. She was placed in service with 1st Naval District 5 May 1942 at Portland, Maine, and renamed *Green Island*.

Used to transport fleet liberty parties in Casco Bay, Maine, *Green Island* continued in service until returned to her former owner 18 December 1945. Her name was struck from the Navy List 20 March 1946.

Green River

Rivers in Illinois, Kentucky, Washington, and Wyoming, Utah, and Colorado.

(LSMR-506: dp. 790; l. 206'3"; b. 34'6"; dr. 7'2"; s. 13 k.; cpl. 138; a. 1 5", 4 40mm., 8 20mm., 4 4.2" m., 10 rkt.; cl. *LSMR-401*)

LSMR-506 was laid down 31 March 1945 by Brown Shipbuilding Co., Inc., Houston, Tex.; launched 28 April 1945; and commissioned 19 June 1945, Lt. Howard E. Moore in command.

After shakedown off the East Coast, *LSMR-506* departed Portsmouth, Va. 7 August, enroute to San Diego, arriving there on the 29th. While enroute, World War II ended. *LSMR-506* was assigned to Squadron 3, operating along the West Coast from San Diego. Departing 18 March 1946, *LSMR-506* arrived Astoria, Oreg., 4 days later. She decommissioned 20 May 1946 and entered the

Pacific Reserve Fleet. While berthed with the Columbia River Group, she was named *Green River* 1 October 1955. Her name was struck from the Navy List 1 October 1958 and she was sold.

Greenbrier River

A river in southeastern West Virginia.

(LSMR-507; dp. 790; l. 206'3"; b. 34'6"; dr. 7'2"; s. 13 k.; cpl. 138; a. 1 5", 4 40mm., 8 20mm., 4 4.2" m., 10 rkt.; cl. LSMR-401)

LSMR-507 was laid down 31 March 1945 by Brown Shipbuilding Co., Houston, Tex.; launched 28 April 1945; and commissioned 22 June 1945, Lt. Alvin G. Walsler in command.

Departing Houston 27 June, LSMR-507 steamed via Galveston to Charleston, S.C., where she arrived 7 July. From 28 to 30 July she sailed to Little Creek, Va., for training in Chesapeake Bay and along the Virginia coast. Assigned to LSMR Squadron 4, she departed Little Creek 4 October for the Great Lakes. She touched at Halifax, Quebec, and Montreal and arrived Rochester, N.Y., 16 October. During the next 3 weeks she sailed to Detroit and Chicago before returning to Rochester 1 November, and then to Little Creek 17 November.

During the next 2 months LSMR-507 continued operations out of Little Creek. She departed 29 January 1946, for operations off San Juan, P.R., and later out of Guantanamo Bay. She returned to Little Creek 24 March.

Following duty out of Norfolk and Baltimore, LSMR-507 departed Little Creek for the West Coast 18 October, arriving San Diego 20 November. Assigned to LSMR Squadron 3, she operated out of San Diego; decommissioned there 5 February 1947; and entered the Pacific Reserve Fleet. While berthed at San Diego, she was named *Greenbrier River* 1 October 1955. Her name was struck from the Naval Register 1 October 1958.

Greencastle

A city in west-central Indiana and a borough in southern Pennsylvania.

(PC-1119; dp. 280; l. 173'8"; b. 23'; dr. 10'10"; s. 22 k.; cpl. 65; a. 2 3", 5 20mm., 2 rkt., 2 dcp., 2 det.; cl. PC-461)

Greencastle (PC-1119) was laid down as PC-1119 12 June 1942 by DeFoe Shipbuilding Co., Bay City, Mich.; launched 11 August 1942; and commissioned at New Orleans, La., 18 December 1942, Lt. Comdr. James Duffy in command.

After shakedown off Key West, she sailed 19 January 1943 for the Southwest Pacific. Steaming via New Caledonia, she reached Brisbane, Australia, 12 March and was assigned duty as flagship Allied Local Defense Forces, Northwest Australia. During the next 6 months she operated out of Brisbane, Townsville, and Cairns, Queensland, escorting convoys between Australia and New Guinea. During June and July she helped repel enemy planes that attacked Allied shipping at Port Moresby.

PC-1119 transferred her base to Milne Bay, New Guinea, in September, and from there she escorted convoys moving men and supplies along the coast of Huon Gulf. On 2 October she supported amphibious landings at Finschhafen, which was to become the jumping off point for the invasion of New Britain. Transferred to the 7th Amphibious Force 6 December, she supported the initial invasion during landings at Arawe, New Britain, 17 December. Nine days later she supported landings by the 1st Marine Division at Cape Gloucester; then, after steaming along the northern coast of New Guinea, she participated in the assault against Saidor 2 January 1944.

During the next 3 months PC-1119 escorted convoys along the New Guinea coast to the Admiralties and New Britain. She supported an amphibious landing at Tala-sea, New Britain, 7 March. Driving westward along New Guinea, she joined the assault at Aitape 22 April;

and, as an escort and patrol ship, she supported landings 3 July at Noemfoor, Schouten Islands. During this invasion she patrolled on anti-shipping sweeps as the Japanese attempted to send reinforcements by barge. After steaming to Australia in August, she returned to Aitape 3 September to prepare for operations in the Moluccas. Between 15 and 24 September she steamed off Morotai, where she controlled landing craft and provided antiaircraft cover for supply transports. Departing 24 September, she sailed via Biak to Humboldt Bay where she arrived the 28th.

PC-1119 departed 9 October for the invasion of the Philippines. Steaming via Manus, Admiralties, she closed the coast of Leyte 20 October. After laying down shoal bouys at the northern end of Leyte Gulf, she served as landing control ship during the assault against Tacloban airfield. She remained off Leyte; and between 23 and 25 October she helped repel heavy enemy air attacks, during which she splashed three Japanese raiders.

Late on the 25th she sailed to search for survivors from gallant ships lost during the Battle off Samar. During mid watch 27 October she rescued 183 men from *Gambler Bay* (CVE-73), then returned the same day to Leyte Gulf. Resuming duty as control and fire cover ship, she served in Leyte Gulf until 9 November. She sailed for New Guinea the 9th and reached Hollandia the 16th.

After repairs, she steamed to Sansapor, New Guinea, 12 December to prepare for the invasion of Luzon. Departing in convoy 30 December, she reached Lingayen Gulf 9 January 1945 and there served as control ship for the landings at San Fabian Beach. The Japanese launched heavy air attacks against American shipping; and, while PC-1119 was returning to Leyte as a convoy escort, she was narrowly missed by suicide planes on the 12th and 13th.

The veteran sub chaser returned to Luzon 29 January; and, after supporting landings at San Felipe and San Narciso by troops of the 8th Army, she arrived Subic Bay 3 February. On the 15th she escorted landing craft from Subic Bay for landings at Marivales, Bataan. The following day she served as fire support ship during the assault against Corregidor. As the first amphibious wave closed the beach, she poured gunfire into enemy pillboxes and gun positions and silenced two Japanese guns. She was briefly caught in enemy crossfire between Corregidor and Caballo. Although damaged by an enemy shell, she embarked casualties from LCM's and evacuated them while under fire to an offshore LST.

PC-1119 operated off western Luzon and Mindoro on antishipping sweeps until 11 March when she sailed for Leyte. Arriving the 14th, from 19 to 24 March she steamed via the Palaus to Hollandia. After repairing battle damage, she departed 30 June and returned to Subic Bay 8 July. During the next month she searched for enemy submarines off Luzon between Subic and San Fernando. Assigned to the Philippine Sea Frontier 14 August, after the end of hostilities she patrolled the South China Sea to accept the surrender of Japanese submarines.

Remaining in the Philippines after the end of the war, PC-1119, "a little ship with a number instead of a name," compiled a Pacific war record that equaled many a larger ship. Assigned to the 16th Fleet 19 March 1946, she returned to the United States and reported for duty 10 August. She decommissioned 9 January 1947 at Green Cove Springs, Fla., and entered the Atlantic Reserve Fleet. While berthed at Green Cove Springs, she was named *Greencastle* 15 February 1956. She was sold to Boston Metals Co., Baltimore, Md., for scrapping 1 July 1958.

Greencastle received five battle stars for World War II service.

Greene

Samuel Dana Greene, born 11 February 1839 in Cumberland, Md., was appointed acting midshipman 21 September 1855. He was executive officer in *Monitor* during her classic battle with ironclad *C.S.S. Virginia* 9 March 1862 and assumed command after his Captain Worden

was wounded. He was also executive officer in *Monitor* in the engagements in the James River, Va., April–May 1862, and when she foundered in a gale. Commander Greene died 11 December 1884 at Portsmouth, N.H., and was buried in Bristol, R.I.

(DD-266: dp. 1,215; l. 314'4½"; b. 30'11½"; dr. 9'4"; s. 34.12 k.; cpl. 122; a. 4 4", 1 3", 12 21" tt.; cl. *Clemson*.)

Greene (DD-266) was launched 2 November 1918 by the Bethlehem Shipbuilding Corp., Quincy, Mass.; sponsored by Mrs. John Stevens Conover, the namesake's daughter; and commissioned 9 May 1919, Comdr. R. A. Theobald in command.

Greene sailed from Newport 5 June 1919 for Brest via Plymouth, England, and returned to New York 27 July. Underway again 18 August, she put in at San Diego, Calif., 22 December and decommissioned there in March 1920. Remaining in the Reserve Destroyer Force until 10 September 1921, she sailed from San Diego that date for the Puget Sound Navy Yard. *Greene* returned shortly thereafter to San Francisco, arriving 2 December 1921, and decommissioned there 17 June 1922.

Recommissioned 28 June 1940 at San Diego, *Greene* was towed to San Francisco and was redesignated AVD-13 6 April 1941 following conversion. She sailed 27 April for the Caribbean and conducted training and tended seaplanes off Puerto Rico and Bermuda.

One week after the Japanese attacked Pearl Harbor *Greene* sailed for Brazil. Until the summer of 1942 she served as seaplane tender at Natal with one call at Rio de Janeiro for repairs in February 1942. She returned to Charleston 18 July 1942. She escorted a convoy from Norfolk to Bermuda and operated in the South Atlantic for the next 6 months as a convoy escort, making two voyages to Rio de Janeiro. Back at Norfolk 26 February 1943, she steamed thence to Argentina, Newfoundland, to operate with *Bogue*, one of the new escort carriers designed to hunt down German submarines in the North Atlantic. Both warships sailed 23 April to escort a convoy to Londonderry, Ireland, and made the eastward passage without incident. On the return leg of the voyage, however, one of the first major engagements between carrier-based aircraft and submarines attempting a rendezvous for mass attack occurred 21–22 May when *Bogue's* planes made six attacks on submarines and sank *U-569* in 50–40 N., 35–21 W. Twenty-four Germans were captured.

During a second antisubmarine patrol from 31 May to 20 June 1943, *Bogue* and her escorts, including *Greene*, shared repeated successes, sinking *U-217* 5 June in 30–18 N., 42–50 W., and *U-118* in 30–49 N., 33–49 W. one week later. For these two successful antisubmarine operations *Greene* received the Presidential Unit Citation. The *Bogue* group was the first of a series of hunter-killer units which was to spell the doom of the German submarine menace.

Subsequently, until the fall of 1943 *Greene* escorted a fast troop convoy from Norfolk to the United Kingdom and return, and operated off Bermuda. On 5 October she sailed as carrier escort for *Core* in company with *Belknap* and *Goldsbrough*. On 20 October the group sank *U-378* in 47–40 N., 28–27 W.

Greene returned to Charleston 19 January 1944 for conversion to high speed transport and was designated APD-36 on 1 February 1944. After intensive training she stood out 12 April for Oran, Algeria, to take part in Operation Dragoon—the invasion of Southern France. On 14 August, when she left the staging area at Propriano, Corsica, and landed American and Canadian troops on the Levant and Port Cros Islands off the coast of France between Toulon and Cannes. *Greene's* troops were assigned to the mission of seizing the strategic islands and silencing long range coastal batteries thought to be emplaced there. That day, the islands were secured—many of the German "guns" turned out to be stove pipes—and the stage was set for the 15 August D-day assault on the mainland.

With her tasks accomplished, *Greene* served on escort duty in the Mediterranean until departing Oran 6 December 1944 for Norfolk, where she put in 21 December. Underway once more 29 January 1945, the far-ranging warship steamed via Panama to reach Ulithi 31 March and commenced escort duties. During April she escorted four carriers to Okinawa while the battle for that island raged. She returned to Guam to meet another Okinawan convoy, and stood antisubmarine picket line duty off Okinawa. Until the fall of 1945 *Greene* continued escort duties between Okinawa, Saipan, and the Philippines. At war's end, she evacuated ex-prisoners of war from Nagasaki after that port had been razed by the second atomic bomb dropped on Japan, and moored at Okinawa 24 September.

Greene's long dynamic career came to an end in a dramatic manner. During the famous 9 October 1945 typhoon at Okinawa, winds in excess of 100 knots drove her aground on the northwest coast of Kutaka. Damaged beyond economical repair, all useful material was salvaged. She decommissioned 23 November 1945. *Greene* was struck from the Navy List 5 December 1945.

Greene received three battle stars and the Presidential Unit Citation for World War II service.

Greene, Howard, see *Howard Greene* (No. 2200)

Greenfish

One of various labroid fishes, Florida bluefish or ladyfish.

(SS-351: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 66; a. 1 5', 10 21" tt.; cl. *Balao*)

Greenfish (SS-351) was launched by the Electric Boat Co., Groton, Conn., 21 December 1945; sponsored by Mrs. Thomas J. Doyle; and commissioned 7 June 1946, Comdr. R. M. Metcalf commanding.

Greenfish's shakedown cruise 22 July to 13 September 1946, took her to Barranquilla, Colombia; the Canal Zone; Callao, Peru; and St. Thomas, Virgin Islands. Exercises out of New London and in Chesapeake Bay carried her through the year, and the early months of 1947 found *Greenfish* back in the Caribbean for fleet exercises. On 11 February 1947 she effected one of the first transfers of personnel from an aircraft carrier, *Franklin D. Roosevelt*, to a submarine by helicopter. Various exercises along the American coast and in the Caribbean occupied *Greenfish* until 8 January 1948, when she entered the Electric Boat Co. yards for GUPPY (Greater Underwater Propulsion Power) conversion.

This conversion included the installation of snorkeling equipment on *Greenfish* to enable her to steam on diesel engines while submerged, which required the enlargement of her "sail." In addition, more batteries were installed to increase her submerged speed and permit the ship to remain completely submerged for longer periods. Returning to New London 21 August 1948, *Greenfish* sailed on her "second" shakedown cruise 1 September, with Rear Admiral James J. Fife, Commander, Submarine Force, Atlantic Fleet, aboard. She transited the Panama Canal 9 September and engaged in exercises at Balboa before returning to New London 24 September.

The new GUPPY submarine was attached to the Pacific Fleet, and sailed for Pearl Harbor 23 October. She reached her new home 25 November 1948. With the exception of ASW and harbor defense exercises in Puget Sound January–February 1950 and a subsequent Mare Island overhaul, *Greenfish* operated out of Pearl Harbor on local exercises through 1951.

Departing Pearl Harbor 15 November 1951, *Greenfish* sailed to Yokosuka, Japan, for Korean War duty. After a patrol 31 January to 1 March 1952, she participated in

exercises at Okinawa and then returned to Hawaii 2 June. Local and special operations filled her time until 5 November 1954, when she entered the Pearl Harbor Shipyard for another modernization overhaul.

Greenfish, overhaul completed 6 July 1955, sailed for deployment with the 7th Fleet 15 September and reached Yokosuka 29 September. From 19 October to 15 November she engaged in special operations, and then embarked on a tour of Southeast Asia. Ports visited by *Greenfish* during her 2-month cruise include Manila, Singapore, Rangoon, where she was the first submarine ever to visit and was inspected by Burmese Prime Minister U Nu, and Hong Kong. After further exercises off Okinawa and Yokosuka, *Greenfish* returned to Pearl Harbor 13 March 1956.

The following 5 years fell into a pattern for *Greenfish*—local operations out of Pearl Harbor, special operations, exercises along the American coast, and periodic overhauls. *Greenfish* entered Pearl Harbor Shipyard 15 December 1960 for a FRAM (Fleet Rehabilitation and Modernization) overhaul and extensive conversion to a GUPPY-III class ship. This included cutting *Greenfish* in half and adding a 15-foot section of hull to permit more batteries and other equipment.

Conversion completed, *Greenfish* departed 28 July 1961 for shakedown, operations at Pearl Harbor, and in December sailed to serve with the 7th Fleet. In addition to special operations, the submarine participated in various fleet and ASW exercises and visited several ports, including Hong Kong, Manila, and Okinawa. Returning to Pearl Harbor June 1962, *Greenfish* engaged in local operations until October, when the Cuban missile crisis sent her to Japan to strengthen the 7th Fleet. Upon return to Hawaii December 1962, she underwent a brief overhaul and then resumed her peace time schedule of local and special operations interspersed with training exercises.

Based at Pearl Harbor, she participated in various ASW exercises while maintaining the high tempo of training and readiness for her crew. From 30 March 1964 to 4 September she underwent overhaul; and, after a cruise to the Pacific Coast and back, *Greenfish* departed for the Far East 27 January 1965. She arrived Japan early in February and during the next 4 months operated with the 7th Fleet in waters from Japan to the Philippines. She returned to Pearl Harbor 1 August, continued type training into 1966, and deployed once again to the Western Pacific 1 February 1966. She completed her duty with the 7th Fleet 1 July and returned to Hawaii later that month to resume readiness exercises out of Pearl Harbor. Into 1967 she continued to serve the cause of peace as a unit of the Pacific Fleet's powerful submarine force.

Greenlet

Any of several grayish, plainly colored, sweet singing birds of the *vireo* family, found primarily in the eastern United States.

(ASR-10: dp. 2,040; l. 251'4"; b. 42'; dr. 14'10"; s. 15 k.; cpl. 102; a. 2 3", 8 20mm., 2 dct.; cl. *Chanticleer*)

Greenlet (ASR-10) was laid down by Moore Dry Dock & Shipbuilding Co., Oakland, Calif., 15 October 1941; launched 12 July 1942; sponsored by Mrs. B. P. Flood; and commissioned 29 May 1943, Comdr. F. W. Laing in command.

After shakedown, *Greenlet* conducted patrol and escort runs out of San Diego before sailing for Pearl Harbor 24 July. Constructed as a submarine rescue ship, she served at Pearl Harbor and at Midway for more than a year, making escort runs and conducting refresher training for patrol-bound submarines. As the progress of the war advanced steadily across the Pacific, she sailed to Guam 21 December 1944 to carry invaluable submarine training closer to the patrol areas.

While at Midway and Guam, *Greenlet* helped train some 215 submarines, among them such fighting boats as *Tang*, *Tautog*, *Barb*, *Snook*, *Drum*, and *Rasher*. In-

directly, she contributed to the sinking of 794 enemy ships, including a battleship and 6 aircraft carriers. Eleven of the submarines trained by *Greenlet* were lost during the war, but her charges sank more than 2,797,000 tons of Japanese military and merchant shipping.

As the bloody war in the Pacific drew to a close, *Greenlet* departed Guam for Japan 16 August 1945. She reached Sagami Wan, Honshu, 28 August; entered Tokyo Bay the following day; and was present during the signing of Japanese surrender 2 September. After placing buoys over wrecks in the harbor and channel at Tokyo, she stripped and demilitarized Japanese miniature submarines based in Yokosuka harbor. On 1 November she escorted three Japanese fleet submarines to Sasebo and converted them for American crews. Departing Sasebo 11 December, she escorted former Japanese submarines *I-14*, *I-400*, and *I-401* to Pearl Harbor, where she arrived via Guam and Eniwetok 6 January 1946.

After returning to San Francisco early in 1946, *Greenlet* spent the following 5 years operating primarily out of San Diego where she trained divers and serviced submarines. From September 1946 to May 1947 and from September 1948 to March 1949 she deployed to the Western Pacific. Operating from the coast of China to the Philippines, she trained and supported fleet submarines stationed in the Far East.

As a result of Communist aggression in South Korea, *Greenlet* departed San Diego for the Far East 6 July 1950. During the next 6 months she operated out of Yokosuka while providing valuable services to the fighting submarine fleet. Sailing for Pearl Harbor 6 January 1951, she served there throughout the remainder of the Korean conflict and continued to provide assistance in the training of submarine crews.

Since the Korean Armistice in 1953, *Greenlet* has remained at Pearl Harbor, training divers and submariners, participating in readiness operations, and assisting in servicing and salvaging operations. On 29 May 1958 she unsuccessfully attempted to keep *Stickleback* (SS-415) afloat rammed during exercises off Ohau, Hawaii.

Between 1953 and 1967 *Greenlet* made eight deployments to the Western Pacific. Operating from Japan and Okinawa to the Philippines and Australia, she rendered training and repair services to submarines, trained divers, and participated in mine recovery and submarine rescue and salvage exercises. During rescue training duty 6 January 1964, she sent her submarine rescue chamber to a depth of 942 feet off the coast of Japan. From the conflict in Korea to the conflict in Vietnam she helped keep the men and boats of the submarine service ready to meet the vast responsibilities in the tension filled Far East.

Into 1967 the vital task of "keeping the peace" presents a greater challenge than ever before. To meet this challenge and to preserve the peace, she remains on duty with the U.S. Pacific Submarine Fleet, filling a most useful and vital role for the security of the free world and for the forces of freedom in Southeast Asia.

Greenling

An elongate, fine-scaled fish found from Kamchatka to California.

I

(SS-213: dp. 1526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 60; a. 1 3", 10 21" tt.; cl. *Gato*)

Greenling (SS-213) was launched by Electric Boat Co., Groton, Conn., 20 September 1941; sponsored by Mrs. R. S. Holmes; and commissioned at New London, Conn., 21 January 1942, Lt. Comdr. H. C. Bruton in command.

After shakedown training out of New London, *Greenling* departed 7 March 1942 for the Pacific. She arrived Pearl Harbor 3 April and sailed 20 April for her first war patrol in the Marshalls and Carolines. The submarine attacked cargo ship *Scia Maru* four times 30 April-1 May off Eniwetok, but due to faulty torpedoes was not able to

USS *Greenlet* (ASR-10) during December 1959

sink her. The tenacious submarine even closed for a night gunfire attack in an attempt to cripple her adversary. Finally forced by Japanese aircraft to break off the attack, *Greenling* turned her attention to the huge Japanese base at Truk. As the Japanese converged on the Solomons, Truk became a busy shipping point and a fertile ground for submarine operations. The submarine recorded her first kill 4 May when she hit cargo ship *Kinjosan Maru* amidships, breaking her in two. As the Japanese were turned back in the important Battle of the Coral Sea, history's first big carrier air battle, *Greenling* attempted to intercept the retiring enemy units, but her speed was no match for the fast Japanese heavy units. The submarine departed the Truk area 4 June, the day of Japan's first great naval defeat at the Battle of Midway, and arrived Pearl Harbor 16 June.

Greenling departed on her second war patrol 10 July 1942. One of the first submarines to operate in the Truk area, she now joined in the undersea blockade of that important base, in an attempt to cut its supply lines to Japan. After damaging ships 26 and 29 July *Greenling* sank transport *Brazil Maru* off Truk, and just after midnight the same night attacked cargo ship *Palau Maru*, which she torpedoed and sank. Next morning the submarine took periscope photographs of Truk, and steamed to the New Ireland area, attempting to intercept Japanese fleet units retiring from the Solomons. The submarine encountered surface opposition in the area, but evaded a destroyer attack 20 August and set course back to Midway. En route she destroyed a large Japanese trawler with her deck gun, and arrived Midway 1 September 1942.

Greenling's third war patrol took her off the Japanese home islands. Departing Midway 23 September, the submarine sank cargo ship *Kinkai Maru* 3 October, *Setsuyo Maru* the next day. She fired three torpedoes at cargo ship *Takusei Maru* 14 October, scored three hits, and watched her sink in the space of 6 minutes. This attack brought a host of escort vessels to search for *Greenling*, but she evaded them and attacked a large freighter 18 October. One torpedo set the target aflame, but the second "fish" ran erratically, circled, and almost hit *Greenling*. The next ran true, however, and cargo ship

Hakonesan Maru was sent to the bottom. After destroying a sampan in the Tokyo-Aleutians shipping lanes 21 October, *Greenling* returned to Pearl Harbor 1 November. The attrition on Japanese shipping by submarines was already being felt and would be a major factor in her eventual defeat.

Steaming into the Solomons-Truk area for her fourth war patrol, *Greenling* departed Pearl Harbor 9 December 1942. Immediately upon her arrival off Bougainville 21 December she attacked a tanker and two escorts, sinking *Patrol Boat 35* before being driven down by depth charge attacks. Moving to the familiar Truk traffic lanes, she sank freighter *Nissho Maru* 30 December. She attacked a large tanker with destroyer escort early 10 January 1943, but after scoring one hit was opened upon by the tanker's large deck gun and was forced to break off the action. Off New Britain 16 January she torpedoed and sank cargo ship *Kimposan Maru* and destroyed a tug with her deck gun, then reconnoitered the Admiralty Islands before steaming to Brisbane, Australia.

The submarine arrived Brisbane 31 January 1943 and remained there until departing on her fifth war patrol 21 February. *Greenling* steamed to the Solomons-Bismarck area, and landed a party of intelligence agents on the coast of New Britain 2 March. In a patrol characterized by bad weather, she scored no hits on enemy shipping and returned to Brisbane 26 April 1943.

Greenling cleared Brisbane 17 May to conduct her sixth war patrol in the Solomons-New Guinea area, long the scene of bitter sea and land fighting. During this patrol she damaged ships 9 June, 10 June, and 27 June, but was unable to record a sinking because of heavy escort activity. She returned to Brisbane 8 July 1943.

The submarine sailed 29 July on her seventh war patrol, which consisted largely of special missions. She landed a party of Marine Raiders in the Treasury Islands 22-23 August to select a site for a radar station and prepare for the landings there, scheduled for October. *Greenling* reconnoitered Tarawa 10 September and sailed to San Francisco via Pearl Harbor for overhaul.

Returning to action 5 December at Pearl Harbor, *Greenling* sailed for her eighth war patrol 20 December 1943,

in the Caroline Islands. She ended the old year with a late night attack, which sank freighter *Shoho Maru*, reconnoitered Wake Island, and returned to Midway 28 January 1944. Her ninth war patrol, 20 March–12 May 1944, was a special mission entailing photographic reconnaissance of Guam, Tinian, and Saipan in the Marianas Islands, work which did much to aid the coming amphibious campaign for the Marianas.

Greenling sailed from Pearl Harbor on her 10th patrol 9 July 1944. Operating off Formosa, she formed a coordinated attack unit with *Billfish* and *Sailfish*. Closely watched by enemy aircraft *Greenling* recorded no torpedo sinkings, though she sank a trawler with gunfire 8 August. She returned to Midway 12 September 1944.

The veteran submarine departed 5 October 1944 for her 11th war patrol, in the ocean approaches to Tokyo. Sighting a 5-ship convoy 7 November, she fired 4 torpedoes and sank both oiler *Kota Maru* and transport *Kiri Maru* 8. Continuing to prowl off Japan, *Greenling* sank her last ship 10 November 1944 when she torpedoed old destroyer *Patrol Boat 46*. She returned to Pearl Harbor 23 November 1944.

Greenling's last war patrol, her 12th, was carried out in the Nansei Shoto Islands. Departing Pearl Harbor 26 December she found no targets until 24 January 1945, when she intercepted a nine-ship convoy. While making her approach *Greenling* was attacked by escorts, and after a 4-hour depth charge attack managed to make her escape. The submarine suffered minor damage and steamed to Saipan 27 January 1945 for repairs. There it was decided to send her to the United States, and *Greenling* steamed via Pearl Harbor to San Francisco, thence through the Canal to Portsmouth, N.H. After overhaul at Portsmouth Naval Shipyard, the submarine decommissioned 16 October 1946 at New London, Conn.

Greenling was placed in service for the 1st Naval District in December 1946. Stationed at Portsmouth, N.H., she assisted in the training of reservists there and at Boston. The submarine continued this vital service until 18 March 1960, when she was placed out of service at Boston. She was sold 16 June 1960 to Minichiello Brothers, Chelsea, Mass., and scrapped.

Greenling received ten battle stars for World War II service and a Presidential Unit Citation for her outstanding performance in her first three war patrols. All her patrols except the fifth, tenth, and twelfth were designated successful.

II

(SS(N)-614; dp. 3732; l. 292'3"; b. 31'8"; dr. 24'; s. over 30 k.; cpl. 99; a. 4 21" tt.; cl. *Thresher*)

The second *Greenling* (SS(N)-614), an attack submarine, was launched by Electric Boat Co., Groton, Conn., 4 April 1964; sponsored by Mrs. H. C. Bruton; and commissioned 3 November 1967, Comdr. Guy H. B. Schaffer in command.

Greensboro

A city in North Carolina.

(PF-101; dp. 1,264; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*)

Greensboro (PF-101), ex-PG-209, ex-MC Hull 1973 was launched under Maritime Commission contract 9 February 1944 by the American Shipbuilding Co., Cleveland, Ohio; sponsored by Mrs. C. I. Carlson; and commissioned at the Coast Guard Yard, Curtis Bay, Md., 29 January 1945, Lt. Cmdr. Henry P. Kniskern, USCG, in command.

Manned by a Coast Guard crew, *Greensboro* remained at Curtis Bay, Md., undergoing outfitting and conversion for weather patrol duty. On 14 February she cleared Baltimore Harbor for Bermuda via Norfolk for shake-down, then escort duties to Guantanamo Bay, Cuba, and Kingston, Jamaica.

Greensboro arrived Boston 23 March for further conversion to air-sea rescue and weather patrol ship. Sailing 11 April she conducted ASW exercises out of Casco Bay,

Maine, en route to Argentia, Newfoundland, arriving 22 April. For 10 months she performed vital air-sea rescue and weather patrol duty, with occasional escort missions, operating out of Newfoundland, the Azores and Recife, Brazil. *Greensboro* returned to Boston 17 February 1946 and remained there until she decommissioned 14 March 1946. Her name was struck from the Navy List 23 April 1947 and sold for scrapping 22 April 1948 to the Southern Shipbuilding Co., New Orleans, La.

Greenville Victory

A former name retained.

(T-AK-237; dp. 4,512; l. 455'3"; b. 62'; dr. 28'6"; s. 17 k.; cpl. 52; a. none; T. VC2-S-AP3)

Greenville Victory (T-AK-237) was laid down under Maritime Commission contract by California Shipbuilding Corp., Los Angeles, Calif.; 21 March 1944; launched 28 May 1944; sponsored by Miss Mary J. Vukov; and delivered to WSA 8 July 1944.

During the remainder of the war, *Greenville Victory* served as a merchant ship under charter to Sea Shipping Co. of New York. Following World War II, she transported cargo in the Atlantic and the Pacific. She was transferred to the Army Transportation Service in the spring of 1948. Acquired by the Navy 1 March 1950, she was assigned to MSTs.

Manned by a civilian crew, *Greenville Victory*, from 1950 to 1953, operated in the Atlantic and the Caribbean, carrying military cargo to French, English, and German ports; Guantanamo Bay; and the Canal Zone. Between 19 February and 9 May she sailed out of New York to the Far East and back, loaded with ammunition for Korea. After completing a run to Europe and back, she again departed New York 9 July for the Far East. She reached Yokohama, Japan, 9 August and during the next 2 months operated in the Western Pacific, carrying ammunition to Formosa and to French forces fighting Communist Viet-Minh guerillas in French Indochina. Sailing from Yokohama 4 October via San Francisco, she reached New York 6 November 1953 to resume cargo runs to Europe.

During the next 2 years, *Greenville Victory* steamed primarily between New York and West European ports. In June and July 1954 she sailed to the Western Mediterranean to replenish at sea ships of the mighty 6th Fleet. On 16 November she departed Newport, R.I., for Antarctica and arrived at McMurdo Sound 16 January 1956 to provision ships of Task Force 43. Departing Antarctica 5 February, via New Zealand, she arrived New York 28 March.

Between 1956 and 1964 *Greenville Victory* maintained a busy schedule transporting cargo to American bases scattered throughout the world. She replenished Task Force 43 on three more Antarctic deployments; and, from December to February of 1956–57, 1957–58, and 1960–61, she operated in Antarctic waters. Cargo runs sent her to the Caribbean in 1958, 1960, and 1962 and to Thule, Greenland, during September and October 1958. She also deployed with the 6th Fleet five times between June 1956 and March 1964; and on two deployments in 1963 and 1964 she transited the Suez Canal, steaming to India and Pakistan.

Greenville Victory departed Norfolk, Va., 6 October 1964 to participate in the massive transatlantic trooplift exercise, "Steel Pike I." Departing Morehead City, N.C., 8 October, she closed the Spanish coast off Rota 19 October. For more than 2 weeks she discharged supplies and cargo in support of amphibious and shore operations. Departing Rota 7 November, she steamed via Morehead City to New York, arriving 20 November.

In response to American determination to protect the integrity and independence of South Vietnam from external Communist aggression, *Greenville Victory* departed New York 22 November for duty in the Western Pacific. Sailing via San Diego, she arrived Guam 24 December. During the next month she steamed to Okinawa, Korea,

and Japan, carrying cargo. Arriving Manila, Philippines, 26 January 1965, she sailed the 28th for Pearl Harbor and San Francisco. After reaching the West Coast 25 February, she made a run out of San Francisco to Seattle, Wash., then sailed for the Gulf Coast 15 March, arriving New Orleans the 28th.

During the next 5 months, *Greenville Victory* made cargo runs in the Atlantic out of Norfolk and New York. She departed New York 20 October after a voyage to Labrador and back; and, steaming via Norfolk and Long Beach, she reached Yokohama, Japan, 22 November. Loaded with military cargo, she sailed for South Vietnam the 30th and arrived Saigon 16 December. The following day she sailed via Vung Tau for the West Coast, arriving San Francisco 3 January 1966.

Greenville Victory replenished her holds with vital military supplies for the forces of freedom in Southeast Asia before returning to the Western Pacific. Sailing via Sasebo, Japan, she reached Bangkok, Thailand, 13 February, sailed the 22d for South Vietnam and arrived Vung Tau the next day. Having unloaded, she sailed 1 March for the West Coast to transport additional military material from the United States to Vietnam. She continued operations between the United States and the Western Pacific until transferred to the Atlantic at mid-year. In 1967 she is busy supplying Allied forces in Europe.

Greenwell, Nettie B., see YF-543

Greenwich

A former name retained.

(Whaler: t. 338; epl. 25; a. 10 guns)

Prize ship *Greenwich* was a whaler cruising as a letter-of-marque ship and was captured off the Galapagos Islands by *Essex*, Lt. David Porter, 28 May 1813. Porter converted her to a storeship and placed her under the command of Lt. John M. Gamble, of the Marine Corps. *Greenwich* cruised with *Essex* off South America until 3 October 1813 when the ships departed for the Marquesas Islands for overhaul and provisioning.

Upon his arrival in the Marquesas, Porter erected a fort on what he called Madison Island, and before leaving for Chile 12 December placed prizes *Greenwich*, *Seringapatam*, and *Sir Andrew Hammond* under the protection of its guns. Soon after Porter's departure, Gamble, who was left in charge, was forced to land a detachment to quiet the threatening natives.

Lieutenant Gamble, despairing of Porter's return, began to prepare for departure from the islands in April 1814 by rigging *Seringapatam* and *Sir Andrew Hammond* for sea. Evidence of an impending mutiny was discovered, and although Gamble transferred all ammunition to *Greenwich* as a precaution, the mutineers attacked and captured *Seringapatam* 7 May 1814, wounding Gamble. Two days later the determined officer attempted to get *Sir Andrew Hammond* to sea, but was attacked again, losing four of his men.

His entire party now reduced to eight men, only four of whom were fit for duty, Gamble finally put to sea in *Sir Andrew Hammond* and made the 2,000-mile voyage to the Sandwich Islands without a chart, only to be captured there by the British 19 June 1814. *Greenwich* was burned by Gamble before he departed the Marquesas.

Greenwich Bay

A bay off the Rhode Island coast.

(AVP-41; d. 1,766 t.; l. 310'9"; b. 41'1"; dr. 13'6"; s. 18 k.; a. 1 5", 6 40mm.; epl. 315; cl. *Barnegat*)

Greenwich Bay (AVP-41) was launched 17 March 1945 by the Lake Washington Shipyard, Houghton, Wash.; sponsored by Mrs. Francis B. Johnson, wife of the Com-

mander Fleet Air Wing 6; and commissioned 20 May 1945, Comdr. Peter F. Boyle in command.

Departing San Diego 26 August after an intensive shakedown, the new seaplane tender sailed for Taku, China, 5 October via Pearl Harbor, Midway, and Okinawa. *Greenwich Bay* spent the rest of 1945 along the China coast, touching at Tsingtao and Shanghai as well as Taku, tending seaplanes of the 7th Fleet. She operated in Japanese waters during January 1946, and after a short stint in the Philippines, sailed for the States 1 May. Reaching Norfolk 1 July 1946 via Hong Kong, Singapore, Naples, Casablanca, and Gibraltar, *Greenwich Bay* continued on to New York for overhaul.

Greenwich Bay reported to the Potomac River Naval Command 19 February 1947 to serve as escort to *Williamsburg*, the Presidential Yacht. This assignment ended 21 June 1948 as she departed Norfolk for an around-the-world cruise. During her 4 month sailing, *Greenwich Bay* made good-will visits to Gibraltar, Port Said, Muscat, Bahrain, Kuwait, Trincomalee (India), Fremantle, Pago Pago, Papeete (Tahiti), and Coco Solo before returning to Norfolk 14 October.

Greenwich Bay sailed 30 April 1949 to assume duties as flagship for Commander, U.S. Navy Middle East Force. Every year since then she has repeated this duty, sailing through the Mediterranean to operate as flagship in the Red Sea, Persian Gulf, and Indian Ocean for 4 to 6 months. In addition to operating with Allied naval units in these areas, *Greenwich Bay* has done extensive work in the People-to-People program, particularly in carrying drugs and other medical supplies to the Arabian and African nations and operated as an important tool of diplomacy, helping to maintain peace in this oil-rich land.

In 1950 the tender's crew distinguished itself in Bahrain, Arabia, as Air France planes crashed there on 13 and 15 June while attempting to make early-morning landings on a fog-shrouded field. *Greenwich Bay* sent out a total of six search-and-rescue missions on the 2 tragic days. On 15 June one of her launches, containing both her captain and medical officer, succeeded in rescuing nine survivors of the crash. For her heroic action *Greenwich Bay* received the special commendation and thanks of both the Arabian and French governments.

When the Suez Crisis flared up in 1956 and seemed to threaten war, *Greenwich Bay* extended her normal cruise in the Persian Gulf to be able to evacuate American dependents and civilians if necessary. As a result of the blocking of the canal, she had to return to the States around the Cape of Good Hope. In her Middle East duties, which are punctuated by local operations and exercises out of Norfolk, *Greenwich Bay* has been visited by many outstanding figures, including King Ibn Saud of Saudi Arabia, the Shah of Iran, His Imperial Majesty Haile Selassie of Ethiopia, and the Shaikh of Kuwait.

Ports which she has visited as part of her official duties as flagship include virtually every major Mediterranean, Persian Gulf, Indian Ocean and Red Sea city as well as several African ones. Among them are Recife, Lisbon, Malta, Bombay, Istanbul, Athens, Beirut, Mombassa (Kenya), Cannes, Karachi, and Madras. *Greenwich Bay* has made 15 Mediterranean deployments protecting American interests and helping to maintain peace in the Middle East. In a conversation with Admiral R. R. Carney and Captain (now Rear Admiral) E. M. Eller, Commander Middle Eastern Force, the late King Iban Saud expressed the Navy's role in this historic region: "The Navy loves freedom. It is the Bedouin of the sea."

Greenwich Bay was struck from the Navy List 1 July 1966 and sold to Boston Metals Co., Baltimore, Md.

Greenwood

Frank Greenwood was born in Methuen, Mass., 10 January 1915 and enlisted in the Naval Reserve 17 July 1940. He was later appointed Midshipman, received training at the Naval Reserve Midshipman's School, and commissioned 12 December 1940. Lt. (j.g.) Greenwood was

killed 12 November 1942 when his ship *Eric* was torpedoed while on convoy duty in the Caribbean.

(DE-679: dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 23.5 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 3 21" tt., 2 dct., 8 dcp., 1 dep. (hh); cl. *Buckley*)

Greenwood (DE-679) was launched by the Fore River Ship Yard, Quincy, Mass., 21 August 1943; sponsored by Mrs. Laura Greenwood, mother of Lt. (j.g.) Greenwood; and commissioned 25 September 1943, Lt. Comdr. A. W. Slayton in command.

Greenwood sailed for the Pacific 29 November 1943, reaching Samoa, via the Panama Canal 26 December. She spent nearly a year in the South Pacific escorting transports and cargo ships through the New Hebrides and the Solomons, with side trips to Australia. On 30 December 1944 *Greenwood* sailed from New Guinea to join Admiral Kinkaid's 7th Fleet at Leyte Gulf. After escorting 26 merchantmen and LSTs to the Philippines and screening them while there, *Greenwood* sailed for Ulithi. There she picked up a convoy of supply and troop ships bound for Iwo Jima, still the scene of bloody battle, and sailed 5 March. Departing the Iwo Jima area 27 March, *Greenwood* sailed to Eniwetok, where she conducted submarine and antisubmarine training exercises.

After war's end, *Greenwood* sailed for a much-needed overhaul at Mare Island, and on 4 September 1945 steamed under the Golden Gate Bridge to end 22 months continuous service in the Pacific.

Following overhaul, *Greenwood* sailed for the East Coast via Panama 2 January 1946. After exercises with the Atlantic Fleet at Panama, she continued to New London, arriving 10 April. The following 3 years saw *Greenwood* functioning as an escort along the East Coast from Maine to Key West. On 2 May 1949 she reported at Key West for duty as school ship for the Fleet Sonar School, and remained in that useful service for nearly 6 years. After tours of escort duty at Norfolk and Newport, R.I., 1954 through 1957 *Greenwood* returned to Key West in July 1957. Six months later she was designated Selected Reserve Training Ship for the 6th Naval District, based at Charleston.

Placed out of commission in service 2 September 1958, *Greenwood* served as a reserve training ship until 2 October 1961, when she recommissioned in response to the renewed Berlin crisis. After training along the coast, she reported to Key West for further duty with the Fleet Sonar School 7 January 1962. As world tension eased, *Greenwood* decommissioned again 1 August 1962 but again stayed in service. Operating out of St. Petersburg, Fla., she continued to conduct reserve training cruises designed to keep the Navy's fighting strength and potential at their peak through the next five years. *Greenwood* was struck from the Navy List 20 February 1967 and sold for scrapping. *Greenwood* received 2 battle stars for World War II service.

Greer

James A. Greer, born 28 February 1833 in Cincinnati, Ohio, enlisted in the Navy in 1848. He entered the Naval Academy in 1853 and graduated as a Passed Midshipman the following year. After participating in the Paraguay Expedition, he cruised the west African coast until the outbreak of the Civil War. Greer was serving on board *San Jacinto* 7 November 1861 when she stopped the British steamer *Trent* and removed the Confederate commissioners on their way to England, thereby nearly drawing Great Britain into the war on the Confederate side. Greer served in St. Louis from 1862 to 1863 and was then attached to Rear Admiral Porter's Mississippi Squadron. While in command of the ironclads *Carondelet* and *Benton*, he participated in the Vicksburg campaign and the shelling of Grand Gulf as well as the abortive Red River expedition. After commanding the Naval Station at Mound City, he assumed command of the flagship *Blackhawk* and then was in charge of conveying Army transports up the Tennessee River. A tour of duty as

Assistant to the Commandant at Annapolis after the war was followed by command of *Mohongo* on the Pacific Station, where Greer was commended for defending American interests in Mexico. After duty at the Naval Academy between 1869 and 1873, Greer returned to the Pacific Station. In 1878 he commanded *Tigress* when that ship was sent to find and aid *Polaris*, wrecked on an Arctic expedition. After special service in *Constitution* during the Paris Exposition, Greer held a variety of shore posts and then served as commander of the European Squadron from 1887 to 1889. Promoted to Rear Admiral in 1892, he retired 28 February 1895. Admiral Greer died in Washington 17 January 1904.

(DD-145: dp. 1,165; 314'4"; b. 30'11"; dr. 9'; s. 35 k.; cpl. 133; a. 4 4", 1 3", 12 21" tt.; cl. *Wickes*)

Greer (DD-145) was launched by William Cramp & Sons Ship & Engine Building Co., Philadelphia, Pa., 1 August 1918; sponsored by Miss Evelina Porter Gleaves, daughter of Rear Admiral Gleaves; and commissioned 31 December 1918, Comdr. C. E. Smith in command.

Greer's shake down took her to Azores, from which she rendezvoused with *George Washington*, carrying President Woodrow Wilson home from the Versailles Peace Conference, and escorted her to the United States. After exercises in coastal waters, *Greer* was assigned to Trepassy Bay, Newfoundland, for duties during a transatlantic flight by four Navy seaplanes, one of which, NC-4, safely completed the historic undertaking. After further training exercises and a European cruise, *Greer* was assigned to the Pacific Fleet, reaching San Francisco 18 November 1919.

Six months' duty with the Pacific Fleet terminated 25 March 1920 when *Greer* sailed to join the Asiatic fleet. After standing by off Shanghai to protect American lives and property during riots there in May, *Greer* sailed to Port Arthur and Darien on intelligence missions and returned to Cavite, P.I., for fleet exercises. The destroyer returned to San Francisco 29 September 1921 via Guam, Midway, and Pearl Harbor. *Greer* decommissioned at San Diego 22 June 1922, and was placed in reserve.

Greer recommissioned 31 March 1930, Comdr. J. W. Bunkley in command. Operating with the Battle Fleet, she participated in a variety of exercises along the coast from Alaska to Panama, with an occasional voyage to Hawaii. Transferred to the Scouting Fleet 1 February 1931, she cruised off Panama, Haiti, and Cuba before being attached to the Rotating Reserve from August 1933 to February 1934. Training exercises, battle practice, and plane guard duty filled *Greer's* peacetime routine for the next 2 years. She sailed for the East Coast and duty with the Training Squadron 3 June 1936. After conducting Naval Reserve cruises throughout that summer, *Greer* sailed for the Philadelphia Navy Yard 28 September and decommissioned there 13 January 1937.

As war swept across Europe, *Greer* recommissioned 4 October 1939, Comdr. J. J. Mahoney in command, and joined Destroyer Division 61 as flagship. After patrolling the East Coast and Caribbean, *Greer* joined the Neutrality Patrol in February 1940. Detached from this duty 5 October, the destroyer patrolled the Caribbean that winter. She joined other American ships on operations in the North Atlantic early in 1941, out of Reykjavik, Iceland, and Argentia, Newfoundland. United States ships, as non-belligerents, could not attack Axis submarines; but, as the German high command stepped up the pace of the war through the summer of 1941, *Greer* found herself involved in an incident which brought America's entry into the war nearer.

The "Greer Incident" occurred 4 September. At 0840 that morning *Greer*, carrying mail and passengers to Argentia, was signaled by a British plane that a Nazi submarine had crash-dived some 10 miles ahead. Forty minutes later the DD's soundman picked up the undersea marauder, and *Greer* began to trail the submarine. The plane, running low on fuel, dropped four depth charges at 1032 and returned to base, while *Greer* continued to dog

the U-boat. Two hours later the German ship began a series of radical maneuvers and *Greer's* lookouts could see her pass about 100 yards off. An impulse bubble at 1248 warned *Greer* that a torpedo had been fired. Ringing up flank speed, hard left rudder, *Greer* watched the torpedo pass 100 yards astern and then charged in for attack. She laid a pattern of eight depth charges, and less than two minutes later a second torpedo passed 300 yards to port.

Greer lost sound contact during the maneuvers, and began to quarter the area in search of the U-boat. After 2 hours, she reestablished sound contact and laid down a pattern of 11 depth charges before discontinuing the engagement. *Greer* had held the German raider in sound contact 3 hours and 28 minutes; had evaded two torpedoes fired at her; and with her 19 depth charges had become the first American ship in World War II to attack the Germans.

When news of the unprovoked attack against an American ship on the high seas reached the United States, public feeling ran high. President Roosevelt seized this occasion to make another of his famed "fireside chats," one in which he brought America nearer to outright involvement in the European war. Declaring that Germany had been guilty of an act of piracy, President Roosevelt in effect unleashed American ships and planes for offensive action as he stated "in the waters which we deem necessary for our defense, American naval vessels and American planes will no longer wait until Axis submarines lurking under the water, or Axis raiders on the surface of the sea, strike their deadly blow—first." The period of "undeclared war" in the Atlantic had begun.

Greer remained in the North Atlantic through 1941, shepherding convoys to and from MOMP, the mid-ocean meeting point at which American ships took over escort duties from the hard-pressed Royal Navy. After overhaul at Boston, she turned south 3 March 1942 to resume patrol duty in the Caribbean, fast becoming a favorite German hunting ground. In addition to regular escort duties, *Greer* performed many other tasks, including rescuing 39 victims of German U-boats. In May she stood guard off Pointe a Pitre, Guadeloupe, lest the Vichy French government try to get cruiser *Jeanne d'Arc* to sea.

Sailing from Guantanamo 23 January 1943, *Greer* sailed to Boston then headed for the Atlantic convoy duty. Departing Argentia, Newfoundland 1 March 1943, she escorted merchantmen for Northern Ireland. During heavy North Atlantic gales, the convoy lost seven ships to three separate U-boat attacks before reaching Londonderry 13 March. *Greer* then escorted 40 merchantmen on the return voyage without incident, and continued on to Hampton Roads 15 April with tanker *Chicopee*.

After exercises in Casco Bay, *Greer* departed New York 11 May with a convoy of 83 ships. Reaching Casablanca, Morocco, 1 June, the destroyer patrolled off the North African port and then recrossed the Atlantic, arriving New York 27 June. After another run to Northern Ireland, *Greer* returned to New York 11 August.

After steaming to Norfolk, she sailed for the British West Indies 26 August to serve briefly as plane guard to *Santee*. She rendezvoused with a convoy in the Caribbean and headed for North Africa. Diverted to New York, she docked there 14 September. Routine training exercises turned into tragedy 15 October as *Greer* collided with *Moonstone* (PYC-9) in the New York Harbor. *Moonstone* sank in less than 4 minutes, but *Greer* rescued all the crew but one.

After repairs, the destroyer escorted French cruiser *Gloire* from New York to Norfolk. *Greer* sailed 26 December with another Casablanca-bound convoy and after an uneventful crossing returned to Boston 9 February 1944. This was the final transatlantic crossing for the old four-stack destroyer, as she and her sister ships were replaced by newer and faster escorts.

The veteran destroyer spent the remainder of her long career performing a variety of necessary tasks in American waters. After a tour of submarine training duty at New London, *Greer* became plane guard for several

new carriers during the summer of 1944. Operating from various New England ports, she served with *Ranger*, *Tripoli*, *Mission Bay*, and *Wake Island*. Sailing to Key West in February 1945, *Greer* continued plane guard duty until 11 June when she sailed to the Philadelphia Navy Yard.

Greer decommissioned 19 July 1945. Her name was struck from the Navy list 13 August and her hulk was sold to the Boston Metal Salvage Co. of Baltimore 30 November 1945.

Greer received one battle star for World War II service.

Greer, Charles R., see *Charles R. Greer* (DE-23)

Greer County

A county in Oklahoma.

(LST-799: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 119; a. 8 40mm., 12 20mm.; cl. LST-542)

LST-799 was laid down by Jeffersonville Boat & Machine Co., Jeffersonville, Ind., 25 August 1944; launched 3 October; sponsored by Miss Mary R. Whalen; and commissioned at New Orleans 21 October, Lt. Daniel C. Millet in command.

Following shakedown off Florida, *LST-799* loaded construction equipment at Gulfport, Miss., and steamed 29 November for the West Coast. Loading ammunition cargo at San Francisco she departed 13 February 1945; and arrived Saipan 24 March. Two days later she was en route to Okinawa, where the largest amphibious operation of the Pacific war was about to begin. Under the threat of enemy air raids, *LST-799* approached the beaches of Okinawa 2 April, one day after the initial landings. On 3 April *LST-599* was hit by a kamikaze and a fire-rescue party from *LST-799* assisted in extinguishing the blaze caused by the impact.

The landing ship was on General Quarters consistently during the next month as the enemy made a futile effort to stop the accelerating American drive across the Pacific toward Japan. Departing Okinawa 8 May, *LST-799* sailed to Ulithi and for the rest of the war shuttled cargo among the American held bases. Following the hard fought victory which ended World War II, she supported occupation forces in Japan and the Philippines until 22 April 1946 when she decommissioned at Japan.

Following the Communist aggression in Korea in the summer of 1950, *LST-799* recommissioned at Yokosuka 26 August 1950. On 5 September she departed with a cargo of ammunition and provisions, arriving Pusan, Korea 2 days later. There she loaded a tank unit of the 5th Marines and sailed for the landings at Inchon. The magnificently executed landings turned the tide of the conflict. General MacArthur summed up the success of the 15 September assault: "The Navy and Marines have never shone more brightly than this morning."

After the Inchon landings, *LST-799* sailed for Wonsan, arriving there 25 October. During December an overhaul was interrupted to participate in the evacuation of American and South Korean troops at Hungnam. On 24 December she embarked final covering elements of the U.S. 3d Division, and sailed for Pusan arriving the 27th.

In early 1951, she completed overhaul and was equipped with helicopter landing facilities. Assigned as a mine squadron flagship, she performed logistic support for minesweepers off the Korean east coast. She remained off Korea until September 1952; and, in addition to logistics, performed helicopter rescue operations, engaged in the coastal blockade, and participated in the Wonsan Harbor Control System.

Following extended overhaul at Long Beach, Calif., *LST-799* returned to the Western Pacific 9 April 1953. She resumed duties out of Wonsan as a Mine Squadron Flagship. After the armistice, she continued evacuation and training in the Far East, until sailing for the United States late in November 1953.

From 1954 to 1956, *LST-799* made two cruises to the Western Pacific. On 1 July 1955, she was named *Greer County*. Upon return from her 1956 cruise, she became Flagship of Mine Squadron 7 operating along the West Coast. She decommissioned 18 January 1960. *Greer County* was struck from the Navy List 1 November 1960 and she was sold for scrapping.

LST-799 received one battle star for World War II service and nine stars for the Korean conflict.

Gregory

Francis Hoyt Gregory was born in Norwalk, Conn., 9 October 1789. While in the merchant service, he was impressed by the British in an incident typical of those which led in part to the War of 1812. After escaping, Gregory was appointed a midshipman 16 January 1809 by President Jefferson and reported to *Rvenge*, commanded by Oliver Hazard Perry. In March 1809 he was transferred to the Gulf Squadron at New Orleans. While serving in *Vesuvius* and as captain of *Gun Boat 162*, Gregory participated in the capture of an English brig smuggling slaves into New Orleans and three Spanish pirate ships. During the War of 1812, he served on Lake Ontario under Commodore Isaac Chauncey and participated in attacks on Toronto, Kingston, and Fort George. In August 1814 Gregory was captured by the British; refused parole, he was sent to England and remained there until June 1815.

After he was released by the British, Gregory joined the Mediterranean Squadron and operated along the North African coast until 1821. In that year he became captain of *Grampus* and spent the following 2 years cruising the West Indies, to suppress piracy. While in the Indies, Gregory captured the notorious pirate brig *Panchita* and destroyed several other pirate ships. After fitting out the frigate *Brandywine*, destined to carry LaFayette back to France, in 1824, Gregory sailed a 64 gun frigate to Greece for the revolutionary government. From 1824-1828 he served at the New York Navy Yard, and in 1831 reported to the Pacific Station for a 3-year cruise in command of *Falmouth*. Gregory served as commander of the Station for 1 year.

From the Pacific, Gregory—appointed a Captain in 1838—sailed to the Gulf of Mexico, where he commanded *North Carolina* and *Raritan* and served in the blockade of the Mexican coast during the war with that country. After the Mexican War, Gregory commanded the squadron off the African coast, with *Portsmouth* as his flagship, until June 1851. Returning to the States, he became Commandant of the Boston Navy Yard in May 1852 and served there through February 1856. His subsequent retirement ended a navy career which spanned nearly 50 years. When the bloody Civil War rolled across the land, Gregory returned to naval service to superintend the building and fitting out of naval vessels in private shipyards. Promoted to Rear Admiral 16 July 1862, he served throughout the 4 years of war and then retired again. Admiral Gregory died 4 October 1866 in Brooklyn, and was buried at New Haven, Conn.

I

(DD-82: dp. 1,191; l. 314'4"; b. 30'11"; dr. 9'2"; s. 34.75 k.; a. 4 4", 12 21" tt.; cpl. 141; cl. *Wickes*)

Gregory (DD-82) was launched 27 January 1915 by the Fore River Ship Building Co., Quincy, Mass.; sponsored by Mrs. George S. Trevor, great-granddaughter of Admiral Gregory; and commissioned 1 June 1918, Comdr. Arthur P. Fairfield in command.

Joining a convoy at New York, *Gregory* sailed for Brest, France, 25 June 1918. She spent the final summer of the war escorting convoys from the French port to various Allied ports in Britain and France. As the war neared its close, *Gregory* was assigned to the patrol squadron at Gibraltar 2 November 1918. In addition to patrolling in the Atlantic and Mediterranean, *Gregory* carried passengers and supplies to the Adriatic and aided in the execu-

tion of the terms of the Austrian armistice. After six months of this duty, the flush-deck destroyer joined naval forces taking part in relief missions to the western Mediterranean 28 April 1919. In company with USS *Arizona*, *Gregory* carried supplies and passengers to Smyrna, Constantinople, and Batum. She then sailed for Gibraltar with the American consul from Tiflis, Russia and some British army officers. Debarking her passengers on the rocky fortress, *Gregory* sailed for New York reaching the States 13 June 1919.

After brief tours in reserve at Tompkinsville, N.Y., the Brooklyn Navy Yard, and the Philadelphia Navy Yard, *Gregory* sailed to Charleston, S.C., 4 January 1921. A year of local training operations out of the southern port ended 12 April 1922 when *Gregory* entered the Philadelphia Navy Yard. She decommissioned 7 July 1922 and went into reserve.

As war broke again over Europe, threatening to involve the United States, *Gregory* and three other four-stackers were taken out of mothballs for conversion to high-speed transports. The DDs were stripped of virtually all their armament to make room for boats, while other important modifications were made for troops and cargo. *Gregory* recommissioned 4 November 1940 as APD-3 and joined *Little*, *Colhoun*, and *McKean* to form Transport Division 12. None of these valiant ships were to live through the Pacific war—all but *McKean* were lost during the Guadalcanal campaign.

Gregory and her sister APD's trained along the East Coast for the following year perfecting landing techniques with various Marine divisions. On 27 January 1942, with war already raging in the Pacific, she departed Charleston for Pearl Harbor. Exercises in Hawaiian waters kept TransDiv 12 in the Pacific through the spring, after which they returned to San Diego for repairs. They sailed for the Pacific again 7 June, reaching Pearl Harbor a week later to train for the upcoming invasion of Guadalcanal, America's first offensive effort in the long Pacific campaign.

Departing Noumea 31 July 1942, *Gregory* joined TF 62 (Admiral Frank Jack Fletcher) and steamed for Guadalcanal. After sending her Marines ashore in the first assault waves 7 August, *Gregory* and her sister APD's remained in the area performing a variety of tasks in one of history's most desperately fought over areas. The versatile ships patrolled the waters around the hotly-contested islands—waters which were to gain notoriety as "Iron Bottom Sound"—and brought up ammunition & supplies from Espiritu Santo.

On 4 September *Gregory* and *Little* were returning to their anchorage at Tulagi after transferring a Marine Raider Battalion to Savo Island. The night was inky-black with a low haze obscuring all landmarks, and the ships decided to remain on patrol rather than risk threading their way through the dangerous channel. As they steamed between Guadalcanal and Savo Island at ten knots, three Japanese destroyers (*Yudachi*, *Hatsuyuki*, and *Murakumo*) entered the Slot undetected to bombard American shore positions. At 0056 on the morning of 5 September, *Gregory* and *Little* saw flashes of gunfire which they assumed came from a Japanese submarine until radar showed four targets—apparently a cruiser had joined the three DD's. While the two outgunned but gallant ships were debating whether to close for action or depart quietly and undetected, the decision was taken out of their hands.

A Navy pilot had also seen the gunfire and, assuming it came from a Japanese submarine, dropped a string of five flares almost on top of the two APD's. *Gregory* and *Little*, silhouetted against the blackness, were spotted immediately by the Japanese destroyers, who opened fire at 0100. *Gregory* brought all her guns to bear but was desperately overmatched and less than 3 minutes after the fatal flares had been dropped was dead in the water and beginning to sink. Two boilers had burst and her decks were a mass of flames. Her skipper, Lt. Comdr. H. F. Bauer, himself seriously wounded, gave the word to abandon ship, and *Gregory's* crew reluctantly took to

the water. Bauer ordered two companions to aid another crewman yelling for help and was never seen again; for his brave and gallant conduct he posthumously received the Silver Star.

At 0123, with all of *Gregory's* and most of *Little's* crew in the water, the Japanese ships began shelling again—aiming not at the crippled ships but at their helpless crews in the water. All but 11 of *Gregory's* crew survived, 6 of them swimming through the night all the way to Guadalcanal. *Gregory* sank stern first some 40 minutes after the firing had begun, and was followed 2 hours later by *Little*. Fleet Admiral Nimitz, in praising the courageous ships after their loss, wrote that “both of these small vessels fought as well as possible against the overwhelming odds . . . With little means, they performed duties vital to the success of the campaign.” *Gregory's* name was struck from the Navy List 2 October 1942.

Gregory received two battle stars for service in World War II.

II

(DD-802: dp. 2,050; l. 376'6"; b. 29'8"; dr. 17'9"; s. 35 k.; cpl. 320; a. 5 5", 10 21" tt., 10 40mm., 7 20mm., 2 dct., 6 dp.; cpl. 320; cl. *Fletcher*)

Gregory (DD-802) was launched by the Todd-Pacific Ship Building Co., Tacoma, Wash., 8 May 1944; sponsored by Miss Ann McGuigan, daughter of Captain McGuigan, superintendent of construction at Tacoma; and commissioned 29 July 1944, Commander Bruce McCandless commanding.

After shakedown along the West Coast, *Gregory* sailed for the Pacific with *Hull* (DD-350), reaching Pearl Harbor 23 October 1944. Two months of local operations terminated in January 1945 as *Gregory* began practice for the impending invasion of Iwo Jima, next-to-last great campaign of the long and bloody Pacific war. *Gregory* sailed for the island 22 January, arriving off Iwo Jima via Saipan and Eniwetok on D-day, 19 February. For the next month she remained off the rocky coast under almost

constant fire to screen transports and provide fire support for the invasion forces. Departing Iwo Jima 15 March, *Gregory* reached Saipan 4 days later to prepare for her role in the Okinawa campaign.

Okinawa, last step prior to invasion of the Japanese home islands themselves, involved over a thousand ships and half a million men, under Admiral R. A. Spruance, in the Pacific's war largest amphibious effort. *Gregory* joined this modern armada as it sailed from Saipan 27 March and was off Okinawa 1 April 1945 as the first waves of Marines waded ashore to bloody battle. Her task group, under Admiral Jerauld Wright, conducted a “demonstration landing” on the southeast coast, hoping to distract some Japanese attention from the actual invasion along Okinawa's western coast. This diversion complete, *Gregory* remained off Okinawa on patrol and radar picket station.

On the afternoon of 8 April, *Gregory's* lookouts spotted three Japanese planes coming in out of the setting sun, a favorite kamikaze device. One of the suicide craft, pieces of fuselage spinning wildly off as *Gregory's* guns registered hit after hit, crashed into the destroyer amidships just above the waterline to port. *Gregory* shuddered under the impact and began to slow in the water as power failed in her forward engine and fire rooms flooded. The two other kamikazes mercilessly pressed on their attack, but the wounded DD downed both of them in blazing gunfire. *Gregory* then steamed to the anchorage at Kerama Retto for temporary repairs, and on 19 April departed Okinawa. After escorting the carrier *Intrepid* to Pearl Harbor, she sailed for San Diego, reaching there 18 May for battle repairs. While *Gregory* was still in overhaul, the Japanese surrendered and the destroyer was placed in inactive status, in commission in reserve, at San Diego. She decommissioned 15 January 1947.

Gregory's rest was to be brief, as Communist forces launched their war in Korea 24 June 1950 and the U.S. Navy joined United Nations forces; she recommissioned 27 April 1951, Comdr. H. C. Lank in command. Reaching

USS *Gregory* (DD-802) took less than a year from keel to commissioning.

Yokosuka, Japan, via Pearl Harbor and Midway 16 August 1951, *Gregory* immediately began patrol duty along the Korean coast. Her principal duties were screening American carriers, such as *Essex* and *Boxer*, from which air strikes against North Korean positions and supply lines were launched; blockading the coast, and participating in coastal bombardment as the tide of war ebbed and flowed along the Korean peninsula. In addition, she was frequently assigned to the Formosa patrol, intended to prevent Communist action against the beleaguered republic. Here *Gregory* came under fire from mainland Communist Chinese shore batteries. While on a search-and-rescue mission for a downed P2V 19 January 1953, she closed to within 8,000 yards of Nan-ao Tao, a Communist-held island just off the China coast. Though shore batteries opened fire on her *Gregory* did not return the fire, instead clearing the area immediately to continue her SAR mission.

After the Korean Armistice ended the shooting war in August 1953, *Gregory* returned to a peacetime routine of local operations out of San Diego interspersed with yearly deployments, usually 6 months long, to the Far East. These deployments took her to Yokosuka, Sasebo, Hong Kong, Bangkok, Sydney, Okinawa, the Philippines, and Formosa for training maneuvers with American and other warships. In the fall of 1958 *Gregory* spent a tension-filled 2½ months off the China coast during one of the periodic intensifications of the Quemoy-Matsu crisis.

Gregory earned the Battle Efficiency "E" three times during her post-war career—1955, 1956, and 1959. *Gregory* decommissioned at San Diego 1 February 1964 and entered the reserve. She was struck from the Navy List 1 May 1966, renamed *Indoctrinator*, and now serves as an inoperable trainer at San Diego.

Gregory earned two battle stars during World War II and four battle stars during the Korean conflict.

Greiner

Kenneth Frederick Greiner was born in Hibbing, Minn., 27 April 1910 and enlisted as a Seaman, Second Class, 28 September 1935. He became an Aviation Cadet in 1936, underwent flight training, and was honorably discharged 7 April 1936. Lt. (j.g.) Greiner was appointed to the Naval Reserve 29 March 1941, and after attending an aeronautical engineering course at the University of Minnesota reported to Naval Air Station, Dutch Harbor, Alaska, 1 October 1941. He was killed in enemy action there 4 June 1942 during the Japanese attack on the Aleutians.

(DE-37: dp. 1140; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; cpl. 156; a. 3 3", 4 1.1", 9 20mm., 2 dct., 8 dep., 1 dcp. (h.b.) cl. *Evarts*)

Greiner (DE-37), originally intended for Great Britain under Lend-Lease, was launched as BDE-37 20 May 1943 by the Puget Sound Navy Yard, Bremerton, Wash., and commissioned 18 August 1943, Lt. Comdr. F. S. Dowd in command.

Following shakedown and training exercise along the California-Washington coast, *Greiner* sailed for Pearl Harbor, reaching there 31 October 1943. A series of training and patrol operations kept her in the Hawaiian area until 23 December, when she sailed for recently won Tarawa as flagship of Escort Squadron 28. *Greiner* spent virtually a year in the Gilberts-Marshalls area, as the great American island offensive swept westward toward Japan. The ship performed a variety of tasks, including the most important job of escorting transport vessels to the assault areas. She rescued 13 men from a downed PBM 26 January 1944, and shelled Kusaie Island, in the Carolines, in reply to a salvo from Japanese batteries 1 June 1944.

Greiner spent 3 months at Pearl Harbor for repairs and operations July–October 1944, and after anti-submarine exercises in Hawaiian waters spent December patrolling around Wotje, Mili, Jaluit, and Maloelap atolls, leap-

frogged earlier in the war. She spent the remainder of the war in the Gilberts and Marshalls plane-guarding and screening escort carrier forces, except for a short voyage to Okinawa 29 June to 3 July 1945.

Greiner steamed back to the United States from Kerama Retto 3 July 1945, and arrived San Francisco 28 July via Ulithi, Eniwetok, and Pearl Harbor. She decommissioned at Oakland 19 November 1945 and was stricken from the Navy List 5 December. The ship was subsequently sold to J. G. Berkwit & Co. 10 February 1945, and resold in 1947.

Greiner received three battle stars for World War II service.

Grenadier

A soft-finned deep sea fish with a long, tapering body and short, pointed tail.

I

(SS-210: dp. 1,475; l. 307'2"; b. 27'3"; dr. 13'3"; s. 20 k. (surf.), 8.75 k. (subm.); cpl. 80; a. 1 3", 10 21" tt.; cl. *Tambor*)

The first *Grenadier* (SS-210) was laid down by Portsmouth Navy Yard, Portsmouth, N.H., 2 April 1940, launched 29 November 1940; sponsored by Mrs. Walter S. Anderson, wife of the Director of Naval Intelligence and commissioned 1 May 1941, Lt. Comdr. Allen R. Jovan in command.

On 20 June *Grenadier* participated in the search for O-9, who failed to surface after a deep test dive, and was present 2 days later as memorial exercises were conducted over the spot where O-9 and her crew lay. After shakedown in the Caribbean, *Grenadier* returned to Portsmouth 5 November for refit. Less than three weeks after the Japanese attack on Pearl Harbor, she sailed for the Pacific to join the submarine fleet which was America's first line of attack in the Pacific.

Grenadier's first war patrol from 4 February to 23 March 1942 took her near the Japanese home islands, off the coast of Honshu, and brought her several targets but no sinkings. On 12 April *Grenadier* departed Pearl Harbor for her second war patrol, along the Shanghai-Yokohama and Nagasaki-Formosa shipping lanes. On 8 May she torpedoed and sank one of her most important kills of the war, transport *Taiyo Maru*. Post-war examination of Japanese records showed *Taiyo Maru* to be more than just the ordinary transport; she was en route to the East Indies with a group of Japanese scientists, economists, and industrial experts bent on expediting the exploitation of the conquered territory. Their loss was a notable blow to the enemy war effort.

On 25 May *Grenadier* was diverted from her patrol area to Midway, where she formed part of the submarine patrol line as the American fleet in a bloody but brilliant battle handed the Imperial Navy its first defeat in some three hundred years. *Grenadier's* third war patrol was in the Truk area, heavily patrolled by enemy ships and planes. Although she sighted some 28 Japanese ships, enemy planes effectively hampered her, and she returned to her new base, Fremantle, Australia, empty-handed.

The Malay Barrier was the site of *Grenadier's* fourth war patrol from 13 October to 10 December. After laying a minefield off Haiphong, Indochina, the submarine made an unsuccessful attack on a large freighter. During the severe depth charging which followed, sea water seeped into the batteries; *Grenadier's* crew suffered headaches and nausea from chlorine gas poisoning for the remainder of the patrol. To increase the misery, on 20 November *Grenadier* spotted a *Ryujo* class carrier, escorted by a cruiser and a destroyer, heading through the Strait of Makassar too distant to shoot. *Grenadier* surfaced to radio the carrier's location and course to Fremantle in hope that another submarine could capitalize on it.

Grenadier's fifth war patrol between 1 January and 20 February 1943, brought her considerably better fortune than earlier patrols. A 75-ton schooner fell victim to her deck guns 10 January, and two days later *Grenadier*

sighted a small tanker with a barge in tow. Judging the target not worth a torpedo, she slipped silently into the column behind the two Japanese ships. At dusk she battle surfaced. With binoculars lashed to the deck guns as sights, she raked tanker and barge sinking them immediately. The remainder of her patrol, along the Borneo coast through shallow and treacherous waters, was hampered by fathometer failures. She conducted an aggressive attack on two cargo ships 22 January but did not sink them.

The battle-tired submarine departed Australia 20 March on her last war patrol and headed for the Strait of Malacca, gateway between the Pacific and Indian Oceans. Patrolling along the Malay and Thai coasts, *Grenadier* claimed a small freighter off the island of Phuket 6 April. She remained in the area and late in the night of 20 April sighted two merchantmen and closed in for the attack. Running on the surface at dawn 21 April, *Grenadier* spotted, and was simultaneously spotted by, a Japanese plane. As the sub crash-dived, her skipper, Comdr. John A. Fitzgerald commented "we ought to be safe now, as we are between 120 and 130 feet." Just then, bombs rocked *Grenadier* and heeled her over 15 to 20 degrees. Power and lights failed completely and the fatally wounded ship settled to the bottom at 267 feet. She tried to make repairs while a fierce fire blazed in the maneuvering room.

After 13 hours of sweating it out on the bottom *Grenadier* managed to surface after dark to clear the boat of smoke and inspect damage. The damage to her propulsion system was irreparable. Attempting to bring his ship close to shore so that the crew could scuttle her and escape into the jungle, Comdr. Fitzgerald even tried to jury-rig a sail. But the long night's work proved futile. As dawn broke, 22 April, *Grenadier's* weary crew sighted two Japanese ships heading for them. As the skipper "didn't think it advisable to make a stationary dive in 280 feet of water without power," the crew began burning confidential documents prior to abandoning ship. A Japanese plane attacked the stricken submarine; but *Grenadier*, though dead in the water and to all appearances helpless, blazed away with machine guns. She hit the plane on its second pass. As the damaged plane veered off, its torpedo landed about 200 yards from the boat and exploded.

Reluctantly opening all vents, *Grenadier's* crew abandoned ship and watched her sink to her final resting place. A Japanese merchantman picked up 8 officers and 68 enlisted men and took them to Penang, Malay States, where they were questioned, beaten, and starved before being sent to other prison camps. They were then separated and transferred from camp to camp along the Malay Peninsula and finally to Japan. Throughout the war they suffered brutal, inhuman treatment, and their refusal to reveal military information both frustrated and angered their captors. First word that any had survived *Grenadier* reached Australia 27 November 1943. Despite the brutal and sadistic treatment, all but four of *Grenadier's* crew survived their 2½ years in Japanese hands to tell rescuing American forces of their boat's last patrol and the courage and heroism of her skipper and crew.

Grenadier received four battle stars for World War II service.

II

(SS-525: dp. 1,570; l. 311'8"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 76; a. 10 21" tt.; cl. *Tench*)

The second *Grenadier* (SS-525) was laid down by Boston Naval Shipyard, Boston, Mass., 8 February 1944; launched 10 February 1951; sponsored by Mrs. John A. Fitzgerald, wife of the first *Grenadier's* last skipper; and commissioned the same day, Comdr. Henry G. Reaves in command.

One of the first "Guppy" submarines, *Grenadier* was equipped with a snorkel to permit indefinite running in an awash condition. *Grenadier* proved the worth of this device during her shakedown. Returning from the Caribbean cruise, the new submarine made the 7-day voyage

from Guantanamo Bay to New London, Conn., submerged. Almost 2 years of intensive training exercises out of New London were capped by her first yard overhaul at Philadelphia, extending from 16 December 1952 to 22 April 1953.

In June 1953 *Grenadier* participated in the annual mid-shipman cruise to Rio de Janeiro and other Brazilian ports. Returning to New London via the Caribbean, she then supported ASW exercises during November, as a carrier task force perfected its antisubmarine operations. *Grenadier* continued training and battle exercises along the New England coast and off the Virginia Capes and in August 1955 cruised to Montreal, Quebec, via the St. Lawrence River.

Grenadier departed New London 3 January 1956 on the first of several Mediterranean cruises. During a 3-month deployment she steamed throughout the Mediterranean and both showed the flag and participated in attack and anti-submarine exercises with various units of the 6th Fleet. On two subsequent Mediterranean deployments from 8 November 1957 to 27 January 1958, and from 10 April to 8 August 1962 she operated with the mighty 6th Fleet to bolster peace keeping operations in that troubled region of the world.

Between these cruises, the submarine participated in exercises along the East Coast and was a frequent visitor to Caribbean waters. *Grenadier* operated out of New London until 15 September 1959, she transferred to Key West, Fla. From there *Grenadier* served more frequently in the Caribbean, and also patrolled and held exercises along the Atlantic and Gulf coasts of Florida.

While on special antisubmarine exercises in the North Atlantic on the morning of 29 May 1959, *Grenadier*, in company with a patrol plane, sighted and photographed a Russian submarine prowling the waters off Iceland. It was the first confirmed sighting of a Soviet submarine in the Atlantic.

Grenadier again confronted Russian ships when the Cuban missile crisis threatened nuclear war in October 1962. In company with *Balao*, *Thredafin*, *Trutta*, and *Chopper*, she formed part of the American fleet that blockaded and quarantined the Communist island. After the Russian offensive missiles were pulled out of Cuba, *Grenadier* was one of several ships dispatched to Cuba in November to assert and confirm America's rights and position there.

Since 1962 *Grenadier* has continued patrols and training operations out of Key West. Assigned to SubRon 12, she has participated in exercises along the Atlantic coast and in the Caribbean. In addition, she has provided valuable aid during the perfecting of advanced sonar and ASW equipment. She distinguished herself in 1966 gathering navigational data and other information in the Caribbean. She continues to serve the Atlantic Fleet into 1967.

Gresham

(RC: dp. 1,090; l. 205'6"; b. 32'0"; dr. 12'6"; s. 14.5 k.; cpl. 103; a. 4 3", 2 mg.)

Gresham, a revenue cutter built in 1896 by Globe Iron Works Co., Cleveland, Ohio, was commissioned by the Revenue Cutter Service 30 May 1897 for service out of Milwaukee in Lake Michigan and adjacent waters. On 24 March 1898 she was ordered to cooperate with the Navy during the Spanish-American War. Following alterations at Ogdensburg, N.Y., she arrived Boston 30 April and patrolled northern coastal waters.

Gresham was returned to the Treasury Department 17 August 1898 and operated in the Revenue Cutter Service until World War I. When the United States entered the World War, *Gresham* was transferred to the Navy 6 April 1917. For the duration of hostilities, she performed patrol and escort duty in the North Atlantic protecting Allied shipping from the menace of U-boats vainly trying to interrupt the growing flow of American fighting men and equipment which doomed the Central Powers. After the war ended, *Gresham* was returned to the Treasury Department 28 August 1919.

Gretchen

A former name retained.

I

(SP-423 : t. 84 ; l. 86' ; b. 13½' ; dr. 4' ; s. 10 k.)

The first *Gretchen* was a motor boat taken over by the government for section patrol 30 July 1917 from its owner, Sylvanus Stokes. Found unsuited for patrol duties by the 5th Naval District, where she was assigned, *Gretchen* was returned to her owner 1 November 1917.

II

(SP-1181 : t. 11 ; l. 54' ; b. 12' ; dr. 3½' ; s. 9 k. ; a. 2 6-pdr.)

The second *Gretchen*, a motor boat, was built by White of Belhaven, N.C., in 1902, taken over by the government from her owners, the North Carolina Fisheries Commission, 20 August 1917, and commissioned 24 August 1917 at Oriental, N.C., Master I. H. Scarborough, USNRF, in command.

After fitting out at Norfolk, Va., *Gretchen* was assigned to patrol station at Wanchese, N.C., and cruised Albemarle and Pamlico Sounds for the months of her commissioned service. She also performed inspection and patrol duties for the North Carolina Fisheries Commission during the period. *Gretchen* was decommissioned and simultaneously returned to her owners by the 5th Naval District 1 January 1919.

Grey Fox

A former name retained.

(SP-52 : t. 19 ; l. 50' ; b. 10'2'' ; dr. 2'3'' ; s. 27 k. ;
a. 1 1-pdr.)

Grey Fox, a yacht, was built by Robert F. Smith & Sons in 1916 ; was purchased from St. George Barber of Chesterfield, Md., at Annapolis, Md., and commissioned 27 May 1917, Chief Machinist N. N. Tonest in command.

Grey Fox was used by the 5th Naval District at Norfolk as a harbor dispatch vessel and as a public Works Officer's boat under the direction of the Joint Board for Control of War Construction Activities. She was laid up in ordinary at the submarine base, Norfolk Naval Operating Base, 6 June 1919. *Grey Fox* was intended for use by the War Department Ordnance Salvage Board in the York and James Rivers, but was found to be in need of extensive repairs and was sold at Norfolk to William Thewes 18 February 1920.

Greyhound

A breed of tall, slender, swift hound with a narrow pointed head.

I

(Sch. dp. 65' ; cpl. 31 ; a. 3 g.)

Greyhound was one of several ships purchased in 1822 to augment Commodore David Porter's "Mosquito Fleet" combating piracy in the West Indies. With Master-Commandant John Porter in command, she joined the West Indies Squadron in early 1823 and was almost immediately dispatched to Puerto Rico to seek that island's aid in suppressing the pirates. Returning from this mission, *Greyhound* was placed under Lt. Lawrence Kearny and sent to patrol the Cuban coast.

While patrolling with *Beagle* on 21 July, *Greyhound* gave chase to an unidentified ship off the Cuban coast near Vera Cruz ; the ship turned out to be a legitimate Colombian privateer : a rare thing in those waters. Lt. Kearny then decided to go ashore in search of game to supplant his ship's food supply ; his boat, when it neared the shore, was attacked from ambush and forced to return to *Greyhound*. When another attempt to land the following day met the same reception, Lt. Kearny sent ashore a party of marines and seamen, under the com-

mand of Lt. David Glasgow Farragut, to attack the pirate camp. Meanwhile the two schooners closed the shore and began to bombard the camp, effectively trapping the pirates between landing party and the sea. After a brief but fierce struggle, the pirates, including some women and children, fled inland. Exploring the village, Farragut and his men discovered several large caves filled with rich plunder of all sorts and they burned the village and the eight small boats they found in the harbor, then returned to the schooners.

Greyhound continued coastal patrol until, with the onset of the yellow fever season, the "Mosquito Fleet" sailed north for healthier weather. *Greyhound* did not return to the Caribbean with Porter the following spring. Found unfit for further service, she was sold at Baltimore in 1824.

II

(Sp-437 ; l. 40' ; b. 9' ; dr. 2'3'' ; s. 18 k. ; a. 1 1-pdr.)

Greyhound (SP-437) was built in 1916 by Great Lakes Boat Building Corp., Milwaukee, Wis. ; and purchased from Mrs. Ida W. Seybert 20 June 1917 at Key West, Fla.

Assigned to section patrol in the 7th Naval District, *Greyhound* cruised in Tampa Bay and served as a Key West Harbor patrol boat, until her sale 2 July 1919.

III

(IX-106 : t. 3,731 ; l. 407' ; b. 61'3'' ; dr. 18' ; s. 15 k.)

Greyhound (IX-106) was built by the Delaware River Steamboat Co., Chester, Pa., in 1906 ; taken over by the Navy on the West Coast in 1918 ; and commissioned as *Yale* 25 March 1918. She saw extensive service shuttling troops across the English Channel until she decommissioned at the Bremerton Navy Yard in 1920. After 15 years of fast passenger service along the West Coast, *Yale* was laid up in 1935 ; in 1940 she was moved to Sitka, Alaska, where she served as a workers' dormitory. She was again acquired by the Navy 30 April 1943 and commissioned 8 August 1943, Lt. Comdr. W. N. VanDenbrugh, in command. She was named *Greyhound* 19 August 1943. After brief service *Greyhound* decommissioned 31 March 1944, and began duty as a floating barracks for personnel at various Puget Sound training schools. She was placed out of service on 9 March 1948 and her name was struck 18 June 1948. She was turned over to the Maritime Commission 12 November 1948 and placed with the National Defense Reserve Fleet at Olympia, Wash. until 5 June 1949 when she was sold for scrapping.

Gridley

Charles Vernon Gridley was born 24 November 1844 in Logansport, Ind., and was appointed to the Naval Academy in 1860. Reporting for duty with his class in September 1863, Gridley joined the sloop-of-war *Oncida* with the West Gulf Blockading Squadron and distinguished himself with Farragut at the Battle of Mobile Bay 5 August 1864. Promoted to Lieutenant in 1867 and Commander in 1882, he spent the next 30 years at various stations around the world, including a tour as instructor at the Naval Academy. Captain Gridley took command of *Olympia*, Admiral Dewey's famous flagship, 27 April 1898, a post which he held despite failing health during the Battle of Manila Bay 1 May 1898. It was that morning that Dewey gave his famous command : "You may fire when you are ready, Gridley," immortalizing the doughty captain. After the destruction of the Spanish squadron and the capture of Manila, Gridley was obliged to leave his command because of his health, and died en route to the United States at Kobe, Japan, 25 May 1898.

I

(DD-92 : dp. 1060 ; l. 315'5'' ; b. 31'8'' ; dr. 9'2'' ; s. 35 k. ; cpl. 100 ; a. 4 4'' , 12 21'' tt.)

The first *Gridley* was launched by the Union Iron Works of San Francisco, Calif., 4 July 1918; sponsored by Mrs. Francis P. Thomas, daughter of Captain Gridley; and commissioned 8 March 1919, Comdr. Frank Jack Fletcher in command.

After fitting out at the Mare Island Navy Yard, *Gridley* departed San Diego 24 March 1919, transitted the Panama Canal, and joined the Destroyer Force for maneuvers in Cuban waters. She then repaired briefly at Norfolk, Va., before putting into New York 26 April 1919. *Gridley's* first assignment was with a group of destroyers posted along the route of the Navy's transatlantic sea-plane flight. *Gridley* and her companions sent up smoke and flare signals to guide the intrepid flyers and with the help of the surface ships NC-4 was able to land in the dense fog at the Azores 17 May 1919. Subsequently *Gridley* participated in the search for NC-1, forced down in the fog, and then acted as guard ship on the last leg of NC-4's historic flight, which was completed at Plymouth, England, 31 May 1919.

Gridley arrived Brest, France, 31 May and spent the next 2 months in various ports of the Mediterranean transporting passengers and making goodwill visits. She arrived back at New York 31 July. Operating out of Portsmouth, N.H., *Gridley* embarked Major General Lejeune and Brigadier General Butler of the Marine Corps at Charleston 2 September 1920, for an inspection tour of Caribbean bases and commands, including posts in Cuba, Haiti, and the Dominican Republic. Her distinguished passengers disembarked 27 September 1920.

In the following years *Gridley* was active training officers and men of the Naval Reserve Force, operating out of Charleston, Newport, New York, and Philadelphia. She decommissioned at Philadelphia Navy Yard 22 June 1922 and remained inactive until her name was stricken from the Navy List 25 January 1937. *Gridley's* hulk was sold for scrapping 19 April 1939.

II

(DD-380: dp. 1850; l. 341'5"; b. 35'6"; dr. 10'4"; s. 40 k.; cpl. 158; a. 4 5", 16 21" tt.; cl. *Gridley*)

The second *Gridley* was launched at the Fore River plant of Bethlehem Shipbuilding Corp., Quincy, Mass., 1 December 1936; sponsored by Mrs. Lewis Buddy III, daughter of Captain Gridley; and commissioned 24 June 1937, Comdr. Leroy W. Busbey, Jr., in command.

Gridley fitted out at Boston Navy Yard, and conducted shakedown in the Caribbean area until 27 October 1938, visiting Puerto Rico, Cuba, and Venezuela. She then underwent alterations at the Boston Navy Yard until 13 June 1938, when she departed that port, transitted the Panama Canal, and entered San Diego harbor 5 July 1938. Joining Destroyer Division 11, *Gridley* spent the next months in tactical maneuvers off the coast of California, and 4 January 1939 departed with the Battle Force for combined maneuvers in the Caribbean. She participated in Fleet Problem 20 with the Fleet off Cuba and Haiti, after which she returned to Boston for repairs.

The destroyer again sailed into San Diego 13 July 1939 and became flagship of Division 11. She conducted maneuvers off California until 2 April 1940, when *Gridley* and other ships of the fleet conducted Fleet Problem 21 in Hawaiian waters. Subsequently, *Gridley* operated out of Hawaii.

Gridley cleared Pearl Harbor 28 November 1941 as part of the antisubmarine screen for famed carrier *Enterprise*, flagship of Admiral Halsey, and after a stop at Wake Island, reversed course for Pearl Harbor. The Task Force was approaching that base on the morning of 7 December when the astounding message heralding the beginning of the war was received: "Air raid on Pearl Harbor, this is no drill." *Gridley* entered the harbor next day to help protect against renewed attack, and during the next 5 months was occupied escorting transports and repair vessels to and from Pearl Harbor and South Pacific ports. Her last such voyage was completed 27 May 1942 and 5 June she arrived at Kodiak, Alaska, with cruiser *Nash-*

ville. In the Alaskan theater, *Gridley* escorted transports and patrolled the Japanese-held islands of Kiska and Attu, assisting in the bombardment of Kiska 7 August 1942. She acted during this period as flagship for famous destroyerman Comdr. Frederick Moosbrugger.

Departing Dutch Harbor 25 September 1942, *Gridley* joined the *Saratoga* task force in Hawaiian waters and later performed escort missions for both combatant and non-combatant ships in the Fijis and New Hebrides. In December 1942 she escorted oiler *Cimarron* out of Noumea to fueling rendezvous with the carrier task forces supporting the bitter fighting in the Solomons. Shifting her base of operations to Purvis Bay, in the Solomons, 13 July, *Gridley* guarded the high-speed transports which rescued survivors from *Helena* in Parasco Bay 16 July 1943, and teamed with destroyer *Maury* to escort infantry landing craft from Guadalcanal for the landings on Tambatuni, New Georgia. She bombarded shore installations near the invasion beaches 25 July and screened the ships supporting the landing. In company with six other destroyers she destroyed Japanese landing barges in Vella Gulf 10 August, and screened *Saratoga* during air operations in the Solomons until 25 August.

Gridley returned to Pearl Harbor with escort carriers *Suwanee* and *Long Island* 4 September 1943 and then departed for San Diego, where she remained for repairs 11 September to 26 October 1943. The Gilbert Islands were her next destination, and *Gridley* left Pearl Harbor once more 10 November 1943 for Makin Island. She assisted in the bombardment of that island, screened aircraft carriers, and then conducted independent patrol in the area until setting course for Hawaii 1 December.

Vice Admiral Marc A. Mitscher's Carrier Task Force 58 departed Pearl Harbor 18 January 1944 for the great offensive in the Marshalls, with *Gridley* again acting as screening ship for *Saratoga*. *Gridley* guarded the carrier during the crucial strikes against Wotje and Eniwetok, and 8 March sailed for the New Hebrides with carriers *Yorktown*, *Princeton*, and *Langley*, assisting them in support of the developing New Guinea offensive. The veteran destroyer sailed with the *Hornet* task force 7 June 1944 to take part in the invasion of the Marianas, where the carriers pounded Saipan, Rota, and Guam. In all these operations *Gridley* and her sister destroyers rendered invaluable service protecting the carriers against air and submarine attack.

Gridley was with American forces in the pivotal Battle of the Philippine Sea 19 to 20 June 1944, when four massive waves of Japanese torpedo bombers and escorting fighters were decimated by fleet air and surface units. *Gridley's* antiaircraft fire helped to protect the aircraft carriers, with the result that Japanese air strength was virtually ended with this battle.

Gridley departed Eniwetok Atoll 30 June 1944 bound with the carriers for strikes on Iwo Jima, Guam, Yap, Ulithi, and the Volcano Islands. She supported directly the American landings on Peleliu 15 September 1944, shooting down at least one Japanese attack plane. After screening the carriers in attacks on Okinawa and Formosa, *Gridley* joined the mounting American forces for the invasion of the Philippines. While protecting the large ships off Luzon 28 October 1944 she and destroyer *Helm* detected and sank Japanese submarine I-54 with a series of devastating depth charge attacks. In the succeeding days, *Gridley* fought off Japanese suicide planes and returned to Ulithi with damaged carriers *Franklin* and *Belleau Wood* 2 November.

Gridley was soon at sea again, however, clearing Ulithi 5 November with the fast carrier task force for the Leyte operation. She later joined a group of escort carriers and served as a bombardment and patrol ship during the landings in Lingayen Gulf until 10 February 1945.

After stopping again at Ulithi, *Gridley* escorted battle-ship *Mississippi* en route to Pearl Harbor, and then sailed via San Diego and the Panama Canal for New York, where she arrived 30 March 1945. She entered the New York Navy Yard next day for much-needed repairs, and after finishing her overhaul departed the United States 22 June

USS *Gridley* (DD-380), a veteran of World War II

for the Mediterranean. *Gridley* spent the next 7 months in passenger, freight, and convoy operations between Casablanca, Oran, Naples, and Marseilles.

Subsequently, *Gridley* returned to New York in February 1946 and then sailed on the 20th of that month for Hawaii. She embarked military passengers and cargo at the Panama Canal and San Diego before arriving at Pearl Harbor 16 March for inactivation. *Gridley* decommissioned at Pearl Harbor Navy Yard 18 April 1946 and was sold for scrapping 20 August 1947.

Gridley was awarded 10 battle stars for service in World War II.

III

(DLG-21 : dp. 7,400 (f.) ; l. 533' ; b. 53' ; dr. 26' ; s. over 30 k. ; cpl. 373 ; a. 4 3'' , terrier mis. 3, 1 ASROC ; cl. *Leahy*)

The third *Gridley*, a guided missile frigate, was launched by Puget Sound Bridge and Drydock Co. of Seattle, Wash., 31 July 1961 ; sponsored by Mrs. Stewart D. Rose, great-granddaughter of Captain Gridley ; and commissioned 25 May 1963, Captain P. A. Lilly in command.

After outfitting at Puget Sound Naval Shipyard, Bremerton, Wash., *Gridley* made a goodwill visit to British Columbia and then conducted acceptance trials out of her homeport, Long Beach, Calif. The powerful new frigate returned to Puget Sound Shipyard 8 November to 9 December 1963, after which she joined the Pacific Fleet as flagship of Destroyer Squadron 19.

Following shakedown out of San Diego early in 1964, *Gridley* departed Long Beach 8 April and steamed via Pearl Harbor to Australia for commemoration of the Battle of the Coral Sea, arriving Adelaide, South Australia, 5 May. The new guided missile frigate next headed for the Philippines, stopping at Subic Bay 29 through 31 May before proceeding to Okinawa 2 June and Sasebo, Japan, on the 8th.

Heading South once more, she returned to Subic Bay and visited Hong Kong. On 4 August she got underway for the South China Sea escorting *Constellation* (CVA-64) to strengthen American naval forces off Vietnam after

Communist motor torpedo boats had attacked destroyers *Maddox* (DD-731) and *Turner Joy* (DD-951) in the Gulf of Tonkin. But for a brief visit to Subic Bay, she remained on station serving screening and picket duty, coordinating antiaircraft warfare efforts, and relaying communications. Before she left the fighting zone 6 September, the ship's competent and dedicated service won her the Navy Unit commendation. She departed Subic Bay 7 November and reached Long Beach on the 21st.

Gridley operated along the West Coast until heading back to the Western Pacific 10 July 1965. Stopping at Pearl Harbor and Yokosuka en route, she steamed to the South China Sea to support aircraft carriers of the 7th Fleet as the flattops hammered Communist targets in Vietnam. On four different occasions in the next 4 months, she rescued pilots who ditched at sea. She returned to Yokosuka 7 December but resumed station in the South China Sea on the 22d to serve as "Tomcat," responsible for checking-in planes returning to their carriers. Early in 1966 she headed for home and reached Long Beach 1 February.

Gridley operated along the California coast until sailing for the Orient 18 November. She left Subic Bay 2 January 1967 for plane guard duty in the China Sea and the Gulf of Tonkin. After varied duties in the fighting zone, she sailed for Australia en route to the West Coast and arrived Long Beach 8 June to prepare for future action.

Griffin

Robert Stanislaus Griffin was born 27 September 1857, and graduated from the Naval Academy in 1878. He served in *Tennessee*, *Philadelphia*, and *Vicksburg*, and took part in the Cuban blockade of 1898 in gunboat *Mayflower*. Griffin rose from Fleet Engineer, North Atlantic Fleet, in 1904 to Engineer in Chief and head of the Bureau of Steam Engineering in 1913. Until 1921, Rear Admiral Griffin performed outstanding service in designing, building, and maintaining ship machinery, and in converting

captured German vessels. He was awarded the Distinguished Service Medal by the President. Rear Admiral Griffin died 21 February 1933 at Washington, D.C.

(AS-13: dp. 14,000; l. 492'; b. 71'; dr. 25'10"; s. 17 k.; cpl. 911; a. 1 4", 1 3")

Griffin (AS-13), originally *Mormacpenn*, a Maritime Commission C-3 type pre-war cargo ship, was launched by Sun Shipbuilding & Dry Dock, Chester, Pa., 11 October 1939. She served briefly with Moore-McCormack, Inc., was acquired by the Navy in 1940, renamed *Griffin* (AS-13) and converted to a submarine tender at Robbins Dry Dock & Repair Co., Brooklyn, N.Y. *Griffin* commissioned 31 July 1941, Comdr. S. D. Jupp in command.

Her conversion completed in September 1941, *Griffin* conducted shakedown off the East Coast and sailed with a sub squadron to Newfoundland 22 November 1941. Recalled to Newport, R.I., after Pearl Harbor, the ship was assigned to the Pacific Fleet, and departed 14 February for Australia.

Griffin arrived Brisbane 15 April 1942 to tend Submarine Squadron 5. Early in the war, the United States developed a major submarine base in Australia; and submarines tended by *Griffin* struck hard at Japanese shipping while surface forces strengthened themselves for the first Pacific offensives. During this period *Griffin* also repaired merchant ships at a time of great need. The tender departed Brisbane for the Fiji Islands 11 November and 1 December sailed to Bora Bora to escort Submarine Division 53 to the Canal Zone. Arriving Balboa 7 January 1943, *Griffin* continued north to Oakland, Calif., arriving 20 January.

After repairs at San Diego, *Griffin* again departed for the Pacific, sailing 27 April 1943. She arrived Pearl Harbor 4 May to take up her vital support duties, and remained until 3 January 1944. The ship performed refits, battle repairs, and general upkeep on submarines before sailing to Mare Island to arrive 10 January.

Griffin returned to Pearl Harbor 17 March, and departed 8 April for the great submarine base at Fremantle, Australia. She arrived 8 May and immediately set about servicing the growing submarine fleet. The tender remained at Fremantle until 20 November 1944, during her stay founding a rubber fabrication shop which solved one of the great shortages on board the submarines. She then moved closer to the Japanese shipping lanes at Mios Woendi, New Guinea, arriving 9 December. There she tended submarines, surface craft of all kinds, and even lent her repair equipment to shore facilities. *Griffin* remained at Mios Woendi until 1 February 1945 when she sailed for Subic Bay, via Leyte.

Arriving 10 February, *Griffin* set up one of the initial submarine repair facilities in the Philippines since 1942. She also helped to salvage damaged destroyer *LaVallette*. Shifting base, the tender sailed 22 March via Leyte, and arrived in the Hawaiian Islands 10 April. After a brief stay at Pearl she departed 10 May for Midway, arrived 4 days later, and set up another repair facility for submarines. By that time submarines supported by *Griffin* had practically annihilated Japanese merchant shipping and had played a decisive role in the great Pacific offensive. She remained at Midway until 10 September, then sailed to Pearl Harbor and San Francisco, entering the bay 24 September. Decommissioned at Mare Island 12 October 1945, the ship was placed in reserve. Later she transferred to the Stockton group, Pacific Reserve Fleet, where she remains in reserve, in service, tending reserve submarines through 1967.

Griffin, Daniel T., see *Daniel T. Griffin* (DE-54)

Griggs

A county in North Dakota.

(APA-110; dp. 11,760; l. 492'; b. 69'6"; dr. 26'6"; s. 18 k.; cpl. 478; a. 2 5", 8 40mm.; cl. *Windsor*; T. C3-5-A3)

Griggs (APA-110), a C-3 type transport was built by the Ingalls Shipbuilding Corp., Pascagoula, Miss.; acquired by the Navy on a loan-charter basis 13 December 1944; sponsored by Mrs. Betty Bennett Banker; and commissioned 14 December 1944, Captain Arthur C. Wood in command.

After shakedown at Galveston, Texas, *Griggs* trained precommissioning crews out of Newport, R.I., before reaching Norfolk 31 March 1945. There she embarked 40 officers and 1,416 men of the 41st Marine Depot Company and the 55th Marine Replacement Draft. Clearing Norfolk 26 May *Griggs* sailed via Canal Zone and discharged her passengers at San Francisco 1 June 1945. She departed Port Hueneme 17 June with 1,032 Seabees embarked and touched at Eniwetok and Ulithi before discharging her passengers at Okinawa and Manila Bay, P.I.

After delivering occupation troops to Japan from Lingayen Gulf and Mindanao, *Griggs* took up "Magic Carpet" duty and departed Saipan 2 November 1945, en route to San Diego, where she arrived 13 days later with many happy war veterans. *Griggs* made two more "Magic Carpet" voyages returning to San Francisco from her last trip 21 February 1946.

Departing San Pedro, Calif., 12 March 1946, *Griggs* sailed via Canal Zone and reached Norfolk 28 March. She remained there until decommissioned at Portsmouth Navy Yard, Portsmouth, Va., 27 May 1946. Delivered to the WSA the next day, her name was stricken from the Navy List 19 June 1946. Sold to Moore McCormack Lines 21 April 1948, she became *Mormacrey*.

Grimes

A county in Texas.

(APA-172: dp. 14,837; l. 455'; b. 62'; dr. 24'; s. 18 k.; cpl. 692; a. 1 5", 12 40mm.; cl. *Haskell*)

Grimes (APA-172) was acquired by the Navy from the Maritime Commission on loan charter basis 23 November 1944; sponsored by Mrs. Harry Fielding; and commissioned 23 November 1944, Captain J. McDonald Smith in command.

After shakedown out of San Pedro, *Grimes* returned to Seattle 25 January 1945; embarked over 240 troops; then departed Seattle 1 February for Honolulu in support of the Navy's great Pacific offensive. After conducting exercises off Maui Island, *Grimes* was underway 20 February 1945, with Transport Division 59 and anchored off the northeast coast of recently secured Iwo Jima 14 March and began embarking units of the 4th Marine Division for evacuation to the Philippine area. While riding to anchor *Grimes* was brought under fire at a distance of about 1,000 yards from small arms positioned in caves and crevices near the waters edge. No damage or casualties resulted. *Grimes* cleared the area 20 March and discharged 1,618 passengers at Pearl Harbor 4 April 1945.

After shuttling troops among the Hawaiian Islands, *Grimes* departed Honolulu with officers and enlisted patients of the Navy, Marine Corps, and Merchant Marine. Reaching San Francisco 30 May 1945, she disembarked her passengers, then sailed for Seattle. With 1,512 Army and Navy passengers on board, the transport sailed from Seattle 16 June and discharged troops at Honolulu and Okinawa before putting in at Guam 14 August. Here she took aboard 900 officers and men of the 6th Marine Division and 8 war correspondents. Sailing the next day *Grimes* rendezvoused with units of the 3d Fleet 19 August for the initial occupation of Japan; she anchored in Tokyo Bay 30 August 1945 and landed her troops and cargo for the occupation of Yokosuka Naval Base without incident.

Grimes sortied from Tokyo Bay 1 September 1945 as part of Task Unit 30.3.5 en route Saipan to lift units of the 2d Marines for the occupation of Nagasaki. Sailing from Saipan 18 September she put her troops ashore 23-25 September 1945. *Grimes* carried out her transport duties in the Pacific until 15 June 1946 when she sailed from

Sasebo, Japan. Going by way of the Canal Zone she reached Norfolk 13 July.

Grimes remained at Norfolk and decommissioned there 26 February 1947. She remained in the Atlantic Reserve Fleet until 1 October 1958, when her name was struck from the Navy List and she was transferred to the Maritime Commission. She was placed in the National Defense Reserve Fleet at Wilmington, N.C., and in October 1964 she was transferred to James River, Va.

Grimes received one battle star for World War II service.

Grindall

A British name retained.

(DE-273 : dp. 1,150; l. 289'5"; b. 35'1"; dr. 11'10"; s. 19½ k.; epl. 198; a. 3 3" 50 cal. cl. *Evarts*)

Grindall was launched as *Sanders* (DE-273) 4 June 1943 at the Boston Navy Yard; sponsored by Mrs. Sarah Sanders, widow of the ship's namesake, Chief Boatswain Eugene Thomas Sanders, who served in the U.S. Navy from 1919 to 7 December 1941 when he was killed in action in the Pacific.

Assigned to the United Kingdom under terms of lend-lease 10 June 1943 her name was changed to HMS *Grindall*.

Following service with the United Kingdom, *Grindall* was commissioned as DE-273 by the United States at Chatham, England, 20 August 1945, Lt. Burrill D. Barker, Jr., USNR, in command. As flagship of reconstituted Task Group 21.3 consisting of 10 lend-lease destroyer escorts, *Grindall* sailed from Chatham 28 August, arriving at Philadelphia 8 September 1945. She decommissioned there 19 October 1945; her name was struck from the Navy List 1 November 1945; and scrapped by the Philadelphia Navy Yard 28 May 1946.

Grinnell

A city in Iowa.

(PC-1230 : dp. 315; l. 174'; b. 23'; dr. 8'; s. 20 k.; epl. 59; a. 1 3", 1 40mm., 5 20mm., 2 rkt., 2 dct.)

PC-1230 was laid down by Leatham D. Smith Shipbuilding Co., Sturgeon Bay, Wis., 20 December 1942; launched 10 March 1943; sponsored by Miss Ann Duffy; and commissioned 15 July, Lt. Carrol E. Church in command.

Following shakedown *PC-1230* performed escort duty between Florida and the West Indies, prior to departing New Orleans 7 December. Enroute to the South Pacific, she transited the Panama Canal, arriving Bora Bora, Society Islands, 13 February 1944. Assigned to convoy escort duty, the submarine chaser ranged the South Pacific for the next 6 months maintaining a constant vigil for enemy submarines.

In early September *PC-1230* prepared for the invasion of the Palau Islands, a preliminary step toward the invasion of the Philippines. Departing Tulagi on the 4th she sailed for the Palaus, arriving Pelelieu 15 September. For the next 10 days she assisted the invasion efforts by performing harbor entrance control duties until these tiny islands were in American hands.

While American forces were liberating the Philippines, *PC-1230* continued harbor entrance control out of Pelelieu, a strategic staging area. From November 1944 to March 1945 she performed patrol, escort, and other assignments in the Palau and Marshall Islands. Departing Eniwetok 4 March she steamed to Pearl Harbor for conversion to Landing Control Ship.

Following overhaul and amphibious training *PC-1230* returned Eniwetok 18 June. For the rest of the war she engaged in training, patrol, and escort duty in the Marshalls, Marianas, and Philippines. After VJ-Day, *PC-1230* remained in the Far East for escort duty in the Philippines and harbor control out of Tokyo Bay.

Upon returning to the United States she decommissioned in March 1946, and joined the Pacific Reserve Fleet. *PC-1230* was named *Grinnell* 15 February 1956. She was sold in April 1960.

PC-1230 received one battle star for World War II service.

Griswold

The first *Griswold* was a former name retained. The second *Griswold* is named for Ens. Don T. Griswold, Jr., born 8 July 1917 in Bryan, Tex. After attending Iowa State, Griswold joined the Naval Aviation Corps. During the crucial Battle of Midway, 6 June 1942, his scout-bomber scored a hit on a Japanese ship but paid dearly for it as he was hit by antiaircraft fire and plunged into the sea. Ens. Griswold was posthumously awarded the Distinguished Flying Cross.

I

(SP-3138 : dp. 133; l. 92'2"; b. 25'; dr. 5'6"; s. 10 k.)

The first *Griswold* (SP-3138), a wooden ferryboat, was built in 1899 by A. Nicholson, of Albany, N.Y., and was taken over by the Navy 12 August 1918, from her owner, East and West Shore Ferry & Transportation Co., New Haven, Conn. She commissioned 3 September 1918, at New York, Ens. W. J. Wilson, USNRF, in command.

Griswold was assigned to the 3d Naval District, and was used during her commissioned service as a ferry between the Bayonne, N.J., fuel depot and St. George, Staten Island, N.Y. She was detached from that duty 9 June 1919 and was simultaneously decommissioned and returned to her owner 20 June 1919.

II

(DE-7 : dp. 1,140; l. 289'5"; b. 35'; dr. 11'10"; s. 21 k.; epl. 156; a. 3 3", 4 1.1", 9 20mm., 2 dct., 8 dct., 1 dct. (hh.); cl. *Evarts*)

The second *Griswold* (DE-7) was launched 28 April 1943 at the Boston Navy Yard; sponsored by Mrs. Don T. Griswold, mother of Ens. Griswold; and commissioned the same day, Lt. Comdr. Charles M. Lyons in command.

After shakedown in Bermuda, *Griswold* headed for the Pacific, reaching Bora Bora, Society Islands, via Norfolk and the Panama Canal 23 July 1943. Immediately pressed into service, she escorted convoys through the South Pacific, until April 1944. On 12 September she conducted a 4-hour attack on a Japanese submarine off Guadalcanal; and, although debris and an oil slick rose to the surface, she was not credited with a kill.

Undaunted, *Griswold* struck again 3 months later and this time recorded a kill. At 2200 on the night of 23 December, patrolling off Lunga Point, Guadalcanal, she was dispatched to investigate a periscope sighting. Alert sonar operators picked up the contact immediately, and held it for the next 5 hours as the determined DE conducted attack after attack on the elusive Japanese raider. Oil slicks and air bubbles after the sixth and seventh attacks told *Griswold* that her quarry was hit—this was confirmed shortly before 0300 on 24 December when a periscope poked out of the water. *Griswold* charged in for her eighth attack, laying a lethal pattern of twelve depth charges. A heavy oil slick dotted with debris rose to the surface, and the tenacious ship and crew were credited with sinking *I-39*.

After overhaul at Mare Island, the escort ship returned to the Pacific theatre on 3 June 1944 to escort convoys and participate in training exercises out of Pearl Harbor well into 1945. From 12 March to 6 May 1945, she remained on station at Eniwetok as flagship for Commander Task Group 96.3 under Comdr. T. F. Fowler. The long Pacific campaign was moving into its final phase that spring as American forces invaded Okinawa, a short step from the Japanese home islands; and *Griswold* soon moved up to the front.

Reaching Okinawa on 27 May, *Griswold* immediately

took up station on the ASW screen, and was shortly rewarded with two kamikaze kills, 31 May and 5 June. The second of these would-be kamikazes dived on *Griswold*; but she evaded him and the marauder exploded into the ocean so close that fragments of the Japanese plane showered over her. That same day two other American ships were seriously damaged by kamikazes as Japan made her desperate, and futile, effort to reverse the tide of war.

On 29 June *Griswold* departed Okinawa, escorting a convoy to Leyte Gulf, Philippines, and continuing on to Ulithi for screening work. At war's end she sailed triumphantly into Japanese waters, anchoring in Tokyo Bay on 10 September. Embarking passengers for state-side, *Griswold* cleared Tokyo 6 days later and arrived San Pedro, Calif., 8 October via Eniwetok and Pearl Harbor. She decommissioned there 19 November 1945 and was struck from the Navy List 5 December. The hulk was sold to Dulien Steel Products, Seattle, Wash., for scrapping 27 November 1946.

Griswold received three battle stars for World War II service.

Grommet Reefer

A former name retained.

(T-AF-53: dp. 3,277; l. 338'8"; b. 50'; dr. 21'; s. 10.5 k.; a. none; T. Cl-M-AV1)

Grommet Reefer (T-AF-53) was laid down under Maritime Commission contract by Walter Butler Shipbuilders, Inc., Riverside Yard, Duluth, Minn., 1 January 1944; launched as *Kenneth E. Gruennert* 29 July 1944; sponsored by Mrs. Walter A. Blodsoe; and delivered to WSA 9 December 1944 for use as a merchant cargo ship. Prior to 1950 she was owned by WSA and the Maritime Commission; and, as *Kenneth E. Gruennert* and later as *Grommet Reefer*, she was operated by several merchant lines, including Grace Lines, Inc., and Alaska Transportation Co.

Grommet Reefer was transferred to the Navy by the Maritime Commission 1 March 1950 and assigned to MSTs. Manned by a civilian crew, she operated in the Pacific out of West Coast ports, carrying military cargo and frozen and refrigerated foodstuffs. She steamed to American bases in the Marshalls, the Marianas, and other islands in the Western Pacific for more than a year. After returning to San Francisco 25 March 1951, she departed for the East Coast 4 April and reached New York 25 April.

Departing New York 29 June, *Grommet Reefer* sailed to the Mediterranean where she steamed to ports in North Africa and Italy before returning to New York 13 August. After completing a cargo run to Bremerhaven and back, she sailed 22 October for a 2-month deployment to the Mediterranean. From January to April 1952 she made three round-trip voyages to Western Europe, and during the next 2 months she supplied American bases in Labrador and Greenland.

Grommet Reefer resumed Mediterranean duty in September and operated between North Africa and Italy before returning to New York 10 November. After loading cargo, she departed for North Africa 5 days later. On 10 December she departed Casablanca, Morocco, for Leghorn, Italy. Loaded with Army cargo, she went aground on a reef during a storm off Leghorn 15 December, 1952. She broke in half the next day, and her stern section sank without loss of life. The bow section and cargo were salvaged, and the bow was transferred to the Maritime Administration 23 July 1953.

Grosbeak

Any of several species of finches, having a thick, strong, conical bill.

I

(SwStr: t. 196; l. 164'; b. 28; dph. 4'6"; a. 2 20-pdr. P.r.; 2 30-pdr. P.r.; 1 12-pdr. sb.)

Grosbeak, renamed from *Fanny*, was purchased at Mound City, Ill., 3 February 1865; and commissioned 24 February, Acting Master Thomas Burns in command.

After brief duty in Kentucky with the iron-clad monitor squadron stationed there, *Grosbeak* joined the Mississippi squadron patrolling the river from Cairo to the White River. When the river steamer *Sultana* caught fire and exploded off Memphis 27 April, *Grosbeak* rescued 60 to 80 survivors and transferred them to hospital. She also transported wounded men from boats further down the river to Memphis for proper care. As the war ended, *Grosbeak* returned to Mound City and was sold there 17 August 1865.

II

(SP-566: l. 38'; b. 8'4"; dr. 2'6"; s. 18 k.; a. 1 mg.)

Grosbeak built by Rice Brothers, Boothbay, Mass., was acquired from her owner R. C. Robbins, Hamilton, Mass., 17 April 1917. She served as a coastal patrol craft along the New England coast from Chatham, Mass., to New London, Conn., during World War I. Her name was struck from the Navy List in 1919 and she was sold to Clarence Kugler, Philadelphia, 21 March 1920.

III

(AMc-19; dp. 185; l. 81'2"; dr. 9'8"; s. 10 k.; cpl. 16)

Grosbeak, the former wooden purse seiner *Del Rio*, was built by J. M. Martinac, Tacoma, Wash., in 1935; and commissioned 11 November 1940, Ens. T. F. Martin in command.

Following conversion to an auxiliary minesweeper at Alameda, Calif., *Grosbeak* joined Mine Division 1 at San Francisco 16 April 1941. Her major duty was sweeping San Francisco Bay and nearby waters, but she was also used for training reserve and junior officers in small boat handling and minesweeping. *Grosbeak* decommissioned 12 September 1944. Her name was struck from the Navy List 14 October; and she was returned to her former owner at San Pedro, Calif., 2 April 1945.

A contract for constructing *Grosbeak* (AM-397) was awarded Defoe Ship Building Co., Bay City, Mich., but cancelled 12 August 1945 before her keel had been laid.

IV

(YMS-317: dp. 270; l. 136'; b. 25'; dr. 8'; s. 15 k.; cpl. 32)

Grosbeak (AMS-14), was launched as *YMS-317*, by the South Coast Co., Newport Beach, Calif., 27 February 1943; sponsored by Mrs. Marjorie Boutelle; and commissioned 18 November 1943, Lt. John B. Warner in command.

After shakedown, *YMS-317* swept the San Francisco Bay area until 3 May 1944, when she sailed for Pearl Harbor. In the Pacific, she acted as an escort vessel to convoys in back and staging areas, such as Eniwetok, Saipan, and Kwajalein, as well as patrolling and minesweeping in these areas. After the war's end, *YMS-317* returned to Pearl Harbor for a badly-needed overhaul. She reached Charleston, S.C. via San Pedro and the Panama Canal in June 1946 and again underwent overhaul. The ship was named *Grosbeak* and redesignated AMS-14 18 February 1947.

Grosbeak spent most of her post-war career at the Mine Warfare School, Yorktown, Va., and the Naval Minecraft Base at Charleston as a training ship. She also participated in various experiments at the Naval Mine Countermeasures Station, Panama City, Fla., and engaged in numerous exercises along the coast from New England to the Gulf of Mexico. From 24 February to 19 March 1950 *Grosbeak* was in the Caribbean to participate in Operation PORTEX out of Vieques Island, P.R., and in

February 1951 she became the first of her type to journey from Yorktown to Charleston via the intracoastal waterway.

The minesweeper received the coveted Battle Efficiency "E" for outstanding performance in her class in 1950, 1951, and 1952, one of the few ships in the Navy to receive three such awards. When she was not engaged in sweeping exercises, *Grosbeak* underwent periodic overhauls at Charleston and also visited Miami and New York. Scheduled for deactivation, *Grosbeak* sailed to Green Springs Cove, Fla., 16 November 1955 and decommissioned there 7 December 1955. The hulk was approved for disposal 27 October 1959 and *Grosbeak's* name was struck from the Navy List 1 November 1959.

Grosse Pointe

A city in southeastern Michigan.

(PC-1546; dp. 280; l. 173'8"; b. 23'; dr. 10'10"; s. 22 k.; cpl. 65; a. 1 3", 1 40mm., 5 20mm., 2 rkt., 4 dep., 2 dct.; cl. PC-553)

PC-1546 was laid down 28 November 1943 by Consolidated Shipbuilding Corp., Morris Heights, N.Y.; launched 30 January 1944; sponsored by Mrs. J. G. Feeney; and commissioned at the New York Navy Yard 5 June 1944, Lt. James O. Watts in command.

After shakedown and ASW training off the East Coast, PC-1546 departed New York 10 August to escort a troop and supply convoy to Guantanamo Bay, Cuba. Assigned to the Eastern Sea Frontier, she screened eight convoys between New York and Cuba during the next 5 months. In January and February 1945 she patrolled the coastal sealanes, searching for German submarines. Resuming escort duties in March, she made five more runs along the East Coast and returned to New York 22 May.

PC-1546 departed for the Pacific 12 June; and, steaming via the West Coast, Hawaii, and the Marshalls, she reached Ulithi, Carolines, 8 August. During the next 2 months she patrolled on air-sea rescue duty between Ulithi and Guam. After shifting her base to Guam 21 October, she resumed air-sea rescue patrols in the Marianas. She operated in the Western Pacific during the next 32 months; and patrols and passenger runs sent her to Okinawa, Korea, Japan, the Bonins, and the Carolines. Departing Guam 14 July 1948, she steamed to Midway; and, after serving as air-sea rescue ship between 25 July and 10 September, she sailed for overhaul at Pearl Harbor.

PC-1546 resumed air-sea rescue patrols 9 January 1949 out of Tutuila, American Samoa. After returning to Pearl Harbor 12 April, she was assigned to the Patrol Group, Hawaiian Sea Frontier. For almost 5 years she continued air-sea rescue patrols in the Central Pacific, operating primarily out of Midway, Johnston Island, and Kwajalein. Between 29 January and 5 May 1954 she served at Bikini, Marshalls, during the testing of the hydrogen bomb. She departed Kwajalein 8 December, reached Pearl Harbor 14 December, then sailed for the West Coast 19 February 1955. Arriving San Francisco 26 February, she underwent overhaul before sailing for Astoria, Oreg., 11 June. After arriving 14 June, she decommissioned 12 August and entered the Pacific Reserve Fleet. While berthed with the Columbia River Group, she was named *Grosse Pointe* 15 February 1956. Under terms of the Military Assistance Program she was loaned to the Republic of Korea 21 November 1960, and she serves the Korean Navy as *Kun Chong San* (PC-708).

Grosser Kurfurst

A former name retained.

Grosser Kurfurst was renamed *Acolus* (q.v.) 6 September 1917.

Groton

A city in Connecticut.

I

(PF-29: dp. 1,264; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*)

Groton (PF-29), formerly PG-137, was launched under Maritime Commission contract by Walter Butler Shipbuilding Co., Inc., Superior, Wis., 14 September 1943; sponsored by Mrs. Percy Palmer; and commissioned 5 September 1944, Lt. P. L. Chase, USCGR, in command.

After shakedown training off Bermuda, *Groton* reported for Atlantic duty 30 October 1944. She departed for her first duty station 2 November, arriving in Argentina, Newfoundland, 3 days later. The ship sailed 6 November for her weather station in the north Atlantic, sending important reports to allied weather stations and helping to guide wartime traffic safely to Europe. *Groton* remained on this duty, based at Argentina, until sailing for Boston 7 February 1945. She had but a short respite, and was back on her weather station 10 days later.

Groton performed weather picket duty in the Atlantic until 15 November 1945 when she returned to Boston for transfer to the Coast Guard. The ship simultaneously decommissioned and commissioned in the Coast Guard 13 March 1946. Serving the Coast Guard on loan, *Groton* again was assigned to weather duty off Argentina until decommissioning 25 September at New Orleans, La.

After being moved to Lake Charles, La., in November, *Groton* returned to New Orleans in January 1947. Turned over to the State Department for disposal, she was sold to the Government of Colombia 26 March 1947, where she now serves as *Almirante Padilla*.

II

(PCE-900: dp. 640; l. 185'; b. 33'; dr. 9'; s. 16 k.; cpl. 96; a. 1 3", 3 40mm., 4 20mm., 4 dep., 1 dct. (h.h.), 2 dct.; cl. PCE-881)

PCE-900 was laid down by Willamette Iron & Steel Corp., Portland, Oreg., 11 January 1943; launched 11 August; sponsored by Mrs. Clara Goff; and commissioned at Portland 12 April 1945, Lt. Arthur Maddalena, Jr., in command.

After shakedown off the West Coast, PCE-900 departed San Pedro 5 June, arriving Pearl Harbor on the 13th. As the war still raged in the Western Pacific, she was assigned to plane guard station out of Pearl Harbor. Throughout the war and following the Japanese surrender, PCE-900 continued operations in the vicinity of Hawaii.

She remained in the Pacific for the next 3 years, then sailed to the East Coast for duties in the 1st Naval District. PCE-900 was assigned as a Naval Reserve training ship out of Boston, where she operated until 1955. She decommissioned 19 August 1955, and joined the Atlantic Reserve Fleet. PCE-900 was named *Groton* 15 February 1956; and, after many years of productive service to the Navy, she was struck from the Navy List 1 February 1960.

Grouper

A salt-water fish noted as a gamefish and for its food values.

(SS-214: dp. 1,525; l. 311'9"; b. 27'2"; dr. 16'10"; s. 20.9 k.; cpl. 80; a. 1 3", 10 21" tt.; cl. *Gato*)

Grouper was launched by the Electric Boat Co., Groton, Conn., 27 October 1941; sponsored by Mrs. Albert F. Church; and commissioned at New London 12 February 1942, Lt. Comdr. C. E. Duke in command.

After shakedown in Long Island Sound, *Grouper* sailed for Pearl Harbor 30 March 1942 to join the Pacific Submarine Force which was to play havoc on Japanese shipping. Before departing for her first war patrol, *Grouper*

was assigned to the submarine screen which ringed the area as the American and Japanese fleets clashed in the decisive Battle of Midway. Patrolling the fringe of the fighting 4 June, *Grouper* sighted two burning enemy carriers, but could not close for attack because of heavy air cover. On that day she was strafed by fighter planes and driven deep in a series of aircraft and destroyer attacks which saw over 170 depth charges and bombs dropped on the novice submarine.

On 5 June as the battle still raged, *Grouper* crash-dived to avoid heavy bombers, then after 3 days at Midway to fuel and provision, *Grouper* sailed on her first war patrol 12 June. She torpedoed and damaged two Japanese marus in the China Sea before returning to Pearl Harbor 30 July. On her second patrol (28 August-9 October) *Grouper* had the satisfaction of sending to the bottom two freighters, *Tone Maru* on 21 September and *Lisbon Maru* on 1 October. Her third patrol, made 12 November to 31 December as she patrolled to Brisbane, Australia, was enlivened by the sinking 17 December of *Bandoeng Maru*, a passenger-freighter headed for the Solomons with troop reinforcements.

During her fourth war patrol (21 January-18 March 1943) *Grouper* rescued an aviator stranded on Rengi Island for several days and located several key Japanese radar installations in the Solomons. Her next four patrols netted her no further kills, despite several determined attacks, but illustrated the varied tasks submarines took on during the war. In addition to her regular patrol duties, which harassed Japanese shipping and tied up valuable warships desperately needed by the enemy, *Grouper* landed 50 men and 3,000 pounds of gear on New Britain Island to carry on guerrilla warfare and at the same time rescued an American aviator stranded there almost 3 months. At the conclusion of her eighth patrol, *Grouper* headed for the States and overhaul, reaching San Francisco 19 October 1943.

After returning to Pearl Harbor 7 January 1944 for additional repairs, the veteran submarine sailed for her ninth war patrol 22 May. This patrol netted *Grouper* what was to be her last kill of the war, *Kumanoyama Maru*, which she sank in a night surface attack 24 June. *Grouper's* final three war patrols found a lack of targets—American submarines had done their job on Japanese shipping too well for *Grouper's* purposes. She stood life-guard duty during several air strikes and rescued seven downed aviators during raids on the Palaus in September 1944.

Returning to Pearl Harbor from her 12th war patrol 26 April 1945, *Grouper* sailed for San Francisco and overhaul the following day. She returned to Pearl Harbor 6 August, but V-J Day cancelled plans for another patrol, and on 9 September *Grouper* in company with *Toro* and *Blackfish*, sailed for New London. Four years of local operations and training exercises along the coast to Florida and in the Caribbean followed for *Grouper*. During this period she chalked up two "firsts:" in 1946 she became the first submarine to have a Combat Information Center installed, and the following year she effected the first discharge and recovery of men from a submerged and underway submarine.

These operations ended 5 March 1950 as *Grouper* entered the Mare Island Ship Yard for conversion to the Navy's first "killer" submarine. Her classification was changed to SSK-214 on 2 January 1951. With the addition of a snorkel and extensive sonar and radar facilities, *Grouper* emerged from the yard 27 June 1951 to pioneer in research on the deadly submarine-versus-submarine warfare. For the next 8 years, as a unit of Submarine Development Group 2, *Grouper* worked to develop and test concepts of hunter-killer antisubmarine warfare. In this duty she ranged along the East Coast from Nova Scotia to Florida as well as participating in Caribbean exercises. In 1953 and 1955 exercises took *Grouper* across the Atlantic to Rothesay, Scotland, via Iceland. In the fall of 1957 she then participated in NATO maneuvers.

Grouper was reclassified AG (SS)-214, 17 May 1958, and on 28 November 1959 she entered the Portsmouth, N.H.,

Navy Yard for extensive modification. Her forward torpedo room was converted into a floating laboratory, work benches and additional berths for scientists were installed, and various types of sonar gear were added topside. Thus equipped, *Grouper* departed Portsmouth 23 June 1960 to embark on the fourth phase of her long career, research vessel for the Naval Research and Underwater Sound Laboratories. Her duties as a floating laboratory took her frequently to the Caribbean and Bermuda, although she retained New London as her home port and engaged in operations there and as far north as Nova Scotia. Her efforts were focused on the study of sound propagation in water. In December 1962 *Grouper* entered the Philadelphia Naval Shipyard for overhaul and modification to prepare for further work in this field. *Grouper* left the Philadelphia Naval Shipyard in May 1963 to resume her investigation of waterborne sound.

In June of 1964 *Grouper* was awarded the coveted Battle Efficiency "E". In November 1965 the submarine again entered the Philadelphia Naval Shipyard for overhaul and equipment modifications to increase her usefulness as a floating underwater sound laboratory. She departed Philadelphia 1 May 1966, reached New London 1 June, and headed for the Caribbean for intensive research. Her studies during 1966 also took her to Narragansett Bay and twice to Bermuda. At the beginning of 1967 *Grouper* was at New London preparing to resume gathering knowledge of underwater sound propagation.

At present *Grouper* is still adding accomplishments as a floating laboratory to her long and outstanding record during both war and peace.

Grouper received 10 battle stars for World War II service.

Grouse

A game bird, smaller than the domestic hen, with mottled plumage; also known as "prairie hen" and "sage-cock."

I

(AMc-12; dp. 200; l. 80'; b. 25'; s. 11 k.)

The first *Grouse* (AMc-12), formerly *New Bol*, was launched in 1938 by Martinac Shipbuilding Co., Tacoma, Wash.; acquired in 1940; and commissioned 20 June 1941 at San Diego, Lt. (j.g.) Theodore L. Bergen in command.

After shakedown off San Diego, *Grouse* performed patrol and minesweeping duties in the 11th Naval District until she decommissioned 26 August 1944. Struck from the Navy List 23 September 1944, she was transferred to the Maritime Commission for disposal 5 February 1945.

II

(YMS-321; dp. 296; l. 136'; b. 24'6"; s. 12 k.; epl. 33; a. 13")

The *Grouse* (YMS-321) was launched 20 February 1943 by Al Larson's Boat Shop, Terminal Island, Calif.; sponsored by Mrs. H. Doty; and commissioned as *YMS-321* on 25 October 1943, Lt. (j.g.) Newman in command.

After shakedown and patrol out of San Diego, *YMS-321* sailed for Pearl Harbor 21 April 1944, arriving 1 May. A month later she sailed for sweeping and patrol duties in the Guam-Saipan-Tinian area. *YMS-321* was also pressed into service as a convoy escort in these staging areas, and on 28 November 1944 was in Tinian harbor during a Japanese air-raid. After escorting a convoy to Eniwetok, she swept the harbor at Maug Island, Marianas, 15 March 1945, and then bombarded the beach the following day. The wooden minesweeper patrolled around Iwo Jima in April 1945 and exploded two floating mines before returning to Saipan.

As the long Pacific war drew to a close, *YMS-321* returned to Pearl Harbor 15 August 1945, and from there returned to San Diego 29 August. After overhaul and operations along the West Coast, she sailed for the East Coast 5 April 1946, arriving Charleston on the 29th.

YMS-321 was reclassified AMS-15 on 25 February 1947, and named *Grouse*. For the next 10 years the small coastal minesweeper operated along the East Coast in a variety of capacities. Although her primary duty was training student officers and enlisted men at the Mine Warfare School, Yorktown, Va., *Grouse* also participated in experimental work at Countermeasures School and Mine Defense Laboratory, at Panama City, Fla. Various minesweeping exercises and regular overhauls consumed most of the rest of her time, although in 1954 and 1955 she was attached to the Hydrographic Office for Project "Vamp," a special coastal survey along the Virginia and Massachusetts shores.

On 1 March 1955 *Grouse* was reclassified MSC (0)-15. Sailing to Portland, Maine, 7 September 1957, she decommissioned and was placed in reserve 12 September 1957. *Grouse* was placed in service, in reserve, 13 November 1958, Lt. (j.g.) K. G. Houghton in command, and proceeded to Portsmouth, N.H., for overhaul. Assigned to the 1st Naval District as a reserve training ship, *Grouse* was based at Portsmouth and used to train reservists from the area in new minesweeping tactics. This work took her along the New England Coast as well as to Chesapeake Bay and to Charleston.

While on a training mission, *Grouse* went aground off Rockport, Mass., on the night of 21 September 1963. There were no injuries to the crew, but all efforts to dislodge *Grouse* from the rocks failed. *Grouse* was destroyed by explosives 28 September 1963, and her name was struck from the Navy List the same day.

Grouse (AM-398) was begun at Defoe Shipbuilding Co., Bay City, Mich., but her contract was terminated 12 August 1945.

Groves

Stephen William Groves, born 29 January 1917 in Millinocket, Maine, after a brief period of enlisted service was appointed Aviation Cadet 15 February 1941. Ens. Groves was a member of Fighter Squadron 8 (on *Hornet*) during the epochal Battle of Midway. He hurled his fighter into a mass of Japanese aircraft threatening American carrier formations. Groves successfully pressed home his attack against disparate odds, thereby playing a key role in this decisive battle before he was presumed dead the next day, 5 June 1942, and received the Navy Cross posthumously for his heroism.

Groves (DE-543), a *John C. Butler*-class escort vessel, was building at Boston Navy Yard, but was cancelled 5 September 1944.

Growler

A large-mouth black bass.

I

(Slp: t. 53; a. 2 g.)

Growler, a wooden sloop, was purchased as *Experiment* on Lake Ontario during 1812, and was first commanded by Sailing Master M. P. Mix. She was actively employed with Chauncey's squadron on Lake Ontario from 1812 to 1814. *Growler* took part in attacks on Kingston, York, and Fort George and the engagement with the British squadron 7 to 11 August 1813. She was captured by the British 10 August 1813. Recaptured 5 October 1813, *Growler* was labelled and purchased by the Navy, rejoining the squadron. The British captured her again 5 May 1814 at Oswego, N.Y., and she was taken into the Royal Navy as *Hamilton*.

II

(Slp: t. 112; l. 64'; b. 20'4"; dph. 5'8"; a. 10 18-pdr. car., 1 6-pdr.)

The second *Growler* was a sloop purchased on Lake Champlain in 1812. She cruised under the command of Lt. Sidney Smith as part of Commodore Macdonough's squadron until she was taken by the British near Isle Aux Noix, Canada, 3 June 1813. *Growler* was then taken into the Royal Navy as *Shannon*, and later *Chub*. Under the latter name she was captured by the American Squadron in the Battle of Lake Champlain 11 September 1814. She saw no further service, however, and was sold at Whitehall, N.Y. in July 1815.

III

(SS-215: dp. 2,424; l. 311'9"; b. 27'2"; dr. 15'3"; s. 20 k.; cpl. 66; a. 1 3', 10 21" tt.; cl. *Gato*)

Growler (SS-215) was launched 2 November 1941, by Electric Boat Co., Groton, Conn.; sponsored by Mrs. Robert L. Ghormley; and commissioned 20 March 1942, Lt. Comdr. Howard W. Gilmore in command.

Growler's first war patrol began 29 June 1942 as she cleared Pearl Harbor for her assigned patrol area around Dutch Harbor, Alaska; topping off at Midway on 24 June, she entered her area on 30 June. Five days later she saw her first action; sighting three destroyers, *Growler* closed them for a submerged torpedo attack and then surfaced. Her torpedoes struck the first two targets amidships, putting them out of action, and hit the third in the bow, but not before she had fired two torpedoes at *Growler*. As the Japanese torpedoes "swished down each side" of *Growler*, she dived deep, but no depth charges followed. One of the torpedoed destroyers, *Arare*, was sunk, and the other two were severely damaged. *Growler* completed her patrol without finding any more targets, and on 17 July berthed at Pearl Harbor.

On 5 August *Growler* began her second and most successful war patrol, entering her area near Taiwan on 21 August. Two days later she conducted a submerged night attack on a freighter, surfacing to give chase when both torpedoes ran under the target and failed to explode; the freighter's quick exit into shallow waters prevented *Growler* from gun attack. Patrolling amidst a large fishing fleet on 25 August, *Growler* sighted and fired at a large passenger freighter but all three torpedoes missed; after a 3-hour depth charge attack, in which some 53 ash cans were dropped, *Growler* surfaced and almost immediately spotted a convoy. After 2 hours of maneuvering, she failed to catch up with the main body of the convoy but did fire at and sink an ex-gunboat, the *Senyo Maru*. No more ships appeared in this immediate area for 3 days, so *Growler* shifted to the east side of the island. First to fall victim was *Eifuku Maru*, a 5,866-ton cargo ship *Growler* sank within 40 minutes after first sighting her on 31 August. On 4 September *Growler* sank by gunfire the *Kashino*, a 4,000-ton supply ship; 3 days later she sent two torpedoes into the 2,204-ton cargo ship *Taika Maru*, which broke in half and sank in 2 minutes. On 15 September *Growler* cleared her patrol area, and arrived back at Pearl 30 September.

During refitting, new surface radar was installed, as well as a new 20mm. gun; thus equipped, *Growler* sailed from Hawaii for her new patrol area in the Solomon Islands across the key Truk-Rabaul shipping lines. Her patrol area in these days of bitter fighting over Guadalcanal was almost continually covered by enemy planes, and only eight enemy ships were sighted with no chance for attack. *Growler* cleared the area 3 December and arrived in Brisbane, Australia, 10 December.

New Year's Day of 1943 saw *Growler* sail from Brisbane for what was to prove one of the most gallant actions in naval history. Entering her patrol area, again athwart the Truk-Rabaul shipping lanes, on 11 January, she waited only 5 days before sighting an enemy convoy. Maneuvering inside the escorts, *Growler* fired two torpedoes and saw them hit; then, as her war diary reports, she was in the unfortunate predicament of being about 400 yards from the destroyer and had to dive without being able to continue the attack. She was credited with sinking *Chifuku Maru*, a passenger-cargo ship.

The patrol continued as normal, with two further attacks, but no sinkings until shortly after 0100, 7 February when *Growler* stealthily approached a gunboat for a night surface attack. The small fast ship suddenly turned to ram. Comdr. Gilmore then took the only move to save his ship; he brought *Growler* left full rudder and rammed the enemy amidships at 17 knots. Machine gun fire raked the bridge at point blank range. The courageous sub seemed lost. Comdr. Gilmore cleared the bridge except for himself. Desperately wounded, he realized that he could not get below in time if his ship were to be saved. "Take her down" he ordered; and, as he floated in the sea, he wrote another stirring tale of inspirational naval history. For his heroic sacrifice to ship and crew, Comdr. Gilmore was awarded the Medal of Honor, one of six submariners to receive this medal of valor.

Severely damaged but still under control, *Growler* returned to Brisbane under command of her exec., Lt. Comdr. A. F. Schade; she docked 17 February for extensive repairs.

Growler's fifth, sixth, and seventh patrols, out of Brisbane to the Bismarck-Solomons area, were relatively uneventful; heavy enemy air cover and a lack of targets resulted in her coming home empty-handed from all but the fifth, on which she sank the passenger-cargo ship *Miyadono Maru*. The seventh patrol was marred by trouble with the storage battery and generators, and on 27 October 1943, only 11 days out of Brisbane, she was ordered to Pearl Harbor, arriving 7 November, and from there to the Navy Yard at Hunter's Point, Calif., for an extensive overhaul and refitting.

Returning to the Pacific, on 21 February 1944, *Growler* departed Pearl Harbor, and after refueling at Midway, headed for her patrol area. However, a week out of Midway a typhoon's high seas and wind delayed her arrival to the patrol area. Once there, *Growler* was again plagued by violent weather which made even periscope observation almost impossible.

Growler returned to Majuro 16 April, and departed there 14 May to take up patrol in the Marianas-Eastern Philippines-Luzon area, where the first stages of the attack on the Marianas and the Battle of the Philippine Sea were getting underway. Rendezvousing with *Bang* and *Seahorse* to form a wolfpack, she continued the patrol closing several targets but achieving firing position only once, when she sank the cargo vessel *Katori Maru*.

Her 10th patrol, from Pearl Harbor 11 August, found her in a new wolfpack, nicknamed "Ben's Busters" after *Growler's* skipper Comdr. T. B. Oakley; in company with *Scalion* and *Pampanito*, she headed for the Formosa Straits area. Aided greatly by reconnaissance and guidance from planes, the wolfpack closed a convoy for night surface action 31 August; their torpedoes plunged the

Japanese into chaos, with their own ships shooting at each other in the dark, but no sinkings were reported. Two weeks later, 12 September, the wolfpack sighted a second convoy and closed for torpedo action. A destroyer spotted *Growler* and attacked her, but the sub calmly fired a spread at the destroyer. Heavily damaged by the torpedoes, the flaming destroyer bore down on *Growler* and only adroit maneuvering took her out of the enemy's way; paint on the bridge was seared by the heat of the passing destroyer. Meantime *Growler's* other torpedoes and those of *Scalion* and *Pampanito* were hitting the convoy, and when Ben's Busters returned to Fremantle 26 September, they were credited with a total of six enemy ships. *Growler* had sunk the destroyer *Shikinami* and the frigate *Hirado*; and her companions had racked up two each. The submarines had also rescued over 150 Allied prisoners from one of the torpedoed ships which had served the Japanese as a prison ship. This difficult operation had been carried out despite rough seas caused by an approaching typhoon.

Growler's 11th and final war patrol began out of Fremantle 20 October in a wolfpack with *Hake* and *Hardhead*. On 8 November the wolfpack, headed by *Growler*, closed a convoy for attack, with *Growler* on the opposite side of the enemy from *Hake* and *Hardhead*. The order to commence attacking was the last communication ever received from *Growler*. After the attack was underway, *Hake* and *Hardhead* heard what sounded like a torpedo explosion and then a series of depth charges on *Growler's* side of the convoy, and then nothing. All efforts to contact *Growler* for the next 3 days proved futile, and the gallant submarine, veteran of seven successful war patrols, was listed as lost in action against the enemy, cause unknown.

Growler received eight battle stars for her service in World War II.

IV

(SSG-577: dp. 2,768; l. 317'7"; b. 27'2"; dr. 19'; s. 14 k.; cpl. 87; a. Regulus mis.; cl. *Grayback*)

The fourth *Growler* (SSG-577), second of the Regulus II guided missile submarines, was built by the Portsmouth Naval Shipyard, Portsmouth, N.H. At her launching 5 April 1958 she was sponsored by Mrs. Robert K. Byerts, widow of Comdr. Thomas B. Oakley, Jr., who commanded the third *Growler* on her 9th, 10th, and fatal 11th war patrols. *Growler* commissioned at Portsmouth on 30 August 1958, Lt. Comdr. Charles Priest, Jr., in command.

After training exercises off the East Coast *Growler* sailed south for her shakedown cruise, arriving at the Naval Air Station, Roosevelt Roads, P.R., on 19 February

USS *Growler* (SS-215) at Groton, Conn., 21 February 1942

"Take Her Down"—famous last words of Comdr. Howard W. Gilmore, Commanding Officer of USS *Growler* (SS-215)

1959. After a brief run back to Portsmouth, she returned to the Caribbean in March to train in launching Regulus I and II guided missiles. *Growler* returned to Portsmouth 19 April via Fort Lauderdale and New London.

Growler then proceeded to the Pacific via Norfolk, Key West, and the Panama Canal, putting in at Pearl Harbor on 7 September to serve as flagship of Submarine Division 12. At Pearl Harbor the guided missile sub participated in a variety of battle and torpedo exercises as well as missile practice before beginning her first Regulus Deterrent Mission. On this mission, which lasted from 12 March to 17 May 1960, *Growler* departed Hawaii with a full store of Regulus II sea-to-surface missiles, armed with nuclear warheads, and patrolled under a strict cloak of secrecy. The threat of *Growler* and her sisters, shadowy submarines silently gliding through unknown seas with their potent cargo, should deter any but the most foolhardy foe. The attitude of her crew, at sea on these silent missions for 2 months and more at a stretch, submerged for hours and even days, is nowhere better expressed than in the poem which traditionally opens each year's log. On New Year's Day 1961, as *Growler* prowled deep on her second patrol, Lt. (j.g.) Bruce Felt wrote: "Not our idea of fun and good cheers, but doing our job to ensure many New Years."

From May 1960 through December 1963 *Growler* had made nine such deterrent mission patrols, one of which, the fourth, terminated at Yokosuka, Japan, on 24 April 1962, as the Navy proudly displayed one of its newest and most effective weapons.

Returning to Mare Island, Calif., in May 1964, *Growler* decommissioned 25 May and was placed in reserve. At present she is berthed at Mare Island with the Pacific Reserve Fleet.

Grumium

A star.

(AK-112: dp. 4,023; l. 441'6"; b. 56'1"; dr. 28'4"; s. 11 k.; cpl. 198; a. 15", 13"; cl. *Crater*; T. EC2-S-C1)

Grumium (AK-112) was launched under Maritime Commission contract as *William G. McAdoo* by Permanente Metals Corp., Richmond, Calif., 20 December 1942; sponsored by Mrs. T. Y. Sturtevant; and acquired by the Navy from the Maritime Commission 5 October 1943. The ship was converted by Todd Shipyard, Seattle, Wash., and commissioned *Grumium* (AK-112) 20 October 1943, Lt. Comdr. B. J. Parylak in command.

Grumium loaded supplies at San Francisco 9 November and got underway from San Pedro 19 November 1943 bound for Pago Pago. The ship unloaded drum gas there and at Funafuti 8 to 11 December, after which she proceeded to Kwajalein 6 March and Eniwetok 15 March delivering the much-needed oil and aviation fuel. After another stop at Kwajalein 26 to 28 April *Grumium* returned to San Francisco via Pearl Harbor, arriving in California 27 May 1944.

At San Francisco *Grumium* was transferred to the direct control of Commander, Naval Air Forces, Pacific Fleet, and underwent conversion to an aviation support ship. She was redesignated IX-174, 20 June 1944 and 2 days later was underway for Pearl Harbor once more, to supply American fast carrier aircraft, then increasing greatly in numbers.

Grumium arrived Pearl Harbor 30 June and 10 July continued to Roi Island. Arriving 19 July the ship transferred supplies to aircraft groups until early September, then returned to Pearl Harbor. She sailed with another load of aviation supplies 28 September, calling at Ulithi and Eniwetok before arriving Manus 17 November. There she supplied carrier forces making the supporting strikes for the Philippine campaign, as America's great island offensive gained momentum. Remaining at Manus until 5 December 1944, *Grumium* sailed to a closer advance base, Ulithi, arriving four days later. From Ulithi the ship supported the far reaching and devastating air raids on the Philippines, Okinawa, and Formosa in the months to come.

As onrushing U.S. forces moved ever north and west, supplies had to be moved into new advance bases, and *Grumium* sailed 14 January 1945 to bring up aviation supplies from Manus to Ulithi. Then she made a similar voyage to Roi Island before moving her supply base to Guam 16 March 1945. The ship was soon to carry her support activities to the assault area itself, however, and rendezvoused with an Okinawa-bound convey at Saipan 23 March.

As American forces stormed ashore at Okinawa 1 April and began that bitterly-fought campaign, *Grumium* made preparations to supply the cruising carrier groups from Kerama Retto, near Okinawa. Arriving 2 April, she serviced the escort carrier groups protecting the landing and providing group support. Japanese forces were determined to defeat the assault and quickly expanded suicide attacks against the assembled ships. *Grumium* came under savage air attack at Kerama Retto 6-7 April; of the many planes destroyed she helped shoot down one. She also rescued survivors from a suicide crash on *Pinkney* (APH-2) 28 April and a bomb hit on *Terror* (CM-5) 30 April.

While *Grumium* was at Kerama Retto, a special designation for aviation supply ships was established; and she became AVS-3 on 25 May 1945. She departed the Okinawa area 6 June, arrived Guam 14 June, and arrived Eniwetok to supply the carrier forces 1 July 1945. *Grumium* remained there during and after the final operations of the war providing vital supplies until departing for the Hawaiian Islands 12 October. Stopping briefly at Pearl Harbor, she arrived Norfolk via the Panama Canal 25 November for deactivation. Decommissioned 20 December 1945, she was redelivered to the Maritime Commission 27 December 1945. Subsequently she joined Maritime Commission's National Defense Reserve Fleet, James River, Va., where she remains.

Grumium received one battle star for World War II service.

Grundy

Counties in Illinois, Iowa, Missouri, Tennessee, and Virginia.

(APA-111: dp. 8393 light; l. 592'; b. 69'6"; dr. 26'6"; s. 18; cpl. 585; a. 2 5"; cl. *Windsor*; T. C3-S-A3)

Grundy (APA-111), was launched under Maritime Commission contract 16 June 1944 by Ingalls Shipbuilding Co., Pascagoula, Miss.; sponsored by Mrs. Lena Moore Gnatt; and commissioned 3 January 1945, Captain J. M. Cabanillas in command.

After loading supplies at New Orleans, the new transport conducted shakedown training out of Galveston, Tex., until 28 January 1945. She departed 4 February for her first assignment, as school ship for pre-commissioning crews at Newport, R.I. Arriving Newport 10 February, *Grundy* held underway drills and training for the crews of nearly finished ships, helping to speed their delivery as active fighting units. This duty was completed 31 March, and *Grundy* sailed for Hampton Roads.

The ship arrived Norfolk, Va., 1 April and immediately embarked Seabees for transportation to the Pacific. Departing 14 April, she sailed to Pearl Harbor via the Panama Canal, arriving there 2 May 1945. At Pearl Harbor *Grundy* performed amphibious exercises and loaded cargo and passengers for the western Pacific. She departed 7 June; stopped at Eniwetok, Guam, and Saipan; and anchored 1 July at Ulithi to join an Okinawa-bound convoy.

Grundy departed in convoy for battle-scarred Okinawa 10 July, and after her arrival 4 days later unloaded her troops and cargo. She then sailed to Ulithi and Peleliu to bring troops from those islands to Guam, where she arrived 31 June. *Grundy* remained there until 2 August when she got underway for Pearl Harbor, unloading her supplies upon arrival 10 August. The war ended while *Grundy* was on her way to San Diego, where she arrived 19 August.

Her troop spaces loaded with replacement units, *Grundy* sailed from Seattle 1 September 1945, and after a stop at Eniwetok arrived Leyte 19 September. There she remained until 26 September, when the transport group of which she was a part departed for Yokohama with occupation troops. Arriving in Japan 4 days later, *Grundy* put ashore her contingent of the occupation forces, embarked veteran troops, and sailed for San Francisco 8 October. She arrived 19 October 1945.

The busy transport's next duty was as part of the "Magic Carpet" fleet, performing the gigantic task of returning the thousands of servicemen to the United States from the Pacific. Carrying replacement troops, she sailed 26 October for Okinawa, arriving 12 November. She then sailed for Shanghai, China, with troops to aid in the occupation and to help stabilize the tense situation there. *Grundy* arrived Shanghai 17 November, and sailed 23 November to embark a group of soldiers for transportation to Seattle from Korea. The transport sailed from Jinsen 5 December and arrived at her revised destination, Portland, Oreg., on Christmas Day 1945.

Designated for return to the Maritime Commission, *Grundy* sailed via San Francisco and the Panama Canal to Norfolk, where she arrived 8 March 1946. She decommissioned 8 May, and was returned to the Maritime Commission 13 May. The ship was subsequently acquired by Moore-McCormack lines, and renamed *Mormacsurf*. In 1966 she was part of a six-ship west coast fleet sold to Grace Lines, serving at present as *Santa Anita*.

Grunion

A small fish of the *silversides* family, indigenous to the western American coast.

(SS-216: dp. 1,525; l. 311'9"; b. 27'; dr. 17'; s. 21 k.; cpl. 70; a. 1 4", 10 21" tt.; cl. *Gato*)

Grunion was launched by the Electric Boat Co., Groton, Conn., 22 December 1941; sponsored by Mrs. Stanford C. Hooper, wife of Rear Admiral Hooper; and commissioned 11 April 1942, Lt. Comdr. M. L. Abele in command.

After shakedown out of New London, *Grunion* sailed for the Pacific 24 May. A week later, as she transited the Caribbean for Panama, she rescued 16 survivors of USAT *Jack*, torpedoed by a German U-boat, and conducted a fruitless search for 13 other survivors presumed in the vicinity. Arriving at Coco Solo 3 June, *Grunion* deposited her shipload of survivors and continued to Pearl Harbor, arriving 20 June.

Departing Hawaii 30 June after 10 days of intensive training, *Grunion* touched Midway; then headed toward the Aleutians for her first war patrol. Her first report,

made as she patrolled north of Kiska Island, stated she had been attacked by a Japanese destroyer and had fired at him with inconclusive results. She operated off Kiska throughout July and sank two enemy patrol boats while in search for enemy shipping. On 20 July the submarine reported intensive antisubmarine activity; and she was ordered back to Dutch Harbor.

Grunion was never heard from nor seen again. Air searches off Kiska were fruitless; and on 5 October *Grunion* was reluctantly reported overdue from patrol and assumed lost with all hands. Captured Japanese records show no antisubmarine attacks in the Kiska area, and the fate of *Grunion* remains a mystery. Her name was struck from the Navy List 2 November 1942.

Grunion received one battle star for World War II service.

Guadalcanal

A volcanic island 90 miles long and 25 miles wide in the Pacific Ocean, Solomon Islands group. Guadalcanal was captured by the Japanese in 1942. Before they could develop it as a bastion Admiral Kelly Turner's amphibious force struck in August. The next 4 months saw some of the bitterest fighting of World War II. Six major naval battles and uncounted smaller engagements were fought in the waters adjacent to the island. The victory on Guadalcanal was the next great step to victory following Midway.

I

(CVE-60: dp. 7,800; l. 512'; b. 65'; ew. 108'1"; dr. 22'6"; s. 19 k.; cpl. 860; a. 1 5", 16 40mm., 20 20mm., 28 ac.; cl. *Casablanca*; T. S4-S2-BB8)

The first *Guadalcanal* (CVE-60), an escort aircraft carrier, was converted from a Maritime Commission hull by Kaiser Co., Inc., of Vancouver, Wash. Originally *Astrolabe Bay* (AVG-60), she was reclassified ACV-60, 20 August 1942 and launched as *Guadalcanal* (ACV-60) 5 June 1943, sponsored by Mrs. Alvin I. Malstrom. She was reclassified CVE-60 on 15 July 1943; and commissioned at Astoria, Oreg., 25 September 1943, Captain D. V. Gallery in command.

After shakedown training, *Guadalcanal* performed pilot qualifications out of San Diego, Calif., and then departed 15 November 1943, via the Panama Canal, for Norfolk, Va., arriving 3 December. There she became flagship of antisubmarine task group 21.12, and with her escort destroyers set out from Norfolk 5 January 1944 in search of enemy submarines in the North Atlantic. On 16 January aircraft from *Guadalcanal* sighted three submarines fueling on the surface and in a rocket and bombing attack succeeded in sinking German submarine *U-544*. Re-

USS *Guadalcanal* (CVE-60) alongside captured German submarine *U-505*

The sub at this point was running in a tight circle to the right, fully surfaced and it was known that most of her crew had abandoned her.

PART III THE CAPTURE

At 1135 ComCortDiv 4 ordered the Jenks and Chatelain to pick up survivors and sent away the Pillsbury's boarding party.

At 1203 the carrier headed back toward the scene of action to get her boarding parties aboard, having in the meantime recovered the fighter planes which had assisted the Chatelain. Carrier's boarding parties were called away at 1230.

After lowering her boat the Pillsbury pursued the sub around the circle trying to get lines aboard. From the carrier's bridge it looked for all the world like rodeo with a cowboy trying to rope a wild horse. The Pillsbury did rope the sub, several times. The first time she got a line aboard, CTG 22.3 broadcast by TBS:

"Bluejay to Dagwood - Rideem Cowboy. Out."

But in the struggle alongside the runaway sub the Pillsbury was holed by the bow planes of the sub, and one engine room was flooded to the water line, forcing her to haul clear and stop.

Meantime the Pillsbury's boarding party, commanded by Lieut. (j.g.) A. L. David, had gotten alongside and leaped from the whaleboat to the deck of the circling sub. There was only one dead man on deck, but the boarders did not know how many men might be below. The sub was still running at about 7 knots and it seemed highly probable that part of the crew was still below setting demolition charges and scuttling. Without hesitation this party took their lives in their hands and plunged down the conning tower hatch to capture and save the boat. They found no one below and immediately went to work closing valves, and replacing the cover on a strainer through which a solid stream of water, 6" in diameter, was pouring into the boat. Then, not knowing at what moment the boat might either blow up or sink, they turned to, seizing all the important looking papers they could find and passing them up on deck.

CONCLUSION

From the time that we sailed from Norfolk the whole task group was determined that we would come back dragging a sub behind us...and they had what it took to do it. When remarkable luck was required, we had it. When perfect cooperation between aircraft and surface vessels was required - it was there. When a clean cut knock out punch was needed, the Chatelain produced it. When outstanding heroism was required, it was commonplace among the boarding parties.

I believe every man in the task group would have volunteered for the boarding parties, and those who could not go were very envious of those who did.

It is a great pleasure to report that all hands in the task group did their duty in an exemplary manner in keeping with the highest traditions of the U. S. Navy.

D. V. Gallery
D. V. GALLERY.

plishing at Casablanca, the task group headed back for Norfolk and repairs, arriving 16 February.

Departing again with her escorts 7 March, *Guadalcanal* sailed without incident to Casablanca and got underway from that port 30 March with a convoy bound for the United States. Scouring the waters around the convoy 8 April northwest of Madeira, the task group discovered German submarine *U-515* and closed in for the kill. *Guadalcanal* aircraft and destroyers *Chatelain*, *Flaherty*, *Pillsbury*, and *Popc* made several well coordinated attacks on the intruder with rockets and depth charges throughout the night. Losing depth control on the afternoon of 9 April, the submarine was forced to surface amid the waiting ships, and was immediately devastated by point blank rocket and gunfire. As Wildcat fighters from *Guadalcanal* strafed the submarine, her captain, German ace Kapitaneutenant Werner Henke, ordered abandon ship and she went to the bottom.

Again on the night of 10 April the task group caught German submarine *U-68* on the surface in broad moonlight 300 miles south of the Azores and sank her with depth charges and rocket fire. The convoy arrived safely at Norfolk 26 April 1944.

After voyage repairs at Norfolk, *Guadalcanal* and her escorts departed Hampton Roads for sea again 15 May 1944. Two weeks of cruising brought no contacts, and the task force decided to head for the coast of Africa to refuel. Ten minutes after reversing course, however, *Chatelain* detected a submarine, *U-505*. The destroyer loosed one depth charge attack and, guided in for a more accurate drop by circling Avenger aircraft from *Guadalcanal*, soon made a second. This pattern blasted a hole in the outer hull of the submarine, and rolled the U-boat on its beam ends. Shouts of panic from the conning tower led her inexperienced captain to believe his boat was doomed, so he blew his tanks and surfaced, barely 700 yards from *Chatelain*. The destroyer fired a torpedo, which missed, and the surfaced submarine then came under the combined fire of the escorts and aircraft, forcing her crew to abandon ship.

Captain Gallery had been waiting and planning for such an opportunity, and having already trained and equipped his boarding parties, ordered *Pillsbury's* boat to make for the German sub and board her. Under the command of Lt. (jg) A. L. David, the party leaped onto the slowly circling submarine and found it abandoned. Braving unknown dangers below, David and his men quickly captured all important papers and books while closing valves and stopping leaks. As *Pillsbury* attempted to get a towline on her, like a cowboy roping a steer, the party managed to stop her engines. By this time a larger salvage group from *Guadalcanal* arrived, and began the work of preparing *U-505* to be towed. After securing the towline and picking up the German survivors from the sea, *Guadalcanal* started for Bermuda with her priceless prize in tow. Fleet tug *Abnaki* rendezvoused with the task group and took over towing duties, the group arriving in Bermuda 19 June.

For their daring and skillful teamwork in this remarkable capture, *Guadalcanal* and her escorts shared in a Presidential Unit Citation. The captured submarine proved to be of inestimable value to American intelligence, and its true fate was kept secret from the Germans until the end of the war.

Arriving in Norfolk 22 June 1944, *Guadalcanal* spent only a short time in port before setting out again on patrol. She departed Norfolk 15 July and between then and 1 December made three anti-submarine cruises in the Western Atlantic. She sailed 1 December for a training period in waters off Bermuda and Cuba that included refresher landings for pilots of her new squadron, gunnery practice, and anti-submarine warfare drills with Italian submarine *R-9*. *Guadalcanal* arrived Mayport, Fla., for carrier qualifications 15 December and subsequently engaged in further training in Cuban water until 13 February 1945 when she arrived back in Norfolk. After another short training cruise to the Caribbean, she steamed into May-

port 15 March for a tour of duty as carrier qualification ship, later moving to Pensacola for similar operations. After qualifying nearly 4,000 pilots, *Guadalcanal* returned to Norfolk, Va., and decommissioned there 15 July 1946.

Guadalcanal entered the Atlantic Reserve Fleet at Norfolk and was redesignated CVU-60 on 15 July 1955, while still in reserve. Her name was finally stricken from the Navy List 27 May 1958 and she was sold for scrap to the Hugo Neu Corp. of New York 30 April 1959.

Guadalcanal was awarded three battle stars and a Presidential Unit Citation for service in World War II.

II

(LPH-7: dp. 18,000 (f.); l. 592'; b. 84'; ed. 105'; dr. 27'; cpl. 900; cl. *Iwo Jima*)

The second *Guadalcanal* (LPH-7), an amphibious assault ship, was launched by the Philadelphia Naval Shipyard 16 March 1963, sponsored by Mrs. David Shoup, wife of the former Commandant of the Marine Corps; and commissioned 20 July 1963, Captain Dale K. Peterson in command.

Upon completion of sea trials and outfitting, *Guadalcanal* departed Philadelphia to join the Amphibious Forces, United States Atlantic Fleet. One of a new class of ships designed from the keel up to embark, transport, and land assault marines by means of helicopters, she lends new strength and flexibility to amphibious operations. After departing Norfolk 23 October 1963 for 6 weeks shakedown training at Guantanamo Bay, Cuba, *Guadalcanal* steamed to Onslow Beach, North Carolina, 6 December for practice amphibious landings. She then carried on training and readiness operations with the Atlantic Fleet, based in Norfolk until departing for Panama 11 February 1964. Following 2 months on station as flagship for Commander PhibRon 12 with the 12 Marine Expeditionary Unit embarked and ready to land anywhere needed, *Guadalcanal* entered Philadelphia Naval Shipyard 26 May, but was deployed again 7 October as a unit of Operation "Steel Pike 1", a NATO landing exercise on the beaches of southern Spain.

Guadalcanal has continued to serve in the Atlantic Fleet into 1967. One of the highlights of her career occurred 21 July 1966 when she recovered Gemini X astronauts after their spacecraft landed in the Atlantic east of Cape Kennedy.

Guadalupe

A river in Texas.

(AO-32: dp. 7,256; l. 552'; b. 75'3"; dr. 31'6"; s. 18 k.; cpl. 285; cl. *Cimarron*)

Guadalupe (AO-32) was launched as SS *Esso Raleigh* 26 January 1940 by the Newport News Shipbuilding & Drydock Co., Newport News, Va.; sponsored by Mrs. W. L. Inslee, wife of the late manager of the Traffic Division, Marine Department, Standard Oil of New Jersey; taken over by the Maritime Commission as MC Hull #12; acquired by the Navy 1 June 1941; and commissioned 19 June 1941, Comdr. Harry B. Thurber in command.

Six weeks of coastwise voyages carrying oil from Texas to New Jersey ended 16 August as *Guadalupe* docked at the Brooklyn Navy Yard. Receiving as deck cargo six PT boats later to form the famous squadron commanded by Lt. Comdr. John Bulkeley, *Guadalupe* sailed for the western Pacific 3 days later. After discharging cargo and oil at Pearl Harbor, Manila, and Cavite, the tanker returned to Norfolk 13 November via San Diego. After America's sudden plunge in war, she put into Baltimore to be fitted with guns.

In January 1942 *Guadalupe* sailed to the Pacific, where she was to participate in virtually every major campaign of the long and bloody war. After months of developing techniques for fueling at sea, a science then in its infancy, *Guadalupe* sailed from Pearl Harbor 2 June 1942 to refuel American ships participating in the

momentous Battle of Midway, the first naval defeat inflicted on the Japanese in 350 years. From Midway *Guadalupe* sailed north to spend the rest of the summer supporting American forces in the Attu campaign.

As the United States launched its first offensive effort in the Pacific, *Guadalupe* sailed south to spend the final four months of 1942 fueling warships operating in and around Guadalcanal. The first half of 1943 saw her in overhaul in the United States and operating in the Aleutians, with two shuttle trips to Pearl Harbor with fuel and planes. Departing Pearl 22 August *Guadalupe* sailed to the central Pacific to support the Gilberts campaign, working with such famous fighting ships as *Essex*, *Independence*, *Washington*, *Enterprise*, *Lexington*, and *Yorktown*. After a late winter overhaul, she returned to the Pacific theater in February 1944 operating in support of Vice Admiral Mitscher's carrier force during the Truk campaign. A short break at Pearl Harbor ended as *Guadalupe* sailed 11 May to operate in support of the 5th Fleet during the Marianas campaign. From there she sailed in late August to support Admiral "Bull" Halsey's 3d Fleet in action against the Japanese in the Palau and Philippine areas. One of her major tasks was refueling ships during the climactic Battle of Leyte Gulf.

On 29 December 1944 *Guadalupe* sailed from Ulithi with units of TF-38, then preparing for the invasion of Lingayen Gulf. Joining a fast carrier strike force under Admiral J. S. McCain, *Guadalupe* steamed through Luzon Strait into the China Sea on the night of 9 to 10 January 1945, concurrent with the first invasion waves on Lingayen Gulf. During the transit of the Strait, another tanker, *Nantahala*, collided with *Guadalupe*, putting a large hole in the bow. Jury-rigged repairs enabled *Guadalupe* to continue with the fast carrier group—which included *Yorktown*, *Cowpens*, and *South Dakota*—as they conducted strikes against Japanese positions on Formosa and along the China coast. This action diverted the enemy from the main action at Lingayen Gulf, and crippled his land-based air power.

A month's availability at Ulithi to repair her damaged bow ended in late February and *Guadalupe* again steamed for battle, this time operating in support of the Iwo Jima invasion. After 2 weeks, off Iwo Jima, 24 February to 7 March, *Guadalupe* returned empty to Ulithi to prepare for her role in the bloody Okinawa campaign. Departing Ulithi 25 March 1945, *Guadalupe* spent 3 weeks off Okinawa, returned to Ulithi for more fuel, and then spent another 3 weeks off Okinawa. As the fierce struggle raged for this rockbound island, last step before the Japanese home islands, *Guadalupe* operated through heavy weather and high seas to provide other services, as well as her normal duties of refueling the giant invasion fleet, largest ever assembled in the Pacific.

Okinawa marked the end of *Guadalupe's* service in the Pacific war. She sailed for the States and overhaul 24 May, and was 2 days out of Pearl Harbor on her way back to the struggle when the Japanese capitulation ended the long war 15 August 1945. From Pearl, *Guadalupe* went to Jinsen, Korea, where she replenished units of the 7th Fleet occupying Yellow Sea ports. The tanker sailed for Okinawa 22 October and remained there through 1945.

In the post-war period *Guadalupe* remained on duty in the Pacific, supplying vital fuel oil to American units in Japan, China, Korea, the Philippines, and scores of islands. Some of this fuel oil she picked up at Bahrein, Arabia, as she sailed from the Far East to Norfolk via the Suez and Gibraltar in 1948, returning over the same route.

When North Korean Communist troops hurled themselves across the 38th parallel 24 June 1950, *Guadalupe* was undergoing repairs at Long Beach, Calif., but she was soon ready for an active part. Sailing for the Pacific 29 July, she spent three months shuttling fuel oil between Hawaii, Kwajalein, and Guam before joining the 7th Fleet at Sasebo, Japan, 1 December 1950. Operating with various units of the fleet, *Guadalupe* visited Okinawa, Hong Kong, and Formosa in addition to refuel-

ing American and United Nations ships in the Korean replenishment area. She also sailed along the Korean coast to support the siege of Wonsan harbor.

An uneasy peace settled over the war-torn peninsula in August 1953, while *Guadalupe* was undergoing overhaul in California, but she returned to the Pacific to support American forces on the Formosa Patrol and training operations. From that time, the tanker's year settled into a routine of six months deployment with the 7th Fleet and 6 months operating out of Long Beach. In her Far East operations, *Guadalupe* has visited every major Pacific port—Hong Kong, Manila, Tokyo, Ceylon, Formosa—while playing her unsung but vital role in keeping the peace. At present she continues her important role as a fleet oiler supporting American ships off the coast of Vietnam.

Gualala

A river in California.

(AOG-28: dp. 2,270; l. 220'6"; b. 37'; dr. 13'1"; s. 10 k.; cpl. 62; a. 1 3", 2 40mm.; cl. *Wautauga*)

Gualala (AOG-28) was launched 3 June 1944, by the East Coast Ship Yard Inc., Bayonne, N.J., under a Maritime Commission contract; acquired by the Navy 19 August 1944; and commissioned 25 August 1944, Lt. Gerald T. Allworth, USCG, in command.

After completing trials, *Gualala* sailed from New York 23 October 1944; touching at Guantanamo and Christobal, she transited the Panama Canal 8 November, proceeding from there to Biak Island via Bora Bora and New Guinea. Arriving 13 January 1945, *Gualala* sailed the seas between Biak, Morotai, and Mios Woendi serving as a fueling ship for fleet units. Departing Mios Woendi 4 June, she touched at Morotai before reaching Balikpapan, Borneo, the 16th. *Gualala* continued her fueling duties throughout the Philippines and at Saipan until 26 December 1945, when she sailed for San Francisco via Pearl Harbor.

Arriving San Francisco 31 January 1946, *Gualala* remained there until decommissioning 29 March 1946, at the Kaiser Shipyard No. 2, Richmond, Calif. Her name was struck from the Navy List 1 May 1946, and she was transferred to the Maritime Commission 10 September 1946. The ship was subsequently sold to the Brazilian government, and renamed *Rijo*.

Gualala received one battle star for World War II service.

Guam

The largest island in the Marianas group.

(PG-43: dp. 350; l. 159'5"; b. 27'; dr. 5'3"; s. 14.5 k.; cpl. 59; a. 2 3", 8 .30 cal. mg.)

Guam (PG-43) was launched 28 May 1927 by the Kiangnan Dock and Engineering Works, Shanghai, China; sponsored by Miss Louise Frances Bruce, and commissioned 28 December 1927, Lt. Comdr. S. G. Moore in command.

One of six new river gunboats built to replace old gunboats on the Yangtze for a year, *Guam* was then assigned to the South China patrol. She was reclassified PR-3 there on 15 June 1928; and, after a year, she returned to duty along the Yangtze. The China through which *Guam* sailed was racked by war from the day she commissioned—first, civil war as Communists battled Nationalists for control of the ancient nation; and then, total war as Japanese forces sought to win and control China and her vast resources. In such conditions, *Guam* several times proved her worth.

On Independence Day 4 July 1930, *Guam* sailed for Yochow and Chenglin to insure the safety of American missionaries and other foreigners in those two cities, then in Communist hands. As she neared Yochow, *Guam* was met by a hail of rifle fire from the shore. She returned the fire with her machine gun and three inch guns, making

USS *Guam* (PG-43)—launched in Shanghai 28 May 1927—patrolling on China Station in 1932

five runs past the city in all. One member of *Guam's* crew was killed in the clash. *Guam* also evacuated American civilians from Wuhu to Hankow in December 1937 in front of approaching Japanese forces, and a year later served as station ship at Standard Vacuum Oil installations in Hankow to protect American lives and property while Chinese and Japanese armies clashed nearby.

As more and more of China fell into Japanese hands, *Guam* remained perilously on Yangtze patrol. By 1939 she was "escorted" by a Japanese warship wherever she went, and from her decks could be seen Japanese troop movements. *Guam* and her sister gunboats, remaining doggedly on station and conducting daily "Repel-Boarders" drills, were a reassuring sight for American civilians.

In January 1941 she was renamed *Wake*, as her former name was to be used for a new battle cruiser building in the States. On 25 November 1941 she was ordered to close the Navy installation at Hankow, distribute the 80 tons of supplies among American civilians remaining there, and sail to Shanghai. When *Wake* reached the China coast 30 November with her inevitable Japanese escort, she was stripped and her crew divided between *Luzon* and *Oahu*, two larger gunboats which then sailed for Manila. A skeleton crew of 10 reservists, under a Shanghai commercial pilot, remained on board to serve as a radio outlet for the handful of Marines and the Consular force left there. When the Japanese attack on Pearl Harbor sent America into the Pacific war a week later, Shanghai immediately fell to the enemy. After her reservist crew failed in their attempts to scuttle her, *Wake* was surrendered to the overwhelming Japanese force, the only U.S. ship to do so in the entire war.

II

(CB-2: dp. 27,000; l. 308'6"; b. 91'1"; dr. 32'4"; s. 31 k.; cpl. 2,251; a. 9 12", 12 5", 56 40mm., 34 20mm.; cl. *Alaska*)

The second *Guam* (CB-2) was launched 12 November 1943 by the New York Shipbuilding Corp., Camden, N.J.; sponsored by Mrs. George Johnson McMillan, wife of Captain McMillan, former governor of Guam; and commissioned 17 September 1944, Captain Leland P. Lovette in command.

After shakedown off Trinidad *Guam* departed Philadelphia 17 January 1945 and joined the Pacific Fleet at Pearl Harbor 8 February via the Canal Zone. Shortly thereafter *Guam* was visited by Secretary of the Navy Forrestal. Clearing Pearl Harbor 3 March *Guam* sailed into Ulithi 13 March where she joined forces with her sister ship *Alaska* and other fleet units to form another of Admiral Marc Mitscher's famed task groups.

Sortie was made from Ulithi next day and Admiral A. W. Radford's Task Force 58, one of the most powerful task forces in naval history, proceeded to vicinity of Kyushu and Shikoku, arriving the morning of 18 March. In her group sailed some of the most gallant ships ever to go in harm's way: carriers *Yorktown*, *Intrepid*, *Independence*, and *Langley*; battleships *Missouri* and *Wisconsin*; cruisers *Alaska*, *St. Louis*, *San Diego*, *Flint*; and 15 destroyers in the screen. *Guam's* battle debut soon came. The fight began with five kamikaze attacks on the carriers. *Guam's* guns were directed at the raiders. During this first battle, the carriers *Enterprise* and *Intrepid*, both in *Guam's* force, were damaged but continued to operate.

Enterprise took a bomb hit near her island structure; a suicide plane crashed *Intrepid's* flight deck aft and glanced off and plunged into the sea. Continued air attacks during the afternoon resulted in the destruction of four enemy planes by *Guam's* group, one of which she splashed. The next afternoon *Guam* was despatched to escort damaged *Franklin* from the combat area. This lasted until 22 March.

After replenishing *Guam* rejoined Task Group 58.4 and departed for combat area in vicinity of Okinawa Gunto, Japan. On the night of 27 to 28 March 1945 Admiral F. S. Low's Cruiser Division 16 in *Guam* conducted bombardment of the airfield on Minami Daito. Then until 11 May *Guam* supported carrier operations off the Nansei Shoto.

After repairs and replenishment at Ulithi *Guam* again departed for the waters east of Okinawa, as a unit of Admiral Halsey's 3d Fleet, Task Group 38.4. Here she continued to support the carriers launching fighter sweeps over the Kyushu air fields. On 9 June *Guam*, *Alaska*, and five destroyers conducted a 90-minute bombardment of Okino Daito. Course was then set for Leyte Gulf, arriving San Pedro Bay 13 June after almost 3 months of continuous operations in support of the Okinawa campaign.

Guam now got a new assignment as flagship of Cruiser Task Force 95, composed of large cruisers *Guam* and *Alaska*, four light cruisers, and nine destroyers. This force steamed into the East China and Yellow Seas between 16 July and 7 August 1945 on a shipping raid.

Direct results were few, but the fact that a surface sweep of Japan's home waters could be made without harm proved the overwhelming dominance and mobility of American sea power. *Guam's* group retired to Okinawa 7 August.

A few days later *Guam* became the flagship of Rear Admiral Low's North China Force and circled the Yellow Sea parading American naval might before the major ports of Tsingtao, Port Arthur, and Darien. She then steamed into Jinsen, Korea, 8 September 1945 to guarantee occupation of that liberated country. *Guam* departed Jinsen 14 November and reached San Francisco 3 December landing a contingent of Army troops for discharge. Clearing San Francisco 5 December 1945, *Guam* arrived Bayonne, N.J., 17 December. She remained there and decommissioned 17 February 1947; *Guam* berthed with the New York Group, Atlantic Reserve Fleet until 1 June 1960 when her name was struck from the Navy List. She was sold for scrapping 24 May 1961 to the Boston Metals Co., Baltimore, Md.

Guam received two battle stars for World War II service.

III

(LPH-9: dp. 17,000 (f.); l. 592'; b. 84'; dr. 26'7" (f.); s. 20 k.; cpl. 528; a. 8 3", 24 large amphibious transport helo; cl. *Iwo Jima*.)

Guam (LPH-9) was laid down by the Philadelphia Naval Shipyard 15 November 1962; launched 22 August

USS *Guam* (CB-2) on 13 November 1944

1964; sponsored by Mrs. Vaughn H. Emory Green; and commissioned 16 January 1965, Captain N. E. Thurmon in command.

After fitting out and builder's trials, the new amphibious assault ship joined the Atlantic Fleet 21 April 1965 and sailed for Norfolk, her homeport. Arriving Hampton Roads the next day for training off the Virginia Capes, she departed Hampton Roads for underway training out of Guantanamo Bay, Cuba.

Guam returned to Norfolk 5 July for intensive amphibious training. She sailed from Hampton Roads 29 November to participate in amphibious and ASW exercises en route to the Caribbean. On 10 December *Guam* joined the Amphibious Ready Squadron in the Caribbean as flagship for Amphibious Squadron 12. There she operated at peak readiness to protect the peace and security of the Caribbean and Central America constantly threatened by Communist aggression and subversion.

From 16 to 28 February 1966, *Guam* patrolled south of the Dominican Republic ready to land forces on the volatile island of Hispanola if necessary. She conducted amphibious exercises until entering Philadelphia Naval Shipyard 1 June for post shakedown availability.

She departed Philadelphia 2 August and prepared for service as the primary recovery ship for the Gemini 11 space flight. On 18 September at 0959 EDT *Guam* recovered Astronauts Pete Conrad and Dick Gordon 710 miles east of Cape Kennedy. From 28 November to 12

December *Guam* participated in Exercise "Lantflex 66", and on the latter date became flagship of Amphibious Squadron 8 and Caribbean Amphibious Ready Group. She continued this duty into 1967 prepared to land troops at any point in the Caribbean where she might be needed to protect the freedom and integrity of the Americas.

Guantanamo

A former name retained.

(Str: dp. 7,930; l. 362'; b. 46'6"; dr. 20'7" s. 11 k.; cpl. 68; a. 1 5", 1 6-pdr.)

Guantanamo was built as *Registan* in 1910 by W. Gray & Co. of West Hartlepool, England; turned over to the Navy 25 February 1918 for use as a cargo transport; and commissioned 21 May 1918.

Gunpowder was *Guantanamo's* main cargo as she plied from New York to St. Nazaire, gunpowder to support the Allied war effort about to reach its climax in Europe; she made three such trips in convoy between commissioning and 11 December 1918 when she returned to New York to prepare for demobilization. Decommissioned at New York 25 January 1919, *Guantanamo* was returned to her owners, New York & Cuba Mail Steam Ship Co. 4 February 1919.

USS *Guam* (LPH-9) on builders trials 3 February 1965

Guard

I

One who protects or defends.

(Ship: dp. 1,846; l. 160'; b. 38'; dr. 20'7"; cpl. 95; a. 4 8" D.r., 2 12-pdr. how.)

Guard, originally named *National Guard*, was renamed 2 June 1866; built by George D. Morgan, Portland, Conn., in 1857; purchased 6 July 1861, and commissioned 23 December 1862, Acting Master William Lee Hays in command.

From commissioning until she decommissioned in 1865, *Guard* served as supply ship for the West India Squadron based at Cape Haitien, Haiti. A routine trip to Key West for supplies in June 1865 turned into a voyage to Boston for quarantine and decommissioning when yellow fever broke out among the crew, leaving *Guard* with a sick list of over twenty.

Decommissioned at Boston 10 November 1865, *Guard* recommissioned 13 March 1866, Acting Master Lewis A. Brown in command; after a trip to Norfolk for supplies and minor repairs, she sailed for Cadiz, Spain, arriving there 16 August. For the next 3 years *Guard* served as supply ship for the European Fleet, carrying supplies and occasional passengers to such diverse ports as Lisbon, Cartagena, Majorca, Palermo, Gibraltar, Naples, Madeira, and Villa Franca, France. During this period she also made three voyages to New York carrying passengers and some invalids for hospitals there and returning with fresh supplies. *Guard* returned to New York 12 October 1869 and decommissioned 5 November.

Guard recommissioned 17 January 1870, Lt. Comdr. Edward P. Lull in command, to take part in the Darien Expedition; she sailed from New York 28 January, arriving in Caledonia Bay, off the Isthmus of Darien, 18 February. In company with *Nipsic* and *Nyack*, under the overall command of Comdr. Thomas O. Selfridge Jr., *Guard* conducted hydrographic surveys to determine what route, if any, would be best for a ship canal across the isthmus. The five routes explored during the 2 years she was on this special duty all proved impractical at the time, and the dream of an interocean canal went unfulfilled until the completion of the Panama Canal two generations later. *Guard's* duty in Central America was interrupted 12 August-3 October 1870 when she sailed from New York to Prince Edward Island and Nova Scotia with supplies. Leaving the Darien Expedition in June 1870, *Guard* returned to New York 22 July and decommissioned there 3 August.

On 1 February 1873 *Guard* again recommissioned, Comdr. Charles A. Babcock commanding, and sailed from New York 22 March with goods, exhibits, and construction materiel for the Vienna Exposition of 1873. She arrived at Trieste, then a part of Austro-Hungary, via Gibraltar and Brindisi 3 May; after discharging her cargo for the exposition, *Guard* remained there undergoing minor repairs. Many of the articles not disposed of at the exposition were then reloaded, as well as some European goods intended for the American Centennial Exposition in 1876, and *Guard* sailed for New York 31 December 1873, arriving there 14 April 1874 via Messina, Sicily, and Gibraltar. She decommissioned 27 April and remained laid up in ordinary until 1877.

Guard's final tour of duty began 18 August 1877 as she recommissioned at New York, Lt. Comdr. F. M. Green commanding. Her mission was to determine by means of the submarine cable the longitudes between Lisbon, Madeira, the Cape de Verde Islands, Pernambuco, and Buenos Aires. Sailing from New York 29 October, she reached Lisbon 30 November and remained there until 3 February 1878, when she sailed to Madeira and from there to the Cape de Verde Islands. Her next stop was Porto Grande, St. Vincente, where she delivered a shipment of astronomical equipment for the observatory there before sailing for Rio de Janeiro 20 April. Arriving there 1 June, *Guard* conducted further astronomical surveys

off the Brazilian coast until, her work completed, she sailed for Portsmouth, N.H., arriving there via Norfolk 4 December. She decommissioned 15 December 1878 and was laid up in ordinary until 27 September 1883, when she was sold to C. A. Williams & Co. of New London, Conn.

II

(Str: dp. 52; l. 67'7"; b. 12'6"; dr. 6'3"; s. 9 k.; cpl. 4; a. none)

The second *Guard* was launched for the Coast Guard by the Mare Island Navy Yard 20 October 1913; sponsored by Miss Janet Crose; and commissioned by the Coast Guard 9 December 1913.

She served the Coast Guard on the West Coast, protecting shipping, preventing smuggling, and enforcing American neutrality laws. When the United States entered World War I, *Guard* was transferred to the Navy 6 April 1917 and served as a patrol boat along the West Coast. After the end of the War, *Guard* was returned to the Coast Guard 28 August 1919.

III

(YP-2384: t. 17; l. 48'8"; b. 10'0"; dr. 5'0"; s. 14 k.; cpl. 7; a. none)

Floyd Hurst (YP-2384), a wooden motor launch built by the Norfolk Navy Yard in 1902, was purchased by the Navy 27 February 1918 at Norfolk from T. C. Hurst of that city and immediately placed in service as a patrol and dispatch boat between the Washington Navy Yard and the naval base at Indian Head, Md. She continued this duty throughout her naval service and was renamed *Guard* 7 January 1921. *Guard* was sold to P. M. Anderson of Washington, D.C., 5 August 1921.

Guardfish

A voracious green and silvery fish with elongated pike-like body and long narrow jaws.

I

(SS-217: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 60; a. 10 21" tt., 1 3"; cl. *Gato*)

The first *Guardfish*, a fleet submarine, was launched by the Electric Boat Co. of Groton, Conn., 20 January 1942, sponsored by Mrs. Edward J. Marquart. She commissioned at New London, Conn., 8 May 1942, Lt. Comdr. T. B. Klakring in command.

After conducting shakedown out of New London, *Guardfish* departed that base 28 June 1942 for Pearl Harbor via the Panama Canal, and arrived there 25 July to prepare for her first cruise. Her first war patrol was in the hitherto unpatrolled waters off northeast Honshu. *Guardfish* departed Pearl Harbor 6 August 1942, sank a trawler 22 August, and 24 August sank 3,114-ton cargo ship *Seikai Maru* off Kinkasan Harbor. Evading escort vessels, she proceeded up the coast and found a convoy 2 September. *Guardfish* attacked the next day, sinking 5,253-ton *Kaimci Maru* and 1,118-ton cargo ship *Tenyu Maru*. *Chita Maru*, a 2,376-ton freighter, retreated into the harbor and anchored, but a remarkable long-range shot from *Guardfish* left her resting in the mud. *Guardfish* returned to Midway from her spectacularly successful first patrol for refit 15 September 1942.

Guardfish departed Midway on her second war patrol 30 September and headed for the East China Sea. Surviving a violent attack by patrolling aircraft 19 October, *Guardfish* closed a seven-ship convoy 21 October, sinking a 4,000-ton freighter and 6,362-ton *Nichiho Maru* north of Formosa as the convoy scattered. After evading pursuing aircraft and surface ships, *Guardfish* returned to Pearl Harbor 28 November 1942. For her outstanding success on war patrols 1 and 2 *Guardfish* received a Presidential Unit Citation.

Moving her base of operations to the Truk area, *Guard-*

fish departed Pearl Harbor 2 January 1943 to patrol off the Japanese stronghold. She sank a Japanese patrol craft 12 January west of Kavieng, and a 1,300-ton cargo ship the next day. Attacked by destroyer *Hakaze* 23 January, *Guardfish* sent her to the bottom with a well-placed torpedo. Moving south toward Rabaul, she attacked a large convoy near Simpson Harbor, but was driven off by concentrated shore fire and escort attacks. *Guardfish* ended her third patrol by arriving at Brisbane, Australia, 15 February 1943.

Her fourth war patrol was conducted in the Bismarcks, Solomons, and New Guinea area, and *Guardfish* recorded no kills during this cruise, 9 March to 30 April 1943.

Departing Brisbane for the same waters 25 May 1943, *Guardfish* sank 201-ton freighter *Suzuya Maru* and damaged another before being forced down by aircraft 13 June. She picked up a surveying party on the west coast of Bougainville 14 July and returned to Brisbane for refit 2 August 1943.

Guardfish departed Brisbane for her sixth war patrol 24 August 1943, landing a reconnoitering party on Bougainville and then moving into cruising waters. She sank 5,460-ton *Kasha Maru* 8 October and subsequently spent 2 days as lifeguard ship during the air strikes on Rabaul. *Guardfish* embarked another reconnoitering party 19 October at Tulagi, landed them on Bougainville, and took vital soundings in Empress Augusta Bay before embarking the Marine party 28 October. These important missions were carried out a scant 2 days before the American landings at Bougainville. *Guardfish* reached Brisbane, closing out her sixth patrol, 3 November 1943.

Turning to the shipping lanes between Truk and Guadalcanal, *Guardfish* began her seventh war patrol 27 December 1943, sinking 10,024-ton oiler *Kenyo Maru* 14 January 1944. She then closed Truk, and sank destroyer *Umikaze* 1 February during an attack on a convoy. After serving briefly as lifeguard ship off Truk she arrived at Pearl Harbor 18 February and from there returned to San Francisco for repairs 9 days later.

Guardfish again put to sea from San Francisco and arrived at Pearl Harbor 1 June. She then joined submarines *Thresher*, *Piranha*, and *Apogon* to form the famous coordinated attack group known as the "Mickey Finns," commanded by Captain W. V. O'Regan in *Guardfish*. The submarines patrolled the shipping lanes around Formosa with spectacular success, *Guardfish* sinking 5,863-ton auxiliary *Mantai Maru*, 2,838-ton cargo ship *Hizan Maru*, and 5,215-ton cargo ship *Jinsan Maru* southwest of Formosa 17 July. After damaging another freighter 18 July, *Guardfish* sank 5,872-ton *Teiryu Maru* the next day, barely escaping the attacks of her escort vessels. She arrived at Midway for refit 31 July 1944, and for her outstanding performance on the eighth patrol was awarded a second Presidential Unit Citation.

Putting to sea as a member of a wolfpack 23 August 1944, *Guardfish* and the other submarines, *Thresher* and *Sunfish*, had a 40 minute surface gun battle with sampans 2 September. On 25 September she attacked and sank 873-ton cargo ship *Miyakawa Maru* #2 in the Sea of Japan, her cruising ground for this patrol. *Guardfish* returned to Pearl Harbor 24 October 1944.

Guardfish departed 26 November for her 10th war patrol to cruise in the "Convoy College" area of the South China Sea, with a wolfpack. She recorded no sinkings during this cruise, but nearing Guam in the early morning darkness of 24 January she mistook *Extractor*, an American salvage ship, for an I class submarine and torpedoed her. *Guardfish* succeeded in rescuing all but 6 of her crew of 79 from the sea, and terminated her patrol at Guam 26 January 1945.

Guardfish's 11th war patrol was spent watching for enemy fleet units attempting to escape from the Inland Sea of Japan by way of Kii Suido. Departing Saipan on this duty 27 February, she found no ships but rescued two downed aviators 19 March before returning to Midway 11 April 1945.

Guardfish departed Midway 8 May 1945 on her 12th and last war patrol, and was assigned lifeguard station for

the ever-increasing air attacks on the Japanese mainland. She sank a small trawler with gunfire 16 June, and arrived back at Pearl Harbor 26 June 1945.

The veteran submarine served with the training command after her return to Hawaii, helping to train surface ships in the newest antisubmarine warfare tactics until 25 August 1945. She then sailed for the United States, transiting the Panama Canal 12 September and arriving at New Orleans 16 September. *Guardfish* arrived at New London 6 November and decommissioned there 25 May 1946.

Guardfish remained inactive until 18 June 1948, when she was placed "in service" for duty as a Naval Reserve Training Ship at New London. Declared in excess of Navy needs, her name was struck from the Navy List 1 June 1960. Appropriately, this ship, one of the most successful of World War II submarines, performed her last service as a target ship for a new submarine torpedo. *Dogfish* and *Blenny* sank her with the newly developed torpedoes off New London 10 October 1961.

Guardfish earned 11 battle stars for her World War II service. Her first, second, third, fifth, sixth, seventh, eighth, ninth, and eleventh war patrols were designated successful.

II

(SS(N)-612: dp. 3,770; l. 279'; b. 32'; dr. 29'; s. 16 k.; cpl. 99; a. 4 21" tt.; cl. *Thresher*)

The second *Guardfish* (SS(N)-612) was laid down by New York Shipbuilding Corp., Camden, N.J., 28 February 1961; launched 15 May 1965; sponsored by Mrs. Kenneth E. Belieu, wife of Assistant Secretary of Navy; and commissioned 20 December 1966, Comdr. G. H. Hines in command.

At present *Guardfish* is undergoing tests and shakedown. Once completed, she will join the Pacific Fleet to become yet another link in the Navy's ever expanding underwater deterrent force. In addition to her primary mission of seeking out, attacking, and destroying all types of enemy ships, she can conduct long-range reconnaissance and surveillance patrols and can carry out extensive ASW operations. Her high-speed, deep-running, far-ranging mobility and her deadly array of modern armament and ASW equipment make her an important part of the Navy's continuing task of "keeping the peace" over the vast reaches of global waters.

Guardian

One who guards or protects.

(YAGR-1: dp. 10,160 (f); l. 441'6"; b. 56'11"; dr. 24'; s. 11 k.; cl. *Guardian*)

Guardian (YAGR-1) was launched as Liberty Ship *James Squires* 8 May 1945 by J. A. Jones Construction Co., Inc., Panama City, Fla.; sponsored by Mrs. Elisa Broome; and delivered 31 May to Waterman Steamship Co. The ship served until 5 October 1945, when she was placed in the National Defense Reserve Fleet, James River, Va. Taken out of reserve in 1954, she was renamed *Guardian*, converted at Charleston Navy Yard, and commissioned YAGR-1 at Norfolk 1 February 1955, Lt. Comdr. Robert E. Euliss in command.

The first ocean radar station ship put into service by the Navy, *Guardian* conducted shakedown in Roosevelt Roads, P.R., and surrounding waters, reporting to Newport, R.I., her home port, 2 June 1955. Equipped with highly sensitive radar gear to enable her to detect, track, and report any aircraft penetrating the continental United States, *Guardian* is attached to the Eastern Continental Air Defense Command. She and her sister ships spend 3 or 4 weeks at a time off the East Coast on radar picket duty, even in the heaviest winter weather in the North Atlantic. In addition to radar picket duty, *Guardian* has participated in ASW exercises with both American and Canadian naval units and in local operations out of New-

port and Key West. Her designation was changed to AGR-1 28 September 1958, and the ship at present remains as a vital part of our Nation's Atlantic defenses.

PT-809 (q.v.) was under the Potomac River Naval Command in November 1959 as a Civil Defense boat and as escort to the Presidential Yacht *Barbara Ann*, later *Honey Fitz*. The name *Guardian* was assigned to her at the request of Captain Aurand, Naval Aide to President Eisenhower, but her official designation remains PT-809.

Guardoqui

The name *Garidoqui (q.v.)*, carried in the U.S. Navy by a Spanish gunboat captured during the Spanish-American War, was erroneously spelled *Guardoqui* when assigned to IX-218.

(IX-218: dp. 15,655; l. 510'6"; b. 68';
s. 10 k.; epl. 70)

Guardoqui (IX-218), ex-*E. T. Bedford*, was built in 1921 by the Federal Ship Building Co., Kearny, N.J.; acquired from the WSA and commissioned at Pearl Harbor 23 June 1945, Lt. Harold L. Tysinger in command.

A tanker originally intended for use as Mobile Floating Storage, *Guardoqui* departed Pearl Harbor for Eniwetok 27 July 1945. Reaching her destination 12 August, she discharged her cargo of fuel and lube oil to Navy and merchant ships for almost a month. *Guardoqui* departed Eniwetok 7 September and put in at Tokyo 21 September to discharge more lube and fuel oil.

Departing Tokyo 7 November, she transited the Panama Canal via Pearl Harbor 28 December and came to anchor off Mobile, Ala., 6 January 1946. *Guardoqui* decommissioned at Mobile 13 February 1946 and was returned to the WSA. Her name was struck from the Navy List 12 April 1946 and she was sold to her previous owner, E. T. Bedford, 28 January 1947.

Guavina

A fish which may reach a length of 2 feet indigenous to the West Indies and the Atlantic coasts of Central America and Mexico.

(SS-362: dp. 1,810; l. 311'9"; b. 27'3"; dr. 15'3";
s. 20 k.; epl. 80; a. 15", 1021" tt.; cl. *Balao*)

Guavina (SS-362) was launched by the Manitowoc Shipbuilding Co., Manitowoc, Wis., 29 August 1943; sponsored by Miss Marie Roen; and commissioned 23 December 1943, Lt. Comdr. Carl Tiedeman in command.

After shakedown, *Guavina* was towed down the Mississippi in floating drydock by tug *Minnesota*, reaching New Orleans 24 January 1944. She underwent training exercises at New Orleans and at Balboa, C.Z., before reaching Pearl Harbor 5 April to prepare for her first war patrol. *Guavina* sailed 6 April 1944, on her first offensive cruise. On 22 April she sank by gunfire two trawlers loaded with lumber and cargo and 3 days later torpedoed a large maru. Her first big kill came 26 April when she sent torpedoes into two of the merchant ships in a seven-ship convoy. One of them, *Noshiro Maru*, sank almost immediately after three tremendous explosions. The second maru also exploded, although persistent depth charging prevented *Guavina* from staying around to observe the sinking. After standing lifeguard duty off Wake during air strikes 21-26 May, the submarine returned to Majuro Atoll 28 May. Her aggressive first patrol forecast even greater service for the nation.

On her second war patrol (20 June-31 July) *Guavina* sailed from Majuro to Brisbane, Australia, sinking 1 ship and rescuing 12 downed aviators. At 1324 on 3 July she picked up an obviously important ship with four escorts, and trailed her to get in attack position. Finally at 0348 the next morning *Guavina* fired four torpedoes, three of

which hit and set off a tremendous explosion. The sub spent the next 3 hours running silent and deep to avoid a total of 18 depth charges and 8 aerial bombs, surfacing at 0643 to observe the wreckage of *Tama Maru*. While on lifeguard duty off Yap 2 to 21 July, *Guavina* picked up a total of 12 downed B-25 pilots, and then headed for Brisbane via Seadler Harbor, Admiralty Islands.

Guavina's third war patrol (16 August-29 September) took her along the Philippine coast off Mindanao. On 31 August she opened fire on two small coastwise steamers, chasing them almost onto the beach before finally destroying them. Then, after a period of lifeguard duty, on 15 September *Guavina* sighted a large ship, later revealed to be a transport at anchor. Closing for the kill she loosed a salvo of three torpedoes. Only one hit, so she fired three more, scoring twice. Although the target was enveloped in fire and smoke, it still did not sink; so *Guavina* administered the final fatal blow with a spread of two torpedoes which totally disintegrated the target.

Departing Brisbane 27 October, *Guavina* headed to the South China Sea for her fourth war patrol. A night surface attack 15 November netted her a large maru; one torpedo hit caused a violent explosion, as the maru apparently was carrying aviation gasoline; a second fish sent through the fiery waters finished her. Tanker *Dowa Maru* fell victim to *Guavina* 22 November, and a second tanker anchored nearby met the same fate the following day. During the final month she searched for additional victims. Then finding unfavorable attack conditions, she sailed for port, making Brisbane 27 December.

Working first with *Pampanito* and then with *Beeuna* and *Blenny*, *Guavina* spent her fifth war patrol (23 January-5 March 1945) again in the South China Sea. The value of the coordinated attack group was quickly proved as on 6 February *Guavina* was directed in for the kill by *Pampanito* and sank the 6,892-ton tanker *Taigyo Maru*. To avoid the subsequent depth charging, *Guavina* pulled the unusual maneuver of lying on the bottom near the stern of her recent victim. She returned *Pampanito's* favor the following day by providing a diversion in the form of four flares from her "Buck Rogers" gun as her sister sub maneuvered for a successful shot. *Guavina* sank another tanker, the 8,673-ton *Eiyo Maru*, 20 February, and suffered one of the severest depth chargings of the war. With no room to run, she lay on the bottom at 130 feet while Japanese escorts and planes dropped a total of 98 depth charges and bombs during the next 7 hours. Battered but undaunted, she sailed to the Fiji Islands, arriving 5 March for a badly needed refit.

On her sixth war patrol (21 March-8 May) *Guavina* worked in coordination with *Rock*, *Cobia*, and *Blenny* in the South China Sea. A lack of targets resulted in her returning empty-handed, but she did rescue five B-25 crew members 28 March before returning to Pearl Harbor 8 May. With six successful war patrols behind her she proceeded to the West Coast for overhaul. She departed San Francisco for Pearl Harbor 6 August, but with the end of the war returned to the States. *Guavina* then put in at Mare Island and was placed in commission, in reserve.

From March 1949, *Guavina* underwent extensive overhaul and modification for conversion to a submarine oiler at Mare Island, and was even equipped with a snorkel. *Guavina* recommissioned in the active fleet as SSO-362 1 February 1950 at Mare Island. After operations along the West Coast, she sailed to Norfolk via Balboa and San Juan 24 July to 25 August. Further operations out of Norfolk were followed by overhaul at Philadelphia and on 29 January 1951, *Guavina* reported to Key West, her new homeport.

Operating out of Key West, *Guavina* cruised to the Caribbean and up the East Coast to Nova Scotia to test the concepts of fueling seaplanes and other submarines, although most of her work was in the Gulf of Mexico and the Straits of Florida. After overhaul at Philadelphia 18 April to 26 July 1952, *Guavina* was redesignated AGSS-362. Two more years of operations along the East Coast and in the Gulf were followed by a second extensive

USS *Guavina* (AOSS-362) fueling a P5M Patrol Seaplane in the open sea in 1955

overhaul at Philadelphia. To aid refueling, *Guavina* gained a large, raised platform over the after torpedo room, which was soon dubbed the "flight deck."

And a flight deck it soon became as in January 1956 *Guavina* began testing the concept of mobile support of seaplanes from a submarine oiler. After an initial 2-week trial period, *Guavina* and a variety of seaplanes carried out refueling development for most of 1956. Sailing from Charleston 18 September, the submarine headed for the Mediterranean. After her 2-month deployment there with the 6th Fleet and Patrol Squadron 56, *Guavina* returned to Key West 1 December, then put into Charleston for overhaul.

Emerging from overhaul 12 July 1957 with the new designation (AOSS-362), *Guavina* resumed her established pattern of testing various applications of submarine oiler and seaplane refueling concepts, operating principally in the Caribbean. Ranging along the coast from New London to Bermuda, she also engaged in antisubmarine exercises and other peacetime training missions. *Guavina* sailed into the Charleston Navy Yard 4 January 1959, and decommissioned there 27 March, going into reserve. She served as a training ship for reservists in the 5th Naval District until struck from the Navy List 30 June 1967 and used as a target for the Atlantic Fleet.

Guavina received five battle stars for World War II service.

Gudgeon

A species of small fresh-water minnow.

I

(SS-211: dp. 1,475; l. 307'; b. 27'3"; dr. 13'3"; s. 20 k.; cpl. 85; a. 13", 10 21" tt.; cl. *Tambor*)

Gudgeon was launched by the Mare Island Navy Yard 25 January 1941; sponsored by Mrs. William S. Pye; and commissioned 21 April 1941 at Mare Island, Lt. Comdr. Elton W. Grenfell in command.

After shakedown along the California coast, *Gudgeon* sailed north 28 August, heading for Alaska via Seattle. On her northern jaunt the new submarine inspected Sitka, Kodiak, and Dutch Harbor for suitability as naval bases. Continuing to Hawaii, she moored at the Pearl Harbor submarine base 10 October. Training exercises and local operations filled *Gudgeon's* time for the next 2 months.

When the Japanese struck at Pearl Harbor 7 December, she was at Lahaina Roads on special exercises, but returned to base immediately.

America's Pacific Fleet had been seriously damaged by the sneak attack on Pearl Harbor but powerful strength remained as *Gudgeon* and her fellow submarine soon offered convincing proof. On 11 December *Gudgeon*, in company with *Plunger*, sailed from Pearl Harbor on her, and America's, first submarine offensive patrol of World War II. When she returned some 51 days later, *Gudgeon* had contributed two more impressive "firsts" to the Pacific submarine fleet. She was the first American submarine to patrol along the Japanese coast itself, as her area took her off Kyushu in the home islands. And on 27 January 1942 *Gudgeon* became the first U.S. Navy submarine to sink an enemy warship in World War II, submarine *I-173*. The Japanese submarine had just returned from a patrol which took her well into American waters off the coast of California and Washington.

On her second war patrol, 22 February to 15 April 1942, *Gudgeon* scored kills on two unknown marus, both freighters, 26 and 27 March. She then checked into drydock for overhaul, but undocked 3 weeks early and readied for sea in a remarkable 40 hours to participate in the momentous Battle of Midway. Departing Pearl Harbor 18 May, *Gudgeon* took station off Midway as part of the submarine screen which encircled the two giant fleets clashing there. Although she had a ringside seat for the action, which saw Japan handed its first naval defeat in 350 years, *Gudgeon* was prevented from offensive action by the confusion of battle and the possibility of mistaken identity. She returned to Pearl Harbor 14 June.

Departing for her fourth patrol 11 July, *Gudgeon* sank 4,858-ton *Naniwa Maru* in a night submerged attack 3 August, her only kill of the patrol. An aggressive attack on a four-ship convoy 17 August seriously damaged two marus before the patrol ended at Fremantle, Australia, 2 September. Now a part of the Southwestern Pacific submarine forces, *Gudgeon* sank 8,783-ton *Choko Maru* 21 October during her fifth war patrol, 8 October to 1 December, and carried out a daring attack on a seven-ship convoy 11 November, torpedoing several ships but sinking none. The submarine's sixth war patrol (27 December 1942-18 February 1943) was unsuccessful in terms of ships sunk, but she carried out two special missions. On 14 January 1943 *Gudgeon* successfully landed six men on Mindanao, Philippines, to carry out the vital

guerrilla resistance movement there. Returning from her patrol area, *Gudgeon* was diverted to Timor Island 9 February, and the following day rescued 28 men—Australian, English, Portugese, and Filipino—for passage to Fremantle.

Gudgeon's seventh war patrol (13 March–6 April) netted her two more Japanese ships before she ran out of torpedoes and had to return to Australia. On 22 March she sank 5,434-ton *Meigen Maru* as well as seriously damaging two other ships in the convoy. Five days later *Gudgeon* took on 9,997-ton tanker *Toko Maru* in a night surface attack punctuated by bursts of gunfire as the Japanese ships spotted and fired on the submarine. It took five torpedoes to sink *Toko Maru*, and most of *Gudgeon's* crew enjoyed the rare treat of watching her slide into the depths.

On her eighth war patrol, conducted as she sailed from Australia to Pearl Harbor 15 April to 25 May 1943, *Gudgeon* chalked up three more kills. Her first came 28 April as she sank *Kamakura Maru*, a former ocean liner. The 17,526-ton transport was the largest Japanese transport, and one of the largest enemy ships sunk by an American submarine. Special operations interrupted *Gudgeon's* patrol as she landed six trained guerrilla fighters and 3 tons of equipment for the guerrilla movement on Panay 30 April. After sinking a small trawler, *Noko Maru*, with her deck guns 4 May, *Gudgeon* battle-surfaced again that same day and left a coastal steamer burning and settling. Eight days later, 12 May, she torpedoed and sank freighter *Sumatra Maru*. Returning to Pearl Harbor, the veteran submarine was sent to San Francisco for badly needed overhaul, her first since commissioning 2 years earlier.

A refreshed sub and crew departed Pearl Harbor for their ninth war patrol 1 September 1943. Before returning to Midway 6 October with all torpedoes expended, *Gudgeon* had sunk *Taiau Maru* and seriously damaged several others. Heading along the China coast for her 10th war patrol (31 October–11 December), *Gudgeon* chalked up two more marus. Early in the morning of 23 November she spotted a convoy of four ships and closed for attack. *Gudgeon* fired a spread of six torpedoes with gratifying results. Frigate, *Wakamiya*, hit by one of the deadly "tin fish" broke in two, sinking almost immediately. A tanker and a freighter were also hit but managed to escape. *Gudgeon* closed in to administer the kill to transport *Nekka Maru*.

Several attacks but no kills highlighted *Gudgeon's* 11th war patrol. On 2 February 1944, she sighted a damaged carrier with two escorts. *Gudgeon* closed for attack, but the escorts spotted her in the glassy smooth sea and attacked. A down-the-throat shot with four torpedoes temporarily discouraged the destroyers and allowed *Gudgeon* to seek deep water and safety, but when she surfaced the Japanese men-of-war were gone. Later in the same patrol *Gudgeon* was forced to try another down-the-throat shot at an enemy escort, but no hits. She returned to Pearl Harbor 5 March 1944.

Gudgeon sailed for her 12th war patrol 4 April 1944. The battle-tested submarine stopped off at Johnston Island 7 April, and was never seen or heard from again. On 7 June 1944, *Gudgeon* was officially declared overdue and presumed lost. Captured Japanese records shed no light on the manner of her loss, and it must remain one of the mysteries of the silent sea.

During her 3-year career, *Gudgeon* earned herself a proud place in the Pacific submarine fleet. Her total tonnage sunk, 71,047, placed her 15th on the honor roll of American submarines, and she had accounted for a total of 12 confirmed kills.

For her first seven war patrols *Gudgeon* received the coveted Presidential Unit Citation. She earned 11 battle stars for World War II service.

II

(SS-567; dp. 1,560; l. 269'2"; b. 27'2"; dr. 17'; s. 15.5 k; cpl. 83; a. 8 21" tt.; cl. *Tang*)

The second *Gudgeon*, was launched by the Portsmouth Naval Shipyard, Portsmouth, N.H., 11 June 1952; sponsored by Mrs. Robert A. Bonin, widow of the first *Gudgeon's* last commanding officer; and commissioned 21 November 1952, Comdr. Robert M. Carroll in command.

After builders' trials, *Gudgeon* sailed for Pearl Harbor, where she joined SubRon 1, SubDiv 1, 18 July 1953. Local operations and training exercises continued until 11 April 1954, when *Gudgeon* sailed to the mainland for ASW exercises along the Washington coast. A Mare Island overhaul occupied the remainder of the year, and *Gudgeon* returned to Pearl Harbor 9 March 1955. She sailed 21 July 1955, for the first of five WestPac tours, visiting Yokosuka, Formosa, Hong Kong, Manila, and Guam before returning to Pearl Harbor 30 January 1956. Local operations out of the Hawaiian port, overhaul, special secret operations, and a second trip to the West Coast took *Gudgeon* through the next 18 months.

Sailing from Pearl Harbor 8 July 1957, *Gudgeon* began a history-making cruise around the world, making the Pacific Fleet Submarine Force's flagship the first American submarine to circumnavigate the globe. After exercises at Yokosuka, *Gudgeon* sailed west 26 August 1957. As she made her way around the world for the next 6 months, the submarine docked at Asian, African and European ports before a triumphal entry into Pearl Harbor 21 February 1958, 8 months and 25,000 miles since taking departure.

After extensive overhaul, *Gudgeon* again settled into the peacetime local and special operations, training exercises, and ASW activities. Three WestPac cruises, in 1959, 1961, and 1963, took her to Japan for exercises with the 7th Fleet as well as to Subic Bay and Hong Kong for liberty. The alternate years, 1960 and 1962, saw *Gudgeon* heading back to the mainland, where she trained and exercised along the Washington and California coasts.

Gudgeon returned from the Far East to Pearl Harbor 1 August 1963, and for the next 2 years operated in Hawaiian waters. She departed Pearl Harbor 29 November and arrived San Francisco 9 December for overhaul at Mare Island. The ship was cut in half and an 18 foot section was added during a conversion which gave the submarine new and larger engines as well as much other improved modern equipment. Modernization was completed in April 1967 and *Gudgeon* returned to duty in the Pacific Fleet.

Guerriere

The name of a fast 49-gun British frigate captured and destroyed in a half-hour battle by U.S. frigate *Constitution* 19 August 1812. This celebrated victory fired the nation with fresh confidence and courage at the outset of the War of 1812.

(Fr: t. 1,508'; l. 175'; b. 45'6"; dph. 14'6"; cpl. 400; a. 33 24-pdrs., 20 42-pdrs.)

The first *Guerriere* was the first frigate built in the United States since 1801. She launched in the Philadelphia Navy Yard 20 June 1814. After fitting out, she became the flagship of a squadron assembled at New York under Captain Stephen Decatur. She sailed from New York 20 May 1815 to lead the squadron in terminating piratical acts against American merchant commerce by Algiers and other Barbary States.

On 17 June 1815, off the Algerian coast, famed frigate *Constellation* drove the 44-gun frigate *Meshuda* under the guns of Decatur's flagship, *Guerriere*. With two broadsides, the American frigate drove below all who were not killed or disabled on *Meshuda's* decks. The flagship of the Algerian Fleet, *Meshuda* surrendered. Among her fatalities was Algiers' ranking naval officer. Two days later *Guerriere* led the squadron in driving the 22-gun Algerian brig *Estedio* ashore.

Guerriere arrived at Algiers 28 June 1815, ready to act with her squadron for the capture of every Algerian ship that entered port unless the Dey ratified the terms of a peace treaty sent him by Decatur. The treaty was nego-

tiated on board *Guerriere* 30 June 1815, ending the payment of tribute Algiers and exacting full payment for injuries to American commerce.

Guerriere next led the squadron in a show of force that resulted in a peace settlement with Tunis 13 July 1815 and with Tripoli 9 August 1815. Having enforced the peace in less than 6 weeks from time of sailing from the United States, she combined with the entire naval force assembled at Gibraltar under Commodore William Bainbridge. The 18 warships, including ship-of-the-line *Independence*, 5 frigates, 2 sloops-of-war, 7 brigs, and 3 schooners, was the largest fleet ever collected under the American flag in the Mediterranean to that time. It marked the beginning of a permanent naval fleet in the Mediterranean which has evolved into the powerful 6th Fleet of today. Then, as today, the fleet was a mighty factor for keeping the peace and strengthening the international diplomacy of the nation.

Guerriere returned to New York 12 November 1815 and was laid up in the Boston Navy Yard for repairs 4 March 1816. She recommissioned under Captain Thomas Macdonough 22 April 1818 for fitting out. On 24 July 1818 she put to sea, carrying the American Minister to Russia to his new post. After calls at Gibraltar, Cowes and Copenhagen, she debarked the American Minister and his family at Cronstadt, Russia, 17 September 1818. She then cruised throughout the Mediterranean until 26 July 1819 when she departed Leghorn for Norfolk, Va., arriving 4 October 1819. She remained and was placed in ordinary there 8 November 1820. For the next 7 years she served as a schoolship in the Norfolk Navy Yard, training classes of midshipmen before the permanent establishment of a naval academy.

Guerriere terminated her schoolship duties late in November 1828 when she was ordered to fit out as the flagship of a U.S. Navy squadron destined for duty in the Pacific. She sailed 13 February 1829, landing passengers at Rio de Janeiro before rounding Cape Horn for Callao, Peru. In the following two years she watched over American commerce, including the whaling fleet, along the western seaboard of South America and westward to the Hawaiian Islands. She departed Callao 8 September 1831 and arrived in Norfolk 29 November 1831. *Guerriere* decommissioned 19 December 1831 and remained in ordinary at the Norfolk Navy Yard until broken up in 1841.

II

(ScSlp: l. 319'3"; b. 46'; dr. 17'11"; s. 13 k.; a. 2100-pdrs., 1 60-pdr., 4 20 pdr., 6 9')

The second *Guerriere* launched 9 Sep 1865 in the Boston Navy Yard and commissioned 21 May 1867, Comdr. Thomas Corbin, in command. She sailed from New York 28 June 1867 to serve as flagship of the South Atlantic Squadron protecting American commerce and interests along the coast of South America. She was relieved as flagship by *Lancaster* 17 June 1869 and sailed from Rio de Janeiro the 25th for the New York Navy Yard where she decommissioned 29 July 1869.

Guerriere recommissioned at New York 10 August 1870. At Portsmouth, N.H., 27 September, she received the body of the late Admiral David G. Farragut for transport to New York. The following day she went fast aground on Great Point, Nantucket Shoales and transferred Admiral Farragut's remains to merchant steamer *Island Home*. She got afloat 1 October 1870 and continued to New York the following day.

Guerriere departed New York 17 December 1870 for Lisbon, thence past Gibraltar for cruising with the Mediterranean Squadron. On 7 April 1871 she was host to the Bashaw of Tripoli, who inspected the ship and presented *Guerriere's* captain with the anchor of the frigate *Philadelphia*. This anchor had laid on the beach for more than half a century after the destruction of the frigate in Tripoli Harbor by Captain Stephen Decatur in "the most bold and daring act of the age." From Tripoli the sloop cruised to the ports of Egypt, Lebanon, Italy and France. On 1 December 1871 she stood out of

Villefranche with the remains of Major General Anderson, which were transferred to Army authorities off Fort Monroe, Va., 6 February 1872. She remained at Norfolk until 10 March, then sailed for the New York Navy Yard where she decommissioned 22 March 1872. She was laid up in ordinary there until 12 December 1872 when she was sold to D. Buchler of New York.

Guest

Commodore John Guest was born in Missouri 7 March 1822; appointed Midshipman 16 December 1837; served in frigate *Congress* during the Mexican War; and, protected foreign residents from Chinese Imperial forces at Shanghai in April 1854. He commanded *Owasco* and *Sangamon* in the Civil War, passing the forts for the capture of New Orleans and engaging Confederate batteries in the siege of Vicksburg. He also took part in the capture of the forts at Galveston, Tex., and the capture of Fort Fisher, N. C. Commodore Guest died 12 January 1879.

(DD-472: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35.5 k.; cpl. 329; a. 5 5" .38 cal., 2 40mm., 11 20mm., 10 21" tt., 6 dep., 2 det.; cl. *Fletcher*)

Guest was launched 27 September 1941 by the Boston Naval Shipyard; sponsored by Mrs. Ann Guest Walsh, granddaughter of Commodore John Guest; commissioned 15 December 1942, Comdr. Henry Crommelin in command.

After shakedown training at Guantanamo Bay, *Guest* made a cruise to Trinidad with aircraft carrier *Independence* (CVL-22). This was followed by a convoy escort voyage from New York to Casablanca and return to Boston (28 April-31 May 1943). She departed Boston 20 July for brief training in Hawaiian waters, then joined the 3d Fleet 28 August at Efate, New Hebrides Islands. After an offensive sweep to the Santa Cruz Islands and several escort missions to Noumea, New Caledonia, she departed Efate 28 October for invasion of Bougainville. She guarded transports during the initial landings 1 November assisting in shooting down two enemy bombers. In the following months she escorted troop and logistic convoys from Guadalcanal to Cape Torokina, twice driving off bombers and torpedo planes which attacked her convoy. She silenced Japanese coastal defense guns at Motupene Point, Bougainville, 4 December 1943, and bombarded the Saba River area 25 January 1944.

Guest protected transports landing the marine raiders on Green Island 31 January 1944. As the raiders embarked the next morning, she made two depth charge attacks for tremendous explosions on a diving submarine. *Hudson* (DD-475) followed up this attack to complete the kill of 1,400-ton Japanese submarine *I-171*. *Guest* again screened transports during invasion of Green Islands 15 February 1944. She bombarded Kavieng, New Ireland 25 February, and, the Sanba River area on Bougainville 17 March. She rescued the crew of *PT-283* on the latter date. Her 5-inch gunfire destroyed the grounded Japanese freighter *Meisyo Maru* 30 April to the east of Nemto Island. After amphibious assault training in the New Hebrides, she departed Roi, Marshall Islands, 10 June 1944 for the invasion and capture of the Marianas Islands.

Guest poured gunfire ahead of troops landing on Saipan 15 June 1944, then helped repel four massive air raids against Admiral Mitscher's Fast Carrier Task Force in the Battle of the Philippine Sea. She also conducted pre-invasion bombardment of Guam and gave direct gunfire support to the landings there 21 July 1944. She remained on bombardment support and patrol stations until 9 August, then sailed for amphibious warfare exercises in the Solomons.

Guest departed Purvis Bay, Solomon Islands, 6 September 1944. A unit of Rear Admiral Oldendorf's Western Fire Support Group, she bombarded Anguar in the Palau Islands 12 September 1944. The following day she rescued 7 officers and 45 men of destroyer *Perry* who hit a mine and sank off Anguar. She departed the area

25 September and entered San Francisco Bay 25 October 1944 for overhaul. This was followed by training in Hawaiian waters until 27 January 1945 when she departed with a task group bound via the Marianas for Iwo Jima. Her 5-inch guns blasted that island during the initial invasion 19 February 1945. She continued gunfire support until 28 February when she sailed to join the screen of escort carriers in San Pedro Bay, Philippine Islands.

Guest departed San Pedro Bay 27 March to guard escort carriers giving direct support to the invasion of Okinawa. Detached 9 May, she was assigned to antiaircraft defense station in the Okinawa western transport area. The night of 25 May a suicide plane glanced off her mast and crashed alongside to starboard without causing damage. She remained on antiaircraft defense station until 1 July 1945. She was then routed via Ulithi and the Marshalls in the screen of escort carriers bound to Adak, Alaska, thence to Ominato, Japan. After plane guard duty with carriers along the coast of Honshu, she returned via Adak to the Puget Sound Naval Shipyard 15 November 1945. She decommissioned at San Diego 4 June 1946 and remained in reserve until transferred 5 June 1959 on loan to the government of Brazil. She serves the Brazilian Navy as *Para* (D-27).

Guest received eight battle stars for service in World War II.

(AMc-83: dp. 195; l. 97'1"; b. 22'; dr. 9'; s. 10 k.; cpl. 17; a. 2 mg.; cl. *Aecentor*.)

The first *Guide* (AMc-83) was launched 20 September 1941 by the Camden Shipbuilding & Marine Railway Co., Camden, Maine; sponsored by Mrs. Cary Bok, Jr.; and commissioned 17 March 1942, Lt. (j.g.) Alvin Hero in command.

Guide trained from the Mine Warfare School at Yorktown, Va., until 17 April 1942 when she sailed to alternately sweep the main shipping channels leading out of Key West, New Orleans, and Mobile, Ala. She periodically made brief visits to Pensacola for special sweeping duties. Her homeport changed from Mobile to Naval Station, Burrwood, La., in July 1944. She continued sweeping the approaches to New Orleans and Mobile until July 1945. She then served the Mine Countermeasures Station at Panama City, Fla., for the remainder of her career.

Guide was placed out of service 12 June 1946 and her name was struck from the Navy List 3 July. She was sold to a private purchaser 11 April 1947.

II

(MSO-447: dp. 665; l. 173'; b. 35'; dr. 11'; s. 12 k.; cpl. 75; a. 1 40mm.; cl. *Agile*.)

The second *Guide* (MSO-447) was launched 17 April 1954 by the Seattle Shipbuilding & Drydocking Corp., Seattle, Wash.; sponsored by Miss Ann L. Larson; and commissioned 15 March 1955, Lt. John E. Lowell in command. Her hull classification changed from AM-447 to MSO-447 on 7 February 1955.

Guide spent the first year of her career in coastwise operations off California. This duty included surveys for the Navy Hydrographic Office in the San Diego-Long Beach area and in San Francisco Bay approaches. She departed Long Beach 1 October 1956 and arrived in Yokosuka 31 October for minesweeping exercises that took her off the coast of Korea, the Marianas Islands, and along the coast of Japan. She returned to Long Beach 15 April for 2 years of training along the western seaboard. On 2 April 1959

she again deployed for the Far East, expanding duties to include joint mine exercises with the naval forces of Japan, Korea and Nationalist China.

Guide returned to Long Beach from her second Asian tour 15 October 1959 and resumed operations along the California seaboard for the next 2 years. On 1 May 1961 she sailed on her third tour of duty with the 7th Fleet, arriving in Yokosuka, Japan, 29 May 1961. Following amphibious and other mine warfare exercises to the coasts of Korea and the Philippines, she returned to Long Beach 14 November. The next 16 months were filled with mine countermeasure and minesweeping training that took her as far north as Seattle and Esquimalt, British Columbia.

Guide was again underway for the Far East 5 April 1963, touching Midway and the Marianas on her way to Japan. She again swept to the shores of Taiwan, Korea, and the Philippines before returning to Long Beach 5 November 1963. Coastwise training occupied her until 5 April 1965 when she sailed for Guam, Marianas Islands, arriving 3 May 1965.

Guide underwent a 3-week upkeep period at Guam. She arrived off the coast of Vietnam 1 June to begin the first of three periods of "Market Time" anti-infiltration patrols to deny movement of war supplies to the Viet Cong. Her first patrol terminated 31 June. Subsequent patrols were carried out 25 July-12 August 1965 and 18 September-5 October 1965. Following a liberty call at Hong Kong, she paid a 2-day visit to Iloilo City, Panay, Republic of the Philippines. She opened for general visiting 25-28 October and contributed books and food to assist in America's people-to-people program of international friendship.

Guide joined in combined mine warfare exercises with units of the Philippine Navy before setting course for the Marshalls, Hawaii, and back to Long Beach, arriving 14 December 1965. The minesweeper operated along the West Coast throughout 1966 and sailed for the Far East early in 1967. On 1 March she was off the coast of Vietnam laboring to keep clear the shipping lanes which supply Allied fighters in that war-torn land. She continued to perform this vital duty past mid-year, reaffirming her right to the proud name *Guide*.

Guide, see *Andradite* (PYC-11)

Guilford

A county in North Carolina.

(APA-112: dp. 11,760; l. 492'; b. 65'6"; dr. 26'6"; s. 18.4 k.; a. 2 5"; cl. *Bayfield*.)

Guilford (APA-112) was launched by the Ingalls Shipbuilding Corp., Pascagoula, Miss., 14 July 1944; sponsored by Mrs. Thomas Lowry Bailey, wife of the Governor of the State; converted to an attack transport by Waterman Steamship Corp., Mobile, Ala.; and commissioned there 14 May 1945, Captain E. R. Gardner in command.

After shakedown in the Gulf of Mexico, *Guilford* sailed for Newport, R.I. Arriving 22 June 1945, she served as a training ship for precommissioning crews until 30 July. *Guilford* then took on board cargo and troops at Norfolk and sailed for the Pacific via San Diego. After off-loading troops at Iwo Jima and in the Japanese home islands, *Guilford* was attached to Operation "Magic Carpet" 18 October. In two round trips from San Diego to Guam, Saipan, Okinawa, and Japan, she transported over 5,000 veterans back to the States for discharge as well as carrying out troops for the occupation of Japan. Returning to San Diego 6 March 1946 from her final Pacific voyage, *Guilford* embarked passengers for the East Coast and sailed for Norfolk via the Panama Canal 15 March.

Guilford reached Norfolk 31 March and decommissioned there 29 May 1946. She returned to the Maritime Commission 31 May 1946. She subsequently was sold in

May 1947 to Pope and Talbot Lines, and was renamed *P & T Navigator*. In 1963 she was resold to American Foreign Steamship Co. and renamed *American Oriole*.

Guinevere

A former name retained.

I

(SP-512: dp. 499; l. 197'6"; b. 32'6"; d. 17'; s. 10 k.; cpl. 75; a. 43')

Guinevere (SP-512) was built by George Lawley & Sons, Boston, Mass., in 1908 and acquired from her owner, Edgar Palmer of New York, 10 June 1917. She commissioned 20 July 1917, Lt. Guy Davis in command.

Sailing from the Newport Coaling Station 1 August 1917, *Guinevere* reached Brest, France, 29 August, after stops at St. Johns, Newfoundland, and the Azores. From there she patrolled the French coast and escorted convoys to Quiberon, Ushant, Lorient, and St. Nazaire. *Guinevere* ran aground and was wrecked off the French coast 26 January 1918, with no loss of life; the wreck was purchased by Societe Americaine de Sauvetage 30 June 1919.

II

(IX-67: dp. 503; l. 195'; b. 32'6"; dr. 15')

Guinevere (IX-67), an auxiliary schooner, was built by George Lawley & Sons, Neponset, Mass., in 1921, and acquired from her owner, Edgar Palmer of New York, 24 March 1942. She commissioned 16 June 1942 at Brooklyn, Lt. Henry H. Anderson in command.

After brief shakedown, *Guinevere* performed harbor patrol at Boston, escorted newly formed convoys out to sea, and periodically sailed to patrol off the coast of Greenland. She decommissioned 2 August 1945 and her name was struck from the Navy List 13 August. She was transferred to the Maritime Commission for sale into private ownership 25 April 1946.

Guitarro

A ray of the guitar-fish family.

(SS-363: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 60; a. 13", 10 21" tt.; cl. *Balao*)

Guitarro (SS-363) was launched 26 September 1943 by Manitowoc Shipbuilding Co. of Manitowoc, Wis.; sponsored by Mrs. Ross T. McIntire, wife of the Chief of the Bureau of Medicine and Surgery; and commissioned at Manitowoc 26 January 1944, Lt. Comdr. E. D. Haskins in command.

Guitarro departed Manitowoc for Chicago 13 February, and there she was placed in a floating drydock. Steamer *Minnesota* towed the drydock to New Orleans, arriving 22 February, and there *Guitarro* prepared for sea. Steaming from New Orleans 1 March, she operated out of Balboa, Canal Zone, for several weeks and departed for Pearl Harbor 2 April 1944.

Arriving at Pearl Harbor 17 April, *Guitarro* prepared for her first war patrol off Formosa. She got underway on this duty 7 May 1944. On the night of 30 May the submarine encountered heavily escorted cargo vessel *Shisen Maru*, and scoring two hits sent her to the bottom. She evaded counter-attacks by the screen ships and headed south for rendezvous with a wolf pack of four submarines under the command of Comdr. F. W. Fenno. On the night of 2 June *Guitarro* made a moonlight periscope approach and fired two torpedoes at frigate *Awaji*, sinking her immediately. The submarine was then forced down to avoid depth charge, torpedo, and aircraft attacks. She returned to Darwin, Australia, 19 June, and 2 days later sailed for Fremantle, arriving 27 June 1944.

Departing on her second war patrol 21 July 1944, *Guitarro* set course for the South China Sea off the west

coast of Luzon. She commenced her approach to the lead escorts of a large convoy 7 August and after missing the first target scored three hits on frigate *Kusakaki*, blowing off her bow and sinking her in a spectacular explosion. The remainder of the convoy escaped as *Guitarro* eluded the determined attacks of an escort destroyer. She surfaced the next day to sink a small coastal vessel with her deck gun, and then steamed toward Cape Bolinao, where she was to rendezvous with *Raton* the next day.

Guitarro detected a convoy along the coastline 10 August, maneuvered from beachside, and fired four torpedoes. Tanker *Shinei Maru* exploded and burned furiously as *Guitarro* dived to avoid depth charges. The submarine suffered considerable outside damage but no serious injury, and she departed for the vicinity of Cape Calavite with *Raton*. While submerged the morning of 21 August *Guitarro* heard a distant depth charge attack, and soon sighted the smoke of a convoy. Hampered by an unfavorable current and a radically maneuvering convoy, she was unable to mount an attack on two tankers; but a cargo ship turned into her and received four torpedoes. Passenger-cargo ship *Uga Maru* was sunk, and *Guitarro* escaped amid a violent depth charge attack. The versatile submarine, finding the water too shallow for a torpedo attack, surfaced 27 August to engage three coastal tankers with her deck gun and succeeded in sinking *Nanshin Maru*. To other tankers were damaged but managed to escape into shoal water. *Guitarro* returned to Fremantle to complete her patrol 8 September 1944.

In company with *Bream*, *Guitarro* departed Fremantle 8 October 1944 for her third war patrol in Philippine waters. As the epochal Battle for Leyte Gulf developed, *Guitarro* played an important role. She sighted the Japanese Central Force under Admiral Kurita on the night of 23 and 24 October and tracked the ships through Mindoro Strait, unable to close for an attack. Her contact reports on the force were vital to the success of the ensuing engagements, which by 26 October virtually eliminated the remaining Japanese naval forces in the Pacific.

Guitarro, *Bream*, and *Raton* rendezvoused 30 October and the three boats attacked a convoy off Cape Bolinao that night. Unable to score any hits until the next day, *Guitarro* managed to work her way inside the screen and fire no less than nine torpedoes at 0847. She observed one cargo ship break in half and was rocked by a tremendous explosion from another direct hit on an ammunition ship. *Guitarro* was driven down 50 feet by the force of the explosion, prompting Comdr. Haskins to report: "The Commanding Officer never wishes to hit an ammunition ship any closer than that one." She teamed up with *Bream* and *Ray* 4 November to sink passenger-cargo ship *Kagu Maru*. After *Bream's* initial attack, *Guitarro* added four hits before diving to avoid escort vessels.

Remaining off western Luzon, *Guitarro* and her wolf pack next encountered cruiser *Kumano* in convoy. Damaged in the Battle off Samar, the cruiser had repaired at Manila and was en route to Japan when the submarines struck. *Guitarro* fired nine torpedoes and gained three hits, but failed to sink the cruiser. Pounded by torpedoes from the other boats, *Kumano* was finally stopped, towed ashore by one of her sisters, and eventually finished off by carrier aircraft 25 November 1944. *Guitarro*, meanwhile, had returned to Fremantle 16 November. For her outstanding performance on her first three patrols, the submarine was awarded the Navy Unit Commendation.

Guitarro departed Fremantle 11 December 1944 on her fourth war patrol, transiting Lombok Strait 17 December to patrol the South China Sea. After putting in at Mios Woendi 17 January 1945 for repairs, she made an attack with undetermined results on a convoy off Cape Batagan. Finding targets scarce, she returned to Fremantle 15 March.

The hard-working submarine again put out to sea 9 April on her fifth war patrol, and was unsuccessfully attacked by aircraft and a patrol boat in Lombok Strait.

She then made her way to the northeast coast of Sumatra, where she engaged in a new mission, the laying of mines, off Berhala Island. After an uneventful patrol astride the shipping lanes between Borneo and Singapore, *Guitarro* anchored off Saipan 27 May 1945. Next day she departed for Pearl Harbor, where she arrived 8 June.

Arriving at San Francisco 18 June 1945, *Guitarro* decommissioned at Mare Island 6 December and was placed in reserve. The veteran submarine recommissioned 6 February 1952, and after overhaul at San Diego engaged in a series of training exercises off the coast until 10 September 1953. She again decommissioned 22 September 1953 and underwent conversion to snorkel equipment at Mare Island Shipyard. *Guitarro* subsequently recommissioned 15 May 1954 and commenced the training of Turkish sailors prior to transfer to Turkey under the Military Defense Assistance Program. *Guitarro* decommissioned and was loaned to Turkey 7 August 1954 where she now serves as *Prevcse* (S-22).

Guitarro was awarded four battle stars and a Navy Unit Commendation for her service in World War II. Her first, second, third, and fifth war patrols were designated successful.

Gulfport

(AK-5: dp. 3,800; l. 267'4"; b. 37'2"; dr. 18'; s. 7.5 k.; cpl. 52; a. 1.4" 50 cal., 1 6-pdr.)

I

Gulfport, formerly SS *Locksun*, ex-*Andrec Rickmers*, was built at Bremerhaven, Germany, in 1902 by Rickmers Atkien Ges. and was owned by the North German Lloyd SS Co. In Pearl Harbor when the United States entered World War I, she was seized by Government orders and converted to a cargo transport at the Honolulu Navy Yard. She commissioned 1 September 1917 at Honolulu, Lt. Comdr. P. F. Johnson, USNR, in command.

In company with four submarines, *Gulfport* sailed from Hawaii on 30 October 1917, reaching New York 28 January 1918 via San Diego, Corinto, Nicaragua, Balboa, Key West, and Norfolk. At New York she discharged her cargo, primarily pineapple, and was attached to the Naval Overseas Transportation Service.

Until she decommissioned in 1922, *Gulfport* served as a cargo ship linking New York and Charleston with various Caribbean ports, particularly Guantanamo, Cuba; St. Thomas, Virgin Islands; Port-au-Prince, Haiti; and Santo Domingo; Dominican Republic. During this period she made a total of 23 round trips to the West Indies, carrying oil and other necessary supplies to American troops based there and frequently returning with a cargo of sugar from the islands. *Gulfport* was detached from NOTS on 10 October 1919 and placed under the military jurisdiction of the Commandant, 6th Naval District, Charleston, for duty in the West Indies Freight Service.

Gulfport completed her last voyage to the Caribbean on 25 November 1921 as she returned to New York; there she decommissioned 3 March 1922 at the Brooklyn Navy Yard and was sold to Moore & McCormack Inc. of New York on 25 July 1922.

II

A city in Mississippi.

(PF-20: dp. 1,264; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*)

Gulfport (PF-20), a frigate, was launched 21 August 1943 by the American Shipbuilding Co., Cleveland, Ohio; sponsored by Mrs. John C. Chambers; and commissioned at Gulfport, Miss., 16 September 1944, Comdr. G. A. Knudsen, USCG, in command.

Gulfport underwent shakedown at Bermuda, B.W.I., and then returned to Norfolk for training 2 December 1944. The frigate was soon active as a convoy escort, however, departing with her first convoy from Norfolk to Oran, Algeria, 18 December. She continued on this vital duty between Algeria and the United States until VE day.

Scheduled for conversion to a weather ship, *Gulfport* entered New York Navy Yard 5 July 1945. Upon completion, she was assigned to the Pacific Fleet, sailing via the Panama Canal and Pearl Harbor to her new home port of Adak, Alaska, where she arrived 16 September 1945. *Gulfport* performed weather duties so singularly important in the movements of both ships and aircraft in the Pacific area until decommissioning 28 May 1946 at Seattle. Her name was struck from the Navy List 19 June 1946 and she was sold to Zidell Ship Dismantling Co. for scrap 13 November 1947 at Seattle.

Gull

A long-winged, usually white, web-footed swimming bird having the lower mandible hooked.

I

(AM-74: dp. 410; l. 124'3"; b. 23'; dr. 10'8"; s. 9 k; a. 1 3")

Gull (AM-74), formerly trawler *Boston College*, was built by the Bath Iron Works, Bath, Maine, in 1928; acquired 30 August 1940; converted at the Boston Yards of the Bethlehem Steel Corp. 30 September 1940; and commissioned 3 December 1940, Lt. Comdr. Ernest L. Posey, USNR, in command.

Attached to the Inshore Patrol, *Gull* conducted minesweeping operations in Massachusetts Bay until 28 March 1941 when she sailed for Norfolk via Yorktown. Homeported at Norfolk 6 April-26 August 1941, she operated along the Atlantic coast as far north as Boston until sailing the latter date for Argentina, Newfoundland, where she put in 4 September. *Gull* continued her exacting duties as a minesweeper at Argentina until the summer of 1944, calling at Boston for repairs as needed. She decommissioned at Quincy, Mass., 25 July 1944. Stricken from the Navy List 22 August 1944, she was transferred to the Maritime Commission for disposal 15 May 1946.

II

(YMS-324: dp. 270; l. 136'; b. 25'; dr. 8'; s. 14 k; cpl. 34)

The second *Gull* (AMS-16) was launched as *YMS-324* by the Al Larson Boat Shop, Terminal Island, Calif., 14 October 1943; sponsored by Mrs. William Toman; and commissioned 28 February 1944, Lt. B. F. Silveira, USNR, in command.

After shakedown and minesweeping training, *YMS-324* sailed from San Pedro 20 June 1944 via Pearl Harbor and reached Guadalcanal 1 August to prepare for the coming invasion of Peleliu. She put in at Peleliu and swept her first enemy mine 14 September, the day before the famous 1st Marine Division stormed ashore, and for the next month continued minesweeping operations there and at Ulithi. Sailing from Ulithi 14 October for the attack on the Ngulu Islands, the ship swept mines under enemy fire without damage or casualties and subsequently continued her duties at Ulithi until departing 19 March 1945 for Okinawa. *YMS-324* aided in clearing the approaches to Okinawa, and remained in those waters until the fall of 1945, returning to San Pedro, Calif., 20 September 1945, 15 months to the day from the time she left.

Redesignated *Gull* (AMS-16) 18 February 1947, she returned to the western Pacific in the autumn of 1947, via Pearl Harbor, and conducted peacetime training until put-

ting in at Chinampo, Korea, 2 November 1950 to support United Nations forces by sweeping mines in those wintry waters. *Gull* remained off Chinampo for more than a month and through her untiring efforts the approaches to that port were cleared, allowing an evacuation accomplished without loss of life. For this hazardous duty *Gull* was awarded the Navy Unit Commendation.

On 1 August 1954 *Gull* was redesignated AMCU-46 and underwent conversion at Yokosuka, Japan. Redesignated again as MHC-46 on 7 February 1955, she returned to Long Beach, Calif., in May, 1955, and subsequently conducted peacetime training duty out of southern California ports until 14 January 1958. Decommissioned at San Diego that date, she was disposed of in March 1959.

Gull was awarded two battle stars for World War II service and nine battle stars and the Navy Unit Commendation for Korean service.

Gull was the name assigned to AM-399, to be built by the Defoe Shipbuilding Co., Bay City, Mich., in 1945. The contract was cancelled 16 May 1945.

Gum Tree

A gum-producing tree.

(YN-13: dp. 700; l. 151'8"; b. 30'6"; dr. 10'6"; s. 15 k.)

Gum Tree (YN-13) was launched 20 March 1941 by the Marietta Manufacturing Co., Point Pleasant, W. Va.; commissioned 16 September 1941, Algiers, La., Lt. George H. Burrows in command.

After shakedown in the Gulf of Mexico and Mississippi River, *Gum Tree* sailed for Newfoundland on 25 September 1941, reaching Argentina 25 January 1942 after touching at Key West, New York, Newport, Boston, and Halifax. She spent the following 17 months laying and tending nets off Newfoundland and then returned to the States for overhaul. Casco Bay, off Portland, Maine, was *Gum Tree's* home port for the remainder of the war as she tended harbor defenses there. Her designation was changed to AN-18 20 January 1944. In September 1945 the net-tender participated in some experimental net operations at Melville, R.I., and then was ordered to Orange, Tex., where she arrived 6 December 1945. *Gum Tree* decommissioned there 20 June 1946 and was struck from the Navy List 7 February 1947. She was transferred 27 February 1948 to the Maritime Commission at Lake Charles, La.

Gunason

Robert W. Gunason, born 26 November 1919 in Chicago, Ill., enlisted in the Naval Reserve as an apprentice seaman 24 August 1940 at Los Angeles. Following service in *Wichita* he was appointed Midshipman and sent to active duty training at the Midshipmen's School, Prairie State, N.Y. Promoted to Ensign 6 June 1941 and to Lieutenant (j.g.) 15 June 1942, Lt. Gunason was killed in action 9 August 1942 while serving in *Astoria*, during the Battle of Savo Island.

(DE-795: dp. 1,400; l. 306'; b. 37'; dr. 13'6"; s. 23.6 k.; cpl. 213; a. 3 3", 4 1.1", 8 20mm., 3 21" tt., 8 dcp., 1 dcp. (h.h.), 2 dct.; cl. *Buckley*.)

Gunason (DE-795) was launched 16 October 1943 by the Consolidated Steel Corp., Orange, Tex.; sponsored by Mrs. Mabel Meneley, the namesake's mother; and commissioned 1 February 1944, Comdr. H. G. White, USNR, commanding.

After shakedown *Gunason* sailed from Boston 6 April 1944 for the Caribbean, reaching Trinidad 4 days later, and began inter-island escort duties. Until June she made frequent escort voyages between Trinidad and Guantánamo Bay, Cuba, delivering her convoys safely. Departing Trinidad 2 June she rendezvoused at Barbados with a merchantman carrying one of the first loads of Bar-

badians to the United States to relieve the wartime farm labor shortage, and escorted the ship safely to Miami.

Subsequently, following repairs at Boston, *Gunason* reached Casco Bay, Maine, 25 June and joined sister destroyer escorts bound for Hampton Roads, where all arrived 2 July to form Task Force 61. *Gunason* served with this task force until early 1945, making three transatlantic escort voyages out of Hampton Roads to Bizerte, Plymouth, and Oran respectively from 4 July 1944-8 January 1945. Highlights of this exacting duty included shepherding a stricken slow tow convoy which had been attacked by U-boats. *Gunason* spent Christmas and New Year's standing by this convoy as it steamed into winter seas at 4 knots.

Gunason was soon to change her theater of operations. She sailed from Boston 27 January 1945 via the Panama Canal for the South Pacific, arriving Manus 4 March. A round trip escort voyage thence to Leyte in March set the pattern she was to follow for the next 3 months—escorting convoys entering and departing Philippine waters—supporting America's last giant thrusts in the Pacific. In June *Gunason* escorted troopships from Hollandia to Manila and after touching Ulithi put in at Manila again early in July.

The ship departed Subic Bay 26 July in company with three destroyer escorts and a flotilla of landing craft bound for Okinawa, arriving 9 days later. A pre-dawn air attack 5 August sent all ships off Hagushi Beach to General Quarters, but *Gunason* and her charges escaped damage. She returned to Leyte 8 August and following an escort voyage thence to Ulithi and return, got underway 30 August with one of the first Leyte-Tokyo convoys, a flotilla of LCI's that entered Tokyo Bay 7 September. *Gunason* sailed the next day for Manila, arriving 17 September, and remained in the Philippines until November. Duties included a trip to Batan Island with a War Crimes Investigating Detail in which facts, later brought forth in the Yamashita War Crimes Trial, were gleaned. A search mission for a downed plane and a training exercise with submarines in Subic Bay occupied *Gunason* until 26 November when she stood out of Subic Bay for the United States, arriving San Diego, Calif., 17 December 1945. She operated out of there until 10 February 1947 when she sailed for the Far East via Pearl Harbor and Guam. *Gunason* arrived Sasebo, Japan 10 March. She sailed 3 days later for patrol off the eastern coast of Korea. *Gunason* remained in this service, with calls at Tsingtao and Yokosuka, until 10 September 1947, when she departed for California.

Arriving San Diego 19 September, *Gunason* conducted coastal operations until 12 December 1947, when she entered Long Beach for inactivation. *Gunason* decommissioned 13 March 1948 and was placed in reserve at Mare Island. At present she is berthed at Stockton, Calif.

Gunboats, Unnamed

Commencing in the 1800's, contracts were let for a considerable number of ships to be designated "Gunboat" followed by a number. Data on these unnamed gunboats will be found in the volume of this series subtitled "Unnamed Ships and Craft of the United States Navy."

Gunnel

A blennoid fish of the north Atlantic ranging south as far as Cape Cod.

(SS-253: dp. 1,525; l. 311'9"; b. 27'3"; dr. 16'10"; s. 20 k; cpl. 80; a. 1 5", 10 21" tt.; cl. *Gato*.)

Gunnel (SS-253) was launched 17 May 1942 by the Electric Boat Co., Groton, Conn.; sponsored by Mrs. Ben Morell, wife of the Chief of the Bureau of Yards and Docks; and commissioned 20 August 1942, Lt. Comdr. J. S. McCain, Jr., in command.

Gunnel's first war patrol (19 October-7 December 1942) covered a passage from the United States to the United Kingdom, during which she participated in Oper-

ation "Torch," the Allied invasion of North Africa. One of six submarines assigned to Admiral Hewitt's Western Naval Task Force, *Gunnel* made reconnaissance runs off Fedhala 6 November 1942, 2 days before the invasion, and at D-day 8 November made infrared signals to guide the approaching fleet to the beachheads. Missions well accomplished, the submarine reached Rosneath, Scotland, 7 December to terminate her first patrol.

Following a major overhaul at Portsmouth, N.H., *Gunnel* steamed to the Pacific to conduct her second patrol (28 May-3 July 1943) in waters west of Kyushu Island in the East China Sea. Success crowned her efforts when cargo ship *Koyo Maru* was sunk 15 June—*Gunnel's* first kill—and 4 days later when another cargo ship, *Tokine Maru*, was sent under.

After overhaul at Mare Island, Calif., the submarine accomplished a third war patrol (17 November 1943-7 January 1944) in homeland waters of Japan off Honshu. This, too, was successful; on 4 December *Gunnel* sent passenger-cargo ship *Hiyoshi Maru* to the bottom.

The fourth war patrol (5 February-6 April) took the boat from Midway to Fremantle and in the South China, Sulu, and Celebes Seas. Bad luck dogged *Gunnel* and she was forced to return to port having made no further kills. Her fifth and sixth patrols, (3 May-4 July) and (29 July-22 September 1944) found her again in the southern approaches of the Sunda Straits and cruising in the Sulu Sea-Manila area but failed to add sunken ships to *Gunnel's* score. During her seventh patrol (21 October-28 December) in the South China and Sulu Seas, she sank the motor torpedo boat, *Sagi*; passenger-cargo ship, *Shunten Maru*; and torpedo boat, *Hiyodori*. On this same patrol *Gunnel* evacuated 11 naval aviators at Palawan 1 to 2 December after the fliers had been protected by friendly guerrilla forces for some 2 months. She conducted her eight patrol (13 June-24 July 1945) in the Bungo Suido area. She attacked an unescorted Japanese submarine 9 July. The great range and speed of the enemy, however, caused *Gunnel's* torpedoes to miss. She returned from the patrol after duty as a lifeguard ship for B-29's flying toward Japan on bombing missions.

Gunnel was refitting at Pearl Harbor and at war's end she was ordered to New London, Conn., where she decommissioned 18 May 1946. Her name was struck from the Navy List 1 September 1958 and was sold for scrapping in August 1959.

Gunnel received five battle stars for World War II service. Her first, second, third, and seventh war patrols were designated successful.

Gunnison River

A river in west-central Colorado.

LSMR-508 was named *Gunnison River* 1 October 1955; reclassified YV-3 in May 1960; and renamed *Targeteer* (q.v.) 26 May 1960.

Gunston Hall

Gunston Hall is a colonial estate in Fairfax County, Va., about 15 miles down the Potomac River from Alexandria and not far from Mount Vernon. Built between 1755 and 1758, it is a representative piece of Virginia's colonial architecture and has been designated a national shrine. Gunston Hall was the home of George Mason, one of Virginia's outstanding Revolutionary figures. In addition to serving in the Constitutional Convention, Mason was prominent in drafting the first constitution of Virginia and was the author of the Virginia Declaration of Rights, which served as the prototype for the Bill of Rights, the first 10 amendments to the Constitution of the United States.

(LSD-5: dp. 4,490; l. 457'9"; b. 72'2"; dr. 18'; s. 15 k.; a. 1 5' 12 40mm.; epl. 326; cl. *Ashland*)

Gunston Hall (LSD-5) originally designated APM-5, was launched 1 May 1943 by the Moore Drydock Co., Oak-

land, Calif., sponsored by Mrs. Harvey S. Haislip; and commissioned 10 November 1943, Comdr. D. E. Collins in command.

After intensive shakedown along the California coast, *Gunston Hall* prepared to sail for the Western Pacific, where she was to participate in every major operation from February 1944 to the end of the war, 18 months later. Loading 225 men from the 4th Marine Tank Battalion and 2 amphibious units, as well as 15 LVT's, 15 tanks, 17 CM's, and 15,000 gallons of gasoline, *Gunston Hall* departed San Diego 13 January 1944. On D-Day 1 February 1944 at Kwajalein Atoll, she stood offshore to unload her cargo as the Marines stormed the beaches on Roi and Namur Islands. *Gunston Hall* remained in the area to repair small craft until 6 February, when she re-embarked for former passengers and equipment and sailed to Guadalcanal via Funa Futi. The pattern she set here held for her participation in eight further key invasion efforts in the Pacific as the Navy "Island-hopped" Marines and Army troops ever closer to the Japanese home islands.

Through the rest of 1944, the versatile landing ship took part in the initial assault invasions of Emirau Island 20 March, Hollandia 22 April, Guam 21 July, Pelelieu Island 15 September, and Leyte Island 20 October. The last assault culminated in the momentous Battle for Leyte Gulf, one of history's greatest naval engagements. While not actually involved in an invasion effort, *Gunston Hall* trained troops and shuttled supplies and men from the rear islands to the staging areas.

In 1945 *Gunston Hall* participated in the initial assault landings at Luzon 9 January, Iwo Jima 19 February, and Okinawa 1 April. After the first invasion waves went ashore at Okinawa—the Pacific's largest amphibious operation, involving over 1,200 ships and half a million men—*Gunston Hall* remained anchored at nearby Kerama Retto until 1 July to repair small craft. She was untouched by the enemy's fierce kamikaze attacks although she saw several other American ships hit and crippled.

Gunston Hall terminated her Pacific war duty 1 July 1945 as she sailed for a much needed overhaul reaching Portland, Oreg., 26 July via Guam, Eniwetok, and Pearl Harbor. After a period of shuttling small craft along the West Coast, she anchored at San Diego in mid-December to repair small craft. *Gunston Hall* returned to the Pacific in 1946 to participate in one of the most significant series of scientific tests of the era. Departing San Diego 17 April, she reached Bikini Atoll 5 May via Pearl Harbor for duties in connection with Operation "Crossroads," the famous series of atomic bomb tests. Departing Bikini 19 August, *Gunston Hall* returned to San Diego 3 October via Kwajalein and Pearl. *Gunston Hall* decommissioned 7 July 1947 at Terminal Island in San Francisco Bay.

Conversion to an Arctic LSD at Puget Sound Navy Shipyard, Seattle, gave *Gunston Hall* a reinforced hull and a greatly extended heating and ventilation system which would permit her to operate effectively in the Arctic. She recommissioned at Puget Sound 5 March 1949, and, after shakedown, sailed north to participate in Operation "MIKI" in the Arctic Circle and later returned for Operation "MICOWEX." Next training and development operations along the West Coast occupied her until the outbreak of war in Korea.

With elements of the 1st Marine Provisional Brigade embarked, *Gunston Hall* departed San Diego 1 July 1950 and reached Pusan, Korea, via Yokosuka 3 August. Disembarking the Marines, she took aboard 30 stretcher cases and returned to Osaka, Japan. On 10 September *Gunston Hall* sailed from Japan to participate in the brilliant amphibious operation at Inchon, Korea, 15 September. After the Marines had landed midway up the peninsula, threatening to cut the communist supply lines to their troops at the tip of the peninsula, *Gunston Hall* made several shuttle trips to bring reinforcements. As the Korean conflict settled into its long and bloody pattern of near stalemate, *Gunston Hall* continued to shuttle troops and supplies between Japan and Korea, occasionally also acting on fire support missions for coastal minesweepers. During an overhaul in the summer of 1952, she

was fitted with a helicopter landing and launching platform large enough to accommodate nine "whirly-birds," newest element in amphibious warfare.

When armistice ended the actual fighting in Korea, *Gunston Hall* sailed to Cheju Do, Korea, 4 September 1953. Remaining there until 22 September, she served in Operation "Big Switch," the exchange of prisoners of war. She then settled into a schedule of annual cruises in the Western Pacific, which took her from San Diego to various Asian ports, interspersed with Arctic resupply cruises.

Gunston Hall was part of one of the Navy's greatest postwar humanitarian efforts in 1955 as she joined TG-90 (Rear Admiral Lorenzo S. Sabin) at Saigon, South Vietnam, for Operations "Passage to Freedom." When the Geneva Accord of July 1954 divided the former French Indochina, over 800,000 North Vietnamese decided to cast their lot with the South rather than live under a Communist government. Since badly depleted French forces could not hope to effect the transfer of so many people, the U.S. Navy detailed nearly 100 ships to carry refugees and equipment from Haiphong to Saigon in a 9-month period. *Gunston Hall* made five coastal runs carrying heavy barges between 2 January and 26 February 1955. In all, the Navy evacuated 310,848 North Vietnamese as well as 68,757 tons of cargo and over 8,000 vehicles. Hard-pressed sailors feeding and clothing the ragged refugees were rewarded when many of the 184 children born during the Haiphong-Saigon passage were named after Navy vessels.

Gunston Hall's pattern of WestPac cruises and Arctic resupply missions was broken a second time in 1962. During the Cuban missile crisis, she embarked elements of the 5th Marine Expeditionary Brigade at San Diego and headed for the Caribbean, transiting the Panama Canal 5 November. As the Soviets withdrew their missiles and the crisis passed, *Gunston Hall* transited the Canal again returning San Diego 15 December.

The veteran LSD sailed for the western Pacific 26 March 1963. After operations which carried her to Japan, Okinawa, Korea, Hong Kong, and several Pacific islands, she returned to the West Coast 13 November. Following operations along the California coast, she departed San Diego 6 November 1964 for duty with the 7th Fleet. Arriving Subic Bay 30 November, she was under way again a week later for Vietnam to support the fight to thwart Communist aggression.

Relieved 8 January 1965 she headed for Hong Kong, en route to Japan, arriving Yokosuka on the 24th. She visited Korea and Okinawa before returning to the battle zone. She unloaded cargo at Da Nang through 18 Feb-

ruary, then headed to Okinawa for more supplies. She continued this pattern of duty shuttling between Pacific ports and Vietnam until departing Yokosuka for home 6 June.

Reaching San Diego 22 June, she prepared to return to the Orient. Sailing 6 August, she visited Hawaii, Okinawa, and Japan before returning to the West Coast 7 October.

After operations out of San Diego, *Gunston Hall* again turned her prow toward the setting sun 16 May 1966. She reached Chu Lai, Vietnam, 27 May and debarked the 9th Marine Engineers before sailing for Subic Bay to resume shuttling between Vietnam and nearby friendly ports, bringing war materiel to the Allies. She participated in Exercises "Hilltop VII" and "Mudpuppy I" in the Philippines before loading three experimental Navy Patrol Air Cushion vehicles 15 December for transportation to San Diego. Back home early in January 1967, *Gunston Hall* prepared for future action.

Gunston Hall earned nine battle stars for World War II service and another nine battle stars during the Korean War.

Gurke

Henry Gurke was born 6 November 1922 at Neche, N. Dak. Enlisting in the Marine Corps 15 April 1942, he participated in the invasion and occupation of Pavuvu, Russell Islands. Private Gurke was killed during the battle for Bougainville 9 November 1943. He and another Marine were sharing a foxhole to defend a vital road when a Japanese grenade dropped directly in on them. Knowing that his companion manned an automatic weapon with greater fire power than his own and could thereby provide more effective resistance, Gurke thrust the other Marine aside and threw himself over the grenade to smother the explosion. For his gallantry above and beyond the call of duty, Private Gurke was posthumously awarded the Medal of Honor.

(DD-783: dp. 2,425; l. 390'6"; b. 40'11"; dr. 18'6"; s. 35 k.; epl. 336; a. 6 5", 12 40mm., 10 20mm., 6 dep., 2 dct., 10 21" tt; epl. 336; cl. *Gearing*)

Gurke (DD-783) was launched 15 February 1945 by the Todd-Pacific Shipyards, Inc., Tacoma, Wash.; sponsored by Mrs. Julius Gurke, mother of Private Gurke; and commissioned 12 May 1945, Comdr. Kenneth Loveland in command.

After shakedown along the West Coast, *Gurke* sailed for the Western Pacific 27 August 1945, reaching Pearl

USS *Gunston Hall* (LSD-5) during December 1959

Harbor 2 September. From there she continued west to participate in the occupation of Japan and former Japanese possessions. Returning to her home port, San Diego, in February 1946, *Gurke* participated in training operations until 4 September 1947 when she sailed for another WesPac cruise. Two further WesPac cruises, alternating with operations out of San Diego and a cruise to Alaska in 1948 to aid in the celebration of the 50th anniversary of the Yukon gold rush, filled *Gurke's* schedule until the outbreak of the Korean War.

Gurke departed San Diego 5 August 1950 and arrived at Yokosuka 19 August to screen fast carrier task forces off the west coast of Korea, 25 August–6 September. She shared with five other destroyers the award of the Navy Unit Commendation to Task Element 90.62 for extraordinary heroism in support of the landing at Inchon, 13–15 September 1950. Steaming up Flying Fish (So Sudo) Channel at flood tide the first day, *Gurke* bombarded Wolmi Do and the Inchon waterfront. Communist fire concentrated on three of the "sitting duck" destroyers, *Gurke* taking three hits that caused no casualties and only minor damage. The destroyer's 5-inch batteries opened in a prelanding shore bombardment 15 September 1950 until the first assault wave of Marines crossed the line of departure for Wolmi Do which was secured by high noon. Wolmi Do was no longer a dominating threat over approaches into Inchon by landing assault craft that

would be borne in on the incoming afternoon tide. After this initial landing General of the Army Douglas MacArthur made visual signal: "The Navy and Marines have never shone more brightly than this morning."

After the Inchon landings, *Gurke* screened fast attack carriers launching powerful strikes against enemy positions and supply lines. She also patrolled the narrow Formosa Straits to prevent Chinese Communist invasion of Formosa and to insure that Formosa was not used as a base for military operations against the Chinese mainland. During the first year of war *Gurke* frequently served as flagship of Vice Admiral Struble and the 7th Fleet's Carrier Task Force 77.

Two interludes in the States for repairs and training interrupted *Gurke's* Korean conflict service. But she continued, when deployed with the Seventh Fleet, to screen attack carriers and bombard enemy coastal supply routes and installations, once destroying a Communist train through accurate gunnery. She again drew fire from Communist shore batteries 25 June 1953, but escaped without serious damage from two direct hits and the shrapnel of five air bursts.

When the shooting stopped in Korea in August 1953, *Gurke* continued patrols in the Far East to help keep the peace. Six to eight month deployments to the Western Pacific were alternated with stateside overhauls and training in a full peacetime routine. During 17–18 June 1960,

USS *Gurke* (DD-783)—personnel inspection

she was a unit of the escort for cruiser *St. Paul* carrying President Eisenhower on a fast Manila-Taiwan cruise. She also participated in nose-cone recovery work as America's space effort rolled into high gear, facilitated by seapower.

In June 1962, *Gurke* participated in a series of nuclear tests off Christmas Island. She entered the Puget Sound Naval Shipyard 11 July 1963 for modernization overhaul, emerging 1 May 1964 with new equipment ranging from antisubmarine rocket launchers to the latest in air search radar and electronic detection devices. She arrived in her new home port of San Diego 15 May for fleet operations along the western seaboard until 21 October when she again sailed for the Far East. She arrived in Yokosuka and joined the 7th Fleet 16 November 1964 to begin her duties as a unit of Fast Carrier Task Force 77.

The first day of 1965 found *Gurke* with Task Group 77.7 in the South China Sea. Long hours were spent on station, plane-guarding for attack carriers *Ranger* (CVA-61) and *Hancock* (CVA-19). As the Vietnam conflict became "hot" in late January she served as one of the escorts for an amphibious task group in the vicinity of Da Nang, South Vietnam. Long stretches at sea with fast carriers were punctuated by liberty calls at Subic Bay and Hong Kong. On 20 April 1965 the destroyer sailed in company with *Ranger* (CVA-61) for return to San Diego, 7 May 1965. The remainder of the year was filled with a rapid succession of coastwise training exercises ranging north to Seattle, which continued until she sailed for the western Pacific 12 May 1966. After visiting Hawaii, Japan, and the Philippines, *Gurke* was stationed in the Gulf of Tonkin late in June for search and rescue duty. On 1 July three North Vietnamese PT boats were detected 11 miles away from *Gurke* and three sister destroyers and closing at high speed. Fighter aircraft from *Constellation* intercepted the raiders and sank all three within minutes. The destroyers picked up 19 survivors for questioning.

While in the Gulf of Tonkin, *Gurke* refueled helicopters by a new in-flight refueling process enabling them to rescue American pilots downed in hostile territory.

After a brief respite in Hong Kong, Formosa, and the Philippines in August, *Gurke* resumed duty in the Gulf of Tonkin in September and set a record in completing 113 in-flight refuelings. On this assignment she bombarded Viet Cong positions in the Mekong and Saigon River deltas. After being relieved early in the fall, the destroyer returned home, via Okinawa and Japan, arriving San Diego 16 November. In 1967, she operated along the West Coast and prepared for future action.

Gurke received seven battle stars for service in the Korean conflict.

Gurkha

A former name retained.

(SP-600; b. 13'; sp. 12 k.; a. 11 pdr.; 1 3-pdr.)

Gurkha was built in 1915 by Britt Brothers of West Lynn, Mass.; acquired from her owner, Willoughby H. Stuart of Boston on 21 April 1917; and commissioned 22 May. *Gurkha* served as a coastal and harbor patrol boat at Portland, Maine, until 25 June 1919 when she was transferred to the Coast Guard.

Gurnard

A trigloid fish having three free pectoral rays, a food fish of the genus *Trigla*. The striped gurnard inhabits the South Atlantic.

(SS-254; dp. 1,525; l. 31'9"; b. 27'2"; dr. 15'3"; s. 20.25 k.; epl. 80; a. 13", 10 21" tt.; cl. *Gato*)

Gurnard was launched 1 June 1942 by the Electric Boat Co., Groton, Conn.; sponsored by Miss Suzanne Slingluff; and commissioned 18 September 1942, Lt. Comdr. C. H. Andrews in command.

Following shakedown out of New London, *Gurnard* sailed for Rosneath, Scotland, 2 November 1942 and reached that port 13 days later. Her first war patrol, 28 November to 27 December 1942, brought her to the Bay of Biscay where she lay off the Spanish coast awaiting German blockade runners bound for Spanish ports. The patrol was uneventful; no enemy ships were sighted and subsequently *Gurnard* returned to New London 9 February 1943 for repairs and alterations.

After reaching Pearl Harbor 26 May, the submarine got underway 12 June for her second war patrol. She patrolled off Toagel Mlungui Passage and on 29 June saw action for the first time, damaging two Japanese merchantmen and surviving 24 depth charges thrown by an enemy destroyer. Varied damage was inflicted on other ships in these waters before *Gurnard* made her first kill, sinking cargo ship *Taiko Maru* at 12-53 N., 131-49 E. on 11 June 1943. Having expended all torpedoes, the submarine returned via Midway to Pearl Harbor, arriving 26 July for refit.

Underway again 6 September, she sailed to the South China Sea to begin her third war patrol. A five-ship convoy was sighted near midnight 7 October and *Gurnard* began her stalk, closing at 0139 on 8 October and sending to the bottom cargo ship *Taian Maru* and passenger-cargo ship *Dainichi Maru* west of Luzon. This successful patrol terminated at Pearl Harbor 28 October.

One month later she sailed on her fourth patrol to prowl off the southeast coast of Honshu and soon found good hunting. A convoy was sighted 24 December and at 0710 *Gurnard* attacked. Two minutes later cargo ship *Seizan Maru No. 2* had broken in two and sunk; she was soon joined by cargo ship *Tofuku Maru*. Japanese destroyers attacked the submarine with over 80 depth charges without success; and after damaging another merchantman on 27 December *Gurnard* returned to Pearl Harbor 7 January 1944.

Following overhaul at San Francisco *Gurnard* departed Pearl Harbor 16 April on her fifth war patrol bound for the eastern Celebes Sea. On this patrol she chalked up one of the highest single-patrol tonnage scores of the Pacific war, attacking a convoy 6 May and sinking 6,886-ton cargo ship *Tenshinzan Maru*, 6,995-ton passenger-cargo vessel *Taijima Maru*, and 5,824-ton passenger-cargo ship *Aden Maru*. Nearly a hundred depth charges rained down around her but she eluded the hunters and escaped undamaged. This vital convoy carried 40,000 troops intended to oppose MacArthur in New Guinea, and the embarked units suffered losses of nearly 50 percent. *Gurnard's* next kill occurred 24 May when several torpedoes sent under 10,090-ton tanker *Tatekawa Maru*. No further opportunities presented themselves; and *Gurnard* put in at Fremantle, Australia, 11 June 1944 with the completion of the patrol.

The submarine stood out on her sixth patrol 8 July for the Banda, Molucca, Celebes, Sulu, and Mindanao Seas. After topping off at Darwin she patrolled off the Peleng Straits and damaged one merchantman before returning to Fremantle 5 September.

Gurnard's seventh patrol commenced 9 October after refit and while cruising off Borneo she raised a five-ship enemy convoy. A successful attack was pressed home 3 November at the end of an 18-hour hunt and two torpedoes demolished cargo ship *Taimai Maru*. *Gurnard* returned to her Australian port 17 November after this victory.

The submarine's eighth and ninth patrols (11 December 1944-1 February 1945 and 10 March-9 May 1945) included reconnaissance off Camranh Bay and patrols with submarines *Hammerhead* and *Boarfish*, but hunting was poor and no ships were sunk. *Gurnard* finished her last patrol at Pearl Harbor 9 May and put in at Mare Island, Calif., 9 days later for a major overhaul. Following a round-trip voyage thence to Pearl Harbor and Midway, she returned to San Francisco 11 September 1945 and decommissioned there 27 November 1945.

Gurnard remained in reserve until 1 July 1949 when she reported to the San Francisco Naval Shipyard for

activation as an armory for naval reserve submarine training. Towed to Pearl Harbor 27 November to 9 December 1949, the submarine served there until returning under tow to Tacoma, Wash., 18 May 1953 to continue reserve training duties in that port until June 1960. She was then inactivated in preparation for disposal. Her name was struck from the Navy List 1 May 1961. She was sold for scrapping 26 September 1961 to the National Metal & Steel Corp., Terminal Island, Calif.

Gurnard received six battle stars and the Navy Unit Commendation for service in World War II. War patrol numbers two through seven were designated "successful".

(SS(N)-662; dp. 3,800 (surf.) 4,600 (subm.); l. 292'3"; b. 31'8"; cpl. 107; a. 4 21" tt.; cl. *Sturgcon*)

The second *Gurnard* (SS(N)-662), a *Sturgcon*-Class nuclear submarine, was laid down 22 December 1964 by the San Francisco Bay Naval Shipyard, Vallejo, Calif.; launched 20 May 1967; sponsored by Mrs. George P. Miller; and completed in the fall of 1968. Once commissioned, she will become a key element in the underwater deterrent force of the Navy and will contribute vitally to the continuing task of "keeping the peace" over the vast reaches of global waters. Designed to attack and destroy all types of enemy ships, her ability to operate for long periods at great depths and at high submerged speed will make her a potent and effective challenge to enemy submarines. Operating under nuclear power, she will be able to conduct long-range reconnaissance patrols and surveillance missions without risking detection by surface ships. Moreover, she will be able to carry out extensive ASW operations, either alone or with other fleet submarines or with destroyer-type surface ships.

Gus W. Darnell, see *Justin* (IX-228)

Gustafson

Arthur Leonard Gustafson was born 13 June 1913 in Watertown, S. Dak. He graduated from the Naval Academy in 1932, serving in battleships *Idaho* and *Colorado* before reporting to destroyer *Peary* 4 September 1939. He perished in action against the enemy when *Peary* was sunk by Japanese bombers off Port Darwin, Australia, 19 February 1942.

(DE-182; dp. 1,240; l. 306'; b. 36'8"; dr. 8'9"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm.; 2 dct., 8 dep., 1 dcp. (h.h.); cl. *Cannon*)

Gustafson (DE-182) was launched 3 October 1943 by the Federal Shipbuilding & Drydock Co., Newark, N.J.; sponsored by Mrs. Eva Smythe Stevens, widow of Lt. Gustafson; and commissioned 1 November 1943, Comdr. Herman Rich in command.

Following shakedown training, *Gustafson* escorted coastal convoys in waters ranging from New York to Galveston. On 20 February 1944 she departed New York in the screen of two escort carriers for duty with Admiral Jonas Ingram's 4th Fleet based at Recife, Brazil. This fleet kept down the German U-boat and raider menace in waters running south from Trinidad to the tip of South America, and across to the coast of Africa. On 14 April 1943, the destroyer put to sea in company with escort carrier *Solomons* to sweep the Atlantic Narrows. On the 23d, *Gustafson* made an unsuccessful hedgehog attack on a target that was probably German submarine *U-196*. Due south of St. Helena, 15 June 1943, aircraft launched by *Solomons* sank the German submarine *U-860*.

Gustafson continued antisubmarine patrol and convoy escort in the South Atlantic. Operating out of Recife and Bahia, Brazil, she helped cover coastal waters from the border of French Guiana down to Rio de Janeiro and across the Atlantic narrows more than halfway to the coast of Africa. On 22 November 1944, while escorting

Navy transport *General M. C. Meigs* to a mid-way rendezvous in the Atlantic Narrows, she closed alongside cruiser *Omaha* to pass orders and the two ships collided. Both ships suffered damage but were able to complete the mid-ocean rendezvous escort mission. After temporary repairs at Bahia, *Gustafson* proceeded north to the New York Navy Yard, arriving 21 December 1944. During a swift overhaul she received additional armament and a new Combat Information Center.

Gustafson departed New York 22 January 1945 for antisubmarine warfare refresher training out of Key West, Fla. From there she proceeded in the escort of a slow convoy to Trinidad and ports of South America. She returned north in March and was stationed at Casco Bay as German Submarine *U-857* moved into the Gulf of Maine. The U-boat announced its presence 5 April 1945 by torpedoing the American tanker *Atlantic States*. Two Coast Guard frigates and two destroyer escorts, including *Gustafson*, were soon hunting for the enemy. *U-857* lay on the bottom, off Cape Cod, but was rooted out by *Gustafson* who destroyed the U-boat by repeated hedgehog attacks in the early hours of 7 April 1945.

Gustafson trained out of New London, Conn., with submarines until 18 May 1945 when she put to sea as a unit of the escort for a convoy bound to Oran, Algeria. She returned to Charleston, S.C., 13 June 1945 and thence to Guantanamo Bay, Cuba, for refresher training.

Gustafson departed Guantanamo Bay 24 July 1945 and transited the Panama Canal the 27th on her way to San Diego, Calif. She sailed for Hawaii 9 August and was on the high seas when hostilities ceased with Japan 15 August 1945. Her base Pearl Harbor, she served as a weather patrol ship north of Hawaii for the remainder of the year, thence via San Diego for return to the Atlantic seaboard. She transited the Panama Canal 27 January 1946 for inactivation at Green Cove Springs, Fla. She decommissioned there 26 June 1946.

Gustafson remained in reserve until 23 October 1950 when she was transferred to the Netherlands under terms of the Military Defense Program. She serve the Netherlands Navy as *Van Ewijk* (F-808) until scrapped early in 1967.

Gustafson received one battle star for World War II service.

Guthrie, see *James Guthrie*

Guyandot

A river in West Virginia.

(AOG-16; dp. 1,818; l. 255'; b. 44'; dr. 16'8")

Guyandot was built as *Veedol II* in 1930 and acquired from her owners, Tidewater Oil, in March 1943; converted at Brewers Drydock, Staten Island, and renamed *Guyandot*; and commissioned 17 April 1943, Lt. Robert R. Crockett, USNR, in command.

Taking on a full load of fuel oil, she sailed for Bermuda on 1 May: from there she was taken in tow to Oran, where she arrived 26 May. From Oran she sailed to Bizerte, Tunisia, arriving there 8 June; although under frequent air attack *Guyandot* worked unceasingly shuttling oil through the wreck-laden channel. Sailing to Tunis on 27 June, *Guyandot* began fueling ships for the Sicilian invasion and, after the assault in late July, carried high octane fuel to the newly taken port of Palermo, again under heavy air attack.

Returning to Tunis 30 August, she began shuttling oil between that port and Bizerte and continued this duty until the Italian invasion was well under way. Arriving in Taranto, Italy, on 8 November, she performed yeoman work in carrying high octane aviation fuel from tankers to the shore. After a month in Palermo for drydock and overhaul, *Guyandot* returned to Taranto to take on gasoline and then sailed into the Adriatic for the port of Bari, arriving 8 February 1944. From Bari she shuttled oil north to Manfredonia to supply the 15th Air Force at

Foggia; this work continued until late March, when she struck an underwater obstacle in Bari and, after two trips with a wooden patch, had to put in for more lasting repairs at Bizerte.

Emerging from drydock 11 May, *Guyandot* spent a month carrying oil from Bizerte to Italy and then sailed again to Bari, arriving there 15 June 1944. From Bari she took high octane fuel to Manfredonia and Monopoli, carrying approximately 40 million gallons of gasoline for the forces moving up the Italian peninsula. An important break in her shuttle runs came from 2 to 14 November, when she carried a load of high octane to Piraeus (Port of Athens), Greece; the British had landed in Greece only in late October and *Guyandot* was the first American ship to dock in Piraeus since before the outbreak of war.

Back on the Bari-Manfredonia-Monopoli run, *Guyandot* continued shuttling oil until 9 December, when she sailed to Palermo for repairs and drydocking; on 7 January 1945, she crossed the Mediterranean to Bizerte. Decommissioned there 12 January, she was transferred to the French Navy as part of lend-lease. France returned the ship to the Navy on 21 March 1949 and on that same day formally purchased *Guyandot* for service under the name *Lac Noir*. Her name was struck from the Navy List 28 April 1949.

Guymon

A city in northwestern Oklahoma.

(PC-1177: dp. 280; l. 173'8"; b. 23'; dr. 10'10"; s. 22 k.; cpl. 65; a. 1 3", 1 40mm., 5 20mm., 2 rkt., 2 dcp., 2 dct.; cl. PC-461)

PC-1177 was laid down 24 July 1943 by Leathem D. Smith Shipbuilding Co., Sturgeon Bay, Wis.; launched 18 September 1943; sponsored by Mrs. Lucy Wagener; and commissioned at New Orleans, La., 20 December 1943, Lt. Edwin H. Kiefer in command.

After shakedown out of Miami, Fla., PC-1177 departed Key West for New York 8 February 1944. Arriving 14 February, she sailed 2 days later to screen a troop and supply convoy from New York to Guantanamo Bay, Cuba. Arriving Guantanamo Bay 4 March, she returned to New York as convoy escort from 8 to 16 March. Between 22 March and 10 May she completed two more escort runs to Cuba and back.

Department New York 26 May, she escorted a convoy to Cuba, then sailed 3 June for the Pacific. Steaming via the West Coast and Pearl Harbor, she reached Purvis Bay, Florida Island, 24 August. After completing amphibious practice in the Solomon Islands, she departed Guadalcanal 8 September for the assault on the Palaus. She arrived off Anguar Island 17 September and served as patrol and shore bombardment ship during the next 5 days. From 21 to 23 September she escorted a convoy to Ulithi; returned to Anguar 27 September; then steamed to the Admiralties, arriving Manus 5 October. She sailed in convoy for the Palaus the 10th; and, after arriving Kossol 15 October, she patrolled coastal waters in the southern Palaus, primarily off Anguar, for more than a month. From 20 to 22 November she sailed to Ulithi, where she continued patrol runs until 20 December. After completing an escort run to the Palaus and back, she departed 26 December for Pearl Harbor and arrived 11 January 1945.

PC-1177 departed Pearl 17 February, touched Eniwetok, and reached Saipan 4 March to prepare for the mighty invasion of Okinawa. She departed the Marianas 25 March as part of the convoy screen and closed Hagushi Beach, Okinawa, 1 April. During and after the amphibious landings she served as part of the antiaircraft screen for transports and support ships. She operated off Okinawa until 17 April when she sailed as a convoy screen to Ulithi. Arriving 22 April, she departed in convoy for the Philippines 4 May and reached Leyte Gulf the 7th. Three days later she departed to escort a troop and supply convoy to Okinawa; and, after arriving 15 May, she resumed antiaircraft screening patrols.

Throughout the remainder of the Okinawa campaign, PC-1177 remained on station, carrying out her assigned patrol and escort duties. After the defeat of Japan, she was reclassified PCC-1177 on 20 August and returned to the West Coast from the Western Pacific late in 1945. She decommissioned at Astoria, Oreg., 27 July 1946 and entered the Pacific Reserve Fleet. While berthed in the Columbia River Group, she was again reclassified PC-1177 on 27 October 1955 and was named *Guymon* 15 February 1956. She was sold by the Navy to Zidell Exploration, Inc., 25 April 1961.

PC-1177 received two battle stars for World War II service.

Gwin

William Gwin was born 6 December 1832 in Columbus, Ind., and appointed a Midshipman 7 April 1847. One of the most promising officers in the nation, he had risen to the rank of Lieutenant Commander by the time of his death. During the Civil War he commanded several ships of the Mississippi Squadron. He was one of Flag Officer Foote's "can do" officers, displaying outstanding initiative, energy and dash. After the fall of Fort Henry he swept with his wooden gunboats up the Tennessee River all the way to regions of Alabama, spreading destruction and terror. This action was a major factor in the collapse of the Confederate lines far behind him in Kentucky. Fire support from two of his gunboats, *Tyler* and *Lexington*, helped save Union troops from disaster in the Battle of Shiloh, bringing high praise from General Grant. He was wounded in action 27 December 1862 while commanding gunboat *Benton* in the battle of Haines Bluff on the Yazoo River. He died from these injuries 3 January 1863 on board a hospital ship in the Mississippi River.

I

(TB-16: dp. 46; l. 100'; b. 12'6"; dr. 3'3"; s. 20 k.; cpl. 16; a. 1 1-pdr., 2 18" tt)

The first *Gwin* (TB-16) was launched 15 November 1897 by the Herreshoff Manufacturing Co., Bristol, R.I.; commissioned at Newport 4 April 1898, Lt. (j.g.) C. S. Williams in command. She departed Newport 24 June, cruising down the eastern seaboard as far as Florida, thence on patrol off Cuba during 6 to 14 August 1898 as America went to war with Spain. She returned north to Annapolis 31 August and served as cadet training ship for the Naval Academy until placed in reserve at Norfolk 10 July 1903.

Gwin remained in reserve until June 1908 when she began assisting in experimental torpedo work out of Newport, R.I. This duty terminated 18 April 1914 when *Gwin* decommissioned for use as a ferryboat. On 11 April 1918 her name was changed to *Cyane*, and she was reclassified YFB-4 on 17 July 1920. Her name was struck from the Navy List 30 April 1925 and she was sold for scrapping 24 September 1925.

II

(DD-71: dp. 1,125; l. 315'6"; b. 31'4"; dr. 8'1"; s. 30 k.; cpl. 100; a. 44", 2 1-pdrs., 1 6" Y-gun, 12 21" tt.; cl. *Caldwell*)

The second *Gwin* (DD-71) was launched 22 December 1917 by the Seattle Const. & Drydock Co., Seattle, Wash.; sponsored by Mrs. James S. Woods; and commissioned at Puget Sound 18 March 1920, Lt. Comdr. H. H. Bousen in command.

Gwin departed Puget Sound 26 April for calls at California ports, thence through the Panama Canal for Newport, R.I., arriving 2 June. Following operations along the eastern seaboard as far south as Charleston, S.C. she decommissioned in the Philadelphia Navy Yard 28 June 1922. She remained inactive at Philadelphia until her name was struck from the Navy List 25 January 1937. Her hulk was sold for scrapping 16 March 1939 to the Union Shipbuilding Co., Baltimore, Md.

USS *Gwin* (DD-71), a 1920 Flush-deck Destroyer with a cutaway stern

III

(DD-433: dp. 1,620; l. 347'10"; b. 36'1"; dr. 11'10"; s. 37 k.; cpl. 209; a. 5 5"; 10 21" tt.; 1 Y-gun; 2 dct.; cl. *Gleaves*)

The third *Gwin* (DD-433) was launched 25 May 1940 by the Boston Navy Yard; sponsored by Mrs. Jesse T. Lippincott, second cousin of Lt. Comdr. Gwin and commissioned at Boston 15 January 1941, Lt. Comdr. J. M. Higgins in command.

Gwin completed shakedown training 25 April 1941 and underwent final alterations in the Boston Navy Yard before conducting neutrality patrol throughout the Caribbean Sea. On 28 September 1941 she assumed identical service in the North Atlantic from her base at Hvalfjördur, Iceland. After the infamous raid on Pearl Harbor, she hurried back to the Eastern Seaboard thence through the Panama Canal to San Francisco, Calif.

On 3 April 1942 *Gwin* stood out of San Francisco Bay as a unit of the escort for carrier *Hornet* who carried 16 Army B-25 bombers to be launched in a bombing raid on Tokyo. Admiral William "Bull" Halsey in carrier *Enterprise* rendezvoused with the task force off Midway, and Gen. "Jimmy" Doolittle's famed raiders launched the morning of 18 April when some 600 miles east of Tokyo. The task force made a rapid retirement to Pearl Harbor, then sped south 30 April 1942, hoping to assist carriers *Yorktown* and *Lexington* in the Battle of the Coral Sea. That battle concluded before the task force arrived, and *Gwin* returned to Pearl Harbor 21 May for day and night preparations to meet the Japanese in the crucial battle for Midway Atoll.

Gwin departed Pearl Harbor 23 May 1942 with Marine reinforcements for Midway and returned to port 1 June. Two days later she raced to join the Fast Carrier Task Force searching for the approaching Japanese Fleet off Midway. But the crucial battle was all but concluded by the time she arrived on the scene 5 June 1942. Four large Japanese aircraft carriers and a cruiser rested at the bottom of the sea along with some 250 enemy planes and a high percentage of Japan's most highly trained and experienced carrier pilots. The Island of Midway was saved to become an important base for operations in the western Pacific. Likewise saved, was Hawaii, the great bastion from which attacks were carried into the South Pacific and Japan itself. But there were American losses too. *Gwin* sent a salvage party to assist in attempts to save carrier *Yorktown* (CV-5), heavily damaged by two bomb and two torpedo hits in the Battle of Midway. As attempts continued 6 June 1942, a Japanese submarine rocked *Yorktown* with torpedo hits and sank destroyer *Hamman* who was secured alongside the carrier. The salvage party had to abandon *Yorktown* and surviving

men were rescued from the sea. The carrier capsized and sank the morning of 7 June 1942. *Gwin* carried 162 survivors of the two ships to Pearl Harbor, arriving 10 June 1942.

Gwin departed Pearl Harbor 15 July 1942 to operate in the screen of fast carriers who pounded Japanese installations, troop concentrations and supply dumps as Marines invaded Guadalcanal in the Solomons 7 August 1942. In the following months *Gwin* convoyed supply and troop reinforcements to Guadalcanal. Joining a cruiser-destroyer task force, she patrolled the "Slot" of water between the chain of Solomon Islands to intercept the "Tokyo Express" runs of enemy supply, troop and warships supporting Japanese bases in the Solomons.

On 13 November 1942, *Gwin* and three other destroyers formed with battleships *Washington* and *South Dakota* to intercept an enemy bombardment-transport force approaching the Solomons. The following night the task group found the enemy of Savo Island: battleship *Kirishima*, 4 cruisers, 11 destroyers, and 4 transports. The Naval Battle of Guadalcanal was hot and furious. *Gwin* found herself in a private gun duel with cruiser *Nagara* and four destroyers. She took a shell hit in her engine room. Another shell struck her fantail and enemy torpedoes began to boil around the destroyers.

Though shaken by exploding depth charges *Gwin* continued to fire at the enemy as long as any remained within range. In a short time the other three American destroyers were out of action, two sinking and *Benham* surviving with her bow partially destroyed. But a masterful battleship duel fought by *South Dakota* and *Washington* wrecked Japanese battleship *Kirishima*. She had to be abandoned and scuttled as was Japanese destroyer *Ayanami*. The battle was over. The gallant American ships had saved Guadalcanal from a savage bombardment in this naval action that marked a turning point toward victory for U.S. forces in the Solomons.

Gwin attempted to escort the noseless *Benham* to Espiritu Santo, New Hebrides Islands. But when all hope was lost, survivors transferred to *Gwin* who hurried *Benham's* abandoned hulk to the bottom with gunfire. The survivors were landed 20 November at Noumea, New Caledonia, and *Gwin* was routed onward to Hawaii, thence to the Mare Island Navy Yard, arriving 19 December 1942.

Having been overhauled, *Gwin* returned to the Southwest Pacific 7 April 1943 to escort troop reinforcements and supplies throughout the Solomons. On 30 June she served with the massive amphibious assault force converging on New Georgia under the leadership of Rear Admiral Richmond Kelly Turner. She supported the most important landings 30 June on the north coast of Rendova Island, 5 miles across Blanche Channel from Munda. Immediately after the first wave of troops hit Rendova

Beach, Munda Island shore batteries opened fire on the four destroyers patrolling Blanche Channel. *Gwin* was straddled by the first salvo. A moment later a shell crashed her main deck aft, killing three men, wounding seven and stopped her after engine. The half-dozen enemy shore batteries were soon silenced as *Gwin* laid down an effective heavy smokescreen to protect the unloading transports. When aerial raiders appeared, her gunners shot down three. Rendova Island was soon in American possession. It served as an important motor torpedo boat base to harass Japanese barge lines and a base for air support in the Solomons.

Gwin escorted a reinforcement echelon from Guadalcanal to Rendova, then raced out in to the "Slot" 7 July to rescue 87 survivors of cruiser *Helena*, lost in the Battle of Kula Gulf. She then joined a cruiser-destroyer task force under Rear Admiral Walden L. Ainsworth to head off a formidable "Tokyo Express" headed through the Solomon Islands to land troops at Vila. The battle was joined past midnight of 12-13 July and Japanese cruiser *Jintsu* quickly slid to the bottom, the victim of smothering gunfire and torpedo hits. But four Japanese destroyers, waiting for a calculated moment when Ainsworth's formation would turn, launched 31 torpedoes at the American formation. His flagship *Honolulu*, cruiser *St. Louis* and *Gwin*, maneuvering to bring their main batteries to bear on the enemy, turned right into the path of the deadly "long lance" torpedoes. Both cruisers received damaging hits but survived. *Gwin* was not so fortunate. She received a torpedo hit amidships in her engine room and exploded in a burning white heat—a terrible sight. Destroyer *Ralph Talbot* took off *Gwin's* crew after their heroic damage control efforts failed; and she had to be scuttled. Two officers and 59 men perished with the gallant destroyer, casualties of the Battle of Kolombangara.

Gwin received five battle stars for service in World War II.

IV

(DM-33: dp. 2,200; l. 376'6"; b. 40'10"; dr. 18'10"; s. 34.2 k.; cpl. 343; a. 6 5" 12 40mm., 8 20mm., 2 dcp., 4 dec. *Robert H. Smith*)

Gwin (DM-33), ex-DD-772, was launched by the Bethlehem Steel Co., San Pedro, Calif., 9 April 1944; sponsored by Mrs. Jesse W. Tarbill, second cousin and sponsor of the previous *Gwin* (DD-433); and commissioned 30 September 1944 at Los Angeles, Comdr. F. S. Steinke in command.

After shakedown along the California coast, *Gwin* sailed for the Pacific theatre as flagship of Mine Squadron 3, reaching Pearl Harbor 3 January 1945. A week later the squadron left for the fighting front. At Saipan, 20 January, *Gwin* and her sister sweepers joined Battle-ship Division 7. For 7 days, 21 to 26 January, she participated in the preliminary bombardment of Iwo Jima, next to the last step in America's long island-hopping campaign across the Pacific. Returning to Pearl Harbor, *Gwin* underwent overhaul before sailing for Eniwetok 23 February.

From Eniwetok *Gwin* steamed to Nansei Shoto 17 March to sweep the area around Okinawa, the scene of one of the war's bloodiest and most heroic invasions. Acting in a variety of roles—antisubmarine screen, radar picket ship, minesweeper, fire support—*Gwin* was to remain off Okinawa the following 5 months, almost to the very end of the war. During this period she accounted for some 16 enemy aircraft as the Japanese launched their desperate kamikaze attacks. Nine of these Japanese planes fell victim to *Gwin's* guns on only 2 days, 16 April and 4 May. An air raid 16 April saw *Gwin* down two "Betties," Japanese dive bombers, coming in only to have another come sweeping in and crash in the sea some 25 yards as the agile DM evaded her. And then the alert gun crew swung their battery to catch another Japanese plane and shoot it down less than 50 yards from the ship.

At dusk on 4 May, *Gwin* was on radar picket station off Okinawa. Combat Air Patrol reported 8 to 10 enemy

planes to port, and *Gwin* swung her batteries to face the enemy. Suddenly a second contingent of planes swept in out of the setting sun to starboard! *Gwin* swung her guns around just in time, and two of the attackers splashed into the sea. Whirling to port, the gun crews fired into the original attack group, and accounted for three more kamikazes. The seas had not yet closed over these three planes when a sixth, another kamikaze, crashed *Gwin*. Two men were killed, 2 missing, and 11 injured as the suicide plane embedded itself into *Gwin's* aft 40mm. platform. Then, as damage control parties rushed to quell the fires raging around the kamikaze, the Japanese attack ended as suddenly as it had begun. In less than six hectic, heroic minutes, *Gwin*, although under attack from all quarters, had downed five Japanese planes and been herself damaged by a sixth.

After a brief stay at Nansei Shoto for battle damage repairs, *Gwin* returned to patrol and sweeping duties around Okinawa. She rendezvoused 20 August with Task Force 38 and, with such illustrious fighting ships as *Missouri*, *Lexington*, *Yorktown*, and *Shangri-La*, headed for Tokyo Bay. Putting into Sagami Bay 27 August 1945, *Gwin* began to sweep the area, front door to Tokyo Bay, and destroyed some 41 mines in 2 days' duty. At last on 29 August 1945 she steamed into Tokyo Bay, and anchored under the towering snowcap of Mount Fujiyama. Departing for Okinawa 1 September, *Gwin*, remained on minesweeping duty there and in the East China Sea for the rest of the year.

With her share of the Pacific "mopping-up" complete, *Gwin* at last headed home, reaching San Pedro, Calif., 23 February 1946. The battle-tested ship then sailed for Charleston, S.C., arriving 14 March. *Gwin* decommissioned there 3 September 1946 and was placed in reserve.

As the Korean War necessitated the strengthening of America's fleet, *Gwin* recommissioned at Charleston 8 July 1952, Comdr. R. E. Oliver in command. For the next few years she divided her time between Caribbean and local exercises, European cruises, and NATO maneuvers, with time out for overhaul. In 1953 *Gwin* crossed the Atlantic for a 4-month tour of duty with the 6th Fleet, visiting 10 Mediterranean ports before returning to Charleston 3 February 1954. Midshipman Able Cruises June to August 1954 and 1955 took her to Lisbon, Portugal, Le Havre, Valencia, Spain, and Terquay, England. *Gwin* returned to the Mediterranean a final time in 1957 for NATO maneuvers with ships of the Portugese, French, and British navies, visiting both Brest and Gibraltar.

In between Caribbean and Mediterranean cruises and training, *Gwin* engaged in a variety of minesweeping and hunter-killer antisubmarine exercises along the East Coast and participated in several other NATO maneuvers in American waters. *Gwin* sailed to the Philadelphia Navy Yard 12 January 1958 where she decommissioned 3 April 1958 and remains in reserve through 1967.

Gwin received a Navy Unit Commendation and four battle stars for service in World War II.

Gwin, William M., see *William M. Gwin* (AK-125)

Gwinnett

A county in Georgia.

(AG-92: dp. 2,411; l. 338'8"; b. 50'4"; s. 11 k.; cpl. 105; a. 1 3", 6 20mm.; T. CI-M-A VI)

Gwinnett (AVS-5) was originally designated AK-185 and was launched as AG-92 under Maritime Commission contract by Walter Butler Shipbuilders, Inc., Superior, Wis., 14 May 1944; sponsored by Mrs. Oliva Dionne, mother of the Dionne quintuplets. After being taken down the Mississippi River to New Orleans, the ship was outfitted at Port Houston Iron Works, Houston, Tex., and commissioned there 10 April 1945, Lt. H. K. Golwey in command.

Soon after commissioning, *Gwinnett* was redesignated AVS-5 on 25 May 1945. After shakedown in the Gulf of

Mexico she was ordered to the Pacific coast for disposal. *Gwinnett* arrived San Francisco 25 January 1946. She decommissioned and was simultaneously redelivered to the Maritime Commission 11 February 1946.

Gyatt

Edward Earl Gyatt was born 4 September 1921 in Syracuse, N.Y. Enlisting in the Marine Corps 28 January 1942, he was killed in action while serving with the 1st Marine Raider Battalion during the Guadalcanal campaign, America's first offensive effort in the Pacific. Part of the invasion force that went ashore on Tulagi D-day 7 August 1942, Private Gyatt reported the approach of a Japanese counter-attack force on his advanced position that night. With utter disregard for his personal safety, he remained at his post and inflicted heavy damage on the enemy until he was killed by a grenade. For his gallantry and courage, Private Gyatt was posthumously awarded the Silver Star.

(DD-712: dp. 2,425; l. 390'6"; b. 41'4"; dr. 18'6"; s. 35 k.; cpl. 336; a. 6 5", 16 40mm., 20 20mm. 5 21" tt. 2 dct., 6 dep.; cl. *Gearing*)

Gyatt (DD-712) was launched 15 April 1945 by the Federal Shipbuilding & Drydock Co., Kearney, N.J.; sponsored by Mrs. Hilda Morrell, mother of Private Gyatt; and commissioned 2 July 1945 at the New York Navy Yard, Comdr. A. D. Kaplan in command.

After shakedown in the Caribbean, *Gyatt* reported to Norfolk for a variety of duties along the East Coast. In addition to local operations and training exercises, she participated in training operations with aircraft carriers in the Gulf of Mexico and the Caribbean. Departing Norfolk 24 January 1947, *Gyatt* sailed south to represent the United States at the inauguration of the new Uruguayan President at Montevideo 27 February to 6 March. Before returning to Norfolk 21 March she made goodwill visits to Rio de Janeiro and Port of Spain, Trinidad.

Gyatt sailed 20 November 1947 to deploy with the 6th Fleet in the Mediterranean and returned to Norfolk 2 March 1948. In six subsequent deployments to Northern Europe and the Mediterranean, she bolstered the readiness of American seapower that proved a mainstay in stemming the threatened advance of Communist domination over Free World nations. Other operations took her north from Norfolk to Nova Scotia and Iceland and south into the Caribbean Sea.

Gyatt entered the Boston Naval Shipyard 26 September 1955 and decommissioned 31 October for conversion to the Navy's and the world's first guided missile destroyer. In addition to twin Terrier guided missile launchers, she received the Navy's first Denny-Brown stabilization system—two 45-square-foot retractable fins extending out from midships well below the waterline to greatly reduce pitch and roll on the sea. Her hull classification was changed to DDG-712 1 December 1956. *Gyatt* recommissioned 2 days later, Comdr. Charles F. Helme, Jr., in command.

The new guided missile ship, a potent weapon in America's expanding arsenal, spent nearly 3 years of intensive evaluation and development work along the Atlantic coast. On 23 May 1957 her hull number was changed to DDG-1 in recognition of her pioneering position. She sailed to join the 6th Fleet 28 January 1960, the first guided missile destroyer to deploy with an overseas fleet. By the time of her arrival back in Charleston, her new home port, 31 August 1960, *Gyatt* had participated in fleet readiness and training operations throughout the Mediterranean.

On her return *Gyatt* joined in America's space program, taking nose-cone recovery station 5 to 10 November 1960 and 24 to 26 April 1961 to aid in "Project Mercury," thus operating in another new area of expanding seapower. With another world crisis pending over the status of Berlin, she again sailed 3 August 1961 to bolster the flexing and powerful arm of the 6th Fleet in the Mediterranean. She remained on alert posture with the "steel-

gray stabilizers" in the Mediterranean until 3 March 1962, then resumed training along the eastern seaboard out of Charleston, S.C.

Gyatt entered the Charleston Naval Shipyard 29 June 1962 for overhaul that included the removal of her missile system and installation of newly developed equipment that would prepare her for specialized service with the Operational Test and Evaluation Force. Her classification changed from a guided missile destroyer DDG-1 back to conventional destroyer DD-712 1 October 1962. Her preparations were complete by 1 January 1963 when *Gyatt* arrived in Norfolk for continuing experimental work under Operational Test and Evaluation Force in waters reaching into the Caribbean Sea. *Gyatt* continued to operate along the Atlantic coast and in the Caribbean into 1967. She performed patrol and ASW duty and trained the officers and men of the Navy in guided missile destroyer tactics. She was also especially active in testing and evaluating new equipment and helping to bring the men and equipment of the Navy efficient and up to date.

Gypsum Queen

A former name retained.

(SP-430: t. 361; l. 135'; b. 27'; dr. 14'5"; s. 14 k.; a. 1 3', 2 mg.)

Gypsum Queen, a sea-going tug, was built by Dialogue & Co. in 1890, acquired from her owners, J. B. King Transportation Co. of New York, in September 1917; and commissioned 4 December 1917 at New York City.

Turned over to the 3d Naval District, *Gypsum Queen* was fitted out for overseas service at New York Navy Yard and subsequently served in French ports as a towing vessel and a minesweeper. While returning from rendering assistance to minesweepers foundering off the coast of France, *Gypsum Queen* struck a rock near Armen Light House off Brest 28 April 1919 and sank with a loss of 2 officers and 13 men.

Gypsy

The first *Gypsy* retained a merchant name. The second *Gypsy* was named for a type of small winch.

I

(SP-55: dp. 22; l. 61'; b. 10'3"; dr. 3'6"; s. 11 k.)

Gypsy, a motor boat, was built by George Lawley & Sons, Neponset, Mass., in 1912, and was acquired by the Navy 11 May 1917 for use as a section patrol boat. Assigned to the 1st Naval District, she burned while being fitted out 20 June 1917, and was struck from the Navy List 23 November 1917.

II

(ARSD-1: dp. 816; l. 224'9"; b. 34'11"; dr. 8'; s. 13 k.; cpl. 65; 2 20mm.; cl. *Gypsy*)

Gypsy (ARSD-1), originally designated LSM-549, was launched by Brown Shipbuilding Co., Houston, Tex., 7 December 1945, and commissioned 18 March 1946 at Houston, Tex., Lt. Comdr. C. S. Horner in command.

Gypsy completed her shakedown training 20 March 1946, and sailed 10 days later from Norfolk for San Pedro, Calif., where she arrived 26 May. The ship then departed 14 June to take part in the impending Operation "Crossroads," a historic series of atomic tests. Arriving off the atoll 10 July 1946, *Gypsy* witnessed the Baker Test 25 July and assisted in recovering beached and damaged craft and doing underwater work on test ships, as the Navy developed a large amount of valuable scientific information on the effects of the atomic bomb on ships and how to reduce them.

Departing 16 September 1946, *Gypsy* worked on the raising of SS *Britain Victory* at Honolulu until 8 November. She arrived San Pedro 10 December 1946 for extensive repairs until June 1947, then did limited salvage work

before proceeding to Guam, arriving 18 August 1947. There *Gypsy* salvaged and towed to Guam the former bow of cruiser *Pittsburgh*, lost in the great typhoon of June 1945. She returned to San Diego 17 January 1948, decommissioned 21 January and joined San Diego Group, Pacific Reserve Fleet.

Gypsy recommissioned 8 August 1951, and after shake-down and repairs arrived Pearl Harbor 19 October 1951. For the next 7 months the ship operated in Apra Harbor, Guam, relocating mooring buoys and working on the breakwater. Arriving Pearl Harbor 31 May 1952, *Gypsy* had new salvage equipment and electronic gear installed and sailed 15 September for Subic Bay. Arriving 9 October she began removing a sunken Japanese hulk. She sailed 9 January 1953 for Inchon, Korea, site of one of the decisive amphibious operations in history. There *Gypsy* removed a sunken barge from the harbor. Later she worked off Pohang and helped clear explosives from Ulsan harbor. Korean coastal work was completed 6 May 1953, and the ship sailed for Pearl Harbor, via Yokosuka and Midway Island, arriving 5 June. After operations there, *Gypsy* sailed to Eniwetok and upon her arrival 18 September began renewing and positioning fleet moorings for the coming Atomic bomb tests, Operation "Castle." She arrived Bikini 7 February 1954 and witnessed the first test shot, the second thermonuclear explosion in history, 1 March 1954. She assisted in recovering test equipment, was detached 26 March 1954, returned to Pearl Harbor 18 April. After operations there, she sailed to Long Beach, arriving 4 May 1955 for deactivation. *Gypsy* decommissioned 23 December 1955 at Astoria, Oreg., and was placed in reserve. In 1967 she was berthed in San Diego.

Gypsy, see YP-353

Gypsy, see YP-70

H

H-1

(SS-28: dp. 358 (n.) 467 t.; l. 150'4"; b. 15'10; dr. 12'5" s. 14 k.; epl. 25; a. 4 18" tt.; cl. H-1)

H-1, (SS-28), originally *Seawolf* and renamed 17 November 1911, was built by the Union Iron Works of San Francisco; launched 6 May 1913; sponsored by Miss Lesley Jean Makins; and commissioned at Mare Island Navy Yard on 1 December 1913, Lt. Henry M. Jensen in command.

The new submarine was attached to the 2d Torpedo Flotilla, Pacific Fleet, and operated along the West Coast out of the submarine base at San Pedro. On various exercises and patrols she travelled the coast from Los Angeles to lower British Columbia, often in company with *H-2* and sometimes *H-3*.

Sailing from San Pedro on 17 October 1917, she reached New London 22 days later via Acapulco, Balboa, Key West, Charleston and Philadelphia. For the remainder of the war, she was based there and patrolled Long Island Sound, frequently with officer students from the submarine school on board.

H-1 and *H-2* sailed for San Pedro on 6 January 1920, transiting the Panama Canal 20 February via Norfolk, Key West and Havana. On 12 March 1920, as *H-1* made

her way up the coast, the submarine went aground on a tricky shoal off Santa Margarita Island, Calif. Four men, including the commanding officer, Lt. Comdr. James R. Webb, were killed as they tried to reach shore. *Vestal*, a repair ship, pulled *H-1* off the rocks in the morning of 24 March, only to have her sink 45 minutes later in some 50 feet of water. Salvage was abandoned. Her name was struck from the Navy List 12 April 1920, and her hulk sold for salvage scrap in June 1920.

H-2

(SS-29: dp. 358 (n.); l. 150'4"; b. 15'10"; dr. 12'5"; s. 14 k.; epl. 25; a. 4 18" tt.; cl. H-1)

H-2 (SS-29) originally *Nautilus* but renamed 17 November 1911, was launched by the Union Iron Works of San Francisco 4 June 1913; sponsored by Mrs. William Ranney Sands; and commissioned 1 December 1913, Lt. (j.g.) Howard H. J. Benson in command.

Attached to the Pacific Fleet, *H-2* operated along the West Coast, usually in company with *H-1*, on various exercises and patrols out of San Pedro until October 1917 when she sailed for the East Coast. Transferred to the Atlantic Fleet as of 9 November 1917, she cruised in the Caribbean for most of that winter, also conducting special submarine detection tests with aircraft and patrol vessels from Key West. After having new engines installed at Philadelphia in the spring of 1918, she resumed patrols in the Caribbean until the end of the war when she returned to the sub base at New London. From there she operated in Long Island Sound, often with student officers from the submarine school on board.

Heading west again, *H-2* sailed with *H-1* on 6 January 1920, touching at several Caribbean ports before transiting the Panama Canal on 20 February. When *H-1* went aground off Santa Margarita Island on 12 March, *H-2* stood by and sent rescue and search parties for survivors, helping to save all but four of her sister ship's crew. She then continued to San Pedro, arriving 20 March.

Drills and exercises with the Pacific Fleet and the 7th Submarine Division out of San Pedro were interrupted by an extensive Mare Island overhaul in the winter of 1921, after which *H-2* returned to the same schedule. In company with SubDiv 7, she sailed from San Pedro on 25 July 1922, reaching Hampton Roads on 14 September via Acapulco, Corinto, and Coco Solo. *H-2* decommissioned there on 23 October 1922. Her name was struck from the Navy List 18 December 1930. She was sold for scrapping in September 1931.

H-3

(SS-30: dp. 358 (n.); l. 150'4"; b. 15'10"; dr. 12'5"; s. 14 k.; epl. 25; a. 4 18" tt.; cl. H-1)

H-3 (SS-30) originally *Garfish* and renamed 17 November 1911, was built by the Moran Co. of Seattle; launched 3 July 1913; sponsored by Miss Helen MacEwan; and commissioned at Puget Sound on 16 January 1914, Lt. (j.g.) William R. Munroe in command.

After shakedown, *H-3* was attached to the Pacific Fleet and began operations along the coast from lower California to Washington, exercising frequently with *H-1* and *H-2*. While engaged in operations off the northern California coast near Eureka with *Milwaukee* and *Cheyenne*, *H-3* ran aground in heavy fog on the morning of 16 December 1916. The crew were rescued by Coast Guard breeches buoy, but after *Milwaukee* was also stranded trying to pull the sub off the beach, the Navy called in a commercial salvage firm. Their job was especially complicated because *H-3* lay high up on a sandy beach, surrounded by quicksand; at low tide she was 75 feet from the water, but at high tide the ocean reached almost 250 beyond her. After a month of hard work, *H-3* was finally salvaged by being placed on giant log rollers and taken overland to the sea.

USS *H-3* (SS-30), previously USS *Garfish*, built at Seattle 1911 through 1914

Having decommissioned 4 February 1917 while salvage work was still going on, she was relaunched 20 April 1917 at Humboldt Bay. She then returned to San Pedro, where she served as flagship of SubDiv 7, participating in exercises and operations along the coast until 1922. *H-3*, with the entire division, sailed from San Pedro on 25 July 1922 and reached Hampton Roads 14 September.

H-3 decommissioned at Hampton Roads on 23 October 1922. She was struck from the Navy List 18 December 1930 and scrapped on 14 September 1931.

H-4 through H-9

Six of the *H*-class submarines, *H-4* through *H-9*, were originally built by the Electric Boat Co. for the Imperial Russian Government. Their shipment was held up pending the outcome of the Russian Revolution, and the boats were stored in knockdown condition at Vancouver, B.C. All six were purchased by the Navy on 20 May 1918 and assembled at Puget Sound Navy Yard.

H-4

(SS-147; dp. 358 n.; l. 150'4"; b. 15'10"; dr. 12'5"; s. 14 k.; cpl. 25; a. 4 18' tt.; cl. *H-1*)

H-4 (SS-147) was launched 9 October 1918 at Puget Sound Navy Yard, and commissioned there 24 October 1918, Lt. Ralph O. Davis in command.

Stationed at San Pedro, Calif., first with SubDiv 6 and then SubDiv 7, *H-4* participated in various battle and training exercises along the West Coast with her sister *H*-subs. These exercises were interrupted by occasional patrol duty off Santa Catalina Island and periodic overhauls at Mare Island.

In company with the two sub divisions and tender *Beaver*, *H-4* sailed from San Pedro on 25 July 1922 and reached Norfolk on 14 September via Magdalena Bay, Corinto, and Coco Solo. She decommissioned there 25 October 1922. *H-4* was struck from the Navy List 26 February 1931 and sold for scrap 14 September.

H-5

(SS-148; dp. 358 (n.); l. 150'4"; b. 15'10"; dr. 12'5"; s. 14 k.; cpl. 25; a. 4 18' tt.; cl. *H-1*)

H-5 (SS-148) was launched by Puget Sound Navy Yard 24 September 1918; and commissioned there 30 September 1918, Lt. Gordon Hutchins in command.

Operating out of San Pedro with SubDiv 6 and SubDiv 7, *H-5* participated in various training and battle exercises, with periodic overhauls at Mare Island. She departed San Francisco 25 July 1922 in company with both divisions and arrived at Norfolk 14 September. *H-5*

decommissioned at Norfolk on 20 October 1922. Her name was struck from the Navy List 26 February 1931. She was sold for scrapping 28 November 1933.

H-6

(SS-149; dp. 358 (n.); l. 150'4"; b. 15'10"; dr. 12'5"; s. 14 k.; cpl. 25; a. 4 18' tt.; cl. *H-1*)

H-6 (SS-149) was launched 26 August 1918 by Puget Sound Navy Yard; and commissioned there 9 September, Lt. Robert P. Lucker in command.

As part of SubDiv 6 and later 7, *H-6* was based at San Pedro, Calif. From there she operated along the West Coast, participating in various battle and training exercises with her sister submarines. Occasional patrol duty off Santa Catalina Island and overhauls at Mare Island varied this effective training routine.

Departing San Pedro on 25 July 1922 with SubDivs 6 and 7, *H-6* reached Norfolk on 14 September. She decommissioned there 23 October 1922. *H-6* was struck from the Navy List 26 February 1931. She was sold for scrapping 28 November 1933.

H-7

(SS-150; dp. 358 (n.); l. 150'4"; b. 15'10"; dr. 12'5"; s. 14 k.; cpl. 25; a. 4 18' tt.; cl. *H-1*)

H-7 (SS-150) was launched at Puget Sound Navy Yard 17 October 1918 and commissioned there 24 October, Lt. Edmund A. Crenshaw in command.

The submarine, attached to SubDiv 6 and later to SubDiv 7, operated out of San Pedro on various battle and training exercises with the other ships of her division. She also patrolled out of San Pedro with interruptions for overhaul at Mare Island.

H-7 reached Norfolk on 14 September 1922, having sailed from San Pedro on 25 July, and decommissioned there on 23 October 1922. Her name was struck from the Navy List 26 February 1931. She was sold for scrapping 28 November 1933.

H-8

(SS-151; dp. 358 (n.); l. 150'4"; b. 15'10"; dr. 12'5"; s. 14 k.; cpl. 25; a. 4 18' tt.; cl. *H-1*)

H-8 (SS-151) was launched at Puget Sound Navy Yard on 14 November 1918, 3 days after the signing of the Armistice, and commissioned there 18 November 1918, Lt. Comdr. Ralph W. Holt in command.

From there she sailed to San Pedro, where she was attached first to SubDivs 6 and 7. Operating with her sister ships, *H-8* engaged in extensive battle and training exercises out of San Pedro, varying this routine with patrols off Santa Catalina Island.

In company with SubDivs 6 and 7, and tender *Beaver*,

H-8 departed San Pedro on 25 July 1922 and arrived in Norfolk on 14 September. She decommissioned there 17 November 1922. Her name was struck from the Navy List 26 February 1931. She was sold for scrapping 28 November 1933.

H-9

(SS-152: dp. 358 (n.); l. 150'4"; b. 15'10"; dr. 12'5"; s. 14 k.; cpl. 25; a. 4 18" tt.; cl. *H-1*)

H-9, (SS-152) was launched at Puget Sound Navy Yard on 23 November 1918, commissioned there 25 November, Lt. Clarke Withers in command.

Joining SubDiv 6 at San Pedro, and later being transferred to SubDiv 7 there, *H-9* participated in a variety of battle and training exercises along the West Coast. She also patrolled off Santa Catalina Island, and put in at Mare Island for periodic overhauls.

H-9 sailed from San Pedro on 25 July 1922 and arrived in Norfolk 14 September, with SubDivs 6 and 7. The submarine decommissioned at Norfolk on 3 November 1922. Her name was struck from the Navy List 26 February 1931. She was sold for scrapping 28 November 1933.

H. A. Baxter

A former name retained.

(SP-2285: dp. 87; l. 82'2"; b. 19'5"; dr. 9'; s. 12 k.)

H. A. Baxter, a tug, was built in 1889 by John A. Dialogue & Son, Milford, Del.; and acquired by the Navy 15 March 1918 from her owner, Robert Rogers of New York City. The tug was chartered at Norfolk for use as a coal tug, but found to be in need of extensive repairs and returned to her owner 24 April 1918.

Haan, General W. G., see *General W. G. Haan* (AP-158)

Haas

John William Haas was born 14 June 1907 in Sioux City, Iowa. A member of the famed Torpedo Squadron 3, the chief machinist and pilot was lost in action 4 June 1942 during the Battle of Midway. In the face of tremendous antircraft fire and Japanese fighter opposition, Chief Haas joined his squadron in pressing home the attack on enemy forces until it became relatively certain that in order to accomplish his mission he would sacrifice his life. Undeterred by the grave possibilities of such a hazardous offensive, he carried on with extreme disregard for his personal safety until the gallant planes of Torpedo Squadron 3 had diverted Japanese planes and contributed importantly to the victory. For his self-sacrifice and valiant fighting effort, Chief Machinist Haas was posthumously awarded the Navy Cross.

(DE-424: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 20mm., 3 21" tt., 2 dct., 8 dep., 1 dep. (hh.); cl. *John C. Butler*)

Haas (DE-424) was launched 20 March 1944 by the Brown Shipbuilding Co., Houston, Tex.; sponsored by Mrs. Gladys Winifred Haas, widow of the late Chief Machinist Haas; and commissioned 2 August 1944, Lt. Comdr. A. M. White, USNR, in command.

After shakedown in the Caribbean and escort duty along

the East Coast, *Haas* arrived Manus, Admiralty Islands, via the Panama Canal, the Galapagos Islands, and Espiritu Santo 15 January 1945. America's gigantic Pacific war effort had carried her fleet back to the Philippines, and *Haas* sailed to Leyte 27 January to assume escort and patrol duties in the still-contested islands. In addition, the destroyer escort provided shore bombardment and fire support for initial assault landings at Lubang Island 1 March and Romblon and Simara Islands 10-12 March. *Haas* escorted a convoy from Okinawa to Leyte in July and another from Ulithi to Manila in early August, just before news of the Japanese capitulation. After war's end she continued to serve as an escort and dispatch ship in the Pacific, with frequent trips along the China coast. On 5 January 1946 *Haas* streamed her homeward bound pennant and sailed from Hong Kong for San Diego via Guam, Eniwetok, and Pearl Harbor. Reaching her destination 1 February, *Haas* decommissioned there 31 May 1946 and joined the "mothball fleet."

Haas recommissioned at San Diego 19 May 1951 and after shakedown reported to 8th Naval District headquarters at New Orleans 18 September to begin duties as a reserve training ship. Cruising primarily in the Gulf of Mexico and the Caribbean, with occasional visits to Central and South America, *Haas* trained some 900 reservists annually as part of the Navy's never-ending effort to maintain skilled and ready reserve. Entering the Charleston Navy Yard 7 November 1957, *Haas* decommissioned there 24 January 1958 and entered the Atlantic Reserve Fleet where she remained until scrapped in December 1966.

Habersham

A county in Georgia.

(AK-186: dp. 2,382 (lt.); l. 338'6"; b. 50'; dr. 21'; s. 12 k.; cpl. 85; a. 1 3"; cl. *Alamosa*)

Habersham (AK-186), a motor cargo ship, was launched 7 June 1944 by the Walter Butler Shipbuilding, Inc., Superior, Wis., under a Maritime Commission contract; sponsored by Mrs. Carl Gray, Jr.; acquired 26 April 1945; and commissioned 12 May 1945, Comdr. M. A. MacPhee in command.

Following shakedown training off Galveston, the cargo ship sailed 2 June for Gulfport, Miss., to take on cargo and departed 4 days later to join the Pacific Fleet, then pressing ever closer to Japan. *Habersham* arrived Pearl Harbor via the Canal Zone 30 June, unloaded her cargo, and returned to San Francisco with passengers and cargo 12 July. She then loaded cargo and sailed 21 July for Eniwetok Island where she arrived 7 August.

Habersham was at Eniwetok when the surrender of Japan was announced, and departed 9 September to carry cargo for occupation forces in Japan. Arriving Tokyo Bay 17 September, she unloaded cargo and departed for Guam and San Francisco 27 November. She arrived 12 January 1946 and sailed for the East Coast 11 February, arriving Norfolk 6 March. *Habersham* decommissioned at Baltimore 9 April 1946 and was returned to the Maritime Commission. Sold into merchant service, she became *Rosa Thorden* and in 1952 *Pusan* for Korean Shipping Corporation.

Hackberry

A tree of the genus *Celtis*, distinguished by elm-like leaves and small fruit.

(YN-20: dp. 560; l. 163'2"; b. 30'6"; dr. 11'8"; s. 12 k.; cpl. 48; a. 1 3"; cl. *Alce*)

Hackberry (YN-20), originally *Maple* but renamed before launching 28 October 1941 by American Shipbuilding Co., Cleveland, Ohio. She was commissioned 21 December 1942, Lt. C. B. Wegner in command.

Following shakedown and training exercises out of Tompkinsville, R.I., the net tender was assigned to North African waters, reporting 12 April 1943. She operated in

Palermo harbor towing and acting as cable recovery and salvage vessel. During her stay in Palermo *Hackberry* installed boom defenses at Catania, Sicily, and operated briefly in Naples harbor.

As the pincers were applied to the Axis in Europe, *Hackberry* took part in the important landings in southern France. Arriving off the beaches 15 August, the ship helped transport garrison troops from the newly-won Alpha beach to Isle du Levant. *Hackberry* remained in the area as Allied troops pushed forward from the beachhead, coming under fire from German shore batteries 22 August. With the capture of Toulon, the ship returned to her regular duties, clearing away the net and other harbor obstructions. Redesignated (AN-25) 20 January 1944, *Hackberry* operated at Toulon and Marseille until being turned over to the French government under lend-lease 12 November 1944.

Hackberry was returned to U.S. custody from lend-lease 21 March 1949 and was sold the same day to France, where she serves as *Araignee*.

Hackensack

A city in New Jersey.

(YTM-750: dp. 390 (f.); l. 107'; b. 26.6'; dr. 12'; s. 12 k.; cpl. 10; cl. Army LT-2089)

Hackensack (YTM-750), a medium harbor tug was taken over from the Army in 1963. She was built by the Higgins Co., New Orleans, La., in 1953.

Hackensack was assigned to the 10th Naval District and operated in the harbor of San Juan, P.R., until struck from the Navy List 1 March 1967.

Hackett, Francis B., see *Francis B. Hackett*

Hackleback

A freshwater fish of the sturgeon family.

(SS-295: dp. 1,526; l. 311'8"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 66; a. 10 21" tt., 1 5", 1 40mm.; cl. *Balao*)

Hackleback (SS-295) was launched 30 May 1943 by the Cramp Shipbuilding Co., Philadelphia, Pa.; sponsored by Mrs. W. L. Wright; and commissioned 7 November 1944, Lt. Comdr. Frederick E. Janney in command.

After training out of New London, *Hackleback* reported to the Fleet Sonar School at Key West 24 December. Two weeks training there were followed by further training at Balboa, Canal Zone, and *Hackleback* sailed for Pearl Harbor 25 January 1945. The new submarine participated in still more training exercises at Pearl Harbor before departing for her first war patrol 6 March.

Japanese merchant shipping had been decimated by the Pacific submarine fleet, and *Hackleback* was to encounter no suitable targets in any of her patrols. But on this first patrol, she played a key role in the sinking of the last of Japan's super-battleships, the *Yamato*. Patrolling the Bungo Suido area late in the night of 6 April, *Hackleback* made radar contact on a fast group of ships at about 25,000 yards. She sent a steady stream of location reports back to Pearl Harbor, at the same time attempting to close the task group. *Hackleback* three times came to within 13,000 yards of the *Yamato* force, but destroyers forced her out of range before she could get in position to fire torpedoes. *Yamato* was not to escape, however. The following morning, 7 April, planes from Admiral Mitscher's famous TF 58, guided by *Hackleback's* contact location reports, struck the *Yamato* group. In four successive waves, the carrier planes accounted for the destruction of *Yamato*, the light cruiser *Yahagi*, and two destroyers, leaving only six destroyers of the Japanese task force to escape.

During the rest of her first patrol, *Hackleback* made two gun attacks on small ships, but discontinued the engage-

ments when it appeared they were trying to lure her in close to shore. Returning to Midway 26 April, she prepared for a second patrol and on 21 May sailed. This time *Hackleback's* primary mission was lifeguard duty off Saki Shima Gunto as the carriers mercilessly pounded the Japanese home islands. On 22 June she picked up a downed carrier pilot, Lt. Comdr. C. P. Smith. *Hackleback* also engaged in some shore bombardment. After an air strike on Shokoto Sho 7 July, the submarine closed the island and fired 73 rounds of 5 inch shells. No surface contacts were made on this patrol. *Hackleback* returned to Guam 12 July.

Sailing for her third war patrol 14 August, the submarine received an unofficial flash "Tokyo accepts" that same day, and on 16 August headed for Midway. The long Pacific war had ended. *Hackleback* spent 2 weeks at Midway and then sailed for home, reaching San Francisco 11 September. She decommissioned there 20 March 1946 and was placed in reserve at Mare Island. *Hackleback's* classification was changed to AGSS-295 on 6 November 1962. Her name was struck from the Navy list 1 March 1967 and as of September 1967 she is being stored at Mare Island.

Haddo

A pink salmon fish prevalent on the Pacific coast of the United States and Canada.

I

(SS-255: dp. 1526; l. 311'9"; b. 27'3"; dr. 15'; s. 20 k.; cpl. 60; a. 1 3", 10 21" tt.; cl. *Gato*)

The first *Haddo* (SS-255) was launched by the Electric Boat Co. of Groton, Conn., 21 June 1942; sponsored by Mrs. Charles F. Russell; and commissioned 9 October 1942, Lt. Comdr. Wallace L. Lent in command.

After conducting shakedown off New England, *Haddo* departed New London 9 April 1943 to patrol the shipping lanes to Rosneath, Scotland. She arrived 30 April and joined Submarine Squadron 50, which was assigned to patrol off Norway and Iceland and stand ready in case of a breakthrough of the German fleet from Norway. When it became clear after three patrols that targets were scarce in this region, *Haddo* and her sister submarines were sent back to the United States.

Haddo returned to New London 29 July 1943 and steamed via the Panama Canal to Mare Island, Calif. Assigned to the Pacific Fleet, she reached Pearl Harbor 25 November and put to sea 14 December on her fourth war patrol, in Philippine waters. The submarine made few contacts and terminated the patrol at Fremantle, Australia, 4 February 1944.

Sailing from Fremantle 29 February, *Haddo* embarked on her fifth war patrol in waters off Borneo, Java, and Indochina. After a disappointing attack 8 March in which two torpedoes exploded prematurely, she made an attack on a tanker and escort 14 March which produced unconfirmed results. Moving to the Indochina coast, she sank a small craft with gunfire the night of 23 March and damaged freighter *Nichian Maru* 29 March before returning to Fremantle 22 April 1944.

Haddo departed Fremantle 18 May 1944 to conduct her sixth war patrol in the East Indies. After undergoing air attack off Morotai 30 May, she sighted heavy smoke and proceeded to investigate. The smoke was a lure that concealed a Japanese patrol boat. After evading this one, *Haddo* encountered six more of the smoking lures. *Haddo* sank two small craft 11 June and scouted the Tawi Tawi anchorage on the 14th of June. Shortly thereafter she was detected by patrol airplane and pursued for almost 10 days. Her sixth war patrol was terminated 16 July at Fremantle.

For her seventh war patrol *Haddo* joined a coordinated attack group with five other submarines to cruise Philippine waters. Japanese convoys ventured into the Palawan area with strong air cover during the day, but usually anchored with escort protection for the night.

Learning from *Harder* that a convoy had been attacked by *Ray* 4 days before and trailed to Paluan Bay, the submarines closed for the attack. As the convoy headed out to sea before daylight 21 August, *Ray* sank one transport while the escort vessels pursued *Harder*. At this point *Haddo* entered the fray, launched six torpedoes at three targets, and dived to avoid air attack. Over one hundred depth charges churned the sea. But *Haddo* had already sunk cargo ships *Kinryu Maru* and *Norfolk Maru*.

Next day *Haddo* followed *Harder* in for an attack on a small convoy with escorts, and *Haddo* succeeded in sending escort ship *Sado* to the bottom. Following a lone destroyer and awaiting her opportunity, *Haddo* was suddenly turned upon by the Japanese ship. She launched a four-torpedo spread "down the throat" of the destroyer which veered off and headed for Manila. Cruising off Cape Bolinao 23 August, the submarine was about to torpedo a tanker close to shore when she detected a pursuing destroyer. With four torpedoes she ripped off the ship's bow. *Haddo* then maneuvered to finish off her antagonist, but her last torpedo missed. Despite the efforts of two Japanese trawlers and another destroyer, *Akakaze* soon sank, giving *Haddo* another kill.

Diverting to New Guinea to refuel and rearm, *Haddo* continued her seventh war patrol. She sank a sampan 8 September and 21 September found a convoy and maneuvered into position ahead of it. While turning to avoid a destroyer, *Haddo* lost depth control, and was not able to regain it in time to effectively attack the cargo ships. She subsequently headed for Subic Bay, and lifeguard duty, but on the way detected a hospital ship and survey ship in company. Disregarding the former, she sent the survey ship, *Katsuriki*, to the bottom.

After serving on lifeguard station and rescuing a Navy pilot from the sea 22 September, *Haddo* returned to Fremantle 3 October 1944. For this outstanding patrol the submarine received the Navy Unit Commendation.

Haddo returned to the waters off Manila for her eighth war patrol. Departing Fremantle 20 October she sank oiler *Hishi Maru No. 2* on 9 November. Serving as lifeguard boat for aircraft, she sank a small ship 6 December 1944 before terminating her eighth war patrol at Pearl Harbor 27 December. From there she was sent to Mare Island shipyard for much-needed repairs, arriving 5 January 1945.

Haddo departed on her ninth war patrol 16 May 1945. Cruising the East China and Yellow Seas, she attacked a convoy emerging from the fog 1 July and quickly sank a small coastal defense vessel and cargo ship *Taiun Maru No. 1*. Clearing the area, she heard automatic gunfire, and soon saw a frigate bearing down hard upon her. *Haddo's* skipper decided not to dive and instead turned on a parallel but opposite course, and the frigate shot by with her guns blazing. *Haddo* suffered little damage, and was able to avoid a companion escort and finally reach deep water. That evening she sank two sailing junks and then set course for a new station off Port Arthur. She sank a trawler 3 July, survived a furious depth charge attack by patrol vessels, and proceeded to Guam arriving 16 July 1945.

Haddo departed on her 10th and last war patrol 10 August 1945 but it was soon terminated by the surrender of Japan. She then headed for Tokyo Bay, where she witnessed the signing of the surrender on board *Missouri* and departed for home. Touching at Hawaii, *Haddo* arrived at Panama 28 September and New London 6 October 1945. Decommissioning 16 February 1946, *Haddo* was kept in reserve until her name was stricken from the Navy List 1 August 1958. She was sold for scrap 30 April 1959 to Luria Brothers & Co., Philadelphia, Pa.

In addition to the Navy Unit Commendation, *Haddo* received six battle stars for her World War II service. Her fifth, seventh, eighth, and ninth war patrols were designated successful.

II

(SSN-604: dp. 3,700 (surf.), 4,300 (subm.); l. 278'6"; b. 31'8"; s. 20 k.; cpl. 100; a. 4 21" tt.; cl. *Thresher*)

The second *Haddo* was launched by New York Shipbuilding Corp., Camden, N.J., 18 August 1962; sponsored by Mrs. Henry M. Jackson, wife of the Senator from Washington; commissioned 16 December 1964, Comdr. John G. Williams in command.

After shakedown out of New London, Conn., in January 1965, *Haddo* arrived at her home port, Charleston, S.C., 8 February and joined Sub Ron 4. She operated off the Atlantic coast and in the Caribbean until departing Charleston 7 July for the Mediterranean. She participated in numerous exercises with ships of the 6th Fleet and NATO countries before returning home 7 November. *Haddo* has continued this pattern of service, alternating operations out of home port in the Atlantic with 6th Fleet deployments, through 1967.

Haddock

A small edible Atlantic fish, related to the cod.

Haddock (SS-32) was renamed *K-1* (q.v.) 17 November 1911 prior to her launching.

I

(SS-231: dp. 1,526; l. 311'8"; b. 27'4"; dr. 15'3"; s. 20 k.; cpl. 60; a. 1 3", 10 21" tt.; cl. *Gato*)

The first *Haddock* (SS-231) was launched by Navy Yard, Portsmouth, N.H., 20 October 1941; sponsored by Mrs. William H. Allen; and commissioned 14 March 1942, Lt. Cmdr. Arthur H. Taylor in command.

After shakedown and training cruises off New England, *Haddock* sailed for the Pacific 19 June 1942 and arrived Pearl Harbor 16 July. She departed on her first war patrol 28 July, the first submarine to do so with the new SJ-type submarine surface radar. This equipment added greatly to her power in seeking out and destroying enemy ships in darkness or reduced visibility. Penetrating into the Bonin Island-East China Sea area, *Haddock* attacked a freighter on the surface 12 August, damaged her, and next day sank an unidentified transport of about 4,000 tons. In the Formosa Straits 26 August she missed with four stern shots at *Teinshum Maru* but sent the target to the bottom by swinging around hard for a shot from the bow tubes. *Haddock* patrolled off Okinawa before returning to Midway 19 September 1942.

Haddock's second war patrol, commencing 11 October from Midway, was carried out in the Yellow Sea. After two attacks without hits, the submarine torpedoed *Tekkai Maru* amidships 3 November, breaking her in two. She was forced to break off another attack 6 November because of destroyers and search aircraft, but during the night of 11 November blew off the stern of cargo ship *Venice Maru* east of the island of Honshu. *Haddock* damaged another ship 13 November, only to be prevented from finishing her off by escort craft, and expended her last torpedo on an empty tanker 16 November. After a brief gunfire duel with her victim, the submarine headed for Pearl Harbor, arriving 4 December.

On her third war patrol, *Haddock* operated south of Japan, departing 28 December from Pearl Harbor. She was attacked by two destroyers raining depth charges, and when she finally surfaced to clear the area, *Haddock* found herself surrounded by Japanese patrol craft. The submarine sped out of the trap just in time to avoid destruction.

A few days later, 17 January, she sank an unidentified freighter of 4,000 tons, and 19 January *Haddock* detected six cargo vessels steaming in double column. Gaining attack position on the last ship, she scored two hits and sent her to the bottom. Aerial attack and depth charges kept her from bagging the other members of the convoy

and bad weather forced *Haddock* to return to Midway 17 February 1943.

Haddock departed Midway 11 March for her fourth war patrol, and saw her first action 3 April off Palau, when she encountered a transport protected by a corvette. Launching two "fish" at the corvette, which apparently ran under without exploding, *Haddock* then turned to the transport and succeeded in sinking her with a spread of torpedoes. Following torpedo tracks, the persistent corvette dropped 24 depth charges, many directly over *Haddock*, that caused some damage to her coming tower and radar. After spending some time patrolling off Saipan, she returned to Pearl Harbor 19 April 1943.

Departing Pearl Harbor again 30 June *Haddock* set course for the Carolines on her fifth war patrol. Detecting a group of four escorted transports north of Palau 21 July, she maneuvered into position and sank *Saipan Maru*. The depth charge attacks of the accompanying ships were ineffective. That same day she came upon two unescorted tankers. Her first attack failed to sink the two ships, but she followed them and made two more attacks before finally breaking off the action for lack of torpedoes. *Haddock* arrived at Midway 6 August and at Pearl Harbor 10 August 1943.

Haddock's sixth war patrol was conducted in waters off Truk, the vital Japanese base in the Carolines. Departing Pearl Harbor 2 September, she torpedoed *Samsai Maru* on the 15th but failed to sink her and the victim turned to ram the submarine. *Haddock* damaged seaplane tender *Notoro* 20 September and then spent a harrowing day eluding the attacks of Japanese escort vessels alerted by the explosions. She returned to Midway 28 September with all torpedoes expended.

The veteran submarine departed on her seventh war patrol 20 October 1943 and headed again for the waters off Truk. Late 1 November *Haddock* damaged two transports, barely surviving the attacks of a hunter-killer group a few hours later. She made one additional attack 2 November, heavily damaging *Hoyo Maru*, before returning to Pearl Harbor 15 November 1943.

For her eighth war patrol *Haddock* joined a coordinated attack group with *Tullibee* and *Halibut*. She departed Pearl Harbor 14 December and rendezvoused 17 December. Encountering a group of warships 19 January, *Haddock* attacked escort carrier *Unyo* and damaged her severely before being driven off by screening vessels. The submarine returned to Pearl Harbor 5 February 1944.

Haddock departed for her ninth war patrol 10 March. Under the Navy's relentless attack, spearheaded by the submarine, Japan's sea lifelines had shrunk to a trickle and targets were scarce; but she succeeded in sinking a small escort vessel 24 April, before returning to Pearl Harbor 10 May 1944. Her 10th war patrol was eventful as the Pacific war drew close to its climax. With Commander Roach in *Haddock* commanding, she formed an attack group with *Halibut* and *Tuna*, departing Pearl Harbor 8 October. Moving to support the invasion of the Philippines, the submarines were present during the battle off Cape Engano, part of the epochal Battle for Leyte Gulf, 25 October and unsuccessfully pursued some of the retiring Japanese units. Bothered by a malfunctioning periscope, *Haddock* scored no hits on the rest of her patrol and returned to Pearl Harbor 10 December.

Fitted out with extra deck guns for her 11th war patrol, *Haddock* sailed, in company with submarines *Sennett* and *Lagarto* for the seas east of Japan. The boats made a diversionary sweep designed to pull early warning craft away from the intended track of the carrier group en route for air strikes against Tokyo. Gaining their objective with complete success, the submarines attacked the picket boats with gunfire, allowed them to send contact reports, and then sunk several, diverting Japanese efforts away from the undetected carrier group. *Haddock* returned to Guam 14 March.

Haddock spent her 12th and 13th war patrols on life-guard station near Tokyo, standing by to rescue downed airmen after raids on Japanese cities. This duty occupied her from April until her return to Pearl Harbor

22 August 1945. The hard fought victory, to which she had contributed so much, was won. So *Haddock* departed for the United States 7 September and after transiting the Panama Canal and visiting various ports on the East Coast, arrived at New London, Conn., 29 March 1946, nearly 4 years after she had sailed from the North Atlantic to victory. She was placed in reserve in commission 20 April and decommissioned 12 February 1947. In August 1948 *Haddock* was assigned duty as a reserve training ship for 6th Naval District, and served in that capacity until being again placed out of service at New London May 1952. She was again assigned to reserve training, this time at Portsmouth, N.H., June 1956, and finally was struck from the Navy List and sold for scrap to Jacob Checkoway 23 August 1960.

Haddock received 11 battle stars for her service in World War II. All of her war patrols except the 12th were designated successful and she received the Presidential Unit Citation for her outstanding performance on the second, fifth, sixth, and seventh war patrols.

Haggard

Captain Haggard commanded the American armed ship *Louisa*, which successfully engaged French and Spanish privateers 20 August 1800 off Tarifa, during the Quasi-War with France. *Louisa* fought off boarders and escaped, although damaged severely in the rigging. Captain Haggard was wounded in the engagement.

(DD-555: dp. 2,050; l. 376'6"; b. 39'8"; dr. 13'; s. 35 k.; cpl. 273; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dp., 2 dct.; cl. *Fletcher*)

Haggard (DD-555) was launched by Seattle-Tacoma Shipbuilding Co., Seattle, Wash., 9 February 1943; sponsored by Mrs. E. B. McKinney; and commissioned 31 August 1943, Comdr. D. A. Harris in command.

Haggard departed for shakedown training off California 29 September and after completing it departed Seattle 24 November for Pearl Harbor. The ship arrived 30 November 1943 and spent the next 2 months in tactical exercises with other destroyers in Hawaiian waters. Her first combat operation was to be the forthcoming invasion of the Marshall Islands, next step on the island road to Japan.

The ship sailed 22 January 1944 for the Marshalls. She covered the unopposed landings on Majuro 31 January and then sailed to Kwajalein Atoll. Taking up firing position inside the lagoon 2 February, she provided gunfire support for the advancing Marines until the island was secured 3 days later. Then *Haggard* patrolled and escorted transports in the Kwajalein area until sailing for Engebi 17-19 February. There the destroyer again provided close fire support with her 5-inch guns, helping to secure the atoll. With the Marshalls in American hands, *Haggard* arrived 7 March at Espiritu Santo, New Hebrides.

For the next months, *Haggard* operated with 3d Fleet in the New Guinea-Solomons area. Her duties included reconnaissance patrols, convoying, and screening escort carriers. She also worked occasionally with mincraft and screened a minelaying operation 9 May in the Solomons,

passing within 800 yards of an enemy-held beach on Buka Passage. During the night of 16-17 May the destroyer was patrolling with *Franks* and *Johnston* when she picked up an underwater sound contact. With quickness and accuracy the three ships delivered depth charge attacks and were credited with the sinking of Japanese submarine I-176.

Haggard joined 5th Fleet at Eniwetok 21 May to prepare for the Marianas operation, as America's amphibious might pressed across the Pacific. Departing Eniwetok 8 July, *Haggard* arrived Guam with battleships *Pennsylvania* and *New Mexico* and other fleet units 17 July and began a devastating bombardment of the beach fortifications. With the landing of Marines 21 July, the destroyer turned to close fire support, lending her accurate gunfire to the battle ashore.

Next on the timetable of the Pacific island campaign was the Palau group, needed to provide an air base for further advances. *Haggard* was withdrawn from Guam to Espiritu Santo 24 August 1944 and later joined the Western Escort Carrier Group off the Solomons 4 September. During the invasion of Peleliu 15 September *Haggard* screened carrier groups as they provided bombardment and close fire support for Marines ashore. Aircraft from her group also bombarded Ulithi before the ships returned to Manus' Seeadler Harbor 1 October.

Haggard's next operation was the long-awaited invasion of the Philippines. She was assigned to an escort carrier group off Samar in support of the invasion and the fleet surface actions 23-25 October. A part of Rear Admiral Stump's "Taffy 2" in the Battle off Samar, *Haggard* and her group were surprised on the morning of 25 October by heavy units to the northward under Admiral Kurita heading toward the invasion beaches on Leyte Gulf. As the carriers of "Taffy 3" retired at top speed and the gallant destroyers, including *Hool*, *Heermann*, and *Johnston*, attacked the Japanese at close range, planes from both carrier groups attacked repeatedly and effectively in the hope of diverting the overwhelming Japanese force and allowing the American light units to escape. *Haggard* took position astern of her carriers to protect them, and took many near misses from the big guns of the Japanese fleet. Although two escort carriers and three destroyers were sunk, quick thinking and the great courage of the attacks saved the smaller American group and inflicted damage on its attackers. Admiral Kurita decided not to steam into Leyte Gulf and returned to the northward.

Haggard remained with the escort carrier groups through November during air operations in support of the Philippines campaign. After a brief stay at Ulithi 25 November-10 December, the destroyer joined Task Force 38 in support of the Luzon invasion. Then, 10-20 January 1945, Halsey's 3d Fleet made a striking incursion into the South China Sea. With *Haggard* and other destroyers screening, the carrier groups struck Luzon, Formosa, Indochina, and the Chinese mainland destroying shipping and airfields in a memorable demonstration of mobile sea power.

The destroyer returned to Ulithi 26 January 1945, but soon sailed with Task Group 58.4 for strikes against Japan itself. Departing 9 February, the group, including carriers *Randolph* and *Yorktown*, hit Tokyo 16-17 February, just before the important landings on Iowa Jima. Turning then to that stoutly defended island, *Haggard's* carrier group lent air support to the assault until returning to Ulithi 4 March 1945.

With the Pacific campaign then reaching its climax, *Haggard* sortied again with Vice Admiral Mitscher's 5th Fleet carriers for attacks on Japan. During strikes on Honshu 18-19 March, Japanese suicide planes struck back at the task force. *Haggard's* gunners shot down several kamikazes, as carriers *Franklin* and *Enterprise* were damaged. After fueling at sea, the fast carrier group, moved toward Okinawa 22 March, with *Haggard* acting as picket destroyer ahead of the formation. Shortly before midnight she detected a surfaced submarine with radar, and after it dived attacked with depth charges. Ten minutes later the submarine surfaced on *Haggard's* port

beam. Commander Soballe brought his ship into a hard left turn toward his adversary. With full throttle and guns blazing, *Haggard* rammed the submarine I-371 amidships, sinking her in three minutes. After this daring duel, *Haggard's* crew made emergency repairs to her damaged bow and took her back to Ulithi 25 March.

Her repairs completed, *Haggard* sailed from Ulithi 21 April with battleship *Iowa* to support the Okinawa operation. Again occupied with screening carriers in the area, *Haggard* and other fleet units were constantly threatened by suicide planes as the Japanese tried desperately to stop the invasion. While proceeding to picket station 29 April the ship was attacked by a kamikaze making a shallow dive to starboard. Though nearly blown apart by the fury of the destroyer's guns, the aircraft crashed close aboard and penetrated her hull near the waterline. Soon afterward, her bomb exploded in *Haggard's* engine room. As water gushed through the gaping hole in the destroyer's side and she began to settle, another suicide plane attacked, but was splashed by anti-aircraft fire. Through fast and skillful damage control the flooding was stopped and *Haggard* was kept afloat. Wounded were taken by cruiser *San Diego* and destroyer *Walker* arrived to tow the stricken ship to Kerama Retto, near Okinawa. The ship arrived 1 May 1945.

Hampered by lack of materials and almost constant air alerts, *Haggard's* crew succeeded in repairing her so that she could get underway. She departed Kerama Retto 18 June 1945 and arrived Pearl Harbor via Saipan and Guam 12 July. From there she steamed to San Diego and the Canal Zone, arriving at Norfolk 5 August 1945. Decommissioned 1 November 1945, *Haggard* was scrapped because of war damage.

Haggard received three battle stars for World War II service.

Hague

A city in South Holland, The Hague ('s Gravenhage) was the center of European diplomacy during the latter part of the 17th and first half of the 18th century.

The Continental frigate *Deane* (q.v.) was renamed *Hague* in September 1782.

Haida, see *Argus* (PY-14)

Haida, see *Mentor* (PYc-37)

Haigler

Principal chief of the Catauba tribe.

(YTB-327: dp. 237; l. 100'; b. 25'; dr. 9'7"; s. 16 k.; T. V2-ME-A1)

Haigler (YTB-327) was built by Brunswick Marine Construction Corp., Brunswick, Ga., in 1942 as *Port Wentworth*, under Maritime Commission contract. Delivered to the Navy at Brunswick 14 November 1942, she was converted to Navy use at Savannah Machine & Foundry Co., Savannah, Ga., and placed in service 13 December 1942, classified as YT-327.

Assigned to the 1st Naval District, *Haigler* served as a harbor tug at Boston, Mass., and was redesignated YTB-327, harbor tug, big, 15 May 1944. She was transferred to the 15th Naval District for duty at Balboa, Canal Zone, 9 June 1945, but was brought back to Boston soon after the end of the war in the Pacific. *Haigler* was subsequently transferred to the Panama Canal and struck from the Navy List simultaneously 11 February 1947.

Hailey

Captain Joshua Hailey was placed in command of the privateer *True Blood Yankee* in early 1813. The priva-

teer, built in France by Rhode Island men, sailed from Brest, France, 1 March 1813 to prey on commerce in the Irish Channel. On one occasion Captain Hailey seized an island near the enemy mainland and held it for 6 days while making repairs. In a 37-day cruise he took 270 prisoners and captured valuable cargoes. Sailing from France on his second cruise, Captain Hailey made a rapid circuit of Ireland and Scotland, landing several times and holding small coastal towns for ransom. During one fight he burned seven vessels in an Irish port. In May he ran into Dublin Harbor to sink a schooner that had eluded him on the previous day. Captain Hailey sailed again 21 September for his third cruise, setting his course for the English Channel. He captured and manned so many prizes that when she was finally captured the *Truc Blood Yankee* had only 32 men left of her original crew of 200. During her three cruises the ship had captured six ships and 21 smaller vessels.

(DD-556: dp. 2,050; l. 376'5"; b. 39'7"; dr. 17'9"; s. 35 k.; cpl. 273; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 2 dct., 6 dcp.; cl. *Fletcher*)

Hailey (DD-556) was launched 9 March 1943 by Seattle-Tacoma Shipbuilding Corp., Seattle, Wash.; sponsored by Mrs. Claude S. Gillette, wife of Rear Admiral Gillette; and commissioned 30 September 1943, Comdr. Parke H. Brady in command.

After shakedown out of San Diego, *Hailey* departed Seattle 13 December 1943 to join the Pacific Fleet at Pearl Harbor. She sortied from Pearl Harbor 19 January 1944 screening a unit of Admiral R. K. Turner's Southern Attack Force for the assault and occupation of the Marshall Islands. Arriving off the southern tip of Kwajalein Atoll, *Hailey* joined the Southern Transport Screen and later stood offshore and pounded the enemy with her 5-inch guns. She sailed from Kwajalein 15 February with the Eniwetok Expeditionary Group and arrived off Eniwetok next day to screen the heavy ships; then joined Admiral Oldendorf's Northern Support Group in battering strong enemy emplacements before retiring to Majuro Atoll screening *Manila Bay*.

After patrolling the Mussau-Emirau area, *Hailey* spent most of April and May on antisubmarine patrol, intercepting barge traffic and providing daily fire support for Army operations in the New Guinea area. Destroyer Division 94, consisting of *Haggard*, *Franks*, *Hailey*, and *Johnston* was moving northwesterly up from the Solomons 16 May. About 2½ hours before midnight they were steaming in scouting line some 125 miles east by north of Green Island. *Haggard* made a sonar contact on her starboard bow at a range of 2,800 yards. It was 1600-ton I-176. Five separate attacks were made and between the last two a heavy underwater ripple explosion was heard. The destroyers continued their search until the following evening without regaining contact—but they recovered souvenirs of Japanese origin from a diesel oil slick that extended over 7 miles of ocean.

During the first part of June *Hailey* took up screening and patrol duties east of Saipan in support of the Marianas operations. She sortied from Eniwetok 1 July with Admiral Weyler's Battleship Division 3 for the pre-invasion bombardment and softening up of Guam, then joined Admiral Conolly's Southern Attack Force for the capture of Guam (21 July–10 August 1944) retiring to Eniwetok 9 August. The remainder of August and September *Hailey* screened a group of escort carriers furnishing air support for the seizure and occupation of Peleliu, Anguar, and Ngesebu Islands in the Palaus.

Hailey next sortied from Seeadler Harbor, Manus Island, 12 October with Admiral F. B. Stump's "Taffy 2," the center formation of the three escort carrier groups off the entrance to Leyte Gulf. While Admiral Oldendorf was crushing Admiral Nishimura's Southern Force in Surigao Strait 24–25 October, Admiral Kurita's Center Force arrived off Samar undetected in the early hours of 25 October with the aim of destroying the heavy concentration of amphibious ships. In the face of overwhelming odds

against a much superior force Admiral Sprague's three "Taffies" gallantly drove off Kurita's forces and defeated his mission—thus stopping the most powerful surface fleet Japan had sent to sea since the Battle of Midway.

The experienced destroyer next joined Admiral Halsey's Fast Carrier Task Force, as a unit of Rear Admiral Bogan's Task Group launching strikes on Formosa, before joining Captain Acuff's fueling group for the 3d Fleet. In February 1945 *Hailey* joined Admiral Marc A. Mitscher's Fast Carrier Task Force 58 and until the last of June participated in bombardments and strikes, inflicting much damage to the enemy on Okinawa and the Japanese home islands where "the fleet had come to stay."

Returning to the States in July, *Hailey* decommissioned at San Diego 27 January 1946 and joined the Reserve Fleet.

Hailey recommissioned at San Diego 27 April 1951, Lt. Comdr. Joseph E. Reedy in command. After training in the San Diego area she transited the Panama Canal and joined units of the 6th Fleet at Newport for duty. *Hailey* departed Newport 6 September 1952 and sailed via the Canal Zone to spend the next 4 months in Korean waters. Joining Fast Carrier Task Force 77, she took part in blockading operations and provided close fire support for our ground troops. Departing Sasebo 5 February 1953, *Hailey* returned to the East Coast once more to join the 6th Fleet.

Between 8 September 1954 and 14 September 1959 *Hailey* made four deployments with the 6th Fleet to the Mediterranean. When not deployed in the Mediterranean, she served as plane guard for carrier *Monterey*, training aviation cadets at Pensacola. In addition, she was continuously engaged in antisubmarine training and destroyer tactics, becoming increasingly proficient as part of a fleet vital in preserving American freedom. *Hailey* decommissioned 3 November 1960 at Portsmouth, Va., and joined the Reserve Fleet. *Hailey* was loaned to the government of Brazil 20 July 1961, and serves as *Pernambuco* (D-30).

Hailey received six stars for World War II service and two stars for Korean service.

Haines

Richard Alexander Haines was born in Haines Falls, N.Y., 28 April 1903. He attended Tennessee Military Institute 1921–1923, attended the Naval Academy for a time, and served 3 years in the Coast Guard 1928–1931. Commissioned Lieutenant in the Naval Reserve 23 July 1941, Haines served in *Washington*, after which he was assigned to *New Orleans*. When *New Orleans* suffered a devastating torpedo hit in the Battle of Tassafaronga, 30 November 1942, Lieutenant Haines remained at his station to assist in controlling the damage until overcome by asphyxiating gas generated by the explosion. In the true tradition of the Navy he had given his life to save his shipmates; he was posthumously awarded the Navy Cross for his heroism.

(DE-792: dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 5", 3 21" tt.; cl. *Buckley*)

Haines (DE-792), a destroyer escort, was launched by Consolidated Steel Shipbuilding Corp., Orange, Tex., 26 August 1943; sponsored by Mrs. Mary V. Haines, wife of the namesake; and commissioned 27 December 1943, Lt. Comdr. Elmer C. Powell in command.

Haines conducted shakedown training off Bermuda, and after final acceptance in February 1944 performed various duties until April. These included escorting a Dutch submarine to the United States, from the Netherlands, sailing with a troop convoy to Panama and back, and serving as a training ship for new destroyer escort crews at Norfolk, Virginia. Early in April *Haines* assumed duty as target towing ship at Quonset Point, R.I., where she helped ready young pilots for duty with American squadrons overseas.

Overseas duty was not long in coming for *Haines*. She was soon assigned to a Mediterranean convoy, leaving from New York and arriving at Casablanca 7 June 1944.

Returning to New York, *Haines* again sailed for the Med, this time with a carrier task group, 30 June 1944. The group paused at Malta before proceeding to Alexandria, Egypt, to guard against Axis attack on that port.

Detached from the task group, *Haines* next took an active part in the vast armada that invaded southern France. Departing Naples 13 August, she escorted troop transports to the assault area, and later acted as a screening ship for the gunfire support group offshore. *Haines* continued her escort duties into September as the Allied advance gained momentum, acting as escort to an LST group ferrying supplies from Corsica to France.

Haines completed her Mediterranean service 1 November 1944 and sailed for the United States, via Oran. She arrived at New York 11 December and immediately entered Brooklyn Navy Yard for conversion into a high speed transport. Completed 1 March 1945, *Haines* was redesignated APD-84. She then served for several months at Norfolk and in Chesapeake Bay as a training ship for fast transport and destroyer escort crews.

Receiving orders to return to combat duty, *Haines* sailed from Norfolk for the Panama Canal 8 August 1945. She received word of the war's end while at Cristobal, Canal Zone, proceeded to San Diego, Calif., and continued to Pearl Harbor in early September. *Haines* was then designated to transport units of the Strategic Bombing Survey, and after extensive preparations departed Guam for Japan 2 October 1945. For the next 2 months the ship stopped at various Japanese ports while technicians and analysts from the survey gathered data on the effectiveness of the aerial bombardments. *Haines* was detached from this duty at Guam and departed that island 6 December 1945 filled with returning Marines. She arrived San Diego 24 December 1945.

Scheduled for deactivation, *Haines* sailed for the East Coast via the Panama Canal, arriving Boston 12 January 1946. She subsequently sailed to Green Cove Springs, Fla., where she decommissioned 29 April 1946 and went into reserve. *Haines* was struck from the Navy List 1 June 1960 and sold for scrap to North American Smelting Co., Wilmington, Del., 19 May 1961.

Haines was awarded one battle star for service in World War II.

Haiti Victory

A former name retained.

(T-AK-238: dp. 4,512; l. 455'; b. 62'; dr. 29';
T. VC2-S-AP3)

Haiti Victory (T-AK 238) was laid down under Maritime Commission contract by Permanent Metals Corp., Richmond, Calif., 24 April 1944; launched 20 July; sponsored by Mrs. Lucius Booner; and delivered to WSA 18 September.

During World War II she operated as a merchantman and was chartered to Waterman Steamship Co.

Acquired by the Navy 1 March 1950, *Haiti Victory* was assigned to MSTs, for cargo operations in the Atlantic. From 1950 to 1957, sailing from New York, she made cargo runs to Northern Europe, the Mediterranean, and the Caribbean.

On 15 June 1957, *Haiti Victory* sailed on her first MSTs cruise to the Pacific. Steaming via the West Coast, the veteran cargo ship arrived Pusan, Korea, 1 August. Following several Far East cruises, she resumed operations in the Atlantic in July 1958. Departing New York 11 July she steamed for the Eastern Mediterranean to support United States peacekeeping efforts in Lebanon. Units of the 6th Fleet had landed Marines at request of Lebanese President Chamoun who wished to prevent a coup against his regime by communist oriented insurgents.

While operating in the Mideast, she twice steamed through the Suez Canal, for cargo runs to Karachi, Pakistan. Returning to New York 3 January 1959, *Haiti Victory* made another Mediterranean cruise prior to assignment in the Pacific. Arriving San Francisco 4 April she operated off the West Coast until sailing for Hawaii 3

months later. Arriving Pearl Harbor 3 July, she underwent conversion and training for a role in America's young space program.

Haiti Victory found a place in history, when she became the first ship to recover a space vehicle from orbit. On 11 August 1960, her helicopter retrieved a 300-pound capsule that was launched into orbit the previous day by a Thor-Agena rocket.

Haiti Victory was renamed *Longview* (g.v.) and reclassified T-AGM-3 on 27 November 1960. She continued operations in the Pacific Missile Range supporting the United States space program. At present *Longview* performs a variety of scientific duties for the Air Force Western Test Range.

Hake

A North American game fish.

(SS-256: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3";
s. 20 k.; epl. 60; a. 1 5", 10 21" tt.; cl. *Gato*)

Hake (SS-256) was launched by the Electric Boat Co., Groton, Conn., 17 July 1942; sponsored by Mrs. F. J. Fletcher, wife of Rear Admiral Fletcher; and commissioned 30 October 1942, Lt. Comdr. J. C. Broach in command.

Hake departed for shakedown off New London soon after commissioning and after bringing crew and equipment up to fighting efficiency began her first war patrol from New London 8 April 1943. Her mission on this patrol was to search out and destroy German submarines in the North Atlantic, but no contacts were gained and she arrived Helenburgh, Scotland, to terminate the patrol 29 April. She departed for her second patrol, off the Azores and again on antisubmarine patrol, 27 May 1943 and after encountering few submarines returned to New London 17 July.

Newly assigned to the Pacific, *Hake* departed New London 25 August 1943 for San Diego, via the Panama Canal. After a training period off the California coast, she sailed for the western Pacific 6 December. *Hake* armed at Pearl Harbor and departed for her third war patrol 27 December 1943. She sighted a transport enroute to Japan 11 January 1944 and after a day-long chase to gain position sank her the next day. The submarine then continued to her cruising grounds off the Philippine Islands, patrolling off Luzon and later moving south to Mindanao. The night of 26 January she attacked a tanker, damaged her, and in turn suffered considerable damage from depth charge attacks before making her escape. *Hake* next encountered three ships with two escorts 1 February. With the three targets in a line of bearing after a perfect approach, the submarine launched a spread of six torpedoes, sinking two of the three, *Tacoma Maru*, and *Nanka Maru*. The attack achieved complete surprise and *Hake* was not attacked by the screening vessels. She then departed for Fremantle, Australia, terminating the patrol there 20 February 1944.

Hake's fourth war patrol was spent in the South China Sea near Singapore, following departure from Fremantle 18 March 1944. She encountered her first target 27 March, and it was a submariner's dream—an unescorted tanker. Two torpedoes sent the ship, *Yamamizu Maru*, to the bottom off southwest Borneo. After an attack the night of 1 April in which *Hake* damaged several ships she battled escorts and searched for transports until 30 April, when she arrived Fremantle. For her fifth war patrol, commencing 23 May, *Hake* was assigned the area southwest of Mindanao. Her duty was to attack shipping and to act as a picket to alert American forces to the approach of the Japanese fleet, which was expected to sortie from Tawi Tawi to the Marianas. Sighting destroyer *Kazegumo* 8 June, she closed for the attack and succeeded in sinking her adversary, but fierce attacks prevented her from sinking any of the accompanying destroyers. *Hake* also succeeded in sinking two transports during this patrol. Cargo ship *Kinshu Maru* was sunk 17 June after four hits, and a heavily laden troop transport was sunk 3 days

later at the entrance to Davao Gulf. She returned to Fremantle 11 July 1944.

Hake returned to her patrol area off the Philippines, departing 5 August. During this, her sixth war patrol, she attacked another destroyer, damaging it, but made few additional contacts because of extremely heavy air and surface patrolling by Japanese forces. She arrived at Fremantle Harbor 24 September 1944.

Departing 20 October for her seventh war patrol, *Hake* encountered few contacts in her patrol area. Operating with *Hardhead* and the ill-fated *Grouler*, which was lost on the patrol, *Hake* spent a harrowing 16 hours 7-8 November, counting nearly 150 depth charges and sustaining considerable damage. She was subsequently sent on a special mission off Panay Island, where she rendezvoused with Filipino guerrillas to bring on board 29 U.S. aviators shot down in recent air attacks. Her valuable cargo safe, *Hake* returned to Australia, arriving Fremantle 16 December.

Hake departed Fremantle for her eighth war patrol 12 January 1945. After searching the South China Sea (now almost denuded of targets) for almost a month, she headed for San Francisco, arriving 13 March. After overhaul she departed San Francisco some 2 months later and began her ninth war patrol in the Pacific 20 July 1945. *Hake* acted as lifeguard ship for the air strikes against Japan, and after the surrender had the distinction of being 1 of 12 submarines to witness the historic ceremonies on board *Missouri* in Tokyo Bay. Following the signing, *Hake* started on the long trek back to New London, via the Panama Canal. She decommissioned at New London 13 July 1946, entered the reserve fleet, and was taken out of reserve 15 October 1956 to serve as a Reserve Training Ship for 4th Naval District at Philadelphia, Pa. Her classification was changed to AGSS-256, auxiliary submarine, 6 November 1962. She continued to serve out of commission as a training ship for reservists at Philadelphia until she was struck from the Navy List 1 March 1967 to be sold.

Hake received seven battle stars for her service in World War II. Her third, fourth, fifth, sixth, and seventh war patrols were designated successful.

Halawa

A cape on the island of Molokai in the Hawaiian Islands.

(AOG-12: dp. 3,650 lt.; l. 255'; b. 43'; dr. 16'; s. 9 k.; cpl. 63; a. 1 3')

Halawa (AOG-12) was built as *Blue Sunoco* in 1929 by Sun Shipbuilding & Dry Dock Co., Chester, Pa., and operated as a tanker for the Sun Oil Co. until acquired by the Navy through the Maritime Commission in 1942. She was renamed *Halawa* and commissioned 10 April 1942, at Pearl Harbor, Lt. Comdr. W. J. Lane in command.

Halawa was based at Pearl Harbor and vicinity during the entire war. She operated at the Naval Base and at Naval Air Station Kaneohe supplying fuel oil and diesel fuel. The ship made occasional voyages to Palmyra, Canton, and Johnston Islands 1942-1944, supplying those bases with fuel. While returning to Pearl Harbor from Canton Island 21 December 1944 *Halawa* suffered a serious generator failure and was towed the rest of the way by tug *ATR-12*. After her arrival 26 December she stayed at Pearl Harbor until being towed to San Francisco after the war. *Halawa* arrived San Francisco 25 September 1945 and decommissioned 25 October. She was returned to the Maritime Commission, was placed in reserve for a time, and was sold 5 July 1948 to Foss Launch and Tug Co.

Halcyon

A bird, identified with the kingfisher, fabled by the ancients to nest at sea about the time of the winter solstice, and to calm the waves during incubation; hence, calm and peaceful.

I

(SP-518: dp. 275; l. 61'; b. 12'4"; s. 11 k.)

The first *Halcyon* was built for the Bureau of Fisheries in 1916 by Marine Construction Co., Boothbay Harbor, Maine. She was transferred to the Navy and commissioned 14 May 1917 at Boston.

Assigned to section patrol in the 1st Naval District, *Halcyon* performed harbor patrol duties until decommissioning 24 June 1919. She was subsequently struck from the Navy List 31 July 1919 and returned to the Bureau of Fisheries.

II

(SP-1658: l. 40'; b. 9'6"; dr. 2'8"; s. 10 k.)

The second *Halcyon* was built by Defoe Boat Works, Bay City, Mich., in 1912, and was taken over by the Navy from her owner, G. G. Barnum, at Duluth, Minn., 16 June 1917. After serving briefly on section patrol in the Great Lakes, 9th Naval District, *Halcyon* was returned to her owner 5 November 1917.

Halcyon II

A former name retained.

(SP-582: dp. 161; l. 140'; b. 18'3"; dr. 5'; s. 15 k.; a. 2 3-pdr.)

Halcyon II, a yacht, was built by Charles Seabury Gas Engine & Power Co. of Morris Heights, N.Y., in 1907, and was purchased by the Navy in August 1917 from her owner, D. W. Flint of Providence, R.I. She commissioned 13 December 1917 at Boston Navy Yard, Ens. C. P. Jameson, USNRF, in command.

After fitting out, *Halcyon II* was employed as a section and harbor patrol boat in Boston Harbor. She performed this service until 4 June 1919 when she was rammed and seriously damaged by steamer *Bayou Teche*. Determined by the Navy to be unseaworthy, she was struck from the Navy List 31 July 1919 and sold to her former owner 4 December 1919.

Hale

Eugene Hale was born at Turner, Maine, 6 June 1836. He was admitted to the bar in 1857 and served for 9 years as prosecuting attorney for Hancock County. He was elected to the Maine legislature 1867-68, to the House of Representatives 1869-79, and succeeded Hannibal Hamlin in the Senate, serving from 1881 to 1911. Although he declined the post of Secretary of the Navy in the Hayes administration, Senator Hale performed constructive work of the greatest importance in the area of naval appropriations, especially during the early fights for the "new Navy." "I hope", he said in 1884, "that I shall not live many years before I shall see the American Navy what it ought to be, the pet of the American people." Much later in his career, he opposed the building of large numbers of capital ships, which he regarded as less effective in proportion to cost and subject to rapid obsolescence. Senator Hale retired from politics in 1911 and spent the remainder of his life in Ellsworth, Maine, and in Washington, D.C., where he died 27 October 1918.

I

(DD-133: dp. 1,090 (n.); l. 314'5"; b. 31'8"; dr. 8'8"; s. 35 k.; cpl. 113; a. 4 4", 2 3-pdrs., 12 21" tt.; cl. *Wicks*)

The first *Hale* (DD-133) was launched by the Bath Iron Works, Bath, Maine, 29 May 1919; sponsored by Miss Mary Hale, granddaughter of Senator Hale; and commissioned at Boston 12 June 1919, Comdr. Allan S. Farquhar in command.

Hale joined Destroyer Squadron 3, U.S. Atlantic Fleet, and after training exercises departed 11 July 1919 for Europe. On this cruise, the ship paid goodwill visits to

European and Mediterranean ports, assisted in the execution of the Austrian Armistice in October, and joined the American detachment in Turkish waters. *Hale* then carried refugees, relief officials, and freight between the ports of Greece, Bulgaria, and Russia, showing the flag in the vital Mediterranean and Balkan area. She returned to Philadelphia 31 March 1920 and resumed her schedule of training and development exercises along the Eastern Coast. *Hale* decommissioned at Philadelphia 22 June 1922 and remained in reserve until 1 May 1930, when she recommissioned.

Departing Philadelphia 15 May, *Hale* took part in refresher training operations and then resumed readiness exercises on the East Coast. She participated in Scouting Fleet maneuvers in early 1931 in the Caribbean, and arrived San Diego via the Panama Canal 4 April 1931. For the next few years *Hale* participated in maneuvers with the Battle Force along the California coast and spent much time perfecting the techniques of modern carrier tactics with carriers *Saratoga* and *Lexington*. The destroyer decommissioned once more at San Diego 9 April 1937.

Hale recommissioned at San Diego 30 September 1939, at a time of mounting crisis in both oceans, and departed 25 November for neutrality patrol in the Caribbean. Her base was changed to Galveston 22 February 1940, and later to Key West, but the ship continued to patrol the Caribbean Sea and Gulf of Mexico. At Philadelphia 1 September 1940 she prepared for transfer to Great Britain as a part of the famous destroyers for bases agreement. She arrived Halifax 6 September 1940 and decommissioned 3 days later. Entering the Royal Navy, she became HMS *Caldwell*.

During her career in the British Navy, *Caldwell* was assigned to escort duty in the Atlantic and later in the Caribbean, as Britain tried desperately to cope with the German U-boat menace. She joined the Royal Canadian

Navy in mid-1942, and while returning to St. John's, Newfoundland, 18 December 1942, was seriously damaged during a heavy gale. She became disabled, and was found drifting helplessly by *Wanderer* 21 December. *Caldwell* was then towed to St. John's and later to Boston. Ready for sea again in May 1943, the ship resumed convoy duty with the Royal Canadian Navy until 1 December, when she returned to Tyne and was placed in reserve. *Caldwell* was broken up for scrap in September 1944.

II

(DD-642: dp. 2,050; l. 376'6"; b. 39'7"; dr. 13'; s. 35 k.; cpl. 273; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dcp.; cl. *Fletcher*)

The second *Hale* (DD-642) was launched 4 April 1943 by Bath Iron Works, Bath, Maine; sponsored by Mrs. G. H. Chase, granddaughter of Senator Hale; and commissioned at Boston 15 June 1943, Comdr. Karl F. Poehlmann in command.

Hale conducted shakedown training in the Caribbean and training exercises on the East Coast before departing Halifax for the Pacific combat zone 21 September. She arrived Pearl Harbor via the Panama Canal 9 October 1943.

Hale departed 8 November 1943 for the invasion of the Gilbert Islands, the first step in America's amphibious sweep across Micronesia. She screened carriers in strikes on Tarawa 18-20 November, took part in the bombardment of Betio Island 19 November, and supported the landings by Marines next day. During the air attacks that followed, *Hale's* gunners accounted for several aircraft. After covering the retirement of damaged carrier *Independence* for 2 days she rejoined the carrier striking force for attacks against the Marshall Islands, next target of the Pacific amphibious forces.

USS *Hale* (DD-133), one of 50 destroyers traded to Great Britain for bases in 1940

Hale returned to Pearl Harbor 8 December to train for the next assault and sailed 21 December for the Ellice Islands. She departed 21 January 1944 for the invasion of the Marshalls, pounding Maloelap and Wotje atolls 29 January to 22 February, before and after the landings. Underway from Kwajalein 11 March, she sailed to Guadalcanal to perform anti-submarine patrol during the loading operations, and departed 27 March escorting reinforcements to Cape Torokina, Bougainville.

After acting as antisubmarine screen and screening ship for escort carriers supporting the Hollandia landings in New Guinea, *Hale* returned to Seeadler Harbor 4-7 May. She then steamed to the Solomons for the final rehearsals for the Marianas campaign. The ship then took part in pre-invasion strikes on Guam, returned briefly to Eniwetok 14 July, to support the Guam landings 21 July.

Hale returned to Eniwetok 4 August 1944, and departed 6 days later for assault and support operations in Hawaiian waters preparatory to the Leyte landings. She got underway with troop transports bound for Manus 15 September, and departed 14 October with the Southern Attack Force bound for the Philippines. On 18 October her group was joined by *Nashville*, with General Douglas MacArthur embarked. *Hale* entered Leyte Gulf early 20 October and helped troop units take Dulag airfield by providing accurate fire support. She then joined Rear Admiral C. A. F. Sprague's escort carriers 25 October after their valiant fight in the battle off Samar.

The destroyer next joined escort screening units for troop reinforcements at Morotai and landed them at Tacloban, Leyte, 14 November. After another such voyage from Hollandia to Leyte in November, aiding the buildup in the Philippines, *Hale* sailed 24 November via New Guinea, the Marshalls, and Pearl Harbor arriving San Francisco 22 December 1944.

Hale returned to the Pacific war in early 1945, arriving Pearl Harbor 25 February. Sailing to Ulithi, she departed 14 March with Rear Admiral Forrest Sherman's *Essex* carrier task force to attack enemy air installations prior to the landings on Okinawa. The group suffered casualties, including *Franklin* and *Wasp* from air attack 19-21 March as *Hale's* gunners shot down several of the attackers. Departing the seas off Japan proper, the carrier force screened by *Hale* and other destroyers turned to Okinawa, flying close support and bombardment missions before, during, and after the initial assault 1 April. During the harrowing period off Okinawa *Hale* rescued two fighter pilots, drove off innumerable kamikaze attacks, and survived a near miss during a bombing attack. The veteran destroyer departed Okinawa 11 April and after stops at Ulithi and Guam arrived Leyte Gulf in the screen of *South Dakota* 1 June 1945. She then escorted *Wash-*

ington to Guam and met tug *Munsee*, towing the bow section of cruiser *Pittsburg*, torn off in the great typhoon off Okinawa, and brought her to Apra Harbor. The ship then sailed to join the 3d Fleet at Leyte Gulf 21 June.

Hale departed as a unit of Admiral Mitscher's famed Task Force 38, 1 July 1945, bound for crippling strikes against Japan itself. *Hale* took part in shore bombardment of factories at Hamamatsu 29 July.

As the war against Japan ended 15 August, *Hale* took up duties as air-sea rescue ship offshore during the landing of occupation forces. She entered Tokyo Bay 16 September 1945, and departed 1 October for the United States carrying 100 veterans. She arrived Seattle 19 October 1945 and was placed in commission in reserve at San Diego until decommissioning 15 January 1947.

With the outbreak of the Korean War and the increase of tension throughout the world, *Hale* was taken out of reserve, commissioning at Long Beach 24 March 1951. After shakedown cruise she sailed via the Panama Canal to her new home port, Newport, R.I., arriving 11 July 1951. After refresher training she departed 22 April 1952 to serve with the 6th Fleet in Mediterranean waters in support of American diplomacy in this vital and troubled region. After stopping at 16 ports in the course of her operations, *Hale* returned to Newport 23 October 1952. For the next 1½ years the destroyer performed a variety of tasks—antisubmarine training and development exercises off the Atlantic coast, plane guard duty for carrier operations in the Gulf of Mexico, and a training cruise for Midshipmen of the Naval Academy.

After a modernization overhaul at Philadelphia September 1953 to January 1954 *Hale* departed 1 June 1954 for a world cruise. Transiting the Panama Canal and entering the Pacific she proceeded to the Far East. She formed a part of America's ever-present naval strength lending stability to the area. Transiting the Suez Canal 17 November 1954, she visited many ports in 6th Fleet waters before returning to Newport 18 December 1954.

Hale continued her vital pattern of readiness exercises, including serving as the Destroyer Force Gunnery School Ship at Newport, until 6 November 1956. Getting underway for the Mediterranean once more, she rendezvoused with 6th Fleet ships and stood by in the eastern Mediterranean during the Suez crisis, helping to avert a larger conflict and protecting American interests. She returned to Newport 20 February 1957.

In June *Hale* participated in one of the greatest international naval reviews in history, joining some 60 U.S. ships and vessels of 17 other nations in the 350th anniversary of the founding of Jamestown. A second Midshipman cruise and NATO exercises in the North Atlantic closed out 1957. She began her second world cruise 23

USS *Hale* (DD-642) at Pearl Harbor 11 October 1958

July 1958, sailing to Naples, through the Suez Canal to India and Japan, and back to San Diego after operations with the 7th Fleet in its constant peace-keeping vigil off Formosa. She returned to Newport via the Panama Canal 24 November 1958.

In the Mediterranean from August 1959–February 1960 *Hale* continued a peace-keeping and goodwill role. She returned to Newport 26 February 1959. After a period of important experimental work in anti-submarine warfare with nuclear submarines, *Hale* decommissioned at Boston 30 July 1960. She was transferred to Colombia 23 January 1961 under the Military Assistance Program and now serves as *Antioquia* (DD-01).

Hale received six battle stars for World War II service.

Hale, Roy O., see *Roy O. Hale* (DE-336)

Haleakala

An extinct volcano located on the eastern end of the island of Maui, Hawaii, meaning House of the Sun.

(AE-25: dp. 8,300 lt.; l. 512'; b. 72'; dr. 29' s. 20 k.; cpl. 331; a. 4 3"; cl. *Suribachi*)

Haleakala (AE-25) was launched 17 February 1959 by Bethlehem-Sparrows Point Shipyard, Inc., Baltimore, Md.; sponsored by Mrs. Maurice E. Curtis, wife of Vice Admiral Curtis; and commissioned 3 November 1959, Captain Miles P. Refo, III, in command.

After shakedown out of Guantanamo Bay *Haleakala* transited the Panama Canal and visited Chile and Costa Rica before arriving San Francisco 17 March 1960. The fifth of a new class of ammunition ships designed from the hull up for carrying and transferring at sea the latest in munitions and guided missiles, *Haleakala* spent the first part of April with *Vega* conducting replenishment exercises to test new equipment.

Haleakala departed San Francisco 7 July 1960 on her first Western Pacific deployment. Visiting Pearl Harbor, Yokosuka, and Sasebo, she provided services to various units of the 7th Fleet before returning to Port Chicago, Calif., 19 December 1960.

Haleakala departed on her second deployment to the Western Pacific 18 April 1961 and again serviced units of the 7th Fleet, returning to Port Chicago 8 September. In October, in company with *Mount Katmai*, she steamed to Long Beach to participate in Exercise "Covered Wagon", an effort to test realistically a representative Attack Carrier Strike Force in all of its wartime tasks in the

face of opposition similar to that which might be expected of a potential enemy.

Haleakala made two subsequent deployments to the Western Pacific between 29 May 1962 and February 1964. She arrived Todd Shipyard, Inc., Seattle, 28 February 1964 for overhaul and modernization to increase her efficiency and safety. With conversion completed by May 1965, through the fall of 1965 *Haleakala* participated in Operation "Baseline." On 20 November she sailed for Yankee Station via Pearl Harbor to support combat operations in Vietnam, returning to Subic Bay 31 December.

Most of 1966 was spent on another WestPac deployment. *Haleakala* departed Subic Bay 23 August for the West Coast, arriving San Francisco 12 September. After training exercises off Mare Island through December, *Haleakala* returned for further replenishment operations off Vietnam into 1967.

Half Moon

A bay on the coast of California south of San Francisco.

(AVP-26: dp. 1,766; l. 310'9"; b. 41'2"; dr. 13'6"; s. 18 k.; cpl. 215; a. 2 5"; cl. *Barnegat*)

Half Moon (AVP-26), a small seaplane tender, was originally designed as a motor torpedo boat tender and designated AGP-6. She was launched by Lake Washington Shipyards, Houghton, Wash., 12 July 1942; sponsored by Mrs. T. A. Gray; redesignated AVP-26 on 1 May 1943; and commissioned 15 June 1943, Comdr. W. O. Gallery in command.

Half Moon spent her first months in shakedown training off California, and was then assigned to the Pacific Fleet. Departing San Diego 25 August 1943, she embarked a Marine air group at Pearl Harbor and steamed into Vila Harbor, New Hebrides, 14 September. The tender then sailed to Brisbane, Australia, and thence to Namoi Bay, on Sariba Island, New Guinea, arriving 6 October. At Namoi Bay *Half Moon* began her tending duties. Her embarked squadron, flying PBY "Catalina" aircraft, conducted night antishipping strikes in the New Guinea area. With the able support of tenders like *Half Moon* these missions—"Black Cat" strikes—achieved important results in the destruction of Japanese transports.

Half Moon departed for Brisbane 21 December 1943, remained until 10 February 1944, and then steamed into a succession of New Guinea ports on the way to her new operating base, Finshafen. There the tender resumed her support of seaplane operations in the New Guinea theater.

After tending seaplanes on rescue missions from Humboldt Bay in May, *Half Moon* spent several months pinch-

USS *Haleakala* (AE-25) in July 1965

hitting for transports in the Pacific area, stopping at Brisbane, Manus, Milne Bay, and other ports. She took up "Black Cat" operations again 25 August 1944 from Middleburg and later Morotai. Steaming out of Morotai 6 October, *Half Moon* joined a small convoy en route to Leyte Gulf to assist in the developing operations for the recapture of the Philippines. They arrived Leyte Gulf 21 October, and *Half Moon* immediately steamed down the eastern coast of Leyte in search of a proper anchorage for her seaplane operations.

Anchoring in Hinamangan Bay, *Half Moon* came under air attack 23 October, and soon realized that her anchorage was a rendezvous point for Japanese planes attacking Leyte. Late 24 October *Half Moon's* radar began to pick up two large surface units converging and it was soon clear that she was to be a witness to the last engagement between battle lines of surface ships—the Battle of Surigao Strait. The tender cautiously slipped out from behind Cabugan Grande Island and was given permission to proceed up the coast of Leyte between, but well to the west of the two fleets. She watched the spectacle of Admiral Oldendorf's big guns pounding the Japanese ships, and after the battle returned to Hinamangan Bay. Another fierce air attack, however, soon convinced the captain that San Pedro Bay, further north, offered a more hospitable base for operation.

Half Moon weathered two severe storms, 29 October and 8 November 1944, and operated with her seaplanes in Leyte Gulf until 27 December. She was then designated as part of the support convoy for the Mindoro Landing, and departed for Mangarin Bay 27 December. The convoy, known as "Uncle plus 15", encountered some of the most prolonged and determined air attacks of the war as the Japanese strove mightily to prevent reinforcements at Mindoro. Air cover provided by land-based aircraft stopped only some of the attackers. Suicide planes, bombs, and strafing hit many ships. Liberty Ship *John Burke*, loaded with ammunition, exploded leaving virtually no trace after a kamikaze hit, tanker *Porcupine* and tender *Orestes* were severely damaged, and other ships also suffered hits.

Nevertheless the convoy drove through giving the Japanese planes a hot time with the concentrated AA fire. During these 3 days, gunners on *Half Moon* and the other ships were at their stations round the clock, *Half Moon* accounting for at least two and possibly four of the attacking aircraft.

The convoy arrived at Mindoro 30 December, air attacks continued. On 4 January during one of these a large bomb skipped over *Half Moon's* fantail, falling to explode. The tender remained in Mangarin Bay tending seaplanes until returning to Leyte Gulf 17 February.

Following the victorious Philippine invasion, *Half Moon* sailed to Manus and Humboldt Bay. On 30 May, she got underway for the Philippines again, arriving Tawi Tawi, Sulu Archipelago, 11 June. She supported seaplane anti-submarine searchers from Tawi Tawi Bay until early August, and then carried out the same mission from Mangarin Bay, Mindoro.

Following Japan's surrender, *Half Moon* proceeded to Subic Bay, Philippines, and from there got underway for Okinawa 30 August. The afternoon of the next day signs of a storm were evident and by 1 September *Half Moon* was engaged in a raging typhoon, with winds up to 120 knots and barometer readings of 27.32. Smart seamanship allowed her to weather the storm, and she arrived safely at Okinawa 4 September.

Half Moon departed Okinawa for Manila 1 October, operated in that area for about a month, and departed 7 November for deactivation. She arrived Seattle 1 December 1945 steamed to San Diego 12 April 1946, and decommissioned there 4 September 1946. Placed in reserve, she was taken out, refitted, and loaned to the Coast Guard in September 1948. *Half Moon* continues in the 1960's to serve as a weather ship under the Coast Guard. Based at Staten Island, N.Y., she collects weather data in the Atlantic Ocean, and acts as an emergency air rescue ship.

Half Moon received two battle stars for World War II service.

Halfbeak

A garlike fish with a beak formed by an extension of the lower jaw, found in warmer seas.

(SS-352: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20.3 k.; cpl. 66; a. 15", 10 21" tt.; cl. *Balao*)

Halfbeak (SS-352) was launched 19 February 1946 by the Electric Boat Co., Groton, Conn.; sponsored by Mrs. William Craig; and commissioned 22 July 1946, Comdr. Evan T. Shepard in command.

After shakedown in the Caribbean and along the Latin American coast to the Canal Zone, Ecuador, and Colombia, *Halfbeak* spent the next 3 years in training operations and fleet exercises out of New London, Conn., where she was part of SubRon 8. Entering the Portsmouth, N.H., shipyard 12 September 1949, *Halfbeak* was converted to a "Guppy" type. Fitted with a snorkel to enable her to stay submerged for long periods of time and distinguished by a greatly streamlined superstructure, *Halfbeak* left Portsmouth 13 January 1950 to work with the Research and Development Group at New London. While conducting tests on special underwater sound equipment, she made a cruise to English waters, operating off Jan Mayen Island, in the winter of 1951.

Halfbeak was engaged in further Caribbean exercises until 10 November 1954, when she sailed for her first Mediterranean cruise. Having visited Gibraltar, Naples, Marseilles, Lisbon, and Valencia, Spain, the submarine returned to New London 2 February 1955. A similar cruise in 1956 was punctuated by the Suez Crisis, and *Halfbeak* remained in the eastern Med operating with the 6th Fleet until January 1957 helping to maintain the peace in that crucial region. Her duties took another turn as 28 July 1958 she departed for the Arctic, where with the nuclear submarine *Skate* she operated under and around the polar ice pack to gather information in connection with the International Geophysical Year. During these operations, *Skate* sailed under the Arctic ice pack to reach the North Pole 11 August and continued to cruise freely there repeating the visit 6 days later.

Local operations and exercises, primarily submarine and fleet maneuvers in the Caribbean but also NATO maneuvers, occupied *Halfbeak* until 1963, when she resumed her role testing and evaluating sonar and other underwater sound equipment out of New London.

Halford

William Halford was born in England 18 August 1841, and enlisted in the Navy in 1869. While serving on board *Saginaw*, which had run aground near Midway 29 October 1871, Halford was one of four who volunteered to sail the ship's boat 1,500 miles to Honolulu for help. After great suffering the party reached Kauai Island 19 December after 31 days at sea. In attempting to land through the heavy surf, all but Halford were drowned, but he managed to reach shore and bring help to his shipmates in *Saginaw*. Halford received a commendation for his bravery and served until 1910, when he retired. Promoted to Lieutenant on the retired list, he returned to the Navy in 1917 and died 7 February 1919 at Oakland, Calif.

(DD-480: dp. 2,050; l. 376'5"; b. 39'8"; dr. 13'9"; s. 37 k.; cpl. 273; a. 45", 10 40mm., 7 20mm., 5 21" tt., 6 dep., 2 det.; cl. *Fletcher*)

Halford (DD-480) was launched 29 October 1942 by the Puget Sound Navy Yard, Bremerton, Wash.; sponsored by Miss Eunice Halford, daughter of Lieutenant Halford; and commissioned 10 April 1943, Lt. Comdr. G. N. Johansen in command.

In 1943 when the struggle in Pacific was raging the Pacific Fleet prepared for its mighty sweep across Micronesia. In an effort to strengthen the "seeing eyes"

of our fleet, *Halford* was one of six destroyers constructed with a cruiser catapult and scout observation plane. She departed San Diego 5 July en route Pearl Harbor arriving 5 days later. For the next 3½ months *Halford* was to test the feasibility of carrying scout planes on small vessels. Because of tactical changes and our growing aircraft carrier strength *Halford* returned to Mare Island 27 October 1943 for alterations which replaced the catapult and scout plane.

By 6 December, with increased fighting power and a new profile, *Halford* again departed for the South Pacific. She called at Pearl Harbor, Funafuti, Espiritu Santo, and Tutuila, Samoa; then took up convoy duties which included a Christmastime assignment of protecting enormous troopship *Lurline* with Marine reinforcements embarked for Guadalcanal. Arriving Guadalcanal she assumed command of the antisubmarine screen and took up station off Lunga Point. In addition to Guadalcanal *Halford* supported the beachhead at Bougainville, screening supply trains and participating in coastal bombardments.

Anti-shiping sweeps on New Ireland's east coast, punctuated by counter-battery fire off East Buka Passage made tense and exciting days for *Halford*, *Waller* and *Wadsworth* during January 1944—a month which also saw the destruction by this three ship task force, of strategic Japanese facilities on Choiseul Island.

Halford next became flagship for Admiral T. S. "Ping" Wilkinson's Green Islands Attack Force. Carrying Major General Barrowclough's 3d New Zealand Division Admiral Wilkinson's destroyer-transport group sortied from Vella Lavella and the *Treasuries*, 12–13 February, arrived off Baralun Island at 0620, D-day 15 February and lowered their landing craft fully manned.

Halford took up station off Green Island and began patrolling while unloading operations proceeded. At 0940 General Barrowclough, RNZA, and staff disembarked to land on Green Island. Within 2 hours after the initial landing all New Zealand forces were ashore; 5800 men were landed during D-day, 15 February. The fact that such a force could put thousands of troops ashore virtually without opposition 115 miles from Rabaul demonstrated the might and mobility of our fleets in the Pacific.

Halford next joined a destroyer squadron to make shipping sweeps off the west coast of New Ireland. On the night of 24–25 February 1944, *Halford* and *Bennett* sank two small coastal ships and severely damaged a patrol vessel. For the next 3 days *Halford* carried out her sweeps south of the strong Japanese naval base of Truk then returned to Purvis Bay for supplies.

Spring of 1944 found *Halford* busily escorting supply units to the northern Solomon Islands. *Halford* then prepared for the longest cruise of her career—commencing early in June with the campaign for the Marianas.

The initial phase of Operation "Forager" which kept *Halford* at sea for 75 days was the bombardment of Tinian's west coast defenses, followed by night harassing fire and the screening of heavy shore bombardment units. 17 June *Halford* joined the battle line of Admiral Marc A. Mitscher's famed Task Force 58 for the greatest carrier action of all time; the Battle of the Philippine Sea. 19 June found *Halford* in the first phase of the battle—the "Marianas Turkey Shoot" as repeated enemy carrier strikes were shot down by surface fire. In the 2-day battle of the Philippine Sea the Japanese Fleet lost 395 of its carrier planes, 31 of its float planes, and three carriers.

While Guam footholds were being secured *Halford* covered beach demolition units giving close bombardment support to assault troops and rescuing a number of friendly natives who had escaped through Japanese lines. *Halford* then joined the Angaur Fire Support Group in the bombardment of Angaur Island (4–21 September 1944).

Halford turned next to the campaign for the recapture of the Philippines. Joining Admiral J. B. Oldendorf's Fire Group of the Southern Attack Force, *Halford* participated in the pre-invasion bombardments in Leyte Island. Then, on 24 October, when Admiral Kinkaid

estimated that Admiral Mishimura's Southern Force would try to enter Leyte Gulf via Suriago Strait, *Halford* prepared for the Battle of Suriago Strait (24–25 October 1944). That night and in the early morning hours of 25 October *Halford* witnessed virtually the complete destruction of the Japanese Southern Force except for destroyer *Shigure*. American casualties totaled 39 men killed and 114 wounded, most of them in destroyer *Albert W. Grant*. Admiral Oldendorf said after the battle, "My theory was that of the old-time gambler: 'Never give a sucker a chance.' If my opponent is foolish enough to come at me with an inferior force, I'm certainly not going to give him an even break."

After the epochal Battle of Leyte Gulf, which broke the back of Japanese sea power, *Halford* departed Leyte Gulf 1 November 1944 and took up operations with the 3d Fleet out of Ulithi until 2 December when she returned to Leyte as part of the covering force for the landings. On 6 December she was dispatched to escort damaged SS *Antone Sautrain* into Leyte but the ship was lost in air attack. Returning to Leyte *Halford* next escorted supply echelons to Ormoc Bay and troopships to Mindoro.

In the afternoon of 2 January 1945 *Halford* sortied from Hollandia to escort transports of Task Force 79 to Lingayen Gulf for the occupation of Luzon Island; delivering the transports safely despite heavy air attack she commenced patrolling the entrance to the Gulf. Then on the afternoon of 11 January *Halford* took part in the shipping strike on San Fernando Harbor in which three small cargo ships, a landing craft, and several barges were sunk. Next morning she took part in the bombardment which neutralized the town of Rosario.

On 14 February, while patrolling Saipan Harbor, in a smoke screen, *Halford* rammed M.S. *Terry E. Stephenson*. Although there were no injuries, it necessitated *Halford*'s return to Mare Island, where she arrived 24 March 1945.

27 May 1945 *Halford* departed San Diego on her way west again. She proceeded to the Marshall Islands via Pearl Harbor where she escorted transports from Eniwetok to Ulithi. 11 August *Halford* departed Eniwetok en route Adak, Alaska as a unit of the Northern Pacific Fleet. With a task force composed of light carriers, cruisers and destroyers, *Halford* departed Adak 31 August and steamed into Ominato, Northern Honshu, Japan 12 September. Under the direction of Admiral Frank Jack Fletcher, this force was responsible for the initial occupation of the Ominato Naval Base and surrounding areas.

With Admiral Fletcher's Task Group, *Halford* cleared Ominato 20 September returning to Adak 5 days later, thence on via Kodiak to Juneau for Navy Day.

Halford departed Juneau, Alaska, 1 November 1945 and arrived Bremerton, Wash., 3 days later to begin inactivation overhaul. She departed Bremerton 23 January 1946. She joined the Pacific Reserve Fleet at San Diego 28 January and decommissioned there 15 May 1946. She remains berthed at San Diego.

Halford received 13 battle stars for World War II service.

Halibut

A large species of flatfish found on both sides of the Atlantic.

I

(SS-232: dp. 1526; l. 311'8"; b. 27'4"; dr. 15'3"; s. 20 k.; cpl. 60; a. 1 3", 10 21" tt.; cl. *Gato*)

Halibut (SS-232) was launched by Navy Yard, Portsmouth, N.H., 3 December 1941; sponsored by Mrs. P. T. Blackburn; and commissioned 10 April 1942, Comdr. P. H. Ross in command.

Halibut completed her outfitting and shakedown cruise 23 June 1942 and departed for the Pacific, arriving Pearl Harbor 27 June. Assigned to the Aleutian Islands area for her first war patrol, she departed 9 August from Hawaii. After searching Chichagof Harbor and the waters off Kiska Island, the submarine engaged in an

indecisive gunnery duel with a freighter 23 August. Finding few targets, she terminated her patrol at Dutch Harbor 23 September.

Her second patrol was also off the Aleutians. She departed Dutch Harbor 2 October 1942 and surfaced for a torpedo attack on what appeared to be a large freighter 11 October. The ship, a decoy "Q-boat" equipped with concealed guns and torpedo tubes, attacked *Halibut* with high explosive shells and a torpedo as the submarine took radical evasive action to escape the trap. After eluding her assailant she returned to Dutch Harbor 23 October and Pearl Harbor 31 October 1942.

Halibut departed Pearl Harbor 22 November for her third war patrol, off the northeast coast of Japan. She began stalking a convoy the night of 9 December and early the next morning closed for the attack. A hit amidships sank *Genzan Maru*; swinging to starboard, *Halibut* put two torpedoes squarely into *Shingo Maru*, sinking her as well. Her success continued as *Gyukozan Maru* was sent to the bottom 12 December. *Halibut* made two more attacks on this patrol, each time being closely pursued by escort vessels, before returning to Pearl Harbor 15 January 1943.

The submarine sailed from Pearl Harbor again 8 February 1943 on her fourth war patrol. Heading for the Japan-Kwajalein shipping lanes she tracked a freighter the morning of 20 February and closed to sink her that night. While northeast of Truk 3 March she detected a large ship and attacked, but was driven off by the fire of deck guns. *Halibut* returned to Pearl Harbor from this patrol 30 March.

Halibut began her fifth war patrol 10 June and made her first attack 23 June. No hits were scored and the submarine was forced to wait out a severe depth charge attack. She damaged an escort carrier off Truk 10 July, and finally returned to Midway 28 July 1943.

The coast of Japan was *Halibut's* cruising ground on her sixth war patrol. Departing Midway 20 August she sank *Taidun Maru* 30 August with three bow shots. Pressing home another attack 6 September, she was sighted but completed the approach to sink the freighter. *Halibut* completed this patrol 16 September, arriving at Pearl Harbor.

Halibut sailed from Pearl Harbor on her seventh war patrol 10 October. She made an unsuccessful attack on a convoy 31 October, was held down temporarily by escorts, and finally caught up with the same ships 2 November to sink *Ehime Maru*. She returned to Pearl Harbor 17 November.

On her eighth war patrol, beginning at Pearl Harbor 14 December, *Halibut* formed a coordinated attack group with *Haddock* and *Tullibee*. Cruising in the Marianas, the submarine scored no hits, returning to Midway 2 February 1944.

Halibut departed on her ninth war patrol 21 March. Cruising eastward of Okinawa 12 April she sank pas-

senger-cargo ship *Taichu Maru*, and fired six torpedoes to separate a convoy 27 April. Closing in on a ship separated from the group, *Halibut* sank *Genbu Maru*, then shifted her attack to coastal minelayer *Kanome*, sinking her also. The submarine was then forced into evasive action as some ninety depth charges were dropped close aboard. Surfacing off the northeastern shore of Kume Shima 29 April she bombarded two warehouses and other buildings with her deck gun, and made an attack on a group of sampans with gunfire 3 May. With men critically wounded in the gun battle she returned to Pearl Harbor 15 May 1944. She then sailed for overhaul to San Francisco from which she returned to Hawaii 20 September 1944.

On her tenth war patrol *Halibut* again joined a coordinated attack group, this time with *Haddock* and *Tuna*. While proceeding to Luzon Strait, the submarines were ordered to set up scouting lines to intercept crippled units of the Japanese fleet retiring after the Battle off Cape Engano. *Halibut* encountered the remnants of Admiral Ozawa's force 25 October and attacked inflicting some damage. After pursuing other units until the following day, *Halibut* returned to station. The sub's next contact came 14 November when she attacked a convoy in Luzon Strait. She was immediately attacked in turn by planes apparently using magnetic airborne detectors. A short but effective depth charge attack directed by the aircraft left *Halibut* severely damaged but still under control. Her crew made temporary repairs and she steamed into Saipan 19 November. The gallant submarine received the Navy Unit Commendation for her performance on this patrol.

Halibut arrived San Francisco via Pearl Harbor 12 December 1944. Later she sailed 16 February 1945 for Portsmouth, N.H., where it was found that her damage was too extensive to justify repair. She decommissioned 18 July 1945 and was sold for scrap 10 January 1947 to Quaker Shipyard and Machinery Company of Camden, N.J.

Halibut received seven battle stars for World War II service. War patrols 3 through 7, 9 and 10 were designated successful.

II

(SSG(N)-587: dp. 3,655 (surf.), 5,000 (subm); l. 350'; b. 29'; dr. 28'; s. classified; cpl. classified; a. 1 Reg. mis., 16 21' tt.; cl. *Halibut*)

Halibut (SSG(N)-587) was launched by Mare Island Naval Shipyard, Vallejo, California, 6 January 1959; sponsored by Mrs. Chet Holifield, wife of Congressman Holifield of California; and commissioned 4 January 1960, Lt. Comdr. Walter Dedrick in command.

Halibut had the distinction to be the first submarine in the world designed and built from the keel up to launch guided missiles. Intended to carry the Regulus I missile, *Halibut* departed for her shakedown cruise 11 March. On

USS *Halibut* (SS-232) in February 1942—Extreme damage from depth charges forced *Halibut* off the patrol line in November 1944.

13 November 1944 (Continued)

and tide rips made this impossible, sweeping us toward BICOGO ISLAND. Unable to make headway in desired direction after 3 hours, and after broaching for 3 minutes, patrolled to northward along east coast of islands.

1922 Surfaced. Proceeded west of BATAN ISLANDS to probable convoy route.

14 November 1944.

- 0335 AIRCON #12. ~~SJ contact at 10,000 yards.~~ Maneuvered to avoid. ✓
- 0455 AIRCON #13. ~~SJ contact at 16,000 yards.~~ Sighted exhaust flames of twin-engine plane. Followed plane back and forth by sight and radar at various ranges. Plane radar interference on AFR. When plane settled on our starboard quarter and started in, at
- 0503 Dived with range 6,500 yards.
- 0537 Surfaced.
- 0551 AIRCON #14. ~~SJ and sight contact, range about 14,000 yards.~~ Maneuvered, and lost contact at 0617.
- 0647 Dived to patrol along estimated traffic route.
- 1146 SHIPCON #10. Sound heard pinging bearing 154⁰T. Nothing in sight, but speeded up, heading for contact, and at
- 1222 Sighted tops of northbound convoy. Started closing at high speed.
- 1232 Can now make out one very large and two smaller freighters and three PC boat escorts.
- 1244 Fourth freighter seen. Convoy consists of one large modern freighter, 2 medium freighters, and one small engines-aft ship. Escorts in sight are three class PC-13 boats and one other small escort. These are all on our side of the convoy and there may be other escorts on the far side. Chose the large freighter as target. It is zigging at about four minute

14 November 1944 (Continued)

intervals. Continued approach at high speed. Much pinging.

- 1319-40 Fired 4 bow tubes at the large freighter on 60 starboard
to track, small gyros, torpedo run 3,100 yards. This is
1320-22 the closest we can get. A freighter in the far column
is overlapping our target, giving two continuous target
lengths. Unfortunately, the three minute torpedo run
will give the target time to zig once more.
- 1324-10 One explosion heard in forward torpedo room and conning
tower. Did not see explosion but the freighter in the
far column is now making black smoke and dropping
astern. Time interval is correct for a hit in this
ship. Swinging for stern tube shots. Escorts have not
found us yet. Over 2,000 yards away with large angles
on bow.
- 1324-34 Sound reported another torpedo explosion.
- 1326(about) Heard strange, loud, fast, buzzing noise. See para-
graph J.
- 1327-45 Heavy explosion to port. Went deep.
- 1328 Heavy explosion.
- 1331 Three heavy explosions, close. At 325 feet.
- 1348 One close depth charge, damaging conning tower. Secure
conning tower. Two escorts heard, one pinging on
either quarter.
- 1350 Several close depth charges, very loud, shaking the
boat violently, and pushing us down to feet. These
came so nearly together it was not possible to count
them accurately, but believe two patterns of four
were dropped. Much minor damage was evident, every-
thing loose was displaced, and both gyros knocked
out. All damage is listed under Paragraph K, but
the following are the more interesting events:
- The forward torpedo room was particularly hard hit.
The skids, with their torpedoes, jumped one foot up,
damaging the torpedoes, all deck plates were dislodged,
and all personnel were thrown into the bilge, one man

14 November 1944 (Continued)

being sure he was going through the bottom of the boat. All sea valves spun open, and the escape trunk leaked, but they soon brought matters under control. The pressure hull and tank tops were wrinkled and numerous bolts sheared. Meanwhile the line from #1 air bank in the forward battery well carried away. The rush of high pressure air, and the combined odors of hair tonic, shaving lotion, glyptol, and food, caused the personnel in the compartment to believe it was flooding and that chlorine gas was escaping, hence, they abandoned and secured the compartment. #1 bank bled down, creating over 50 $\frac{1}{2}$ pressure in the compartment. This prevented opening the after door or the flappers. Since the forward door opens into the torpedo room, ordered that room to crack the door carefully, checking for chlorine gas, and letting the pressure equalize if no gas was present. By opening this door the pressure in the two compartments was reduced to 28 $\frac{1}{2}$. Began to bleed the pressure into the control room through the trim line hose connections. This was a long, very noisy process, but finally were able to jack the door open and help the men in the forward rooms. Both sound heads could be trained in hand, but with difficulty, and in the great heat and pressure the men were working to exhaustion. On surfacing found that a depth charge had exploded on or very close to the 4" gun (forward), for the breech cover was smashed and punctured, and, the chamber pushed to port. For some reason, the Japs shoved off. A little persistence would have paid off handsomely. The beating the ship took and survived brings our admiration and respect to the men who designed her, the people who built the HALIBUT, and those who recently overhauled her at Bethlehem Steel Company.

- 1645 At periscope depth; all clear.
- 1910 Surfaced. Set course to westward.
- 2120 SJ radar interference. Contacted PINTADO by radar and asked her to close to visual range. Gave her information to be relayed to Comsubpac and requested that she standby until repairs are made to our radio. Set course for SAIFAN following PINTADO.
- 2308 Gyro compass back in commission.

the way to Australia 25 March she became the first nuclear powered submarine to successfully launch a guided missile. The submarine returned to Mare Island Shipyard 18 June 1960, and after short training cruises departed 7 November for Pearl Harbor and active service with Pacific Fleet. During her first deployment she successfully launched her seventh consecutive Regulus I missile during a major Southeast Asia Treaty Organization weapons demonstration. Returning to Pearl Harbor 9 April 1961, *Halibut* began her second deployment 1 May. During the months that followed she participated in several guided missile launching exercises and underwent intensive training.

Halibut deployed for the third time to the Western Pacific in late 1961, establishing a pattern of training and readiness operations followed through 1964. On 4 May 1964 *Halibut* departed Pearl Harbor for the last Regulus missile patrol to be made by a submarine in the Pacific. Then, from September through December, *Halibut* joined eight other submarines in testing and evaluating the attack capabilities of the *Permit* Class submarines.

In February 1965 *Halibut* entered Pearl Harbor Naval Shipyard for a major overhaul, and on 15 August she was redesignated SS(N)-587. The nuclear attack submarine sailed from Pearl Harbor 6 September for the West Coast, arriving Keyport, Wash., the 20th. On 5 October she departed Keyport for Pearl Harbor and, after an 8-day stop-over at Mare Island, Calif., arrived 21 October. *Halibut* then began ASW operations in the area, continuing through 1966 and to date in 1967 adding powerfully to the deterrent strength of the United States in the Pacific.

Hall

Elijah Hall, born 8 December 1742, in Raynham, Mass., was appointed Lieutenant in the Continental Navy 14 June 1777, to serve in the frigate *Ranger* under John Paul Jones. *Ranger* sailed for France 1 November 1777, taking two prizes en route, then put to sea from Brest 10 April 1778, to cruise in the Irish Sea. Hall took part in the capture of several vessels, the landing at St. Mary's Isle 23 April, and the capture of *Drake* next day. Hall commanded the prize crew which took *Drake* into Brest. Hall continued to serve as Lieutenant of *Ranger* until he was captured at Charleston, S.C., 12 May 1780. Released after the end of the war, Hall settled in Portsmouth, N.H., in 1818 and held various community positions until his death there 22 June 1830.

(DD-583: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35 k.; cpl. 273; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dcp., 2 dct.; cl. *Fletcher*)

Hall was laid down by Boston Navy Yard 16 April 1942; launched 18 July 1942; sponsored by Mrs. Elizabeth Williams Greenleaf, great-granddaughter of Lt. Elijah Hall; and commissioned 6 July 1943, Comdr. J. F. Delaney in command.

Hall departed Boston 11 August 1943, for shakedown training off the East Coast, then reported for duty at Norfolk 28 September. As escort for French transport *Richclieu*, she sailed for Boston 2 October, returning 3 days later. She continued escort duties in the Norfolk and Boston areas until departing 5 November for special duty with *Halligan* and *Macomb*. The three destroyers rendezvoused at sea with battleship *Iowa*, carrying President Roosevelt and other dignitaries to the historic Teheran Conference. After a safe crossing, the escorts were relieved of their duties near Gibraltar 17 November. They performed escort and antisubmarine search duties off western Africa until 6 December, then rejoined *Iowa* for the return voyage of the President and his party.

Ordered to the Pacific, *Hall* departed Charleston 21 December arrived Pearl Harbor 11 January 1944. She cleared Hawaii 22 January with Rear Admiral Turner's Expeditionary Force bound for the capture and occupation of the Marshall Islands, a giant step across the

Pacific toward Japan. Sent with three cruisers and three other destroyers on a special mission to wreck the airfields on Tarao Island during the invasion, *Hall* joined in the devastating bombardment of that island 30 January. Her guns knocked out a gasoline dump with a tremendous explosion, hit several gun emplacements, and then screened the larger ships during the remainder of the firing. Tarao effectively neutralized, the ships then sailed for Kwajalein and the main assault.

Hall carried out varied duties during the month-long invasion of the islands. She supported the landing of troops on Burnet Island 4 February; covered the landings of Engebi Island and supplied gunfire support 18 February; and furnished starshell illumination for landings 22 to 23 February on Parry Island. After an escort voyage with transports to Pearl Harbor and back between 29 February and 26 March, *Hall* was assigned patrol and lifeguard duties in the Kwajalein area. While searching for a downed Marine flyer 4 April near Wotje she received two 6-inch shells close aboard from an enemy shore battery. Suffering one sailor killed, she returned the fire, continued her search, and finally rescuing the airman. *Hall* continued her effective role in the overwhelming amphibious victory until departing Majuro atoll 12 May for Pearl Harbor, where she arrived 18 May.

Hall next joined the escort for a group of 12 fleet oilers whose job it was to supply vital fuel to units of the 5th Fleet during the Marianas operations. She made two fueling voyages from Majuro to the Marianas, then shifted her base to Seadler Harbor, Admiralty Islands, 26 August to screen refueling and replacement units during the operations for the capture of the Carolines. *Hall* continued this duty until 24 November.

Getting underway from Manus 29 November, *Hall* steamed to Humboldt Bay, New Guinea, to join 7th Fleet for the developing invasion of the Philippines. Convoying troop-laden amphibious ships, she arrived Leyte Gulf 7 December 1944, and 4 days later steamed out of San Pedro Bay for Mindoro Island with the Mindoro Attack Group. As the ships passed through Surigao Strait and into the Sulu Sea, they underwent frequent severe air attack, but the escort ships succeeded in downing four aircraft 13 December. *Hall* and the other escorts supported the landings at Mangarin Bay 15 December; and, as Japanese planes bombed and strafed the first wave of assault troops, *Hall* patrolled and fired from her station to seaward of the landing craft. The gunfire and covering aircraft splashed 15 dive-bombers during the initial landings.

After two escort voyages to Leyte Gulf, *Hall* joined Admiral Oldendorf's support force for the landings at Lingayen Gulf. Sailing 30 December, she steamed via the Sulu Sea for Luzon. On 3 January 1945, the group encountered desperate, but determined, enemy air strikes, which were repelled by tight air cover and effective gunfire. The Japanese attacks intensified, however; and the ships remained at nearly continuous battle stations for more than 4 days. Brave men in these gallant ships inflicted heavy damage on the attackers. Japanese kamikazes, in turn, fatally hit *Ommancy Bay* (CVE-79) 4 January, and the burning, abandoned escort carrier was sunk by American torpedoes. The next 2 days brought even heavier Japanese attacks. Despite the withering curtain of fire laid down by *Hall* and other ships of the group, the suicide raiders crashed more than 16 ships, including *California* (BB-44) and *New Mexico* (BB-40). Undaunted, the valiant ships bore the brunt of the kamikazes with resolute courage and determination. In doing so, they repelled the menace of the suicide planes and saved the transport and assault forces from certain destruction.

Following the successful amphibious assaults in Lingayen Gulf 9 January, *Hall* continued to operate in the Gulf where she served as an escort and screen ship. Later in the month she returned to Leyte before departing for Ulithi 29 January. At Ulithi *Hall* joined in the preparations for the upcoming Iwo Jima operation. On 15 February she joined a fire support unit, which included flag-

ship *Texas*, west of Saipan and set course for Iwo Jima. The force arrived off Iwo the next day; and, after joining in a heavy shore bombardment, *Hall* covered underwater demolition teams and furnished close fire support for minesweepers until the troops stormed ashore 19 February. After performing additional patrol and close fire support missions during this fiercely fought and strategically important invasion, *Hall* returned to Ulithi 12 March to prepare for the invasion of Okinawa, the last step on the long, bloody road to the heart of the Japanese Empire.

Hall departed for Okinawa 21 March with Task Force 54. She began patrolling off that fiercely contested island 25 March. Her gunfire drove off two Japanese torpedo boats 30 March, and shot down two aircraft 6 April. Continuing her operations she covered minesweepers with gunfire, screened heavy units of the fleet, and provided close support gunfire until steaming to Leyte 28 May. She soon returned to the scene of the action, arriving back at Okinawa 13 June. Her lookouts observed *Twiggs* strike a mine off the beach 16 June. *Hall* immediately came to the rescue, pulling 48 survivors from the water.

Detached from duty off Okinawa 23 June, *Hall* sailed for the United States. She was in overhaul status at San Pedro, Calif., when news of the Japanese surrender came. She reported to San Diego for inactivation, and decommissioned 10 December 1946, and entered the Pacific Reserve Fleet at Long Beach. The destroyer was taken out of reserve 2 December 1959, and, after a training period was loaned to Greece under the Military Assistance Program 9 February 1960, where she now serves as *Lonchi* (D-56).

Hall received eight battle stars for World War II service.

Hall, Earle B., see *Earle B. Hall* (DE-597)

Halligan

John Halligan, born 4 May 1876 in South Boston, Mass., graduated from the Naval Academy at the head of his class in 1898. He served during the Spanish-American War in *Brooklyn*, flagship of Commodore Schley. During World War I he was chief of staff to Commander, U.S. Naval Forces, France, and for his outstanding performance of duty he received the Distinguished Service Medal. After the Armistice, he commanded *Ohio*, and in 1925 became chief of the Bureau of Engineering. Subsequently, he commanded *Saratoga*, served as Assistant Chief of Naval Operations in 1930, and in 1933 became Commander Aircraft, Base Force. Appointed Rear Admiral in 1930, Halligan died at Puget Sound, Wash., 11 December 1934, while serving as Commandant, 13th Naval District.

(DD-584 : dp. 2,050; l. 376'6"; b. 39'8"; dr. 13'; s. 35 k.; cpl. 273; a. 5 5', 10 40mm., 7 20mm., 10 21" tt., 6 dep., 2 dt.; cl. *Fletcher*)

Halligan (DD-584) was laid down 9 November 1942 by Boston Navy Yard, Boston, Mass.; launched 19 March 1943; sponsored by Mrs. John Halligan, widow of Admiral Halligan; and commissioned 19 August 1943, Comdr. C. E. Cortner in command.

After shakedown off Bermuda, *Halligan* in mid-November joined *Iowa* carrying President Roosevelt and his party en route to the historic Teheran Conference. She served as part of the escort screen to Casablanca, then for the next few weeks conducted anti-submarine operations off North Africa. She rejoined *Iowa* 11 December and steamed to the United States, arriving Charleston, S.C., 17 December.

Assigned to duty in the Pacific, *Halligan* departed Charleston 21 December, reached San Diego, Calif., 4 January 1944, and arrived Pearl Harbor 11 January. As part of Task Force 52, she sailed 22 January for the invasion of the Marshall Islands. Between 31 January and 25 February she operated as a screen and patrol ship dur-

ing the Kwajalein operations, and she screened and patrolled in the forward area until returning to Pearl Harbor 22 May.

Halligan next joined the screening group for escort carriers *Natoma Bay* and *Manila Bay*, carrying Army fighters for support of the Saipan operation. After launching planes 22 June, the task group was attacked the next day by Japanese dive bombers.

After a period at Pearl Harbor, *Halligan* departed 15 September for Eniwetok and Manus, Admiralties. Arriving Seadler Harbor 3 October, she joined a task force forming for the invasion of the Philippines. Departing 14 October, she entered Leyte Gulf 20 October and was soon in the thick of the fighting as Japanese planes tried unsuccessfully to dislodge the landing forces. While guarding the transports, she survived almost continuous air attacks; at one point two bombs passed between her stacks and struck the water without exploding. On 25 October she splashed at least two attacking aircraft, one a two-engined bomber. Later that same day, she departed Leyte to screen the battered escort carriers of "Taffy 3," withdrawing from their courageous battle against Japanese forces off Samar. She joined the carriers 26 October and steamed to Manus, Admiralties, arriving 1 November. While at Manus, she supported rescue operations following the explosion of *Mount Hood* 10 November. Two days later she sailed for Leyte, and she finished the year screening for escort carriers between Leyte and the Admiralties.

Halligan's next assignment was supporting the invasion of Luzon at Lingayen Gulf. Operating as part of Admiral Oldendorf's powerful support forces, she departed the Palau 1 January 1945, transited Surigao Strait 3 January, and steamed through the Sulu Sea bound for the western coast of Luzon. Penetrating deep into enemy-held territory, the fleet was subjected to vicious kamikaze attacks. *Ommaney Bay* was severely hit 4 January; and after her survivors were rescued, the burning carrier was sunk by torpedoes fired by *Burns* (DD-588). The following day Japanese planes resumed their attacks; despite withering antiaircraft fire which splashed most of the attackers, suicide planes damaged several ships during an afternoon attack. *Halligan* splashed one kamikaze 5 January, then sent rescue and repair parties to assist damaged *Stafford*.

Arriving off Lingayen Gulf 7 January, *Halligan* screened escort carriers and patrolled in search of enemy submarines during the important Lingayen landings 9 January. She remained off the Luzon coast until 17 January when she sailed for Leyte as part of the screen for six escort carriers. Arriving Leyte Gulf 22 January, she sailed for Ulithi the next day and arrived 25 January to prepare for the invasion of Iwo Jima.

Assigned duty as fire support and shore bombardment ship, *Halligan* departed Ulithi 10 February; and, after conducting simulated shore bombardment at Tinian, Marianas, she departed Saipan 12 February for Iwo Jima. On 17 February she served as lifeguard ship north of Iwo Jima during preinvasion air strikes. At dawn she sighted and took under fire a Japanese twin-engined bomber, which attacked the ship from the port bow. Hit repeatedly by accurate gunfire, the attacker dropped a large bomb which landed about 100 yards off the port bow and failed to explode. Burning as it passed over the ship, the enemy plane splashed more than a mile away.

Halligan closed to within 2,700 yards of the shore of Iwo Jima 19 February; and, as the first wave of marines headed for the beach, she joined other ships in providing a heavy support barrage. Her guns destroyed a Japanese shore battery, and she spent much of D-day pounding assigned target areas in support of the main landings. Later that day she joined other destroyers screening for escort carriers, and during the remainder of her duty off Iwo Jima she served as a screen and plane guard ship for offshore carrier operations.

One of the last destroyers to return from the Iwo Jima operation, *Halligan* arrived Ulithi in mid-March. She was soon underway again, this time as part of the

mighty fleet steaming for the invasion of Okinawa—gateway to the heart of the Japanese Empire. Assigned to a fire support unit, she arrived off the southwestern part of Okinawa 25 March and began patrolling between Okinawa and Kerama Retto. In addition she covered minesweepers during sweep operations through waters which had been heavily mined with irregular patterns.

Halligan continued her offshore patrols 26 March. At about 1835 a tremendous explosion rocked the ship, sending smoke and debris 200 feet in the air. The destroyer had hit a moored mine head on, exploding the forward magazines and blowing off the forward section of the ship, including the bridge, back to the forward stack. *PC-1128* and *LSM-194* arrived soon after the explosion to aid survivors. Ensign R. L. Gardner, the senior surviving officer who was uninjured organized rescue parties and directed the evacuation of the living to waiting rescue vessels. Finally, he gave the order to abandon ship as the smoking hulk drifted helplessly.

The gallant *Halligan*, veteran of so many important operations in the Pacific, lost one-half her crew of 300 in the disaster; and only 2 of her 21 officers survived. The abandoned destroyer drifted aground on Tokashiki, a small island west of Okinawa, the following day. There the hulk was further battered by pounding surf and enemy shore batteries. Her name was struck from the Navy List 28 April 1945, and in 1957 her hulk was donated to the government of the Ryukyu Islands.

Halligan received six battle stars for World War II service.

Hallmar III, see *YP-542*

Halloran

William Ignatius Halloran, born 23 July 1915, at Cleveland, Ohio, enlisted in the Naval Reserve as an apprentice seaman 14 August 1940. Commissioned Ensign 12 June 1941, he was assigned to Naval Air Station, San Pedro, Calif., and later to *Arizona*. Ens. Halloran was among those lost in *Arizona* at Pearl Harbor 7 December 1941.

(DE-305: dp. 1,140; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; cpl. 156; a. 3 3", 4 1.1", 9 20mm., 2 dct., 8 dep., 1 dep. (h.h.); cl. *Evarts*)

Halloran (DE-305) was laid down by Mare Island Navy Yard, Vallejo, Calif., 21 June 1943; launched 14 January 1944; sponsored by Mrs. L. J. Halloran, mother; and commissioned 27 May 1944, Lt. Comdr. J. G. Scripps in command.

After shakedown, *Halloran* departed California as a convoy escort 31 July arriving Pearl Harbor 9 August. Sailing for Eniwetok 16 August, she arrived 24 August and 2 days later she became part of the escort screen for fast oiler replenishment group steaming to the Western Pacific. Based at Manus, and later Ulithi, *Halloran* continued this duty until 29 November, helping to bring vital fuel to fleet units off Palau, Yap, and Luzon. While moored at Ulithi 20 November, she witnessed the torpedoing of oiler *Mississinewa* and in company with *Rall* searched the harbor fruitlessly for a suspected midget submarine.

From 5 to 7 December, *Halloran* screened two escort carriers transporting replacement aircraft to Manus, and 14 December she sailed to escort tankers to Eniwetok. She departed 19 December for Pearl Harbor, arriving Christmas Eve. *Halloran* was underway again 22 January 1945, this time as a unit of the escort screen for the amphibious task force designated to capture Iwo Jima. After patrolling the area around the training site at Saipan, she served as a barrier patrol ship during the actual landings 19 February. She continued this duty until 28 February when she departed with a convoy. Steaming via Saipan and Tulagi, she reached Espiritu Santo 15 March.

The far-steaming DE's next assignment was with the Okinawa assault forces. Departing Espiritu Santo 25 March, she arrived off Okinawa 9 April and began vital antisubmarine barrier patrols. She repelled six attacking Japanese aircraft 12 April, splashing one and damaging two others, and was narrowly missed by a torpedo 20 April. After performing various other duties, including assistance to the stricken *Isherwood* and escort duty to Saipan and back, she resumed her barrier patrols 30 May. A suicide plane attacked *Halloran* 21 June, but her gunners splashed it in the nick of time a scant 75 yards from the ship. However, an exploding bomb killed three men and caused considerable damage to hull and superstructure.

After repairs at Kerama Retto, *Halloran* patrolled off Ie Shima from 5 to 13 July, then assumed tactical command of an escort screen for LST's en route to the Philippines. After arriving Leyte Gulf 17 July, she patrolled at San Pedro Bay Leyte, and Lopez Bay, Luzon, prior to departing the Philippines for the United States 10 September.

Halloran arrived San Diego 29 September and sailed 3 days later for Charleston, S.C., where she arrived 11 October. She decommissioned at Charleston 2 November 1945. Her name was struck from the Navy List 28 November 1945, and she was sold 7 March 1947.

Holloran received three battle stars for World War II service.

Hallowell

(PF-72: dp. 1430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*; T. S2-S2-AQ1)

Hallowell (PF-72) was laid down as PG-180 under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I., 1 April 1943; reclassified PF-72 on 15 April 1943; renamed *Machias* 5 May 1943; renamed *Anguilla* by the British 10 June 1943; launched 14 July 1943; and sponsored by Mrs. John S. MacDonald. *Anguilla* was transferred under lend-lease to the United Kingdom 15 October 1943 as part of the 21-ship "Colony" class. She served as a patrol and escort craft until returned to the United States 31 May 1946. The frigate was sold to Pro-Industry Products of New York City 13 June 1947.

Hamlin, Cyrus, see *Lyra* (AK-101)

Halsey

William Frederick Halsey, Jr., born Elizabeth, N.J., 30 October 1882. He was appointed to the U.S. Naval Academy by President William McKinley in 1900 and graduated as a member of the class of 1904. After 2 years at sea, he was commissioned Ensign 2 February 1906. As a junior officer, the future Fleet Admiral served in battleships and destroyers, assuming his first command, *Dupont* in 1909. His valor and distinction during World War I earned him the Navy Cross.

During World War II Admiral Halsey became one of our most famous leaders as Commander of the legendary 3d Fleet. He exhibited a keen tactical mind that was brilliant and creative. He was the living example of his famous motto, "Hit hard, hit fast, hit often." Before the Pacific war was 2 months old, Admiral Halsey, flying his flag in *Enterprise*, gained the Presidential Unit Citation for his flagship and the Distinguished Service Medal for himself for his "audacious attack against the Marshall and Gilbert Islands on 31 January 1942."

The 3d Fleet was the greatest seapower force ever assembled and enabled a tactical change from the "hit and run" methods of the early stages of the Pacific war to direct confrontation and assaults. Admiral Halsey, with his flag in *New Jersey* and later *Missouri* forced the Japanese fleet back into their inner defenses; and then destroyed the major air and sea installations in the Jap-

anese home islands. He thus prevented any major ensuing offensive and hastened the cessation of hostilities in the Pacific theatre.

Fleet Admiral Halsey died 16 August 1959 at Fishers Island Country Club off the Connecticut shore, and was buried with full military honors at Arlington National Cemetery 20 August 1959. His name will long be revered by Americans who will proudly remember him as one of the greats.

(DLG-23: dp. 7,515(f.); l. 533'; b. 54'10"; s. 30 k.; epl. 377; a. 2 3", 2 Ter. mis., 1 ASROC, 6 tt.; cl. *Leahy*)

Halsey (DLG-23), a guided missile frigate, launched 15 January 1962 at San Francisco Naval Shipyard; sponsored by Mrs. Margaret Denham and Miss Jane Halsey, granddaughters of the late Fleet Admiral; commissioned 20 July 1963, Captain H. H. Anderson, USN, in command. The ceremonies included a eulogy by Fleet Admiral Chester W. Nimitz, USN, on Fleet Admiral Halsey's illustrious career.

Halsey departed San Francisco on 25 November 1963 for Dabob Bay and Carr Island to conduct ASW system alignment tests and acoustical noise surveys until 7 December. She arrived at her home port of San Diego on 11 December 1963.

Halsey was assigned to Destroyer Squadron 7, Destroyer Division 71 on 13 December, and participated in a special sea power demonstration for the Secretary of the Navy,

acting as screen commander from 15-18 December. She conducted her weapons qualification trials from 15 January 1964 to 14 February, and fired her first missiles on the Pacific Missile Range on 10 February 1964.

After a shakedown cruise from 16 March to 1 May, she returned to the San Francisco Naval Shipyard on 15 May 1964; and concluded her post-shakedown on 17 July 1964.

During her first years of active service, *Halsey* experimented with a unique system of internal organization combining all the aspects of the weapons systems and CIC under a combat officer; and separate hull and communications administration departments.

In 1966 *Halsey* was assigned to Destroyer Squadron 7, Destroyer Division 71, in the Pacific Fleet. On 2 July she left San Diego for Subic Bay, Philippines. By August she was conducting air-sea rescue and ASW operations in the South China Sea. During this period *Halsey* rescued some 16 airmen in two cruises in the Gulf of Tonkin. On 5 December the frigate departed Yokosuka, Japan, for the West Coast, arriving San Diego 21 December.

The first quarter of 1967 was spent in training cruises off the West Coast. On 10 April *Halsey* left San Diego for an overhaul period at San Francisco Bay Naval Shipyard that continued into August. By September *Halsey* was again involved in further exercises testing her vital capabilities.

Halsey, Delbert W., see *Delbert W. Halsey* (DE-310)

Halsey Powell

Halsey Powell was born 3 August 1883 in McAfee, Ky., and graduated from the Naval Academy in 1904. During the next years he served on such famous ships as *Kearsarge*, *Illinois*, and *Tennessee* and studied at the Naval War College, rising to the rank of Captain in 1926. Captain Powell was aide to the Secretary of the Navy in 1926 and Naval Attaché at Peking, 1927-29. After commanding *Pittsburgh* he returned to Washington, where he died 24 December 1936. Captain Powell was awarded the Distinguished Service Medal for outstanding performance as a destroyer division commander on convoy duty during World War I.

(DD-686: dp. 2050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 37; cpl. 319; a. 5 5", 10 40mm., 7 21mm., 10 21" tt., 6 dep., 2 dct.; cl. *Fletcher*)

Halsey Powell (DD-686) was launched by Bethlehem Steel Co., Staten Island, N.Y., 30 June 1943; sponsored by Mrs. Halsey Powell, widow of Captain Powell; and commissioned 25 October 1943, Comdr. W. T. McGarry in command.

Halsey Powell conducted her shakedown training off the East Coast, and sailed 20 January 1944 from Norfolk to join the Pacific Fleet. Arriving Pearl Harbor 12 February, the destroyer steamed to Majuro to escort tankers back to Hawaii, returning to the Marshalls in March for escort and patrol duty. As the islands fell to American amphibious troops, *Halsey Powell* and other ships protected the task force from air and submarine attack. The destroyer carried out a series of effective attacks on submarine I-32 23 March, and after running out of depth charges yielded to *Manlove* and *PC-1135* to complete the kill.

Following the Marshalls operation, *Halsey Powell* departed Pearl Harbor 30 May for rehearsals in connection with the upcoming Marianas invasions. She sortied with the assault force from Eniwetok 11 June, and as troops stormed ashore on Saipan 4 days later she took up fire support station off the beaches, and was an effective force in victory. In addition to screening, radar picket duties, and fire support for ground forces, *Halsey Powell* sank a net tender, a cargo ship and numerous small craft in the lagoon with her guns. The operation a success, she entered Saipan harbor 21 June, after the carrier forces had decimated the Japanese in the Battle of the Philippine Sea. She then steamed to Tinian, bombarding shore

positions, clearing the way for troops and screening through the invasion there 24 July. Following this she spent 2 weeks on screening and radar picket duty off Guam before returning to Eniwetok 22 August to join the fast carrier task force.

Halsey Powell sortied with Vice Admiral Mitscher's famous Task Force 38, 29 August. Operating for long periods at sea by underway refueling and replenishment, this powerful carrier force represented the ultimate in mobile striking power afloat. During September the carriers, screened by *Halsey Powell* and other destroyers, struck the Palaus and the Philippines, returning to Ulithi 1 October. Five days later the ships sailed on one of the most important operations of the long Pacific war. After air strikes on Okinawa the great task force turned to its real objective, the airfields on Formosa. The air battle raged 12-15 October, with *Halsey Powell* assisting in the splashing of many Japanese aircraft. At a cost of 3 damaged ships, the task force had driven off nearly a thousand enemy aircraft, downing over 500.

As the invasion of Leyte began, the desperate Japanese Navy moved with its remaining units into the Philippines. This three-pronged attack, launched almost without air power, precipitated the epochal Battle for Leyte Gulf. *Halsey Powell* screened Admiral Bogen's carriers during the strikes which made up one phase of the battle, the Battle of the Sibuyan Sea, 24 October. Battleship *Musashi* was sunk and Kurita's ships were delayed and confused. That night the bulk of TF-38 steamed north to meet another Japanese fleet, and in the Battle off Cape Engano next day another major victory was won. *Halsey Powell* picked up downed pilots 29-30 October and returned to Ulithi with the task force 9 November 1944.

During the remainder of 1944 TF-38 carried out heavy strikes against the Philippines and Formosa. The fleet sailed into the South China Sea 9-15 January to support the Lingayen Gulf operation, and the supporting ships fought off air attacks the carriers struck bases in China and Indochina. With *Ticonderoga* damaged by a kamikaze 21 January, *Halsey Powell* was assigned to escort her to Ulithi, where they arrived 24 January 1945.

The carrier task force departed again in February to attack Japan itself. *Halsey Powell* screened the carriers during this attack, in covering attacks for the Iwo Jima invasion 19 February, and later during more strikes on Japan. The destroyer shot down one attacking aircraft 16 February and assisted with many others. The veteran carrier groups returned 1 March to Ulithi, but were underway again 14 March to soften up Okinawa for the coming assault, and to strike more blows at Japan. On 20 March *Halsey Powell* was alongside *Hancock* when Japanese air-

USS *Halsey* (DLG-23)—When asked about kamikazes who had not heard of Japan's surrender, Halsey quipped, "Shoot 'Em Down in a Friendly Fashion."

craft attacked. As the destroyer was getting clear the aircraft overshot the carrier and crashed *Halsey Powell*. Her steering gear jammed but alert action with the engines averted a collision. Fires were put out and although 9 were killed and over 30 wounded in the attack the ship reached Ulithi 25 March.

Halsey Powell arrived San Pedro for battle repairs 8 May, but with the Pacific war reaching its climax sailed again for Pearl Harbor 19 July 1945. She arrived Eniwetok 17 August, 2 days after the surrender of Japan, and was present in Tokyo Bay for the formal surrender ceremonies 2 September. The ship then supported the occupation forces until departing 31 October for Puget Sound. *Halsey Powell* decommissioned 10 December 1946 at San Diego and was placed in the Pacific Reserve Fleet.

With the increased demands on the Navy as a result of the Korean conflict, *Halsey Powell* recommissioned 27 April 1951. After shakedown and training exercises the ship sailed for the familiar waters of the Far East 23 July from Long Beach, arriving Japan 16 August. Joining Task Force 77, the destroyer acted as plane guard and screening ship while the carrier planes kept up constant pressure on the Communist lines and shore installations. *Halsey Powell* continued these operations off the eastern coast of Korea until October, when she departed the nearly stabilized war zone for training off Okinawa. Late in the month she returned to take part in destructive bombardments of Suwon Dam, Wonsan, Hungnam, and other areas. Patrolling and screening duties continued until the ship sailed for the United States 20 February 1952.

Halsey Powell got underway for her second tour in Korea 4 October 1952, and in the next 7 months took part in shore bombardment and screening duties as United Nations naval strength continued to seal off North Korea from the sea. The destroyer returned to the United States 6 May 1953, and after training exercises out of San Diego sailed once more for Japan 26 December 1953.

During the next few years *Halsey Powell* made yearly cruises to the western Pacific, operating with Task Force 77 off Korea, patrolling the Formosa Strait, and engaging in tactical exercises with other units of the Pacific Fleet. In September–October 1958 the ship aided Nationalist Chinese operations in the Quemoy-Matsu crisis, convoying transports and standing by to deter attack by the Communist Chinese. Seapower was a decisive force in checking the spread of communism.

Halsey Powell's trim silhouette became familiar at many far eastern ports. She continued to alternate these important operations with the Seventh Fleet with training and readiness exercises off the west coast. In recent years this included practice cruises with NROTC midshipmen. *Halsey Powell* continued to be an important contributor to peace in the Far East as well as America's readiness at sea. During May–July 1962 the destroyer took part in important nuclear tests in the Pacific, and returned in 1963–64 to her regular pattern of deployments.

On 1 January 1965, *Halsey Powell* was assigned to Reserve Destroyer Squadron 27 with Long Beach as her home port. She operated as a Naval Reserve training ship through 1967, cruising between Vancouver, Canada, and Mazatlan, Mexico.

Halsey Powell received seven battle stars for World War II service and two for Korean service.

Halstead

(PF-76; dp. 1430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*; T. S2-S2-AQ1)

Halstead (PF-76), originally designated PG-184, was built under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-76 15 April 1943, renamed *Barbados*, and launched 27 August 1943, sponsored by Miss Anna M. Pacheco. *Barbados* was then completed and transferred to the United Kingdom under lend-lease 18 December 1943 as part of the 21-ship

"Colony" class. She served as a patrol and escort craft until being returned to the United States 15 April 1946. The frigate was sold to Sun Shipbuilding & Drydock Co., Chester, Pa., 30 October 1947, and subsequently scrapped.

Hamblen

A county in Tennessee.

(APA-114; dp. 8,100 (lt.); l. 492'; b. 69'6"; dr. 26'6"; s. 16 k.; cpl. 479; a. 2 5". 840mm.; cl. *Bayfield*; T. C3-S-A2)

Hamblen (APA-114) was launched under Maritime Commission contract by Ingalls Shipbuilding Corp., Pascagoula, Miss., 30 July 1944; sponsored by Mrs. Hugh B. Vickery; and commissioner after conversion 12 June 1945, Captain G. M. Wauchope in command.

After shakedown training out of Galveston, *Hamblen* loaded passengers and cargo at New Orleans and arrived San Juan, P.R., 25 July 1945. There she embarked a contingent of Puerto Rican army troops and steamed westward 26 July for Hawaii, via the Panama Canal. Shortly after her arrival 11 August, the war ended, and *Hamblen* took up the task of bringing replacement troops into the forward areas and transporting veterans back to the United States. Embarking Marines at Hilo, *Hamblen* sailed for Japan via Saipan, unloading her troops near Tokyo 22 September 1945. Subsequently, she made voyages to Lingayen Gulf and Manila bringing occupation troops into Japan, and departed Wakayama 5 November for Saipan. There *Hamblen* took more returnees on board and sailed eastward, arriving San Pedro, Calif., 24 November 1945.

Hamblen made one more voyage for "Magic Carpet," the giant operation which accomplished the task of bringing home American servicemen, arriving Okinawa 26 December and arriving Tacoma, Washington, 17 January 1946. The ship was designated for return to the Maritime Commission, released 23 January 1946, and sailed to the Canal Zone, where she arrived 22 February. *Hamblen* continued to Norfolk, where she decommissioned 1 May 1946. Six days later she was returned to the Maritime Commission, and sold in 1948 to Isthmian Lines, whom she serves as merchant ship *Steel Voyager*.

Hambleton

Samuel Hambleton was born in 1777 in Talbot County, Md. Entering the Navy as a Purser 6 December 1806, he served as Acting Lieutenant in *Laurencee* during the battle of Lake Erie in the War of 1812. Commodore Oliver Hazard Perry commended Hambleton for gallant conduct in encouraging his men and personally working a gun until severely wounded. Until 1832 Purser Hambleton served actively in the Navy, attached to *Java* and *Columbus* during Mediterranean cruises and to *John Adams* and *Eric* in the West Indies. With the exception of a tour of duty at the Philadelphia Navy Yard from 1843 to 1845, Hambleton remained on leave or waiting order from 1832 until his death 17 January 1851 in Talbot County.

(DD-455; dp. 2,200; l. 347'11"; b. 36'1"; dr. 15'8"; s. 37 k.; cpl. 272; a. 4 5", 4 1.1", 5 20 mm., 5 21"tt., 2 dct., 6 dp.; cl. *Gleaves*)

Hambleton (DD-455) was laid down by the Federal Shipbuilding & Drydock Co., Kearney, N.J., 16 December 1940, launched 26 September 1941; sponsored by Mrs. Nannie Hambleton Martin, great grandniece of Samuel Hambleton; and commissioned 22 December 1941, Cmdr. Forrest Close in command.

Departing Norfolk 31 January 1942, in company with her sister ship *Emmons*, *Hambleton* began a shakedown, unique in wartime, that took her through the Panama Canal to Callao, Peru; Valparaiso, Chile; Guayaquil, Ecuador; Cartagena, Colombia; and Balboa, C.Z. She

was diverted for antisubmarine search north of Cuba in early March and on 15 March 1942 rescued six men on a life raft who had survived the torpedoing of SS *Ceibra*. After antisubmarine patrol along the East Coast and intensive training in Casco Bay, Maine, *Hambleton* sailed as escort to *Augusta* and *Ranger* 14 April. Reaching Africa's Gold Coast 10 May, *Ranger* launched her cargo of P-40 fighter planes for the North African fighting and headed back to the West Indies. In heavy rain and low visibility 17 May *Hambleton* collided with *Ellyson* (DD-454) and had to proceed to San Juan and then Charleston for repairs.

Hambleton joined a fast troop transport out of New York 1 July, sailed for Ireland and arrived 11 July. Immediately she reported for duty with the joint British and American Naval Forces in Europe. With Royal Navy personnel on board as communications liaison, she conducted antisubmarine patrols and served as plane guard for HMS *Duke of York* through August. She then returned to the United States for duty along the coast in preparation for Operation "Torch," the forthcoming invasion of North Africa.

Hambleton joined the invasion fleet 28 October; and, as part of Admiral H. K. Hewitt's Western Naval Task Force, she screened the carrier *Sangamon* during operations against airfields in French Morocco on D-day, 8 November. As she lay anchored by *Winooski* off Fedala in the evening of 11 November 1942, *Hambleton* was struck amidships on the port side by a U-boat torpedo. With all power gone, the destroyer took a 12 degree list to starboard as her damage control parties worked swiftly to jettison topside weights and shore up weakened bulkheads. The crippled ship was towed to Casablanca for temporary repairs. Seabees there cut the ship in two, removed a 40-foot section of her damaged hull, then joined the two remaining halves together. Escorted by a tug, *Hambleton* reached Boston 28 June for permanent repairs.

After a second shakedown in the Caribbean and training along the East Coast, *Hambleton* escorted a convoy to Oran in April 1944, and began to prepare for her role in the Normandy Invasion. Operating in the Western Mediterranean with seven other destroyers and British scout planes, she sank *U-616* on 17 May after an intensive 4-day pursuit of the German raider. From the Mediterranean *Hambleton* sailed to Plymouth, England, staging area for the epochal invasion. She escorted a large convoy of LST's to the landing areas on 7 June D-day plus 1, and remained off Omaha Beach for critical shore bombardment and screening duties. In the early morning hours of 9 June *Hambleton's* radar picked up several contacts, soon determined to be Nazi E-boats. Her guns blazing, *Hambleton* set out after the enemy. In a 4-hour running gun battle she sank one and severely damaged another of the five German boats. After returning for provisions at Porlant, England, *Hambleton* was back on the line for the bombardment of Cherbourg 25 June.

Hambleton departed Belfast, Ireland, 4 July and steamed to the Mediterranean, touching Oran, Algeria, 10 July and reaching Naples, Italy, 15 July. On 11 August she participated in the bombardment of shore positions on the southern coast of France prior to Operation "Anvil," the invasion of that vital area. *Hambleton* remained in the Mediterranean for patrol and screening duty until sailing for Boston 25 October. Arriving Boston 8 November, the battle-training destroyer was converted into a high speed mine sweeper and redesignated DMS-20 on 15 November. *Hambleton* emerged from the yard 19 December and sailed for the Pacific 30 December. Steaming via San Diego, Pearl Harbor, and Eniwetok, she arrived Ulithi 9 March 1945, to prepare for the invasion of Okinawa, the largest amphibious assault in the Pacific. Departing 19 March, she arrived off Okinawa, the gateway to the heart of the Japanese Empire, 23 March. Prior to the invasion 1 April, she cleared channels and anchorages for the 1,200 ships taking part in the invasion. During the long campaign that followed she operated off Okinawa to sweep, screen, patrol, and provide fire support. She was under almost constant attack from the air. Al-

though, damaged 3 April by a kamikaze which splashed close aboard her port quarter, *Hambleton* remained on duty as part of the mighty fleet that had come to the Ryukyus to stay, despite all the Japanese could unleash.

With Okinawa nearly secured, *Hambleton* and her sister ships deployed to the East China Sea in mid-July to begin massive sweeping of this area. In a month they cleared more than 600 miles from the 7,200 square mile area in one of the largest sweep operations yet launched. *Hambleton* was in the East China Sea for a second such mission when Japanese acceptance of peace terms was announced 15 August. Joining Admiral Halsey's 3d Fleet off Tokyo, *Hambleton* steamed into Tokyo Bay 28 August, to clear the way for the occupation forces. In the next few months *Hambleton* swept a total of 184 mines from Japanese minefields in various straits and channels. During this period she rode out four typhoons, one of which battered her with 60-foot waves. Departing Japanese waters 20 November, *Hambleton* steamed via Eniwetok, Pearl Harbor, and San Diego to Norfolk arriving late December.

Based at Charleston, S.C., the veteran minesweeper maintained an operational pattern that kept her prepared to meet our nation's needs in the emerging cold war struggle. During the next decade *Hambleton* participated in fleet and tactical exercises in the Caribbean and along the East Coast. In 1949, 1952, and 1954 she deployed to the Mediterranean and operated with the mighty 6th Fleet from the shores of North Africa to the turbulent Middle East while helping to preserve freedom and maintain peace in that unsettled area of the world.

After returning to Charleston from her third Mediterranean cruise 6 July 1954, *Hambleton* decommissioned 15 January 1955, and entered the Atlantic Reserve Fleet. She was reclassified DD-455 the same day. At present she is berthed at Orange, Tex.

Hambleton received seven battle stars for World War II service.

Hamilton

The first *Hamilton* was named for Alexander Hamilton. See *Alexander Hamilton* for biography. The second *Hamilton* was named for Archibald Hamilton.

Archibald Hamilton was the son of Paul Hamilton, Secretary of the Navy from 7 March 1809 to 31 December 1812. Archibald was appointed Midshipman 18 May 1809 and assigned to work with a new kind of hollow shot needed by frigate *President*. He next sailed for Europe in *John Adams* 31 January 1811 carrying dispatches for American officers in the Mediterranean. On his return to the United States, Archibald Hamilton was assigned to *United States* on which he won high commendation from his commanding officer, Commodore Stephen Decatur, for gallantry in action during the capture of British frigate *Macedonian*, 25 October 1812. Decatur selected him to bear the captured British flags to Washington.

Appointed Acting Lieutenant 21 December 1812 and Lieutenant 24 July 1813, Hamilton served with distinction throughout the War of 1812 only to be killed shortly after the Treaty of Ghent had formally ended the war. Because of the slow communications of the day word of peace had not reached New York by 15 January 1815 when frigate *President*, carrying Hamilton, ran the blockade out of that port. The next day British men-of-war *Endymion*, *Pomone* and *Tenedos* overtook and captured *President* after a long and bloody running fight in which Hamilton was killed.

I

(Sch. : t. 112; cpl. 50; a, 1 32-pdr., 1 24-pdr., 8 6-pdr.)

The first *Hamilton*, formerly the merchant ship *Diana*, was a schooner of 10 guns in Commodore Chauncey's squadron on Lake Ontario. She was under the command of Lt. H. McPherson. During the War of 1812 her action included attacks on Kings'ton, York, and Fort George. *Hamilton* along with the remainder of the squad-

ron gave excellent assault cover to enable American forces to land at Fort George. On 8 August 1813, a heavy squall capsized *Hamilton* and a sister ship *Scourge*.

II

(DD-141 : dp. 1,090; l. 314'5"; b. 31'9"; dr. 8'8"; s. 35 k.; cpl. 113; a. 4 4", 3.30 cal., 12 21" tt.; cl. *Wickes*)

Hamilton (DD-141) was launched 15 January 1919 by the Mare Island Navy Shipyard; sponsored by Miss Dolly Hamilton Hawkins, great-grand-niece of Archibald Hamilton; and commissioned 7 November 1919, Lt. Comdr. R. G. Coman in command.

Based at San Diego, *Hamilton* participated in battle practice and maneuvers along the California coast with Destroyer Squadron 17. In the summer of 1920 she also took part in torpedo and smoke screen operations in Hawaii. Battle practice and other readiness operations ranging across the Pacific to Hawaii continued until *Hamilton* decommissioned at San Diego 20 July 1922.

Hamilton recommissioned 20 January 1930 and, after shakedown, reached her new home port, Norfolk, 26 November. She served with the Scouting Force, operating along the East Coast throughout 1931, and then returned to San Diego in January 1932. After a year of plane guard duty and battle exercises along the California coast, *Hamilton* again shifted to the East Coast, reaching Norfolk 29 January 1933. Based at Newport, R.I., she served with the Scouting Force in local operations and exercises until 1939. When war broke in Europe in the fall of that year, *Hamilton* joined other four-stackers on the Grand Banks Patrol, which sent American ships as far north as Iceland and Greenland to protect their own and neutral shipping. *Hamilton* continued this duty until converted to a fast minesweeper in June 1941. Reclassified DMS-18 on 17 October 1941, she resumed patrol duty along the East Coast and into the North Atlantic.

When America was catapulted into the war 7 December 1941, *Hamilton's* pace accelerated greatly. Wartime duties now took the old flush-decker on coastal convoys from New York through U-boat infested waters as far south as the Canal Zone.

The Caribbean and the waters off Cape Hatteras were particularly rich ground for the Nazi marauders, and *Hamilton* more than once attacked U-boats sighted on the surface or detected by sound contacts. On 9 June 1942 *Hamilton* rescued 39 survivors of destroyer *Gannet*, torpedoed just north of Bermuda.

The shifting tide of war drew *Hamilton* from the coastal convey route in the fall of 1942 as she became part of "Operation Torch," the Allied invasion of North Africa. *Hamilton* sailed for North Africa 24 October with Rear Admiral H. K. Hewitt's Task Force 34, a part of America's giant overseas amphibious thrust. Two weeks later, she cruised off the Moroccan coast providing antisubmarine protection and fire support for the first waves of invasion barges as the Allies stormed ashore at Casablanca, Oran, and Algiers 8 November 1942.

Hamilton remained along the North African shore on minesweeping and escort duty out of Casablanca until December when she sailed for the Brooklyn Navy Yard, arriving 26 December. The following year saw *Hamilton* engaged primarily in coastal convoy duty, guiding and protecting merchantmen as they threaded their perilous way through German submarine packs from Iceland to the Caribbean.

Then as 1943 waned, the ebb and flow of war once again drew *Hamilton* from home waters, and sent her into the fiercely raging Pacific war. Departing Norfolk 3 December 1943, *Hamilton* transited the Panama Canal 5 days later and reached San Diego 16 December. The long giant steps across the Pacific had begun to accelerate, and *Hamilton* was soon to have her first taste of battle in the crucial Marshall Islands campaign. From San Diego she steamed to Pearl Harbor and, after a brief training period, sailed for Kwajalein Island, a key target in the Marshalls. As the Marines stormed ashore there 31 January 1944, *Hamilton* steamed in the area to screen

transports and provide the fire support that made it possible to land and stay.

After the successful conclusion of that invasion, *Hamilton* retired to Noumea, New Caledonia, to prepare for the invasion of the Admiralty Islands. At Noumea, *Hamilton* joined forces with three other flush-deckers converted to fast minesweepers—*Hovey*, *Long*, and *Palmer*—to form an important preliminary sweep unit. It was the hazardous and vital mission of these ships to enter enemy harbors three to five days before D-day to clear out mines and provide safe anchorage for the invasion force. The toll of these operations, conducted before enemy shore batteries had been taken out, was high. Of her original unit, only *Hamilton* survived the war.

Under unceasing enemy fire, *Hamilton* and her group entered Seeadler Harbor, Admiralty Islands, 2 March 1944 to begin sweeping operations. After the invasion was launched, she remained in the area screening transports and patrolling on ASW duty until early April when she returned to Noumea to prepare for the invasion of Aitape. After sweeping operations there before the 22 April invasion, *Hamilton* served on general sweeping duty in the Solomons and then readied for the Mariana campaign.

Entering Saipan Harbor 13 June, *Hamilton* helped clear the way for the invasion. The struggle for Saipan was important not only in itself, but also in that it precipitated the Battle of the Philippine Sea, the far-spreading battle known to the Navy as the "Marianas Turkey Shoot" because of the number of Japanese planes shot down during the intensive engagement fought on 19 and 20 June. American carrier planes and ships under the command of the famous Admirals R. A. Spruance and Marc A. Mitscher decimated Japan's air arm, downing 395 carrier planes, and 31 float planes. In addition American submarines *Cavalla* and *Albacore* sank two of Japan's few remaining carriers, *Shokaku* and *Taiho*, while carrier-based planes chalked up a third, *Hiyo*. After this decisive battle had crippled them, the Japanese high command thoroughly understood that the war was lost, and that now they could only delay the end.

The conquest of Saipan was followed by an equally hard-fought struggle for Guam. The day organized enemy resistance on Saipan ended, *Hamilton* sailed from Eniwetok 9 July to take part in the preliminary bombardment and sweeping activities at Guam. This time a long period on the firing line preceded *Hamilton's* entrance into the harbor. Then 3 days before D-day, 21 July, she started to sweep the harbor. After screening transports in the retirement area, *Hamilton* sailed to Pearl Harbor for repairs.

Hamilton's next tour of hazardous mine sweeping duty fell at Peleliu Island. Arriving off the Palau 12 September 1944, *Hamilton* joined her unit and proceeded through several heavily mined channels. In Kossol Passage, the converted destroyers exploded 116 mines. For destroying three extensive mine fields, which the Japanese had hoped would ward off or severely damage the invasion force, *Hamilton* and the other minesweepers received the coveted Navy Unit Commendation. Then, after duty in the transport screen, she escorted convoys from the staging areas to the Palau to prepare for the assault on the Philippine Islands.

She departed Manus 10 October and entered Leyte Gulf on the 17th. Three days before Army divisions came ashore, *Hamilton* swept the channels around Dinagat Island and Looc Bay to clear the way to the invasion beaches. To add to the usual turmoil of battle, the fleet as a whole was under almost constant air attack. Then the Japanese made the one final dramatic but futile effort to regain control over the Pacific seas and repel the Americans from the Philippines. In this bitterly fought effort, the Battle of Leyte Gulf, the already depleted Imperial Navy was virtually annihilated. As the battle raged 23 to 26 October, American submarines, planes and surface ships sank three battleships, four carriers, six heavy and four light cruisers, and nine destroyers. American losses were two escort carriers, a light carrier, and

three destroyers. This battle marked the end of Japanese sea power as an important threat. The fleet had cleared the way for the final assaults leading into Japan.

Arriving at Manus, Admiralty Islands, 31 October, *Hamilton* underwent availability and repairs and, once more ready for battle, sailed 23 December to prepare the way for the invasion of Lingayen Gulf. As the minesweepers steamed through the channel 6 January 1945, wave after wave of kamikazes attacked as the Japanese suicidally hurled themselves at the American fleet, bent on destroying it no matter what the cost. *Hamilton*, emerged from the desperate kamikaze attacks unscathed, although she saw other ships struck time and again by the "divine wind" and other air attacks. After the invasion forces landed at Lingayen Gulf 9 January, *Hamilton* remained as a transport screen and escort until 1 February when she sailed for Saipan.

From Saipan the gallant veteran ship again steamed into battle, this time appearing off Iwo Jima, the rock-bound Japanese island which was to cost America so dearly. *Hamilton* recorded no casualties during sweeping operations which began 16 February, but she had to aid her sister-ship *Gamble* left powerless by a direct bomb hit on the 18th. In addition to helping the wounded ship fight myriad fires, *Hamilton* took on board and care for the more seriously injured sailors. After marines stormed ashore on Iwo Jima 19 February, *Hamilton* patrolled off the fortress island until 27 February. The four-stacker then returned to Iwo Jima as a convoy escort 7 March. Three days later *Hamilton* sailed from the battle and from the Pacific War. Steaming for Eniwetok, she changed course to rescue 11 men from a downed B-29 11 March.

Hamilton reached Pearl Harbor via Eniwetok 25 March and, after a brief period of training, headed home. As she sailed under the Golden Gate Bridge 8 April, the tireless destroyer ended over 100,000 hard miles of steaming in the Pacific struggle. Scheduled for overhaul and modernization, she went into drydock at Richmond, Calif.; but she was subsequently reclassified AG-111 (miscellaneous auxiliary) 6 May 1945 and taken out of drydock. The faithful four-stacker spent the few remaining months of the war participating in experimental minesweeping work along the California coast out of Santa Barbara. Two weeks before the Japanese surrender, *Hamilton* sailed to the destroyer base at San Diego, where she decommissioned 16 October 1945. Her hulk was sold to Hugo Neu of New York City for scrapping 21 November 1946.

Hamilton earned nine battle stars for World War II service.

Hamilton County

Counties in Florida, Illinois, Indiana, Iowa, Kansas, Nebraska, New York, Ohio, Tennessee, and Texas.

(LST-802: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 268; a. 8 40mm., 12 20mm.; cl. LST-511)

LST-802 was laid down by Jeffersonville Boat & Machine Co., Jeffersonville, Ind., 2 September 1944; launched 19 October 1944; sponsored by Mrs. Dolores Alberts; and commissioned 13 November, Lt. K. J. Adams in command.

Following shakedown off Florida, LST-802 loaded quonset hut sections at Gulfport, Miss., and departed New Orleans 18 December. Steaming via the Canal Zone and

San Francisco, she arrived Pearl Harbor 4 February 1945. After unloading, she sailed 2 weeks later for the Solomon Islands, arriving Guadalcanal 7 March.

LST-802 departed Guadalcanal on the 18th; transported Marines to Guam; then arrived Saipan 3 April to prepare for the Okinawa invasion. She embarked over 150 Seabees at Saipan and sailed on the 12th for the Ryukyu Islands.

Arriving off Chimu Wan, Okinawa Shima 17 April she unloaded men and equipment to strengthen the beachhead and facilitate the flow of supplies to the troops. For the remainder of World War II LST-802 shuttled troops and equipment between Okinawa and the Philippines. After the Japanese surrender she remained in the Far East with the occupation forces operating out of Japan, Okinawa, and the Philippines to various Pacific islands until she decommissioned at Guam 21 July 1946.

After communist aggression against South Korea, the United States met this challenge to freedom by sending American forces to aid the embattled people. To assist in the transportation of cargo and troops, LST-802 recommissioned at Yokosuka 30 August 1950, Lt. Vladimir Fedorowicz in command. Sailing to Kobe, she embarked units of the 1st Marine Division, for the daring invasion of Inchon; then departing Japan 10 September, she arrived off Blue Beach, Inchon 5 days later. The Marines stormed ashore, and the well planned, and well coordinated invasion caused General Douglas MacArthur's famous remark "The Navy and Marines have never shone more brightly than this morning." LST-802 continued loading equipment and supplies until 15 October when she joined a task group for Wonson.

Following a month of cargo operations at Wonson, she returned to Yokosuka for replenishment. In mid December she was enroute to Hungnam, where she assisted in the evacuation of United States and South Korean Forces. During January 1951 she shuttled troops and prisoners-of-war along the Korean coast, then on 20 March she departed Yokosuka for a stateside overhaul.

Returning to the war zone 8 months later, LST-802 resumed cargo and troop transport duty between Japan and Korea. From November 1951 to June 1952, the veteran landing ship performed cargo operations, evacuation services, and harbor control duties in the vicinity of Korea.

Following another brief period in the United States, LST-802 resumed operations in the Far East, just as the Korean conflict ended; and remained there until February 1954. One year later she was again operating in the Far East during a crisis over the Tachen Islands. When communist artillery threatened Nationalist Chinese positions on the islands, the veteran LST and other 7th Fleet units evacuated forces and supplies to Formosa.

LST-802 was named *Hamilton County* 1 July 1955, then operated off the California coast from August 1955 to August 1956. After returning to the Western Pacific in mid October 1956, *Hamilton County* was assigned to Mine Squadron 3, U.S. Pacific Fleet. Equipped with helicopter, she performed in mine warfare exercises and provided replenishment for minesweepers off Okinawa, Korea, and Japan for the next four years. *Hamilton County* decommissioned at Sasebo 30 June 1960, and was loaned to Japan under the Military Assistance Program. She now serves the Japanese Self-Defense Forces as *Hayatomo* (MST-461).

LST-802 received one battle star for World War II service and seven stars for Korean service.

Hamlin

A sound on the coast of South Carolina north of Charleston.

(CVE-15: dp. 11,000; l. 496'; b. 69'6"; d. 23'¼"; s. 18 k.; cpl. 890; a. 3 4" cl. *Bogue*)

Hamlin (CVE-15) was one of a large group of escort carriers built on Maritime Commission C-3 hulls and

transferred to the British under lend-lease during World War II. Launched by Western Pipe & Steel Co., San Francisco, Calif., 5 March 1942, as AVG-15, aircraft escort vessel, she was sponsored by Mrs. William H. Shea. Her designation was changed to ACV-15, auxiliary aircraft carrier, 20 August 1942, and she was acquired and simultaneously transferred to the United Kingdom 21 December 1942. *Hamlin's* designation was changed to CVE-15, escort aircraft carrier, 15 July 1943.

Renamed HMS *Stalker*, the escort carrier played a vital part in allied operations in the Atlantic. She participated in the Salerno landings in September 1943, providing effective on the spot air support for assault forces. *Stalker* also took part in the important landings in southern France in August 1944. Returned to the United States 29 December 1945, she was struck from the Navy List 20 March 1946 and sold to Waterman Steamship Corp. of Mobile, Ala., 18 December 1946. Waterman in turn sold her to The Netherlands in August 1947 where she was converted to a merchant ship and now sails to the Far East as *Riouw*.

I

(AV-15: dp. 8,000; l. 492'; b. 69'6"; dr. 23'9"; s. 19 k.; cpl. 1,077; a. 2 5"; cl. *Kenneth Whiting*)

Hamlin (AV-15) was launched by Todd-Pacific Shipyards, Inc., Tacoma, Wash., 11 January 1944; sponsored by Miss Constance Taffinder, daughter of Rear Admiral S. A. Taffinder; and commissioned 26 June 1944, Captain G. A. McLean in command.

Hamlin conducted shakedown drills off California until 16 August 1944 when she departed San Pedro for the Pacific. Arrived Pearl Harbor 24 August, the ship loaded aviation gasoline and supplies and got underway 29 August for Eniwetok. She unloaded cargo and passengers there and continued to recently won Saipan, arriving 11 September to take up her plane-tending duties. During this period, seaplanes tended by *Hamlin* were making important contributions to the Pacific fighting by engaging in reconnaissance, hunter-killer operations against submarines, and air coverage of fleet cripples. She moved to Ulithi 11 October and back to Saipan anchorage 29 December 1944, all the time continuing her vital support of seaplane operations. *Hamlin's* aircraft protected the cruisers *Houston* and *Reno*, damaged 14 October off Luzon, and flew photographic missions and rescue flights as the Navy pressed home the ever-mounting attack on Japanese-held territory.

The operation next on her schedule was Iwo Jima, necessary to safeguard lines of communication and provide a base from which fighters could protect B-29's in bombing missions over Japan. *Hamlin* proceeded 15 February to Guam for fuel oil and two days later departed for Iwo Jima. She arrived 2 days after this historic and bitterly contested landing had begun, and with two other tenders established a floating seaplane base from which search and rescue missions were performed.

Debris and off-shore gunfire prevented the establishment of the seadrome until 24 February, and *Hamlin* worked under the handicap of large swells and congestion of the sea areas around Iwo Jima. The ship also experienced numerous air raids during this operation, but suffered no damage. She got underway for Saipan 8 March 1945, and after another voyage to Guam, she returned to prepare for the Okinawa operation and the largest seaplane tending job of the war.

Hamlin sailed 23 March from Saipan for Okinawa, the first step prior to the home islands in the long campaign across the Pacific. Her commander was designated Commander, Seaplane Base Group. The tenders arrived Kerama Retto, west of Okinawa, 28 March, the day after it had been secured and 4 days before the main landings on Okinawa. During the operation, *Hamlin's* planes provided long-range search, antisubmarine patrols, and air-sea rescue services, even providing aviation gasoline and luboil to battleships and cruisers. Her work was performed amid nearly constant air attack by Japanese suicide planes, and, though many ships in the anchorage were

damaged by repeated attacks, *Hamlin* fought off all attacks without injury.

The tender group shifted its base of operations to Chimu Wan, Okinawa, 11 July. After the surrender of Japan, *Hamlin* and other tenders got underway to assist in the occupation 16 August, anchoring in Yokosuka harbor 30 August. She began tending seaplanes on patrol over Japanese home waters 2 September, and was anchored in the harbor when the historic surrender was signed on board *Missouri*.

Hamlin returned to California following a short period in Japan and decommissioned at San Diego 15 January 1947. She went to reserve with the San Diego Group and remained there until September 1962 when she was transferred to the Maritime Administration, under Navy ownership, and placed in the National Defense Reserve Fleet, Suisun Bay, Calif. She was struck from the Navy List 1 July 1963.

Hamlin received three battle stars for service in World War II.

Hammann

Charles Hazeltine Hammann was born in Baltimore, Md., 16 March 1892, and was appointed to the provisional rank of Ensign, Naval Reserve, Flying Corps, 14 October 1918, while serving overseas. Ens. Hammann was awarded the Medal of Honor, when, as a pilot of a seaplane 21 August 1918, off the coast of Italy, he dived down and landed next to a downed fellowpilot, brought him aboard, and although his plane was not designed for the double load, brought him to safety amid constant danger of attack by Austrian planes. Hazeltine was killed while on active duty at Langley Field, Va., 14 June 1919.

I

(DD-412; dp. 1620; l. 348' 4"; b. 36'1"; dr. 11'5"; s. 35 k.; cpl. 192; a. 4 5", 8 21" tt.; cl. *Sims*)

The first *Hammann* (DD-412) was launched by the Federal Shipbuilding & Drydock Co., Kearny, N.J., 4 February 1939; sponsored by Miss Lillian Hammann; and commissioned 11 August 1939, Comdr. A. E. True in command.

Hammann conducted shakedown off the East Coast and for the next 2 years participated in training and readiness operations off both coasts. At Iceland 7 December 1941 when war began, she quickly returned to Norfolk, Va., for fuel and supplies, and departed 6 January 1942 for the Pacific. She arrived San Francisco 22 January via the Panama Canal and sailed 25 February with Vice Admiral Fletcher's Task Force 17 for action in the South Pacific.

The destroyer took part in training maneuvers in the New Caledonia area during early March, and on the 27th the Task Force departed for the Coral Sea. *Hammann* acted as screening ship and plane guard for *Lexington*. Returning to Tongatabu 20 April, the Task Force sortied again into the Coral Sea 27 April for a surprise air raid on Japanese invasion forces on Tulagi.

While screening the carriers during the air raids of 4 May, *Hammann* was directed to rescue two fighter pilots downed on Guadalcanal, some 40 miles to the north. Steaming at full speed, the destroyer arrived at dusk and sighted a marker on the beach, which proved to be a parachute. The motor whaleboat was put over the side, but dangerous surf prevented it from landing. Consequently, the pilots were recovered with the use of lines from the boat. This accomplished, an attempt was made to destroy the wreckage of the aircraft, but the rough water made this impossible; *Hammann* returned to *Lexington's* screen from this successful operation that night.

Four days later, 8 May, came the main action of the Battle of the Coral Sea, the first naval engagement fought entirely on both sides between aircraft and ships. During the exchange of air attacks, *Hammann* screened the carriers, firing furiously at Japanese torpedo planes as they attacked. Just as the torpedo planes retired, dive bombers appeared, one exploding a bomb a scant 200 yards off *Hammann's* starboard bow. *Lexington*, which had

taken two devastating torpedo hits to port, was first thought to be under control, but a large internal explosion shortly before 1300, followed later by others, sealed her fate. As the order was given to abandon ship, *Hammann*, *Morris*, and *Anderson* stood by to receive survivors. The destroyer picked up nearly 500 men from the water before the gallant "Lady Lex" went down the night of 8 May, torpedoed by destroyer *Phelps*.

The Battle of the Coral Sea, that checked the Japanese advance to the southeast was over, but new demands called far to the north. Under urgent orders from Admiral Nimitz to meet a new threat, *Hammann* steamed with the Task Force at high speed to Pearl Harbor, arriving 27 May. Working feverishly to repair and replenish the force got underway 30 May to take part in one of the decisive battles of history, Midway. Steaming to meet the overwhelming Japanese fleet, the carriers with their protecting destroyers and cruisers, sped to the northeast just in time. No better example exists in the war of the flexibility and mobility of naval power and the great results that can follow.

During the great air battle of 4 June, *Hammann* screened *Yorktown*, helping to shoot down many of the attacking aircraft. But the carrier took two torpedo hits and, listing heavily, was abandoned that afternoon. *Hammann* again picked up survivors in the water, including *Yorktown's* skipper, Captain Buckmaster, and transferred them to the larger ships. Next morning, however, efforts were mounted to save the stricken carrier, a skeleton crew returned on board, and attempts were made to tow her to safety. *Hammann* came alongside 6 June to transfer a damage control party. The destroyer then lay alongside, providing hoses and water for firefighting, power, and other services while tied up next to *Yorktown*.

The salvage party was making excellent progress when the protective screen was penetrated by a Japanese submarine after noon on 6 June. Four torpedoes were loosed; two missed, one passed under *Hammann* and hit *Yorktown*, and the fourth hit the destroyer amidships, breaking her back.

As the debris from the explosion rained down and the ships lurched apart, it was apparent that the valiant *Hammann* was doomed. As she settled with sickening quickness, life rafts were lowered and rescue efforts began by ships in company. The ship sank in just 4 minutes, and following the sinking a violent underwater explosion caused many deaths in the water, bringing the toll in dead to over 80. Survivors were taken on board *Benham* and *Balch*.

Hammann thus was lost after taking a distinguished part in two of the most important Pacific battles, turning points in the war and history. The action at Midway was a victory of intelligence bravely applied by Admiral Nimitz and his Fleet, the first really smashing defeat inflicted on the Japanese.

Hammann received two battle stars for service in World War II.

II

(DE-131: dp. 1200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 8 dep., 2 det., 1 dep. (h.h.); cl. *Edsall*)

The second *Hammann* (DE-131), formerly *Langley*, was named 1 August 1942 after the first *Hammann*; launched by Consolidated Steel Corp., Orange, Tex., 13 December 1942; sponsored by Mrs. Lillian Rohde; and commissioned 17 May 1943, Lt. Comdr. R. D. deKay in command.

Hammann departed 5 June for Bermuda and shakedown operations, returning to Philadelphia 6 July. From there the ship sailed to Norfolk and on 13 July began the first of her many transatlantic convoy voyages. Her first four passages to Casablanca, Morocco, covered the period 13 July 1943 to 10 March 1944. During this period she screened convoys in company with escort carriers. She made several attacks on submarine contacts, but recorded no kills.

Between 28 March 1944 and 29 November 1944 the busy ship made no less than six more voyages successfully con-

voying to and from Europe, stopping at ports in Northern Ireland. Starting 4 January the ship changed her convoy destination to Liverpool and made four more voyages protecting the vital flow of supplies for the end of the European war. During one passage, 2 March 1945, *Hammann* was called upon to aid one of the ships in the convoy, *Lone Jack*, after a torpedo attack. The destroyer escort picked up 70 survivors and sent salvage parties aboard the stricken ship to keep her afloat.

Her duties in the Atlantic completed, *Hammann* departed New York 7 July 1945 for training operations in the Guantanamo Bay, Cuba, area, departing 24 July for California. She arrived San Diego via the Panama Canal 4 August, and from there proceeded to Pearl Harbor. As the Pacific war was then over, the destroyer escort took on passengers at Pearl Harbor for California, and after discharging them sailed through the Canal again to Charleston, S.C., arriving 25 September. She decommissioned at Green Cove Springs, Fla., 24 October 1945, and was placed in reserve. She was later moved to the Texas Group at Orange, where she remains out of commission in reserve.

Hammerberg

Owen Francis Patrick Hammerberg was born at Daggett, Mich., 31 May, 1920. He enlisted in the Navy 16 June 1941 and subsequently served in battleship *Idaho* and submarine chaser *Advent*. In 1941 he underwent instruction at the Deep Sea Diving School, Washington, D.C., and was assigned duty with the Salvage Unit under Service Force, Pacific Fleet. He lost his life during rescue operations at Pearl Harbor 17 February 1945. Disregarding all personal danger, he rescued one diver who had been trapped in a cave-in of steel wreckage while tunneling under a sunken LST. After this rescue, Hammerberg went even farther under the buried hulk and, while rescuing a second diver, was pinned down by another cave-in and perished. Boatswain's Mate Hammerberg was posthumously awarded the Medal of Honor.

(DE-1015: dp. 1,340; l. 315'; b. 37'; dr. 18'; s. 25 k.; cpl. 206; a. 3 3", 1 det., 6 dep.; cl. *Dealey*)

Hammerberg (DE-1015) was launched 20 August 1954 by the Bath Iron Works Corp., Bath, Maine; sponsored by Mrs. Elizabeth Moss, mother; and commissioned 2 March 1955, Lt. Comdr. Murray E. Draper in command.

Based at Newport, *Hammerberg* participated in convoy exercises, trained students at the Fleet Sonar School, Key West, and conducted antisubmarine warfare exercises during her first 2½ years of service.

Hammerberg departed Newport 3 September 1957 to participate in maneuvers with units of NATO. Antisubmarine training in the Irish Sea was followed by visits to Plymouth, England and Brest, France, before the destroyer escort returned to Newport 21 October. Then, after hunter-killer exercises with aircraft carrier *Tarawa*, *Hammerberg* sailed from Newport 1 April 1958 to Bodo, Norway, to take part in combined exercises with the Norwegian Navy. She returned to Boston 14 May.

Departing Newport 27 January 1959, *Hammerberg* sailed to Guantanamo Bay for refresher training, then took part in antisubmarine warfare training with the navies of Chile and Peru. She returned to Newport 21 April.

Between May 1959 and February 1960 *Hammerberg* was busy with antisubmarine exercises interspersed with cruises to Newfoundland and Puerto Rico. In March and April she participated in amphibious operations at Onslow Beach, N.C., and deployed 23 August 1960 for her second South American cruise. *Hammerberg* returned to Newport 13 December.

Hammerberg departed Newport 7 August 1961 on her third South American cruise. In November, at the request of the Organization of American States, *Hammerberg* and other American ships patrolled offshore the Dominican Republic to help ensure the orderly change-

over of that government and check Communist influence. *Hammerberg* returned to Newport 1 December. During 1962 *Hammerberg* participated in convoy escort operations and operated with the Fleet Sonar School in Key West. On 7 November *Hammerberg* was en route south to Mayport, Fla., where she was diverted to patrol the Florida Coast during the Cuban Crisis. On 29 November after President Kennedy had resolved the Cuban Crisis she sailed for Newport, R.I., for a well-deserved rest and tender availability. 1963 found *Hammerberg* in the Boston Naval Shipyard. From June to November she devoted time to "Unitas IV"—a deployment which was to comprise the circumnavigation of South America in the conduct of ASW operations with seven South American navies. On 30 November *Hammerberg* proceeded to Guantanamo Bay, Cuba, for participation in "PHIBA-SWEX I-63", a large-scale amphibious, ASW operation with over 30 other units of the Atlantic Fleet. On 17 December she arrived Newport, R.I. During 1964 *Hammerberg* participated in Operations "Springboard," "Canus Silex," and "Steel Pike," all exercises to sharpen the ship and crew not only in her important mission of locating and destroying submarines, but also in patrol, escort, rescue, evacuation, blockade and surveillance assignments.

On 8 February 1965 *Hammerberg* got underway for Northern Europe to join NATO "Match Maker I" Squadron in Exercise "Pilot High." On 3 May the squadron left Lisbon for Operation "Pole Star" off Halifax, Nova Scotia. After return to Newport 20 July, *Hammerberg* went into repair at Boston Naval Shipyard. She then trained off Guantanamo Bay, Cuba, and in August 1966 rendezvoused with *Van Voorhis* (DE-1028), *Leahy* (DLG-16) and *Requin* (SS-481) off Trinidad to participate in Operation "Unitas VII" through November. She continued her tactical maneuvers into 1967 constantly ready as a deterrant protecting the free world from aggression.

Hammerhead

A voracious shark, found in warm seas, with a curious hammerlike head.

I

(SS-364: dp. 1526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 60; c. *Gato*)

The first *Hammerhead* was launched 24 October 1943 by Manitowoc Shipbuilding Co. of Manitowoc, Wis.; sponsored by Mrs. R. W. Berry; and commissioned 1 March 1944, Comdr. J. C. Martin in command.

After a month's training in Lake Michigan *Hammerhead* was placed in a floating drydock and towed down the Mississippi River to New Orleans, La., where she arrived 8 April 1944. She subsequently proceeded to Balboa, Canal Zone, for further training, and thence to Pearl Harbor, Hawaii.

The submarine departed Pearl Harbor on her first war patrol 6 June 1944 in company with *Steelhead* and *Parche*. Cruising the seas south of Formosa, her first engagement came 9 June when she sank a sampan with gunfire. She then encountered a coastal oiler 29 June and closed for the attack, but the topedoes failed to strike home and a surprise aerial attack forced the sub down. Next day *Hammerhead* damaged several ships of a convoy. She returned to Fremantle, Australia 17 August 1944.

Hammerhead's second war patrol was conducted in the Java and South China Seas. She departed Fremantle 9 September and made her first attack the night of 1 October, when a convey consisting of four cargo ships, one oiler, and three escorts was detected off Borneo. *Hammerhead* fired 10 torpedoes, scored a total of 6 hits, and sent 3 of the cargo ships to the bottom. The morning of 20 October the submarine found still another six ship convoy, and after evading one of the escorts delivered a six-torpedo attack. Two more cargo ships fell victim to *Hammerhead's* marksmanship. The submarine returned from this highly successful patrol 2 November 1944, and

was later awarded the Navy Unit Commendation for her outstanding performance.

The submarine commenced her third war patrol 25 November, returning to the South China Sea. On this cruise she operated with *Lapon* and *Paddle*, and although several attacks were made, no sinkings resulted. She returned to Fremantle 17 January 1945.

Hammerhead departed on her fourth war patrol 19 February, in company with *Baya*. Patrolling off Cape Varella, she detected a convoy and two escorts 23 February and while closing the cargo ships obtained a perfect shot on an escort. A spread of four torpedoes sank Japanese frigate *Yaku*. Due to the illness of her commanding officer, the submarine was forced to end her patrol, and moored at Subic Bay 3 March 1945.

Beginning her fifth war patrol 10 March 1945, *Hammerhead* proceeded to the coast of Indochina, where on 29 March she detected a large escorted convoy. Working her way inside the screen, the submarine was able to get a clear shot at an escort vessel, and a single hit broke her in two. After sinking the escort, *Hammerhead* damaged other members of the group before retiring. She returned from this war patrol 6 April 1945, mooring at Subic Bay, Philippines.

For her sixth war patrol *Hammerhead* operated in the Gulf of Siam. She arrived 6 May and that night encountered a small tanker and two escorts. After missing with two torpedoes at extreme range the submarine found the mark in a second attack, sinking the tanker *Kinrei Maru*. *Hammerhead* attacked other ships of the convoy without success and after a depth charge attack decided to break off. Sighting a cargo carrier 14 May with only an aircraft escort, *Hammerhead* made a perfect approach and sank the ship with two torpedoes. She returned from this patrol 25 May.

Hammerhead departed Fremantle 21 June on her seventh and last war patrol, also carried out in the Gulf of Siam, in company with three other submarines. Her major attack of this patrol occurred 10 July, when she sank cargo ships *Sakura Maru* and *Nanmei Maru No. 5*. The patrol was brought to a close 21 August 1945 at Pearl Harbor.

Hammerhead arrived Mare Island, Calif., for decommissioning 20 August 1945 and decommissioned 9 February 1946. She was then placed in the Fleet Reserve at Mare Island. Subsequently, *Hammerhead* was brought out of reserve during the Korean conflict, recommissioned 6 February 1952, and engaged in training duty on the West Coast between San Diego and San Francisco, Calif., until 21 August 1953, when she decommissioned for return to the Reserve Fleet. Earmarked for loan under the Military Assistance Program, the veteran submarine recommissioned once more 16 July 1954 to prepare for transfer. Decommissioned and transferred to Turkey 23 October 1954, she now serves the Turkish Navy as *Cerbe* (S-341).

Hammerhead received seven battle stars and a Navy Unit Commendation for World War II service. All seven of her war patrols were designated successful.

II

(SS(N)-663: dp. 3,800 (surf.), 4,600 (subm.); l. 292'3"; b. 31'8"; s. over 20 k.; surf. 107; a. 4 21" tt., cl. *Sturgeon*)

The second *Hammerhead* (SS(N)-663), a *Sturgeon*-class nuclear submarine, was laid down by Newport News Shipbuilding & Drydock Co., Newport News, Va., 29 November 1965; launched 14 April 1967 and sponsored by Mrs. O. Clark Fisher. The commissioning of the nuclear submarine is scheduled for the spring of 1968. A key element in the underwater deterrent force of the Navy she contributes to the vital, continuing task of "keeping the peace" over the vast reaches of global waters. Designed to attack and destroy all types of enemy ships, she is able to operate for long periods at great depths and at high submerged speed, making her a potent and effective challenge to enemy submarines. Operating under nuclear power, she also can conduct long-range reconnaissance

patrols and surveillance missions without risking detection by surface ships. Moreover, she is able to carry out extensive ASW operations, either alone or with other fleet submarines and destroyer-type surface ships.

Hammondspport

A village in New York.

(AKV-2: dp. 4,000 (f.); l. 478'; b. 63'6"; dr. 22'10"; s. 16 k.; crl. 255; a. 1 5", 4 3"; cl. *Kitty Hawk*)

Hammondspport (AKV-2) was built as *Seatrain Havana* in 1932 by Sun Shipbuilding & Dry Dock Co., Chester, Pa. After operating for Seatrain Lines, Inc. until 1941 she was acquired by the Navy through the Maritime Commission on a bareboat basis and commissioned at New York Navy Yard as *Hammondspport* (APV-2) 11 December 1941, Comdr. P. R. Glutting in command. She was reclassified AKV-2 on 15 September 1943.

Designed to carry cargo and aircraft, *Hammondspport* got underway 18 December 1941 for Chesapeake Bay, Va., and a short shakedown cruise. She continued to the Canal Zone, where she arrived 26 December and unloaded five PT boats transported from New York. *Hammondspport* arrived San Francisco 7 January 1942, and began loading cargo and aircraft to be carried to beleaguered allied forces in the western Pacific. Departing 15 January she steamed into Brisbane harbor with her precious cargo 5 February 1942. After unloading her cargo of 120 P-40 aircraft the ship sailed for San Francisco, arriving 17 March.

From March until August *Hammondspport* made four voyages from California to Pearl Harbor with general cargo and aircraft for further transfer to the forward areas. Departing from San Diego 1 September 1942, the ship then sailed into the western Pacific area, carrying cargo and aircraft to Noumea, Espiritu Santo, and Efate, New Hebrides Islands before returning to San Diego 3 November 1942.

Hammondspport carried out this vital supply duty for the remainder of the war. She carried not only replacement aircraft for the far-ranging fleet groups of the 3d and 5th fleets, but land-based aircraft as well. In addition, she brought to such staging bases as Espiritu Santo and Noumea spare parts and other vital cargo and carried damaged aircraft back to Pearl Harbor and California bases. As the allied armies and navies advanced toward Japan, her destinations moved northward and westward. After the fall of the Marianas, *Hammondspport's* most frequent supply point was Guam, to which she carried hundreds of aircraft during 1945.

With the surrender of Japan *Hammondspport* continued to sail regularly between San Francisco, Pearl Harbor, and the Pacific islands, bringing aircraft and supplies back from Samar, Philippine Island, and the Marianas during September-November 1945. The ship departed Eniwetok atoll 21 December 1945 on her final passage, carrying 44 aircraft and 600 tons of cargo to Pearl Harbor and San Francisco. After touching at the latter port *Hammondspport* through the Panama Canal to Philadelphia, where she arrived 9 February 1946. There she decommissioned 7 March 1946 and was returned to the Maritime Commission. After a short period under charter to United Fruit Co., the ship was resold to Seatrain Lines 10 May 1946 and resumed merchant service as *Seatrain Havana*.

Hamner

Henry Rawlings Hamner was born 13 March 1922 in London, England. Appointed to the Naval Academy from Virginia, he graduated and gained his commission in June 1942. Hamner served to fit out and commission several new ships during the war, in addition to serving in the 12th Naval District and at Norfolk. He was appointed lieutenant in July 1944. Lieutenant Hamner died 6 April

1945 in *Howorth*, when his ship was crashed by a kamikaze during the suicidal Japanese "kikusui" massed attack of that day off Okinawa where "the fleet had come to stay".

(DD-718: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35 k.; cpl. 336; a. 6 5", 16 40mm., 20 20mm., 5 tt. 6 dep., 2 dct.; cl. *Gearing*)

Hamner (DD-718) was launched 24 November 1945 by the Federal Ship Building & Drydock Co., Port Newark, N.J.; sponsored by Mrs. Henry Rawlings Hamner, wife of Lt. Hamner; and commissioned 12 July 1946, Comdr. Joseph B. Swain in command.

After shakedown in the Caribbean, *Hamner* reported to the Pacific Fleet 24 December 1946 and immediately departed for her first deployment with the 7th Fleet. The new destroyer spent 9 months operating with Destroyer Division 111 out of various Chinese and Japanese ports before returning to the States for 6 months of training operations. *Hamner* followed this pattern of cruises until hostilities began in Korea 24 June 1950. Deployed in the Far East at the time, *Hamner* sailed to the Korean coast and began shore bombardment of Communist positions and supply lines. After participating in the evacuation of Yongdok and the defense of Pohang Dong, *Hamner* joined Task Force 77 for the brilliant amphibious operations against Inchon 15 September 1950.

After operating along the Korean coast to screen carriers whose planes were pounding Communist troops, *Hamner* returned to the States in March 1951. She was back on line in October 1951 and continued to prowl waters surrounding the peninsula with various task forces and bombardment groups, effectively damaging and checking the enemy. In March 1952 she spent 5 weeks on shore bombardment off the east coast of Korea near Kojo causing much damage to the enemy. Although frequently under heavy fire from enemy batteries, she was not hit. Returning to the States in May 1952, *Hamner* resumed her duties along the Korean coast 2 January 1953, remaining there on the bomblines, at the siege of Wonsan Harbor, and on Formosa patrol until the armistice of 27 July 1953.

Hamner returned to the Western Pacific every year thereafter visiting ports in Korea, Japan, Taiwan, the Philippines, and even Australia in 1956 and 1959.

In addition to reminding Asia of America's determination and strength in the struggle against Communism, the destroyer made many good-will visits to Asian ports and engaged in exercises and Formosa patrol. She arrived off Taiwan for six weeks duty with the Taiwan Patrol Force 31 December 1958, just after another flareup of the Quemoy-Matsu crisis. When not deployed in the Pacific, *Hamner* trained out of San Diego. Entering the San Francisco Ship Yard in January 1962, she underwent a Fleet Rehabilitation and Modernization (FRAM) overhaul designed to add 10 to 20 years to her operating efficiency. Fitted with a new superstructure and the Navy's most modern electronic equipment, *Hamner* left the shipyard 5 December 1962 and, after training, sailed for her 13th WestPac cruise 18 May 1963. During this cruise she was part of the ready amphibious group in South Vietnam coastal waters in September.

Hamner returned to San Diego 24 November. She operated along the West Coast throughout 1964 and sailed again for the Orient 5 January 1965. Arriving Subic Bay on the 27th, she escorted aircraft carrier *Hancock* (CVA-19) to the Gulf of Tonkin. On 15 March she joined aircraft carrier *Coral Sea* (CVA-43) in "Yankee Team" operations. On 10 May she headed north at flank speed to cover SeaBee landings at Chu Lai. "Market Time" operations began 5 days later and on the 20th *Hamner* shelled Communist positions in South Vietnam in the first scheduled shore bombardment by the U.S. Navy since the Korean conflict. Thereafter she screened *Coral Sea*, bombarded the Trung Phan area 25 June, and covered the landing of Marines from *Iwo Jima* (LPH-2) at Qui Nhon 1 July. As mid-July approached, the destroyer headed home, reaching San Francisco on the 26th.

Overhaul at Hunter's Point and operations off the West Coast occupied the next year. *Hamner* got underway for her 14th WestPac deployment 2 July 1966. Late in the month she bombarded South Vietnam. Following patrol duty, she steamed up the Song Long Tao River to shell the Rung Sat Special Zone.

Hamner joined TG 77.6 as plane guard for *Oriskany* (CVA-34) on 1 October and continued this duty until receiving an emergency call from the carrier at 0730 on the 26th "I am on fire." Speeding alongside, for hours *Hamner* sprayed cooling water on her charred and buckled bulkheads. After the fight to save the ship had been won, *Hamner* escorted her to Subic Bay for repairs.

Back off Vietnam 6 November, the destroyer spent 2 weeks in Operation "Traffic Cop", shelling Communist junks bringing arms and supplies to the Viet Cong. Within a fortnight, *Hamner* had destroyed 67 craft. On 14 and 19 November enemy shore batteries fired on *Hamner*, and *John R. Craig* (DD-885). Although several rounds sprayed the destroyers with shrapnel, neither ship was damaged. On each occasion the American ships moved just outside range of the enemy guns and hammered the Communist batteries to silence. Leaving the fighting zone 20 November, a month and a day later, *Hamner* reached San Diego, where early in 1967 she began preparations to meet her next challenge.

Hamner was awarded five battle stars as well as a Presidential Unit Citation for her outstanding service in Korea.

Hamond

(PF-73: dp. 1430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*; T. S2-S2-AQ1)

Hamond (PF-73), originally designated PG-181, was built under Maritime Commission contract by Walsh-Kaiser Co. Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-73 15 April 1943, renamed *Antigua*, and launched 26 July 1943, Mrs. Louise M. Reddick sponsoring. *Antigua* was then completed and transferred to the United Kingdom under lend-lease 4 November 1943, as part of the 21-ship "Colony" class. She served as a patrol and escort ship until being returned to the United States 2 May 1946. The frigate was sold for scrap to the Sun Shipbuilding & Drydock Co., Chester, Pa.

Hampden

A former name retained.

(Brig: 14 guns)

Hampden, a merchant ship in the West Indian trade, was purchased during the summer of 1776 by the Continental Congress and converted to Navy use at New Haven, Conn. Her first commanding officer, Hoysted Hacker, sailed her to Newport, R.I., in September 1776 to join *Alfred*, Captain John Paul Jones. After a month's delay, occasioned by a shortage of men, the two ships departed 27 October under Jones' command for a cruise to the north. The purpose of this foray was to harass Newfoundland fisheries and to attempt the liberation of American prisoners of war on Cape Breton Island. Soon after getting underway, however, *Hampden* grounded on a ledge, was considerably damaged, and could not continue. Captain Hacker and his crew transferred to the sloop *Providence* and continued the cruise, while *Hampden* returned to Providence, R.I. She was sold out of the service in late 1777 at Providence.

Hampden County

A county in Massachusetts.

(LST-803: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; cl. *LST-511*)

LST-803 was laid down by Jeffersonville Boat & Machine Co., Jeffersonville, Ind., 14 September 1944; launched 23 October; sponsored by Mrs. Katie Bryant; and commissioned 17 November, Lt. H. M. Parsons in command.

After shakedown off Florida *LST-803* departed New Orleans in December, arriving San Diego 8 January 1945. Sailing 4 days later, she touched Pearl Harbor, and Eniwetok before arriving Guam 12 February. During the next month she prepared at Guam, Saipan and Tinian for the invasion of Okinawa. With the 16th Marine Antiaircraft Battalion on board, she sailed 26 March for the last barrier on the road to Saipan.

The landing ship approached Kerama Retto 2 April, then under heavy enemy air raids and suicide attacks for the next week she unloaded her cargo before proceeding to Saipan for reinforcements. For the rest of the war *LST-803* shuttled cargo between Okinawa and the Philippines, then after the official Japanese surrender arrived Tokyo Bay with cargo for the occupation forces.

Following 3 months duty in the Far East *LST-803* sailed for the United States in mid-November, arriving San Diego the following month. In July 1946 she returned to the Western Pacific to operate as a utility ship, and transported cargo, troops, and prisoners-of-war throughout the Mariana and Caroline Islands. She continued these operations until 26 February 1949, when she departed Kwajalein for the United States. Arriving Long Beach 10 April, *LST-803* decommissioned 15 June and joined the Pacific Reserve Fleet.

Following the external communist aggression in South Korea *LST-803* recommissioned, Lt. Ben Owen in command, 15 November 1950 to meet the demand for ships needed in the struggle. She departed Port Hueneme 3 March 1951, and arrived Yokosuka 26 April. On 17 May she sailed to Korea to transport prisoners-of-war between Pusan and Koje-Do. Throughout the rest of the year she operated between Japan and Inchon, Korea, transporting troops, cargo, and prisoners-of-war then sailed 31 January 1952, for San Diego. After a brief overhaul and training, the veteran landing ship was back in Japan 15 November. She resumed her cargo and transport runs from Japan to Inchon and Pusan, continuing these operations until the Armistice ended the armed conflict 27 July 1953. Her major projects were amphibious landings at Inchon and salvage work behind enemy lines at Chumum Do.

After the war she engaged in Operation "Big Switch," the return of North Korean and Chinese Communists to Incheon for the exchange of South Korean repatriates. Returning to San Diego 25 September she operated along the West Coast for the rest of the year. In May 1954 she sailed on her third Far East tour and, while there, was assigned to "Passage to Freedom" which transported French and Vietnamese Army units, and Christian refugees from North Vietnam to Saigon.

While still in the Far East early 1955, another impending crisis flared between the Communist Chinese and the Chinese Nationalists over the Tachen Islands. As part of the amphibious force of the 7th Fleet, *LST-803* commenced embarking personnel and supplies from the Tachen beaches on 8 February. During the next week she transported over 2,300 troops and civilians, along with vehicles and heavy weapons to Formosa. After these two operations contributing to Peace in Asia were completed *LST-803* sailed for the United States, arriving San Diego 28 April.

On 1 July *LST-803* was named *Hampden County*. For the next 2 years she engaged in amphibious exercises along the West Coast, Hawaii, and in the Far East. After her 1956-57 WestPac tour, she returned to the West Coast 31 August; then decommissioned at Mare Island 2 January 1958. She was struck from the Navy List 17 April and was sunk as a fleet practice target off the coast of California 26 September 1958.

LST-803 received one battle star for World War II service and five stars for the Korean conflict.

Hampshire

Prior to being launched, Continental ship *Ranger* (q.v.) was called *Hampshire*.

Hampshire County

Counties in Massachusetts and West Virginia.

(LST-819: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. LST-511)

LST-819 was laid down by the Missouri Valley Bridge & Iron Co., Evansville, Ind., 12 September 1944; launched 21 October; sponsored by Mrs. William M. Gilmore; and commissioned 14 November 1944, Lt. George W. Ryerson in command.

Following shakedown off Florida, LST-819 loaded cargo, then departed New Orleans 18 December for the Pacific. After a brief stop at San Diego and Pearl Harbor, the tank landing ship arrived Tulagi 23 February 1945. During the next month she shuttled cargo throughout the Pacific, then ammunition for the Okinawa invasion.

Arriving 2 April, one day after the initial landing, LST-819 prepared to unload her cargo under heavy enemy air attack. Remaining off the island for the next 3 weeks, she assisted in the courageous effort as the Japanese made a futile attempt to stop the American thrust toward Japan. For the rest of the war she continued transport and cargo operations in the vicinity of Okinawa.

After V-J Day, she operated with the occupation forces in Okinawa and Japan, then sailed for the United States in mid-November, arriving San Francisco 6 January 1946. Later that month she sailed to Astoria, Oreg.; decommissioned there and joined the Pacific Reserve Fleet.

Because of the Korean conflict buildup LST-819 recommissioned at Astoria 8 September 1950, Lt. J. H. Burch in command. Following training she departed San Diego 3 months later, arriving Yokosuka 17 January 1951. Two weeks later she steamed to Pusan where she embarked army personnel for transport to Inchon, arriving there 19 February. From February to June LST-819 carried troops and vehicles from Japan to Korean ports; then on 8 June departed for the United States. After 6 months out of San Diego, "819" was en route for her second tour in the Far East, arriving Yokosuka 15 February 1952. She resumed cargo runs to the war zone as American forces demonstrated their ability to fight for the cause of freedom. She continued cargo operations and harbor entrance patrol until late October when she steamed back to the United States.

After the Korean conflict LST-819 made another cruise to the Far East from August 1953 to June 1954 where she resumed her cargo operations under more peaceful conditions. She returned San Diego 17 July and operated along the West Coast until she decommissioned 24 June 1955.

While in reserve at San Diego LST-819 was named *Hampshire County* 1 July 1955.

Hampshire County (LST-819) recommissioned 9 July 1966 for use in the Vietnam War. By 9 September she had completed shakedown training and on 24 September left Del Mar, Calif., for Danang, Vietnam, arriving 8 November. After debarking Marines and cargo there, she returned to Guam, anchoring 19 December. *Hampshire County* then participated in operation "Market Time" and continued into 1967 in her important combat support mission.

LST-819 received one battle star for World War service and four stars for the Korean conflict.

Hampton

The first *Hampton* retained its former name, while the second was named after a county in South Carolina.

I

(SP-3049: t. 48; l. 63'; b. 19'4"; dr. 6'3"; s. 9 k.)

Hampton (SP-3049), a wooden tug, was built in 1905 by H. Turman, Turkey Point, Va., and chartered by the Navy in 1918. She commissioned 21 April 1918 and served on general harbor duty in Hampton Roads under the jurisdiction of the 5th Naval District until being returned to her owner 13 August 1919.

II

(PCS-1386; dp. 251; l. 136'; b. 25'; dr. 9'; s. 14 k.; cpl. 59; a. 1 40mm., 2 20mm., 2 dep., 1 dep. (h.h.), 2 det.; cl.)

PCS-1386 was laid down by Wheeler Shipbuilding Corp., Whitestone, N.Y., 15 May 1943; launched 28 September 1944; and commissioned 4 November, Lt. Thomas R. McMahan in command.

Equipped with the latest sonar gear, PCS-1386 was assigned to the Fleet Sound School Squadron following her shakedown period. From her arrival at Key West 25 November 1944, until the end of the war she trained officers and enlisted men in the intricate art of submarine detection. The students later contributed to the war effort by operating the range recorder and attack plotter on the hunter-killer destroyers and destroyer escorts. Through the Navy's excellent ASW methods the enemy submarine threat was neutralized and the victorious conclusion of World War II was hastened.

After the war PCS-1386 continued training operations based at Key West and in addition performed exercises in the Atlantic, Caribbean and Gulf of Mexico from 1946 to 1956. PCS-1386 was named *Hampton* 15 February 1956 and decommissioned 27 April 1956. Hampton was transferred to the 5th Naval District and assigned to the Naval Reserve Training Center, Baltimore. Hampton operated as a training ship until she was struck from the Navy List 1 July 1959 and disposed of by Navy sale.

III

(APA-115: dp. 8,393 (lt.); l. 492'; b. 69'6"; dr. 26'6"; s. 18 k.; cpl. 475; a. 25", 8 40mm.; cl. *Bayfield*)

The second *Hampton* (APA-115) was launched 25 August 1944 under Maritime Commission contract by Ingalls Shipbuilding Corp., Pascagoula, Miss.; sponsored by Mrs. Harry Gilmore; and commissioned 17 February 1945, Comdr. W. H. Ferguson in command.

After completing her shakedown training out of Galveston, Hampton arrived Newport 20 March for duty as a training ship for pre-commissioning crews. She continued this vital duty until departing 7 May for Norfolk to embark troops destined for Hawaii. The transport sailed 19 May and arrived Pearl Harbor via the Panama Canal 9 June. At Hawaii Hampton embarked over 1,000 members of the 34th Construction Battalion and sailed for Guam, where she arrived 6 July 1945. After disembarking her Seabees, so vital to the success of the island campaign in the Pacific, the transport sailed to the east, arriving San Francisco 25 July.

Hampton sailed from San Francisco 13 August, just prior to the surrender of Japan, and arrived Samar Island via Ulithi and Eniwetok 7 September. Joining the vast fleet carrying occupation forces to Japan, Hampton landed troops at Aomori Bay, Honshu, 25 September, and then returned to Okinawa for more occupation units. During October she carried these troops to Jinsen, Korea; Chefoo and Tsingtao, China, helping to speed occupation of these ports and stabilize the volatile China situation.

Hampton departed Tsingtao for Portland via Okinawa and Leyte, arriving 28 October 1945. She then made two voyages to Guam as part of the "Magic Carpet" fleet, performing the giant task of bringing home the thousands of Pacific veterans. After returning to the Pacific coast from the second voyage 10 February 1946, the transport sailed for the East Coast, arriving Norfolk 7 March. She

decommissioned 30 April 1946 and was returned to the Maritime Commission 1 May. In 1947 *Hampton* was sold to Pope and Talbot Lines and renamed *P. & T. Explorer*.

Hamul

Probably named after the star Hamal.

(AK-20: dp. 8,560; l. 492'; b. 69'; dr. 28'6"; s. 17 k.; cpl. 857; a. 1 5", 4 3"; cl. *Hamul*; T. C3-cargo)

Hamul (AK-20), formerly *Sea Panther* and *Doctor Lykes*, was launched in May 1940 by the Federal Shipbuilding & Drydock Co., Kearney, N.J. After two trips to the Orient for Lykes Brothers Steamship Co. of New Orleans, *Hamul* was acquired by the Navy and commissioned 14 June 1941 at Charleston, Comdr. F. M. Tillson in command.

Originally a cargo ship, *Hamul* rendered logistical support for occupation of Iceland prior to America's involvement in the war. After working with General Electric in experiments on night camouflage, *Hamul* departed Boston in January 1942 to head a convey of five ships with men and material to establish a base at Bora Bora, Society Islands. This mission completed, the cargo ship returned to the States via Chile, while she loaded 10,000 tons of nitrate. *Hamul* discharged the valuable cargo at Mobile and remained there for conversion to a destroyer tender. Departing Mobile 7 January 1943, as AD-20, *Hamul* tended destroyers and other ships in Casco Bay, Maine, until April and then sailed south to serve as flagship of the Destroyer-Escort Shakedown Task Group in Bermuda. In the following 19 months she tended some 348 DE's as well as removing demolition charges from *U-505*. This German submarine was the first capture of a regular enemy war ship on the high seas by the U.S. Navy since 1815.

After overhaul at the Brooklyn Navy Yard, *Hamul* sailed for the Pacific 1 January 1945, reaching Saipan 12 February via the Panama Canal, Pearl Harbor, and Eniwetok. She remained there preparing amphibious craft for the massive Iwo Jima invasion until 27 March, when she sailed to Ulithi. At Ulithi *Hamul* kept busy repairing damaged craft returning from the Okinawa campaign until 6 May, when she sailed for the scene of the Pacific war's last major struggle. *Hamul* reached Okinawa 10 May 1945 and remained there until February 1946 to repair battle-damaged ships. With over 400 homeward bound veterans aboard, she departed Okinawa 10 February 1946. After discharging them at San Diego she proceeded to Jacksonville, Fla., and subsequently Orange, Tex., to prepare for decommissioning.

As *Hamul* entered the final stages of the decommissioning process, she was called back into active service as station ship at Plymouth, England. Reaching the British port 17 April 1947, *Hamul* remained there 3 years tending various American ships and making quarterly cruises to Atlantic and Mediterranean ports. Again ordered to decommission, *Hamul* departed Plymouth 17 July 1950; but the outbreak of war in Korea again called for every available ship. Going west via Norfolk, *Hamul* reached Sasebo, Japan, 23 October and began servicing the fleet operating off the Korean coast.

From that period on *Hamul's* career fell into a pattern of 6 months duty in the East, which took her to the Philippines, Hong Kong, Formosa, and other Asian ports and islands, alternating with a similar period of time in her home port, Long Beach. During the active fighting in Korea and the Cold War afterwards, she played a vital role in maintaining America's mobile presence in the Pacific. *Hamul* (AD-20) decommissioned 9 June 1962 at Long Beach. Returned to the Maritime Administration, she was placed in the National Defense Reserve Fleet, Suisun Bay, Calif., where she remains.

Hancock

John Hancock was born 12 January 1737 in Braintree, Mass., graduated from Harvard College in 1754, and be-

came the wealthiest merchant in Boston. He was president of the Massachusetts Provincial Congress and served as president of the Continental Congress from 24 May 1775 to 29 October 1777. As holder of this office, Hancock was the first signer of the Declaration of Independence.

John Hancock served the Continental Congress until he became Governor of Massachusetts in 1780. He presided over the State's Constitutional Convention held in that year. He also presided over the Massachusetts Convention of 1788 which ratified the Federal Constitution. With the exception of a term in the Confederate Congress, 1785-86, Hancock was Governor of Massachusetts until his death 8 October 1793. His body was interred in the Old Granary Burying Ground, Boston.

I

(Sch: t. 72; l. 60'; b. 20'; cpl. 70; a. 6.4-pdr.)

The first *Hancock*, was the former schooner *Speedwell*, hired from Mr. Thomas Grant of Marblehead, Mass., in October 1775 as one of a small fleet fitting out to prey upon British supply ships and support General Washington's siege of Boston. This fleet, the first under Continental pay and control, came to be called "George Washington's Navy."

In October 1775, *Hancock* and *Franklin* were ordered to intercept two brigs as they arrived in the St. Lawrence from England. But the two schooners instead sought easier quarry off Cape Canso where five prizes of dubious legality were taken. They also raided Charlottetown settlement without regard to orders to respect Canadian property. The story of their illegal actions reached General Washington who dismissed both ship commanders and returned their prizes to Canadian owners with apologies.

On 1 January 1776, Captain John Manley, Continental Army, was appointed Commodore of the Fleet and hoisted his flag in *Hancock*. She captured two enemy transports 25 January 1776, fending off an eight-gun British schooner in a brisk engagement while prize crews took the captured ships into Plymouth Harbor.

On 30 January 1776 *Hancock* was intercepted off Plymouth by the 14-gun British Brig *Hope* who had sailed from Boston for the express purpose of capturing *Hancock*. The American schooner ran ashore and grounded where it became impossible for *Hope*, with her deeper draft, to draw close aboard. The little sloop refloated and captured several more prizes in joint operations with the squadron by April 1776 when Captain Samuel Tucker took command of *Hancock*. He relieved Commodore John Manley who was taken into the Continental Navy to command Continental Frigate *Hancock*.

Hancock captured two brigs off Boston 7 May 1776. She continued to cruise under Tucker until declared unfit for service late in 1776. She returned to her owner early the following year.

II

(Fr.: t. 763; l. 136'7"; b. 35'6"; dph. 11'½"; cpl. 290; a. 24 12-pdr., 10 6-pdr.)

The second *Hancock* was one of the first 13 frigates of the Continental Navy authorized by resolution of the Continental Congress 13 December 1775. She was built at Newburyport, Mass., and placed under command of Captain John Manley 17 April 1776. After a long delay in fitting out and manning, she departed Boston in company with Continental frigate *Boston* 21 May 1777. On 29 May they captured a small brig loaded with cordage and duck. The next day they encountered a convoy of transports escorted by British 64-gun ship *Somerset* which set sail to close *Hancock*. Manley was saved by clever and well-timed action of *Boston* who forced *Somerset* to give up the chase by taking on the transports.

After escaping from *Somerset*, the two frigates sailed to the northeast until 7 June when they engaged the Royal Navy's 28-gun frigate *Fox* who tried to outsail her American enemies. *Hancock* gave chase and soon overhauled

Continental Frigates *Hancock* and *Boston* capturing British Frigate *Fox* 7 June 1777

Fox who lost her mainmast and suffered other severe damage in the ensuing duel. About an hour later, *Boston* joined the battle and compelled *Fox* to strike her colors.

Hancock spent the next few days repairing the prize and then resumed cruising along the coast of New England. East of Cape Sable she took an enemy coal sloop which she towed until the next morning when the approach of a British squadron prompted Manley to set the coal sloop ablaze and leave her adrift. The British brig *Flora* recaptured the *Fox* after a hot action. *Boston* became separated from *Hancock* who tried to outsail her pursuers. Early in the morning 8 July 1777 the British were within striking distance. HMS *Rainbow* began to score with her bowchaser and followed with a series of broadsides which finally forced *Hancock* to strike her colors after a chase of some 39 hours.

Hancock, renamed *Iris*, served the British Navy so effectively that her new owners boasted of her as "the finest and fastest frigate in the world." The most famous of the many prizes which made her officers wealthy men was the American 24-gun ship *Trumbull*, captured 8 August 1781. Later that year a French squadron in the West Indies captured *Iris* and used her as a cruiser. When the British took Toulon in 1793 they found *Iris* dismantled and used as a powder hulk. The British blew her up as they evacuated Toulon.

Hancock, a frigate launched at Salisbury, Mass., 28 April 1778, was renamed *Alliance* (q.v.) by the Continental Congress to honor the entry of France into the war.

III

(AP-3: dp. 8,500; l. 465'6"; b. 45'4"; dr. 24'3"; s. 13 k.; cpl. 278; a. 6 3")

The third *Hancock* (AP-3) was built in 1879 by J. Elder & Co., Glasgow, Scotland. Formerly *Arizona*, she was purchased by the War Department during the Spanish-American War and transferred to the Navy 8 November

1902. She was commissioned 20 November 1902, Lt. Comdr. F. W. Coffin, USN, in command.

Hancock sailed from San Francisco for the East Coast 14 December 1902 via Valparaiso, Chile; Montevideo, Uruguay; and Bahia, Brazil. She arrived New York Navy Yard 21 February 1903 and decommissioned 9 March for fitting out. Recommissioned 21 September, she served as receiving ship at the New York Navy Yard until relieved by *Washington* 6 August 1913.

Hancock departed New York 15 September and arrived at the Philadelphia Navy Yard the following day to be fitted out as a Marine transport. She sailed for the Gulf of Mexico 4 January 1914 having embarked the 1st Regiment, Advance Base Brigade of Marines. She landed the Marines at Vera Cruz, Mexico, to assist in the occupation of that city resulting from the arrest of the crew of a whaleboat of *Dolphin* (PG-24) by soldiers of General Huerta, aspirant to the Mexican presidency. During the tense months that followed, *Hancock* transported refugees uprooted by the Mexican Revolution between the coast of Mexico and Galveston, Tex., as she delivered supplies for the United States Expeditionary Force in Mexico. Other trouble spots erupted in the Americas. Both Haiti and the Dominican Republic, were going through a series of violent revolutions endangering the lives and property of foreigners and inviting foreign intervention. This situation demanded a buildup of American strength in the area. As a result as the diplomatic crisis with Mexico eased, *Hancock* embarked a battalion of Marines from Vera Cruz and transported them to Guantanamo, Cuba. She returned to Norfolk 25 July 1914 to embark the 5th Marine Regiment and got underway 30 July to cruise in waters off Haiti and Santo Domingo to be on hand to protect American interests against any eventuality. She returned to Norfolk 23 December for a general overhaul.

Hancock resumed duty cruising in the Caribbean. She continued to transport Marines, stores, provisions, mail, and other cargo to forces ashore in Mexico, Haiti, and Santo Domingo. From 12 to 30 September 1916 she as-

sisted in the salvage of material from *Memphis* after the cruiser was driven ashore by a tidal wave in the harbor of Santa Domingo. *Hancock* carried the ill-fated ship's crew, stores, fittings, and ammunition to the Norfolk Navy Yard.

Hancock was at Guantanamo Bay, 27 March 1917 when ordered to proceed to St. Thomas in the Danish West Indies, where the Danish Government was to transfer the islands to the United States. She sailed the next day, embarking a Marine Detachment at Santo Domingo before arrival at St. Thomas, 30 March 1917. On 31 March, *Hancock's* captain, Comdr. Edwin T. Pollock, USN, took over the islands in the name of the United States of America. At 1600 when the transfer became effective, Commander Pollock assumed the position of Acting Governor of the Virgin Islands. When the United States declared war on Germany six days later, *Hancock* took possession of German steamers *Wasgenwald* and *Calabria* interned there.

Hancock arrived at San Juan, P.R., 18 May 1917 to take possession of two more interned German steamships, *Präsident* and *Odenwald*. She embarked 29 German prisoners of war 23 May, and stood out of San Juan harbor that afternoon to tow *Odenwald* to the Philadelphia Navy Yard where she arrived 1 June.

Hancock was assigned to the U.S. Cruiser and Transport Force to embark troops of the 1st American Expeditionary Force 13 June. She got underway 17 June as Flagship of Troop Convoy Number 4 and arrived without mishap at St. Nazaire, France, 2 July. Returning to Philadelphia 22 July, her principal service until September 1919 was transportation of Marine passengers and military stores to ports in the West Indies and the Gulf of Mexico. She returned to Philadelphia 3 September and decommissioned 18 October 1919.

Hancock recommissioned 15 March 1920 and departed Philadelphia 2 April for Rosyth, Scotland, to man and fit out former German ships *Ostfricsland* and *Frankfurt* which had been allocated to the United States. She returned to New York with the vessels 9 August. After repairs at Philadelphia, she resumed transport duties between the East coast and the West Indies, 5 October 1920. She got underway from Philadelphia 5 March 1921 for Mare Island, Calif., and entered San Francisco Bay 20 April. The ship then sailed for the Hawaiian Islands 5 May arriving Honolulu 14 May, and served as receiving ship at Pearl Harbor until 1925. She was towed from Pearl Harbor 9 July 1925 arrived at the Mare Island Navy Yard 25 July, placed out of commission 1 September 1925, struck from the Navy List and sold 21 May 1926.

Hancock (CV-14) was laid down 1 February 1943 by Newport News Shipbuilding & Dry Dock Co., Newport News, Va., and renamed *Ticonderoga* (q.v.) 1 May 1943.

IV

(CV-19: dp. 27,100; l. 888'; b. 93'; ew. 147'6"; dr. 28'7"; s. 33 k.; cpl. 3,448; a. 12 5", 44 40mm., 59 20mm., ac. 80 plus; cl. *Bsscr*)

The fourth *Hancock* (CV-19) was laid down as *Ticonderoga* 26 January 1943 by the Bethlehem Steel Co., Quincy, Mass.; renamed *Hancock* 1 May 1943; launched 24 January 1944; sponsored by Mrs. DeWitt C. Ramsey, wife of Rear Admiral Ramsey, Chief of the Bureau of Aeronautics; and commissioned 15 April 1944, Captain Fred C. Dickey in command.

After fitting out in the Boston Navy Yard and shake-down training off Trinidad and Venezuela, *Hancock* returned to Boston for alterations 9 July. She departed Boston 31 July en route to Pearl Harbor via the Panama Canal and San Diego, and from there sailed 24 September to join Admiral W. F. Halsey's 3d Fleet at Ulithi 5 October. She was assigned to Rear Admiral Bogan's Carrier Task Group 38.2.

Hancock got underway the following afternoon for a rendezvous point 375 miles west of the Marianas where

units of Vice Admiral Mitscher's Fast Carrier Task Force 38 were assembling in preparation for the daring cruise to raid Japanese air and sea bases in the Ryukyus, Formosa, and the Philippines. Thus enemy air power was paralyzed during General MacArthur's invasion of Leyte. When the armada arrived off the Ryukyu Islands 10 October 1944, *Hancock's* planes rose off her deck to wreak destruction upon Okinawan airfields and shipping. Her planes destroyed 7 enemy aircraft on the ground and assisted in the destruction of a submarine tender, 12 torpedo boats, 2 midget submarines, 4 cargo ships, and a number of sampans. Next on the agenda were Formosan air bases where 12 October *Hancock's* pilots downed six enemy planes and destroyed nine more on the ground. She also reported one cargo ship definitely sunk, three probably destroyed, and several others damaged.

As they repelled an enemy air raid that evening, *Hancock's* gunners accounted for a Japanese plane and drove countless others off during 7 hours of uninterrupted general quarters. The following morning her planes resumed their assault, knocking out ammunition dumps, hangars, barracks, and industrial plants ashore and damaging an enemy transport. As Japanese planes again attacked the Americans during their second night off Formosa, *Hancock's* anti-aircraft fire brought down another raider which splashed about 500 yards off her flight deck. On the morning of the third day of operations against this enemy stronghold *Hancock* lashed out again at airfields and shipping before retiring to the southeast with her task force. As the American ships withdrew a heavy force of Japanese aircraft roared in for a parting crack. One dropped a bomb off *Hancock's* port bow a few seconds before the carrier's guns splashed her into the sea. Another bomb penetrated a gun platform but exploded harmlessly in the water. The surviving attackers then turned tail, and the task force was thereafter unmolested as they sailed toward the Philippines to support the landings at Leyte.

On 18 October she launched planes against airfields and shipping at Laoag, Aparri, and Camiguin Island in Northern Luzon. Her planes struck the islands of Cebu, Panay, Negros, and Masbate, pounding enemy airfields and shipping. The next day she retired toward Ulithi with Vice Admiral John S. McCain's Carrier Task Group 38.1.

She received orders 23 October to turn back to the area off Samar to assist in the search for units of the Japanese fleet and to destroy amphibious forces which were struggling to take the island from Japan. *Hancock* did not reach Samar in time to assist the heroic escort carriers and destroyers of "Taffy 3" during the main action of the Battle off Samar but her planes did manage to lash the fleeing Japanese Center Force as it passed through the San Bernardino Straits. *Hancock* then rejoined Rear Admiral Bogan's Task Group with which she struck airfields and shipping in the vicinity of Manila 29 October 1944. During operations through 19 November, her planes gave direct support to advancing Army troops and attacked Japanese shipping over a 350-mile area. She became flagship of Fast Carrier Task Force 38, 17 November 1944 when Vice Admiral McCain came on board.

Unfavorable weather prevented operations until 25 November when an enemy aircraft roared toward *Hancock* in a suicide dive out of the sun. Anti-aircraft fire exploded the plane some 300 feet above the ship but a section of its fuselage landed amidships and a part of the wing hit the flight deck and burst into flames. Prompt and skillful teamwork quickly extinguished the blaze and prevented serious damage.

Hancock returned to Ulithi 27 November and departed from that island with her task group to maintain air patrol over enemy airfields on Luzon to prevent enemy suicide attacks on amphibious vessels of the landing force in Mindoro. The first strikes were launched 14 December against Clark and Angeles Airfields as well as enemy ground targets on Salvador Island. The next day her planes struck installations at Masinloc, San Fernando, and

Cabatuan, while fighter patrols kept the Japanese airmen down. Her planes also attacked shipping in Manila Bay.

Hancock encountered a severe typhoon 17 December and rode out the storm in waves which broke over her flight deck, some 55 feet above her waterline. She put into Ulithi 24 December and got underway 6 days later to attack airfields and shipping around the South China Sea. Her planes struck hard blows at Luzon airfields 7 and 8 January and turned their attention back to Formosa 9 January hitting fiercely at airfields and the Tokyo Seaplane Station. An enemy convoy north of Camranh Bay, Indochina, was the next victim with 2 ships sunk and 11 damaged. That afternoon *Hancock* launched strikes against airfields at Saigon and shipping on the northeastern bulge of French Indochina. Strikes by the fast and mobile carrier force continued through 16 January, hitting Hainan Island in the Gulf of Tonkin, the Pescadores Islands, and shipping in the harbor of Hong Kong. Raids against Formosa were resumed 20 January 1945. The next afternoon one of her planes returning from a sortie made a normal landing, taxied to a point abreast of the island, and disintegrated in a blinding explosion which killed 50 men and injured 75 others. Again outstanding work quickly brought the fires under control in time to land other planes which were still aloft. She returned to formation and launched strikes against Okinawa the next morning.

Hancock reached Ulithi 25 January where Vice Admiral McCain left the ship and relinquished command of the 5th Fleet. She sortied with the ships of her task group 10 February and launched strikes against airfields in the vicinity of Tokyo 16 February. During that day her air group downed 71 enemy planes, and accounted for 12 more the next. Her planes hit the enemy naval bases at Chichi Jima and Haha Jima 19 February. These raids were conducted to isolate Iwo Jima from air and sea support when marines hit the beaches of that island to begin one of the most bloody and fierce campaigns of the war. *Hancock* took station off this island to provide tactical support through 22 February, hitting enemy airfields and strafing Japanese troops ashore.

Returning to waters off the enemy home islands, *Hancock* launched her planes against targets on northern Honshu, making a diversionary raid on the Nansei-shoto islands 1 March before returning to Ulithi 4 March.

Back in Japanese waters *Hancock* joined other carriers in strikes against Kyushu airfields, southwestern Honshu, and shipping in the Inland Sea of Japan, 18 March 1945. *Hancock* was refueling destroyer *Halsey Powell* 20 March when suicide planes attacked the task force. One plane dove for the two ships but was disintegrated by gunfire when about 700 feet overhead. Fragments of the plane hit *Hancock's* deck while its engine and bomb crashed the fantail of the destroyer. *Hancock's* gunners shot down another plane as it neared the release point of its bombing run on the carrier.

Hancock was reassigned to Carrier Task Group 58.3 with which she struck the Nansei-shoto islands 23 through 27 March and Minami Daito Jima and Kyushu at the end of the month.

When the 10th Army landed on the western coast of Okinawa 1 April *Hancock* was on hand to provide close air support. A suicide plane cartwheeled across her flight deck 7 April and crashed into a group of planes while its bomb hit the port catapult to cause a tremendous explosion. Although 62 men were killed and 71 wounded, heroic efforts doused the fires within half an hour enabling her to be back in action before an hour had passed.

Hancock was detached from her task group 9 April and steamed to Pearl Harbor for repairs. She sailed back into action 13 June and left lethal calling cards at Wake Island 20 June en route to the Philippines. *Hancock* sailed from San Pedro Bay with the other carriers 1 July and attacked Tokyo airfields 10 July. She continued to operate in Japanese waters until she received confirmation of Japan's capitulation 15 August 1945 when she recalled her planes from their deadly missions before they reached their tar-

gets. However planes of her photo division were attacked by seven enemy aircraft over Sagami Wan. Three were shot down and a fourth escaped in a trail of smoke. Later that afternoon planes of *Hancock's* air patrol shot down a Japanese torpedo plane as it dived on a British task force. Her planes flew missions over Japan in search of prison camps, dropping supplies and medicine, 25 August. Information collected during these flights led to landings under command of Commodore R. W. Simpson which brought doctors and supplies to all Allied prisoner of war encampments.

When the formal surrender of the Japanese Imperial Government was signed on board battleship *Missouri*, *Hancock's* planes flew overhead. The carrier entered Tokyo Bay 10 September 1945 and sailed 30 September, embarking 1,500 passengers at Okinawa for transportation to San Pedro, California, where she arrived 21 October. *Hancock* was fitted out for "Magic Carpet" duty at San Pedro and sailed for Seeadler Harbor, Manus, Admiralty Islands, 2 November. On her return voyage she carried 4,000 passengers who were debarked at San Diego 4 December. A week later *Hancock* departed for her second "Magic Carpet" voyage, embarking 3,773 passengers at Manila for return to Alameda, Calif., 20 January 1946. She embarked Air Group 7 at San Diego 18 February for air operations off the coast of California. She sailed from San Diego 11 March to embark men of two air groups and aircraft at Pearl Harbor for transportation to Saipan, arriving 1 April 1946. After receiving two other air groups on board at Saipan, she loaded a cargo of aircraft at Guam and steamed by way of Pearl Harbor to Alameda, Calif., arriving 23 April 1946. She then steamed to Seattle, Wash., 29 April to await inactivation. The proud ship decommissioned and entered the reserve fleet at Bremerton, Wash.

Hancock commenced conversion and modernization to an attack aircraft carrier in Puget Sound 15 December 1951 and was reclassified CVA-19, 1 October 1952. She recommissioned 15 February 1954, Captain W. S. Butts in command. She was the first carrier of the United States Fleet with steam catapults capable of launching high performance jets.

She was off San Diego 7 May 1954 for operations along the coast of California that included the launching 17 June of the first aircraft to take off a United States carrier by means of a steam catapult. After a year of operations along the Pacific coast that included testing of Sparrow I and Regulus missiles and Cutlass jet aircraft, she sailed 10 August 1955 for 7th Fleet operations ranging from the shores of Japan to the Philippines and Okinawa. She returned to San Diego 15 March 1956 and decommissioned 13 April for conversion that included the installation of an angled flight deck.

Hancock recommissioned 15 November 1956 for training out of San Diego until 6 April 1957 when she again sailed for Hawaii and the Far East. She returned to San Diego 18 September 1957 and again departed for Japan 15 February 1958. She was a unit of powerful carrier task groups taking station off Taiwan when the Nationalist Chinese islands of Quemoy and Matsu were threatened with Communist invasion in August 1958. The carrier returned to San Diego 2 October 1958 for overhaul in the San Francisco Naval Shipyard, followed by rigorous at sea training out of San Diego. On 1 August 1959, she sailed to reinforce the 7th Fleet as troubles in Laos demanded the watchful presence of powerful American forces in water off southeast Asia. She returned to San Francisco 18 January 1960 and put to sea early in February to participate in a new demonstration of communications by reflecting ultra-high-frequency waves off the moon. She again departed in August to steam with the 7th Fleet in waters off Laos until lessening of tension in that area permitted operations ranging from Japan to the Philippines.

Hancock returned to San Francisco in March 1961, then entered the Puget Sound Naval Shipyard for an overhaul that gave her new electronics gear and many other improvements. She again set sail for Far Eastern waters

2 February 1962, patrolling in the South China Sea as crisis and strife mounted both in Laos and in South Vietnam. She again appeared off Quemoy and Matsu in June 1962 to stem a threatened Communist invasion there, then trained along the coast of Japan and in waters reaching to Okinawa. She returned to San Francisco 7 October 1962, made a brief cruise to the coast of Hawaii while qualifying pilots then again sailed 7 June 1963 for the Far East.

Hancock joined in combined defense exercises along the coast of South Korea, then deployed off the coast of South Vietnam after the coup which resulted in the death of President Diem. She entered the Hunter's Point Naval Shipyard 16 January 1964 for modernization that included installation of a new ordnance system, hull repairs, and aluminum decking for her flight deck. She celebrated her 20th birthday 2 June 1964 while visiting San Diego. The carrier made a training cruise to Hawaii, then departed Alameda 21 October 1964 for another tour of duty with the 7th Fleet in the Far East.

Hancock reached Japan 19 November and soon was on patrol at Yankee Station in the Gulf of Tonkin. She remained active in Vietnamese waters fighting to thwart Communist aggression until heading for home early in the spring of 1965.

November found the carrier steaming back to the war zone. She was on patrol off Vietnam 16 December; and, but for brief respites at Hong Kong, the Philippines, or Japan, *Hancock* remained on station launching her planes for strikes at enemy positions ashore until returning to Alameda, Calif., 1 August, 1966. Her outstanding record during this combat tour won her the Navy Unit Commendation.

Following operations off the West Coast, *Hancock* returned to Vietnam early in 1967 and resumed her strikes against Communist positions. After fighting during most of the first half of 1967, she returned to Alameda 22 July and promptly began preparations for returning to battle.

Hancock was awarded the Navy Unit Commendation and received four battle stars for service in World War II.

A city in Kings County, Calif.

(PC-1142: dp. 295; l. 174'; b. 23'; dr. 8'; s. 20 k.; cpl. 65; a. 1 3", 1 40mm., 3 20mm., 2 rkt., 4 dcp., 2 dct.)

PC-1142 was laid down by the Defoe Shipbuilding Co., Bay City, Mich., 31 March 1943; launched 20 August; and commissioned 3 June 1944, Lt. (j.g.) Francis A. Mulhern in command.

After shakedown off Florida, PC-1142 was assigned to the Naval Training Center, Miami, operating there for 2 months. She sailed 22 September to escort a convoy to Cuba, then for the next 10 months continued escort and patrol duty between Florida and Cuba. PC-1142 departed Key West 22 June 1945 en route to the Pacific, arriving San Diego 10 July.

Two weeks later she steamed for Hawaii; then after a brief stay at Pear Harbor arrived Eniwetok 24 August. For the rest of the year PC-1142 performed patrol and escort operations in the Western Pacific. On 7 January 1946 she arrived Ponape, Caroline Islands, for assignment as a station ship. She continued these services out of Ponape and Eniwetok until 24 May when she was taken in tow by APL-44. PC-1142 arrived San Diego 30 July, remaining there for the next three months. In late October she sailed to Astoria, Oreg., and decommissioned at Vancouver, Wash.

USS *Wasp* (CV-18), USS *Yorktown* (CV-10), USS *Hornet* (CV-12), and USS *Hancock* (CV-19) in "Murderer's Row," Ulithi Atoll 2 December 1944

While berthed with the Pacific Reserve Fleet, Columbia River Group, *PC-1142* was named *Hanford* 15 February 1956. She was loaned to the Republic of China under the Military Assistance Program in July 1957, and now serves the Chinese Navy as *Pci Chang* (PC-122).

Hank

William Edwin Hank was born at Norfolk, Va., 25 September 1902 and graduated from the Naval Academy in 1925. During the years before World War II, he served at various shore stations and in *New York*, *Hull*, and *Saratoga*. Commissioned Lieutenant Commander in 1940, Hank took command of destroyer *Laffey* 1 April 1942. He received the Navy Cross for his skillful handling of the ship during the Battle of Cape Esperance October 11-12 and a second Navy Cross for heroism during the Naval Battle of Guadalcanal 12-13 November. As *Laffey* gallantly fought battleship *Hici* against great odds in a decisive fleet action that helped turn the course of the war, she was sunk by large caliber gunfire and a torpedo. Lt. Cmdr. Hank was reported missing and presumed dead 14 November. His ship received the Presidential Unit Citation.

(DD-702: dp. 2,200; l. 376'6"; b. 40'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 12 40mm., 11 20mm., 10 21" tt.; cl. *Aucn M. Sumner*)

Hank (DD-702) was launched 21 May 1944 by the Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Mrs. William Edwin Hank, widow of Lt. Cmdr. Hank; and commissioned 28 August 1944, G. M. Chambers in command.

After completing her Caribbean shakedown 18 October, *Hank* joined battleships *Missouri*, *Texas*, and *Arkansas* at New York and then sailed for the Pacific reaching Pearl Harbor 6 December via the Panama Canal and San Francisco. *Hank* reported to Ulithi 28 December and sortied 2 days later as part of the screen for Task Force 38, a fast carrier force under Vice Admiral John S. McCain. The primary mission of the carriers was to conduct air strikes against strategic Japanese positions along the China coast and on Formosa and Luzon to distract enemy attention and to divert Japanese ships from the landings at Lingayen Gulf which were to begin 9 January 1945. The day after the invasion was launched, Task Force 38 moved into the South China Sea to conduct a series of devastating raids on targets along the China Coast and in Indochina. After launching one final raid against Okinawa, the carriers and escorts, *Hank* included, returned to Ulithi 26 January 1945.

Joining Task Force 58, a reorganized fast carrier strike force under the command of Admiral Mitscher, *Hank* sortied 10 February. Carrier planes launched massive raids against airfields, aircraft factories, and shipping in the Tokyo area 16 and 17 February in paralyzing diversionary strikes prior to the invasion of Iwo Jima, 19 February. These raids, launched less than 125 miles from Tokyo Bay itself, were the first carrier air strikes to hit Japan proper since the Halsey-Doolittle raid of 1942.

Among the ships which *Hank* helped screen in the 116 unit task force were such illustrious veterans as *Indianapolis*, *Bunker Hill*, *Hornet*, *Wasp*, *Lexington*, *Essex*, *Yorktown*, *Enterprise*, *Saratoga*, *Indiana*, *Missouri*, *South Dakota*, and *Washington*. Deploying to the Iwo Jima area the afternoon of 18 February, *Hank* remained there to provide support for the invasion which began the following day; and she operated off the bitterly contested island until returning to Ulithi 4 March.

As the Pacific war moved into its climactic phases, *Hank* steamed from Ulithi with Task Force 58 14 March for further strikes against the Japanese home islands. Closing to within 75 miles of their targets, the carriers launched massive strikes against airfields on Kyushu and ships in the Inland Sea 18 and 19 March. Although under heavy air opposition from time to time, the carrier

planes claimed a total of 528 Japanese aircraft destroyed. After participating in the bombardment of enemy shore positions—including radio facilities, a weather station, and an airfield—on Minami Daito Shima 27-28 March, *Hank* headed for Okinawa. Her task force furnished support for landings made on that heavily fortified island 1 April, and *Hank* spent a busy week screening the carriers and stopping kamikazes with highly effective anti-aircraft fire. The destroyer then reported to a lonely radar picket station, where on the afternoon of 11 April she narrowly averted disaster by her effective gunfire. As a kamikaze came in low off the port bow, heading directly for the bridge, *Hank's* accurate anti-aircraft fire deflected it slightly, but the "Zeke" came in close enough to kill three sailors before crashing into the sea and exploding close aboard.

After repairs at Ulithi, *Hank* again joined Task Force 58, 1 May to resume screening and radar picket duties off Okinawa. June was spent at San Pedro Bay, Philippines, undergoing replenishment and training, and on 1 July the carriers redesignated Task Force 38 and operating under Vice Admiral McCain in Admiral Halsey's 3d Fleet sortied to launch further strikes against the Home Islands. *Hank* spent most of this period on hazardous and lonely radar picket duty, steaming 50 miles from the main body of ships to provide early warning of enemy air attacks. On the night of 18 July she joined Destroyer Squadron 62 and Cruiser Division 18 for an antishipping sweep across the entrance to Tokyo Bay. As she patrolled her radar picket station 9 August, *Hank* and *Boric* found themselves in the midst of five kamikaze planes. One of the aircraft came so close to *Hank* that it drenched both ship and personnel forward with gasoline before the veteran ships destroyed it and the other four attackers. *Boric* had been hit in the after bridge structure and suffered 48 dead and 66 wounded, while *Hank* had to report 1 man missing in action and 5 wounded.

Hostilities ceased 15 August 1945, and *Hank* steamed proudly into Tokyo Bay 10 September to participate in the occupation. She continued operations around Japan and Pearl Harbor through 30 December, when she sailed for Charleston, S.C., via Eniwetok, Pearl Harbor, San Diego, and the Panama Canal.

The veteran ship operated primarily out of New Orleans for reserve training cruises and good will visits to Caribbean and Central American ports until sailing 6 September 1949 for the Mediterranean. During her 5 months with the 6th Fleet, *Hank* participated in amphibious operations and visited Gibraltar, Malta, France, Sicily, Italy, and Algeria. Returning to Norfolk 26 January 1950, *Hank* engaged in training operations and a cruise to the Caribbean until sailing for the Far East and the Korean War 6 September. She arrived Yokosuka, Japan, 1 month later and joined the United Nations Blockade and Escort Force off the Korean coast. Her movements centered mainly around Wonsan Harbor, then under siege, with frequent interruptions for blockade patrol and bombardment missions. *Hank* supported the evacuation of Wonsan in early December and then moved up to Hungnam to help provide the curtain of fire which covered the evacuation of Allied troops. In January and February 1951, *Hank* supported the 8th Army as it moved to recapture and consolidate Seoul and Inchon. Screening, blockade patrol, and shore bombardment constituted the destroyer's duties along the Korean coast until she sailed for the United States, reaching Norfolk 9 June via San Diego, the Panama Canal, and Guantanamo.

After a yard overhaul at Norfolk, *Hank* resumed the peacetime training operations, Caribbean exercises, and annual deployments to the Mediterranean that kept the fleet ready to serve America well at any moment on the seas. In the fall of 1956 as warfare flared over the nationalization of the Suez Canal, *Hank* was there. She conducted patrols in the eastern Mediterranean to assert and confirm America's determination to keep the peace as well as to protect her citizens and interests.

In 1960 the destroyer with the Navy began to reach into space. She participated in training for Project Mercury,

America's first man-in-space effort, off the Virginia capes, and she was designated one of the recovery ships when Astronaut Lt. Comdr. Scott Carpenter made his orbital flight 24 May 1962. *Hank* operated with *Independence* on blockade and surveillance duty during the October 1962 Cuban Missile Crisis, remaining in the tension-filled Caribbean for nearly a month. She was designated a Naval Reserve Training Ship in October 1963 and proceeded to her new home port, Philadelphia. After undergoing repairs at Sun Shipbuilding & Drydock Co., Chester Pa., in 1964 *Hank* began reserve training cruises along the East Coast from Fort Lauderdale, Fla., to Halifax, Nova Scotia, continuing into 1967.

Hank received four battle stars for World War II, and four battle stars for Korean service.

Hanna

William T. Hanna was born 23 October 1920 in New York, N.Y. Private Hanna enlisted in the U.S. Marine Corps 14 January 1942 at New York. He was killed in action 9 October 1942 while attached to the 1st Marine Division Reinforced on Guadalcanal. His unit received the Presidential Unit Citation for outstanding gallantry and determination in successfully executing forced landing assaults against a number of strongly defended Japanese positions on various Japanese strongholds including Guadalcanal. For his undaunted courage Private Hanna was posthumously awarded the Navy Cross and Purple Heart. "Fighting desperately in hand-to-hand combat against overwhelming hostile forces, Private Hanna refused to be dislodged from his position and after exacting a tremendous toll of the enemy, heroically died at his post."

(DE-449; dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 2 dct., 8 dcp. (h.h.); cl. *John C. Butler*)

Hanna (DE-449) was launched 4 July 1944 by the Federal Shipbuilding & Drydock Co., Newark, N.J.; sponsored by Mrs. William P. Hanna, mother; and commissioned 27 January 1945, Lt. Comdr. Means Johnston, Jr., in command.

After shakedown out of Bermuda and Guantanamo Bay, *Hanna* returned to New York 24 March 1945. Departing New York 9 April she escorted *Akutan* (AE-13) to Cristobal, Canal Zone, then sailed via San Diego arriving Pearl Harbor 4 May. After more intensive training and various escort missions in Hawaiian waters *Hanna* sailed 9 June for Eniwetok where she took up duty with Marshall-Gilberts Surface Patrol and Escort Group. This duty continued until 28 September after the Japanese surrender. Then she and the U.S. prize *Tachibana Maru* formed the task unit to evacuate Japanese soldiers and sailors from Wake Island. Embarking 700 passengers they reached Tokyo 12 October. The U.S. Navy crew was withdrawn; the United States ensign hauled down; and *Tachibana Maru* turned over to the Japanese.

Departing Tokyo 24 October 1945 *Hanna* returned to Eniwetok and then sailed to Guam, where she took up duty as air-sea rescue and weather reporting ship. She continued this important task until her return to the States, where she decommissioned at San Diego 31 May 1946 and joined the Pacific Reserve Fleet.

Hanna recommissioned at San Diego 27 December 1950, Lt. Comdr. C. W. Ward in command to augment Navy strength in the Korean conflict.

Once more an active unit of the Pacific Fleet, *Hanna* served with Escort Squadron 9 until 16 April 1951 when she sailed for the Western Pacific. Here she served as patrol ship in the Formosa Straits. In June 1951 *Hanna* joined Task Force 95 for blockading and escort duties off the west coast of Korea. In August, while on shore bombardment mission in Wonsan Harbor *Hanna* was instrumental in silencing enemy shore batteries after a duel lasting more than 2 hours. During the ensuing months *Hanna* served gallantly, operating with the Blockading

and Escort Forces of Task Force 95. She was part of the antisubmarine and antiaircraft screen for our aircraft carriers launching repeated strikes against the Communists. In early November 1951 *Hanna* was detached for the United States, reaching San Diego 26 November for overhaul.

Three months later *Hanna* returned to the western Pacific and resumed her shore bombardment missions in addition to escorting damaged vessels and investigation of fishing craft. She returned to San Diego 9 June 1953. After operations off the California coast *Hanna* departed 19 November for an island-hopping cruise of the Central Pacific, returning to San Diego 6 June 1954.

Between 9 November 1954 and 28 July 1957 *Hanna* made three more deployments to the western Pacific. On her last deployment *Hanna* took up patrolling the Central Carolines, Northern Marianas, the Bonins, and the Volcano Islands. In addition she participated in a rescue mission involving the Chinese Nationalist merchantman SS *Ping Tung* that had run aground on Yokoate Shima, an island of the Ryukyu chain.

Hanna's home port was changed to Long Beach 26 November 1957 and she was designated a Naval Reserve Training Ship. She commenced the first of her reserve training cruises 6 February 1958 to Manzanillo, Mexico, and from that date until 27 August 1959 made 18 such cruises in addition to numerous weekend cruises. *Hanna* decommissioned at Mare Island 11 December 1959 and joined the Pacific Reserve Fleet.

Hanna received five stars for Korean service.

Hannah

A former name retained.

(Sch: t. 78, a. 4 4-pdrs.)

Hannah, originally owned by John Glover of Marblehead, Mass., was the first armed vessel to sail under Continental pay and control, and was taken over 24 August 1775. She was the beginning of the small fleet fitted out by George Washington in the fall of 1775 to aid him in the siege of Boston by capturing provisions ships making for the harbor from British ports. Her first Captain was Nicholson Broughton, a captain in the Army, and her crew was recruited from John Glover's regiment.

After outfitting, *Hannah* sailed 5 September, and next day captured the sloop *Unity* with naval stores and provisions. The ship returned to Beverly, Mass., and after much trouble maintaining an adequate crew, sailed again near the end of September 1775. She cruised off Boston, and was run ashore by British sloop *Nautilus* near Beverly 10 October. After a spirited engagement between the British ship and townspeople on the shore, *Hannah* was saved from destruction and capture, but was soon decommissioned as General Washington found more suitable ships for his cruisers.

Hannam

(PF-77; dp. 1,430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*; T. S2-S2-AQ1)

Hannam (PF-77), originally designated PG-185, was built under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I. Intended for us by the United Kingdom, she was reclassified PF-77, 15 April 1943, renamed *Caicos*, and launched 6 September 1943, sponsored by Mrs. William A. Sandison. *Caicos*, was then completed and transferred under lend-lease to the United Kingdom 31 December 1943 as part of the 21-ship "Colony" class. She served as a patrol and escort ship until being returned to the United States 12 December 1945. The frigate was sold to N. B. Wolcott of New York City in June 1946 and resold to Argentina 6 July 1947. Renamed *Santisma Trinidad* (P-34), she served with the Argentine Navy as a frigate until 1963, when she was reclassified a survey ship and renamed *Augusto Lasere* (Q-9).

EMBRYO OF THE AMERICAN NAVY.

THE SCHOONER "MANNAH" RUNNING THE GAUNTLET OF TWO BRITISH SHIPS-OF-WAR,
OFF CAPE ANN, SEPTEMBER 5, 1775.

Hannibal

Hannibal was born in 249 B.C. to be brought up by his father in undying hatred of Rome. During the Second Punic War, he led an army from the Carthaginian colony in Spain across the Alps into Italy, defeating every army sent to oppose him. *Hannibal* maintained himself in the Italian peninsula for 15 years without support from home; but when Carthage was threatened with invasion in 203 B.C., he returned to Africa. He was defeated in the Battle of Zama 202 B.C., and soon was driven into exile. In 183 B.C. *Hannibal* took poison and died.

(AG-1: dp. 4,000'; l. 274'1"; b. 39'2"; dr. 17'7"; s. 9 k. cpl. 244; a. 1 4", 2 3", 8 .50 cal. mg.)

Hannibal (AG-1), a converted steamer, was built as *Joseph Holland* by J. Blumer & Co., Sunderland, England, in 1898; purchased by the Navy 16 April 1898; renamed *Hannibal*; and commissioned 7 June, Comdr. H. G. Colby in command.

From June 1898 to May 1908 *Hannibal* served in the Collier Service along the Atlantic coast. After an overhaul in 1908, she continued in the Collier Service with her base in New England for nearly 3 years. *Hannibal* decommissioned 15 August 1911.

She recommissioned 16 October 1911 and was assigned to the U.S. Survey Squadron to make depth soundings and surveys in preparation for the opening of the Panama Canal. Hydrographic surveys continued in the Caribbean until 1917, including operations in Panama, Nicaragua, Honduras, and Cuba.

With the advent of World War I, *Hannibal* operated with the Patrol Force of the Atlantic Fleet. After an

overhaul in early 1918, she became a tender to submarine chasers at Plymouth, England. *Hannibal* served in English waters until December, when she sailed for the Azores via Gibraltar as a sub-chaser escort. In early 1919 she resumed sub-tender duties, and visited England, France, and Portugal returning to the United States in August.

Hannibal remained in reserve at Philadelphia until 9 February 1921, when she sailed for Cuba to resume survey operations which lasted until 1930. During the next decade *Hannibal* surveyed waters near Trinidad, Venezuela, Costa Rica, and the Canal Zone. During World War II she operated out of Norfolk in the Chesapeake Bay degaussing range. *Hannibal* decommissioned 20 August 1944 and was sunk as a bombing target March 1945.

Hanover

A county in Virginia.

(APA-116: dp. 8,100 lt.; l. 492'; b. 69'6"; dr. 26'6"; s. 16 k.; cpl. 479; a. 2 5", 8 40 mm.; cl. *Bayfield*; T. C3-S-A2)

Hanover (APA-116) was launched under Maritime Commission contract by Ingalls Shipbuilding Corp., Pascagoula, Miss., 18 August 1944; sponsored by Mrs. Stanley M. Bebler; loaned to the Navy and simultaneously commissioned 31 March 1945, Comdr. J. H. Henderson in command.

After conducting a brief shakedown cruise off Galveston, Tex., *Hanover* arrived Gulfport, Miss., 3 May 1945 and began loading Marines and SeaBees for transportation to the Pacific. She got underway 6 May and sailed

to Pearl Harbor, carrying out training operations en route. After her arrival 24 May, the ship unloaded her troops for further transfer and until 6 June took part in under-way training operations in Hawaiian waters. She then sailed for San Francisco in company with other transports, and just before reaching California was diverted to Portland, Oreg., where she arrived 19 June.

Hanover got underway 1 July for Eniwetok Atoll, an important Pacific staging area, expecting to take part in the final assault on Japan. Arriving 14 July, she sailed in convoy 3 days later, bound for Ulithi. The ship remained at this base briefly, for she was soon bound for Okinawa, where she arrived 12 August 1945. *Hanover* unloaded replacement troops on this battle-scarred island, and after the close of the war prepared to take part in the occupation.

After embarking Army units *Hanover* sailed 5 September for Jinsen, Korea, to aid in the occupation, and unloaded her troops 3 days later. The transport returned to Okinawa 14 September but was soon forced to stand out to sea to ride out the great hurricane of September 1945. After the severe weather subsided, *Hanover* returned to Okinawa and loaded troops for the occupation of China. She arrived Taku 30 September to help stabilize the troubled situation there and aid in the consolidation of the area by Nationalist forces.

Hanover's next assignment was with the "Magic-Carpet" fleet, bringing home American troops from the Pacific. She arrived San Francisco on her last voyage 6 February 1946, and was ordered to steam via the Panama Canal to Norfolk, Va., where she arrived 9 March. The ship decommissioned 11 May 1946 and was returned to the Maritime Commission the next day. Sold to the Matson Navigation Co. in 1947, she sailed as *Hawaiian Wholesaler* until 1961, when she became *Ventura* for Matson's Oceanic Steamship Co.

Hansford

A county in Texas.

(APA-106; dp. 8,100 lt.; l. 492'; b. 69'6"; dr. 26'6"; s. 16 k.; cpl. 479; a. 2 5", 8 40mm.; cl. *Bayfield*; T. C3-S-A2)

Hansford (APA-106) was launched 25 April 1944 as *Gladwin* by Western Pipe & Steel Co., San Francisco, under Maritime Commission contract; sponsored by Mrs. Edward C. Cahill; transferred to the Navy; renamed *Hansford* 25 August 1944, and commissioned 12 October 1944, Comdr. William A. Lynch in command.

After shakedown off San Pedro, Calif., *Hansford* got underway for Pearl Harbor 25 November 1944 and unloaded passengers and cargo there 2 December. In the Hawaiian Islands she undertook an intensive training program emphasizing landing exercises during daylight and maneuvering in formation at night. On 28 December she embarked the 1st Battalion Landing Team, 27th Regiment, 5th Division, U.S. Marines who joined her crew in amphibious training as they made ready for combat.

On 27 January 1945, *Hansford* sailed for Saipan, the staging area for the invasion of Iwo Jima, next step in America's seaborne thrust across the Pacific. After final rehearsal at Saipan, she sortied 16 February 1945 with Task Force 51. The initial assault waves which stormed the beaches of Iwo Jima 19 February included units from *Hansford*. She continued to land troops and equipment through 25 February. Although she often closed to within 1,000 yards of land, *Hansford* managed to escape the enemy shells which landed nearby. However, four of her boats, two LCVP's and two LCM's were lost during the operation, and her beach party, which was ashore from 19 February through 22 February, suffered 17 casualties including one officer and three enlisted men killed and one bluejacket missing. Three members of the boat group were wounded.

Each day while she was anchored off Iwo Jima, *Hansford* embarked and cared for casualties who were brought on board from the beaches. On the afternoon of 25 Febru-

ary she sailed for Saipan. Upon arrival there, 28 February, she transferred 127 casualties to an Army hospital.

Hansford departed for Tulagi, Solomon Islands, 5 March 1945, where upon arrival 12 March, she replaced the boats lost at Iwo Jima. The next day she sailed for the New Hebrides, anchoring in Segond Channel, Espiritu Santo Island, 15 March to embark the 2d Battalion Landing Team, 105th Regiment, 27th Infantry Division, U.S. Army. While at Espiritu Santo, *Hansford* readied herself for further combat. She got underway for Ulithi atoll, the staging area for the invasion of Okinawa, 25 March.

She sortied to the Ryukyus 4 April to take part in the follow up phases of the vast Okinawa operation, largest invasion of the Pacific War. After a passage made difficult by three submarine contacts and encounters with numerous floating mines, her task group anchored in Kerama Retto 9 April 1945. The next day she steamed to the Hagushi beaches at Okinawa, where she landed her troops, cargo, and embarked casualties. *Hansford's* crew often sighted enemy planes which raided the area 20 times during the week she was off Okinawa, but she only opened fire once when an enemy plane passed close aboard at an extremely low altitude. The ship's company suffered their only casualty when the barrel of a 20mm. gun exploded.

Hansford departed Okinawa with 51 casualties on board 16 April and transferred them to an Army hospital upon her arrival Saipan 20 April. The next day she got underway for Ulithi where she anchored 23 April for a month of training for future operations against the Japanese home islands. She then proceeded to the Philippines arriving San Pedro Bay, Leyte Gulf, 27 May, to continue preparations for invasion.

The day after the Japanese capitulated, *Hansford* embarked Commander Amphibious Group 12, Rear Admiral J. L. Hall, and his staff of 62 officers and 218 bluejackets. On 19 August key Army units came on board at Leyte for passage to occupation duty in Japan. She got underway for Tokyo Bay 25 August, returned to Subic Bay that night because of typhoon and 27 August again sailed for Japan. Her formation entered Tokyo Bay early in the watch and passed battleship *Missouri* as the surrender ceremonies ending the war took place. The next day *Hansford's* occupation troops and cargo debarked at Yokohama. During the ensuing weeks at Yokohama, *Hansford* was a center of much activity since Admiral Hall, now serving as Port Director, was embarked. Her duties included quartering liberated Allied prisoners.

Assigned "Magic Carpet" duty 13 October, *Hansford* sailed with 79 officers and 1,320 enlisted passengers whom she debarked in San Pedro 26 October. After repairs in dry dock, she returned to Nagoya, Japan, 4 December and got underway for Seattle, Wash., with another load of troops 7 December. The day after her arrival back in Japan, she was released from "Magic Carpet" duty, and sailed for the United States. Subsequently, *Hansford* sailed via the Panama Canal to Norfolk, arriving 2 May 1946, she decommissioned there 14 June 1946. She was redelivered to the Maritime Commission and sold 20 May 1947 to Isthmian Lines, where she became *Steel Apprentice*.

Hanson

Robert Murray Hanson was born 4 February 1920 at Lucknow, India, the son of Methodist missionaries stationed in India. Joining the Marine Corps shortly after the outbreak of World War II, Hanson trained as a fighter pilot and became part of the 25th Marine Fighting Squadron. He was credited with splashing 26 Japanese planes, 20 of them in 6 consecutive flying days. His country recognized the quintuple ace's skill and daring by awarding him the Medal of Honor as well as the Air Medal and the Navy Cross. The Medal of Honor Citation reads in part: "Undeterred by fierce opposition, and fearless in the face of overwhelming odds, 1st Lt. Hanson fought the Japanese boldly and with daring aggressiveness". Lt. Hanson was lost in action when his plane

crashed into the sea over Rabaul, New Britain, 3 February 1944.

(DD-832: dp. 2,425; l. 390'6", b. 41'1"; dr.; 18'6"; s. 35 k.; cpl. 367, 6 a. 6 5", 12 40 mm., 8 20 mm., 5 21" tt.; dep., 2 det. cl. *Gearing*)

Hanson (DD-832) was launched 11 March 1945 by the Bath Iron Works Corp., Bath, Maine; sponsored by Mrs. Harry A. Hanson, mother of Lt. Hanson; and commissioned 11 May 1945, Comdr. John C. Parham in command.

After shakedown in the Caribbean and conversion to a picket destroyer at Boston Navy Yard, *Hanson* sailed for the Pacific 7 November 1945. She spent most of the following year operating in support of occupation forces in Japan, with a September period of fleet maneuvers off the China coast. Reporting to the Atlantic Fleet at Norfolk 6 February 1947, *Hanson* trained along the East Coast until sailing in late January 1948 for her first tour of duty with the 6th Fleet in the Mediterranean. She was designated DDR-832 (radar picket destroyer) 8 March 1949. During her second deployment to the Mediterranean in the summer of 1949 *Hanson* took part in two of the most important steps toward peace taken in that tension-wracked region. As station ship to the United Nations General Assembly at the Isle of Rhodes, she was the only American warship present as Greece received control of the long-contested Dodecanese Islands. On her next important duty *Hanson* carried United Nations mediator Dr. Ralph Bunche, later awarded the Nobel Peace Prize, to Beirut, Lebanon, for peace negotiations on Israel.

World crisis shifted from Europe and the Mediterranean to the East in 1950, and *Hanson* joined the Pacific Fleet at Pearl Harbor 12 July to prepare for her role against Communist aggression in Korea. Her first duty off the war-torn country saw *Hanson* participating in the brilliant amphibious operations at Inchon 15 September 1950 as well as providing fire cover for the successful evacuation of Hungnam and Wonsan just before Christmas that year. *Hanson's* second combat cruise to Korea, September 1951 to May 1952, took her along the east coast as a member of the fleet bombarding strategic shore targets in support of ground troops where her accurate fire was most effective. In December she also participated in the important Formosa Patrol and visited Hong Kong. After a respite at San Diego, *Hanson* returned to the Korean bomblines in December 1952 for task force operations, screening the fast carriers as they launched their jets against enemy supply lines and positions. The battle-hardened destroyer also participated in shore bombardment, search-and-rescue operations, and Formosa patrol before returning to the United States 20 July 1953, shortly before the end of open conflict in Korea.

Subsequent years found *Hanson* making annual 6-month deployments with the 7th Fleet to strengthen American defenses in the Pacific and to prove American determination to keep the peace to possible aggressors. In addition to patrol, major portions of *Hanson's* pacific cruises were devoted to tactical maneuvers and battle exercises with United States and allied ships as well as intensive anti-submarine hunter-killer training. Hong Kong, Formosa, Japan, the Philippines, Korea, and even Australia provided familiar ports of call for the destroyer on these cruises. *Hanson* was patrolling the Straits of Formosa virtually within sight of the Communist mainland in the fall of 1958 as shelling of the offshore islands of Quemoy and Matsu precipitated the latest major international crisis which this "small boy" again helped to quell. In the spring of 1962 and again in 1963 *Hanson* took part in the annual Australian celebration of the Battle of the Coral Sea, World War II's first carrier naval engagement in the Pacific.

When not deployed to the western Pacific *Hanson* trains out of her home port, San Diego, in a program designed to keep ship and crew at their peak readiness. Much of this training is centered on *Hanson's* role as a radar picket destroyer, designed to provide early warning of approaching enemy air, surface, or submarine forces. In

the spring of 1964 she was redesignated DD-832 and entered the shipyard at Mare Island to undergo a Fleet Rehabilitation and Modernization Conversion designed to prolong her effective life as a fighting ship for many years.

Conversion completed 6 December 1964, *Hanson* rejoined the Pacific Fleet early in 1965 as a unit of DesRon 11. She operated along the West Coast until heading for the Far East early in the summer to join the fight against Communist aggression in Southeast Asia. In July she shelled enemy targets ashore and, but for brief respites, she patrolled and fought in troubled Vietnamese waters until late in the autumn.

Returning to San Diego in December, she operated along the coast of California and Mexico until getting underway for the Orient 17 July 1966. She steamed via Hawaii, Midway, Guam, and Subic Bay for Vietnam and anchored in the Saigon River 13 September. But for short visits to Hong Kong, Formosa, and the Philippines, *Hanson* operated in the fighting zone until relieved 6 January 1967. During the deployment, her 5-inch guns fired over 9,000 rounds at Communist targets, mostly in direct support of ground forces. She also did plane guard duty, patrolled close ashore to stop infiltration of supplies and men from the north, and refueled helicopters.

Back at San Diego 11 February 1967, *Hanson* operated along the West Coast preparing for her next WestPac deployment.

Hanson received eight battle stars for Korean service.

Happy Days, see *Alpmandite* (PY-24)

Haraden

Jonathan Haraden was born in Goucheater, Mass., 11 November 1744, and joined the Massachusetts State Navy in July 1776 as First Lieutenant of the sloop *Tyrannicide*. Sailing with her for 2 years, he captured many prizes, and rose to command her in 1777. In 1778, Haraden left the state navy for a career as a privateersman, commanding *General Pickering*. He simultaneously engaged three British privateers off New Jersey in October 1779, and captured a 22-gun sloop in the Bay of Biscay. When British privateer *Achilles*, of three times his force, attempted to recapture his prize a few days later, Haraden fought a fierce action at close quarters for 3 hours, forcing the larger ship to sheer off. Captured briefly by Admiral Rodney in the West Indies in 1781, Haraden escaped and sailed privateer *Julius Caesur* in 1782. In June of that year fought off two British vessels of equal force at the same time. His health declined steadily after the close of the War for Independence, and he died at Salem, Mass., 23 November 1803.

I

(DD-183: dp. 1,060; l. 314'5"; b. 31'8"; dr. 8'6"; s. 35 k.; cpl. 101; a. 4 4", 4 21" tt., 1 dcp; cl. *Wickes*)

The first *Haraden* was launched by Newport News Shipbuilding & Drydock Co., Newport News, Va., 4 July 1918; sponsored by Miss Mabel B. Stephens, great-niece of Captain Jonathan Haraden; and commissioned at Norfolk Navy Yard 7 June 1919, to Lt. Comdr. R. H. Booth in command.

Haraden was assigned to U.S. Naval Forces in European Waters; after calling at Newport for supplies she departed New York 30 June 1919 for duty in the Adriatic Sea. She arrived Spalato, Dalmatia, 28 July 1919 and conducted operations from that port assisting the naval force in the execution of the terms of the Austrian armistice, serving as station ship at Trieste and Fiume, and participating in maneuvers. This duty occupied her until 23 October 1919, when she departed for Norfolk, Va., arriving 18 November.

The destroyer departed Norfolk 7 April 1920 for Charleston, S.C. and operated with reserve destroyer divisions out of Charleston until 15 March 1921. After an exten-

sive overhaul at New York, ending 2 May, *Haraden* sailed for Newport and training operations off New England. She returned to Charleston 12 October 1921 and to Philadelphia 10 April 1922. *Haraden* decommissioned 17 July 1922.

With the mounting tensions in 1939, *Haraden* was called back to active service and recommissioned at Philadelphia 4 December 1939. After shakedown training at Guantanamo Bay, Cuba, the destroyer performed neutrality patrol in Cuban waters briefly and then returned to Newport, R.I., 6 March 1940. She subsequently conducted neutrality patrol in waters off Block Island and Nantucket Shoals, and made three training cruises in Chesapeake Bay.

Arriving Boston Navy Yard 7 September 1940, *Haraden* was 1 of the 50 over-age destroyers to be sent to the United Kingdom in exchange for bases. She sailed 18 September for Halifax, Nova Scotia, and decommissioned there for transfer to the British 24 September 1940. Her name was struck from the Navy List 8 January 1941.

Assigned to Canada and renamed HMCS *Columbia*, she saw much service in World War II. She first underwent refit and then was assigned to convoy duties in the Atlantic. Her first major action began 15 October 1941 when she joined convoy SC-48, already under submarine attack. *Columbia* and the other escorts fought valiantly, but nine merchantmen from the convoy were sunk before reaching England. After the U.S.'s entry into the war *Columbia* was reassigned to convoy ships from New York to St. Johns, Newfoundland, the first leg of the transatlantic journey. She escorted convoys and performed anti-submarine patrol until 25 February 1944, when she struck a cliff in foul weather off the coast of Newfoundland. *Columbia* was not fully repaired after the accident but made watertight and used as a fuel and ammunition hulk in Nova Scotia until her return to the War Assets Administration for disposal in August 1945 when she was sold for scrapping.

II

(DD-585: dp. 2,050; l. 376'6"; b. 39'8"; dr. 13'; s. 35 k.; cpl. 273; a. 5 5', 10 21" tt., 6 dep., 2 dct.; cl. *Fletcher*)

The second *Haraden* was launched by Boston Navy Yard, Boston, Mass., 19 March 1943; sponsored by Miss Caroline E. Derby, great-great-grandniece of Captain Jonathan Haraden; and commissioned at Boston 16 September 1943, Comdr. H. C. Allen, Jr., in command.

Haraden departed Boston 9 October 1943 for shakedown training off Bermuda, and after its completion joined carrier *Intrepid* at Boston 30 November for the voyage to the Pacific. She transited the Panama Canal and arrived San Diego 21 December to join Rear Admiral Oldendorf's Northern Support Group for the epic invasion of the Marshall Islands.

Escorting the main attack group of transports, *Haraden* arrived in the Marshalls 30 January, and was detached to form a screen for the battleships and cruisers during the heavy bombardments of 31 January. As troops landed under the devastating fire on Ennubir Island, *Haraden* shifted to direct fire support, turning her guns on an ammunition dump on Ennagannet Island that soon blew up with a tremendous explosion. That night she conducted anti-submarine patrol and 1 February continued fire support and patrol functions during the landings on Roi and Namur. The destroyer departed the Kwajalein area briefly for an escort voyage to the Ellice Islands 6-15 February, but returned to provide anti-submarine patrol for units off Kwajalein and Eniwetok until 29 February.

Haraden arrived Pearl Harbor 8 March 1944, and after a brief period of upkeep steamed back to the Marshalls with two fleet oilers carrying vital fuel. Arriving 1 April, she engaged in various duties in support of the operations there, including fire support and anti-submarine patrol, until departing for Pearl Harbor with escort carrier *Bataan* 18 May. At Pearl Harbor *Haraden* was reassigned to escort carriers *Natoma Bay* and *Manila Bay* and repair ship *Hector* for the next major operation in the epic sweep through the Pacific—the Marianas.

Arriving east of Saipan 22 June 1944, *Haraden* screened her escort carriers during the launching of aircraft 22-24 June; while refueling alongside *Natoma Bay* she narrowly missed being sunk by four aerial bombs in a surprise attack. Two bombs fell some 200 yards to port and two astern. *Haraden* returned to Pearl Harbor, arriving 8 July, until 15 September participated in training exercises and maneuvers in Hawaiian waters in preparation for the invasion of the Philippines.

Haraden arrived Seeadler Harbor, Manus, Admiralty Islands, 2 October 1944, and 12 days later departed as an escort unit for the large group of transports carrying invasion forces. They arrived off Leyte 20 October and *Haraden* began a long and grueling job of covering the transports during and after the main assault. Japanese airplanes began almost continuous raids on the landing group the afternoon of 20 October, with *Haraden* acting as part of the anti-aircraft screen, protecting the transports with her gunfire.

The afternoon of 26 October *Haraden* formed with an escort carrier group in Leyte Gulf and steamed for Manus, arriving Seeadler Harbor 1 November 1944. Remaining there until 12 November, the ships sailed to Palau, arriving the 18th, and from there provided air support to convoys bound to and from the Philippines until 28 November. The carrier force, with *Haraden* in the screen, departed 10 December for the Sulu Sea, en route to the invasion of Mindoro.

Haraden and the escort carriers entered the Sulu Sea 13 December, and were attacked that day by four Japanese aircraft. *Haraden* assisted in downing three of the raiders, but the fourth banked left and dived for the destroyer. Trailing smoke from hits by *Haraden*'s gunners, she crashed into the destroyer's side, putting her forward engine room out of commission and severely damaging her topside. As *Haraden* lay dead in the water, destroyer *Twiggs* came alongside to help and the destroyer was soon underway on her own power. She arrived at San Pedro Bay 14 December 1944 and transferred her casualties—14 killed and 24 wounded. Steaming on toward the United States via Hawaii, she arrived at Puget Sound Navy Yard, Bremerton, Wash., 14 January 1945 for battle repairs.

Repairs and training completed, *Haraden* departed again for the Pacific 19 April from San Francisco, arriving Pearl Harbor 25 April. She performed escort duties for amphibious convoys in the Western Pacific until 6 July, when she commenced a series of training exercises off Subic Bay, Philippine Islands.

Haraden next participated in the operations off the China coast following the surrender of Japan. She got underway 28 August with units of the 7th Fleet and made a show of force at Tsingtao and along the China coast to help stabilize the tense situation there. She arrived at Jinsen, Korea, 8 September and after another voyage down the coast of China and back, departed Jinsen with the North China occupation forces 29 September. She stood by to support the amphibious landings of occupation forces off Taku Bay 30 September-6 October, and visited Chefoo, Shanghai, Taku, and Tsingtao in support of the occupation. Underway from Tsingtao 13 December 1945, she steamed by way of Pearl Harbor to San Francisco, arriving 3 January 1946. Later moved to San Diego, she remained inactive until decommissioned there 2 July 1946. *Haraden* entered the Pacific Reserve Fleet, San Diego Group, where she remains.

Haraden received five battle stars for her service in World War II.

Harcourt

Former named retained.

I

(ScTug: t. 75; l. 66'; b. 16'3"; dph. 7'9"; s. 13 k.)

The first *Harcourt*, a screw tug, was purchased by the Navy at New York from a private owner 14 June 1864.

Her first commanding officer was Acting Ensign J. A. Chadwick.

After a brief period as dispatch boat at Hampton Roads, *Harcourt* was ordered 31 July 1864 to Beaufort, N.C., to serve the North Atlantic Blockading Squadron as a pilot tug. She remained at Beaufort carrying pilots to and from ships in the harbor until returning to Norfolk for repairs in November 1864. She later spent a brief period as a patrol boat on the James River in March 1865, and in April assisted in towing the hulk of former C.S.S. *Albemarle*, the formidable ram sunk in Albemarle Sound 27 October 1864 by Lt. W. B. Cushing, to Norfolk Navy Yard, where she arrived 27 April. *Harcourt* performed various tug duties in Hampton Roads until placed in ordinary 20 November 1865. She was sold at Norfolk 16 April 1867.

II

(IX-225: dp. 3,381; l. 441'6"; b. 56'11"; dr. 27'1"; s. 11 k.; cpl. 71; T. EO2-S-C1)

The second *Harcourt*, a standard Liberty Ship, was laid down under Maritime Commission contract as S.S. *John M. Clayton* by California Shipbuilding Corp., Los Angeles, Calif., 23 November 1942; launched 27 December 1942; sponsored by Miss Barbara Bechtel; and completed 8 January 1943. Sailing for the American-Hawaiian Steamship Co., she carried war cargoes in both the Atlantic and Pacific Oceans until hit by a Japanese bomb 2 January 1945 during the Mindoro landings in the Philippines. Her crew beached the ship before she went down; she was subsequently raised and taken to Pearl Harbor where the yard force working with customary efficiency and speed repaired the gaping hole in her port side. Acquired by the Navy on a bareboat basis, the ship commissioned as *Harcourt* (IX-225) on 22 June 1945, Lt. Comdr. H. T. Shelly in command.

Ready for service 10 July, *Harcourt* sailed for Eniwetok with fleet supplies. She then sailed for Tokyo, arriving 17 September with a load of freight for the 3d Fleet, and remained there to assist in the occupation until 31 March 1946, when she sailed for San Francisco. *Harcourt* arrived San Francisco 22 April, decommissioned 17 May, and was delivered to the War Shipping Administration at Suisun Bay, Calif. She remained in the National Reserve Defense Fleet in a damaged condition until sold for scrap to Zidell Exploration Co., in 1962.

Hardcastle, Walter, see *Walter Hardcastle*

Harder

A fish of the mullet family found off South Africa.

(SS-257: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'; s. 20 k.; cpl. 60; a. 13", 1021" tt.; cl. *Gato*)

The first *Harder* (SS-257) was laid down by the Electric Boat Co., Groton, Conn., 1 December 1941; launched 19 August 1942; sponsored by Miss Helen M. Shaforth; and commissioned 2 December 1942, Comdr. S. D. Dealey in command.

Following shakedown off the East Coast, *Harder* sailed for Pearl Harbor; and, after a short stay there, she departed on her first war patrol 7 June 1943. Cruising off the coast of Japan, the submarine worked her way inside a picket line and sighted her first target 22 June. She made a radar approach on the surface and fired four torpedoes at the two-ship convoy, sinking *Sagara Maru*. She returned to Midway 7 July.

Harder began her second war patrol 24 August from Pearl Harbor; and, after touching at Midway, she headed for the Japanese coast. While patrolling off Honshu 9 September, she attacked and sank *Koyo Maru*, and later that night ran by an escort ship at a range of 1,200 yards without being detected. Two days later the submarine encountered a convoy. After running ahead to improve her firing position, she sank cargo ship *Yoko Maru* with a

spread of three torpedoes. Continuing her patrol, *Harder* sighted two more ships 13 September, but she was forced down by enemy planes while firing torpedoes. Escorts kept the submarine down with a severe depth charge attack which lasted for over 2 days and almost exhausted her batteries. After evading the Japanese ships, *Harder* detected her next target 19 September; a torpedo sent *Kachisan Maru* to the bottom almost immediately. Though running in bad weather, *Harder* continued to find good targets. On 23 September she sank a 4,500-ton freighter, *Kowa Maru*, and a 5,800-ton tanker, *Daishin Maru*, off Nagoya Bay. Her torpedoes expended, *Harder* turned eastward 28 September. After shooting up two armed trawlers the 29th, she touched Midway 4 October and arrived Pearl Harbor 4 days later.

For her third war patrol *Harder* teamed with *Snook* and *Pargo* to form a deadly and coordinated attack group. Departing 30 October for the Marianas, *Harder* encountered a target 12 November. Promptly dispatching this one, she surfaced and sighted a trawler-escort damaged by the explosion of one of her own depth charges. Submerging again until sunset, the submarine sank the damaged ship with gunfire, then turned her bow toward Saipan in search of new targets. Sighting three marus on the 19th, she radioed her companions and closed for attack. After passing close by an escorting destroyer, *Harder* fired six torpedoes at two ships, sinking *Udo Maru*. As depth charges began to fall, she pressed the attack; two more torpedoes finished *Hokko Maru*. She surfaced to periscope depth after nightfall to finish off the third maru. Shortly before midnight, she fired several more shots at 6,000-ton *Nikko Maru*; but she stubbornly refused to sink. A brave, but doomed, enemy crew kept the cargo ship afloat until *Harder* had expended all torpedoes, many of which ran erratically. Rough weather the next day finally sank the damaged maru. *Harder* returned to Pearl Harbor 30 November, then sailed to Mare Island, Calif., for overhaul.

Returning to action in the Pacific, *Harder* reached Pearl Harbor 27 February 1944 and departed on her fourth war patrol 16 March with *Seahorse*. She headed for the western Carolinas where she was assigned duty as lifeguard ship for downed aviators. During American air strikes against Woleai 1 April *Harder* received word of an injured pilot awaiting rescue from the beach of a small enemy-held island west of Woleai. Protected by air cover, she nosed against a reef, maintained her position with both screws, and sent a boat ashore through breaking surf. Despite Japanese snipers, boiling shoals, and the precarious position of the submarine, the daring rescue succeeded, and the intrepid submarine returned to the open sea.

On 13 April an enemy plane sighted *Harder* north of the western Carolines and reported her position to *Ikazuchi*, a patrolling destroyer. As the enemy ship closed to within 900 yards, *Harder* fired a spread of torpedoes that sank the attacker within 5 minutes. Dealey's famous report was terse—"Expended four torpedoes and one Jap destroyer." Four days later *Harder* spotted a merchant ship escorted by destroyers. Firing four torpedoes, she sank 7,000-ton *Matsue Maru* and damaged one of the escorts. Then, adding to the enemy's misery, she returned to Woleai where she surfaced on the morning of 20 April to deliver a shore bombardment under cover of a rain squall. She returned to Fremantle from this highly varied and successful patrol 3 May.

Even greater successes lay ahead for this valiant submarine. Having sunk one destroyer, *Harder* joined the all-out hunt against Japanese destroyers, once considered the most dangerous of foes. Assigned the area around the Japanese fleet anchorage at Tawi-Tawi, *Harder* departed Fremantle 26 May with *Redfin* and headed for the Celebes Sea.

On 6 June *Harder* entered the heavily patrolled Sibutu Passage between Tawi-Tawi and North Borneo and encountered a convoy of three tankers and two destroyers. She gave chase on the surface but was illuminated by the moon. As one of the destroyers turned to attack,

Harder submerged, turned her stern to the charging destroyer, and fired three torpedoes at range of 1,100 yards. Two struck *Minatsuki* and exploded; the destroyer sank within 5 minutes. After attacking the second escort without success, *Harder* was held down by a depth charge attack while the convoy escaped.

Early next morning an enemy plane spotted *Harder*. The submarine soon sighted another destroyer searching the area for her. As before, the enemy closed the range; once again, *Harder* took the initiative. She fired three torpedoes at short range, and two of them struck amidships, one detonating the ship's magazine with a tremendous explosion. *Hayanami* sank a minute later. Following the inevitable depth charge attack, *Harder* transited the Sibutu Passage after dark and steamed to the northeast coast of Borneo. There on the night of 8 June she picked up six British coast-watchers, and early next day she headed once more for Sibutu Passage.

That evening *Harder* sighted two enemy destroyers patrolling the narrowest part of the passage, just 6 miles from Tawi-Tawi. After submerging, she made an undetected approach and at 1,000 yards fired four torpedoes at the overlapping targets. The second and third torpedoes blasted destroyer *Tanikaze*; she sank almost immediately, her boilers erupting with a terrific explosion. The fourth shot hit the second ship and exploded with a blinding flash. Within minutes *Harder* surfaced to survey the results, but both ships had disappeared. Soon afterward, she underwent the inevitable depth charge attack by enemy planes; then she set course for a point south of Tawi-Tawi to reconnoiter.

On the afternoon of 10 June *Harder* sighted a large Japanese task force, including three battleships and four cruisers with screening destroyers. An overhead plane spotted the submarine at periscope depth and a screening escort promptly steamed at 35 knots toward her position. Once again, *Harder* became the aggressive adversary. As the range closed to 1,500 yards, she fired three torpedoes on a "down the throat" shot, then went deep to escape the onrushing destroyer and certain depth charge attack. Within a minute two torpedoes blasted the ship with violent force just as *Harder* passed under her some 80 feet below. The deafening explosions shook the submarine far worse than the depth charges and aerial bombs which the infuriated enemy dropped during the next 2 hours. When she surfaced, *Harder* saw only a lighted buoy marking the spot where the unidentified destroyer either sank or was heavily damaged.

Harder reconnoitered Tawi-Tawi anchorage 11 June and sighted additional enemy cruisers and destroyers. At 1600 she headed for the open sea and that night transmitted her observations which were of vital importance to Admiral Spruance's fleet prior to the decisive Battle of the Philippine Sea. *Harder* steamed to Darwin 21 June for additional torpedoes; and, after patrolling the Flores Sea south of the Celebes, she ended the patrol at Darwin 3 July.

The important results of *Harder's* fifth war patrol have caused some to call it the most brilliant of the war. Not only did *Harder* further deplete the critical supply of destroyers by sinking three of them and heavily damaging or destroying two others in 4 days, but her frequent attacks and a rash of enemy contact reports on this fleeting marauder so frightened Admiral Toyoda that he believed Tawi-Tawi surrounded by submarines. As a result, Admiral Ozawa's Mobile Fleet departed Tawi-Tawi a day ahead of schedule. The premature departure upset the Japanese battle plans, and forced Ozawa to delay his carrier force in the Philippine Sea, thus contributing to the stunning defeat suffered by the Japanese in the ensuing battle.

Harder, accompanied by *Hake* and *Haddo*, departed Fremantle 5 August for her sixth and last war patrol. Assigned to the South China Sea off Luzon, the wolf-pack headed northward. On 21 August *Harder* and *Haddo* joined *Ray*, *Guitarro*, and *Raton* in a coordinated attack against a convoy off Paluan Bay, Mindoro. The Japanese lost four passenger-cargo marus, possibly one by *Harder*.

Early the next day, *Harder* and *Haddo* attacked and destroyed three coastal defense vessels off Bataan, *Harder* sinking frigates *Matsuwa* and *Hiburi*; then, joined by *Hake* that night, they headed for Caiman Point, Luzon. At dawn 23 August *Haddo* attacked and fatally damaged *Asakaze* off Cape Bolinao. Enemy trawlers towed the stricken destroyer to Dasol Bay; and *Haddo*, her torpedoes expended, informed *Harder* and *Hake* the following night of the attack and left the wolf-pack for replenishment at Biak.

Harder and *Hake* remained off Dasol Bay, searching for new targets. Before dawn 24 August they sighted a Japanese minesweeper and a three-stack Siamese destroyer. As *Hake* closed to attack, the destroyer turned away toward Dasol Bay. *Hake* broke off her approach, turned northward, and sighted *Harder's* periscope about 600 to 700 yards dead ahead. Swinging southward, *Hake* then sighted the minesweeper about 2,000 yards off her port quarter swinging toward them. To escape the charging minesweeper, *Hake* started deep and rigged for silent running. At 0728 she heard 15 rapid depth charges explode in the distance astern. She continued evasive action that morning, then returned to the general area of the attack shortly after noon. She swept the area at periscope depth but found only a ring of marker buoys covering a radius of one-half mile.

The vigorous depth charge attack thus ended the career of *Harder*, and she went down with all hands. The Japanese report of the attack concluded that "much oil, wood chips, and cork floated in the vicinity." Dubbed "Hit 'Em again, *Harder*," this intrepid submarine had created havoc among Japanese shipping. Her record of aggressive daring exploits became almost legendary. All six of her patrols were designated successful. She received the Presidential Unit Citation, and in accordance with Navy custom it was presented to the second *Harder* upon commissioning. The resolute and resourceful Comdr. Dealey, "a submariner's submariner," was posthumously awarded the Medal of Honor.

Harder received six battle stars for World War II service.

II

(SS-568: dp. 1,560; l. 269'2"; b. 27'3"; dr. 17'; s. 16 k.: cpl. 83; a. classified; cl. *Tang*)

The second *Harder* (SS-568) was laid down by the Electric Boat Co., Groton, Conn., 30 June 1950; launched 3 December 1951; sponsored by Mrs. Kay Logan Cole; and commissioned 19 August 1952, Comdr. R. B. Laning in command.

After shakedown out of Newport, R.I., *Harder* made a 1,000-mile submerged passage from New London, Conn., to Nassau, Bahamas, while snorkeling. She then engaged in tests out of New London to evaluate fast attack type submarines. As a *Tang*-class attack boat, *Harder* belongs to the first new type of submarine built after World War II. Her design, which incorporates many of the lessons learned in wartime operations, includes a snorkel breathing apparatus, a stronger pressure hull, and more powerful engines.

Harder began fleet operations out of New London in June 1953. During the next several years she carried out a schedule of training and readiness operations with ships of the Atlantic Fleet and Allied NATO nations. Operating from the North Atlantic to the Caribbean, she engaged in sonar evaluation tests, supported ASW tactical exercises, and participated in submerged simulated attack operations. In March 1959 she participated in SUBICEX, during which she cruised 280 miles beneath the ice packs off Newfoundland, further than any conventionally powered submarine had previously gone.

After completing a 3 month advanced submarine exercise in the Atlantic, *Harder* changed her home port to Charleston, S.C., where she arrived 17 November and joined Submarine Squadron 4. She continued operations in the Atlantic and Caribbean for more than a year, then departed Charleston 24 May 1961 for deployment off the western coast of Europe and in the Mediterranean. After

Subject : U.S.S. HARDER (SS257) - report of Fifth War Patrol.

June 9th (cont.)

2102 Sighted another destroyer. - They were in line of bearing and patrolling the narrows on north - south, zig zag courses. Sounded "battle stations", submerged to radar depth and commenced the attack. The nearest destroyer, now at a range of 8000 yards, was chosen as the first target and his angle on the bow was about 20 degrees port. At 4000 yards, he headed directly for us but his actions were interpreted as a routine zig. Increased submergence to periscope depth. At 3000 yards, both destroyers ziggged 30 degrees to their right (with the first presenting a 30 degree port track) and the picture became "just what the doctor ordered" for the HARDER. At a range of 1000 yards on the nearest target, both destroyers were overlapping, with a 100 degree port track showing. Gyros were near zero and torpedoes set for running at 6 feet.

(June 9th)

2124 Commenced firing the bow tubes. No. 1 appeared to pass just ahead of the first destroyer, No. 2 struck it near the bow, No. 3 hit just under the destroyer's bridge, and No. 4 passed astern of the near target. The sub was now swung hard right to avoid hitting the first destroyer and fire was withheld on remaining tubes until a new setup could be put into the T.D.C. for an attack on the second destroyer. About thirty seconds after turning, the second destroyer came into view just astern of what was left of the first one, then burning furiously. Just then No. 4 torpedo which had passed astern of the first target was heard and observed to hit the second target. - (No more torpedoes were needed for either.)

Meanwhile, a heavy explosion, believed to be caused by an exploding boiler on the first destroyer, went off and the sub (then about 400 yards away) was heeled over by the concussion. At almost the same time a blinding explosion took place on the second destroyer (probably his ammunition going off) and it took a quick nose dive. When last observed, by the Commanding Officer and Executive Officer, the tail of the second destroyer was straight in the air and the first destroyer had disappeared. "Sound" now reported, "No more screws".

The above listed pandemonium may not be in exact chronological order but is as accurate as the happenings over that eventful few minutes can be remembered.

(13)

ENCLOSURE (A)

D

"Sam" Dealey in USS *Harder* (SS-257) reports the sinking of two Japanese destroyers. From June 1943 to August 1944, USS *Harder* sank one seaplane tender, eight cargo ships, one tanker, four destroyers, and two frigates.

reaching Bremerhaven, Germany, 9 June, she supported ASW operations with ships of the Federal German Navy. The following month she steamed via Holy Loch, Scotland, and Rota, Spain, to the Mediterranean where she supported peace-keeping operations of the mighty 6th Fleet. *Harder* returned to Charleston 28 August.

Training exercises and tests evaluating ASROC and other ASW systems kept *Harder* busy until she entered Charleston Naval Shipyard for overhaul in October 1962.

Ready for action in April 1963, she operated along the Atlantic Coast and in the Caribbean for the next 2½ years polishing her underwater warfare tactics and operating with destroyer type ships as they worked on ASW exercises.

Harder again entered Charleston Naval Shipyard 22 October for a thorough overhaul and modernization in which she received an 18-foot extension to her hull, a redesigned superstructure, new engines as well as improved electrical and electronic equipment. Modernization completed early in 1967, *Harder* rejoined the fleet eager to face the challenge of more demanding service to the Navy and the Nation.

Hardhead

A fish of the croaker family.

(SS-365 : dp. 1,526; l. 311'9"; dr. 15'3"; s. 21 k.; cpl. 66; a. 10 21" tt., 1 5", 1 40mm., 1 20mm., 2 .50 cal.; cl. *Balao*)

Hardhead (SS-365) was launched by Manitowoc Shipbuilding Co., Manitowoc, Wis., 12 December 1943; sponsored by Mrs. E. F. McDonald; and commissioned 18 April 1944, Comdr. F. McMaster in command.

Following shakedown training in Lake Michigan the submarine entered a floating dry dock at Lockport, Ill., and was towed to New Orleans, where she arrived 16 May 1944. *Hardhead* got underway from Algiers, La., 22 May, and arrived Balboa, Canal Zone, 5 days later. There she took part in additional training exercises before her arrival at Pearl Harbor 7 July 1944.

Hardhead departed on her first war patrol 27 July and proceeded to her patrol area off the Philippines. Early 18 August she detected Japanese cruiser *Natori* east of San Bernardino Strait, and closed for a surface attack. The first well directed salvo stopped the cruiser dead in the water; a second sent her to the bottom. During the remainder of her first patrol *Hardhead* rendered lifeguard services during strikes by fleet aircraft on the Philippines and operated with a reconnaissance line during the Palaus operation. She arrived Fremantle, Australia, 26 September 1944.

Hardhead's second patrol began as she departed Fremantle 24 October and set course for the Philippines. While steaming on the surface through the Sulu Sea October she discovered a life raft adrift. In it was Commander (now Rear Admiral) Bakutis, fighter squadron commander of *Enterprise*, who had been in the water for 6 days after being shot down during America's smashing victory in the Battle for Leyte Gulf. Operating in a coordinated group with *Growler* and *Hake*, the submarine sighted a large cargo ship with escorts 8 November. After being driven off in one attack, *Hardhead* aggressively gained an ahead position and sank *Manei Maru*. It was during this attack that *Growler* was lost. *Hardhead* performed lifeguard duty off Subic Bay in November and on the 25th came upon an escorted merchant ship. She sank a coast defense vessel, damaged the merchantman, and evaded a retaliatory depth charge attack. Soon afterward, the submarine returned to Fremantle, ending another skillful and effective patrol 5 December.

Putting to sea again 24 December, *Hardhead* began her third war patrol in the South China Sea. Operating with *Besugo* and *Blackfin*, *Hardhead* damaged several ships before sinking *Nanshin Maru* 2 February 1945. Following lifeguard duty for the B-29 strikes on Singapore she returned to Fremantle 15 February.

Hardhead's fourth war patrol included a special mine laying mission. She sailed 20 March 1945 and laid mines off French Indochina during the night of 2 April. The submarine then entered the Gulf of Siam, where after several attacks she sank cargo ship *Araosan Maru* 6 April. Following a visit to Subic Bay to reload 11-15 April she patrolled the South China Sea, but found few contacts. American submarines had by this time reduced Japanese merchant activity to a trickle. The island nation was doomed. *Hardhead* returned to Fremantle 16 May.

Sailing from Fremantle 18 June, *Hardhead* began her fifth war patrol, to be conducted in the Java Sea. She severely damaged a freighter with her deck guns 22 June, and next day sank four coastal defense craft during an attack on Ambat Roads with *Bullhead*. Illness of her Commanding Officer forced *Hardhead* to end her fifth patrol 17 July at Onslow, Australia.

The submarine departed Onslow on her sixth and last patrol 18 July, and headed back into the Java Sea. She forced a merchant ship to beach 27 July but found few targets and returned to Subic Bay 10 August. Soon afterward the Pacific war, in which the submarine had played an aggressive and important part, ended. *Hardhead* sailed 31 August and arrived San Francisco via Pearl Harbor 22 September 1945. She decommissioned 10 May 1946 and entered the reserve fleet at Mare Island.

Hardhead was placed in commission in reserve 6 February 1952 and upon her arrival at New London for conversion was placed out of commission. Following her "guppy" conversion, including streamlining, installation of a snorkel breathing apparatus, and larger storage batteries, the submarine recommissioned 24 March 1953. She joined the Atlantic Fleet for training exercises and tactical drills in the years that followed, operating mainly in the Caribbean and off the East Coast of the United States. She sailed for the Mediterranean 7 September 1956 to strengthen the 6th Fleet during the Suez crisis.

In July 1958 *Hardhead* joined Submarine Development Group 2, turning her attention from fleet operations to research and testing of equipment and tactical doctrine. She operated off the East Coast and in the north Atlantic, and by 1961 had won four consecutive "E" awards for her performance. *Hardhead* continued through 1967 to perform this vital work in maintaining the technical superiority and readiness of the fleet.

Hardhead received six battle stars for World War II service. All six of her combat patrols were successful.

Harding

Seth Harding was born at Eastham, Mass., 17 April 1734. He went to sea early in his life and commanded several merchant ships during the French and Indian War. At the beginning of the American Revolution, he offered his services to Connecticut and was commissioned commander of the state brig *Defence*. Harding captured many British ships while in command of this and two other vessels. In September 1778 Harding accepted a Continental commission and took command of *Confederacy*. He cruised along the coast in company with *Deane* during 1779, taking three prizes and performing convoy duties. He was ordered to take John Jay, newly appointed minister to Spain, to Europe in September 1779, but the ship was dismasted 10 days out. Harding, through skillful seamanship, sailed his ship to Martinique for repairs, his passengers continuing on another ship. *Confederacy* raided British merchantment and guarded convoys until 18 April 1781, when she was forced to surrender to two British ships, *Roebuck* and *Orpheus*. Harding was subsequently exchanged, commanded the letter of marque *Diana*, but was captured again. After this release the fighting captain volunteered to serve as First Lieutenant to John Perry in *Alliance*, and was wounded on board during the last engagement of the revolution, off the coast of France. Harding spent his last years as a merchant sailor and in retirement in Schoharie, N.Y., where he died 20 November 1814.

I

(DD-91: dp. 1,060; l. 315'5"; b. 31'8"; dr. 8'6"; s. 35 k.; cpl. 100; a. 4 4", 3 .30 cal. mg., 12 21" tt.; cl. *Wickes*)

The first *Harding* (DD-91), a torpedo-boat destroyer, was launched 4 July 1918 by Union Iron Works, San Francisco; sponsored by Mrs. George A. Arnes; and commissioned 24 January 1919, Comdr. Henry D. Cooke in command.

Assigned to the Atlantic Fleet, *Harding* sailed 3 February 1919 for Newport, R.I., via Santa Cruz and the Panama Canal. Arriving 18 February, she shifted to Boston 2 days later and stood out of the harbor 21 February to escort *George Washington*, carrying President Wilson back to the United States from the Versailles Conference. *Harding* participated in the ceremonies in Boston harbor following the berthing of *George Washington* 23 February.

After repairs *Harding* departed Norfolk 8 March for fleet exercises in Cuban waters, then steamed to New York, arriving 14 April. She departed New York again 1 May as part of the destroyer group acting as guide for the historic flight of Navy seaplanes across the Atlantic. *Harding* and the other destroyers made smoke by day and provided searchlight illumination by night during the first long leg of the flight; NC-1 and NC-3 made forced landings near the Azores and *Harding* rendered assistance to NC-1 before it sank. NC-4, the remaining seaplane, arrived Ponta Delgada 20 May and as she took off for the last leg of her journey, *Harding* got underway to provide radio compass signals at sea. After the seaplanes landed at Plymouth, England, to complete the flight 31 May 1919, *Harding* visited Brest and the Azores before returning to Newport 18 June.

For the next few months *Harding* trained out of Newport and Norfolk, reporting to the Philadelphia Navy Yard 13 December 1919 for conversion to seaplane tender. She completed the conversion at Charleston Navy Yard and sailed 20 May 1920 for duty at Pensacola Naval Air Station. Before she could take up her new duties, however, *Harding* was ordered to Vera Cruz, Mexico, with urgently needed medical supplies for the American Red Cross. Reaching Vera Cruz 9 June 1920, she unloaded her precious bubonic plague serum and other supplies, touched at Tampico, and returned to Pensacola 13 June. *Harding's* fast response had helped to save many lives.

Harding's role at the burgeoning Pensacola Naval Base was a key part of the training program for seaplane pilots. She remained there until 4 August, after which she operated in the Caribbean area tending seaplanes until 23 February 1921. She then arrived Key West, and after a

short period at Philadelphia proceeded to Hampton Roads to take part in the bombing tests on U-117. Steaming from Norfolk 21 June, *Harding* spent the next month witnessing the important experiments that gave much valuable information on the effects of bomb explosions on warships. The tests came to a climax with the controversial sinking of ex-German battleship *Ostfriesland* 21 July 1921, and *Harding* was detached from duty 22 July.

Harding subsequently trained out of Newport and other Atlantic ports until 27 December 1921, when she arrived Charleston. Remaining there until 3 April 1922, she sailed to Philadelphia where she decommissioned 1 July 1922. *Harding* was sold for scrap 29 September 1936 to Schiavone-Bonomo Corp., New York City.

II

(DD-625: dp. 1,630; l. 348'4"; b. 36'1"; dr. 17'5"; s. 37 k.; cpl. 276; a. 4 5", 10 21" tt.; cl. *Gleaves*)

The second *Harding* (DD-625) was launched 28 June 1942 by Seattle-Tacoma Shipbuilding Corp., Seattle; sponsored by Mrs. Sherwood A. Taffinder; and commissioned 25 May 1943, Lt. Comdr. G. G. Palmer in command.

After shakedown out of San Diego *Harding* sailed 1 July for Norfolk, via the Panama Canal. Arriving Hampton Roads 19 July, she trained in Chesapeake Bay and off the East Coast. She joined a convoy at Norfolk 16 August 1943 and for the next 8 months was assigned anti-submarine patrol for merchant convoys in the Atlantic. During this period of guarding the sea *Harding* made three round trips to Casablanca.

After escorting battleship *Texas* on training exercises, *Harding* sailed 18 April with a convoy for Europe, and began her first great combat operation—the Normandy Invasion. She spent the month of May training with other ships between Plymouth and Clyde. Then, early on the 6th of June 1944, *Harding* joined other naval units in the historic assault. *Harding* was assigned fire support station, and delivered close gunfire support to the troops ashore for the first hours of the landing. Her accurate gunfire destroyed pill boxes and machine gun emplacements, blasting a way for the troops. *Harding* also sent a boat ashore at Point Du Hoc to take supplies to the intrepid rangers and bring out prisoners and wounded. She continued operations in the assault area until 16 July, protecting against air attack and assisting several transports in distress.

Shifting her operations to the Mediterranean, *Harding* sailed 1 August for Oran, Algeria, and from there pro-

USS *Harding* (DD-91), a guardian for the famous NC Seaplane flight in 1919

ceeded 15 August to the southern France assault area, as a screening ship. She sailed almost immediately to Corsica, later returning to take up patrol station outside the assault area in southern France. On the night of 17 August she detected a downed German plane, and after recovering bodies, proceeded to investigate an unidentified contact. As *Harding's* signalman sought to illuminate the stranger, a burst of machine gun fire extinguished the light and revealed the presence of four enemy E-boats.

In company with three other destroyers, *Harding* began a running, twisting battle with the four boats, illuminated by starshell fire, and despite their superior maneuverability all four were sunk; three by *Harding's* accurate batteries. She brought survivors ashore and resumed her patrol until 24 August.

Harding joined a convoy of LCI's en route to Oran, Algeria, 24 August, returned to spend another week in southern France until 6 September, and sailed for New York 25 September 1944. Arriving New York 3 October she proceeded to Boston for conversion to a destroyer-minesweeper; *Harding* was reclassified DMS-28, 15 November 1944. Emerging 1 December for her trials, *Harding* underwent training until 30 December and sailed for the Pacific. She arrived San Diego via the Canal Zone 15 January 1945, and continued her training in mine-sweeping techniques.

Sailing 10 February via Pearl Harbor, *Harding* arrived Ulithi 9 March to prepare for the invasion of Okinawa, the last and largest of the giant Pacific amphibious assaults. She departed for Okinawa 19 March and began her minesweeping operations in the surrounding areas 24 March. During the initial landings 1 April 1945 *Harding* served as an outer screening ship, and continued this dangerous duty during the savage air attacks which followed. After a near miss by a horizontal bomber during the first heavy raids of 6 April, *Harding* was assigned to provide fire support to forces ashore the night of 8 April. She returned to screening duties next day and 16 April was attacked with other ships by four suicide planes. One was driven off, another shot down, but a third steered directly for *Harding's* bridge. As gunfire ripped into her, the aircraft splashed close aboard to starboard, tearing a huge gash in *Harding's* side from keel to main deck when her bomb exploded.

The stricken ship backed toward Kerama Retto, counting 14 men killed, 8 missing, and 9 wounded. She repaired at Okinawa, and arrived Pearl Harbor 22 August via Saipan.

From Hawaii *Harding* transited the Panama Canal via San Diego and arrived Norfolk 17 September. She decommissioned 2 November 1945 and was sold for scrap 16 April 1947 to Luia Brothers Co., Inc., of Philadelphia.

Harding received three battle stars for World War II service.

Hargood

Captain William Hargood, RN, commanded *Belleisle* at Trafalgar.

(PF-74; dp. 1430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*)

Hargood (PF-74), originally PG-182, was built under maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-74 15 April 1943; renamed *Ascension*; and launched 7 April 1943, sponsored by Mrs. A. A. Kirby. *Ascension* was then completed and transferred under lend-lease to the United Kingdom 24 November 1943 as a part of the 21-ship "Colony" class. She served as a patrol and escort craft until being returned to the United States 31 May 1946. She was sold 16 October 1947 to Hudson Valley Shipwrecking Corp., Newburg, N.Y.

(DE-573; dp. 1,400; l. 306'; b. 37'; dr. 9' 5"; s. 24 k.; cpl. 186; a. 3 3', 2 dcp., 1 dcp., (h.h.), 8 dcp.; cl. *Buckley*)

Hargood (DE-573) was launched by the Bethlehem-Hingham Shipyard, Hingham, Mass., 18 December 1943. Designated for transfer to Great Britain under lend-lease, she was delivered to the Royal Navy and commissioned 7 February 1944. *Hargood* served through the rest of the war as an escort vessel in the North Atlantic and off the Normandy beachhead, and was returned to the United States 23 February 1946. Struck from the Navy List 12 April 1946, she was sold to Northern Metal Co., Tacony, Pa., and removed 7 March 1947 for scrapping.

Harjurand

A former name retained.

(ARS-31; t. 812; l. 188'6"; b. 32'11"; dph. 13'½")

Harjurand (ARS-31) was built as *Olesa* in 1919 by Astilleros Cardona, S.A., Barcelona, Spain. She had a long and varied merchant career, serving in the 1920's as *Per Skogland* under Estonian registry, 1931-32 as *Camberway* for the British Sunderland Steam Shipping Co., in 1933 as *Tento*, in 1934 as *Margot*, and finally under Estonian ownership again as *Harjurand* in 1937. Requisitioned by the War Shipping Administration, she was turned over to the Navy 1 June 1942. Although Navy-owned, she was operated under contract by Merritt Chapman, and Scott, under the supervision of the Bureau of Ships.

Harjurand was one of the pioneer vessels in the Navy's very successful World War II Salvage Service. One of her first major operations was the salvage of cargo from SS *Edward Luckenbach*, torpedoed off Florida 1 July 1942. *Harjurand* and other salvage ships worked from 28 March to 8 December 1943 at the difficult job of bringing up her valuable cargo of metal ores, and *Harjurand* succeeded in carrying some 4,500 tons of the recovered ore to Tampa to be utilized in the war effort.

For most of the next 18 months, *Harjurand* was engaged mainly in removing protruding parts of sunken hulks which threatened navigation off the East Coast of the United States. She worked on *Gulfamerica* off Jacksonville, Fla., April 1944, *Ashkabad* at sea east of Georgia in June, *Maurice Tracy* off South Carolina in August, and destroyer *Sturtevant* off the Florida Keys during April 1945.

At the close of the war, to which the old coal-burning *Harjurand* had contributed much, the contract with Merritt Chapman, and Scott was terminated and the ship was returned to the War Shipping Administration 22 May 1946. She was stricken from the Navy List 19 June 1946. Subsequently, *Harjurand* was sold to Miraflores, S.A., of Panama, and resumed merchant service until about 1955 as *Dodcanese*.

Harkness

William Harkness, born 17 December 1837 in Ecclefechan, Scotland, served as a volunteer surgeon in the Union Navy during the first year of the Civil War. However, during most of his naval career, he served as an astronomer to be eventually recognized as an expert in that profession. He was associated with the U.S. Naval Observatory from 1862 to 1899, the last 5 years of which as director. Then in 1897 he was appointed director of the *American Ephemeris and Nautical Almanac*. Retired 17 December 1899, Rear Admiral Harkness died in Jersey City, N.J., 28 February 1903.

(YMS-242; dp. 245; l. 186'; b. 23'4"; dr. 8'7"; s. 14 k.; cpl. 34; a. 1 3', 2 20mm., 2 dcp., 2 dcp.; cl. *YMS-v*)

Harkness (YMS-242) was laid down as *YMS-242* by Tacoma Boat Building Co., Tacoma, Wash., 1 June 1942; launched 10 October 1942; commissioned 27 March 1943, Lt. (j.g.) H. S. Meredith in command.

After shakedown along the California coast, *YMS-242* departed San Diego 20 August 1943 for duty in the Western Pacific. Steaming via Pearl Harbor, she con-

ducted mine sweeping patrols in the Marshall and Solomon Islands throughout the next year. As American amphibious forces swept over the Mariannas, she swept for mines and made reconnaissance patrols during the summer and fall of 1944. Following the conquest of the Mariannas, she returned to Pearl Harbor 25 December before sailing to the West Coast for conversion to a surveying ship.

After conversion by South Coast Shipbuilding Co., Newport Beach, Calif., she was named *Harkness* and reclassified AGS-12 on 24 March 1945. The following month she returned to the Western Pacific where she conducted survey operations in the Marshalls and at Okinawa. Following the Allied victory of World War II, she sailed to Japanese waters for a month of survey work. She returned to Guam from Nagoya, Japan, 4 January 1946; then sailed 10 January for the United States via the Marshalls and Pearl Harbor, reaching San Diego 26 February. She sailed 29 March for the East Coast; touched at Acapulco, Guantanamo Bay, and Norfolk; and arrived New York 8 May.

Following overhaul, *Harkness* departed 25 July for Miami, Fla., and arrived 29 July to reclassify as AGSC-12. For more than 3 years she operated out of Miami, participating in extensive ocean surveys from the Gulf of Mexico to the North Atlantic. During much of 1947 she patrolled the Mexican coast off Vera Cruz. *Harkness* surveyed coastal waters off Labrador and Newfoundland from July to October 1948 and 1949; and survey work continued for the first 5 months of 1950 in the Caribbean between Trinidad and Venezuela. She returned to New York later in the year and decommissioned 22 September 1950.

Harkness was converted to a minehunter by Brooklyn Navy Yard; reclassified AMCU-12 on 18 August 1951; and recommissioned 5 September 1951, Lt. John M. Bohanon in command. Assigned to the Atlantic Fleet Mine Force, she departed New York 2 July 1952 and arrived Norfolk the next day. The next year she steamed to Charleston, S.C., and Key West and Panama City, Fla., while involved with training exercises and other operations. Assigned along the Atlantic Coast to the 5th Naval District in October 1953, *Harkness* again participated in training operations, primarily in the Virginia Capes Operation Area, finally steaming to Newport during June 1954 for channel clearance operations. Reclassified MCH-12 on 1 February 1955, she continued her part in numerous mine clearing exercises, in July 1957 even operating in Cuban waters out of Guantanamo Bay and Havana.

Harkness departed Little Creek 30 January 1958 and arrived Green Cove Springs, Fla., via Jacksonville 3 February. She decommissioned 2 April 1958 and entered the Atlantic Reserve Fleet. Her name was struck from the Naval Register 1 November 1959.

Harkness received one battle star for World War II service.

Harlack, see *Pompey* (AF-5)

Harlan R. Dickson

Harlan Rocky Dickson, a member of *Yorktown's* famed Dive Bomber Squadron 5, twice received the Navy Cross for his outstanding courage and combat flying, first at Tulagi and again at the pivotal Battle of Midway. Lt. Comdr. Dickson crashed and was killed off the California coast 5 February 1944.

(DD-708: dp. 2,200; l. 376'6"; b. 40'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 12 40mm., 11 20mm., 10 21" tt., 6 dep., 2 det.; cl. *Allen M. Sumner*)

Harlan R. Dickson (DD-708) was launched 17 December 1944 by the Federal Shipbuilding & Dry Dock Co., Kearny, N.J.; sponsored by Mrs. Mildred Mae Studler, mother; and commissioned at New York 17 February 1945, Comdr. Paul G. Osler in command.

After shakedown in the Caribbean, *Harlan R. Dickson*

departed New York for the Pacific 5 August 1945, but with the Japanese capitulation was ordered back to Solomons, Md., for experimental mine work. She finally joined her squadron at Pearl Harbor 12 December and remained in the Pacific for tactical training until March 1946. Returning to the east coast, *Harlan R. Dickson* engaged in further training until sailing 2 February 1947 for the first of what were to become regular cruises in the Mediterranean with the 6th Fleet in its tremendous mission of keeping the peace against Soviet intrigue. In addition to visiting many Mediterranean ports, the destroyer sailed into the Red Sea before returning to the States 14 August.

This year established a pattern which *Harlan R. Dickson* was seldom to break: six months of duty in the Mediterranean alternating with training and fleet maneuvers along the East Coast and in the Caribbean. During her second tour with the 6th Fleet, *Harlan R. Dickson* served under the United Nations blue-and-white flag December 1948-January 1949 as the world peace organization strove to mediate the Palestine crisis—only one in many that developed in the Mediterranean "Sea of History" from 1945 on. In 1953 she participated in at sea training. On her sixth Mediterranean cruise, 2 July to 4 December 1956, *Harlan R. Dickson* played a key role in another crisis situation, this time evacuating American citizens from Haifa, Israel, as war threatened between Israel and Egypt. Her career entered still another phase September 1959 when she began service as a recovery ship on the Atlantic coast missile range to retrieve test capsules fired from Cape Canaveral, now Cape Kennedy.

Harlan R. Dickson's constant participation in both fleet and NATO exercises to keep her fighting ability and readiness at a peak paid rich dividends in October 1962 as she joined a hunter-killer antisubmarine unit in the quarantine of Cuba during the offensive missile crisis. After the crisis subsided, *Harlan R. Dickson* continued her vital duty in maintaining America's strength and showing friend and foe alike her determination to maintain both peace and freedom. *Harlan R. Dickson* joined Operation "Springboard" in the Caribbean, visiting San Juan and Santo Domingo before returning to Newport 4 February 1963. On 7 March she commenced her 10th Mediterranean deployment with the 6th Fleet. While in the Persian Gulf, *Harlan R. Dickson* represented the United States in Khargex VI, an exercise designed for the perfection of working relationships with our allies of the Iranian and British Navies. After a brief stop in the Mediterranean she returned to Newport in September. On 2 January 1964 *Harlan R. Dickson* entered the Boston Naval Shipyard for overhaul.

Harland

(PF-78: dp. 1430; l. 303'11"; b. 37'6"; s. 20 k.; dr. 13'8"; cpl. 190; a. 3 3"; cl. *Tacoma*; T. S2-S2-AQ1)

Harland (PF-78), originally designated PG-186, was built under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-78 15 April 1943, renamed *Cayman*, and launched 6 September 1943, sponsored by Mrs. James Gillies. *Cayman* was then completed and transferred to the United Kingdom under lend-lease 20 January 1944 as part of the 21-ship "Colony" class. She served as a patrol vessel and escort ship until being returned to the United States 23 April 1946. The frigate was sold for scrap 1 July 1947, to the United Dock Corp., New York.

Harlem Heights, see *Suamico* (AO-49)

Harlequin

A sea duck, found chiefly in North America, Iceland and Siberia.

(AM-365: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3", 4 40mm.; cl. *Admirable*)

Harlequin (AM-365) was launched 3 June 1944 by Willamette Iron & Steel Corp., Portland, Ore.; sponsored by Mrs. Mary M. Doig, whose husband and son were reported missing in action and who also had another son, a brother, and nine nephews in the Navy. She commissioned 28 September 1945, Lt. Henry R. Darling, USNR, in command.

Reporting to San Pedro, Calif., for shakedown 19 October, *Harlequin* remained there until 29 November, when she sailed south, reaching New Orleans 15 December. *Harlequin* sailed to Orange, Tex., 2 April 1946 and decommissioned there 27 May. She was reclassified MSF-365, 7 February 1955. *Harlequin* was struck from the Navy List 1 May 1962, and later sold to Mexico.

Harman

(PF-79: dp. 1,430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*; T. S2-S2-AQ1)

Harman (PF-79), originally designated PG-187, was built under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-79 15 April 1943, renamed *Dominica*, and launched 14 September 1943, sponsored by Mrs. Andrew D. Manchester. *Dominica* was then completed and transferred to the United Kingdom under lend-lease 25 January 1944 as part of the 21-ship "Colony" class. She served as a patrol vessel and escort until being returned to the United States 23 April 1946. The frigate was subsequently sold to Sun Shipbuilding & Drydock Co., Chester, Pa., 27 March 1947 and scrapped.

Harmon

Leonard Roy Harmon, born 21 January 1917 at Cuero, Tex., enlisted in the U.S. Navy as a Mess Attendant Third Class at Houston 10 June 1939. After training at Norfolk he reported to *San Francisco* for duty 28 October 1939. Advanced to Mess Attendant First Class, Harmon was killed in action aboard *San Francisco* during the Naval Battle of Guadalcanal 12-13 November 1942. With disregard for his own safety Harmon rendered invaluable assistance to caring for the wounded and evacuating them to a dressing station. Harmon was hit while deliberately exposing himself to gunfire as he tried to protect a shipmate. He was posthumously awarded the Navy Cross.

(DE-72: dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 3 21" tt., 8 dcp., 1 dcp. (h.h.), 2 dct.; cl. *Buckley*)

Harmon (DE-72) was laid down by Bethlehem-Hingham Shipyard, Inc., Hingham, Mass.; 12 April 1943; assigned to the United Kingdom 10 June 1943; launched as *Aylmer* 10 July 1943; sponsored by Mrs. E. M. Mackay; and transferred under lend-lease to the Royal Navy 30 September 1943. As one of the 78 "Captain" class destroyer escorts, she served as a British frigate during the remainder of World War II, patrolling the Atlantic and supporting the Allied invasion of Normandy. Following the war, she was returned to the custody of the U.S. Navy at New York 5 November 1945. She was sold to Mr. John J. Witto, Staten Island, N.Y., 20 June 1947, and scrapped in February 1948.

I

(DE-678: dp. 1,400; l. 306'; b. 37'; dr. 13'6"; s. 23 k.; cpl. 213; a. 3 3", 3 40mm., 3 21" tt.; cl. *Buckley*)

Harmon (DE-678) was launched 25 July 1943, by Bethlehem Steel Co., Quincy, Mass.; sponsored by Mrs. Nautia Harmon Carroll, mother of Mess Attendant Harmon; and commissioned 31 August 1943, Lt. Comdr. Kendall E. Read in command.

After shakedown out of Bermuda, *Harmon* departed Norfolk 7 November 1943, and transited the Panama

Canal to take up duty with the 3rd Fleet. Arriving Noumea 25 December, she remained in that area serving as escort ship until 18 September 1944, when she proceeded to Pearl Harbor for overhaul and training.

Harmon returned to Manus 24 November 1944, and joined the 7th Fleet as a unit of Admiral R. L. Conolly's Luzon Reinforcement Group. *Harmon* sortied from Manus 2 January 1945, with this large convoy and sailed through dangerous waters arriving at the transport area on the eastern side of Lingayen Gulf 11 January.

On 5 March *Harmon* arrived off Iwo Jima to act as escort and antisubmarine screen. This duty lasted until 27 March 1945, when she proceeded to Pearl Harbor and reported to the 1st Fleet for training. She remained there until August when *Harmon* was ordered to Mare Island to increase her fire power by replacing her 3-inch guns with 5-inch mounts.

The war over, *Harmon* departed San Diego 7 January 1946, enroute the Canal Zone where she conducted training operations with submarine. Clearing Cristobal 28 March *Harmon* arrived in New London 3 April 1946. Here she trained with submarines until December, then decommissioned at Green Cove Springs, Fla., 25 March 1947, and joined the Atlantic Reserve Fleet. *Harmon* was struck from the Navy List 1 August 1965, and sold to North American Smelting Co., Wilmington, Del., 30 January 1967 to be scrapped.

Harmon received three battle stars for World War II service.

Harnett

A county in North Carolina.

Harnett (APA-240), a *Haskell*-class victory transport, was under construction by Oregon Shipbuilding Co., Portland, Ore., under Maritime Commission contract, but was cancelled 27 August 1945.

Harnett County

A county in central North Carolina.

(LST-821: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. *LST-511*)

LST-821 was laid down by Missouri Valley Bridge & Iron Works, Evansville, Ind., 19 September 1944; launched 27 October; sponsored by Mrs. Hugh Robertson Sr.; placed in partial commission 14 November for the cruise down the Mississippi River; and commissioned at New Orleans 22 November, Lt. C. J. Rudine in command.

After shakedown off Florida, *LST-821* departed New Orleans 27 December for the West Coast arriving San Diego 18 January 1945. Sailing on to San Francisco and Pearl Harbor, where she loaded additional cargo, *LST-821* arrived Eniwetok, Marshall Islands, 7 March. For the next 5 weeks she operated in the vicinity of Eniwetok, Ulithi, and Guam before sailing to Okinawa.

The campaign against the enemy held fortress of Okinawa was well under way when *LST-821* arrived 18 April. Five days later she unloaded her cargo of men, vehicles, and supplies off Ie Shima. On the 24th she embarked 183 men of the 77th Infantry Division and transported them to the west coast of Okinawa, then returned to Ulithi 5 May for a short overhaul.

For the rest of the war she shuttled troops and equipment among the U.S. bases in the Pacific, as American forces prepared for a possible assault on the Japanese homeland. Japan's acceptance of Allied peace terms precluded any invasion of Japan, and *LST-821* continued operations with the occupation forces in the Far East until 11 December when she sailed for the United States.

The landing ship arrived San Diego 7 January 1946; sailed to Portland in early April and decommissioned at Vancouver, Wash., 8 July 1946. She remained in the Pacific Reserve Fleet for the next 20 years, and was named *Harnett County* 1 July 1955.

Harnett County recommissioned 20 August 1966 to help meet the large and growing demand for ships in the Vietnam war. After shakedown training off San Francisco Bay, she departed for duty with the Amphibious Force, Pacific Fleet, that continued into 1967.

LST-821 received one battle star for World War II service.

Harney, Lake, see *Lake Harney*

Harold C. Thomas

Harold Chester Tomas was born in Gleo, Okla., 7 May 1907 and enlisted in the Navy 28 January 1927. He was appointed Carpenter 8 February 1933 and served in various ships and at Cavite before being commissioned Chief Carpenter 24 March 1939. Thomas reported to *Boise* 14 May 1940 and was appointed Lieutenant (junior grade) 1 September 1942. During the Battle of Cape Esperance, 11-12 October 1942, *Boise* with three other cruisers and destroyers under Rear Admiral Norman Scott, exchanged salvos with enemy cruisers, and was badly hit by gunfire. Lt. (j.g.) Thomas lost his life while valiantly working with damage control parties to keep his ship in the battle, and was awarded the Navy Cross posthumously.

(DE-21 : dp. 1,140 t.; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; cpl. 156; a. 3 3", 4 1"; 9 20mm., 2 dct., 8 dep., 1 dcp. (h.h.); cl. *Evarts*)

Harold C. Thomas (DE-21) was launched 18 December 1942 by the Mare Island Navy Yard as *Essington* (BDE-21) for the British; later designed for Navy use; and commissioned 31 May 1943, Comdr. H. Reich in command.

After three voyages escorting merchantmen from San Francisco to Pearl Harbor, *Harold C. Thomas* served with ComSubTraPac 2-20 November 1943. Sailing from Pearl Harbor 20 November with a convoy of merchantmen and cargo ships, she reached Abemama, Gilbert Islands, 28 November, a week after Vice Admiral R. A. Spruance began the occupation of those islands. *Harold C. Thomas* spent the rest of the year in the Gilberts on patrol and escort duty.

After undergoing availability early in 1944, *Harold C. Thomas* sailed as flagship for Escort Division 10, 29 February. Reaching Eniwetok, Marshall Islands, 11 March, she did escort work until 30 March when she became part of a hunter-killer carrier group on antisubmarine patrol east of the Marshalls. Returning to Pearl Harbor 6 May, the destroyer spent the remainder of the year in the vital but unsung work of shepherding merchantmen, cargo ships, and transports through the back staging areas up to their assembly points for invasion forces. This duty took *Harold C. Thomas* to the Marshall, Admiralty, Palau, and Marianas Islands. She also performed some submarine training work at Pearl Harbor. On 21 November *Harold C. Thomas* rescued seven men from a PBM which had crashed at sea off Majuro Atoll.

Departing Pearl Harbor 21 January 1945, she reached San Francisco 6 days later and proceeded to San Diego for badly needed repairs. *Harold C. Thomas* returned to Pearl Harbor 5 April and spent the rest of the war in submarine training and escort duty. The long Pacific war ended 1 September with the signing of the armistice on board *Missouri* in Tokyo Bay, and *Harold C. Thomas* sailed for the States 20 days later, putting into San Pedro 27 September where she decommissioned 26 October 1945. She was sold to the Pacific Bridge Co., San Francisco, 25 November 1946 and scrapped 26 March 1947.

Harold C. Thomas received two battle stars for World War II service.

Harold J. Ellison

Harold John Ellison was born 17 January 1917 in Buffalo, N.Y., and was appointed Ensign 20 October 1941 after completing flight training. Soon afterwards he reported to Torpedo Squadron 8 on board famous carrier *Hornet*. In the pivotal battle of Midway, 4 and 5 June 1942, Ellison

and his comrades led a gallant torpedo attack on the Japanese ships, pressing home the attack without fighter cover and knowing they had insufficient fuel to return to *Hornet*. Though no hits were scored in this first attack, the torpedo bombers diverted the Japanese ships, decoyed their combat air patrols away from Navy dive bombers, and thus contributed importantly to the great victory. Ensign Ellison was presumed dead 5 June 1942 and received the Navy Cross posthumously for his gallantry.

Harold J. Ellison (DE-545), a *John C. Butler*-Class destroyer escort, was building at Boston Navy Yard, Boston, but was cancelled 10 June 1944.

I

(DD-864 : dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35 k.; cpl. 367; a. 6 5", 12 40mm., 5 21" tt., 6 dep., 2 dct., 1 dct. (h.h.); cl. *Gearing*)

Harold J. Ellison (DD-864) was launched by Bethlehem Steel Co., Staten Island, N.Y., 14 March 1945; sponsored by Mrs. Audrey Ellison, widow; and commissioned 23 June 1945, Comdr. J. C. South in command.

Although scheduled to join the Pacific Fleet for the final assault on Japan, *Harold J. Ellison* was completing her shakedown cruise when the surrender came 15 August 1945. Homeported at Norfolk, she operated in the Atlantic and Caribbean for the next 2 years, taking part in Naval Reserve training cruises, and antisubmarine exercises.

Beginning in 1947, when she sailed from Norfolk 10 November, *Harold J. Ellison* added periodic cruises to the Mediterranean with the 6th Fleet to her operations, helping to keep the peace and protect American interests in this vital area. She participated in the search for lost British submarine *Affray* in April 1951, and added cruises to the Caribbean and northern Europe in 1953.

From 1954 to 1956 she continued tactical training along the East Coast and participated in European cruises. Following the explosive Suez crises, *Harold J. Ellison*, took part in vital peacekeeping operation during 1957 as the 6th Fleet helped stabilize the dangerous incident in the Eastern Mediterranean.

The following summer another crisis threatened the stability of the Mideast, as the government of Lebanon was in danger from communist oriented insurgents. The veteran peace keeping destroyer screened *Saratoga* and *Des Moines* from July to September 1958 while the 6th Fleet landed Marines at the request of Lebanese President Chamoun. Once again the rapid and effective response of this mighty armada clearly pointed up the value of ready, trained, prepositioned amphibious forces in maintaining world peace.

In September she operated with famed Task Group Alfa for the perfection of new tactics and equipment in anti-submarine warfare. *Harold J. Ellison* remained on this duty until April 1959.

The ship returned to her pattern of cruises to the Mediterranean in 1959, departing 21 September. In 1960 her homeport became Charleston, and in 1961, during her tenth tour with the 6th Fleet, the ship cruised in the troubled Persian Gulf during the crisis in Kuwait. *Harold J. Ellison* added a new function in January 1962, when she was assigned to Project Mercury as a part of the recovery unit on the Atlantic range. In 1962 she entered New York Naval Shipyard for a Fleet modernization and rehabilitation overhaul, an extensive repair job designed to extend her life and improve her readiness. The veteran destroyer rejoined the fleet in early 1963 and through 1964 continued to operate on training and readiness exercises off the Atlantic coast. Her high peacetime accomplishments are exemplified by the winning of five Battle Efficiency "E" awards during her years of service.

On 29 September 1965, *Harold J. Ellison* departed Norfolk in DesRon 24 and headed via the Panama Canal for

the Pacific to augment the Pacific Fleet during the struggle for freedom in Vietnam. During her months in the combat zone, she served as a rescue destroyer, screened carriers, patrolled, and fired over 1,000 rounds of fire in ammunition on various Viet Cong targets to support friendly troops.

Leaving Southeast Asia by steaming eastward through the Suez Canal, she completed her round-the-world cruise upon returning to Norfolk in April 1966. In July she entered the Norfolk Naval Shipyard for an overhaul which lasted for the rest of the year.

After sea trials and refresher training early in 1967 *Harold J. Ellison* rejoined the Atlantic Fleet ready for future assignments.

Harpy

In Greek mythology, any of several hideous winged monsters with the head and trunk of a woman and the tail, legs, and talons of a bird; they carried off the souls of the dead.

The light draft monitor *Klamath* (q.v.) was renamed *Harpy* 15 June 1869 while laid up in an unfinished condition at Mound City, Ill.

Harrier

Any hawk of genus *Circus* feeding on small animals and insects.

(AM-366: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3'', 4 40mm.; cl. *Admirable*)

Harrier (AM-366) was launched 7 June 1944 by the Willamette Iron & Steel Corp., Portland, Oreg.; sponsored by Mrs. William A. Kettlewell; and commissioned 31 October 1945, Lt. R. N. Compton in command.

After shutdown and exercises along the Oregon coast, *Harrier* put into San Diego 5 January 1946. She decommissioned there 28 March 1946 and was placed in reserve. *Harrier's* name was stricken from the Navy List 1 December 1959 and her disposal approved 3 October 1960.

Harriet Lane

Harriet Rebecca Lane was the niece and official hostess of President James Buchanan.

(SwStr: t. 600 (approx.); a. 2 32-pdrs.)

Harriet Lane, built for the Treasury Department by William H. Webb, was launched in New York City November 1857. She served as a revenue cutter until temporarily transferred to the Navy late in 1858. Her new assignment took her to Paraguay with a squadron ordered to support the discussions of U.S. Special Commissioner James B. Bowlin with Dictator Carlos Antonio Lopez concerning reparations for damages incurred during an unprovoked attack on *Waterwitch* by the Paraguayan forces 1 February 1855. This display of sea power quickly won the United States a prompt and respectful hearing which 4 years of diplomacy had failed to obtain. Paraguay apologized, paid an indemnity to compensate the family of an American seaman killed during the fight, and signed a new commercial treaty containing provisions highly advantageous to the United States. In his report Flag Officer W. B. Shubrick singled out *Harriet Lane* for special commendation on the invaluable service she rendered in extricating his other ships repeatedly run-

ning aground in the treacherous waters of the Parana River.

Returning to the United States, *Harriet Lane* resumed her former duties as a revenue cutter. In September 1860 she embarked Edward Albert, the Prince of Wales, the first member of the British Royal Family to visit the United States, for passage to Mount Vernon where he planted a tree and placed a wreath on the tomb of George Washington.

Harriet Lane again transferred to the Navy 30 March 1861 for service in the expedition sent to Charleston Harbor, S.C., to supply the Fort Sumter garrison. She departed New York 8 April and arrived off Charleston 11 April. The next day she fired a shot across the bow of *Nashville* when that merchantman appeared with no colors flying. *Nashville* avoided further attack by promptly hoisting the United States ensign, but 2 days later raised the Palmetto flag to begin her career as one of the most elusive Confederate privateers. When Major Anderson surrendered Fort Sumter 13 April, *Harriet Lane* withdrew with her sister ships.

Her next important service came the following summer when a task force was sent against Fort Clark and Fort Hatteras on the outer banks of North Carolina to check blockade running in the area. The ships sortied from Hampton Roads 26 August 1861 for this first important combined amphibious operation of the war. The next morning *Harriet Lane*, *Monticello*, and *Pawnee* slipped close inshore to provide direct support to the landings while heavier ships pounded the forts from deeper water. The last resistance was snuffed out the following afternoon, giving a badly needed boost to morale in the North disheartened a month before by defeat in the first battle of Bull Run. Of greater importance was the fact that this combined operation opened the inland waterways to Union ships and gave the North Atlantic Blockading Squadron a base deep in Southern waters.

Harriet Lane ran aground while attempting to enter Pamlico Sound through Hatteras Inlet 29 August and suffered severe damage while fast on the shoal. She was refloated at the cost of her armament, rigging, stores, provisions, and everything else on board which could be heaved over the side to lighten ship. Temporary repairs completed 3 September, she proceeded to Hampton Roads, arriving 8 September 1861.

Harriet Lane sailed 10 February 1862 to join Comdr. D. D. Porter's Mortar Flotilla at Key West, where units were assembling for an attack on Confederate forts in the Mississippi River Delta below New Orleans. Comdr. Porter embarked at Washington. During her passage to Hampton Roads, *Harriet Lane* was taken under fire by the Confederate battery at Shipping Point, Va., which inflicted such damage to her port wheel that her departure for Key West was delayed another 2 days. On 24 February, she captured the Confederate schooner *Joanna Ward* off Florida.

The Mortar Flotilla sailed from Key West 6 March to begin the operation which would deprive the Confederacy of the use of its largest inland waterway. *Harriet Lane*, as Porter's flagship, was among the ships which engaged Forts Jackson and St. Philip, which protected New Orleans. She helped provide the intense fire which covered Flag Officer Farragut's daring rush past the forts on 24 April. "You supported us most noble," wrote Farragut in praise of Porter's action. On 29 April *Harriet Lane* steamed up river to accept the surrender of upstream forts. The success of this attack opened the way for the movement of waterborne Union forces, now free to steam up river to join those coming south from Illinois to form a pincer which would sever the Confederacy.

Farragut ordered the Mortar Flotilla to Ship Island 1 May, and *Harriet Lane* continued to Pensacola where she transported Brigadier General L. G. Arnold's troops from Fort Pickins to the other side of the bay where they occupied Forts Barrancas, and McRee, Barancas Barracks, and the Navy Yard which had been abandoned by the Confederates. Back at Ship Island for repairs 30 May, *Harriet Lane* prepared to ascend the Mississippi with

Revenue Cutter *Harriet Lane*, Porter's Flagship of the Mortar Flotilla in 1862

Porter's mortar boats to engage enemy batteries on the cliffs of Vicksburg, Mississippi while Farragut ran past this river stronghold to join Flag Officer Davis in an effort to clear the entire Mississippi Valley of obstructions to Union shipping. However, sufficient ground forces to take Vicksburg were not made available, nullifying the value of his operation, and after a frustrating encounter with new Confederate ironclad ram *Arkansas*, Farragut ran back down past Vicksburg while *Harriet Lane* and her sister vessels in the Mortar Flotilla again covered the dash by bombarding the Confederate batteries 15 July.

As his ships required extensive repairs and most of his men were ill, Farragut ordered his ships to rendezvous at Pensacola. Following blockade duty in Mobile Bay, *Harriet Lane* sailed for Galveston, Tex., which she bombarded and captured, with the aid of *Westfield*, *Owasco*, *Clifton*, and *Henry Janes*, 3 October 1862. She was in Galveston Harbor when the Confederates retook that base 1 January 1863; and, after a bitter contest in which her captain, Comdr. J. M. Wainwright and executive officer, Lt. Comdr. Edward Lea, were killed, she fell into Southern hands. After serving the Confederate Army's Marine Department of Texas, she was sold to T. W. House, who converted her into a blockade runner named *Lavinia*. She finally escaped Galveston 30 April 1864 and sailed to Havana, where she was interned. In 1867, following the war, she was recovered from Cuba; was converted to a bark rig; and renamed *Elliott Richie*. She was abandoned off Pernambuco, Brazil, 13 May 1884.

Harrington, W. D., see *Sculptor* (AK-103)

Harris

John Harris was born in Pennsylvania 20 May 1790 and was commissioned Second Lieutenant in the Marine

Corps 23 April 1814. He fought with a mounted detachment of Marines in the Florida Indian Wars 1836 to 37 and as part of the occupying force in Mexico near the close of the war. Harris was promoted to the office of Colonel Commandant of the Corps 7 January 1859 on the eve of the Civil War. Colonel Harris died while serving as Commandant 12 May 1864.

(AP-8: dp. 13,529 (lt.); l. 535'2"; b. 72'4"; dr. 31'3"; s. 17 k.; cpl. 628; a. 4 3", 6 40mm., 4 20mm.)

Harris (AP-8) was built in 1921 by Bethlehem Shipbuilding Corp., Sparrows Point, Md. She served as a passenger ship, *Pine Tree State*, and was renamed *President Grant* in 1922. She operated to the Orient for American Orient Line, later American Mail Line, and was one of America's fastest and best Pacific liners until the introduction of newer ships in the thirties. *President Grant* was idled by the 1936-37 Maritime strike, and lay at Seattle until being taken over by the Navy from the Maritime commission 17 July 1940. Converted to a troopship at Todd's Seattle yard, she was renamed *Harris* and commissioned 19 August 1940, Lt. A. M. Van Eaton in command.

Harris spent the first few months of her commissioned service carrying troops to Pearl Harbor and acting as a troop training ship at San Diego. She sailed 13 April 1942 for the South Pacific, carrying Marines to occupy strategic points outside the Japanese perimeter of conquest. Her task group arrived Wallis Island 31 May 1942 and unloaded troops for the defense of the New Caledonia area. *Harris* then returned to the United States and operated out of Monterey Bay, Calif., in amphibious training. This vital work was completed 22 August 1942, and she sailed from San Diego for Norfolk.

After suffering collision damage which necessitated her drydocking until 14 October, *Harris* loaded troops at Nor-

folk to begin training for landings in North Africa. She departed 23 October with the Southern Attack Force, and acted as flagship for the transport force. This invasion, skillfully executed, increased the pressure on Axis forces in Africa, and prepared a springboard for invasion of Southern Europe. *Harris* arrived offshore early on 8 November 1942 and after *Bernadou* and *Cole* boldly entered the harbor with raider forces, debarked her Army troops to consolidate the landing. One of the first transports to complete disembarkation, *Harris* returned to Norfolk 13 November.

She got underway 5 December with combat troops for the Pacific, arriving San Diego 17 December. There she trained and was redesignated APA-21 before sailing from San Francisco for Alaska 24 April 1943 to take part in the recapture of Attu.

Harris arrived Cold Harbor 30 April and 4 days later shaped course for the barren Aleutian Island. She skillfully debarked her troops during the assault 11 May. She remained in the Adak-Dutch Harbor area until 10 June 1943, when she returned to San Diego. After training off California, *Harris* and other ships of the Northern Pacific Force sailed 29 July for the occupation of another Aleutian Island, Kiska. Landings were made without opposition 15 August, as the Japanese had evacuated under cover of fog. *Harris* completed her unloading by 21 August and returned to San Francisco 31 August.

As United States power mounted in the Western Pacific *Harris* sailed 8 September for New Zealand via Noumea. Arriving Wellington on 30 September, she loaded Marines and trained out of Wellington and Efate, New Hebrides, until 13 November 1943. *Harris* then sailed with the Southern Attack Force for the invasion of Tarawa, Gilbert Islands, as the Navy began its resistless push across Micronesia to Japan. *Harris* arrived the day after the initial landings on 20 November. Despite fire from shore batteries she discharged her troops and cargo during the days that followed. She remained off the stubbornly defended island caring for casualties and unloading until 2 December, when she sailed for Pearl Harbor.

Arriving Pearl Harbor 14 December 1943, *Harris* took part in amphibious drills for the next step toward Japan, the invasion of the Marshalls. She sailed 22 January 1944 and arrived off Kwajalein 31 January. After a week of bloody fighting in this highly successful assault troops and casualties were reembarked on board *Harris* 8 February and arrived Pearl Harbor 15 February.

Harris sailed to San Pedro for needed repairs, and returned to Pearl Harbor 9 May 1944. She immediately began loading troops and equipment for another important Pacific operation, the invasion of the Marianas. She arrived off Saipan 16 June, one day after the initial landings, and remained in the transport area until 20 June. With the Marianas won, and Japanese air power dealt a crippling blow in the Battle of the Philippine Sea, *Harris* sailed for Eniwetok, arriving 24 June.

The veteran transport returned to the Hawaiian Islands and the Solomons 21 July to 8 September, in order to prepare for the next assault. She then sailed from Guadalcanal for the invasion of the Palaus, wanted as staging bases for later air attacks. *Harris* conducted a diversionary landing 15 September on Babelthuap while the main forces stormed Peleliu, and after standing ready with her reserve troops for several days, sailed for Ulithi. Arriving 23 September, *Harris* put her troops ashore to occupy this atoll, ideal for a fleet anchorage, and departed 2 days later for Manus.

The invasion of the Philippines followed. *Harris* embarked elements of the 1st Cavalry Division and sailed for Leyte Gulf 12 October. After having to leave the formation temporarily to free her paravane from a dangerous live mine, *Harris* regained position and unloaded her troops and cargo, 20 October. Following the decisive Battle for Leyte Gulf, *Harris* took on board survivors of the gallant fight off Samar between heavy Japanese forces and light U.S. carriers and destroyers. She departed 28 October, arriving Guam 3 days later, and returned to Leyte Gulf with reinforcements. *Harris* then sailed for

Guadalcanal and Bougainville for additional troops and spent December 1944 in landing exercises in Huon Gulf.

Harris departed Manus 31 December to rendezvous with the assault forces steaming toward Lingayen Gulf. The convoys encountered some of the heaviest air attacks of the war en route, and *Harris*'s gunner were busy, especially 8 to 9 January 1945, the days immediately preceding the assault. She debarked her troops under heavy smoke screen, and departed for Leyte Gulf. Here she embarked more landing forces that she soon landed at La Paz without opposition as the invasion of Luzon gathered momentum. She returned to Leyte Gulf 1 February.

Loading again, *Harris* prepared to take part in the final step in the steady drive to victory, the invasion of Okinawa. She sailed 27 March and arrived offshore for the initial landings 1 April, a member of Rear Admiral Hall's Southern Attack Force. Fierce enemy suicide attacks soon developed, and again *Harris*'s gunners fought off numerous attacks as ships around her were hit. She completed her unloading under these hazardous conditions by 3 April and departed for Pearl Harbor 6 April.

Harris continued to San Francisco, arriving 30 April, but soon returned to the fighting, bringing fresh troops to Okinawa 28 May. After another round trip from Pearl Harbor to Okinawa, the ship arrived Ulithi 10 August, having narrowly missed the great August typhoon.

Assigned to assist in carrying occupation troops to Japan, *Harris* sailed to the Philippines 17 August, and arrived Tokyo Bay 8 September. After disembarking her troops *Harris* made another voyage to Samar for occupation troops, finally departing Japan 12 October. The ship made its final occupation voyage to Taku, Bar, China, helping to stabilize the volatile situation there, and sailed 16 November for Guam and the West Coast.

Harris transited the Panama Canal, arrived Boston 2 February 1946 and decommissioned 16 April. She was sold to American Ship Breakers, Inc., 20 July 1948 and scrapped. *Harris* received ten battle stars for World War II service.

Harris, Albert T., see *Albert T. Harris* (DE-447)

Harris, Lake, see *Lake Harris*

Harris County

Counties in Georgia and Texas.

(LST-822: dp. 1,625; l. 328'; b. 50'; dr. 14'11"; s. 11.6 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. LST-511)

LST-822 was laid down by Missouri Valley Bridge & Iron Co., Evansville, Ind., 20 September 1944; launched 1 November 1944; and commissioned at New Orleans, La., 23 November 1944, Lt. R. N. McIntyre in command.

After shakedown off the Florida coast, LST-822 departed New Orleans for the Pacific 27 December. Steaming via San Diego and San Francisco, she reached Pearl Harbor 6 February 1945. After a month of training in Hawaiian waters, she sailed 15 March with Army troops and equipment embarked. She touched Eniwetok 27 March, then arrived Ulithi 7 April to prepare for participation in the conquest of Okinawa, begun a week earlier. Departing 12 April, she approached the shore of Okinawa 18 April; and, during bitter fighting ashore and frequent Japanese air attacks, she operated between Okinawa and islands to the west. On 22 April she discharged men and equipment at Ie Shima while protected by smoke cover. During her 3 weeks at Okinawa she survived 18 enemy air raids and carried vitally needed supplies for ground forces.

LST-822 departed Okinawa 11 May, reached Saipan the 18th, and sailed for the Philippines 6 June. Arriving

Leyte 11 June, she proceeded to Biak where she arrived the 18th and embarked troops for transfer to Okinawa. Steaming via Leyte, she reached Naha, Okinawa, 4 July. There she embarked victorious troops of the 108th Armored Tank Battalion and sailed 6 July for Cebu, Philippines. She arrived 17 July, embarked troop replacements at Subic Bay, then returned to the Ryukyus, arriving Ie Shima 7 August.

Following the Japanese surrender, she returned to the Philippines to transport occupation troops and equipment to Japan. As part of a 120-ship convoy, she departed Lingayen Gulf 17 September and arrived off Wakayama, Japan, the 25th. After unloading equipment and debarking Army engineers, she sailed 1 October for Manila. Between 19 and 27 October, she carried additional occupation troops from Lingayen Gulf to Wakayama; and during the next 4 months, she supported occupation landings and Allied operations along the coast of Japan.

Departing Sasebo 3 March 1946, *LST-822* sailed for the United States where she arrived San Diego 30 March. After operating along the West Coast from Southern California to Washington, she entered drydock at Portland, Oregon, 28 May. She decommissioned 27 July and entered the Pacific Reserve Fleet 10 August.

LST-822 recommissioned at Bremerton, Wash., 23 November 1950, Lt. Kent D. Myers in command. In response to the Communist aggression in South Korea, she departed Long Beach, Calif., 10 February 1951 for the Far East. Steaming via Pearl Harbor, she arrived Yokosuka, Japan, 23 March. During the next 4 months she operated between Japan and the western coast of Korea, supporting amphibious operations and bolstering the American effort to repel the Communist threat. She departed Yokosuka 20 July, arrived San Diego 9 August, and spent the next 9 months participating in amphibious training along the West Coast.

LST-822 departed San Diego 9 April 1952 and again deployed to the Far East, arriving Yokosuka via Pearl Harbor 18 May. Operating out of Yokosuka and Sasebo, she steamed to ports along the coast of Korea from Inchon and Koje Do to Pusan and Pohang. She transferred men and supplies between Japan and South Korea and later in the year and into 1953 shuttled North Korean prisoners of war during prisoner exchanges. Departing Inchon 22 January 1953, she sailed via Sasebo to Yokosuka, then departed for the West Coast 5 February. She arrived San Diego 5 March and resumed amphibious training, which continued during the remainder of the year.

LST-822 departed San Diego 25 January 1954 for the Western Pacific. Arriving Yokosuka 25 February, she resumed supply duty in support of the forces of freedom in the Far East, and during the next 5 months steamed to Korea, Okinawa, and along the coast of Japan. On 11 August she departed Yokosuka for Haiphong, North Vietnam, where she arrived 26 August. There she joined Operation "Passage to Freedom," which provided citizens of North Vietnam an opportunity to escape the Communist takeover and to find a life of freedom in South Vietnam. As part of the mighty sea power of the United States stationed in the Far East, she took part in the evacuation of almost 300,000 Vietnamese from North to South. Between 29 August and 2 October she carried refugees, cargo, and military equipment from Haiphong to Nha Trang, South Vietnam, thus strengthening South Vietnam as a bastion of democracy in the tense and troubled Southeast Asia. After returning to Japan 28 October, *LST-822* departed Yokosuka 17 November, touched Pearl Harbor 5 December, and reached San Diego 20 December.

LST-822 operated along the West Coast until 27 June 1955 when she sailed for operations in the Arctic Ocean off Alaska. Named *Harris County* 1 July, she steamed via Seattle, Wash., and reached Point Hope, Alaska, 27 July. For almost 2 months she conducted supply and survey operations in the ice filled Arctic Ocean north of Alaska. Departing Point Hope 19 September, she sailed to San Diego and arrived 8 October. She returned to Seattle late in October and from 1 December to 20

January 1956 underwent extensive overhaul. Departing Seattle 27 January, she carried cargo to San Francisco 31 January. *Harris County* was placed in service in reserve 21 February at Mare Island, Calif., and she entered the Pacific Reserve Fleet. In March she transferred to MSTs.

Manned by a civilian crew, *Harris County* continued operating along the coast of Alaska and into the southern reaches of the Arctic Ocean. She operated out of ports in California and Washington as a supply and replenishment ship between 1956 and 1962. On 14 January 1962 she departed Seattle for the mid Pacific. Steaming via Seward, Alaska, she arrived Pearl Harbor 12 February to begin duty as a survey support ship. Since then *Harris County* has operated throughout the Pacific from Hawaii to New Guinea while carrying supplies and supporting ocean survey projects. Her duties have carried her to eastern New Guinea, the Marshalls, the Marianas, and the Line Islands of Polynesia. At present in 1967 *Harris County* continues operating in the South West Pacific under MSTs.

Harris County received one battle star for World War II and four battle stars for Korean service.

Harrisburg

The capital of Pennsylvania.

(Sc Str.: dp. 10,499; l. 585'; b. 63'3"; dr. 29'; s. 20 k.; cpl. 541; a. 2 6", 2 4", 2 1-pdr.)

Harrisburg, a troop transport, was built as a steel three-masted schooner in 1888 as *City of Paris* by J. & G. Thompson, Clydebank, Scotland, for the Inman Line. With her sister ship, *City of New York* (later to become *Harvard*) she was one of the finest transatlantic liners of the day, and one of the first ships with twin screws on that service. *City of Paris* was transferred to American registry in 1893 as *Paris*, and held the record for the Southampton-New York crossing in July 1893.

At the outbreak of the Spanish-American War in 1898, *Paris* was acquired by the Navy as an auxiliary cruiser, and commissioned *Yale* 2 May 1898, Captain W. C. Wise commanding. Sent to Puerto Rico to watch for the entrance of the Spanish fleet into the Caribbean, *Yale* patrolled those waters until putting in at Key West, Fla., 3 July. During this period she captured Spanish merchantman *Rita* and was fired upon by Spanish ships off San Juan. Subsequently, she was used by the Army to transport troops to and from Puerto Rico. *Yale* departed Charleston, S.C., 8 July, sailed to Puerto Rico, and arrived at New York 1 August. She decommissioned 2 September 1898 and was returned to the American Line, from whom she had been leased.

Reverting to *Paris*, the sleek ship again sailed the Atlantic, but had the misfortune to run aground on the Manacles, England, 21 May 1899. She remained there until 11 July, when she was reloaded and sent to Belfast, Ireland, for extensive refit. *Paris* emerged from Belfast with two funnels instead of her original three and powerful new engines. Renamed *Philadelphia*, she continued her transatlantic passenger service.

Philadelphia was acquired by the Navy in 1918 and renamed *Harrisburg*. She commissioned 29 May 1918, Comdr. Wallace Bertholf commanding. During the war *Harrisburg* made four voyages to Europe, two to Liverpool and two to Brest, with troops and supplies, and made six additional trips after the war carrying veterans of the European fighting home to the United States. She was then decommissioned at Hoboken, N.J., 25 September 1919, and returned to her owner, the American Line, for passenger service. She was subsequently sold to the New York-Naples Steamship Co. in 1922 and scrapped in 1923.

Harrison

Benjamin Harrison, from whom the first *Harrison* was named, was born about 1726 in Charles County, Va., and

USS *Harrisburg* camouflaged in 1918

attended the college of William and Mary. As a member of the Virginia House of Burgesses, Harrison protested against the Stamp Act. An early advocate of independence, he served in the Continental Congress 1774-78 and as Governor of Virginia 1781-84. Harrison died 24 April 1791. His son and great-grandson were both Presidents of the United States.

Napoleon Harrison was born in Martinsburg, Va. (now West Virginia), 19 February 1823 and was appointed Midshipman 26 February 1838. Serving in California during the Mexican War in *Portsmouth*, he was a volunteer in the expedition to rescue Kearny's command, and spent 5 days en route from San Francisco to Monterrey in a small boat carrying despatches. In 1862 Harrison commanded *Cayuga* at the passage of Forts Jackson and St. Philip, leading the battle line past the forts and upriver to New Orleans. He later commanded *Mahaska* in the James River Flotilla, *Minnesota* in the North Atlantic Blockading Squadron, and various ships in the South Atlantic Blockading Squadron. After the fall of Charleston in 1865 Harrison served at Navy Yard, Portsmouth, N.H. Following the Civil War, he taught at the Naval Academy and in 1870 took command of his last ship, *Congress*. Captain Harrison died 27 October 1870 at Key West, Fla. The second *Harrison* was named after him.

I

(Sch: 44-pdrs.)

Harrison, a former fishing schooner built in 1761, and named the *Triton* was chartered 22 October 1775 as part of the small fleet outfitted by General George Washington to capture much needed supplies and to aid him in the siege of Boston. Under Captain William Coit the ship set sail from Plymouth, where she had been obtained, on October 26. Although *Harrison* was not sturdy or particularly seaworthy. Captain Coit succeeded in capturing two British provision ships 5 November. Continuing her cruise against British shipping, the ship departed again

13 November 1775 and after being chased by frigate *Tartar* on the 23d, brought two more prizes into port 1 December. *Harrison* remained at Plymouth, was frozen in for a time in January, and after making two short unproductive cruises decommissioned.

II

(DD-573: dp. 2050; l. 376'2"; dr. 13'; b. 39'8"; s. 35 k.; cpl. 273; a. 5 5", 10 21" tt., 6 dep. 2 dct.; cl. *Fletcher*)

Harrison (DD-573) was launched by Consolidated Steel Co., Orange, Tex., 4 May 1942; sponsored by Mrs. Harry B. Hird; and commissioned 25 January 1943, Comdr. C. M. Dalton in command.

Following shakedown training in the Gulf of Mexico and Caribbean, *Harrison* escorted a merchant ship to the Canal Zone, and sailed for New York. The ship arrived New York 6 April and Charleston 2 days later. She then joined a convoy out of New York for Casablanca, and after touching at several points in the Mediterranean returned 1 June to Charleston. *Harrison* was then assigned to anti-submarine exercises in Caribbean waters with carrier *Yorktown*, after which she performed escort duty in the area until 22 July 1943.

Harrison was assigned in mid-1943 to the Pacific fleet, where the crescendo of amphibious war was beginning. Departing with carrier *Lexington* from Norfolk 22 July, the ship arrived Pearl Harbor 9 August and spent the next days training for the important amphibious operations which were to come. Her job was to screen the carriers as their aircraft softened up Japanese-held islands, and the task group got underway 22 August for strikes against Marcus, Wake, and Tarawa, interspersed with short resupply stops at Pearl Harbor. With these vital preliminary operations complete, *Harrison* departed 21 October for duty in the Solomons, long the scene of bitter fighting both on land and sea.

She arrived Espritu Santo, New Hebrides, 4 November and 3 days later steamed to Empress Augusta Bay,

Bougainville, to screen transports carrying reinforcements. As she patrolled off the bay, where Marines had landed 1 November, the Japanese launched a fierce night attack with dive bombers and torpedo planes 8-9 November. *Harrison's* gunners accounted for at least one plane during the battle. The destroyer departed 14 November for the Gilberts operation and again screened transports as they put initial assault troops ashore 20 November. *Harrison* remained off bloody Tarawa until 29 November, when she took up patrol off Makin. The ship then sailed to Funafuti 7 December and engaged in training exercises before anchoring at Pearl Harbor 1 January 1944. She remained in Hawaiian waters for most of January taking part in fire support exercises for impending invasion of the Marshall Islands.

Harrison sailed with the Southern Attack Force 22 January, and arrived off Kwajalein 31 January. She screened battleships *New Mexico* and *Mississippi* while the larger ships pounded shore installations, and sank a small tanker with her guns as the Japanese ship attempted to escape from the lagoon. As the Marines landed and advanced over the numerous islands in the atoll, *Harrison* entered the lagoon 4 February and rendered close fire support. She spent the next 4 weeks patrolling offshore and anchored in the lagoon, departing 1 March for Efate, New Hebrides.

The destroyer arrived Efate 7 March and after a short rest screened a task group during the strike on Kavieng, New Ireland, 20 March. Returning to Efate 25 March, she joined some 200 ships for the largest operation yet attempted in the southwest Pacific, the occupation of Hollandia. *Harrison* arrived New Guinea 1 April, engaged in patrol and escort operations until 19 April, and then sailed to Humboldt Bay for the assault. Carriers screened by the destroyer and her sisters bombarded enemy airfields and supported the successful landing, after which *Harrison* arrived Port Purvis 11 May for a month of local exercises and patrols.

Next on the timetable of conquest in Micronesia were the Marianas, and *Harrison* sailed 4 June for the Marshalls to prepare for that operation. Arriving Kwajalein 8 June, she engaged in patrolling and readiness operations until 17 June, when she sailed for Guam. *Harrison* arrived 21 June and lent fire support to Marines ashore in addition to patrolling the transport areas. This operation not only constituted a break in Japan's inner ring of defenses, but dealt a death blow to the Empire's naval air arm at the Battle of the Philippine Sea. *Harrison* sailed back to Espiritu Santo via Eniwetok 16 August.

Harrison departed 22 August for New Guinea, where she supported with gunfire Rear Admiral Barbery's landing on Morotai Island 15 September. After helping to establish this important air base, the destroyer joined a larger task force at Humboldt Bay and departed 13 November for one of the largest operations of the war, the invasion of the Philippines. *Harrison* arrived off Leyte 20 October and delivered accurate shore fire for the assault forces during the initial stages. She then assumed escort duties in already crowded Leyte Gulf until returning to Humboldt Bay 23 October.

After her many long months in the Pacific forward areas, *Harrison* departed for the United States 1 November and arrived Mare Island, California, via Pearl Harbor, 24 November 1944. She remained there until departing again for Pearl Harbor 20 January 1945. Arriving Ulithi 7 February, *Harrison* joined famed Task Force 58, Vice Admiral Mitscher, and in company with *Hornet*, *Wasp*, and other carriers sailed three days later to stage the first strike on the mainland of Japan since the Halsey-Doolittle raid of 1942. Observing the strictest secrecy to insure success, the carriers and their escorts arrived off Japan 16 February and launched a devastating series of strikes against the Tokyo area. After these attacks, the vast force moved south to support the Iwo Jima landings, scheduled for the 19th, and remained east of the island until returning for another raid on Tokyo 25 February. Refueling at sea in a remarkable demonstration of the mobility and striking power of carrier forces,

the ships then sailed to Okinawa for photo-reconnaissance missions 1 March. This completed, *Harrison* and the rest of the task force arrived Ulithi 5 March 1945.

The great task force sortied once more from Ulithi 14 March to support the Okinawa operation, last stop on the island road to Japan. In heavy strikes 18-19 March the carrier forces inflicted great damage on Okinawa in preparation for the invasion, and *Harrison* shot down another attacking enemy aircraft. Attacks against Japanese airfields in the home islands were also launched, cutting down significantly the air opposition over Okinawa during the initial assault. After the Marines stormed ashore 1 April, the carrier groups and their destroyers turned to direct support of the landing. As a Japanese task force, built around the giant battleship *Yamato*, sortied from the inland sea to attack the beaches at Okinawa, Task Force 58 aircraft delivered a skillful and effective attack, sinking *Yamato* and five other ships while suffering only small losses.

During her operations off Okinawa *Harrison* began to experience increasing kamikaze attacks. *Harrison's* gunners accounted for two of the suicide planes 6 April, and protected the carriers during countless attacks in the days following the invasion. She returned to Ulithi 30 April for a brief respite, but was underway again 9 May for tactical support of the American forces on bitterly contested Okinawa. The task force, now part of 3d Fleet, continued this pattern, including periodic strikes against Japan, until after the great June typhoon. *Harrison* rode out the storm 5 June in which *Pittsburgh* lost her bow and the ships put in at Leyte Gulf 11 June to repair damage.

After replenishing the great task force moved once more toward Japan 1 July. During the next 2 months, devastating air strikes were carried out against Japan, and retaliatory air attacks were fought off by *Harrison* and the other protecting destroyers. Refueling at sea, the carriers kept up a constant bombardment of the home islands. In addition, *Harrison* with four cruisers and five other destroyers made an anti-shipping sweep along the northern coast of Honshu; but, testifying to the thoroughness of American surface and submarine attrition, gained not one contact. Then during the night of 30-31 July *Harrison* and the rest of her squadron swept Suruga Wan, near Tokyo, and in the very shadow of Mount Fujiyama bombarded railroad yards and an aluminum plant.

Task Force 38 kept up its relentless attacks against Japan until the surrender 15 August. *Harrison* arrived Guam 26 August and Pearl Harbor 14 September. There the veteran destroyer got underway with carrier *Enterprise* for the Canal Zone and the East Coast, arriving Boston 17 October 1945. After Navy Day celebrations the ship arrived Charleston 3 November and decommissioned 1 April 1946. *Harrison* was subsequently placed in reserve and transferred to Orange, Tex., where she remains.

Harrison received 11 battle stars for World War II service.

Harry Bumm

A former name retained.

The steam tug *Harry Bumm*, also known as *Tug No. 5*, was renamed *Epsilon (q.v.)* in November 1864.

Harry Culbreath, see *Titania* (AK-55)

Harry E. Hubbard

Harry Enson Hubbard was born 18 March 1903 in Baltimore, Md. He graduated from the Naval Academy in June 1925, served 3 years in battleship *Maryland*, then qualified in submarines at New London, Conn. Following duty in submarine *S-34*, he completed Naval Academy postgraduate work, then served in submarine tender

Holland, and, was executive officer of destroyer *Twiggs*. He served at the Naval Torpedo Station at Newport, then commanded destroyer *Roper* 1939 to 1940, before assignment as staff gunnery officer for destroyers in the Atlantic. The latter duty terminated 1 March 1942 when Hubbard took command of destroyer *Meredith* (DD-434).

In command of *Meredith*, Hubbard helped screen carrier *Hornet* off Japan for the famed Doolittle bombing raids on Tokyo 18 April 1942. Thereafter he coned his destroyer on arduous patrol and escort from Hawaii to the Samoan, Fiji, and Solomon Islands. His destroyer helped cover transports landing reinforcements on bitterly contested Guadalcanal 18 September 1942.

During the darkest days of the Solomons Campaign Hubbard joined in maintaining the lifeline of supplies to fighting men holding their ground on Guadalcanal. On 15 October 1942 he fought his ship against Japanese carrier-based scouting planes, then fought off 18 enemy dive bombers and 12 torpedo planes launched by Japanese aircraft carrier *Zuikaku*. His gunners shot down five of the attackers, all the destroyermen following the example of Hubbard who carried on the fight though blinded by burns about his face. When his men had cleared the bridge, he abandoned the sinking *Meredith* scant moments before she made her final plunge. He perished on a life raft at sea the morning of 16 October 1942. The heroic stand of Commander Hubbard and his destroyerman had drawn the enemy aircraft away from ships who made it to Guadalcanal with munitions and desperately needed supplies.

(DD 748: dp. 2,200; l. 376'5"; b. 41'4"; dr. 15'8"; s. 34 k.; cpl. 336: a. 6 5", 11 20mm., 10 21" tt.; cl. *Allen M. Sumner*)

Harry E. Hubbard (DD-748) was launched 24 March 1944 by the Bethlehem Steel Co., Staten Island, N.Y.; sponsored by Miss Jean Hubbard, daughter; and commissioned 22 July 1944, Comdr. Leonard W. Bailey in command.

Flagship of Destroyer Squadron 64, *Harry E. Hubbard* trained precommissioning crews destined for newly constructed warships until sailing for Hawaii 16 January 1945. She served as a training ship out of Pearl Harbor until 17 April, then departed for combat. She arrived off Okinawa 8 May 1945 to serve as a picket destroyer guarding against the day and night waves of Japanese aerial raids and suicide runs of kamikaze planes. Although the American fleet suffered losses and damage, it had come to stay. As with all previous Japanese weapons, even the suicide kamikazes were defeated in their attempt to save this last "stepping stone" to Japan itself. For nearly 2 months *Harry E. Hubbard* fought off the savage raiders, shooting down four suicide planes that tried to crash her at various times.

When picket destroyers *Evans* and *Hugh W. Hadley* were badly damaged in their stand against some 50 suicide planes 11 May 1945, *Harry E. Hubbard*, first to arrive on the scene, went alongside *Evans* to render fire-fighting, damage control and medical aid. She gave similar assistance to destroyer *Barry* 24-25 May, shooting down two suicide planes as she escorted *Barry* from picket station into Kerama Retto. One enemy plane was disintegrated by *Harry E. Hubbard's* gunners a bare 50 yards from the ship.

Harry E. Hubbard remained off Okinawa until 24 July 1945, then escorted occupation troops to Jinsen, Korea, and carried the Commander of Destroyer Squadron 64 to Chinkai, Korea, to oversee the demilitarization of the former Japanese naval base there. She returned to Jinsen 7 November 1945, then based out of Tsingtao, China. She performed escort, mail, and communication service for the North China Occupation force until departing 16 March 1946, for the California seaboard. She arrived at San Francisco 28 March 1946, underwent demobilization overhaul at Oakland, then decommissioned at San Diego 15 January 1947. She remained in the Pacific Reserve Fleet until recommissioned 14 May 1949 but decommissioned 12 December without having gone to sea.

Following the invasion of South Korea, *Harry E. Hubbard* recommissioned 27 October 1950, Comdr. Burres D. Wood in command. After initial shakedown along the coast of California, she departed San Diego 2 January 1951 for two months of training in Hawaiian waters. She then steamed to assist the U.N. Forces in Korea. Besides helping guard the fast carrier task force making repeated airstrikes against the enemy, she frequently joined in gunstrike missions to bombard coastal rail and communication centers and performed as sea-going artillery to support the advance of land troops. Her bombardment missions were conducted against targets at Yongdae Gap, Wonsan, Songjin, Chingjin, Kyoto, Chako, Bokuko, Chuminjin, and other enemy strongholds of supply and reinforcement. When destroyer *Walke* (DD-723) was heavily damaged by underwater explosion off Wonson 11 June 1951, *Harry E. Hubbard*, with the same skill as off Okinawa in 1945, moved in to render effective medical and damage control assistance. She returned to the California coast in October 1951 for overhaul and completed a similar tour of duty with the 7th Fleet off Korea July to December 1952. She returned to San Diego in January 1953 but again departed 11 July to guard fast carrier task groups watching over the uneasy truce in Korea. Intervened by patrol in the Taiwan Straits, this duty continued until 13 January 1954. She returned to San Diego for overhaul and refresher training along the western seaboard.

Harry E. Hubbard departed San Diego 11 August 1954 on the first of nine additional Far East tours with the 7th Fleet which were completed by the close of 1966. During this service, she joined the roving 7th Fleet 6 to 13 February 1955 in moving in under Chinese Communist artillery defenses to cover the evacuation of Chinese Nationalist from untenable positions on the Tachen Islands. In October to November 1956 she diverted from Australia to the "Dewline" in the Northern Pacific to serve on picket patrol during the Suez Crises. She next joined in combined warfare exercises with SEATO Treaty nations to improve readiness in defending freedom in that part of the world. From time to time, she patrolled the Taiwan Straits to insure Taiwan was not threatened from the Communist mainland of China. She was off Guam in June 1960, twice guarding the flight of President Eisenhower's aircraft during his Far East visit.

When Communist North Vietnamese torpedo boats committed unprovoked attacks on American destroyers patrolling the Gulf of Tonkin 2 to 5 August 1964, *Harry E. Hubbard* was nearby in the South China Sea screening carrier *Ticonderoga* (CVA-14). The carrier task group struck back with lightning rapidity to destroy North Vietnamese torpedo boats and their supporting facilities. In awarding the Navy Unit Commendation to *Ticonderoga* and her screen, Secretary of the Navy Paul Nitze stated that they had "demonstrated the firm intent of the United States to maintain freedom of the seas and to take all necessary measures in defense of peace in Southeast Asia."

Harry E. Hubbard returned to San Diego 28 October 1964 for a year of warfare readiness operations along the western seaboard. In October she departed for the coast of South Vietnam. In company with *Valley Forge* (LPH-8) in November and December 1965, she provided gunfire support for two Marine amphibious landings. In the following months she acted as escort to *Kitty Hawk* (CVA-63) and *Hancock* (CVA-19) during their strike operations in the South China Sea; acted as Harbor Defense ship at Danang and fired more than 1,000 rounds of exploding 5-inch shells into Viet Cong strongholds along the South Vietnamese coast. She returned to Long Beach, Calif., 7 April 1966. The destroyer had drawn nationwide attention 10 March 1966 when the ABC Television Network included scenes of one of her shore bombardments along the South Vietnamese coast. The prowess and accuracy of her gunners was illustrated by one spotter's comment: "*Hubbard* is the fastest shooting ship and one of the most accurate I've seen." *Harry E. Hubbard* headed for the Western Pacific in the spring of 1967

USS *Harry E. Hubbard* (DD-748) in 1966

where more action against aggressors in Southeast Asia awaited her.

Harry E. Hubbard shared in the Navy Unit Commendation awarded Task Group 77.5 for support operations in the Gulf of Tonkin 2 to 5 August 1964. She also received six battle stars for World War II and Korean service.

Harry E. Yarnell

Harry Ervin Yarnell, born near Independence, Iowa, 18 October 1875, began his naval career which spanned 51 year and 3 wars, when he entered the U.S. Naval Academy in 1893. After serving in *Oregon* during the Battle of Santiago, 3 July 1898, Yarnell was commissioned ensign 1 July 1899 and reported to the Asiatic Station. He served in the Philippines during the Aguinaldo Insurrection and on the China Station during the Boxer Rebellion.

From Asia Yarnell reported to *Connecticut* at her commissioning, and sailed around the world with the Great White Fleet. Next, duty at the Newport Torpedo Station, on CINCLANT's staff, and at the Naval War College occupied him until World War I, when he served at Gibraltar and London. Yarnell then rotated between sea and shore duty until ordered to *Saratoga* September 1927, as prospective commanding officer. He served as captain of the carrier from her commissioning until 17 August 1928, when he was appointed Chief of the Bureau of Engineering as Rear Admiral.

From January to April 1930 Admiral Yarnell was Naval Adviser to the American delegation at the London Naval Conference, and in October 1936 he became commander in Chief, Asiatic Fleet, with the rank of Admiral.

His tour there was notable for the sagacious and firm manner with which he handled a most explosive international situation.

After 3 years service, Admiral Yarnell was transferred to the Retired List; but, 1 November 1941, as war loomed in the East he was recalled to the office of the Secretary of the Navy as Special Adviser to the Chinese Military Mission.

Admiral Yarnell was relieved of active duty 15 January 1943 but returned in June as Head of a Special Section in the Office of Chief of Naval Operations until December 1944, when he again was relieved of active duty.

Admiral Yarnell died 7 July 1959 at Newport, R.I., his home since his retirement. Among the awards and medals earned in his long and distinguished career were the Navy Cross, the Distinguished Service Medal, the Diploma and Decoration of the Companion of the Order of the British Empire, and the Cloud Standard, Second Class, of the Government of China.

(DLG-17; dp. 5670; l. 535'; b. 53'6"; dr. 17'2"; s. over 30 k.; cpl. 400; a. 4 Ter., ASROC, 2 3"; cl. *Leahy*)

Harry E. Yarnell was launched 9 December 1961 by the Bath Iron Works, Bath, Maine; sponsored by Mrs. Philip

Yarnell, wife of the late Admiral Yarnell; and commissioned 2 February 1963 at the Boston Naval Shipyard, Captain Charles E. Nelson in command.

Second of the "double-end," *Leahy*-class guided-missile frigates to join America's sea-going arsenal, *Harry E. Yarnell* is equipped with Terrier surface-to-air missile launching tubes both fore and aft and ASROC anti-submarine missiles as well as more conventional torpedo tubes and guns. Before taking her place in America's powerful deterrent force, the new ship was fitted out at Boston and received a grim reminder that even in peacetime the sea can be a powerful enemy. As she was out on trials, *Harry E. Yarnell* was diverted 10 April 1963 to search for *Thresher*, the nuclear submarine later found on the bottom some 8,000 feet down. Quarters in the area where the sub was last reported, the guided missile frigate found an oil slick and some debris but could not contact the lost submarine.

On her way to her new home base at Norfolk 23 April, *Harry E. Yarnell* passed and photographed several Russian "merchant" ships. The next few months were spent conducting training for shakedown and missile qualification. Designated to carry out standardization trials for her class as well as special acoustical tests, *Harry E. Yarnell* spent 28 October-26 November in the Caribbean operating out of Guantanamo and then returned to Norfolk.

Harry E. Yarnell continued operating in the Virginia Capes area and the Caribbean until departing Norfolk 8 September 1964 for her first Atlantic crossing. NATO ASW exercises en route took the guided missile frigate far north, and she crossed the Arctic circle on the 21st. She visited Amsterdam en route to the Mediterranean, where she remained until returning to Norfolk in February 1965.

On her next Mediterranean deployment, which began 8 October, she transited the Dardanelles 3 January 1966 and entered the Black Sea to operate close to the Soviet Union before returning to Norfolk in March. After NATO exercises in the North Atlantic, *Harry E. Yarnell* received the battle efficiency "E" for the preceding year.

Operations in the Gulf of Mexico and Caribbean brought the fine ship and her crew to a high degree of readiness before she sailed for her 3d Med deployment early in 1967. She cruised the Mediterranean ready to help snuff out trouble, should it occur in that troubled area, until returning to Norfolk in May. At mid-year she operated in the North Atlantic, honing her fighting edge to prepare for the challenges of the future.

Harry F. Bauer

Harry Frederick Bauer was born 17 July 1904 at Camp Thomas Lytle, Ga., and graduated from the Naval Academy in 1927. During the early part of his career he served at shore stations, including a tour as instructor at the Naval Academy, and in *Twiggs*, *Cuyama*, and *Tracy*. Bauer was commissioned Lieutenant Commander 1 July 1941 and took command of fast transport *Gregory* 1 January 1942. While acting as combat transports for Marines off Guadalcanal during the night of 4-5 September 1942, *Gregory* and *Little* were surprised by three Japanese destroyers covering a small troop landing. Though vastly outgunned, the two transports fought valiantly before being sunk. Lt. Comdr. Bauer was badly wounded, and while being pulled clear by two of his crew ordered them to rescue another man crying out for assistance. Lt. Comdr. Bauer was lost, receiving the Silver Star posthumously for his gallantry.

(DM-26: dp. 2200; l. 376'6"; b. 40'10"; dr. 15'8"; s. 34 k.; cpl. 336; a. 3 5", 8 20mm., 2 .50 cal.; cl. *Robert H. Smith*)

Harry F. Bauer (DM-26) was launched as DD-738 by Bath Iron Works Corp., Bath, Maine, 9 July 1944; sponsored by Mrs. Harry F. Bauer, wife of Lt. Comdr. Bauer; converted to minelayer DM-26 and commissioned 22 September 1944, Comdr. R. C. Williams, Jr., in command.

Following shakedown training out of Bermuda and minelayer training off Norfolk, *Harry F. Bauer* sailed 28 November 1944 via the Panama Canal arriving San Diego 12 December. After additional training both there and at Pearl Harbor she departed Hawaii 27 January 1945 as a unit of Transport Group Baker for the invasion of Iwo Jima, next stop in the island campaign toward Japan. As Vice Admiral Turner's invasion troops stormed ashore 19 February, *Harry F. Bauer* acted as a picket vessel and carried out antisubmarine patrol to protect the transports. As the campaign developed, the ship also conducted shore bombardment, destroying several gun emplacements, tanks, and supply dumps. She proceeded to Ulithi 8 March to prepare for the last and largest of the Pacific island operations, Okinawa.

Harry F. Bauer arrived Kerama Retto 25 March and helped screen minecraft during preliminary sweeps of the invasion area. Under intensive air attack during this period, she shot down several Japanese planes, three on the night of 28-29 March alone. On the day of the assault, 1 April 1945, she joined the picket ships offshore, and for over two months of antisubmarine and anti-aircraft duty was under almost continuous attack. A torpedo crashed through her ballast tank 6 April, but failed to explode, and she again shot down three aircraft on the night of 29 April 1945. While in company with *J. William Ditter* 6 June, she was attacked by eight enemy aircraft. Each ship accounted for three; one crashed close aboard *Harry F. Bauer*, flooding two compartments. Although damaged herself, the ship escorted the crippled *J. William Ditter* to Kerama Retto. Survey of her damage during repairs revealed an unexploded bomb in one of her flooded compartments.

After repairs at Leyte, *Harry F. Bauer* arrived Okinawa 15 August, the day of the Japanese surrender. With the prospect of massive minesweeping in Japanese waters incident to the occupation, she sailed 20 August for the East China Sea, where she engaged in minesweeping operations until arriving Sasebo 28 October. Sailing for the United States 1 December she arrived San Diego 22 December.

Sailing to Norfolk 8 January 1946, *Harry F. Bauer* began operations with the Atlantic Fleet. These consisted of antisubmarine cruises in the Atlantic and Caribbean, tactical training and fleet maneuvers. During October-November 1948 she took part in 2d Fleet exercises in the Atlantic, and in June-July 1949 participated in a Naval Academy training cruise with giant battleship *Missouri*.

In 1950 *Harry F. Bauer* made her first cruise to the troubled Mediterranean, departing 9 September and returning to Charleston 1 February 1951. During the years that followed she continued with tactical operations, that took her to the Caribbean and Northern Europe. She ended active steaming in September 1955 and decommissioned 12 March 1956 at Charleston, entering the Atlantic Reserve Fleet, Philadelphia, where she remains.

Harry F. Bauer received a Presidential Unit Citation for the series of courageous actions off Okinawa during that bitter campaign, where "the fleet had come to stay" and four battle stars for World War II service.

Harry L. Corl

Harry Lee Corl was born in Lambertville, Mich., 26 March 1914, and enlisted in the Navy 20 November 1934. He was discharged in 1938 but enlisted again the following year, rising to ensign 15 June 1942. He was awarded the Navy Cross for heroism in the epochal Battle of Midway, when he was the pilot of a torpedo plane in the assault against the Japanese fleet. His squadron probably scored hits on two of the carriers later lost in the action. Ensign Corl was reported missing on a mission in the South Pacific 24 August 1942, and was presumed dead 25 August.

(ADP-108: dp. 1390; l. 306'; b. 37'; dr. 12'7"; s. 24 k.; cpl. 204; a. 1 5", 6 40mm.; cl. *Crosley*)

Harry L. Corl (ADP-108) was launched as DE-598 by Bethlehem-Hingham Shipyard, Hingham, Mass., 1 March 1944; sponsored by Mrs. Marie Mohr, sister of Ensign Corl; and commissioned 5 June 1945, Lt. W. D. Jenckes in command. She had been redesignated ADP-108 and converted to a high speed transport before commissioning.

Following her shakedown training in the Caribbean, *Harry L. Corl* departed Norfolk for the West Coast 4 August 1945. She arrived San Diego 19 August, 4 days after the end of the war, and was assigned the duty of carrying supplies and men to northern Pacific ports. Arriving Seattle 26 August, the transport took on passengers and equipment for northern weather stations. She arrived Dutch Harbor, Alaska, 1 September and Petropavlovsk, on the Kamchatka Peninsula, 5 days later. There *Harry L. Corl* unloaded cargo and helped to establish an important weather station, so vital to safe navigation of the Pacific.

The transport made three more supply voyages from Attu to Petropavlovsk, and sailed to Seattle 21 November. After a voyage to Alaskan ports with passengers the ship returned to Seattle 11 January 1946. Scheduled for inactivation, *Harry L. Corl* then sailed for San Francisco, and departed that port 26 February for the east coast. She arrived New York 20 March and Green Cove Springs, Florida, 12 April, decommissioning 21 June 1946. *Harry L. Corl* was subsequently placed in the reserve fleet, where she remained until her name was struck from the Navy List on 15 January 1966. She was delivered to Korea in May 1966 for use in the ROK Navy as *Ah San*.

Harry Lee

Harry Lee was born in Washington, D.C., 4 June 1872 and was appointed second lieutenant in the Marine Corps for the war with Spain 2 August 1898. He served at the Havana Naval Station during the war and in various ships of the Navy and Marine Corps stations following it. Joining the 6th Regiment in 1917, Lee commanded it at Chateau Thierry, St. Mihiel, and the Argonne Forest and marched with the Army to the Rhine. After the war he commanded the Marine Brigade in Santo Domingo, sent in 1921 to pacify the country and establish constitutional government. For 3 years he served as military governor of the country. Later General Lee commanded Marine Barracks, Parris Island, and while in command of the Marine base at Quantico, Va., died 1 March 1933. For World War I service Major General Lee was awarded the Army and Navy Distinguished Service Medals, the French Legion of Honor, and other decorations.

(AP-17: dp. 9,989; l. 475'4"; b. 61'6"; dr. 25'4"; s. 16 k.;
cpl. 453; a. 4 3", 4 40mm.)

Harry Lee (AP-17) was built as passenger ship *Exochorda* by New York Shipbuilding Co., Camden, N.J., in 1931 and operated in the Mediterranean area for American Export Lines. Acquired by the Navy 30 October 1940, she was converted at Tietjen and Lang Dry Dock Co., Hoboken, N.J., and commissioned *Harry Lee* (AP-17) 27 December 1940, Captain R. P. Hinrichs in command. *Harry Lee* was redesignated APA-10, 1 February 1943.

Harry Lee spent the first few months of her commissioned service transporting Marine combat units to the Caribbean for training exercises, helping to build the amphibious teams which were to find such great success in the later stages of World War II. After a stay at Norfolk, the transport was assigned in July to the Iceland route, carrying troops and supplies to that country from Norfolk and New York. After making two such passages, she returned to Boston 22 December 1941 to take part in additional training exercises. With America then in the war, *Harry Lee* spent the next 18 months in amphibious maneuvers in the Caribbean area. During this time the ship carried out many valuable experiments with landing craft and boat control procedures, all of which bore fruit in the dangerous months to come.

Returning to Boston 6 April 1943, *Harry Lee* was des-

ignated for use in the upcoming offensive in the Mediterranean, and sailed 8 June for Algeria. She anchored at Oran 22 June to prepare for the landing and found herself off the southwest coast of Sicily 10 July with Vice Admiral Hewitt's Western Naval Task Force. During this giant invasion *Harry Lee* debarked her troops through the heavy surf at Scoglitti and withstood several Axis air attacks before retiring 2 days later.

After the success of the Sicilian operation, the transport returned German prisoners of war to the United States, arriving Norfolk 3 August. It was then decided that her amphibious prowess was needed in the Pacific, and she sailed 24 August for Wellington, New Zealand, via the Panama Canal and San Francisco, arriving 12 October 1943. At Wellington *Harry Lee* loaded Marines in preparation for the big push of the invasion of the Gilbert Islands. She proceeded to Efate, New Hebrides, 1-7 November and for the next few weeks held amphibious practice landings in preparation for the landings on Tarawa. The transport departed for Tarawa 13 November, and arrived offshore 20 November. There she launched her Marines onto the bloody beaches, under threat of submarine attack and air attack and sailed the next day for Pearl Harbor.

Harry Lee participated in rehearsal landings in Hawaiian waters after her arrival at Pearl Harbor 7 December 1943, and sailed 23 January 1944 for the invasion of the Marshall Islands, next step on the island road to Japan. She arrived off Kwajalein 31 January. She effectively carried out her role in this complicated operation by landing troops on two small islands in the atoll; they met little opposition. *Harry Lee* remained off Kwajalein until departing for Funafuti 5 February. From there she sailed to Noumea 24 February and by 14 March was anchored off Guadalcanal to load troops and continue her amphibious preparations.

After carrying troops to Bougainville and New Guinea in April, *Harry Lee* sailed to Aitape, New Guinea, under Rear Admiral Barbey for the Hollandia operation. She arrived 23 April after the initial assault, unloaded her troops, and proceeded to bring reinforcements from other points in New Guinea to the landing area. This accomplished, the transport arrived Espiritu Santo 11 May.

Harry Lee was next to take part in the invasion of the Marianas. After landing operations conducted around Guadalcanal the ship sailed to Kwajalein and got underway in convoy for Guam 12 June. During this gigantic operation, in which troops were projected over 1,000 miles of ocean from the nearest advance base, *Harry Lee* was held in reserve for the Guam landings. She arrived off Agat, Guam, 21 July 1945 and debarked her troops. The transport then remained offshore loading and relanding troops for tactical purposes until 25 July, when she steamed with her fellow transports to Eniwetok. They arrived 29 July, and 2 days later sailed for Pearl Harbor.

Arriving Pearl Harbor 7 August 1944, *Harry Lee* set course for California and a much-needed overhaul. She arrived San Pedro 18 August and remained in California until departing 21 October with troops for Seadler Harbor, Manus. Until 31 December the ship conducted practice landings in New Guinea and the Solomons for the upcoming invasion of Luzon, and departed the last day of 1944 for Lingayen Gulf. Enroute, Japanese planes attacked the task force savagely with suicide planes and bombers, but *Harry Lee* by effective gunfire and luck escaped damage. She entered Lingayen Gulf 9 January 1945 and began landing troops under constant air alert. That night the transports retired off the beaches under smoke screens, returning next day to resume the dangerous job of landing supplies. *Harry Lee* sailed 10 January for Leyte Gulf, anchoring 14 January.

With troops ashore at Lingayen, *Harry Lee* departed 19 January for Ulithi and arrived 2 days later. She soon was back in action, however, sailing 17 February for Iwo Jima and her last amphibious operation of the war. The transport arrived via Guam 22 February, 3 days after the initial landings, and after sending a reconnaissance unit ashore 24 February disembarked her troops. The ship

remained off Iwo Jima until 6 March acting as a hospital evacuation vessel. She then sailed with casualties to Saipan 6-9 March.

Harry Lee spent the rest of her time in the Pacific transporting troops and supplies, as the American thrust at Japan neared its final phase. She touched at Tulagi, Noumea, New Guinea, Manus, and the Philippines, bringing reinforcements and vitally needed supplies. The ship was at Leyte Gulf 20 July when ordered back to the United States, and she arrived for a brief stay 8 August. It was during this time that news of Japan's surrender reached the veteran transport.

The ship reached Manila 16 September at aid in the occupation of Japan, and after loading troops at various points in the Philippines arrived Tokyo Bay 13 October 1945. Assigned to operation "Magic-Carpet", and the huge job of bringing American veterans home from the Pacific, *Harry Lee* arrived San Francisco 4 November, and made another round trip to the Philippines and back, arriving 20 January 1946. From San Francisco she sailed 23 January for New York, via Norfolk. The ship arrived 9 February 1946 and decommissioned at Brooklyn Navy Yard 9 May 1946. After a period in Reserve Fleet, she was sold to Turkey in April 1948. Renamed *Tarsus*, she was burned in the Bosphorus after a rare three ship collision 14 December 1960.

Harry Lee received seven battle stars for World War II service.

Harry Toulmin, see *Seginus* (AK-123)

Hart

The first *Hart* was named for Midshipman Ezekiel B. Hart and Lt. Comdr. John E. Hart.

Ezekiel B. Hart entered the Navy as a Midshipman 30 April 1814. He was killed in the action of Commodore Chauncey's squadron on Lake Ontario 26 August 1814.

John E. Hart was appointed a midshipman 23 February 1841. He served on various ships of the fleet, and was appointed Lieutenant Commander July 1862. Commanding *Albatross*, Hart served in the West Gulf Blockading Squadron during the Civil War and engaged two Confederate steamers in the Red River near Fort De Russey 4 May 1863. He died of fever contracted on duty in the Mississippi River 11 June 1863.

The second *Hart* was named for Lt. Patrick Hart.

Patrick Henry Hart was born 31 May 1915 in New York City and graduated from the Naval Academy in 1937. Hart served on board *Colorado* and *West Virginia* before designated a naval aviator in 1940. Appointed Lieutenant in 1942, he was killed while a member of Torpedo Squadron 3 at the battle of Midway and posthumously received the Navy Cross for heroism in attacking the Japanese carriers during the battle 4 June 1942.

I

(DD-110; dp. 1,191; l. 314'5"; b. 31'9"; dr. 9'2"; s. 34 k.; cpl. 113; a. 4 4", 12 21" tt.; cl. *Wickes*)

The first *Hart* (DD-110) was launched 4 July 1918; by Union Iron Works of San Francisco, Calif., sponsored by Mrs. Daniel C. Nutting; and commissioned 26 May 1919, Comdr. Harold Jones in command.

Hart joined the destroyer force and operated off the California coast until 17 July 1920, when she was reclassified minelayer, destroyer, DM-8, and proceeded to Mare Island Navy Yard for installation of minelaying equipment. Following her conversion, *Hart* was assigned to Mine Detachment, Asiatic Fleet, and sailed for the Philippine Islands in November 1920. She subsequently operated in waters off the Philippine Islands and China in peacetime operations.

Ordered to San Diego, Calif., for deactivation, *Hart* sailed from Manila 12 December 1930 and arrived San Diego 24 January 1931. She decommissioned 1 June 1931, and her name was struck from the Navy List 11 November. *Hart* was sold for scrap 25 February 1932 in accordance with the London Treaty for the limitation of naval armaments.

II

(DD-594; dp. 2,050; l. 376'5"; b. 39'8"; dr. 13'9"; s. 35 k.; cpl. 273; a. 5 5"; 10 21" tt., 6 dep., 2 dct.; cl. *Fletcher*)

The second *Hart* (DD-594), originally designated *Mansfield* and renamed *Hart* 21 March 1944, was launched 25 September 1944 by Puget Sound Navy Yard; sponsored by Mrs. Emma Hart, mother; and commissioned 4 November 1944, Comdr. W. D. Coleman in command.

Hart conducted her regular shakedown cruise off California and during her training participated in experimental high-speed refueling exercises with oiler *Kaskaskia*. From 12 December to 23 December, the destroyer refueled at sea some 50 times under all conditions of sea and weather gaining vital information on how to improve this key wartime operation. Ending her regular shakedown 31 January 1945, the ship departed 19 February for Pearl Harbor. From 27 February to 3 March she escorted carrier *Intrepid* in gunnery and aircraft operations, departing for Ulithi 5 March.

Arriving at Ulithi 16 March, *Hart* joined the assembled task forces for the Okinawa operation. From her arrival 24 March until 12 April the ship was assigned as part of the screen for escort carriers furnishing close air support for the landings and preinvasion neutralization of neighboring Japanese air strips. Detached 12 April, she assumed duty as an escort for transports for 2 days and then commenced protective patrol duties during landings near Okinawa.

Hart was detached from 5th Fleet 19 April and proceeded to the Philippines to join 7th Fleet for the Borneo landings. She arrived off Brunei Bay 9 June 1945 and commenced a patrol of the South China Sea to guard against possible interference from the remains of the Japanese Fleet at Singapore. *Hart* also carried out shore bombardment beginning 11 June in support of Australian troops landing at Brunei Bay. On 14 June she shot down her first Japanese aircraft during an attempted bombing. During the period 19-21 June she provided close support for further landings on the coast of Borneo near Brunei Bay, and then departed for Balikpapan and other amphibious operations. There *Hart* patrolled, provided starshell illumination, and directed minesweeping vessels through the treacherous enemy minefields off the beaches. Australian troops went ashore 1 July under cover of fire from *Hart* and other ships; during the operation *Hart* destroyed two mines and a 75mm gun emplacement ashore.

Temporarily leaving the landing areas, *Hart* was assigned as part of the escort for General MacArthur in *Cleveland*, steaming to Manila with the General and then proceeding to Leyte 5 July. She next moved to Subic Bay for training exercises and escort duty, and after the surrender of Japan 15 August was assigned to the newly formed North China Force.

Hart departed 5 September 1945 to support the landing of Army occupation forces at Jinsen, Korea. The force threaded its way through many mines en route, and after arrival *Hart* sent boarding parties on board Japanese merchantmen in the harbor for inspection and disarming. This duty completed, *Hart* sailed for China, escorting Cruiser Division 6 in an important show of force off the coast. She continued through the next few months to aid in the landings of American Marines, calling at Port Arthur, Tsingtao, and Taku.

The veteran destroyer sailed for the United States 9 February 1945, decommissioned 31 May 1946, and was placed in reserve at Long Beach, Calif. Later moved to Mare Island, and then Stockton, Calif., she continues into 1967 as part of the Pacific Reserve Fleet.

Hart received two battle stars for her service in World War II.

Hartford

The capital of the state of Connecticut.

(ScSlp: t. 2,900; l. 225'; b. 44'; dr. 17'2"; s. 13.5 k.; epl. 302; a. 20 9' D.sb., 2 20-pdr. P.r., 2 12-pdrs.)

Hartford was launched 22 November 1858 by the Boston Navy Yard; sponsored by Miss Carrie Downes, Miss Lizzie Stringham, and Lt. G. H. Preble; and commissioned 27 May 1859, Captain Charles Lowndes in command.

After shakedown out of Boston, the new screw sloop of war, carrying Flag Officer Cornelius K. Stribling, the newly appointed commander of the East India Squadron, sailed for Cape Hope and the Far East. Upon reaching the Orient, *Hartford* relieved *Mississippi* as flagship. In November she embarked the American Minister to China, John Elliott Ward, at Hong Kong and carried him to Canton, Manila, Swatow, Shanghai, and other Far Eastern ports to settle American claims and to arrange for favorable consideration of the Nation's interests. Her presence, as a symbol of American sea power, materially contributed to the success of Ward's diplomatic efforts.

With the outbreak of the Civil War, *Hartford* was ordered home to help preserve the Union. She departed the Strait of Sunda with *Dacotah* 30 August 1861 and arrived Philadelphia 2 December to be fitted out for wartime service. She departed the Delaware Capes 28 January as flagship of Flag Officer David G. Farragut, the commander of the newly created West Gulf Blockading Squadron.

An even larger purpose than the important blockade of the South's Gulf Coast lay behind Farragut's assignment. Late in 1861, the Union high command decided to capture New Orleans, the South's richest and most populous city, to begin a drive of sea-based power up the Father of Waters to meet the Union Army which was to drive down the Mississippi valley behind a spearhead of armored gunboats. Other operations," Secretary of the Navy Welles warned Farragut, "must not be allowed to interfere with the great object in view—the certain capture of the city of New Orleans."

Hartford arrived 20 February at Ship Island, Miss., midway between Mobile Bay and the mouths of the Mississippi. Several Union ships and a few Army units were already in the vicinity when the squadron's flagship dropped anchor at the advanced staging area for the attack on New Orleans. In ensuing weeks a mighty fleet assembled for the campaign. In mid-March Comdr. David D. Porter's flotilla of mortar schooners arrived towed by steam gunboats.

The next task was to get Farragut's mighty, deep-draft, saltwater ships across the bar, a constantly shifting mud bank at the mouth of each pass entering the Mississippi. At the cost of endless toil and a month's delay, Farragut managed to get all of his ships but *Colorado* across the bar and into the river where Forts St. Philip and Jackson challenged further advance. A line of hulks connected by strong barrier chains, six ships of the Confederate Navy—including ironclad *Manassas* and unfinished but potentially deadly ironclad *Louisiana*, two ships of the Louisiana Navy, a group of converted river steamers called the Confederate River Defense Fleet, and a number of fire rafts also stood between Farragut and the great Southern metropolis.

On 16 April, the Union ships moved up the river to a position below the forts, and Porter's gunboats first exchanged fire with the Southern guns. Two days later his mortar schooners opened a heavy and methodical barrage which continued for 6 days. On the 21st, the squadron's Fleet Captain, Henry H. Bell, led a daring expedition up river and, despite a tremendous fire on him," cut the chain across the river. In the wee hours of 24 April, a dull red lantern on *Hartford's* mizzen peak signaled the fleet to get underway and steam through the breach in the obstructions. A wild night action of far

reaching consequence followed. As the ships closed the forts their broadsides answered a withering fire from the Confederate guns. Porter's mortar schooners and gunboats remained at their stations below the southern fortifications covering the movement with rapid fire.

Hartford dodged a run by ironclad ram *Manassas*; then, while vainly attempting to avoid a fire raft, grounded in the swift current near Fort St. Philip. When the burning barge was shoved alongside the flagship, only Farragut's gallant leadership and the disciplined training of the crew saved *Hartford* from being destroyed by flames which at one point engulfed a large portion of the ship. Meanwhile the sloop's undaunted gunners never slackened the pace at which they poured broadsides into the forts. As her firefighters snuffed out the flames, the flagship backed free of the bank.

When Farragut's ships had run the gauntlet and passed out of range of the fort's guns, the Confederate River Defense Fleet made a daring but futile effort to stop their progress. In the ensuing melee, they managed to sink converted merchantman *Varuna*, the only Union ship lost during the historic night.

The next day, after silencing Confederate batteries which had opened on them from earthen works, a few miles below New Orleans, *Hartford* and her sister ships anchored off the city early in the afternoon. A handful of ships and men had won a great decisive victory that secured the South could not win the war.

The conquest of New Orleans deprived the South of its greatest center of wealth, commerce and industry as well as her most important outlet to the sea. It was also the first thrust of the mighty pincer movement which ultimately cut the South in two dooming it to defeat.

Early in May, Farragut ordered several of his ships up stream to clear the river and followed himself in *Hartford* on the 7th to join in the conquest of the valley. Defenseless, Baton Rouge and Natchez promptly surrendered to the Union ships and no significant opposition was encountered until 18 May when the Confederate commandant at Vicksburg replied to Comdr. S. P. Lee's demand for surrender: ". . . Mississippians don't know and refuse to learn, how to surrender to an enemy. If Commodore Farragut or Brigadier General Butler can teach them, let them come and try."

When Farragut arrived on the scene a few days later, he learned that heavy Southern guns mounted on the bluff at Vicksburg some 200 feet above the river could shell his ships while his own guns could not be elevated enough to hit them back. Since sufficient troops were not available to take the fortress by storm, the Flag Officer headed downstream 27 May leaving gunboats to blockade it from below.

Orders awaited Farragut at New Orleans, where he arrived on the 30th, directing him to open the river and join the Western Flotilla and stating that Lincoln himself had given the task highest priority. The Flag Officer recalled Porter's mortar schooners from Mobile and dutifully got underway up the Mississippi in *Hartford* 8 June.

The Union Squadron was assembled just below Vicksburg by the 26th. Two days later the Union ships, their own guns blazing at rapid fire and covered by an intense barrage from the mortars, suffered little damage while running past the batteries. Flag Officer Davis, commanding the Western Flotilla, joined Farragut above Vicksburg on the 30th; but again, naval efforts to take Vicksburg were frustrated by a lack of troops. "Ships," Porter commented, ". . . cannot crawl up hills 300 feet high, and it is that part of Vicksburg which must be taken by the Army." On 22 July, Farragut received orders to return down the river at his discretion and he got underway on the 24th, reached New Orleans in 4 days, and after a fortnight sailed to Pensacola, Fla., for repairs.

The flagship returned to New Orleans 9 November to prepare for further operations in the unpredictable waters of the Mississippi. The Union Army, ably supported by the Mississippi Squadron, was pressing on Vicksburg from above, and Farragut wanted to assist in the campaign by blockading the mouth of the Red River from which sup-

Admiral Thomas C. Hart served in USS *Hartford* from 1899 to 1902.

plies were pouring eastward to the Confederate Army. Meanwhile, the South had been fortifying its defenses along the river and had erected powerful batteries at Port Hudson, La.

On the night of 14 March, Farragut in *Hartford* and accompanied by six other ships, attempted to run by these batteries. However, they encountered such heavy and accurate fire that only the flagship and *Albatross*, lashed alongside, succeeded in running the gauntlet. Thereafter, *Hartford* and her consort patrolled between Port Hudson and Vicksburg denying the Confederacy desperately needed supplies from the West.

Porter's Mississippi Squadron, cloaked by night, dashed downstream past the Vicksburg batteries 16 April, while General Grant marched his troops overland to a new base also below the Southern stronghold. April closed with the Navy ferrying Grant's troops across the river to Bruinsburg whence they encircled Vicksburg and forced the beleaguered fortress to surrender on the Fourth of July.

With the Mississippi River now opened, Farragut turned his attention to Mobile, Ala., a Confederate industrial center still building ships and turning out war supplies. The Battle of Mobile took place 5 August 1864. Farragut, with *Hartford* as his flagship, led a fleet consisting of 4 iron-clad monitors and 14 wooden vessels. The Confederate naval force was composed of newly built ram *Tennessee*, Admiral Buchanan's flagship, and steamers *Selma*, *Morgan*, and *Gaines*; and backed by the powerful guns of Forts Morgan and Gaines in the Bay. From the firing of the first gun by Fort Morgan to the raising of the white flag of surrender by *Tennessee* little more than 3 hours elapsed—

but 3 hours of terrific fighting on both sides. The Confederates had only 32 casualties, while the Union forces suffered 335 casualties, including 113 men drowned in *Tecumseh* when the monitor struck a torpedo and sank.

Returning to New York December 13, *Hartford* decommissioned for repairs a week later. Back in shape in July 1865, she served as flagship of a newly-organized Asiatic Station Squadron until August 1868 when she returned to New York and decommissioned. Recommissioned 9 October 1872, she resumed Asiatic Station patrol until returning home 19 October 1875. In 1882, as Captain Stephen B. Luce's flagship of the North Atlantic Station, *Hartford* visited the Caroline Islands, Hawaii, and Valparaiso, Chile, before arriving San Francisco 17 March 1884. She then cruised in the Pacific until decommissioning 14 January 1887 at Mare Island, Calif., for apprentice sea-training use.

From 1890 to 1899 *Hartford* was laid up at Mare Island, the last 5 years of which she was being rebuilt. On 2 October 1899, she recommissioned, then transferred to the Atlantic coast to be used for a training and cruise ship for midshipmen until 24 October 1912 when she was transferred to Charleston, S.C., for use as a station ship.

Again placed out of commission 20 August 1926, *Hartford* remained at Charleston until moved to Washington, D.C., 18 October 1938. On 19 October 1945, she was towed to the Norfolk Navy Yard and classified as a relic. *Hartford* sank at her berth 20 November 1956. She was subsequently dismantled. Major relics from her are at the National Navy Memorial Museum, Washington (D.C.) Navy Yard, and elsewhere.

Helmsmen on board USS *Hartford*, flagship of Admiral Farragut

Hartley

The first *Hartley* retained her former name; the second was named for Admiral Henry Hartley.

Henry Hartley was born in Bladensburg, Md., 8 May 1884. Enlisting in the Navy 1 February 1901, he came up through the ranks and was commissioned lieutenant 3 August 1920. A specialist in salvage work, Hartley was instrumental in salvaging the sunken submarines *S-51* and *S-4*, for which he received the Navy Cross and the Distinguished Service Medal. After establishing the Deep Sea Diving School at Washington, D.C., in 1928 and serving as its commander, Hartley continued his pioneer research in techniques of salvage work. As technical aid to Rear Admiral Cyrus Cole, he helped supervise the dramatic rescue and salvage work on the sunken submarine *Squalus* in 1939. During World War II, Hartley served first in the Mediterranean, where his transport *Susan B. Anthony* participated in the invasion of Sicily, and then shifted to the Pacific. As commander of *Chester*, flagship of Service Squadron 10, Hartley participated in the Battle of Leyte Gulf, a major turning point of the war, and then engaged in bombardment and salvage work at Wake Island, Marcus Island, Iwo Jima, Haha Jima, and Okinawa. After commanding SerRon 10 for a year with the rank of Commodore, Hartley returned to Washington in March 1946 for special duty. After 46 years of service to his country, he retired with the rank of Rear Admiral 1 May 1947. Admiral Hartley died at Bethesda, Md., 6 March 1953.

I

(dp. 64; l. 64'6"; b. 11; dr. 6'6"; s. 7 k.; epl. 5)

Hartley was built at San Francisco in 1875. Acquired from the Coast Guard for use in World War I, she served as a harbor patrol ship out of San Francisco. *Hartley* was returned to the Coast Guard 15 February 1919.

II

(DE-1029: dp. 1,280; l. 314'6"; b. 36'9"; dr. 9'3"; s. 25 k.; epl. 170; a. 4 3", 1 ASW rkt., 1 det., 6 dep; cl. *Dcaley*)

Hartley was laid down by the New York Shipbuilding Co., Camden, N.J., 31 October 1955; launched 24 November 1956; sponsored by Mrs. Henry Hartley, widow of Admiral Hartley; and commissioned 26 June 1957 at Philadelphia, Pa., Lt. Comdr. C. N. Crandall, Jr., in command.

After shakedown in the Caribbean to test the latest and most efficient antisubmarine equipment, *Hartley* joined Escort Squadron 14 in Newport, R.I., for a series of ASW and convoy tactics exercises 28 January 1958. Departing Newport 12 May in company with CortRon 14, CortRon 10, and *Wasp* (CVS-18), *Hartley* deployed to the Mediterranean for operations with the mighty 6th Fleet. During the Lebanese crisis in July she patrolled off the coast of Lebanon as the 6th Fleet acted quickly and effectively to stabilize the tense political situation and to prevent the spread of violence to other parts of the unsettled Middle East. For the next 2 months she continued peace-keeping patrols and ranged the Mediterranean from Turkey to France. She returned to Newport 7 October.

After a series of ASW exercises out of her home port, *Hartley* sailed with CortRon 14 for an extended South American cruise 6 February 1959. American units joined ships from the Brazilian, Argentine, Uruguayan, and Venezuelan navies for intensive ASW training exercises. *Hartley* returned to Newport 5 May 1959 and engaged in further escort and ASW exercises until June 1960, when she entered Monroe Shipyard, Chelsea, Mass., for installation of a new high speed sonar dome. *Hartley* then served as Fleet Sonar School training ship at Key West, Fla., until November 1960.

Antisubmarine exercises out of Newport filled *Hartley's* schedule for the following 4 years, punctuated by occasional special operations. In October 1961, *Hartley* sailed

to Norfolk to work with NASA research teams in improving shipboard recovery and space capsule egress procedures for American astronauts. After another tour with the Sonar School at Key West, *Hartley* prepared for BEAGLE II, a joint Canadian-American exercise which was cancelled because of the Cuban missile crisis in October 1962. In response to the Russian attempt to establish offensive missile bases in Cuba the United States established an effective naval blockade off Cuba. Vigilant American ships helped repulse this threat to world peace; and, operating off the East Coast, *Hartley* provided essential support during one of the most tense and dangerous international situations of the Cold War.

Since 1962, *Hartley* has continued operating in the Atlantic and the Caribbean. In March 1963, she conducted surveillance patrols off Cuba, and during the next 5 months she participated in extensive ASW exercises out of Key West and Newport. Early in September she entered the Boston Naval Shipyard where she underwent overhaul and modification. Equipped with the latest advances in sonar equipment and DASH, *Hartley* resumed duty 27 January 1964. During February and March she trained out of Guantanamo Bay and served at the Sonar School at Key West. Returning to Newport 8 April, she spent the remainder of the year participating in antisubmarine exercises which sent her from the Gulf of Maine to the Straits of Florida.

After conducting surveillance patrols and sonar training out of Key West during the early part of 1965, she was heavily damaged by Norwegian freighter *Blue Master* 16 June. As *Hartley* entered Chesapeake Bay in heavy weather, the merchantman hit the destroyer escort broadside, and her bow almost cut *Hartley* in half. She suffered no casualties but was extensively damaged in the engineering spaces. Prompt and effective rescue and salvage operations kept her from grounding; 19 hours after the collision, she reached Norfolk under tow.

After extensive repairs at Norfolk Navy Yard, *Hartley* returned to Newport early in October. There she resumed antisubmarine operations.

Hartley operated out of Newport along the New England coast and in the Caribbean until she sailed for Northern Europe late in May 1967. After cruising along the Scandinavian coast, she arrived Copenhagen 23 June. She next visited Holy Loch, Scotland, before getting underway 17 July for the Mediterranean, where she became an element of stability in that tense and explosive region so recently disturbed by the war between Israel and Arab States.

Harvard

Harvard, a college founded at Cambridge, Mass., in 1636, was named for John Harvard, a general benefactor. Opened in 1638, Harvard University now includes a large group of graduate and professional schools as well as the college and is one of the world's leading educational institutions.

I

(ScStr: dp. 10,499; l. 585'; b. 63'3"; dr. 29'; s. 20 k.; epl. 407; a. 8 5"; 8 6-pdrs.)

The first *Harvard*, a schooner-rigged steamship was built in 1888 as *City of New York* by J. & G. Thompson, Clydebank, Scotland, for the Inman Line. Sister ship of *City of Paris*, *City of New York* was one of the largest and best liners of her day, and one of the first steamships with twin screws. She was transferred to American registry under the American Line in 1893 as *New York*. These ships brought the United States to the front rank in the Atlantic passenger trade, and *New York* established the record for the Southampton to New York crossing in September 1893. At the outbreak of the Spanish-American War, *New York* was chartered as an auxiliary cruiser with a civilian crew, commissioning 26 April 1898 at New York, Captain C. S. Cotton in command and renamed *Harvard*.

Assigned as a scout, *Harvard* departed New York 30 April to cruise West Indian waters in search of the Spanish fleet. After sending back several reports on the location of Spanish units in the Caribbean, *Harvard* was blockaded by a larger force at St. Pierre, Martinique, 11-17 May, after which she proceeded to Santiago de Cuba and St. Nicholas Mole, Haiti, with dispatches from Commodore Schley. Interrupting her scouting duties, *Harvard* returned to Newport News, Virginia, 7-26 June, during which time her crew was officially taken into the Naval Service.

Harvard returned to the Caribbean with troops and supplies, arriving at Altares, Cuba, about 1 July. The morning of 3 July she received the electrifying news that the Spanish fleet had sortied. After Rear Admiral Sampson's smashing victory off Santiago, she rescued survivors. Despite the high surf and ammunition explosions from the stricken Spanish ships, *Harvard* succeeded in recovering over 600 officers and men.

No longer needed as a scout in the Caribbean, *Harvard* was sent back to the United States 10 July 1898. She was temporarily turned over to the War Department, and returned to Santiago de Cuba to transport troops back to the United States. *Harvard* arrived at New York 27 August and decommissioned 2 September 1898 at New York Navy Yard.

Reverting to her old name, *New York*, the ship resumed transatlantic service with the American Line until World War I. During this period she underwent extensive conversion in 1903, when one of her three funnels was removed. Again needed in support of American forces abroad, *New York* was chartered by the Navy 9 May 1918 for use as a troop transport. She commissioned as *Plattsburg* 24 May 1918, Commander C. C. Bloch commanding.

Plattsburg made four voyages from New York to Liverpool transporting the AEF to Europe, and after the end of the war made a total of seven voyages, bringing home over 24,000 veterans. She returned to New York after her final crossing 29 August 1919, and was returned to her owners 6 October 1919.

As *New York* the ship once again plied the Atlantic with passengers, but she was no longer a first-class liner, and was withdrawn from service in 1920. Sold to the Polish Navigation Co., she made two more voyages, but the company was soon forced to close down and she was scrapped in 1923.

Harvard, a passenger ship built by Delaware River Shipbuilding Company in 1907, was acquired by the Navy from Pacific Steamship Co. in 1918. She served as *Charles* (q.v.). Renamed *Harvard* after her return to private owners in 1920, she served with the Los Angeles Steamship Co. until she was stranded and destroyed north of Point Arguello, Calif., 30 May 1931.

II

(SP-209: dp. 804; l. 243'; b. 32'; dr. 12'6"; s. 12 k.; a. 4 3-pdr.)

The second *Harvard*, a steel yacht, was built as *Eleanor* by Bath Iron Works, Bath, Maine, in 1904 and leased as *Wacouta* by the Navy from G. F. Baker, New York, N.Y., 23 April 1917. *Wacouta* was renamed *Harvard* and commissioned 10 May 1917 at New York, Lt. A. G. Sterling in command.

After being fitted out for overseas service, *Harvard* departed New York 9 June 1917 with a convoy, and arrived at Brest, France, 4 July. She then engaged in patrol duties out of Brest, and on 16 July picked up 59 survivors from the ill-fated British steamship *Trelissick*. *Trelissick* had been torpedoed and sunk 15 July, after having rescued some 30 men from another torpedoed British ship, *Exford*, the day before. *Harvard* returned the survivors from both ships safely to Brest.

Continuing her duties around Brest, *Harvard* performed as a harbor patrol and coastal convoy ship. She assisted

the torpedoed merchantman *Texas* 29 November 1917 and searched for survivors of the sinking of *Hundaago*, a Norwegian steamship, 4 August 1918.

Harvard departed for England 21 November 1918 and remained there until June 1919, when she returned to New York via Bermuda. The yacht was decommissioned and turned over to her owner 26 July 1919.

Harveson

Harold Aloysius Harveson, born 7 August 1913 at Lake Charles, La., graduated from the U.S. Naval Academy 3 June 1937. After serving in *Louisville* and on the staff of the Pacific Fleet Scouting Force, Lt. (j.g.) Harveson was assigned to *Utah* 19 August 1941. Operating out of Pearl Harbor, the aged ex-battleship, converted to a target ship, served the fleet as the major anti-aircraft training ship, as well as a key to developing carrier air-to-ship attack tactics. During the sneak attack on Pearl Harbor 7 December 1941, the Japanese concentrated much of their strike force on *Utah* in the assumption that she was carrier *Saratoga*. Torpedoed twice early in the attack, she had overturned and sunk by 0812. Like so many of her crew, Lt. Harveson gave his life in the opening moments of World War II.

(DE-316: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 3 21" tt., 2 dct., 8 dep., 1 dep. (h.h.); cl. *Edsall*)

Harveson (DE-316) was laid down by Consolidated Steel Corp., Orange, Tex., 9 March 1943; launched 22 May 1943; sponsored by Mrs. T. L. Herlong, mother; and commissioned at Orange 12 October 1943, Lt. Comdr. P. L. Stinson, USCG, in command.

Manned entirely by a Coast Guard crew, *Harveson* completed shakedown out of Bermuda only to be seriously damaged in collision with a merchantman 15 December 1943, on a foggy night off the Virginia Capes. Repairs were completed at Portsmouth, Va., by February 1944, and the destroyer-escort joined Escort Division 22. Departing New York 1 March, *Harveson* escorted a convoy to Londonderry, Ireland, via Halifax. In the next 14 months she escorted nine more convoys carrying vitally needed supplies for the European theatre safely across the dangerous North Atlantic.

When V-E Day came, CortDiv 22 was ordered to the Pacific; and *Harveson* reached Pearl Harbor via the Panama Canal and San Diego 11 July to begin refresher training. *Harveson* was still engaged in tactical training at Pearl Harbor when Japan capitulated, but soon she participated in the occupation of the defeated enemy's homeland. Departing Harbor 3 September, she escorted a convoy LSTs to Japan, where she arrived Sasebo 24 September. During the next few weeks she operated along the coast of Honshu, escorting *Mt. McKinley* (AGC-7) and supporting occupation landings at Wakavama, Hiro, and Nagoya. She departed Yokohama for the United States 4 November and arrived Jacksonville, Fla., in December for duty with the Atlantic Fleet. She decommissioned at Green Cove Springs, Fla., 9 May 1947, and entered the Atlantic Reserve Fleet.

Harveson was towed to the Mare Island Navy Yard in 1950 for conversion to a radar picket ship. She recommissioned at Vallejo, Calif., 12 February 1951, Lt. Comdr. W. S. Slocum III in command; and, as the first of a new class of radar picket ships, she was redesignated DER-316. After intensive tests and vigorous tactical training, *Harveson* joined Escort Squadron 10 at Newport, R.I., 30 May to begin duty as a radar picket ship. While on patrol, the former destroyer escort, outfitted with the most modern radar and early detection warning devices, cruised off the coast of the United States to provide adequate early warning of any enemy attack. From her usual station in the North Atlantic, *Harveson* also sailed to the Caribbean for frequent antisubmarine and tactical exercises.

Departing Newport 15 July 1957, *Harveson* reported for radar picket duty at Pearl Harbor 18 August. There she joined the Barrier Forces, Pacific Fleet, to strengthen America's warning system in the vast and lonely reaches of the Pacific. After almost 3 years of barrier patrols out of Hawaii, *Harveson* steamed to San Francisco for inactivation. She decommissioned 30 June 1960 and joined the Pacific Reserve Fleet, Stockton, Calif. Her name was struck from the Navy List 1 December 1966. She is scheduled to be used as a target.

Harvest

(Bark: t. 314; dr. 15)

Harvest was an old whaler purchased by the Navy at New Bedford, Mass., 21 October 1861 for service in the Stone Fleet, a group of ships sunk in the channels of inlets to several Southern harbors to simplify the Union Navy's task of blockading the Confederacy. *Harvest*, with W. W. Taylor as master, sailed from New Bedford 20 November 1861 and arrived off Savannah, Ga. 4 December. However, the last mention of her in official records states that she was not sunk with the other ships which were scuttled to blockade Savannah but was retained for service as a coal scow.

Harvest Moon

The full moon nearest the autumnal equinox.

(SwStr: t. 546; l. 193'; b. 29'; dr. 8'; s. 15 k.;
a. 4 24-pdr. how.)

Harvest Moon, a side-wheel steamer, was built in 1863 at Portland, Maine, and was purchased by Commodore Montgomery from Charles Spear at Boston, Mass., 16 November 1863. She was fitted out for blockade duty at Boston Navy Yard and commissioned 12 February 1864, Acting Lieutenant J. D. Warren in command.

Assigned to the South Atlantic Blockading Squadron, *Harvest Moon* departed Boston 18 February and arrived off Charleston 25 February 1864. Next day Rear Admiral Dahlgren made the steamer his flagship. After putting into Washington Navy Yard for repairs, *Harvest Moon* began her regular blockading duties 7 June 1864 off Charleston. For the next 9 months the steamer served off Tybee Island, the North Edisto River, and Charleston harbor. During this period she also acted as a picket and dispatch vessel as well as Admiral Dahlgren's flagship.

While proceeding in company with tug *Clover* shortly after 0800 on 29 February 1865 *Harvest Moon* struck a torpedo in Winyah Bay, S.C. Admiral Dahlgren, awaiting breakfast in his cabin, saw the bulkhead shatter and explode toward him. The explosion blew a large hole in the ship's hull aft and she sank in 2½ fathoms of water. One man was killed. The Admiral, and the crew, were taken on board *Nipsic*. *Harvest Moon* was stripped of her valuable machinery and abandoned 21 April 1865. In 1963, nearly 100 years later, a project was initiated to raise *Harvest Moon* from the mud at the bottom of Winyah Bay and to restore the ship, but has made little headway.

Harvest Queen

A former name retained.

(SP-1215: dp. 275; l. 152'; b. 36'; dr. 4'9'')

Harvest Queen was originally built in 1857 at Coxsackie, N.Y., and was purchased from her owner, J. N. Breggs, of Coeymans, N.Y., 29 August 1917.

Late in 1917 *Harvest Queen*, an unpowered barge, was fitted out as a barracks ship at Newport, R.I., and was subsequently towed to New London, Conn., March 1919 to act as a barracks ship at the Naval District Base. She was still later towed to Norfolk, Va., and transferred to

USS *Harvest Moon*, Admiral Dahlgren's Flagship

the 9th Naval District, where she served Base 2, Mine Force, as a barracks ship. *Harvest Queen* was transferred to the Coast Guard 28 March 1920.

Harvey

(PF-80: dp. 1,430; l. 303'11"; b. 37'6"; dr. 13'8"; s. k.; cpl. 190; a. 3 3'; cl. *Tacoma*; T. S2-S2-AQ1)

Harvey (PF-80), originally designated PG-188, was built under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-80 15 April 1943, renamed *Gold Coast*, and launched 21 September 1943, after being renamed *Labuan (q.v.)*. She was completed and transferred to the United Kingdom under Lend-Lease 5 February 1944, as part of the 21-ship "Colony" class. She served as a patrol and escort vessel in the English Channel until being returned to the United States 13 May 1946. The frigate was subsequently sold to Heggie Iron & Metal Co., Dorchester, Mass., 9 July 1957 and scrapped.

Harwood

Bruce Lawrence Harwood was born 10 February 1910 at Claremont, Calif., and enlisted in the Navy 6 June 1935. After training as an aviation cadet at Pensacola, he was commissioned Ensign 7 July 1939 and began flying duty with a torpedo plane squadron. Harwood received the Navy Cross for extraordinary heroism 24 August 1942 during the Solomons campaign. Leading his squadron in an unsupported aerial torpedo raid against a Japanese task force, Lieutenant Harwood pressed home the attack through a bursting hail of fire from hostile AA batteries. Under his leadership, the squadron scored one certain and two estimated hits on an enemy aircraft carrier. Harwood was awarded the Gold Star in lieu of a second Navy Cross for extraordinary heroism as squadron commander 20 September-5 October 1942. Leading an attack group of bombers through adverse flying conditions, Lieutenant Harwood located a force of enemy destroyers landing troops and supplies on Guadalcanal. Despite violent maneuvering by the enemy, he and his men scored at least one and probably more hits. On 4 October Harwood led another attack group of torpedo planes against an enemy light cruiser and three DD's. In spite of bad visibility and heavy AA fire, he pressed home the attack, scoring two positive and one possible hit on the cruiser. The following night he and his bombers again sought the enemy and, flying on instruments through a violent tropical storm to Rekata Bay, bombed shore installations there despite fierce opposition from Japanese fighter planes which swarmed to the attack. Appointed Commander 1 July 1944, Harwood was killed 24 October 1944 when *Princeton* received bomb hits which triggered a series of fatal explosions. While serving as air officer in *Princeton*, Commander Harwood had received another Gold Star in lieu of a third Navy Cross.

(DD-861: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35 k.; cpl. 367; a. 6 5", 4 40mm., 5 21" tt. 1 h.h., 6 dep., 2 det.; cl. *Gearing*)

Harwood (DD-861) was launched 22 May 1945 by the Bethlehem Steel Co., San Pedro, Calif.; sponsored by Mrs. Bruce Lawrence Harwood, widow of the late Commander Harwood; and commissioned 28 September 1945, Comdr. Reid P. Fiala in command.

After shakedown along the California coast, *Harwood* joined the 7th Fleet in Chinese waters. In addition to aiding in the occupation of Japan, the destroyer also participated in fleet and antisubmarine exercises before returning to San Diego 21 February 1947. *Harwood* entered the Mare Island shipyard after a second WesPac cruise in January 1949 to be equipped with the latest antisubmarine equipment. Redesignated DDE-861 4 March 1950, the escort destroyer reported to her new home port, Newport, R.I., 11 September 1949 to participate in re-

search on cold weather ASW operations as well as fleet and training exercises. Departing Norfolk in late August, *Harwood* made her first Mediterranean cruise with the 6th Fleet and returned to the States 10 November 1950.

Subsequent years fell into a pattern for *Harwood* as, to maintain her battle readiness and stress America's commitment to the defense of democracy, she engaged in varied training maneuvers and made yearly cruises to the Mediterranean. *Harwood* sailed 4 January 1957 for a 3-month ASW demonstration which took her along the South American coast to Colombia, Ecuador, Peru, Chile, Panama and Cuba. Entering the New York Navy Yard 2 May 1961, *Harwood* underwent a Fleet Rehabilitation and Modernization (FRAM) overhaul. Her bridge was totally reconstructed, new types of torpedo tubes were installed, and the 3-inch antiaircraft guns were removed to accommodate a hangar and launching deck for DASH, an antisubmarine helicopter. Departing the yard 2 February 1962, *Harwood* sailed to her home port, Mayport, Fla., and from there to the Caribbean. When the Cuban crisis erupted in October 1962, *Harwood* was ready and sailed with 4 hours notice to join the blockading fleet "quarantining" the Communist island. Redesignated DD-861 on 1 July 1963, she returned Mayport 2 November.

Harwood sailed for the Mediterranean 6 August and provided ASW service during Exercise "Riptide IV" en route. She transited the Straits of Gibraltar on the 22d for intense periods of AAW, ASW, and BCM exercises in the Med. Returning home 23 December, the destroyer operated along the Atlantic coast until getting under way 31 March 1964 for a brief visit to Brazil. She arrived Annapolis 1 June, embarked midshipmen, and sailed for Europe. She visited Norway, Belgium, France, and England before debarking the "Middies" at Norfolk.

In April 1965 she began overhaul and alterations at Norfolk which turned out to be a major face lifting. On 22 August she returned to Mayport en route to Guantanamo Bay, Cuba, for refresher training. She operated along the coast of the Southern states until departing Mayport 22 July 1966 for the Mediterranean deployment. On this tour she transited the Suez Canal and visited Aden and Kenya before rejoining the 6th Fleet in the Med 2 November.

Harwood returned home 17 December. She operated out of Newport, off the New England coast until sailing for her 10th Mediterranean deployment 29 June 1967. Reaching Rota, Spain, 10 July, *Harwood* soon joined the 6th Fleet, an element of stability in the ancient and volatile sea which had so recently been churned by the Arab war with Israel.

Hase, General W. F., see *General W. F. Hase* (AP-146)

Haskell

Counties in Kansas, Oklahoma, and Texas.

(APA-117: dp. 6,873; l. 455'; b. 62'; dr. 24'; s. 17; cpl. 503; a. 1 5"; cl. *Haskell*)

Haskell (APA-117), a "victory ship" transport type, was launched 13 June 1944 by California Shipbuilding Corp., Wilmington, Calif., under Maritime Commission contract; sponsored by Mrs. W. L. Friedell, wife of the Commandant of the 11th Naval District; and commissioned 11 September 1944, Comdr. A. L. Mare in command.

Following her shakedown cruise, *Haskell* arrived San Francisco 19 October and began loading troops and supplies destined for the Pacific. Underway 28 October, she set course for Finschafen, New Guinea, and arrived 15 November 1944. Four days later the transport anchored at Biak Island to unload her troops, who were to take part in the developing New Guinea offensive.

Haskell sailed via Mios Woendi to Noemfoor Island, 23 November-2 December, where preparations were underway for the important landings at Lingayen Gulf,

Philippines. At staging areas throughout the western Pacific ships such as *Haskell* loaded troops and made practice landings prior to the actual assault. After exercises at Japen Island, *Haskell* departed in convoy for the Philippines 4 January 1945. A part of Rear Admiral Conolly's reinforcement echelon, *Haskell* and the other transports arrived off Lingayen Gulf 11 January, 2 days after the initial landings. *Haskell's* group escaped attack while sailing the treacherous route through the Philippines. After unloading her troops and cargo, *Haskell* departed the next day, but not before her gunners had shot down their first enemy aircraft during an air raid on the 11th.

The transport sailed to Leyte Gulf 15 January 1945, loaded troops, and took part in a practice landing at Tacloban, Leyte. The ship departed with Rear Admiral Struble's amphibious group 26 January for the Zambales landing north of Subic Bay, Luzon. This unopposed landing was carried out 3 days later and helped to cut off the Bataan Peninsula and hasten the fall of Manila. *Haskell* returned to Leyte Gulf 1 February 1945.

With control of the Philippines secured, *Haskell* was next assigned to the giant Okinawa operation. She completed loading troops and supplies at Leyte 13 March 1945 and after amphibious exercises sailed 27 March for Okinawa. This massive invasion, climax of the Pacific island-hopping campaign, began 1 April. *Haskell* was a member of Rear Admiral Hall's Southern Attack Force, and debarked units of the 7th Division with their equipment during the first waves of the assault. During the first days of the bitter struggle she also served as an emergency hospital ship and cared for many casualties at her off shore anchorage. After unloading her troops and cargo, the transport sailed 6 April for Saipan, Marianas, thus escaping the heavy Japanese air counterattacks so valiantly endured by the ships remaining at Okinawa. Stopping at Saipan only briefly, *Haskell* steamed independently via Eniwetok and Pearl Harbor to San Francisco, where she arrived 1 May.

The ship underwent needed repairs and embarked Navy and Coast Guard personnel for the Pacific and sailed the 23d for Noumea. Arriving 9 June 1945, the ship began a series of transport voyages to various ports in the Pacific, providing men and cargo at Guadalcanal, Eniwetok, and Guam. She arrived Apra Harbor, Guam, 1 July and embarked 83 Japanese prisoners of war for transfer to Pearl Harbor, where she arrived 15 July. From Pearl Harbor *Haskell* sailed to San Francisco 22 July and Seattle 12 August.

While *Haskell* loaded at Seattle the war ended, and she assumed a new role, that of bringing occupation troops to the Pacific and transporting returnees to the United States. She sailed 20 August for Okinawa and after stops at Eniwetok and Ulithi arrived 11 September and unloaded her troops. Soon afterward, 16 September, the ship was forced to put to sea to ride out the giant typhoon which swept the area and after 2 days of grueling heavy weather returned to Okinawa.

Haskell's role was as a transport for over 1,400 allied prisoners of war released from enemy prison camps. These wasted veterans were offloaded at Manila 25 September, and the ship sailed for the United States 1 October with 1,800 members of the Eastern Air Forces. After a stop at Eniwetok *Haskell* arrived San Francisco 19 October 1945.

As a unit of the "Magic-Carpet" fleet *Haskell* made two more voyages to the Far East during the gigantic task of returning American servicemen to their homes. These passages, to Okinawa and Japan, terminated with *Haskell's* arrival at Seattle, Wash., 2 February 1946. Designated for return to the Maritime Commission, the ship sailed to Norfolk, Va., via the Panama Canal, and arrived 21 March 1946. *Haskell* decommissioned 22 May 1946 and was returned 2 days later. Placed in the National Defense Reserve Fleet in 1956, *Haskell* was berthed at Wilmington, N.C., until 1965 when she transferred to James River, Va., where she remains.

Haskell received two battle stars for World War II service.

Hassalo

The name *Hassalo* was assigned to a 3,365-ton gun-deck frigate in 1863. Listed in the Naval Register from 1864 to 1866, the screw steamer was never built. Her name was struck from the Naval Register in 1867.

Hassan Bashaw

Dey of the Barbary state of Algiers in the late 18th century.

(Brig: l. 93'2"; b. 27'; dph. 11'6"; a. 22 6-pdrs.)

Hassan Bashaw, a brig, was built for the Dey of Algiers in response to his request in 1797 that two cruisers be outfitted and built in the United States at his expense. As the Dey had been helpful in our negotiations with other Barbary powers, President Adams acquiesced and *Hassan Bashaw* and *Skjoldbrand*, a schooner, were laid down. *Hassan Bashaw* was built by Joshua Humphreys' son, Samuel Humphreys, and incorporated all features of design known to be favored by the Barbary rulers. Her commander was Captain John Smith.

The ship arrived Algiers 8 February 1799 in company with *Skjoldbrand* and other ships carrying tribute to the Dey, who was then Mustapha, Hassen having died a year earlier. The two ships ordered by the former Dey were transferred to Algiers, in addition to two other vessels, a quantity of naval stores, and a sum of money, to insure the safety of American merchant ships from Algerine pirates. *Hassan Bashaw*, a fast and much-admired ship, was later captured by the Portuguese on a passage between Cadiz and Algiers, but was released and used by the Dey as a corsair.

Hassayampa

A river in Arizona.

(AO-145: dp. 11,600 (lt.) ; l. 655'; b. 86'; dr. 35'; s. 20 k.; cpl. 324; a. 12 3"; cl. *Neosho*)

Hassayampa (AO-145) was launched 12 September 1954 by the New York Shipbuilding Corp., Camden, N.J.; sponsored by Mrs. Jean H. Holloway, wife of Vice Admiral Holloway; and commissioned 19 April 1955, Captain William V. McKaig, in command.

After shakedown along the East Coast, *Hassayampa* transited the Panama Canal and arrived Pearl Harbor 15 July for duty with Service Force, Pacific Fleet. Between July 1955 and May 1958 *Hassayampa* made three deployments to the Western Pacific, providing logistics for our mighty 7th Fleet. In June she joined the 1st Fleet at San Francisco to participate in the celebration of the 50th Anniversary of the cruise of the Great White Fleet around the world. *Hassayampa* resumed her regular duties, returning to Pearl Harbor 16 July.

In September *Hassayampa*, as part of America's flexible power afloat, deployed with the 7th Fleet to prevent invasion of Chinese offshore islands and convoyed Nationalist transports during the Quemoy-Matsu Crisis. Between 1959 and 1961 she made three more deployments to the Western Pacific, continuing her services to the 7th Fleet. In May 1962 *Hassayampa* supported units of the 7th Fleet moving Marines into Thailand to prevent flareup of trouble in Laos.

On 23 January 1963 *Hassayampa* deployed to the Far East to resume duty with the 7th Fleet. Returning to Pearl Harbor 15 June, she underwent a modernization overhaul from October to January 1964. She again sailed for the Western Pacific 12 March. On 31 March she joined a Navy carrier task force out of Subic Bay for operations in the Indian Ocean. Until returning to Subic Bay 16 May she served with the Concord Squadron from

Malaysia to the eastern coast of Africa. She remained in the Far East until mid-September, and during that time she refueled ships off Japan and in the South China Sea. During the Tonkin Gulf crisis in August she provided at-sea logistics support for the always-ready ships of the mighty 7th Fleet. After completing her deployment, the busy fleet oiler arrived Pearl Harbor 29 September.

Resuming Far East duty in April 1965, *Hassayampa* operated in the South China Sea and supported the American effort to thwart Communist aggression in Southeast Asia. She returned to her homeport at Pearl 16 December, thence served as a recovery logistic ship during the "Gemini 8" space shot in mid-March and the "Gemini 9" shot in early June 1966. Sailing again for the Far East 5 June, during the next 5 months she maintained a busy schedule refueling escorts and hardhitting carriers of the 7th Fleet including *Constellation* (CVA-64), *Oriskany* (CVA-34), *Ranger* (CVA-61), *Franklin D. Roosevelt* (CVA-42), *Intrepid* (CVS-11) and *Coral Sea* (CVA-43). During a 2-week period in November she refueled 67 ships; prior to returning to Pearl Harbor 16 December, she had refueled 367 ships in the Western Pacific.

As a fleet oiler, *Hassayampa* operated out of Pearl Harbor into mid-1967 to maintain her peak readiness and efficiency while preparing to further support the 7th Fleet off troubled Southeast Asia.

Haste

Celerity of motion, speed.

(PG-92: dp. 900; l. 205'; b. 33'; dr. 14'7"; s. 16 k.;
cpl. 90; a. 2 3"; cl. Action)

Haste (PG-92), was one of a group of Canadian corvettes turned over to the Navy and manned by the Coast Guard. She was launched as *Mandrake* (CN-310) by Morton Engineering & Dry Dock Co., Quebec, Canada, 22 August 1942, taken over by the Navy renamed, and commissioned 6 April 1943, Lt. W. A. Dobbs, USCG commanding.

Haste took up regular escort duties following shake-down, making ten voyages to Newfoundland or the Caribbean before November 1944. Small patrol ships such as *Haste* did much to lessen the effect of U-boat patrols on allied commerce during this critical period of the war. During the period November 1944-May 1945 the corvette served on patrol duty for 10-day periods out of New York. After making two more escort voyages to Newfoundland and return, the ship departed New York 2 July for Charleston, where she arrived 3 days later. *Haste* decommissioned 3 October 1945 and was returned to the Maritime Commission.

Hastings

(SwStr: t. 293; l. 173'; b. 34'2"; dph. 5'4"; a. 2 30-pdr.,
2 32-pdr., 4 24-jdr.)

Hastings, a small wooden gunboat, was built as *Emma Duncan* in 1860 at Monongahela, Pa., and operated as a river transport out of Cincinnati, Ohio. She was purchased at Cairo, Ill., in March 1863 from J. Bachelor. Fitted out and ready for service in April; her first commanding officer was Acting Master W. N. Griswold. Rear Admiral Porter recommended that her name be changed to *Hastings* 7 April 1863.

One of the group of lightly built steamers which bore the brunt of the war on the Mississippi tributaries, *Hastings* was initially assigned to the Tennessee River. While steaming upriver to report for duty, she received her baptism of fire when attacked by Confederate guerrillas near Green Bottom Bar 24 April. Captain Griswold rounded to and engaged the Confederates for a time, after which they withdrew. The light gunboat was hulled seven times and suffered three casualties in the action. *Hastings* then assumed duty as a convoy ship for Army transports on the Tennessee River. In May she was sent

briefly for duty at the mouth of the Yazoo River, but was soon back on the Tennessee. She arrived at Eastport, Miss., 26 October 1863 to assist General Sherman's troops in crossing the river during operations culminating in the Battle of Chattanooga, and steamed to Paducah, Ky., when that city was threatened by Confederate cavalry 8 November. In need of repairs, *Hastings* returned to the Naval Station at Cairo 16 December.

Hastings resumed active patrolling in April 1864, and was detailed to convoy General T. Kilby Smith's transports from Springfield Landing to Grand Ecore, La. Union troops had suffered defeat at the battle of Pleasant Hill, and the land portion of the Red River operation was deemed a failure. Covering the withdrawal of Smith's troops, *Hastings* took part 12 April in an engagement with Confederate cavalry and artillery near Blair's Landing. After a fierce engagement, in which *Hastings* fought at the rear of the transport group, the convoy passed downriver.

As the pace of Confederate attacks in Tennessee heightened, *Hastings* was sent to Fort Pillow, Tenn., to protect it from capture, but was unable to get there in time to help the surrounded city and give assistance to *Tyler*, the only gunboat present. Arriving 14 April, however, *Hastings* shelled the woods in the area of the city. During this period, the veteran gunboat was acting as flagship for the resourceful commander of the 7th District, Mississippi Squadron, Lt. Comdr. S. L. Phelps. Subsequently, she operated in the White River, and in June 1864 cooperated with Major General Frederick Steele in his efforts to corner and defeat Confederate cavalry in the Tennessee and White River areas. *Hastings* patrolled the river, gained intelligence, and convoyed troops in cooperation with the Army.

The gunboat continued her service on the tributaries of the Mississippi until returning to Cairo, Ill., early in 1865. She decommissioned 7 July 1865 and was sold at Mound City, Ill., 17 August 1865 to Henry H. Semmes. *Hastings* was subsequently redocumented *Dora* in October 1865 and served as a river freighter until 1872.

Hastings, Burden R., see *Burden R. Hastings* (DE-19)

Hastwiciana

A former Onondaga Indian settlement in what is now Onondaga County, N.Y.

(YTB-512: dp. 325; l. 100'; b. 25'; dr. 9'7")

Hastwiciana (YTB-512), a diesel-powered tug, was launched by Commercial Iron Works, Portland, Oreg., 24 March 1945; and placed in service 26 October 1945.

Hastwiciana was assigned to the 13th Naval District, and served in the harbors of that district through 1967. Reclassified YTM-775 in March 1966, at present she is assigned to Puget Sound Naval Shipyard, Bremerton, Wash.

Hatak

A Choctaw chief.

(YTB-219: dp. 410; l. 110'; b. 26'5"; dr. 11'4"; s. 12 k.)

Hatak (YTB-219), a wooden tug, was originally designated YT-219 and built by Greenpoint Basin & Construction Co., Long Island; launched 22 July 1944, Mrs. B. L. Lea as sponsor; and placed in service as YTB-219, 18 December 1944.

After fitting out at New York Navy Yard, *Hatak* proceeded to report to the 5th Naval District for duty in January 1945. She remained in the Norfolk area as a tugboat until struck from the Navy List 27 June 1957.

Hatfield

John Hatfield was appointed Midshipman 18 June 1812 upon the outbreak of war. He volunteered for duty

under Commodore Isaac Chauncey on Lake Ontario where he served in *Lady of the Lake*. Midshipman Hatfield was killed during the attack on York, Canada, 27 April 1813.

(DD-231 : dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k.; cpl. 101; a. 4 5", 1 3", 12 21" tt.; cl. *Clemson*)

Hatfield (DD-231) was launched 17 March 1919 by New York Shipbuilding Corp., Camden, N.J.; sponsored by Mrs. J. Edmond Haugh; and commissioned 16 April 1920, Lt. N. Vytlačil in command.

After training cruises during the summer, *Hatfield* sailed from Brooklyn 6 September 1920 for Key West, Fla., and continued her exercises along the Atlantic coast for the remainder of 1920. From 4 January 1921 to 24 April she operated in the Caribbean. *Hatfield* returned to Hampton Roads in time for a review of the fleet by President Harding 28 April. She continued maneuvers until 7 November, when she was assigned to the 14th squadron of the Atlantic Fleet.

During early 1922, *Hatfield* operated from Charleston, and on 2 October departed for the Mediterranean to join the U.S. detachment in Turkish waters where she remained on patrol duty until 31 July 1923, visiting many ports including Smyrna, Jaffa, Bierut, Rhodes, and Varna.

Upon return to New York 11 August 1923 she was assigned to the U.S. Scouting Fleet. For the next 7 years *Hatfield* maneuvered and drilled along the East Coast, Cuba, Central America, and the Gulf of Mexico. On 15 January 1928 her squadron accompanied President Coolidge to Cuba and Haiti for the Pan-American Conference. In November 1930 she sailed for Philadelphia where she decommissioned 13 January 1931.

On 1 April 1932 she was placed in rotating reserve commission and departed 29 June for San Diego, her new home port. She operated out of San Diego until 27 April 1936 when she departed for a cruise that took her to Spain, France, Italy, and Algiers. She sailed for America 9 November 1937 and arrived Charleston in mid-December. *Hatfield* decommissioned 28 April 1938 after 4 months of operations along the East Coast.

She once again recommissioned 25 September 1939 and was assigned to the Neutrality Patrol until August 1940. *Hatfield* departed 2 August for the West Coast and was assigned to the defense force of the 13th Naval District. She operated in this area until 11 December 1941 when she sailed for patrol duty in Alaskan waters. In the uncertain early months of the Pacific war, *Hatfield* convoyed merchant ships to Alaskan ports, helping to carry the supplies necessary to establish bases in the North. She continued this vital duty in the bleak and dangerous northern waters until 13 March 1944, when she returned to Seattle.

Hatfield performed antisubmarine duties off Seattle until August and entered Puget Sound Navy Yard in September for conversion to a target-towing vessel. Redesignated AG-84, 1 October 1944, she took up her new duties 25 October at Seattle. For the remainder of her commissioned service, *Hatfield* operated out of Port Angeles Wash., and San Diego, towing targets for aircraft bombing practice. In this way she helped to contribute to the victories which carrier air power won in the Pacific. She also spent a short time as an underway training ship off San Diego before arriving Bremerton, Wash., 12 November 1946. *Hatfield* decommissioned 13 December 1946, ending 26 years of service, and was sold for scrap to National Metal & Steel Corp., Terminal Island, Calif.

Hatteras

An inlet on the coast of North Carolina.

I

(SwStr: d. 1,126 t.; l. 210'; dr. 18'; s. 8 k.; cpl. 126.; a. 4 32-pdrs., 1 20-pdr.)

The first *Hatteras*, formerly *St. Mary*, was purchased by the Navy from Harland and Hollingsworth of Wilming-

ton, Del., on 25 September 1861. She was fitted out at the Philadelphia Navy Yard and commissioned in October 1861, Comdr. George F. Emmons in command.

Hatteras sailed for Key West on 5 November 1861, arriving there 13 November to join the South Atlantic Blockading Squadron which was destined to choke off the South's economic lifeline. After blockade duty off Apalachicola, Fla., she was reassigned to Cedar Keys, Fla., reaching there 7 January 1862. Nine days later *Hatteras* made a highly successful raid on the Cedar Keys harbor, burning seven small would-be blockade runners loaded with turpentine and cotton, the Florida Railroad wharf (an important Southern railroad terminus), several flatcars, and various buildings. To cap this day's work, *Hatteras* also captured 14 of the 22-man garrison stationed there, and their commanding officer. Such unceasing attack from the sea on any point of her long coastline and inland waterways cost the South sorely in losses, economic disruption, and dispersion of strength of defense.

After this exploit, *Hatteras* was transferred to the Gulf Blockading Squadron and arrived off Berwick, La., 26 January. The next day she engaged CSS *Mobile* but failed to do any serious damage when the light-draft ship withdrew to the safety of shallow water. Nevertheless the Gulf proved to be a profitable hunting ground for *Hatteras*, as, in less than a year, she captured seven blockade runners with assorted cargoes of cotton, sugar, and other goods the South was desperately striving to export. These captures netted *Hatteras*, among other things, some 534 bales of valuable cotton. Commander Emmons stationed four of his own men on board one prize, 20-ton sloop *Poody*, and, rechristening her *Hatteras Jr.*, turned the erstwhile blockade runner into a unit of the Gulf Blockading Squadron. Other Confederate ships taken as prizes by *Hatteras* included: steamer *Indian No. 2*, schooner *Magnolia*, steamer *Governor A. Mouton*, schooner *Sarah*, sloop *Elizabeth*, and brig *Josephine*. The majority of these ships were captured off Vermillion Bay, La., as they ran toward either Havana or the Sabine River area of Texas.

However, *Hatteras'* illustrious blockading career was cut short in early 1863 not long after she was ordered to join the squadron under Real Admiral David Farragut, who was attempting to retake the key Texas port of Galveston. Under a new skipper, Comdr. Homer C. Blake, who had relieved Captain Emmons in November 1862, *Hatteras* joined Farragut's squadron off Galveston on 6 January 1863.

As the blockading fleet lay to off the coast near Galveston on the afternoon of 11 January 1863, a set of sails was sighted just over the horizon and *Hatteras* was ordered to give chase. She took off in pursuit of the strange ship at about 3 p.m. and for the next 4 hours followed her closer and closer into shore. Finally, as dusk was falling, *Hatteras* came within hailing distance of the square-rigged ship. Commander Blake demanded to know her identity. "HBMS *Spitfire*," came the reply. Still suspicious, Blake ordered one of *Hatteras'* boats to inspect this "Britisher." Scarcely had the boat pulled away from *Hatteras* than a new reply to Blake's question rang through the night. "We're the CSS *Alabama*." With this, the famed Confederate raider commanded by Raphael Semmes broke the Stars and Bars and began raking *Hatteras* with her guns. Through the gloom, for about 20 minutes, the two ships exchanged heavy fire at distances ranging from 25 to 200 yards. The flashes of the guns and their rumbling were heard in the Union squadron some 16 miles away, and the cruiser *Brooklyn* was dispatched to investigate and render aid if necessary.

But *Hatteras* had already been badly holed in two places by the rebel raider and was on fire and beginning to sink. Captain Blake ordered the magazines flooded to prevent explosion and reluctantly fired a single bow gun, indicating surrender and a need for assistance. *Alabama* promptly sent over her boats to help remove *Hatteras'* crew, and the last boatload of men had barely pulled away when the Union blockader sank, some 45 minutes from the beginning of the action. Of *Hatteras'* crew of 126, 2 had been killed and 5 wounded; 6 had escaped back

to the squadron in the boat originally sent out to board and investigate "HBMS *Spitfire*;" and the remainder, including Captain Blake, were taken to Port Royal, Jamaica, and from there paroled back to the United States. *Alabama* suffered 2 wounded.

When *Brooklyn* reached the site of the battle early the following morning, she found the hulk of *Hatteras* upright in some 9½ fathoms of water about 20 miles south of Galveston Light. Only *Hatteras'* masts reached out of water, and from the topmast the U.S. Navy pendant was still whipping in the breeze. Even in defeat the gallant blockader had not struck her colors.

II

(Str: dp. 10,505; l. 377'; b. 52'; dr. 23'10"; s. 10 k.)

The second *Hatteras* was built in 1917 for the Cunard Line by the Bethlehem Shipping Corp. of Sparrow's Point, Md. Acquired by the Navy for the war effort, she commissioned 23 October 1917, Lt. Comdr. W. K. Martin in command.

After loading cargo, mainly iron, in Maryland, *Hatteras* joined a convoy at Norfolk and sailed for France on 26 January 1918. On 4 February the convoy ran into a severe North Atlantic storm, and *Hatteras'* steering gear broke down completely. The disabled ship headed back to Boston using a jury-rigged steering system arriving 11 days later. On 6 March she sailed again for France via Halifax, but 11 days later ran into another severe storm, and, once again, broken steering gear forced her to turn back to Boston.

On 9 April *Hatteras* sailed for France for the third time, this time through relatively calm seas, and arrived in Nantes on the 30th. Cargo successfully discharged, she returned to Baltimore on 23 May. Thereafter she made four more Atlantic crossings, one to Nantes and three to Bordeaux, finally returning to New York 19 March 1919. *Hatteras* decommissioned there on 8 April 1919 and the same day was returned to the USSB, which retained her until she was abandoned in 1938.

Hatteras (AVP-42), a *Barnegat*-class seaplane tender under construction by Lake Washington Shipyard, Houghton, Wash., was cancelled 22 April 1943.

Hauoli

Hawaiian word meaning "delight."

(SP-249: dp. 299; l. 211'; b. 22'; dr. 8'; s. 19 k.; 1 6-pdr.)

Hauoli, a steam yacht, was built in 1903 by Robbins Drydock Co., Brooklyn, N.Y., and purchased by the Navy as *California* in August 1917 from her owner, Clara B. Stocker, of New York. After fitting out, she commissioned at New York Navy Yard 24 December 1917, Lt. (j.g.) W. Applebye-Robinson, USNRF, commanding. Her name was changed back to the original *Hauoli* 18 February 1918.

Hauoli spent the first year of her service as a patrol vessel in New York Harbor. She patrolled outside the harbor also, and occasionally carried passengers to and from convoys. The yacht was transferred to special duty 28 January 1919 and assigned to the experimental use of Thomas A. Edison for ASW studies. Edison installed listening devices in *Hauoli* and carried out tests in and around New York harbor. Before demobilization cut short the experiments with *Hauoli*, she was withdrawn from that service and decommissioned 8 October 1919, and later sold to Denton Shore Lumber Co., Tampa, Fla., 7 September 1920.

Haven

A place of refuge.

(AH-12: dp. 11,141; l. 520'; b. 71'6"; dr. 24'; s. 18 k.; cpl. 564; cl. *Haven*; T. C4-S-B2)

Haven (AH-12), formerly *Marine Hawk*, was launched under Maritime Commission contract by Sun Shipbuilding & Drydock Corp., Chester, Pa., 24 June 1944; sponsored by Mrs. E. Lang; acquired and placed in service 15-19 June 1944 for transportation to her conversion yard, Todd-Erie Shipyard, Brooklyn. Upon completion of her conversion to Navy use, she commissioned 5 May 1945, Captain T. T. Patterson in command.

Following shakedown training, the hospital ship sailed 14 June via the Panama Canal for the Pacific Theater, where the war was reaching its climax. Reaching Pearl Harbor 6 July the ship brought patients on board for return to San Francisco. After returning to Hawaii 11 August, just prior to the Japanese surrender, *Haven* sailed to Okinawa and Nagasaki. She arrived off the destroyed Japanese city 11 September and brought on board a group of allied ex-prisoners of war, some of them suffering from the effects of the atomic blast. During the remainder of 1945 the ship was engaged in transporting patients from Guam, Saipan, and Pearl Harbor to San Francisco, arriving after her second long voyage 31 January 1946.

At San Francisco *Haven* took on radiological equipment and scientific researchers in preparation for the forthcoming atomic tests in the Pacific, Operation Crossroads. She sailed 29 May for Pearl Harbor and arrived Bikini Atoll 12 June 1946, operating temporarily as APH-112. The ship remained in the test area supervising the medical aspects of the experiments throughout the operation, and arrived Kwajalein 26 August to assist in the inspection of the test ships.

Haven departed 10 October for Pearl Harbor and the United States, and upon her arrival and decontamination was assigned once again to transport troops from the Pacific outposts to California as AH-12. This important duty occupied her until February 1947, when she reported to San Diego and decommissioned 1 July. *Haven* entered the Pacific Reserve Fleet, San Diego group.

With the outbreak of the Korean War, hospital ships were desperately needed. Following the sinking of sister ship *Benevolence* off fog-bound San Francisco in August 1950, *Haven* was taken out of reserve and commissioned 15 September 1950. She sailed 25 September via Pearl Harbor for Inchon, Korea, site of one of the most audacious and skillful amphibious operations in history. The hospital ship remained off Inchon caring for casualties until 6 January 1951, when the attacking Chinese Communists forced her to move further south. She steamed via Pusan to Sasebo, Japan.

Haven returned to Pusan 5 February to care for battle casualties, and after another voyage to Inchon remained at Pusan until she sailed for the United States arriving San Francisco 30 October 1951. Eager to get back into action, however, she began her second tour of Korean duty 7 January 1952. She operated off Inchon and Pusan during the months that followed, receiving many of her patients by helicopter directly from the front lines. *Haven* sailed again for the United States 16 September 1952, and, after the installation of a new flight deck to facilitate helicopter evacuation of patients, once more steamed out of San Diego 24 January 1953. She returned to her regular station in Inchon harbor where during the next 7 months she treated almost 3,000 patients.

The veteran hospital ship sailed for the United States 20 August 1953, and, after her arrival at San Francisco 3 September, operated off the coast of California. She began her fourth tour of duty in Korea 4 January 1954, arriving Inchon 7 February to provide regular medical care for troops. *Haven* also made occasional visits to Japan; and on 1 September with Korea in a state of uneasy truce, she was ordered to French Indochina, arriving Saigon 9 September. There she brought French troops on board as Viet Nam was partitioned and the French army withdrawn. *Haven* sailed to Oran and Marseille in October to disembark the soldiers, and completing her round-the-world voyage arrived Long Beach via the Panama Canal 1 November 1954.

Haven took part in fleet maneuvers and provided hospital services for sailors through 1955 and 1956 and decommissioned at Long Beach 30 June 1957. She was placed in an "In Reserve, In Service" status, and remained moored at Long Beach providing medical services to the Pacific Fleet until 1 March 1967 when she was struck from the Navy List. *Haven* was returned to the Maritime Administration 5 June 1967 and is at present berthed in the National Defense Reserve Fleet at Suisun Bay, Calif.

Haven received nine battle stars for Korean War service.

Haverfield

James Wallace Haverfield was born 11 April 1917 in Urichsville, Ohio. After receiving his B.A. from Ohio State University in 1939, Haverfield enlisted in the Naval Reserve as an apprentice seaman 11 September 1940. He accepted an appointment as a midshipman 16 March 1941 and after completing his training at Northwestern University, was commissioned Ensign 12 June 1941. Ensign Haverfield reported to the battleship *Arizona* at Pearl Harbor 28 June, and remained there. During the Japanese attack on Pearl Harbor 7 December 1941, Ensign James Haverfield was one of 46 officers and 1,057 men of *Arizona* lost when the valiant ship was sunk by the enemy.

(DE-393; dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 3 21" tt., 2 dct., 8 dep., 1 dep. (h.h.); cl. *Edsall*)

Haverfield (DE-393) was launched 30 August 1943 by Brown Shipbuilding Co., Houston; sponsored by Mrs. Tracy Haverfield, mother of Ensign Haverfield; and commissioned 29 November, Lt. Comdr. Jerry A. Matthews in command.

After shakedown in the Caribbean, *Haverfield* joined escort carrier *Bogue's* hunter-killer group in patrolling Atlantic convoy lanes in search of marauding German U-boats. Departing Norfolk 26 February 1944, the hunter-killer group, aided by a Canadian corvette and British

aircraft, sank *U-575* on the 23rd of March. With some seven survivors of the Nazi submarine aboard, *Haverfield* continued her patrol to Casablanca, where she reported to Commander Moroccan Sea Frontier and turned over the German prisoners 18 March. After returning to Norfolk, *Haverfield* sailed on her second offensive combat cruise with the *Bogue* group 5 May. Operating with another HUK group under *Block Island*, the *Bogue* force sank *RO-501*, ex *U-1224*, at 18°08' N., 33°13' W. 13 May as the former German ship was heading for her new home in Japan.

Reaching Casablanca 29 May, *Haverfield* was ordered out that same night to render emergency assistance to survivors of carrier *Block Island*, sunk by a German torpedo off the Canary Islands. *Haverfield* rescued one of six *Block Island* fighter pilots who had been aloft when the carrier sank, but a long search failed to locate the remaining five men. After this, *Haverfield* continued to operate until the European War ended in May 1945 on trans-Atlantic HUK missions as well as on patrol along the icy Great Barrier. When all German U-boats still at sea had been accounted for, the destroyer-escort underwent a Boston overhaul; and, after intensive training in Cuban waters, sailed for the Pacific 19 July to be ready for the invasion of Japan. Reaching Pearl Harbor via the Panama Canal and San Diego 1 August, *Haverfield* was there when the war ended in mid-August and at the end of the month assumed convoy escort duty from Saipan to Okinawa. She patrolled the China coast and then streamed her homeward-bound pennant, reaching Boston 15 February 1946. *Haverfield* sailed to Green Cove Springs, Fla., 25 March 1946, decommissioned and went into reserve 30 June 1947.

Reclassified DER-393 in September 1954, *Haverfield* was converted to a radar picket ship at the Philadelphia Navy Yard and recommissioned there 4 January 1955. Fitted with the latest electronic detection equipment and with 50 tons of ballast in her keel to compensate for the topside weight of the new radar antennae, *Haverfield* trained off the East Coast and then reported to her new home port, Seattle, via the Panama Canal and San Diego 23 July. *Haverfield* served as flagship of the newly cre-

USS *Haven* (AH-12) off Korea in 1952

ated CortRon 5 in addition to regular radar picket patrol off the Pacific coast. After 5 years of this duty, she reported to Pearl Harbor 10 April 1959 for similar employment along the Pacific Barrier. Departing Pearl Harbor 16 May 1960, *Haverfield* sailed to a new homeport, Guam, to make surveillance of the Trust Territory Islands and to ensure the safety and welfare of the islanders.

After participating in Operation Cosmos, which provided navigational aids for and was prepared to render emergency assistance to President Dwight Eisenhower's plane as the Chief Executive crossed the Pacific on a good will tour, *Haverfield* operated with the famed bathyscaphe *Trieste* as it descended the Marianas Trench to a near-record dive of 19,300 feet 30 June 1960.

Following her support of this scientific endeavor, *Haverfield* conducted antisubmarine and search and rescue patrols among the Bonins, the Marianas, and the Caroline Islands. For almost 5 years she served primarily in the Trust Territory of the Pacific, though twice she deployed to the Far East. Steaming to Japan in October 1960, she became the first radar picket escort ship to operate with the 7th Fleet in the Western Pacific. In mid-October 1961 she returned to the Far East; and, upon relieving *John R. Craig* (DD-885) on patrol in the Formosa Strait, she became the first of her type to join in this important peace-keeping operation. She continued intermittent patrols off Taiwan until 10 January 1962 when she steamed via Japan to resume patrol duty out of Guam. In November Typhoon Karen left widespread destruction on Guam; and *Haverfield*, the first ship to return to the storm-wracked Apra harbor, provided valuable supplies and services.

Haverfield returned to Pearl Harbor March 1965 and, after joining Escort Squadron 5, sailed 19 June for duty off South Vietnam. There she participated in "Market Time" patrols to guard against infiltration of North Vietnamese troops and supplies by sea. She served "Market Time" for 7 months, then returned Pearl Harbor 2 February 1966. Departing for the Far East 23 May, she resumed "Market Time" operations 9 June. Eleven days later she participated in the most significant action of the operation up to that time.

A 100-foot, steel-hulled North Vietnamese trawler, attempting to infiltrate "Market Time" patrols with a large cargo of arms and ammunition for the Viet Cong, was detected by U.S. Coast Guard cutter *Point League* near the mouth of the Co Chien River in the Mekong Delta. A chase and fire fight followed, during which the cutter forced the enemy trawler aground. The enemy abandoned the burning ship; after wiping out enemy shore resistance, "Market Time" units, including *Haverfield*, sent volunteers on board to fight fires and salvage the captured cargo. While American and South Vietnamese teams extinguished the fires, other volunteers offloaded almost 80 tons of ammunition and arms, including mortars, recoilless rifles, machineguns, and antitank weapons. This represented the largest seizure of the "Market Time" operation and thwarted a determined attempt by the North Vietnamese to supply Viet Cong.

Haverfield continued "Market Time" patrols during the next 5 months. In addition she provided gunfire support 6 September against an enemy on Phu Quoc Island, South Vietnam. She returned to Pearl Harbor 6 December, remained there until late April 1967, and then resumed patrol duty off South Vietnam.

For her participation in World War II, *Haverfield* was awarded one battle star as well as the Presidential Unit Citation for her antisubmarine work in the Atlantic.

Havre

A city in northern Montana.

(PCE-877: dp. 640; l. 185'; b. 33'; dr. 9'; s. 15 k.; epl. 99; a. 1 3', 3 40mm., 5 20mm., 4 dep., 1 dep. (h.h.), 2 dct.; cl. PCE-842)

PCE-877 was laid down by Albina Engine & Machine Works, Portland, Oreg., 6 May 1943; launched 11 August;

sponsored by Miss Marjory Wooton; and commissioned 14 February 1944, Lt. Coleman H. Smith in command.

After shakedown off San Diego PCE-877 sailed for Hawaii arriving Pearl Harbor 19 September for conversion to an amphibious force control ship. Following her conversion and training for her new assignment, PCE-877 departed Pearl Harbor 22 January 1945, reaching Eniwetok 3 February. Proceeding to Saipan, she joined the Iwo Jima invasion force and was enroute to the Japanese held volcano fortress on the 15th. Four days later the converted sub chaser arrived in the transport area where she directed and controlled landing craft on their approach to the beaches. Following the initial assault she patrolled off the island, performing rescue and salvage operations.

With Iwo Jima secured, PCE-877 steamed to Leyte to prepare for the next major campaign, invasion of Okinawa. In late March the largest amphibious force of the Pacific war steamed to the Ryukyu Islands. American troops hit the beaches 1 April and PCE-877 once again assumed attack station to screen and direct landing ships on their approach to shore. Under frequent enemy air attack, she remained off Okinawa for 2 weeks giving support to the troops. Following a short overhaul at Ulithi, PCE-877 resumed operations off Okinawa in mid May. On 28 May she came under Japanese air attack while assisting LCS-119, which had been demolished by a suicide plane. During this encounter she aided in splashing an enemy plane and recovered sixty-one survivors from the stricken ship. For the rest of the war she performed patrol off Okinawa and amphibious training in the Philippines. Reclassified PCE(C)-877 on 20 August, she sailed 6 days later to escort a transport convoy enroute to Tokyo.

PCE(C)-877 returned to the United States early in 1946, arriving Charleston, S.C., in February. From 1946 to April 1954 she was attached to Amphibious Control Squadron 2 and engaged in exercises in the North Atlantic, Chesapeake Bay, and the Caribbean.

During April 1954 she sailed to the Great Lakes where she became a Naval Reserve Training Ship in the 9th Naval District. Here she was again reclassified PCE-877, 27 October 1955, and was named *Havre* 15 February 1956. For the next 10 years *Havre* operated throughout the Great Lakes, engaging in 2-week cruises which provided valuable training for Naval Reservists, including ASW exercises.

At present *Havre* continues operations in 1967 out of her home port Great Lakes, Ill.

PCE-877 received two battle stars for World War II service.

Hawaii

An American island territory in the Pacific, later the 50th State.

(CB-3: dp. 27,500; l. 808'6"; b. 90'10"; dr. 27'1" s. 33 k.; a. 9 12" planned; cl. *Alaska*)

Hawaii (CB-3) was launched 3 November 1945 by New York Shipbuilding Corp., Camden, N.J.; sponsored by Mrs. Joseph R. Farrington, wife of the delegate from the Territory of Hawaii. One of a projected class of six battle cruiser type ships, of which only two were completed, *Hawaii* and her sisters were designed to cope with the large German "pocket battleships" and Japanese armored cruisers. Due to the reduction in defense expenditures after World War II, her construction was suspended. In September 1947 she stood 84 percent complete. For a time it was planned that *Hawaii* should be converted to the Navy's first guided missile ship, but she remained in the Atlantic Reserve Fleet. Her classification was changed to large command ship, CBC-1, 26 February 1952 when conversion was again contemplated; but she reverted to her original classification 9 October 1954 and was sold for scrap to Boston Metals Co., Baltimore, Md., in 1959 after being struck from the Navy List 9 June 1958.

Hawaiian

(NOTS: dp. 12,000; l. 406'9"; b. 51'1"; dr. 26'1"; s. 11 k.; cpl. 97)

Hawaiian was built by the Delaware River Shipbuilding Co., Chester, Pa., and launched in November 1900, Mrs. W. C. Sproul, wife of the United States Senator from Pennsylvania and daughter of the founder of the shipyard, sponsor. The cargo vessel was acquired by the Navy from her owner, the American-Hawaiian Steamship Line, and commissioned on 10 August 1918 at Hoboken, N.J., Lt. Comdr. L. A. Carlisle in command.

Taking aboard cargo at New York, *Hawaiian* sailed for Bassens, France, on 17 August, arriving there 3 September. After discharging her cargo there, she returned to New York on 28 September. *Hawaiian* sailed for Europe again on 11 October. On 26 October, only one day out of Gibraltar, she rammed the British steamer *Larchgrove* amidships, sinking her almost immediately. *Hawaiian*, badly holed in the bows and shipping water, limped into Gibraltar the following day with 16 survivors of the British steamer on board. After temporary repairs had been effected, *Hawaiian* continued on to Marseilles, arriving there 12 November to discharge cargo. She then returned to the United States via Gibraltar, arriving at New York on 15 December.

Hawaiian stayed in drydock at New York until 21 March 1919, when she decommissioned and was returned to her former owners.

Hawk

A bird of prey related to the falcon family, noted for its swiftness and grace in flight.

I

(IX-14: dp. 545; l. 145'; b. 22'; dr. 11'; s. 14 k.; cpl. 47; a. 1 3-pdr., 2 1-pdr.)

The first *Hawk* (IX-14) was a converted yacht built as *Hermione* by Fleming & Ferguson, Paisley, Scotland, in 1891; purchased by the Navy 2 April 1898 and renamed *Hawk*; and commissioned 3 days later, Lt. J. Hood in command.

Hawk sailed from Key West in late April 1898 to join the North Atlantic Squadron in blockading Cuba during the Spanish-American War. On 23 May she accompanied Admiral Sampson's flagship *New York* out from Key West. Two weeks later she attacked and destroyed enemy ship *Alphonso XII*, which carried cargo for Cuba. In late summer she departed for Norfolk where she decommissioned 14 September 1898.

Recommissioned in 1900, she was loaned to the Ohio Naval Militia where she served for 9 years. On 3 August 1909 *Hawk* was transferred to the Naval Militia of New York, and served for 10 years in the Buffalo area. She decommissioned 21 May 1919 and joined the Reserve Fleet. She was designated IX-14 on 1 July 1921.

Hawk once again recommissioned 16 April 1922 and was assigned to the 9th Naval District. She operated in the Great Lakes area for the duration of her service. She decommissioned 14 February 1940 and was sold 25 February to the Indiana Salvage Co., Michigan City, Ind.

II

(AM-133; dp. 590; l. 147'; b. 26'; dr. 13'; s. 12 k.; a. 2 6-pdrs.)

The second *Hawk* (AM-133), a converted trawler, was built in 1937 as *Gale* by the Bethlehem Shipbuilding Co., Quincy, Mass.; acquired by the Navy 1 January 1942 from her owner, General Sea Foods Corp., Boston; converted to a minesweeper at Bethlehem Steel's Atlantic Yard, and commissioned 23 May 1942, Lt. J. W. Lowes in command.

Hawk was assigned to the 1st Naval District and was based at the Boston Section Base. She performed general minesweeping duties near Boston and in mid-1943 was assigned to the Northern Ship Lane Patrol. *Hawk* decommissioned 1 May 1944 and was sold.

III

(YMS-362: dp. 245 t.; l. 136'; b. 22'9"; dr. 6'3"; s. 14.5 k., a. 1 3")

The third *Hawk* (YMS-362) was launched as *YMS-362* by Robert Jacob, Inc., City Island, Bronx, N.Y., 22 May 1943; sponsored by Miss Marilyn Miller; commissioned 4 October, Lt. J. W. Starbuck, Jr., in command.

YMS-362 spent its first year of commissioned life in training on the eastern coast of the United States. She departed Norfolk, Va., and the Atlantic Fleet 19 October 1944, and arrived at Pearl Harbor 25 November for war duty. She swept mines in support of the invasion of Iwo Jima 17 February 1945, destroying two enemy machine gun emplacements ashore as the invasion began. Her minesweeping patrols continued around the Japanese home islands until 28 December, when *YMS-362* began passage for her return to Charleston, S.C., arriving in late May 1946.

After overhaul and refitting, she took up duties with the Atlantic Fleet as a unit attached to the U.S. Naval Minecraft Base at Charleston. During a second refitting, on 17 February 1947 *YMS-362* was renamed and redesignated *Hawk* (AMS-17). Reclassified a second time as MSC (O)-17 on 7 February 1955, *Hawk* continued her service as a minesweeping training ship until she was struck from the Naval Register 17 October 1957.

Hawk received four battle stars for her service in World War II.

Hawk (AM-400), under construction by Defoe Shipbuilding Co., Bay City, Mich., was cancelled 12 August 1945.

Hawk, see *YT-213*

Hawkbill

A large sea turtle.

(SS-366; dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'33"; s. 20 k.; cpl. 66; a. 10 tt., 1 5", 1 40mm., 1 20mm.; cl. *Balao*)

Hawkbill (SS-366) was launched by Manitowoc Shipbuilding Co., Manitowoc, Wis. 9 January 1944; sponsored by Mrs. F. W. Scanland, Jr., and commissioned 17 May 1944, Lt. Comdr. F. W. Scanland, Jr., in command.

Following a period of training on the Great Lakes, the submarine departed 1 June 1944 from Manitowoc to begin the long journey down the Illinois River and finally by barge down the Mississippi. She arrived New Orleans 10 June and, after combat loading, sailed 16 June for training out of the submarine base, Balboa, Canal Zone. With this vital training completed, she arrived Pearl Harbor 23 July for final preparations before her first war patrol.

Departing 23 August, the submarine steamed via Saipan to her patrol area in the Philippine Islands in company with *Baya* and *Becuna*. In October *Hawkbill* shifted patrol to the South China Sea and, while approaching two carriers 7 October, was forced down by violent depth charging by Japanese destroyers. Two days later she attacked a 12-ship convoy with *Becuna*, damaging several

of the ships. *Hawkbill* transited heavily patrolled Lombok Strait 14 October, and terminated her first patrol at Fremantle, Australia on the 17th.

In company with *Becuna* and *Flasher*, the submarine departed for her second patrol 15 November bound for the area north of the Malay Barrier. She encountered a convoy 15 December and sank destroyer *Momo* with six well-placed torpedoes during a night attack. Finding few contacts—a testament to the effectiveness of the American submarines—*Hawkbill* headed once more for Lombok Strait. This time she was sighted by a patrol craft, but cleverly maneuvered into a rain squall. The submarine was then fired upon by shore batteries before passing out of range. *Hawkbill* returned to Fremantle 5 January 1945.

On her third war patrol beginning 5 February, the submarine returned to Lombok Strait to turn the tables on her former pursuers. Her torpedoes sank two submarine chasers 14 February, and she added some small craft before turning for the South China Sea. *Hawkbill* detected a convoy 20 February; after engaging one escort with gunfire, she sank 5,400-ton cargo ship *Daizen Maru* with a spread of torpedoes. The rest of her patrol brought no targets; she arrived Fremantle 6 April 1945.

Departing on her fourth patrol 5 May, *Hawkbill* served on lifeguard station for a B-24 strike on the Kangean Islands north of fabled Bali. She arrived 16 May on her patrol station off the coast of Malaya, and soon afterward encountered minelayer *Hatsutaka* heading south along the coast. She attacked and obtained two hits, causing severe damage. The ship was observed next morning being towed to the beach. At a range of almost 5,000 yards, *Hawkbill* fired three more torpedoes into the shallow waters and broke the ship in half, sinking a familiar enemy of submarines operating on the Malayan coast. After further patrol off Malaya and in the Gulf of Siam, she arrived Subic Bay 18 June 1945.

Hawkbill departed for her fifth and last war patrol 12 July. Returning to the coast of Malaya, she attacked a convoy 18 July. Her first torpedoes missed, and an hour later a depth charge attack of unusual accuracy and intensity began. *Hawkbill* was blown partially out of the water by a perfectly placed pattern and damaged considerably; but by hugging the bottom with all machinery secured, she eluded the attacking destroyers. After a stay at Subic Bay for repairs, she steamed to Borneo to rendezvous with Australian Army officers for a special mission. *Hawkbill* destroyed two radio stations with her deck guns, landed commandos at Terampha Town, and destroyed shore installations. After reconnaissance of Anambas Island, also in the South China Sea, the versatile submarine returned to Borneo 13 August.

Following the surrender of Japan, *Hawkbill* sailed to Pearl Harbor, departing 22 September 1945 for San Francisco. She decommissioned at Mare Island 30 September 1946 and joined the Reserve Fleet. Brought out of reserve in 1952, *Hawkbill* was loaned to the Netherlands under the Military Assistance Program 21 April 1953 and now serves as *Zeeleeuw* (S-803).

Hawkbill received six battle stars for World War II service. All five of her war patrols were designated successful, and she received a Navy Unit Commendation for her outstanding performance on patrols 1, 3, and 4.

II

(SS(N)-666: dp. 4,630 (t.); l. 292'; b. 32')

The second *Hawkbill* (SS(N)-666), a *Sturgeon*-class nuclear submarine, was laid down by Mare Island Division, San Francisco Bay Naval Shipyard, Vallejo, Calif., 12 September 1966, and is to be launched in the summer of 1968. A key element in the underwater deterrent force of the Navy she contributes to the vital continuing task of "keeping the peace" over the vast reaches of global waters. Designed to attack and destroy all types of enemy ships, she is able to operate for long periods at great depths and at high submerged speed, making her a potent and effective challenge to enemy submarines. Operating under

nuclear power, she is also capable of conducting long-range reconnaissance patrols and surveillance missions without risking detection by surface ships. Moreover, she can carry out extensive ASW operations, either alone or with other fleet submarines and destroyer-type surface ships.

Hawke

A former name retained.

Hawke, or *Hawk*, was a small coastal sloop obtained by Major Silas Talbot of the Continental Army in October 1778 for use in his daring capture of British 8 gun schooner *Pigot* in Narragansett Bay. The British ship effectively blockaded the town of Providence, and Talbot equipped his small ship with 2 guns and 60 soldiers to board her. On the night of 28 October, Talbot slipped silently past British batteries and stood for *Pigot*. He managed to entangle his jib boom in his adversary's rigging, and opened fire. Although the British captain put up a courageous resistance, Talbot's soldiers quickly overran the ship and sailed her into Stonington, Conn. Not a man was lost on either side.

Silas Talbot gained great fame for this exploit, and later became a Captain in the Continental Navy and in the U.S. Navy after the Revolution.

Hawkins

William Deane Hawkins was born 19 April 1914 in Fort Scott, Kansas, and enlisted in the Marine Corps 5 January 1942. He accepted a battlefield commission in the Solomons 18 November 1942, and was killed 21 November 1943 in the assault on Tarawa. First Lieutenant Hawkins received the Medal of Honor for his gallantry during the bloody assault on Betio in which he gave his life. The citation reads in part: "Fearlessly leading his men on to join the forces fighting desperately to gain a beachhead, he repeatedly risked his life throughout the day and night to direct and lead attacks on pill boxes and installations with grenades and demolitions. . . . Refusing to withdraw after being seriously wounded in the chest during this skirmish, First Lieutenant Hawkins steadfastly carried the fight to the enemy, destroying three more pillboxes before he was caught in a burst of Japanese shell fire and mortally wounded. His relentless fighting spirit in the face of formidable opposition and his exceptionally daring tactics were an inspiration to his comrades during the most crucial phase of the battle and reflect the highest credit upon the United States Naval Service."

(DD-873: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35 k.; cpl. 367; a. 6 5", 6 3", 5 21" tt., 6 dcp., 1 dcp. (h.h), 2 dct.; cl. *Gearing*)

Hawkins (DD-873), originally Beatty but renamed 22 June 1944, was launched by Consolidated Steel Co., Orange, Tex., 7 October 1944; sponsored by Mrs. Clara Hawkins, mother of First Lieutenant Hawkins; and commissioned 10 February 1945, Comdr. C. Iverson in command.

Following shakedown training in the Caribbean, *Hawkins* arrived Norfolk 23 March 1945 to undergo conversion to a radar picket ship. Emerging 26 May, she conducted training exercises before sailing 18 June from Guantanamo Bay, Cuba, for San Diego and Pearl Harbor. After her arrival 8 July *Hawkins* prepared to enter the last phase of the Pacific War, but 3 days after her 12 August departure from Pearl Harbor for Eniwetok the Japanese surrendered. The destroyer continued from Eniwetok to Iwo Jima and Tokyo Bay, arriving 27 August, and assisted in early occupation operations. She then escorted ships to and from the Marianas, remaining in Japanese waters until 3 January 1946. *Hawkins* then steamed to the Philippines and Saipan, finally arriving Pearl Harbor 3 April.

Arriving San Diego 11 April, the destroyer took part in training operations off the west coast until sailing

USS *Hawkins* (DD-873)—“Mail Call”

again for the far east 6 January 1947. During the months that followed she steamed between Chinese and Korean ports, assisting and supporting American Marine units in their attempts to stabilize the explosive Chinese situation and protect American lives. *Hawkins* also took part in rescue operations off Hong Kong 19 July 1947, when giant steamer *Hong Kheng* sank with over 2,000 passengers on board. She returned to the United States 8 October 1947.

After a year of operations out of San Diego the ship sailed again for the troubled Far East, arriving Tsingtao, China, 29 October. Following operations off the China coast *Hawkins* got underway from Tsingtao 6 December. On this long voyage, completing a circuit of the globe, the destroyer visited Ceylon, Turkey, Gibraltar, New York, and Panama before arriving San Diego 16 March 1949.

Hawkins was reassigned to Atlantic Fleet soon afterward, arriving her new home port, Newport, 23 May 1949. For the next year she took part in reserve training cruises and readiness exercises in the Caribbean. The ship had been reclassified DD-873 18 March 1949. *Hawkins* departed 2 May 1950 for a cruise with 6th Fleet in the strategic Mediterranean.

While there she and the world were shocked by the Communist invasion of South Korea. After NATO maneuvers she returned to Newport 10 October and prepared to become part of the nation's far flung bulwark in the Korean conflict. Sailing 3 January via the Panama Canal she arrived Pusan 5 February. During her 4 months of Korean duty *Hawkins* screened the mobile carrier forces during strikes on enemy positions and supply lines, provided antisubmarine protection, and controlled jet aircraft in combat air patrols. She also acted as plane guard during operations in the Formosa Straits designed to discourage Communist aggression against the friendly island. Departing the Far East in June, the destroyer returned to Newport 8 August via the Mediterranean.

For the next few years the veteran ship alternated picket duty and training operations in the western Atlan-

tic with periodic cruises to the Mediterranean with the 6th Fleet. She was in the Eastern Mediterranean during the summer of 1956 when the Suez crisis threatened the security and peace of the area. *Hawkins* arrived Mayport, Fla., her new home port, 18 August 1960, and soon resumed her pattern of cruises to the Mediterranean. In 1961 she operated with a special Task Group in connection with American space experiments and missile tests off Cape Canaveral, now Cape Kennedy. When the introduction of offensive missiles into Cuba in 1962 threatened the security of the United States, *Hawkins* joined with other ships in quarantining that Caribbean country, cruising the Caribbean from late October until December in a modern demonstration of the power of forces afloat. In 1963 the ship returned to the Mediterranean in the Spring and in August took part in Polaris missile tests in the Caribbean with submarine *Alexander Hamilton*. During the next 5 months *Hawkins* operated with carriers off Florida and in the Caribbean. Following additional Polaris missile tests with *Andrew Jackson* (SSBN-619) in February 1964, she steamed to Boston 21 March and was placed in commission, in reserve, prior to undergoing FRAM I overhaul.

Reclassified DD-873 on 1 April, *Hawkins* completed FRAM late in 1964. Assigned to Destroyer Squadron 24, she operated out of Newport until departing 29 September for duty in the Far East. Steaming via the Panama Canal and the West Coast, she joined the 7th Fleet 23 November as part of America's powerful naval commitment to thwart Communist aggression in Southeast Asia. For the next 3 months she guarded hard-hitting carriers in the South China Sea and the Gulf of Tonkin and provided gunfire support for ground troops along the coast of South Vietnam. She departed Subic Bay late in February 1966, steamed via the Suez Canal, and arrived Newport 8 April.

Hawkins maintained the peak readiness of her crew and equipment over the next few months with exercises off the East Coast and in the Caribbean. Departing New-

USS *Hawkins* (DD-873) refueling from USS *Enterprise* (CVA(N)-65)

port 28 November, she joined the 6th Fleet at Gibraltar 8 December and became flagship for ComDesRon 24. For more than 3 months she cruised the Mediterranean from Spain to Greece before returning to Newport 20 March 1967. Into mid-1967 she operated along the Atlantic Coast from New England to Florida, prepared as always to cruise in defense of the United States and the free world.

Hawkins received two battle stars for Korean service.

Hayes, President, see *President Hayes* (AP-39)

Haynsworth

William McCall Haynsworth, Jr., was born in Darlington, S.C., 16 January 1901, and appointed Midshipman from the Sixth Congressional District of South Carolina 19 June 1919. After graduation from the Naval Academy he reported for duty on board destroyer *Mahan*, 16 June 1924, and was detached in April 1928 for postgraduate instruction in mechanical engineering at the Naval Academy, followed by postgraduate work at various colleges and industrial plants. He was assigned to cruiser *Houston*, 10 November 1930 and detached in February 1934 to serve at the Naval Research Laboratory, Bellevue, District of Columbia until June 1936 when he was ordered to *Houston* as Assistant Fire Control Officer.

In April 1939 he reported to Charleston Navy Yard in connection with fitting out of *Ingraham* (DD-111). He assumed command of *Ingraham* 19 July 1941 and with the outbreak of World War II commenced escort duty for convoys sailing from New York and Halifax to the British Isles. *Ingraham*, while investigating the collision of destroyer *Buck* with a merchant vessel, was rammed by fleet oiler *Chemung* in dense fog off Nova Scotia, 22 August 1942. The force of the collision exploded *Ingraham*, killing Commander Haynsworth and all but ten men and one officer.

(DD-700: dp. 2,200; l. 376'6"; b. 40'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 16 40mm., 20 20mm., 2 dct., 6 dcp., 5 21" tt.; cl. *Allen M. Sumner*)

Haynsworth (DD-700) was launched 15 April 1944 by the Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Mrs. Haynsworth, widow of Comdr. Haynsworth; and commissioned 22 June 1944, Comdr. Robert Brodie, Jr., in command.

After shakedown in the Caribbean *Haynsworth* departed New York 20 September escorting *Queen Mary* with Prime Minister Winston Churchill on board. Rendezvousing with British escorts, she returned to New York and sailed 26 September via the Canal Zone and San Pedro, arriving Pearl Harbor 20 October. *Haynsworth* sailed 16 December for Ulithi and joined Vice Admiral J. S. McCain's Fast Carrier Task Force 38 for the final assaults on the Japanese. During the next 3 months she operated with the 3d and 5th Fleets as part of the screen for the Fast Carrier Task Force; the primary mission being to conduct air strikes against strategic Japanese positions along the China coast, and Formosa, and to harass enemy shipping during the landings at Luzon 9 January 1945.

The day after the invasion was launched, Task Force 38 moved into the South China Sea and conducted raids on the China coast and Indochina, doing much damage to the enemy. Launching one final raid against Okinawa, *Haynsworth* retired to Ulithi 26 January. She sortied 10 February with Admiral Marc Mitscher's Fast Carrier Force 58 for strikes against airfields, factories, and shipping in the Tokyo area. Heavy fighter sweeps were launched 16 February to cover the airfields around Tokyo Bay. Despite heavy weather with low ceiling, most of the target areas were effectively neutralized. During the afternoon three Japanese picket boats that had evaded detection in thick fog were spotted by *Haynsworth* and promptly sunk, taking 12 prisoners. In addition to damaging aircraft frame and engine plants, a number of ships

and small craft were attacked and sunk in Tokyo Bay, the biggest prize being the 10,600-ton *Yamashiro Maru*.

As the Pacific war approached its climax, *Haynsworth* again sailed from Ulithi for further strikes against Japan. Massive air attacks were launched against airfields on Kyushu and ships in the Inland Sea 18 and 19 March, inflicting heavy damage on the dwindling Japanese air and sea power. After participating in the bombardment of enemy shore positions on Minami Daito Shima 28 March, she sailed for Okinawa. Landings were made on the Japanese fortress 1 April, with Task Force 58 providing support, and *Haynsworth* frequently aiding in the destruction of enemy aircraft during the many attacks, where "the fleet had come to stay." Only after she was crashed by a kamikaze 6 April did she have to retire to Mare Island via Ulithi for repairs.

After repairs *Haynsworth* had duty at Treasure Island, Calif., as a training ship from 17 July to 5 September. After several months of operations at Pearl Harbor, she sailed for the east coast 14 January 1946, reaching Boston 26 April for a year in the Reserve Fleet. Returning to active service in March 1947, *Haynsworth* based her operations from Algiers, La., conducting reserve training cruises in the Gulf and in the Caribbean until the summer of 1949.

Haynsworth sailed 6 September 1949 for her first duty with the 6th Fleet in the Mediterranean, returning to Norfolk 7 February 1950. She arrived Charleston 10 days later, decommissioned there 19 May and joined the Reserve Fleet.

With the expansion of operations due to the Korean War, *Haynsworth* recommissioned at Charleston 22 September 1950, Comdr. Herbert F. Rommel in command. Following training and operations along the East Coast and in the Caribbean she sailed 3 September 1951 for duty in the Mediterranean.

After more operations on the East Coast and in the Caribbean, and a Midshipman cruise to the North Atlantic, *Haynsworth* sailed from Norfolk 2 November 1953 for a round-the-world cruise. While in the Pacific she was assigned duty for 4 months in the Far East with the 7th Fleet, a vital peace-keeping force in that part of the world. *Haynsworth* returned to Norfolk 4 June 1954 to resume her support of the 6th Fleet. In 1956 with the Suez crisis still unsettled, Navy units stood by in the eastern Mediterranean and evacuated U.S. nationals from Egypt. *Haynsworth* aided the Navy's preparedness in the event of any conflict. Between 1956 and 1960 she made five deployments to the Mediterranean, supporting the Navy's peace-keeping role and keeping a watchful eye on the troubled spots of the free world. In 1959 *Haynsworth* took part in the historic "Operation Inland Seas," commemorating the opening of the mighty St. Lawrence Seaway, steaming up the St. Lawrence to Montreal.

Late in 1961 while in the Mediterranean, *Haynsworth* delivered emergency food rations to flood-ravaged Africa; and on 3 October 1962, she stood by off Cape Canaveral as a rescue ship and witnessed the take off of astronaut Comdr. Walter Schirra on his historic six-orbital flight. Later that month, under much more serious circumstances, she hastened to the Caribbean and participated in the naval quarantine of Cuba, effectively checking the Communist threat to the security of the Western Hemisphere.

In February 1963 *Haynsworth* deployed to the Mediterranean, the Red Sea, and the Gulf of Aden for operations with the 6th Fleet. After returning to Norfolk, she embarked midshipmen for an Atlantic cruise from 1 August to 10 September; then underwent overhaul at New Orleans, La., and Orange, Tex., before arriving Galveston 28 February 1964 to begin duty as a Naval Reserve training ship.

Assigned to Reserve Destroyer Squadron 34, *Haynsworth* since that time has operated out of Galveston while providing valuable on board training facilities for hundreds of Naval Reservists. Manned by a nucleus crew, she has steamed to ports along the Gulf and Atlantic coasts, and numerous training cruises have carried her

into the Caribbean. Into mid-1967 she has continued to bolster the strength of the Navy and the Nation through intense, skilled, and effective training which maintains the caliber and readiness of the Naval Reserve.

Haynsworth received three battle stars for World War II service.

Hayter

Hubert Montgomery Hayter was born in Abingdon, Va., 17 October 1901, and graduated from the Naval Academy in 1924. In the following years he served on battleship *Arizona*, destroyer *Yarborough*, and other ships, taking command of *Ramsay* (DM-16) in 1939. Lt. Comdr. Hayter was transferred to *New Orleans* 5 February 1941, and was killed during an action with Japanese forces off Savo Island 30 November 1942. Hayter was serving as damage control officer when *New Orleans* received a torpedo hit, and as Central Station, his battle post, filled with asphyxiating gas, he ordered all men without masks to leave the compartment, giving his own to a partially stricken seaman. After clearing the compartment of all personnel, Lt. Comdr. Hayter was finally overcome by the fumes. For this extraordinary act of heroism, he was posthumously awarded the Navy Cross.

(DE-212: dp. 1400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 3 21" tt., 2 dct., 8 dcp., 1 dcp. (h.h.), cl. *Buckley*)

Hayter (DE-212) was launched by Charleston Navy Yard, Charleston, S.C., 11 November 1943; sponsored by Mrs. Maurine K. Hayter, widow of the namesake; and commissioned at Charleston 16 March 1944, Lt. Comdr. H. H. Theriault in command.

Hayter departed Charleston 1 April 1944 for shakedown training off Bermuda, and subsequently was assigned to an escort division for Atlantic duty. Between 1 June and 30 November 1944 she made three voyages to Europe, two from Norfolk to Bizerte and one from Casco, Maine, to Bizerte. During the voyages *Hayter* provided anti-submarine protection and transferred the division doctor to many merchant ships in the convoy needing medical assistance.

Hayter sailed 2 January 1945 on a special duty in the Atlantic, with other units of Escort Division 62. Their assignment—to find and sink German submarine *U-248*, which had been sending vital weather reports to Axis units from the Azores area. The ships conducted several search sweeps before *Hayter* made contact with the sub 16 January, and after a series of lethal depth charge attacks lasting two hours the submarine was sunk. *Hayter* patrolled the Azores for a time, then joined a convoy screen for the voyage back to Norfolk, arriving 5 February 1945.

Departing Casco Bay 17 March, *Hayter* and her consorts proceeded into the north Atlantic for anti-submarine sweeps in the Iceland area. The ships made a depth charge attack 10 April, but did not score a definite kill. The group returned to Argentia, Newfoundland, 14 April, and departed 4 days later for anti-submarine barrier patrol, cruising between escort carriers *Bogue*, to the south, and *Core*, to the north. Contact was made 23 April and all ships searched without avail until the next day, when *Frederick C. Davis* reported contact on her starboard bow.

As *Hayter* maneuvered to attack, *Davis* was struck by a torpedo on her port side amidships, breaking her in two. As the stricken ship settled and sank *Hayter* began rescue operations, and despite rough seas, sharks, and the threat of further attacks, managed to save 65 survivors and recover 12 of the dead from the sea. Three of the survivors were revived by artificial respiration given by members of *Hayter's* crew. In the meantime, the other escorts had closed in on the submarine, *U-646*, and forced it to the surface. Guns quickly sank the U-boat and her captain was later made prisoner.

Hayter arrived Argentia 6 May and sailed two days later for Philadelphia Navy Yard via Boston. She arrived 22 May and began her conversion to high speed

transport, her designation becoming APD-80 on 1 June 1945.

Emerging as a high speed transport, *Hayter* departed Philadelphia 13 August 1945 for her refresher training off Guantanamo Bay. She subsequently operated out of Norfolk and Newport in training operations until 30 October, when she departed Norfolk for Jacksonville, Fla. At Jacksonville, *Hayter* was placed in the Reserve Fleet at Green Cove Springs, decommissioned 19 March 1946, and was later moved to the Texas group, where she remained until struck 1 December 1966.

Hayward, Eliza, see *Eliza Hayward* (No. 1414)

Hayward, see *Santa Rosa* (YFB-33)

Hazard

To run, or take the risk of; to venture upon; dangerous, risky.

(AM-240: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3", 2 40mm., 6 20mm., 2 dct., 3 dcp. (h.h.); cl. *Admirable*)

Hazard (AM-240) was launched 21 May 1944 by the Winslow Marine Railway & Shipbuilding Co., Winslow, Wash.; sponsored by Miss Joanne R. Heddens; and commissioned 31 October 1944, Lt. Curtis B. Tibbals, USNR, in command.

After shakedown out of San Pedro Bay, *Hazard* departed San Francisco 5 January 1945 screening a convoy to Pearl Harbor. Arriving Pearl 13 January she began a series of escort voyages between Pearl Harbor and Eniwetok. *Hazard* next screened a convoy to Ulithi Atoll and Kossol Roads, ultimately reaching San Pedro Bay, Leyte Island for supplies.

Hazard sortied from Leyte 19 March 1945 as part of Admiral Killand's Western Islands Attack Group for the invasion and occupation of Okinawa (14 March-30 June 1945). Arriving off Kerama Retto *Hazard* reported to the Transport Screen and took up screening station as antisubmarine patrol, then spent the next two days recovering radar reflector bouys. *Hazard* began her very important task of clearing the mine fields around Kerama Retto 31 March, a task which lasted until 30 June. For as a minesweeper's slogan says "no sweep, no invasion." No amphibious assault can begin without extensive preliminary sweeps, nor can it continue without constant re-sweeping.

Okinawa now secured, *Hazard* sortied outside the southern entrance to Kerama Retto to sweep the area northeast from Okinawa in the East China Sea. Making sweeps until 14 July *Hazard* retired to Buckner Bay where she spent the remainder of the month as standby ship. She sortied with a sweeping unit 13 August for an area in the East China Sea.

With hostilities over, *Hazard* broke off operations and returned to Buckner Bay to join a group of minesweepers for the Yellow Sea and Jinsen, Korea, clearing the way for occupation ships. She next worked to clear Sasebo. Then, on 26 October 1945, *Hazard* returned to the East China Sea to finish the job she had started in August. Clearing that area 9 November she returned to Sasebo. Departing Sasebo 20 November 1945 *Hazard* sailed via Eniwetok and Pearl Harbor arriving San Diego 19 December.

Hazard departed San Diego 31 January 1946 and transited the Panama Canal to arrive Galveston 17 February. She decommissioned there 27 July 1946 and joined the Reserve Fleet. *Hazard* was reclassified MSF-240, 7 February 1955 and remains in the Texas Group, Atlantic Reserve Fleet at Orange, Tex.

Hazard received three battle stars for World War II service.

Hazel

The first *Hazel* retained her former name, while the second was named for the small tree or shrub which bears the hazelnut, or filbert.

I

(SP-1207: t. 10; l. 44'; b. 9'6"; dr. 3'3"; s. 8 k.; a. 1 1-pdr.)

Hazel (SP-1207), a small motor boat, was acquired from her owner, J. W. Mathews, Chincoteague, Va., and commissioned 1 June 1917, Chief Boatswain's Mate D. J. Jester commanding.

Assigned to the 5th Naval District, *Hazel* operated as a patrol craft and performed general harbor duties around Chincoteague Island and in Hampton Roads. She occasionally made cruises up Chesapeake Bay as far as Annapolis. *Hazel* was returned to her owner 16 January 1919.

II

(YN-24: dp. 560; l. 163'2"; b. 30'6"; dr. 11'8"; s. 12 k.; cpl. 48; a. 1 3'; cl. *Aloe*)

Hazel (YN-24), originally *Poplar* but renamed soon after keel-laying, was launched 15 February 1941 by American Shipbuilding Co., Lorain, Ohio, and was placed in service 27 October 1941. She commissioned 17 December 1942 at Newport, Lt. (j.g.) A. W. Brown commanding.

After being placed in service, *Hazel* steamed to Portsmouth, N.H., and Boston, where her outfitting was completed. She performed net laying duties at Portland, Maine, and had returned to Boston by the fateful morning of America's entry into the war, 7 December 1941. Following the attack on Pearl Harbor, the net tender was assigned to Newport, where she performed patrol duties in addition to installing and maintaining the anti-submarine net. *Hazel* commissioned in December 1942, and remained in the Narragansett Bay area, based at the Naval Net Depot, Melville, R.I. She occasionally performed patrol and fire fighting duties in addition to net tending and installation.

Hazel was redesignated AN-29, 20 January 1944 and after spending October-November 1944 at Portland, Maine, returned to Newport to train officers and men in net defenses and do experimental work for the net depot. She arrived Boston 21 February 1945 to work on the Boston harbor nets, and in the spring was assigned to the Canal Zone. *Hazel* departed Boston 20 April and arrived Cristobal 2 May 1945.

Tending nets in the Canal Zone defense system until the end of the war, *Hazel* then took on the large task of removing the intricate defenses from the Canal and its approaches. This was completed 14 October 1945 and the ship returned to its base at Coco Solo. She remained in the 15th Naval District performing miscellaneous duties at Coco Solo, Balboa, and other installations until 2 December 1957, when she departed for Florida. *Hazel* arrived Mayport 9 December and decommissioned 11 February 1958. She was placed in reserve at Green Cove Springs, where she remained until struck from the Navy List 1 September 1962.

Hazelton

A former name retained.

(SP-1770: dp. 10; l. 40'; b. 9'8"; dr. 20"; s. 20 k.; a. none)

Hazelton was built by the Great Lakes Boat Building Corp. of Milwaukee, Wis., in 1917, and was chartered by the Navy 19 September 1917 from her owner, G. B. Markle. of Hazelton, Pa. She commissioned 25 August 1918 at Newport, R.I., Coxswain S. H. Neary commanding.

Enrolled at Milwaukee, *Hazelton* was taken to Newport for fitting out and commissioning, and subsequently served the Second Naval District in the Newport area as a dispatch boat. She was returned to her owner 10 December 1918.

Hazelwood

John Hazelwood, born in England in 1726, was appointed to superintend the building of fire rafts for the protection of Philadelphia against the British during the Revolutionary War. A commissioned officer in the Pennsylvania Navy, Commodore Hazelwood commanded all units of the Pennsylvania and Continental navies participating in the defense of the Delaware River approaches to Philadelphia in 1777. His gunboats and galleys engaged British men-of-war 23 October near river obstructions; and, after the British frigate *Merlin* and ship of the line *Augusta* grounded, their crews were forced to burn them. Later Commodore Hazelwood took command of Continental vessels in Delaware Bay. In recognition of his services in the War for Independence, the Continental Congress voted him a handsome sword, now in the collection of the Naval Historical Foundation. Commodore Hazelwood died at Philadelphia 1 March 1800.

I

(DD-107: dp. 1,060 t.; l. 314'5"; b. 31.9"; dr. 8'6"; s. 35 k.; cpl. 113; a. 4 4', 2 1-pdrs., 12 21" tt.; cl. *Wickes*)

The first *Hazelwood* (DD-107) was laid down 24 December 1917 by Union Iron Works, San Francisco, Calif., launched 22 June 1918; sponsored by Miss Marian L. Neitzel; and commissioned 20 February 1919, Comdr. A. A. Corwin in command.

Following shakedown and a voyage to Norfolk for supplies, *Hazelwood* departed New York for the Mediterranean 15 April 1919. Reaching Gibraltar 9 May, she participated in training and served as escort to *Arizona* (BB-39). After cruising the Mediterranean, she departed Malta 28 July and arrived New York 13 August. Next day she got underway for her new home waters, the Pacific. Sailing via Cuba and Panama, she arrived San Francisco 5 September. After operations along the West Coast, she decommissioned at San Diego 7 July 1922.

Hazelwood recommissioned 1 April 1925, and participated in training and readiness exercises with units of the Pacific Fleet for the next 5 years. She decommissioned again 15 November 1930, at San Diego, was sold to Learner and Rosenthal 30 August 1935, and was scrapped 14 April 1936.

II

(DD-531: d. 2,050; l. 376'3"; b. 39'7"; dr. 13'; sp. 37 k.; cpl. 273; a. 5 5", 2 21" tt.; cl. *Fletcher*)

The second *Hazelwood* (DD-531) was laid down 11 April 1942 by the Bethlehem Shipbuilding Co., San Francisco, Calif., launched 20 November 1942; sponsored by Mrs. Harold J. Fosdick; and commissioned 18 June 1943, Comdr. Hunter Wood, Jr., in command.

After shakedown, *Hazelwood* departed the West Coast 5 September. Reaching Pearl Harbor 9 September, she sailed 2 days later with a fast carrier strike force under Rear Admiral C. A. Pownall in *Lexington* to launch carrier-based air strikes against Tarawa, Gilbert Islands. *Hazelwood* next joined a second fast carrier force—6 carriers, 7 cruisers, and 24 destroyers under Rear Admiral A. E. Montgomery—for strikes against Wake Island 5 and 6 October.

Returning to Pearl Harbor 11 October, the destroyer took part in intensive training to prepare for the giant amphibious drive to Japan. She joined Task Force 53 under Vice Admiral R. A. Spruance at Havannah Harbor, New Hebrides, 5 November. Departing 13 November, she took part in invasion of the Gilbert Islands 20 November. In one of the bitterest struggles during the fleet's push across the Pacific, she served on antisubmarine patrol and as standby fighter-director ship. *Hazelwood* returned to Pearl Harbor 7 December 1943 to prepare for the next operation.

As the war in the Pacific gained momentum, *Hazelwood* sortied from Pearl Harbor 22 January 1944 as part of Task Force 52 under Admiral Spruance for the invasion of

Kwajalein and Majuro Atolls in the Marshall Islands. After troops stormed ashore 31 January, she anchored in Kwajalein Harbor as primary fighter-director ship and also patrolled against enemy submarines. This objective secured, she departed Kwajalein 15 February for several months of patrol and escort duty through the Solomons and Marshalls. She also bombarded Japanese shore positions at Ungalabu Harbor and a tank farm on New Ireland.

Hazelwood next participated in the invasion of the Palaus. As the 1st Marine Division landed on Peleliu, Palau Islands, 15 September, she pounded enemy shore positions with gunfire to lessen Japanese opposition. She remained off Peleliu on patrol until 3 October, when she sailed to Seeadler Harbor, Manus Islands. There the never-resting veteran joined Vice Admiral T. C. Kinkaid's naval forces for the invasion and liberation of the Philippine Islands. As troops landed under naval cover on Leyte 20 October, *Hazelwood* came under heavy Japanese air attacks.

The next week brought constant enemy air raids and a succession of far-reaching fleet moves as the Imperial Navy made one final but futile effort to drive America out of the Philippines and regain some measure of control over the seas. In this struggle, known to history as the Battle of Leyte Gulf, the Japanese Navy was all but annihilated. Three enemy battleships, four carriers, six heavy cruisers, four light cruisers, nine destroyers, and a host of planes fell victim to America's naval prowess and determination. *Hazelwood* herself accounted for at least two kamikazes among many destroyed.

Hazelwood engaged in patrols off Leyte Gulf and gunnery and training exercises out of Ulithi during December. She then joined Vice Admiral J. S. McCain's fast carrier strike force and sailed 30 December. Carrying the war home to the enemy, the carriers launched heavy air raids against Japanese positions in the Ryukyu Islands, Formosa, Okinawa, and along the China coast from 3 to 7 January 1945. These devastating strikes also diverted Japanese attention from the Philippines, where landings were made at Lingayen Gulf 9 January. After further strikes on Japanese positions in Indochina, the hard-hitting force returned to Ulithi 26 January.

Joining another fast and mobile carrier task force, *Hazelwood* sortied 11 February to protect carriers as they launched heavy air strikes against the Japanese home islands 16 and 17 February. Swiftly shifting positions as only sea-based power can, the fleet then sped south to provide support for the landings on Iwo Jima, begun 19 February. Although under constant attack from kamikazes as well as fighters and dive-bombers, *Hazelwood* came through the invasion untouched and on the night of 25 February sank two small enemy freighters with her guns.

Returning to Ulithi 1 March, the battle-ried destroyer sailed again for action 14 March with a fast carrier force to provide air cover and shore bombardment for the invasion of Okinawa, last step before invasion of the Japanese home islands. After the invasion 1 April, *Hazelwood* operated off Okinawa on radar picket and escort patrols through intense Japanese air attacks. On 29 April the carrier group she was shepherding was attacked by kamikazes who dove out of low cloud cover.

Hazelwood, all guns blazing, maneuvered to avoid two of the Zeros. A third screamed out of the clouds from astern. Although hit by *Hazelwood*'s fire, the enemy plane careened past the superstructure. It hit #2 stack on the port side, smashed into the bridge, and exploded. Flaming gasoline spilled over the decks and bulkheads as the mast toppled and the forward guns were put out of action. Ten officers and 67 men were killed, including the Commanding Officer, Comdr. V. P. Douw, and 35 were missing. *Hazelwood*'s engineering officer, Lt. (j.g.) C. M. Locke, took command and directed her crew in fighting the flames and aiding wounded. Proceeding by tow and part way under her own power, the gallant ship reached Ulithi 5 May for temporary repairs, thence to Mare Island via Pearl Harbor 14 June for permanent repairs. *Hazelwood*

decommissioned 18 January 1946 and entered the Pacific Reserve Fleet at San Diego.

Hazelwood recommissioned at San Diego 12 September 1951, Comdr. R. M. Niles in command, and joined the enlarged fleet necessary to fight Communist aggression in Korea and to bolster the free world's strength everywhere. After shakedown she departed San Diego 4 January 1952, and reached Newport, R.I., 21 January to join Destroyer Forces, Atlantic Fleet. Operations and exercises along the East Coast and in the Caribbean, as well as hunter-killer training with carrier groups, occupied *Hazelwood* until she departed Newport for the Far East 7 December 1953.

She reached Tokyo 12 January 1954, via Pearl Harbor and spent the next few months operating with a fast carrier task force and patrolling along the Korean coast to enforce an uneasy armistice. The far-ranging destroyer returned to the States the long way, departing Hong Kong 28 May 1954 and sailing through the Suez Canal to reach Newport 17 July.

During the next few years *Hazelwood* maintained a pattern of training and readiness operations along the East Coast and in the Caribbean interspersed with deployments to the Mediterranean. During the Suez crisis in the fall of 1956 she served with the mighty 6th Fleet, patrolling the eastern Mediterranean and helping to stabilize a tense international situation.

In 1958 *Hazelwood* began extensive testing of helicopters for antisubmarine warfare both in Narragansett Bay and out of the Naval Ordnance Laboratory in Maryland. Assigned to the Destroyer Development Division, she participated in tests on equipment used with radar and electronic counter-measure systems. Her primary research and development work involved the testing of the Drone Anti-Submarine Helicopter (DASH), an example of the Navy's continuing effort to apply the technological advances of modern science for the security of our nation and the free world. *Hazelwood* provided on board testing facilities and helped make possible the perfection of DASH, an advanced and vital ASW Weapons system. In August 1963 alone the drone helicopter made 1,000 landings on the versatile destroyer's flight deck.

In addition to experimental developments, *Hazelwood* continued to engage in the many duties assigned to a destroyer. As America confronted Russia over the introduction of offensive missiles into Cuba in October 1962, she steamed again to the troubled Caribbean for anti-submarine and surveillance patrols. *Hazelwood* arrived Guantanamo Naval Base 5 November, just after the quarantine of Cuba had gone into effect and remained on guard during the crisis, serving as a Gun Fire Support Ship for Task Force 84. When the nuclear submarine *Thresher* failed to surface 10 April 1963, *Hazelwood* immediately deployed to the scene of the tragedy with scientists from the Woods Hole Oceanographic Laboratories to begin a systematic search for the missing ship.

Hazelwood resumed testing of DASH during June and later in the year conducted on board trials of the Shipboard Landing Assist Device (SLAD). She continued both developmental and tactical operations along the East Coast during the next year. She decommissioned 19 March 1965, and entered the Atlantic Reserve Fleet. At present she is berthed at Norfolk, Va.

Hazelwood received 10 battle stars for World War II service.

Healy

Howard Raymond Healy was born in Chelsea, Mass., 28 March 1899, and graduated from the Naval Academy in 1922. After serving on various ships of the fleet and as an instructor at the Naval Academy, Healy commanded *Dorsey* (DD-117) 1937-1939. After a tour at Naval Torpedo Station, Newport, R.I., Comdr. Healy reported 13 March 1941 as Damage Control Officer on board *Lexington* (CV-2). During the Battle of the Coral Sea, *Lexington* took two torpedoes and two bomb hits 8 May 1942, and despite heroic damage control could not be saved. Com-

mander Healy died on board and was posthumously awarded the Bronze Star for his courage, leadership, and professional excellence during the battle to save his ship. Commander Healy perished at his battle station.

(DD-672: dp. 2050; l. 37'6"; b. 39'8"; dr. 17'9"; s. 37 k.; cpl. 319; a. 5 5", 10 21", tt. 6 dep., 2 dct.; cl. *Fletcher*)

Healy (DD-672) was launched by Federal Shipbuilding & Dry Dock Co., Kearny, N.J., 4 July 1943; sponsored by Mrs. Howard R. Healy, widow of the namesake; and commissioned at New York Navy Yard 3 September 1943, Comdr. J. C. Atkeson in command.

After completing her shakedown cruise off Bermuda, *Healy* returned to New York 31 October. The ship departed for a week of coastal patrol 10 November, and after meeting a convoy at sea steamed into Norfolk 18 November 1943. Two days later she cleared port en route to the Pacific, and after transiting the Panama Canal arrived San Francisco 4 December. From there she proceeded to Pearl Harbor, and after arrival 11 December spent several weeks training in Hawaiian waters with carrier *Yorktown* and other ships which would become the famous Task Force 58 under Vice Admiral Mitscher.

The Navy had begun its gigantic island campaign in the Pacific with the capture of the Gilberts, and *Healy* departed 16 January 1944 for the second major operation, the capture of the Marshall Islands. Until being detached from the group 1 February, *Healy* screened carriers *Enterprise* and *Yorktown* during devastating raids on installations on the target islands, including Kwajalein. *Healy* was assigned 1 February to escort damaged battleships *Washington* and *Indiana* to Majuro, and rendezvoused with the carriers there 4 February.

Healy's next major operation was the neutralization of Truk, a major Japanese naval base in the Pacific. Departing Majuro 12 February, the carrier group attacked Truk 17-18 February with striking thoroughness, sinking or rendering useless most of the shipping and aircraft and eliminating Truk as a major threat to the allied plans. After the raid *Healy* and the carriers steamed to the Marianas, fought off several air attacks 22 February, and delivered important strikes against Saipan, Tinian, and Guam, America's next objectives in the Pacific.

Prior to the Marianas invasion, however, *Healy* screened *Enterprise* on a series of raids in the western Pacific designed to aid the coming operations. After a stop at Espiritu Santo the ships struck the Palau Islands 30 March, and after beating off Japanese air raids launched an attack on Yap and Ulithi the next day. *Enterprise* planes attacked Woleai 1 April 1944, and returned to Majuro five days later. *Healy* put to sea again 14 April to screen *Enterprise* during strikes on New Guinea, supporting operations and landings at Tanahmerah Bay. Another heavy raid on the Japanese base at Truk 29-30 April completed this highly successful operation, and she returned to Majuro 4 May.

After a period of intensive training and preparation, she departed Majuro 6 June for the invasion of the Marianas, a spectacular amphibious operation to be carried out nearly 1,000 miles from the nearest advance base, Eniwetok. Again acting as screening ship for the carriers, *Healy* supported softening-up raids 11-15 June and protected them during the period of direct support as Kelly Turner's marines went ashore 15 June. Two days later *Healy* and the other ships steamed out to join Admiral Mitscher's carrier task force as the Japanese made preparations to close the Marianas for a decisive naval battle. The great fleets approached each other 19 June for the biggest carrier engagement of the war, and as four large air raids hit the American dispositions fighter cover from the ships of *Healy's* task group and surface fire from the ships decimated the Japanese formations. With able assistance from American submarines, Mitscher succeeded in sinking two Japanese carriers in addition to inflicting fatal losses on the enemy naval air arm during "The Great Marianas Turkey Shoot" 19 June. *Healy* helped rescue pilots from downed aircraft 21 June,

and arrived Eniwetok 9 July. The Marianas invasion had been secured and the enemy threat turned back.

Getting underway again 17 June, *Healy's* carrier task force launched repeated strikes on Guam, steamed into the Carolines, and commenced strikes against the Palau 25 July. Continuing to cruise with Task Force 58, *Healy* screened the carriers during strikes on the Bonin and Volcano Islands 4-5 August before returning to Eniwetok 11 August 1944. Sailing again 28 August, the group hit the Bonins, Palau, and various targets in the Philippines until 17 September. *Healy* was detached that date and joined a carrier task group for direct support of the Pelelieu invasion, the next step on the island road to Japan.

The destroyer returned with her carrier group to Manus 21 September, and steamed to Ulithi to form an important task group for operations in the western Pacific. The giant force, numbering 17 carriers and supporting surface ships, rendezvoused at sea, and launched strikes against Okinawa 10 October. Then the carriers moved toward their real objective 12 October—Formosa. In a devastating 3 days of air attacks, carrier planes did much to destroy Formosa as a supporting base for the Japanese in the island battles to come. Japanese forces retaliated with heavy and repeated land-based air attacks. *Healy* brought down one bomber and assisted in downing many more during these attacks, in which cruisers *Canberra* and *Houston* were damaged.

After protecting the retirement of the damaged ships, *Healy* resumed her screening duties for air attacks against Philippine installations 19 October. As troops stormed ashore at Leyte for the historic return to the Philippines, *Healy* and her carrier group began direct support of the operation, blasting airfields on southern Luzon.

By 24 October it was clear that the invasion of Leyte had called forth one last giant effort on the part of the Japanese to annihilate the American fleet. Its three major fleet units moved toward the Philippines for the historic Battle for Leyte Gulf, intending to divert Halsey's carriers to the northward and strike the assault forces in the gulf a two-pronged death blow. *Healy* joined Rear Admiral F. C. Sherman's Task Group 38.3, near Luzon 24 October which was attacked early in the day by land-based aircraft. Planes of the task group struck out at the ships of Admiral Kurita in the Sibuyan Sea, sinking the giant battleship *Musashi* and damaging other heavy units, of the Japanese forces.

While two other phases of the great engagement, the Battle of Surigao Strait and the Battle off Samar, were being fought, Admiral Halsey deployed carrier forces northward to meet the powerful force under Admiral Ozawa. Making contact 25 October, the carriers, screened by *Healy* and other surface units, launched a series of strikes at the Japanese carrier group. Despite effective enemy anti-aircraft fire, the planes succeeded in sinking four carriers, and a damaged destroyer was later sunk by gunfire. The great sea battle was thus ended, with the invasion of Leyte secured and the Japanese fleet no longer an effective fighting unit.

Healy returned to Ulithi for replenishment 30 October and sailed two days later with her task group for additional strikes on the Philippines. Strikes 5 November crippled airfields on Luzon, hit shipping Manila Bay, and fought off air attacks by Japanese planes against the fleet. These operations continued until 2 December, with *Healy* splashing several of the attacking aircraft in the protection of her carriers. After a brief stay at Ulithi, the destroyer and her task group returned to Luzon for strikes against airfields 14-16 December. After riding out the terrible typhoon which sank destroyers *Hull*, *Monaghan*, and *Spence*, *Healy* searched for survivors from the lost ships before returning to Ulithi with her carrier group 24 December.

After getting underway 30 December, *Healy* and her task group moved back to the Philippines. They attacked Formosa and Luzon until 8 January 1945, and then pushed into the South China Sea for a bold demonstration of the mobility of carrier-based air power. Attacking Formosa,

Camrauh Bay, Saigon, Hong Kong, and Hainan, the ships sailed out of the South China Sea 21 January, having sunk over 130,000 tons of shipping and destroyed numerous aircraft.

The carrier forces, after another stop at Ulithi, now turned their attention to Iwo Jima. With *Healy* and other destroyers in the protective screen, carrier planes supplied close support for the invasion 19 February, and continued for 3 days before departing for strikes against Japanese home air bases. Leaving the carrier group, *Healy* next was assigned to the battleships designated to bombard Iwo Jima, and remained off the island patrolling and screening 4-27 March. She then sailed with cargo ship *Thuban* by way of Saipan and Eniwetok to Pearl Harbor, arriving 4 April 1945. From there the veteran destroyer steamed to San Francisco Bay, where she arrived 23 April.

After repairs and additional training, *Healy* again got underway for the combat zone 20 June 1945, departing the Hawaiian area 2 August with battleship *New Jersey* and other ships for the western Pacific. The destroyer arrived Guam 11 August, and en route from there to Iwo Jima heard the news that the war was over. *Healy* steamed off Japan with *Missouri* and other units preparatory to the formal surrender, then acted as harbor control vessel at Tokyo Bay until after the ceremonies, departing 5 September with passengers for the United States. She put them ashore at San Diego 21 December 1945 and sailed from California via the Panama Canal to New York, where she arrived 17 January 1946. Subsequently, she sailed to Charleston and decommissioned 11 July 1946.

Healy remained in reserve until recommissioning at Charleston 3 August 1951. After shakedown training at Guantanamo Bay, Cuba, the ship took part in training exercises including anti-submarine, air defense, and screening drills until 29 June 1953. During this time she visited various Caribbean ports and convoyed shipping to and from the Panama Canal.

Healy put to sea 29 June 1953 on a world cruise, stopping at San Diego and Pearl Harbor on the way to the Far East. The destroyer participated in operations with the 7th Fleet patrolling off Communist China, and conducted coastal patrol off Korea 3 August to 3 December 1953. Rejoining her division, she then resumed her world cruise, visiting Hong Kong, Ceylon, Egypt, Italy, and other countries before returning to Norfolk 6 February 1954. The ship spent the remainder of 1954 on a midshipman training cruise to northern Europe and on local exercises off Virginia.

The destroyer joined the 6th Fleet in 1955, sailing 5 November for the Mediterranean. She remained with the fleet protecting allied interests in that area until 26 February 1956, when she returned to Norfolk. After another cruise training midshipmen, which took her to northern Europe again, the ship returned to Annapolis 31 July 1956. *Healy* then participated in local operations, spent a month as training ship for Naval Mine Warfare School, Yorktown, Va., and arrived Norfolk 19 March 1957. Moving to Philadelphia, the ship decommissioned 11 March 1958, where she remains in reserve through 1967.

Healy received eight battle stars for World War II service.

Heath Hen

A black grouse.

(AMc-6: dp. 270; l. 94'4"; b. 22'; dr. 8'6"; s. 9 k.; cpl. 16)

Heath Hen (AMc-6) a wooden dragger, was built in 1936 by A. D. Storey, Fairhaven, Mass., as *Noreen*; acquired by the Navy 18 October 1940 and renamed *Heath Hen* (AMc-6); converted to a coastal minesweeper and commissioned 20 January 1941.

The small ship served in the 5th Naval District until 16 March 1944 when she arrived Provincetown, Mass., for duty with the Naval Mine Test Facility. Redesignated small boat C-13538, her name was dropped and she served as C-13538 in mine warfare experiments until damaged by an oil explosion 16 March 1945. She was subsequently turned over to the Maritime Commission and sold 10 May 1948.

Heather

Former name retained.

(LHT: dp. 731; l. 165'; b. 28'6"; dr. 8'; s. 11.5 k.; cpl. 26)

Heather was one of the lighthouse tenders taken over by the Navy 11 April 1917. In addition to performing her regular lighthouse duties she was listed for Pacific patrol along the Washington coast. The tender also participated in work on submarine nets and drill in mine laying. *Heather* was returned to the Lighthouse Service in compliance with an order dated 1 July 1919.

Heavy Moon, see *YP-573*

Hebe

A former name retained.

(SP-966: dp. 20; l. 52'; b. 15'7"; dr. 3'; s. 9 k.; a. 1 mg.)

Hebe, a small motor boat, was built by George Bishop, Patchogue, Long Island, N.Y., in 1912; leased by the Navy 19 May 1917 from her owner, Edwin Thorne, of New York City; and commissioned 1 August 1917 at Brooklyn Navy Yard, Ens. W. L. Suydam, Jr., USNRF, in command.

Assigned to section patrol duties with the 3d Naval District, *Hebe*, based at Sayville, N.Y., cruised in the Great South Bay and Fire Island region of southern Long Island until returned to her original owner 14 December 1918.

Hecate

In Greek mythology, a goddess of the earth, moon, and underground realm of the dead, later considered the goddess of sorcery and witchcraft.

The light draft monitor *Etlah* (q.v.) was renamed *Hecate* 15 June 1869 while laid up in an unfinished condition at Mound City, Ill.

Hecla

I

(Bomb brig: 194 t.)

Hecla was purchased at New York in 1846. She commissioned there on 9 March 1847, Lt. Archibald B. Fairfax commanding.

The day after commissioning, *Hecla* sailed for the Gulf of Mexico to support American actions during the Mexican War. She arrived off the island of Sacrificio, near Vera Cruz, on the morning of 29 March, just in time to see the Mexican city fall to American forces that evening. From Vera Cruz *Hecla* was dispatched with other ships of the American squadron to patrol the Gulf of Mexico along the Mexican coast, stopping and searching all ships encountered. On 18 April, during this first patrol, she contributed 25 men and 4 officers to a successful amphibious expedition against the Mexican city of Tuxpan. Her first patrol in the Gulf ended on 24 April as she came to anchor off the Bar of Santander. *Hecla* made three more similar patrols in the summer of 1847, frequently stopping at various Mexican ports and sending men ashore for water and provisions.

On 15 August *Hecla* shifted upriver to anchor in the harbor of Alvarado, where she served as a harbor patrol vessel

until the end of the Mexican War. She was especially vigilant for small canoes attempting to smuggle illegal supplies and ammunition up the river, seizing several.

With the end of the war, *Hecla* sailed for the United States on 20 July 1848, arriving in Norfolk on 15 August and continuing to New York on 4 September. She decommissioned there 9 September and was sold shortly thereafter.

II

Former *Shakamaxon* (q.v.). Name changed to *Hecla* 15 June 1869. Name changed to *Ncbraska* 10 August 1869.

Hecla, see YF-547

Hecla, see *Xanthus* (AR-19)

Hector

In the *Iliad*, one of Priam's 50 sons. Husband of Andromache, Hector was bravest of the Trojans. He slew Patrocles and was in turn slain by Achilles.

I

Hector, formerly *Pedro*, was built in 1883. Taken as a prize during the Spanish-American War, she commissioned at Key West 22 June 1898, Lt. W. L. Burdick in command.

From 10 to 20 July *Hector* made a patrol out of Key West up the Gulf of Mexico to Tampa and back to Key West. She sailed for Boston 24 July and arrived there a week later. *Hector* decommissioned at Boston 17 September 1898 and was sold 10 October 1899.

II

(AC-7: dp. 11,230; l. 403'; b. 53'; dr. 24'8"; s. 12 k.; cpl. 82)

Hector (AC-7) was launched 3 July 1909 by the Maryland Steel Co., Sparrows Point, Md.; and commissioned 22 October 1909. She was on special service with the Atlantic Fleet from commissioning through 1913, when she was stationed at Norfolk. From there *Hector* served as a fuel ship, ferrying freight and fuel up the East Coast and down to the Caribbean, especially Guantanamo and Santo Domingo. *Hector* was wrecked off the Atlantic coast 14 July 1916 and sank 3 days later.

III

(AR-7: dp. 9,140; l. 529'5"; b. 73'4"; dr. 23'4"; s. 19 k.; cpl. 1,108; a. 4 5", 8 40mm.; cl. *Vulcan*)

Hector (AR-7), a modified Liberty ship, was launched 11 November 1942 by the Los Angeles Shipbuilding & Drydock Co.; sponsored by Mrs. Schuyler F. Heim; and commissioned 7 February 1944, Comdr. J. W. Long in command.

After shakedown along the West Coast, the new repair ship sailed for the Pacific, reaching Pearl Harbor 9 April 1944. She remained at Pearl Harbor effecting repairs on various ships, primarily landing craft, until she departed for Eniwetok 5 June. Arriving there 13 June, *Hector* spent the summer at Eniwetok and then sailed for Ulithi 30 September. Her biggest repair job of the war came to her 27 October at Ulithi as the cruiser *Houston*, torpedoed twice by Japanese submarines, was towed alongside. Although hampered by a severe typhoon season which twice sent her out to sea for safety, *Hector* managed to repair *Houston* by the end of the year besides aiding many other smaller craft.

Hector departed Ulithi 16 February 1945 and 5 days later steamed into Tarragona, Leyte Gulf, to repair ships as the battle for the Philippines raged. This task completed, she returned to Ulithi 30 March and continued on to Saipan 22 May. After the long war ended 1 Sep-

tember, *Hector* remained in the Pacific to prepare various ships for return to the States.

Departing Saipan 21 January 1946, *Hector* reached Long Beach 3 February. After serving as a repair ship there, she sailed for her first WestPac cruise 7 May 1947, thereby settling into a peacetime schedule interrupted 3 years later by the outbreak of war in Korea. *Hector* sailed into Yokosuka 18 September 1950. From there she continued to Inchon, Korea, arriving at the scene of a brilliant amphibious operation, 25 September. For the remainder of the Korean War *Hector* alternated repair service along the Korean coast and in Japan with normal duty out of Long Beach.

Thereafter, as before the Korean conflict, *Hector* alternated 4 to 6 months of service and exercises along the California coast with 6- and 8-month WestPac cruises. During these cruises the repair ship, operating in support and service of the nation's far-flung Pacific and Asian defenses, visited such ports as Yokosuka, Hong Kong, Shanghai, Guam, and Eniwetok. Serving intermittently as flagship for both Service Squadrons 1 and 3, *Hector* also was a major participant in the Navy's "People-to-People" program in Asia. Her deployments to the Western Pacific continued into the 1960's.

Hector operated in the Far East from Japan to the Philippines between June 1963 and January 1964. After providing repair services for ships at Long Beach during the remainder of 1964 and the first 6 months of 1965, she underwent a modernization overhaul at Long Beach between July 1965 and February 1966 to increase her repair capabilities. Thence, she resumed fleet services out of Long Beach until departing for the Far East 5 August. She arrived Subic Bay later that month, and during the next 6 months repaired and serviced ships in the Philippines, Taiwan, and Japan. She returned to the West Coast in March 1967; and into mid-1967 *Hector* continued to maintain a high state of readiness and provide repair services at Long Beach.

Hecuba

A minor planet between Jupiter and Mars.

(AKS-12: dp. 5,244; l. 441'6"; b. 56'11"; dr. 28'4"; s. 12 k.; cpl. 193; a. 15", 43"; cl. *Acubens*)

Hecuba (AKS-12), originally liberty ship *George W. Cable*, was launched by Delta Shipbuilding Co., New Orleans, La., 6 November 1944 under Maritime Commission contract; sponsored by Mrs. J. Alfred Chard; acquired and converted to Navy use at Todd-Johnson Drydocks Corp.; and commissioned 21 April 1945, Comdr. N. H. Castle in command.

Following her conversion to a stores ship and shake-down training, *Hecuba* departed New Orleans 31 May 1945 for duty in the Pacific, arriving Pearl Harbor 22 June. From Hawaii she sailed to the western Pacific, commencing her first issue to the fleet after her arrival at Eniwetok 16 July. *Hecuba* arrived back in Pearl Harbor 18 August to reload general supplies for ships of the fleet. She sailed to Ulithi, arriving 10 September, and continued issuing the vital stores at that atoll as well as at Leyte and Okinawa until 28 November 1945. *Hecuba* departed for San Francisco for additional supplies, only to return to Pearl Harbor 8 February 1946. She decommissioned at Pearl Harbor 26 March 1946 and was intended for use in the Pacific atomic tests of that summer, only to be towed to San Francisco in 1947 and placed in the National Defense Reserve Fleet, Suisun Bay, Calif., where she remained until sold for scrapping to Schintzer Steel Products Co., Portland, Oreg., 19 October 1964.

Heed

Attention or regard.

(AM-100: dp. 890; l. 221'2"; b. 32'; dr. 10'; s. 18 k.; cpl. 105; a. 1 3", 2 40mm., 6 20mm., 2 dct., 5 dcp.; cl. *Auk*)

Hecd (AM-100) was launched 19 June 1942 by the General Engineering & Dry Dock Co., Alameda, Calif.; and commissioned 27 February 1943, Lt. J. J. Lind in command.

After shakedown out of San Diego *Hecd* sailed 24 April for the Aleutians where she took up patrolling station then acted as escort for convoys sailing to and from Alaskan ports. After minesweeping operations out of Dutch Harbor, Alaska, she sailed for Pearl Harbor 1 December and took up duty there until 22 January 1944 when she joined Rear Admiral R. L. Conolly's Northern Attack Force for the Marshall Islands Operations (29 January-23 February 1944). *Hecd* screened the transports until they entered Kwajalein Lagoon 31 January for the initial landings then began her sweep of the anchorage areas. Screening, minesweeping operations and hydrographic work kept *Hecd* busy until 31 March when she sailed for Pearl Harbor.

After escort duties at Pearl Harbor, *Hecd* joined Vice Admiral Turner's Northern Attack Force as a unit of the Minesweeping and Hydrographic Survey Group for capture of Marianas' Saipan and Tinian (June-August 1944). After screening *Louisville* during fire support missions off the southern coast of Saipan, *Hecd* patrolled between Saipan and Tinian and subsequently for the next 7 months screened convoys between the Marshalls, the Carolines, and Marianas.

Hecd sortied from Ulithi 19 March 1945 as a unit of Admiral Blandy's Amphibious Support Force for the capture of Okinawa (14 March-30 June 1945). After sweeping operations off Okinawa, she acted as patrol and escort ship until 28 April when she sailed for the United States via Pearl Harbor, arriving Seattle 24 May.

With the newest of sweep gear, *Hecd* sailed again for the Western Pacific, arriving Eniwetok 9 October via the Johnston Islands. She carried out minesweeping operations at Okinawa, Sasebo, Formosa, and the East China Sea before returning to San Diego 9 February 1946. *Hecd* remained at San Diego and decommissioned there 15 January 1947, joining the Pacific Reserve Fleet.

Hecd recommissioned 5 March 1952, Lt. E. N. Robinson, in command.

Departing San Diego 12 May, she transited the Panama Canal and arrived Charleston 6 June. Between June 1952 and November 1953 *Hecd* operated out of Charleston and Norfolk, making one deployment to the Mediterranean (6 January-21 May 1953) and a cruise to Quebec, Canada (3-29 August 1953). Departing Charleston 16 November she sailed to Orange, Tex., and decommissioned there 27 January 1954 and once again joined the Reserve Fleet. Reclassified MSF-100 on 7 February 1955, *Hecd* remained at Orange, Tex., until struck from the Navy List 1 March 1967.

Hecd received five battle stars for World War II service.

Heekon

A Delaware Indian word meaning "ebb tide."

(YT-141: dp. 325; l. 100'; b. 25'; dr. 9'7")

Heekon (YT-141), a diesel-powered tug, was launched by Charleston Navy Yard 29 November 1939; sponsored by Miss Margaret L. Pence; and placed in service 22 March 1940.

Heekon operated at Washington, D.C., during World War II. She was reclassified YTB-141, 15 May 1944 and YTM-141 in February 1962. Following the war she continued to serve as a harbor tug in the Potomac River Naval Command until being sold in early 1963 to Hughes Bros. & Co., New York.

Heermann

Lewis Heermann, born in Kassel, Germany, 3 August 1779 was commissioned Surgeon's Mate in the United States Navy 8 February 1802. On 16 February 1804, during the War with the Barbary States, Stephen Decatur left Heermann in command of the bomb ketch *Intrepid*

while he and a fearless band of American seamen boarded the captured frigate *Philadelphia* in Tripoli Harbor, swept her Barbary captors crew overboard, and set the frigate ablaze.

When hostilities with the Barbary States closed in 1805, Heermann returned to the United States but soon took leave of absence to study in Europe until 1808 when he returned to active duty in Norfolk, Va. Largely due to his pleas for better medical care for the men of the Navy, Congress passed a bill authorizing the construction of hospitals at several naval stations, but the first official U.S. Naval Hospitals were not actually built until after Dr. Heermann's death.

He was transferred to New Orleans in August 1811; and, with the exception of a year in the North for his health and an assignment 11 June 1830 in the Mediterranean where he served for an unknown time as Fleet Surgeon of the U.S. Squadron, he remained there until he died in May 1833.

(DD-532: dp. 2,100; l. 376'3"; b. 39'8"; dr. 13'; s. over 30 k.; cpl. 273; a. 5 5', 10 21" tt., 6 dcp.; 2 dct.; cl. *Fletcher*)

Heermann (DD-532) was launched 5 December 1942 by the Bethlehem Shipbuilding Co. of San Francisco; sponsored by Mrs. Edward B. Briggs, wife of Lt. E. B. Briggs, USCGR, great grandson of the namesake; and commissioned 6 July 1943, Cmdr. Dwight M. Agnew, USN, in command.

After shakedown training out of San Diego, *Heermann* joined the 5th Fleet 21 October 1943 for the assault on the Gilbert Islands the second major offensive thrust in the Navy's conquest of Japan's far-flung Pacific empire. She arrived off Tarawa in Rear Admiral Harry W. Hill's Southern Attack Force 20 November. Her guns sank a small enemy craft inside the lagoon and the next 2 days powerfully assisted troops ashore with close-in fire support. With the island secured, she returned to Pearl Harbor for voyage repairs and training which ended 23 January when she sailed in the screen of an attack transport reserve force. The ships steamed east of Kwajalein while Rear Admiral Turner's Joint Expeditionary Force landed on that atoll 31 January. In the ensuing 2 weeks *Heermann* patrolled off Kwajalein and operated in the screen of escort carriers which were launching strikes in support of troops ashore. Then she steamed to Eniwetok Atoll where she joined in the preinvasion bombardment of Japan and Parry Islands, gave close fire support to the troops once they were ashore, and then patrolled off the atoll during mop-up operations.

Heermann set course first for Majuro Lagoon and then Purvis Bay, Florida Island, Solomons and reported to Commander 3d Fleet and Task Force 39, 18 March 1944. For the next month she divided her time between protecting troop and resupply convoys which were occupying Emirau Island and hunting enemy supply barges along the coast of New Hanover.

Back in Port Purvis 3 June, *Heermann* participated in the bombardment of a tank farm on Fangelawa Bay, New Ireland, 11 June, and then searched for submarines along sealanes leading from the Solomons towards the Admiralties, the Carolines, and the Marshall Islands until 26 June. The summer of 1944 found *Heermann* busy escorting Navy and Merchant shipping to rendezvous where they joined convoys bound for various ports. This duty took her to Espiritu Santo, New Hebrides Islands and Noumea, New Caledonia Island.

Heermann cleared Port Purvis 6 September 1944 with Rear Admiral William D. Sample's escort carrier force that provided air support during the invasion of the Palau Islands. After replenishing at Seeadler Harbor, Admiralty Islands, she sortied 12 October 1944 with a fire support group for the liberation of the Philippine Islands.

Heermann screened transports and landing ships safely to the beaches of Leyte and then joined Rear Admiral Thomas L. Sprague's Escort Carrier Group (Task Group 77.4) which was made up of three escort carrier task units, known as the "Three Taffies" because of their voice

calls: "Taffy 1", "Taffy 2", and "Taffy 3". Destroyers *Hoel* and *Johnston* joined her in screening Rear Admiral Clifton A. F. Sprague's unit, "Taffy 3" which also included his flagship *Fanshaw Bay* (CVE-70) and three other escort carriers.

Dawn of 25 October 1944 found "Taffy 3" east of Samar steaming north as the Northern Air Support Group. "Taffy 2" was in the central position patrolling off the entrance to Leyte Gulf, and "Taffy 1" covered the Southern approaches to the Gulf some 130 miles to the southeast of Heermann's "Taffy 3". At 0645 "Taffy 3's" lookouts observed anti-aircraft fire to the northward and within 3 minutes were under heavy fire from Japanese Admiral Kurita's powerful Center Force of four battleships, 6 heavy cruisers, 2 light cruisers, and 11 destroyers. The battle off Samar was thus joined.

The only chance for survival of the little group of light American ships lay in slowing the advances of the enemy warships while withdrawing toward Leyte Gulf and hoped-for assistance. The carriers promptly launched their planes to attack the Japanese vessels, and the escorts promptly set to work generating smoke to hide the American ships.

Heermann, in a position of comparative safety on the disengaged side of the carriers at the start of the fight, steamed into the action at flank speed through the formation of "baby flattops" who, after launching their last planes, formed a rough circle as they turned toward Leyte Gulf. Since smoke and intermittent rain squalls had reduced visibility to less than 100 yards, it took alert and skillful seamanship to avoid colliding with friendly ships during the dash to battle. She backed emergency full to avoid destroyer escort *Samuel B. Roberts* and repeated the maneuver to miss destroyer *Hoel* as *Heermann* formed column on the screen flagship in preparation for a torpedo attack.

As she began the run, dye from enemy shells daubed the water nearby with circles of brilliant red, yellow, and green. *Heermann* replied to this challenge by pumping her 5-inch shells at one heavy cruiser, *Chikuma*, as she directed seven torpedoes at another, *Haguro*. When the second of these "fish" had left the tube, *Heermann* changed course to engage a column of four battleships whose shells began churning the water nearby. She trained her guns on *Kongo*, the column's leader, at whom she launched three torpedoes. Then she quickly closed *Haruna*, the target of her last three torpedoes, which were launched from only 4,400 yards. Believing that one of the "fish" had hit the battleship, she nimbly dodged the salvos which splashed in her wake as she retired. Japanese records claim that the battleship successfully evaded all of *Heermann's* torpedoes, but they were slowed down in their pursuit of the American carriers. The giant, *Yamato*, with her monstrous 18.1-inch guns, was even forced out of the action altogether when, caught between two spreads, she reversed course for almost 10 minutes to escape being hit.

Heermann sped to the starboard quarter of the carrier formation to lay more concealing smoke and then charged back into the fight a few minutes later, placing herself boldly between the escort carriers and the column of four enemy heavy cruisers. Here she engaged Japanese cruiser *Chikuma* in a duel which seriously damaged both ships. A series of 8-inch hits flooded the forward part of the plucky destroyer, pulling her bow down so far that her anchors were dragging in the water. One of her guns was knocked out but the others continued to pour a deadly stream of 5-inch shells at the cruiser, which also came under heavy air attack during the engagement. The combined effect of *Heermann's* guns and the bombs, torpedoes, and strafing from carrier-based planes was too much for *Chikuma* who tried to withdraw but sank during her flight.

As *Chikuma* turned away, heavy cruiser *Tone* turned her guns on *Heermann* who replied shell for shell until she reached a position suitable to resume laying smoke for the carriers. At this point plants from Admiral Stump's "Taffy 2" swooped in to sting *Tone* so severely

that she too broke off action and fled. The courageous attacks of the destroyers and aircraft thus saved the out-gunned task groups.

Heermann retired to Kossol Passage for temporary repairs before getting underway for Mare Island and overhaul which was completed 15 January 1945. She then returned to the Western Pacific to join fast carrier task forces in raids against the Japanese mainland which helped to demoralize the Japanese people and to prepare them for surrender. During the fighting to take Iwo Jima, *Heermann* supported operations ashore by radar and antisubmarine picket duty. On 20 March 1945 she sank a small surface vessel and rescued seven of her crew after she went down. Seven days later she took part in the night bombardment of Minamo Daito Jima. During the Okinawa campaign she took several enemy planes under fire as she guarded carriers which provided air support for troops ashore. On 18 April with the assistance destroyers *Mertz*, *McCord*, *Collett*, and *Uhlmann* and planes from aircraft carrier *Bataan*, *Heermann* sank Japanese submarine *I-56*, a carrier of the dreaded "kaitens", human-guided suicide torpedoes. She continued to support carrier operations off Okinawa until retiring to Leyte Gulf for replenishment and voyage repairs late in June. On 1 July she helped to screen the fast carrier force which devoted the ensuing 5 weeks to almost continuous air strikes and bombardment.

On 15 August 1945 *Heermann* was on radar picket station some 200 miles southeast of Tokyo when, several hours after the announcement of the end of hostilities, a suicide plane emerged from a cloud bank and began to dive in *Heermann's* direction only to be splashed by the destroyer's alert gunners in one of the final naval actions of World War II. In the following weeks *Heermann* operated in the screen of the fast carrier task force providing air cover and air-sea rescue service while General MacArthur and Admiral Nimitz were preparing to occupy Japan. She entered Tokyo Bay 16 September 1945 and remained in the area to support the occupation forces until 7 October when she sailed for the United States. She decommissioned at San Diego 12 June 1946.

Heermann remained in reserve at San Diego until recommissioning 12 September 1951. After training in local waters and upkeep in San Francisco, she departed San Diego 4 January 1952 for her new base, Newport, R.I., where she arrived 23 January. She spent the year 1952 training in waters stretching from the New England coast to the Virginia Capes, followed by intensive antisubmarine warfare and fleet problems during winter cruising in the Caribbean. She returned to Newport to resume operation along the Northeastern seaboard. After a voyage to Plymouth, England, in June and July 1953, she participated in antisubmarine maneuvers between Newport and the Virginia capes.

Heermann departed on a world cruise 3 December 1953. First she sailed for Yokosuka, Japan, by way of the Panama Canal, San Diego, and the Hawaiian Islands. After a 2-day replenishment in Yokosuka, she set course for Okinawa where she acted as part of the escort for 3d Marine Division amphibious warfare landings and conducted barrier patrol in support of the exercise. After more maneuvers took her to Korea, Iwo Jima, and the South Coast of Japan, she returned to Yokosuka which she cleared 22 May 1954 to resume her world cruise, calling at Hong Kong and Singapore on her way to the Suez Canal. In the Mediterranean she visited Port Said, Naples, Villa Franche, and Barcelona before returning to Newport 17 July 1954.

For the next year and a half *Heermann* participated in training exercises along the Atlantic coast. On 1 February she sailed to join the 6th Fleet in exercises along the coast of Lebanon, Israel and Egypt. In April she was invited by Prince Ranier to be in port for his wedding to Miss Grace Kelly 19-24 April 1956. She furnished a 40-man honor guard for the occasion. From Monaco she joined the 6th Fleet off Greece, and then departed for Fall River, Mass., where she arrived 28 May 1956. *Heer-*

mann operated out of Newport until 6 November when she sailed for the Mediterranean where she proved to be a first-rate antisubmarine ship in joint exercises with the Italian Navy. After revisiting Monaco at the invitation of Prince Ranier and Princess Grace, she returned to Fall River 20 February 1957. She served as gunnery school-ship out of Newport until 30 June when she joined *Badger* in the screen of antisubmarine warfare carrier *Lcyte* for 2 weeks of air operations for the training of Academy midshipmen. She decommissioned at Boston 20 December 1957 and was assigned to the Boston Group of the U.S. Atlantic Reserve Fleet. On 14 August 1961 she was transferred on a loan basis to the government of Argentina under terms of the Military Assistance Program. She serves in the Argentine Navy under the name *Brown* (D-20).

In addition to the Presidential Unit Citation, *Heermann* received the Philippine Republic Unit Citation Badge and nine battle stars for World War II service.

Helen B., see *YP-92*

Helen Baughman

A former name retained.

(SP-1292 : dp. 50 ; l. 66'8" ; b. 18'6" ; dr. 4'9")

Helen Baughman, a schooner, was built by Bowns of Nanticoke, Md., in 1894 ; and taken over by the Navy in August 1917 from her owner, the Maryland State Conservation Commission.

Helen Baughman was assigned to the 5th Naval District, and was used for patrol of Chesapeake Bay. Based at Deale, Md., she cruised Herring Bay, Tangier Sound and surrounding areas until being returned to her owner 27 November 1918.

Helen C., see *YP-470*

Helen Euphane

A former name retained.

(SP-403 : dp. 178 ; l. 120' ; b. 20'4" ; dr. 7'3" ; s. 10 k. ; a. 1 1-pdr.)

Helen Euphane, a Menhaden fishing boat, was built by E. J. Tull, Pocomoke City, Md., in 1902 ; purchased from her owners, Eubank Tankard Co., Kilmarnock, Va., 23 May 1917 ; and delivered 5 June 1917. Her first commanding officer was Lt. (j.g.) Rowland G. Foster, USNRF.

Assigned to the 5th Naval District as a minesweeper and patrol boat, *Helen Euphane*, based at Norfolk, operated in Hampton Roads and lower Chesapeake Bay until she was sold back to her original owners 15 April 1919.

Helena

Three outstanding vessels have been named for *Helena*, capital city of Montana.

I

(Gbt. l. 250'9" ; b. 40'11" ; dr. 9' ; a. 4 4" r., 4 6-pdrs., 4 11-pdrs., 1 3" r.)

The first *Helena* was launched by the Newport News Shipbuilding Co., Newport News, Va., 30 January 1896 ; sponsored by Miss Agnes Belle Steele, daughter of the mayor of Helena ; commissioned at New York Navy Yard 8 July 1897, Comdr. W. T. Swinburne in command.

Helena's first assignment was with the North Atlantic Fleet, cruising primarily in home waters. During the Spanish-American War, she stood by in Cuban waters, where she saw action several times. On 2 and 3 July 1898 she exchanged fire with enemy batteries at Fort Tumas. On 18 July she was part of the squadron which closed the port of Manzanillo by sinking or destroying eight small vessels there during a vigorous attack.

The great problem facing the United States at the close of the Spanish-American War was the Philippine Insurrection. To aid in suppressing this rebellion, *Helena* sailed from Boston 3 November 1898, bound for duty on the Asiatic Station, via the Suez Canal, arriving Philippines 10 February 1899. On 21 May 1899 she was present at the evacuation of Jolo by the Spanish and the landing of American troops to replace them. During June she stood by with other vessels in Manila Bay to support the Army during its offensive south of Manila into Cavite Province. One of her landing parties brought troops ashore in an assault which carried strong defenses along the Zapote River 13 June. On 7 November 1899, *Helena* bombarded San Fabian in Lingayen Gulf, and covered the landing of 2,500 troops there. Just 45 years later, American troops would once more storm those beaches while American naval guns boomed in support.

Helena remained in the Far East for the rest of her naval service, engaged in protecting American lives and interests. She served in Chinese waters from October 1900 until December 1902, then returned to the Philippines until March 1903 when she sailed back to the China coast. In December 1904, she moored once more at Cavite in the Philippines, where she was placed out of commission 19 April 1905.

Helena recommissioned 16 July 1906, and cruised on the Asiatic Station until June 1907. From that time on, with intervals for overhaul, *Helena* served both with the South China patrol and Yangtze River Patrol. She was placed in reduced commission 29 June 1929, but continued to serve on the South China Patrol until 27 May 1932 when she was decommissioned and struck from the Navy list. She was sold 7 July 1934.

II

(CL-50 : dp. 10,000 ; l. 608'4" ; b. 61'8" ; dr. 19'10" ; s. 33 k. ; cpl. 888 ; a. 15 6" ; 8 5" , 8 .50 cal.)

The second *Helena* (CL-50), was launched 27 August 1939 by the New York Navy Yard ; sponsored by Miss Elinor Carlyle Gudger, granddaughter of Senator Thomas J. Welch of Montana ; and commissioned 18 September 1939, Captain Max B. Demott in command.

Helena, assigned to the Pacific Fleet, was at Pearl Harbor on 7 December 1941, when the Japanese attacked. She was moored at 1010 Dock Navy Yard on the east side of the harbor ; outboard was minesweeper *Oglala*. By chance *Helena* was in the berth normally assigned to *Pennsylvania* ; and this became a prime target for the Japanese planes.

Within 3 minutes of the time the first bomb of the attack fell on Ford Island, a lone torpedo plane launched a torpedo that passed under *Oglala*, and hit *Helena* on the starboard side almost amidships, just as the crew raced to battle stations. One engine room and one boiler room were flooded. Wiring to the main and 5-inch batteries was severed, but prompt action brought the forward diesel generator up within 2 minutes, making power available to

USS *Helena* in a mud dock on the Liao River, China, during the winter of 1903 and 1904

all mounts. Immediately, they sent up a heavy fire that keep her free of further damage. Outstanding damage control work, and the fact that watertight integrity was promptly insured by the closing of the doors and hatches throughout the ship, kept *Helena* afloat. Many times later she gave the Japanese occasion to regret their failure to sink her that first day of the war.

After preliminary overhaul at Pearl Harbor, *Helena* steamed to Mare Island Navy Yard for permanent repairs. In 1942, she sailed to enter action, escorting a detachment of SeaBees and an aircraft carrier rushing planes to the South Pacific. She made two quick dashes from Espiritu Santo to Guadalcanal, where the long and bloody battle for the island was then beginning, and having completed these missions, joined the Task Force formed around *Wasp* (CV-7).

This Task Force steamed in distant support of six transports carrying Marine reinforcements to Guadalcanal. On 15 September 1942, in mid-afternoon *Wasp* was suddenly hit by three Japanese torpedoes. Almost at once, she became an inferno. *Helena*, her guns blazing, stood by to rescue nearly 400 of *Wasp*'s officers and men, whom she took to Espiritu Santo.

Helena's next action was near Rennell Island, again in support of a movement of transports into Guadalcanal. Air attacks from Henderson Field had slowed down the

Tokyo Express for several days, so 11 October 1942 the Japanese poured everything they could deliver against the airstrip, hoping to neutralize air operations long enough to bring heavy troop reinforcements during the night. The Japanese fleet closed and by 1810 was less than 100 miles from Savo Island.

Helena, equipped with superior radar, was first to contact the enemy and first to open fire at 2346. When firing had ceased in this Battle of Cape Esperance in Iron Bottom Sound, *Helena* had sunk cruiser *Furutaka* and destroyer *Fubuki*.

Helena was next under attack on the night of 20 October 1942 while patrolling between Espiritu Santo and San Cristobal. Several torpedoes exploded near her but she was not hit.

Helena saw the climatic Naval Battle of Guadalcanal from its beginning when she was assigned the job of escorting a supply echelon from Espiritu Santo to Guadalcanal. The ship made rendezvous with the convoy of transports off San Cristobal 11 November 1942, and brought it safely into Guadalcanal. During the afternoon of 12 November, word came from a coast watcher, "enemy aircraft approaching." Immediately suspending unloading operation, all ships stood out to form an anti-aircraft disposition. When the attack came, superb maneuvering of the force, and its own anti-aircraft fire,

broke up the first attack but the second damaged two ships. *Helena* came through without a scratch, and the task group brought down eight enemy planes in the 8-minute action.

As unloading resumed, an increasing stream of reports flowed in from patrolling aircraft. Ominously, the Japanese forces sighted contained no transports, and their intention was thus read as one of being pure offense. *Helena*, still steaming with Rear Admiral Daniel Callaghan's Support Group, aided in shepherding the transports away from Guadalcanal, then reversed course to fateful "Ironbottom Sound." The night of Friday, 13 November, *Helena's* radar first located the enemy. In the action that followed, the tropical night was lit again and again by the flashes of her big guns. She received only minor damage to her superstructure during the action. Daylight found a tragic scene in the grisly slot. The weaker American fleet had achieved the goal at heavy cost. Great valor had turned back the enemy and prevented the heavy attack that would have been disastrous to the Marine troops ashore.

Helena found a measure of revenge when she was assigned to the several bombardments of Japanese positions on New Georgia during January 1943. Her guns rocked the enemy at Munda and Vila Stanmore, leveling vital supply concentrations and gun emplacements. Continuing on patrol and escort in support of the bitter Guadalcanal operation through February, one of her float planes shared in the sinking of Japanese submarine RO-102 11 February 1943. After overhaul in Sydney, Australia, she was back at Espiritu Santo in March to participate in bombardments of New Georgia, soon to be invaded. The first goal on New Georgia proper was Rice Anchorage. In the force escorting the transports carrying the initial landing parties, *Helena* moved into Kula Gulf just before midnight 4 July, and shortly after midnight on the 5th, her big guns opened up in her last shore bombardment.

The landing of troops was completed successfully by dawn, but in the afternoon of 5 July 1943, word came that the Tokyo Express was ready to roar down once more and the escort group turned north to meet it. By midnight 5 July, *Helena's* group was off the northwest corner of New Georgia, three cruisers and four destroyers composing the group. Racing down to face them were three groups of Japanese destroyers, a total of ten enemy ships. Four of them peeled off to accomplish their mission of landing troops. By 0157 *Helena* began blasting away with a fire so rapid and intense that the Japanese later announced in all solemnity that she must have been armed with 6-inch machine guns. Ironically, *Helena* made a perfect target when lit by the flashes of her own guns. Seven minutes after she opened fire, she was hit by a torpedo; within the next 3 minutes, she was struck by two more. Almost at once she began to jackknife. Below, she was flooding rapidly even before she broke up. In a well-drilled manner, *Helena's* men went over the side.

Helena's history closes with the almost incredible story of what happened to her men in the hours and days that followed. When her bow rose into the air after the sinking, many of them clustered around it, only to be fired on there. About a half hour after she sank, two American destroyers came to the rescue.

At daylight, the enemy was in range once more, and again the destroyers, *Nicholas* (DD-449) and *Radford* (DD-446), broke off their rescue operations to pursue. Anticipating an air attack, the destroyers withdrew for Tulagi, carrying with them all but about 275 of the survivors. To those who remained they left four boats, manned by volunteers from the destroyers' crews. Captain C. P. Cecil, *Helena's* commanding officer, organized a small flotilla of three motor whaleboats, each towing a liferaft, carrying 88 men to a small island about 7 miles from Rice Anchorage after a laborious all-day passage. This group was rescued the next morning by *Gwin* (DD-433) and *Woodworth* (DD-460).

For the second group of nearly 200, the bow of *Helena* was their liferaft, but it was slowly sinking. Disaster

was staved off by a Navy Liberator that dropped life-jackets and four rubber lifeboats. The wounded were placed aboard the lifeboats, while the able-bodied surrounded the boats and did their best to propel themselves toward nearby Kolombaranga. But wind and current carried them ever further into enemy waters. Through the torturous day that followed, many of the wounded died. American search planes missed the tragic little fleet, and Kolombaranga gradually faded away to leeward. Another night passed, and in the morning the island of Vella Lavella loomed ahead. It seemed the last chance for *Helena's* men and so they headed for it. By dawn, survivors in all three remaining boats observed land a mile distant and all who were left were safely landed. Two coastwatchers and loyal natives cared for the survivors as best they could, and radioed news of them to Guadalcanal. The 165 sailors then took to the jungle to evade Japanese patrols.

Surface vessels were chosen for the final rescue, *Nicholas* and *Radford*, augmented by *Jenkins* (DD-447) and *O'Bannon* (DD-450) set off 15 July 1943 to sail further up the Slot than ever before, screening the movement of two destroyer-transport and four other destroyers. During the night of 16 July, the rescue force brought out the 165 *Helena* men, along with 16 Chinese who had been in hiding on the island. Of *Helena's* nearly 900 men, 168 had perished.

Helena was the first ship to receive the Navy Unit Commendation. Her actions in the Battles of Cape Esperance, Guadalcanal, and Kula Gulf were named in the citation. *Helena* also earned the Asiatic-Pacific Area Campaign medal with seven stars.

The name *Helena* was assigned to CL-113, but construction on that hull was cancelled 5 October 1944.

(CA-75; dp. 13,600; l. 674'11"; b. 70'10"; dr. 20'6"; s. 33 k.; epl. 1,142; a. 9 8"; 12 5", 48 40mm., 22 20mm.; cl. *Baltimore*)

The third *Helena* received her name while building after the cancellation of CL-113; was launched at Bethlehem Steel Co., Quincy, Mass., 28 April 1945, sponsored by Mrs. John T. Haytin, wife of the mayor of Helena; and commissioned 4 September 1945, Captain A. H. McCollum in command.

Helena completed her outfitting in the Boston area and sailed 24 October 1945, arriving New York City the next day to take part in the tremendous celebration of the Navy's role in World War II victory that marked Navy Day, 27 October 1945. After two shakedown/training periods at Guantanamo Bay, Cuba, *Helena* returned to Boston in February 1945 to prepare for her first deployment, a round-the-world cruise. *Helena* sailed from Boston 12 February 1946 for England where Admiral H. Kent Hewitt boarded and broke his flag as Commander Naval Forces, Europe, and Commander 12th Fleet. During the next 3 months, *Helena* conducted training exercises in Northern European waters and paid good-will visits to major ports in England and Scotland.

Relieved as flagship 1 May 1946, *Helena* sailed for the Far East via the Suez Canal, calling at major Mediterranean ports, Colombo, Ceylon, Singapore, and arriving Tsingtao 18 June 1946. During her tour in the Far East, *Helena* took part in a wide variety of training exercises and fleet maneuvers until she finally departed Shanghai 22 March 1947 for home after more than a year in foreign waters.

After training operations in California waters *Helena* departed once more for the Far East 3 April 1948, arriving Shanghai 24 days later. Throughout the summer and fall of 1948, she operated primarily in Chinese waters, returning to Long Beach December 1948.

Helena spent much of the spring of 1949 in training a new crew and in May cruised to train Naval Reservists, returning to Long Beach for a conversion necessary to

equip her to carry a helicopter. During July and August 1949, *Helena* took part in a 6-week at sea training cruise for men of the Naval Reserve Officers' Training Corps to the Galapagos Islands and Panama. She then took part in Operation "Miki," a joint Army-Navy amphibious training exercise in the Hawaiian Islands conducted in November.

Helena then proceeded via Yokosuka and Hong Kong to the Philippines where she conducted training exercises. She returned to Japan in January 1950, and soon after experienced the highlights of her service as flagship of the 7th Fleet when the Joint Chiefs of Staff, then touring the Far East, embarked 2 February 1951. During the remainder of her Far Eastern tour she carried out a schedule of large scale fleet exercises off Okinawa, and visits to Japanese ports. She departed for the United States 21 May 1950.

Helena's schedule called for a summer spent in Long Beach, followed by overhaul at San Francisco. Suddenly came word of the communist aggression in Korea. Hurriedly she prepared for sea; and, on 6 July 1950, sped westward. Stopping at Pearl Harbor only to take on ammunition, she plowed across the Pacific and into action on the east coast of Korea. On 7 August, she first unleashed her guns on an enemy target—the railroad marshalling yards, trains, and power plant near Tanchon.

Serving as flagship of the Bombardment Task Group, *Helena* pounded enemy positions, aiding immeasurably in keeping the invaders off balance and preventing them from mounting a formidable drive, as United Nations forces prepared to take the offensive. Operations such as hers provided the diversion necessary to cover the powerful amphibious assault into Inchon, 15 September 1950. Later, *Helena* provided gunfire support for Korean troops pushing the invaders north along the east coast, and it was *Helena's* concentrated firepower that aided in creating a diversion at Samchok, and in the recapture of Pohang.

Valuable as she was in Korean waters, *Helena* could no longer put off overhaul and in November 1950 she arrived at Long Beach to prepare for the now twice-postponed yard period.

After her overhaul, she reported for duty at Sasebo 18 April 1951, and was assigned to Task Force 77, the fast carrier group making daily air strikes against the enemy. While operating as heavy support for the carriers, *Helena* was often detached to pound shore targets. During June 1951, she was occupied almost continually in interdiction fire at targets along the east coast of Korea, then returned to the Task Force. At twilight on a day late in July, *Helena* was straddled, then hit by shore gunfire. Damage was light, and swiftly twisting around the harbor in the maneuver which came to be called "the war dance", *Helena* delivered rapid continuous fire that destroyed seven enemy gun positions and an ammunition dump. After a short respite at Yokosuka, she returned again to the Task Force, but was soon detached for special duty supporting a massive air strike on supply depots and railroad marshalling yards at Rashin, acting as radar picket.

Helena's accurate gunnery was next sought by the 8th Army, for whom she fired at 13 targets along the bomblines in aid of advancing infantry. Her support to ground forces continued with missions fired for United States Marines and Korean Army units. On 20 September 1951 she returned to Yokosuka. Here, at a ceremony on her decks, President Syngman Rhee of Korea presented to Task Force 95 the first Korean Presidential Unit Citation awarded to a naval unit. *Helena* received the award for her operations in the fall of 1950.

After rejoining the Task Force, *Helena* was ordered to duty as fire support vessel in the Hungnam-Hamhung area. With her helicopter providing its usual efficient spotting, she fired with great success on rail and highway bridges, marshalling yards and gun positions for the next 2 weeks.

Helena returned to Long Beach 8 December 1951 and her entire battery of nine 8-inch guns was replaced. In February, she commenced training for return to the Far

East. One of the highlights of this training period came 14 to 23 February 1952 when she took part in "Lex Baker One", the largest scale training exercise held since the outbreak of the Korean war. Over 70 ships and 15,000 sailors and Marines took active part in this operation.

Helena arrived once again at Yokosuka 8 June 1952 and the next day was under way to rendezvous with Task Force 77 off the coast of Korea. For 5½ months her mission again was to burn buildings, destroy gun positions, and smash transportation facilities; all were left in her wake after shore bombardments. She also performed air rescue of pilots, two of which were deep in enemy territory.

On 24 November 1952, *Helena* was relieved of her normal duties at Yokosuka and 5 days later sailed on a special mission. She called first at Iwo Jima where on 1 December Admiral Arthur W. Radford, Commander in Chief Pacific Fleet, boarded the ship by helicopter to visit briefly. Two days later she proceeded to Guam, where President-Elect Dwight D. Eisenhower, with several of his prospective cabinet members, and Admiral Radford embarked for passage to Pearl Harbor. Top-level policy conferences were held on board. *Helena's* distinguished passengers disembarked at Pearl Harbor 11 December 1952 and she returned to Long Beach 16 December.

Helena departed for the Far East 4 August 1953 to join Task Force 77 on security patrol in the Sea of Japan and after another voyage to the United States for upkeep and training, rejoined the 7th Fleet at Yokosuka as flagship on 11 October 1954. *Helena* spent much of her time in waters off Taiwan. The highlights of *Helena's* service during this tour of duty came in February 1955 during the evacuation of the Tachen Islands. These off-shore islands posed a possible point of contention between the Nationalist and Communist Chinese; and it was determined to neutralize them by means of evacuation. On 6 February came the "execute" from President Eisenhower, and the fleet, led by *Helena*, got underway. By 1500 on 9 February 1955, with *Helena* on watchful patrol, all civilians had been removed to safety from the islands—a total of 18,000 people. Early on 12 February the remaining 20,000 Nationalist troops were removed and, as *Helena* steamed on rear guard patrol, the Task Force sailed south.

After 6 months' training in home waters, *Helena* again sailed for Yokosuka, arriving 25 January 1956. During the 6 months of this tour of duty, she once more operated primarily in the Taiwan area and briefly in Philippine waters on exercises. She returned to Long Beach 8 July.

Exercises, which included firing of the Regulus I missile from *Helena's* launching gear, continued for 9 months; then she headed for another Far East tour 10 April 1957. During the ensuing tour of duty, she played her flagship role fully, combining sea power and diplomacy.

Helena returned to Long Beach 19 October. Following major overhaul completed 31 March 1958 and intensive training, including missile launching, she again sailed west.

Helena's 1958 cruise in the Far East began 3 August. Her first port of call was Keelung, Taiwan, arriving 21 August. Next day students and faculty of the Taiwan National Defense College were received on board for a tour of the ship. Her schedule next called for a visit to Manila, but the crisis brought on by the Chinese Communist shelling of the off-shore islands governed by the Nationalists interrupted normal operations.

During the next weeks, *Helena* patrolled the troubled area. On 7 September she steamed to within 10 miles of the Chinese mainland, covering Chinese Nationalist supply ships replenishing Quemoy Island. While on this duty, she was illustrating once more the fact that the mere presence of the overwhelming naval strength of the United States is one of the most formidable protections the free world has in determining such aggression.

On 9 October 1958, while off the Philippines, word flashed to *Helena* to proceed to the aid of a stricken Norwegian merchant vessel, *Hoi Wong*, aground on Bombay Reef in the Paracel Islands. *Helena* reached the scene

at 1000, 10 October 1958. Her helicopters rescued men, women and children, whom she transported to Hong Kong. Her men had skillfully and courageously carried out a difficult humanitarian mission, another contribution to strengthening American relationships with Asian nations. *Helena* resumed patrol and readiness operations until her return to Long Beach 17 February 1959.

On 5 January 1960 *Helena* departed for the Western Pacific in company with *Yorktown* and her escort of Destroyer Squadron 23. Visits to Korea and to Taiwan prefaced her participation in Operation "Blue Star," one of the largest peacetime amphibious exercises in our history.

After a period in Japan, *Helena* sailed with *Ranger* and *Saint Paul* to Guam. On 24 April 1960, *Helena*, in company with destroyers *Taylor* and *Jenkins*, set sail for Australia. She then returned to Long Beach and from June until November underwent extensive overhaul. In mid-January 1961 she became the permanent flagship of Commander, 1st Fleet.

On 17 May 1961, led by the *Helena*, 12 1st Fleet ships put on a firepower demonstration for more than 700 members of the American Ordnance Association. In June, *Helena*, with eight guests of the Secretary of the Navy on board, cruised to Portland, Oreg., for the Rose Festival.

During the next months, *Helena* joined in Exercise "Tail Wind," rendezvousing with cruiser *Los Angeles*, the

guided missile frigate *Coontz* and their destroyer escort to form the largest "Fleet Sail" in 4 years. *Helena* visited major ports of the Far East, rode out Typhoon Olga off Hong Kong, then returned to San Diego 6 October, soon to participate in Exercise "Covered Wagon." During the remainder of the year, *Helena* participated in a major fleet demonstration observed by the Chief of Naval Operations, Admiral George W. Anderson. Her last operations of the year was Exercise "Black Bear."

During 1961 and 1962, *Helena* operated in West Coast and western Pacific waters, taking part in several amphibious operations with ships of the 1st Fleet and elements of the 1st Marine Division and 3d Marine Air Wing. *Helena* embarked foreign and staff officers from the Naval War College March 1962, and two groups of Navy League members on orientation cruises in June and August.

As the year ended, *Helena* was scheduled for inactivation at Long Beach Naval Shipyard. On 18 March 1963, Commander 1st Fleet shifted his flag to *Saint Paul*. *Helena* was placed out of commission in Reserve 29 June 1963. *Helena* was transferred in June 1963 to San Diego, Calif., where she remains.

For her service in the Korean conflict, she was presented the Presidential Unit Citation of the Republic of Korea and the Korean Service Medal with four stars.

Observers depart USS *Helena* (CA-75) to spot gun fire in Korea 15 October 1950

Helena I

(SP-24: dp. 9; l. 43'; b. 10'; dr. 3'; s. 10 k.; a. 1 mg.)

Helena I, a wooden motor yacht, was built in 1906 by Van Sant Brothers, of Port Republic, N.J., and acquired by the Navy from Dr. W. G. Hall, Trenton, N.J., in May 1917. Assigned to the 7th Naval District, she was taken to Key West, Fla., and commissioned there 7 September 1917, Otis Curry, QM 2/c in command.

Helena I operated as a harbor and coastal patrol boat in the vicinity of Key West until being decommissioned and sold 27 August 1919. Before she could be delivered to her new owner, however, the boat was wrecked 11 September 1919 in a hurricane, and was stricken from the Navy List 4 October 1919.

Helenita

A former name retained.

I

(SP-210: dp. 304; l. 187'; b. 21'; dr. 8'6"; s. 16 k.; a. 2 3")

The first *Helenita* was a yacht built by Gas Engine & Power Co., Morris Heights, N.Y., acquired by the Navy from Frank J. Gould August 1917, and commissioned 17 October 1917 at Morris Heights, N.Y.

Originally intended for foreign service, *Helenita* sailed from Newport, R.I., to Bermuda 4 November, and until 1 January 1918 engaged in patrol, search, and dispatch service out of Bermuda. Found to be too lightly built for sea service, she was sent back to the United States, arriving 10 January 1918 at Charleston. *Helenita* then entered Philadelphia Navy Yard 17 January for extensive repairs.

Subsequently, *Helenita* was assigned briefly in May to New London, Conn., and New York, moving to Base 2, Delaware Bay, as a patrol vessel in June. She continued on this duty until sent to Norfolk for repairs 6 August to 26 November 1918. Returning to New York in May, 1919, *Helenita* decommissioned and was simultaneously returned to her owner 17 June 1919.

II

(YP-2230: l. 45'; b. 11'8")

The second *Helenita* was a small wooden motor boat acquired by the Navy in 1919, probably from the Marine Aviation Corps. She was used as a district patrol craft in the 5th Naval District, Norfolk, Va., from February to August 1919, after which she was transferred to the City of Norfolk Department of Public Safety. Transferred 30 August, *Helenita* served the city until 1 December 1922, when she was returned to the Navy at Norfolk. She was finally sold to H. W. Bleckley, Milwaukee, Wis., 22 June 1923.

Helianthus

A former name retained.

(SP-585: dp. 37; l. 64'; b. 13'6"; dr. 3'3"; s. 10 k.; a. 1 1-pdr.)

Helianthus, a motor boat, was built by Herreshoff Manufacturing Co., Bristol, R.I., in 1912, and acquired by the Navy from N. A. Herreshoff; delivered 11 June 1917 and commissioned 6 July 1917, Boatswain T. H. Rich in command.

Helianthus was assigned to the 2d Naval District as a section patrol craft, and operated on Harbor Patrol and Harbor Entrance Patrol in Narragansett Bay and Newport, R.I. She was transferred 28 March 1919 to the Coast and Geodetic Survey.

Helios

The Greek sun-god, represented as driving a four-horse chariot through the heavens.

(ARB-12: dp. 1,781; l. 328'; b. 50'; dr. 11'2"; s. 12 k.; cpl. 286; a. 8 40mm.; cl. *Aristaeus*)

Helios (ARB-12), formerly *LST-1127*, was launched 14 February 1945 by the Chicago Bridge & Iron Co., Seneca, Ill.; sponsored by Mrs. Emery Adams; and commissioned as *LST-1127*, 26 February 1945, Lt. Adam W. Melohusky in command.

Helios sailed down the Mississippi and around to Baltimore where she decommissioned 16 March 1945. She was then converted to an ARB by the Maryland Drydock Co., of Baltimore. *Helios* recommissioned 23 July 1945, Lieutenant Melohusky in command, and proceeded to Chesapeake Bay for her shakedown. Ordered to the Pacific, the battle-damaged repair ship sailed from Norfolk 27 August. By the time she reached Pearl Harbor 29 September, the long war had come to its end and *Helios's* services were no longer needed. Sailing 11 October, she reached Charleston a month later and from there sailed to the Inactive Fleet Berthing Area at Green Cove Springs, Fla. *Helios* decommissioned there 3 December 1946 and remained in reserve until leased to the government of Brazil 19 January 1962 as *Belmonte*.

Heliotrope

An herb of the genus *heliotropium*.

(SwStr: t. 239; l. 134'; b. 24'6"; dph. 6'8"; s. 6 k.; a. 1 12-pdr.)

Heliotrope, a wooden steamer, was originally named *Maggie Baker*, and was purchased by the Navy from her owner, Stacey Pitcher, at New York 16 December 1863. Renamed *Heliotrope*, she commissioned at New York Navy Yard 24 April 1864.

Heliotrope was assigned initially to the North Atlantic Blockading Squadron, and sailed soon after her commissioning to Hampton Roads, Va., where she served as a tug and ordnance boat. She continued this duty with occasional patrols up the James River, until her transfer to the Potomac Flotilla 23 January 1865.

Heliotrope reported for her new duties early in February, and participated 6-8 March in a joint expedition up the Rappahannock River to Fredericksburg. In cooperation with Army units, *Heliotrope* and the other gunboats succeeded in destroying railroad facilities, a large quantity of track, and a depot of army supplies. Returning to routine patrolling in the Potomac, she embarked with other gunboats on another expedition 16 March, sending her small boats with about 50 men up Mattox Creek. Three schooners and various types of supplies were captured or destroyed on this 2-day foray.

The small gunboat continued her vital work of Choking off Confederate supplies in the Potomac River area until mid-April, when she steamed for New York, arriving 20 April. *Heliotrope* decommissioned 12 January 1865 and was sold 17 June to the Department of the Treasury for use with the Lighthouse Service.

Heliotrope, see *Surprise* (PG-63)

Hell Gate, see *YM-15*

Helm

James Meredith Helm, born 16 December 1855 at Grayville, Ill., graduated from the Naval Academy in 1875. He served in various ships and abroad until the Spanish-American War, when he commanded gunboat *Hornet*. In the blockade of Cuba, he captured a Spanish steamer

and three contraband schooners, and was advanced five numbers in grade for outstanding performance at the Battle of Manzanillo 30 June 1898. Helm subsequently commanded *Idaho* and *Wabash*. During World War I, Rear Admiral Helm was Commandant of the 4th Naval District and received the Navy Cross for his achievements. He retired 16 December 1919 and died 28 October 1927.

(DD-388: dp. 1,850; l. 341'4"; b. 35'5"; dr. 10'4"; s. 35 k.; cpl. 158; a. 4 5", 4 .50 cal., 16 21" tt.; cl. *Gridley*)

Helm (DD-388) was launched by Norfolk Navy Yard 27 May 1937; sponsored by Mrs. J. M. Helm, widow; and commissioned 16 October 1937, Lt. Comdr. P. H. Talbot in command.

After shakedown *Helm* operated in the Caribbean until March 1938. Following summer exercises, she was attached to the newly formed Atlantic Squadron 1 October 1938. Early in 1939 she deployed with Carrier Division 2 in the Caribbean for the annual fleet problem, developing tactics and doctrine so vital in the war which was to come. Transferred to the West Coast in May 1939, *Helm* engaged in fleet exercises and screening maneuvers out of San Diego and the Hawaiian Islands. This duty continued through the troubled months of 1941, and on the morning of 7 December *Helm* was underway in West Loch Channel, Pearl Harbor when the Japanese planes struck. The destroyer manned her guns and brought down at least one of the attackers while she was strafed and slightly damaged by two bombs close aboard. After the attack, she joined the task group of carrier *Saratoga*, just arrived from San Diego and served as screening ship and plane guard.

The destroyer sailed 20 January on a special mission to rescue Department of the Interior workers from Howland and Baker Islands. Using her whaleboat *Helm* brought off six men from the two islands 31 January. She was attacked by a Japanese patrol bomber later that day. Her gunners drove off the attacker and the ship returned to Pearl Harbor 6 February.

Following a round trip voyage to San Diego, *Helm* departed Pearl Harbor 15 March escorting an advance base party to the New Hebrides. She arrived Efate 19 March and for the next few weeks escorted ships in that area while U.S. bases were consolidated. She rescued 13 survivors from SS *John Adams* on 9 May and 4 from oiler *Neosho*, sunk in the Battle of the Coral Sea on 17 May. These men were taken to Brisbane, Australia, where *Helm* joined British Rear Admiral Crutchley's Task Force 44 on 19 May.

For the next 2 months *Helm* performed escort duty along the Australian Coast. The fleet was then assembling for the first offensive amphibious operation in the Pacific, the capture of Guadalcanal. *Helm* departed Auckland, New Zealand, 22 July for the Fiji Islands. Following practice landings Adm Turner's fleet suddenly struck Guadalcanal and Tulagi, arriving off the beaches 7 August and catching the Japanese completely by surprise. The destroyer screened the transports as troops disembarked, shooting down several attacking aircraft during the first 2 days.

With cruisers *Vincennes*, *Quincy*, and *Astoria*, *Helm* patrolled the waters around Savo Island the night of 7 August and, as night fell 8 August, the four ships and destroyer *Wilson* took up patrol between Savo and Florida Islands. Another group of two cruisers and two destroyers patrolled to the south, and picket destroyers *Blue* and *Ralph Talbot* were stationed to the northwest of Savo Island. A fateful combination of circumstances had allowed Admiral Mikawa's cruisers and destroyers to approach Savo Island undetected. Failures in search and identification had prevented early analysis of the dangerous situation, and the inadequate two-ship screen off Savo Island had not warned of the Japanese ships. The alarm was sounded by destroyer *Patterson* at about 0143, just seconds before two torpedoes ripped into HMAS *Can-*

berra in the southern group. Soon both formations of cruisers were battling the fierce Japanese attack. *Helm*, on the port bow of *Vincennes*, turned back to help the stricken cruisers. She stood by *Astoria*, brought survivors to transports off Guadalcanal, and withdrew with the remainder of the force to Noumea 13 August. The Battle of Savo Island was a disaster, but even in defeat the ships had prevented the Japanese from attacking the vulnerable transports at Guadalcanal. Much desperate fighting followed but the Americans had come to stay.

For the next few weeks *Helm* remained in the dangerous waters near Guadalcanal, escorting transports and patrolling. She sailed to Brisbane 7 September and departed next day to provide escort protection for transports between Australia and New Guinea, where another bitter struggle was in progress. The veteran destroyer remained on this duty for some months, escorting LST's to Woodlark Island for an unopposed landing in June 1943 and protecting the important base at Milne Bay. As MacArthur's army prepared to move into New Britain under naval cover, *Helm* bombarded Gasmata 29 November 1943 and sortied from Milne Bay again 14 December under Admiral Crutchley for the capture of Cape Gloucester. *Helm* helped in the pre-invasion bombardment, fired close support missions after the initial landings, and performed screening duties as transports unloaded. The operation by Admiral Barbey's VII Amphibious Corps was a smooth and successful one, and, as soon as the position was secured, *Helm* and the rest of Admiral Crutchley's fleet moved to Saidor, where Admiral Barbey performed one of his famous amphibious "hops." The destroyer screened the cruiser force as it prevented attack by surface and air forces from seaward.

Helm continued her escort duty in the Guadalcanal and Milne Bay areas until departing 19 February 1944 for Pearl Harbor. The ship proceeded thence to Mare Island Navy Yard escorting battleship *Maryland*, and arrived 4 March.

Helm departed San Francisco 5 May. After arrival Pearl Harbor 5 days later she engaged in refresher training in Hawaiian waters. She arrived Majuro 4 June and Kwajalein 7 June to join the naval force assembling for the next step in America's amphibious sweep across the Pacific, the invasion of the Marianas. She joined Vice Admiral Mitscher's famed Task Force 58 and sailed with it from Kwajalein 7 June. The fast carrier group guarded the western approaches to the islands 11 to 13 June and provided air support for the landings, which were carried out by Admiral Kelly Turner's amphibian 1,000 miles from the nearest advance base at Eniwetok. The carrier task forces returned from a strike on the Bonin Islands 18 June and deployed to repel the Japanese fleet as it closed the Marianas for a decisive naval battle. The great fleets approached each other 19 June for the biggest carrier engagement of the war. As four large air raids hit the American fleet formation, fighter cover from *Helm's* task group and surface fire from the ships annihilated the Japanese planes. With able assistance from American submarines, Mitscher succeeded in sinking two Japanese carriers while inflicting such staggering losses on the enemy naval air arm that the battle was dubbed the "Marianas Turkey Shoot." Admiral Spruance had succeeded in protecting the invasion force in a battle the importance of which was well understood by the Japanese. Admiral Toyoda had said 15 June: "The fate of the Empire rests on this one battle," repeating the words of Admiral Toga at Tsushima.

Following the decisive Battle of the Philippine Sea, *Helm* and the fast carriers turned their attention to neutralizing the enemy bases on the Bonin and Volcano Islands and supporting the invasion of Guam. The mobile carrier groups, screened by destroyers and cruisers, also began attacks on the Palau Islands 25 July. With occasional respite at Eniwetok or Ulithi, the carriers attacked Iwo Jima and other islands in the western Pacific until well into September. *Helm* sank a small Japanese freighter off Iwo Jima 2 September and later that day surprised and sank a small cargo ship.

Helm and her carrier group arrived Seeadler Harbor 21 September 1944. They sortied again 24 September; and, after ground support strikes in the Palaus, rendezvoused with the entire task force seventeen carriers with their supporting and screening vessels—for an important sweep to the west. Strikes were launched against Okinawa 10 October; after which the carriers turned to their real objective, the airfields and military installations on Formosa. In a devastating 3-day attack carrier planes did much to destroy that island as a supporting base for the Japanese in the battle of the Philippines and other invasions to come. Enemy planes retaliated with heavy and repeated land-based attacks. *Helm* brought down one bomber with her 5-inch guns 13 October and assisted in shooting down several more.

Following the Formosa Air Battle, a convincing demonstration of the power and mobility of sea power, Task Force 38 returned to the east coast of Luzon to strike enemy air bases in the Philippines to neutralize Japanese air power during the invasion of Leyte. By 24 October it was clear that the assault on Leyte had called forth one final effort on the part of the Japanese to destroy the American fleet. Its three major fleet units moved toward the Philippines. The Northern Group was to lure the American carriers northward away from Leyte, before the others converged on the assault area in Leyte Gulf for a two-pronged death blow. In for the historic Battle of Leyte Gulf, *Helm* with Rear Admiral Davison's Task Group 38.4 turned her attention toward Admiral Kurita's Center Force. Planes from the carriers struck the Japanese ships near mid-day in the Battle of the Sibuyan Sea, sinking giant battleship *Musashi* and damaging other heavy ships.

While two of the other phases of this great battle, the Battle off Samar and the Battle of Surigao Strait, were being fought, Halsey took the carrier groups north to engage the powerful fleet of Admiral Ozawa. Screened by *Helm* and other surface units, the carriers made air contact 25 October and, in a series of devastating strikes, sank four Japanese carriers, and a destroyer. The great sea battle was thus ended, with the invasion of Leyte secured and the Japanese fleet no longer an effective fighting unit.

Helm and the carriers resumed direct support of ground operations on Leyte 26 October. In addition to air attacks by land-based Japanese aircraft, the group also experienced submarine attack 28 October. *Helm* and companion destroyer *Gridley* made a contact around noon and, as the carriers cleared the area, the two ships dropped depth charges and sank *I-46*. Two carriers, *Franklin* and *Bellevue Wood*, were damaged 30 October by suicide planes. That night the group retired toward Ulithi, where it arrived 2 November after over 2 months of almost continuous service.

Departing Ulithi again 5 November, *Helm* and her carrier group returned to the Philippines for strikes against Japanese shipping and shore targets, returning the 20th. *Helm* was then detached from Task Group 38.4 and steamed from Ulithi for Manus the 26th. Arriving 2 days later, the ship began preparations for the next important amphibious operation in the Philippine campaign, the landings at Lingayen Gulf on Luzon. *Helm* departed 27 December with a large task group bound for Lingayen Gulf; and, as the ships entered the Sulu Sea, heavy air attacks began. The Japanese, hitting with their only remaining weapon, struck with suicide planes 4 January and sank escort carrier *Ommancy Bay*. Gunfire from *Helm* and the other screening ships took a heavy toll of the attackers. From 6 to 17 January the destroyer operated with carriers west of Lingayen Gulf providing air support for these important landings. The ships departed 17 January and arrived Ulithi 6 days later.

As the great naval task force assembled for the invasion of Iwo Jima, next stop on the island road to Japan, *Helm* sailed 12 February in the screen of a group of escort carriers, arriving off the volcanic island fortress 16 February. She screened the carriers during the important preliminary strikes and protected them while they lent close

support to the invasion, which began on the 19th. The carrier groups were hit repeatedly by desperate air attacks, with *Helm* and the other destroyers accounting for many suicide and torpedo planes. When escort carrier *Bismarck Sea* was sunk, in a massive suicide attack 21 February, *Helm* rescued survivors and brought them to the transport anchorage next day.

The veteran destroyer continued screening operations off Iwo Jima until 7 March when she steamed toward Leyte for repairs. She was soon underway again, however, for the last and largest of the Pacific amphibious operations, the invasion of Okinawa. Sailing 27 March, she joined escort carrier groups off the island for pre-invasion strikes; and, after the historic assault 1 April, for ground support operations. During her stay off Okinawa the destroyer shot down many suicide planes which menaced the carriers during fanatical, last-ditch efforts by the Japanese to repel the invasion. *Helm* steamed to Leyte 19 June with Okinawa secured.

Following the Okinawa operation *Helm* served as an escort and patrol ship out of Ulithi and Leyte, and helped to search for survivors of ill-fated *Indianapolis 3* to 6 August 1945. The ship was steaming toward Ulithi from Okinawa when the war ended 15 August. She returned to Okinawa and finally to Iwo Jima to join the Bonins patrol, for air-sea rescue work until 8 September. The destroyer then sailed to Sasebo, Japan, where she served as shipping guide and patrol vessel until returning to Okinawa 26 September. After another stay in Japan, the ship departed for Pearl Harbor and San Diego 29 October. She returned to the United States 19 November, then sailed back to Pearl Harbor where she decommissioned 26 June 1946. *Helm* was used that summer as a target ship during the historic Operation "Crossroads" atomic tests in the Pacific, and her hulk was sold to Moore Dry Dock Co., Oakland, Calif., in October 1947 for scrapping.

Helm received 11 battle stars for World War II service.

Helma, see YHB-14

Helori

A former name retained.

(SP-181: dp. 90; l. 92'4"; b. 15'8"; dr. 5'6"; s. 12 k.; cpl. 17; a. 2 3-pdr.)

Helori, a motor boat, was built by Johnson Brothers & Blanchard, Seattle, Wash., in 1911, and purchased from her owner, Omar J. Humphrey, of Seattle, 23 April 1917. She commissioned 21 May 1917 at Puget Sound Navy Yard, Washington.

Assigned to the 13th Naval District, *Helori* operated out of Puget Sound Shipyard training crews for subchasers and performing guard duty. She made frequent trips to and from Bremerton and Seattle. In 1920, her designation was changed to YP-181, district patrol craft, and she continued to serve the 13th Naval District in that capacity until she was sold 17 September 1925.

Helori, see YP-181

Helvetia

A former name retained.

(SP-3096: dp. 499; l. 157'4"; b. 36'2"; dr. 12')

Helvetia, a schooner, was built by I. L. Snow & Co., Rockland, Maine, and purchased by the Navy from her owner, R. K. Snow. She was taken over and simultaneously commissioned 19 July 1918 at Norfolk, Va.

Initially assigned to the 5th Naval District, *Helvetia* acted as a stores and mother ship for submarines at Norfolk until November 1918, when she was transferred to

New London for duty with Submarine Force, Atlantic Fleet. She was repurchased by her former owners in February 1919.

Hemlock, see *YC-1137*

Hemlock II, see *YC-1138*

Hemminger

Cyril Franklin Hemminger enlisted in the Navy 26 May 1920. Working his way up through the ranks, he was appointed Boatswain 3 April 1942 and reported to cruiser *Astoria* for duty in the Pacific 8 days later. Hemminger was commissioned Ensign 15 June 1942 and in the early stages of the Guadalcanal Campaign, was killed during the Battle of Savo Island.

(DE-746: dp. 1,240; l. 306'; b. 36'8"; dr. 8'9"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 10 20mm., 3 tt.; 2 dct., 8 dep., 1 dep. (h.h.); cl. *Cannon*)

Hemminger (DE-746) was launched 12 September 1943 by Western Pipe & Steel Co., San Francisco; sponsored by Mrs. Sue Frances Hemminger, widow; and commissioned 30 May 1944, Lt. Comdr. J. R. Bodler, USNR, in command.

Shakedown completed, *Hemminger* reached Pearl Harbor in August 1944 to train submarines for war patrols. She also patrolled between Pearl and Eniwetok and worked in hunter-killer antisubmarine operations. On 28 February 1945 while on a HUK mission with *Corregidor* and CortDiv 53, the destroyer escort was diverted to participate in the fruitless search for Lieutenant General M. F. Harmon, Commander Army Air Forces Pacific, whose plane had disappeared. After patrol duty in the Marshall Islands, *Hemminger* sailed 30 April to escort a resupply convoy to Okinawa, where battle still raged. From 16 May to 20 June, she acted as screen for a carrier group engaged in neutralization of Sakishima Gunto and supported ground forces on Okinawa as well as the air attack on Kyushu.

Hemminger joined CortDiv 53 and *Kassan Bay* for further hunter-killer patrol around Guam and Eniwetok until sailing for the Philippines 27 September. Detached from the Pacific Fleet, *Hemminger* reached Norfolk 2 December via Saipan, Pearl Harbor, San Diego, and the Panama Canal. Training out of Green Cove Springs, Fla., occupied *Hemminger* until she decommissioned there 17 June 1946 and went into reserve.

After a period of duty with the reserve training program, *Hemminger* recommissioned at Norfolk 1 December 1950. In the following years her career assumed a pattern of local operations along the coast punctuated by reserve training cruises to Canada and the Caribbean. One reserve cruise in June 1952 took *Hemminger* to Lisbon, while others saw her at Rouen, France; Barranquilla, Colombia; Cadiz, and New Orleans.

Hemminger also participated in several fleet exercises and worked with the Turkish submarine *Gur* in August 1954. Departing Little Creek, Va., 23 November 1957 she reported to New York Naval Shipyard for inactivation. *Hemminger* decommissioned there 21 February 1958 and joined the Atlantic Reserve Fleet. She was loaned to Thailand 22 July 1959 under the Military Assistance Program, and serves the Royal Thai Navy as *Pin Klao*.

Hempstead

AVP-43 was named for a bay off the coast of New York, APA-241 for a county in Arkansas.

Hempstead (AVP-43) was under construction by Lake Washington Shipyard, Houghton, Wash., but was cancelled 22 April 1943.

Hempstead (APA-241) was to be built by Oregon Shipbuilding Corp., Portland, Oreg., under Maritime Commis-

sion contract. The contract was cancelled 27 August 1947.

Henderson

The first *Henderson* (AP-1) was named for Archibald Henderson, who was born in Fairfax County, Va., 21 January 1783, and was appointed a Second Lieutenant in the Marine Corps 4 June 1806. He served in *Constitution* during her famous victories in the War of 1812. He was appointed Colonel Commandant of the Marine Corps 17 October 1820. Colonel Henderson served in the field during the Indian Wars and held the post of Commandant for 38 years, longer than any other man. Under his leadership the Corps developed into a formidable arm of the nation's naval forces. General Henderson died suddenly 6 January 1859.

The second *Henderson* (DD-785) was named for Lofton R. Henderson, who was born in Cleveland 24 May 1903 and graduated from the Naval Academy in 1926. Prior to World War II he served in China, and various Caribbean stations, and on carriers *Langley*, *Ranger* and *Saratoga*. Major Henderson was posthumously awarded the Navy Cross for his heroism at the historic Battle of Midway, one of the decisive battles of history in which the leadership of the fleet commander and the valor of a handful of pilots changed the course of the war. While his plane was leading 16 Marine Corps planes in a glide bombing attack on carrier *Hiryu*, the left wing burst into flames as he began his final approach. Henderson continued the attack and perished as his plane dived toward the enemy carrier. Henderson Field, Guadalcanal, was named in his honor.

(AP-1: dp. 7,750; l. 483'10"; b. 61'1"; dr. 16'2"; s. 14 k.; cpl. 233; trp. 1,695; a. 8 5", 2 3", 2 1-pdr.)

The first *Henderson* (AP-1) was launched by Philadelphia Navy Yard 17 June 1916; sponsored by Miss Genevieve W. Taylor, great-granddaughter of General Henderson; and commissioned at Philadelphia 24 May 1917, Lt. C. W. Steel in command.

Henderson arrived New York 12 June 1917 and sailed 2 days later with Rear Admiral Gleaves' cruiser and transport force, which carried units of the A.E.F. to France. In her holds she had space for 1,500 men and 24 mules. Reaching St. Nazaire 27 June she disembarked troops and returned to Philadelphia 17 July 1917. Subsequently, *Henderson* made eight more voyages to France with troops and supplies for the allies in the bitter European fighting. She established two large base hospitals in France during 1917. In constant danger from submarines, the transport was steaming near Army transport *Antilles* 17 October 1917 when the latter was torpedoed and sunk. *Henderson* escaped attack by wrapping herself in an envelope of smoke. But torpedoes were not her only danger; and on her seventh voyage to France a serious fire broke out in a cargo hold. Destroyers *Mayrant* and *Paul Jones* transferred her troop passengers to nearby transports without loss of life, and determined firefighting crews soon brought the flames under control.

Following the armistice, *Henderson* made eight more transatlantic voyages bringing home members of the A.E.F. She carried more than 10,000 veterans before returning to Philadelphia 27 December 1919. She then took up duty as troop rotation ship for Marine units in the Caribbean, carrying Marines, their dependents, and supplies to bases in Cuba, Haiti, and other islands. She also participated in Marine training maneuvers in Florida before returning to Philadelphia 6 July 1920. After an extended period of repairs, the transport resumed her duties in the Caribbean. This was interrupted 21 June to 21 July as *Henderson* carried military and civilian leaders to observe the historic bombing tests off the Virginia Capes.

Henderson continued to transport the Navy's fighting men including Marines to the far-flung bases of the world, especially to the troubled Far East, and to participate in vital amphibious training.

During the next few years, she also performed ceremonial duties, embarking a congressional party to observe fleet maneuvers in the Caribbean in the Spring of 1923, and carrying President Harding on an inspection tour of Alaska. The President called at Wrangell, Juneau, and Sitka, reviewed the fleet off Seattle from the deck of *Henderson*, and departed 27 July 1923, only 5 days before his death.

During Fleet Problem # 3 in early 1924, *Henderson* participated in a mock amphibious invasion of the Panama Canal Zone. This major training operation by the fleet led not only to perfected assault techniques but improved landing craft as well. She carried out many of these important exercises during the inter-war years, helping to develop the techniques which were to insure victory in World War II. The ship also aided in the protection of American interests in the volatile Caribbean states and in the Far East.

Henderson arrived Shanghai 2 May 1927 with Marines for the garrison there, and remained in China for 6 months protecting American nationals in the war-torn country. Here members of her crew became the originators of the Golden Dragons. Membership in this deep sea organization is dependent upon crossing the international date line. She was constantly engaged in carrying replacements for the fleet including troops to and from the various trouble spots in China. Until 1941 she operated on a regular pattern of voyages from San Francisco to the Philippines and other Pacific islands, carrying the fighting men of the sea, their dependents, and equipment.

With the outbreak of the war in 1941, *Henderson* took up duty as a transport between California and Hawaii, making over 20 such voyages with fighting men, civilian passengers, and cargo for the Pacific War. On her last voyage she departed Port Hueneme 18 July 1943 and arrived Noumea with 71 much-needed nurses. The transport then sailed to the Solomon Islands with SeaBees before returning to San Francisco 24 September 1943.

Henderson decommissioned 13 October 1943 for conversion to a hospital ship at General Engineering & Dry Dock Co., Oakland, Calif. She commissioned as *Bountiful* (AH-9) 23 March 1944, Comdr. G. L. Burns in command.

Bountiful departed San Francisco 1 April 1944 for Honolulu, returned later that month, and sailed once more 1 May for the western Pacific. After brief service at Honolulu and Eniwetok the ship arrived 18 June off the Saipan invasion beaches. She made three passages to the hospitals on Kwajalein with casualties of the Marianas invasions, as American forces continued their victorious sweep across the Pacific to Japan. About this time *Bountiful* established one of the few blood banks in a Naval ship. The life-saving blood bank proved to be self-supporting.

The floating hospital remained at Manus until 17 September when she sailed for the Palaus to bring casualties of the Peleliu landing to hospitals in the Solomons. After November *Bountiful* operated between Leyte and the rear bases carrying veterans of the Philippines campaign. She departed Manus 24 February 1945 for Ulithi and Saipan to receive casualties of the bitter Iwo Jima assault, and in the next months sailed to rendezvous with the fleet to take on wounded from Iwo Jima, Okinawa, and the fleet units themselves. Returning to Leyte Gulf 15 June, she remained until 21 July, and then got underway for California. *Bountiful* arrived after war's end, sailing into San Francisco Bay 21 August 1945.

Bountiful was assigned as hospital ship at Yokosuka, Japan, departing 1 November 1945. She arrived 24 November to support the occupation forces, and remained until 27 March 1946 when she sailed for San Francisco. After delivering her patients, the ship sailed 26 May for the atomic tests at Bikini Atoll, and after observing the history-making series of nuclear experiments of Operation "Crossroads" returned to Seattle 15 August 1946. She decommissioned 13 September 1946, and was sold for scrap by the Maritime Commission 28 January 1948 to Consolidated Builders, Inc., Seattle.

Bountiful received four battle stars for World War II service.

II

(DD-785: dp. 2,425; l. 390'6"; b. 40'11"; dr. 18'6"; s. 35 k.; cpl. 336; a. 6 5", 16 40mm., 15 20mm., 5 21" tt., 6 dep., 2 dct.; cl. *Gearing*)

The second *Henderson* (DD-785) was launched 28 May 1945 by Todd Pacific Shipyards, Inc., Seattle, Wash.; sponsored by Mrs. A. R. Early; and commissioned at Seattle 4 August 1945, Comdr. H. A. Knoertzer in command.

Henderson conducted shakedown cruise out of San Diego, then departed Seattle 31 October for Hawaii. Upon her arrival 7 November she operated as a screen ship for escort carriers in Hawaiian waters and conducted experimental sonar tests with submarines before returning to San Diego 23 April 1946. After divisional exercises off California she departed 2 December 1946 for Operation "High Jump," an antarctic exploration and test program. This important operation included tests of clothing and equipment as well as mapping and weather work. *Henderson* reached Sydney, Australia, 13 March 1947 and San Diego 6 April 1947.

After two long cruises to the Pacific in support of U.S. occupation forces in Japan, *Henderson* departed San Diego 5 August 1950 to join the United Nations forces in Korea. Arriving Yokosuka 19 August she served as a screening ship for fast carrier forces whose planes flew ground support and other missions in Korea. As U.S. forces prepared to leap northward with the historic Inchon invasion, *Henderson* was with the assault forces. She steamed up Flying Fish Channel on 13 September, destroying mines and bombarding the Inchon waterfront preparatory to the invasion. The destroyers also traded blows with Communist shore batteries. The gunfire support group again entered the channel into Inchon Bay 14 to 15 September, softening up shore defenses. General of the Army Douglas MacArthur soon made signal as the Marines landed that day: "The Navy and Marines have never shone more brightly than this morning." *Henderson* remained on fire support duty at Inchon until 1 October.

The destroyer returned to screening duty after Inchon, first along the coast of Korea and then in the Formosa Strait. This duty continued until she departed Keelung 20 March, arriving San Diego 7 April 1951. After coastwise exercises and a cruise to Hawaii for training, *Henderson* sailed 4 January 1952 for her second tour of duty in Korea. She arrived off Hungnam 16 February to take part in the blockade of that port and the coastal areas to the north. Her duties included gunfire support and bombardment of industrial sites until 7 March, when she screened carrier *Bataan* off the coast of Japan. For the remainder of her tour *Henderson* operated with the fast carrier task forces around Korea and in the Formosa Strait. She departed Yokosuka 25 July and arrived San Diego 10 August 1952.

Henderson conducted training exercises off San Diego until 22 March 1953, when she departed for her third Korean tour. She took part in the siege of Wonsan harbor, supporting Korean troops with accurate and continuous gunfire, and conducted antisubmarine operations off Okinawa. The destroyer engaged in the vital coastal patrol, maintaining Allied control of the seas around Korea, until after the Korean armistice in July 1953. She arrived San Diego 19 October 1953, after a total of 22 months of Korean duty.

Following Korea, *Henderson* established a pattern of cruises to the Far East with the fast and mobile 7th Fleet, a main guarantor of peace in the region. Since 1954, she has made more than a dozen such cruises. Highlights of this phase of her service include protection of the Quemoy Islands from Communist aggression in September 1954, relief of Ceylonese flood victims in January 1958, and important fleet and individual exercises during her periods at sea.

USS *Henderson* (AP-1) at Coco Solo, C.Z., 6 January 1933

Commencing 11 August 1964, *Henderson* began annual cruises in Vietnamese waters, supporting 7th Fleet amphibious and shore bombardment operations, and guarding the fast-striking hard hitting carriers. She returned to Long Beach 16 December, underwent modernization overhaul and intensive shore bombardment training, and returned to the intensified struggle against Communist aggression in South Vietnam 10 July 1965. During the next 5 months she ranged the South China Sea and Gulf of Tonkin while screening *Oriskany* and pounding Viet Cong positions. In December she steamed to the Gulf of Siam, where she blasted V.C. coastal targets on the Ca Mau Peninsula. As escort for *Bon Homme Richard*, the veteran destroyer departed Hong Kong 26 December and arrived Long Beach 13 January 1966.

Henderson spent the next year serving as an ASW school ship out of San Diego and taking part in squadron exercises out of Long Beach. Late in July she joined in a massive but unsuccessful air-sea search for the Hawaii-bound aircraft carrying Brigadier General Joseph W. Stilwell, Jr., USA. After completing preparations for another WestPac deployment, she returned to the troubled waters of Southeast Asia in January 1967. Over the next 4 months she supported attack carrier operations and conducted even more intensive shore bombardment assignments, thus contributing to the determined American effort to restore the peace and insure the freedom in Southeast Asia. *Henderson* returned to Long Beach in

mid-June to prepare for further duty in defense of the Nation and the free world.

Henderson received eight battle stars for Korean War service, and shared in the Navy Unit Commendation given her task unit for its part in the Inchon landings.

Hendrick Hudson

A Dutch spelling of Henry Hudson, English explorer and navigator.

(ScStr: t. 460; l. 171'; b. 29'11"; dph. 9'6"; s. 11 k.; a. 4'8", 220-pdr.)

Hendrick Hudson, a schooner-rigged screw steamer, was built as *Florida* in 1859 at Greenpoint, N.Y., and captured by *Pursuit* while attempting to run the blockade at St. Andrew's Bay, Florida, 6 April 1862. Taken to Philadelphia for adjudication, she was condemned and purchased by the Navy Department from the Prize Court 20 September 1862. Renamed *Hendrick Hudson*, she commissioned 30 December 1862 at Philadelphia, Acting Master John E. Giddings commanding.

Assigned to the East Gulf Blockading Squadron, *Hendrick Hudson* sailed to Hampton Roads, arriving 3 January 1863, and from there proceeded to her blockading station off East Pass, St. George's Sound, Florida. On station 1 February, *Hendrick Hudson* began her long

months of arduous blockade duty, working to shut off commerce through the multitude of small inlets and passes of the Florida coast. She remained off St. George's Sound until late August 1863, capturing schooner *Margaret* 1 February and schooner *Teresa* 16 April. She then retired to Boston for repairs and refitting, returning to a new station off the mouth of the Suwanee River 28 December.

Resuming her blockading duties, *Hendrick Hudson* encountered a small schooner off Key West 21 March 1864 and stood toward her. The blockade runner, *Wild Pigeon*, suddenly turned across *Hendrick Hudson's* bow, however, and was inadvertently rammed and sunk. None of her assorted cargo could be recovered. The steamer continued her blockading duties through 1864, spending much of her time in busy Tampa Bay and St. Marks, Florida. A group of her men went ashore on an expedition 12 November and engaged some Confederate soldiers briefly, in one of the many forays ashore by personnel of the East Gulf Squadron.

Hendrick Hudson participated 27 February to 7 March 1865 in an expedition with Army units in the vicinity of St. Marks, Florida. The steamer helped blockade the river and some of her crew went ashore with the Army in an attempt to capture Confederate positions. Following the end of the war, *Hendrick Hudson* was not retained in the squadron, and was ordered north 15 July 1865. She decommissioned 8 August 1865 at Philadelphia and was sold 12 September. The ship was subsequently redocumented *Hendrick Hudson* and operated in commercial service until she was lost in 1867.

Hendry

A county in Florida.

(APA-118: dp. 6,873; l. 455'; b. 62'; dr. 24'; s. 17 k.; cpl. 536; a. 15', 12 40mm.; cl. *Haskell*; T. VC2-S-AP5)

Hendry (APA-118) was launched under Maritime Commission contract 24 June 1944 by California Shipbuilding Co., Wilmington, Calif.; sponsored by Mrs. James K. Herbert; acquired by the Navy and commissioned 29 September 1944, Captain R. C. Welles in command.

Following a rigorous shakedown cruise *Hendry* sailed 23 October for Pearl Harbor, arriving 29 October. The transport then took part in extended amphibious training operations, designed to bring assault forces and ship's crews to a peak of readiness for the climactic operations ahead in the Pacific. She departed 11 December with troops to Midway, returning 9 days later, and got underway again 27 January, this time for the giant invasion of Iwo Jima. *Hendry* arrived Saipan to join the invasion fleet 11 February, and departed 16 February for Iwo Jima. Her troops were among the initial invasion forces early on the morning of 19 February, and for the 6 days that followed *Hendry* unloaded troops and supplies on the beaches, retiring at night under escort protection. Her gunners were busy during this dangerous period; Japanese planes succeeded in sinking escort carrier *Bismarck Sea* and damaging *Saratoga* but suffered heavy losses. *Hendry* sailed for Saipan 25 February, arriving 3 days later.

Hendry remained in the Saipan area until late March, taking part in training for the largest amphibious operation of the Pacific, the capture of Okinawa in Japan's back yard. She sailed 27 March as part of a mighty armada, called by British observers "the most audacious and complex enterprise yet undertaken by the American amphibious forces." Arriving Easter Sunday, the morning of the first landings, *Hendry* put ashore her troops and for the next 10 days survived fierce kamikaze attacks, which took a heavy toll on American transports and escort vessels in the Okinawa area but were themselves destroyed and did not even check the steady progress of the invasion. Her gunners and those of the supporting ships kept *Hendry* free from damage until she departed the bitterly contested island 10 April.

After her arrival at Saipan 14 April, the transport sailed to Tulagi, Espiritu Santo, Eniwetok, and Guam, with troop contingents, departing Guam 21 July 1945 for the United States. She arrived San Pedro 6 August and after the surrender sailed 26 August for the western Pacific. *Hendry* embarked occupation troops at Manila and Lingayen Gulf, Philippines, in late September, and arrived Nagoya, Japan, 7 October. After unloading she sailed again for the United States arriving San Francisco via the Philippines 21 November. On this voyage she was a unit of "Magic Carpet," participating in the gigantic task of bringing home veterans of the Pacific war. After a voyage to Pearl Harbor and return, the ship departed San Diego for the East Coast 14 January 1946, arrived 30 January at Norfolk and decommissioned 21 February. *Hendry* was placed in the Maritime Commission's National Defense Reserve Fleet on the James River, where she remains.

Hendry received two battle stars for World War II service.

Henjes, Barbara, see YT-342

Henjes, Robert, see YT-464

Henley

The first and second *Henleys* were named for Robert Henley, born 5 January 1783 in Williamsburg, Va., son of Leonard and Elizabeth Dandridge Henley and nephew of Martha Dandridge Custis Washington. Appointed a midshipman 8 April 1799, Henley participated in the engagement between *Constellation* and *La Vengeance* during the Quasi-War with France 2 February 1800. After service with Preble's squadron in the Mediterranean and a cruise to the East Indies, Henley received his first command, Gunboat No. 5, at Baltimore 9 April 1808. Henley was in command of 2 divisions of 15 gunboats which drove 3 British frigates from Hampton Roads 20 June 1813. Reporting to brig *Eagle*, he received the thanks of Congress and a gold medal for valiant conduct in the Battle of Lake Champlain 11 September 1814. With the end of the War of 1812, Henley filled a variety of billets before commanding *Hornet* against pirates in the West Indies. He captured pirate schooner *Moscow* off Santo Domingo 29 October 1821. After serving as commandant of the Naval Rendezvous at Norfolk 1822 to 1824, he reported for similar duty at Charleston. Captain Robert Henley died at Sullivan's Island, Charleston, after a short illness 7 October 1828.

The third *Henley* was named for John D. Henley, brother of Captain Robert Henley, who was born in Williamsburg 25 February 1781. Commissioned midshipman 14 August 1799, Henley served in *Chesapeake* cruising in the West Indies until 1801. Departing Baltimore in the schooner *Vixen* 3 August 1803, he joined the Mediterranean Squadron for the War with Tripoli. An officer in Gunboat No. 6 under Lieutenant John Trippe, Henley participated in the attack on Tripoli 3 August 1804. Gunboat No. 6 ran alongside one of the enemy's large boats and nine men and two officers, Trippe and Henley, stormed the Tripolitan before the gunboat fell away from the enemy. Although outnumbered three to one, the Americans fought so fiercely that within a few minutes the enemy struck their colors. Fourteen of the enemy had been killed and 22 were taken prisoner. Both Trippe and Henley were highly commended for their bravery in this action. Following completion of his tour in the Mediterranean in 1805, Henley made a merchant voyage to distant ports and then in September 1807, assumed command of Gunboat No. 20. Henley then served a tour in Washington and with the outbreak of war against the British was ordered to Charleston in June 1813 to command schooner *Carolina*. His ship was destroyed 27 December 1814 off New Orleans during a fierce struggle in which the few small warships played a decisive role in delaying the powerful British attack and bringing

victory. For his part in the victory at New Orleans 8 January 1815 Henley was highly commended by General Andrew Jackson. Promoted to Captain 5 March 1817, Henley commanded *John Adams* in the West Indies and *Congress* in the Indian Ocean before taking command of *Macedonian* in the struggle against West Indian pirates in 1822. Captain Henley served as commandant of the Charleston and Baltimore stations and the Portsmouth Navy Yard, New Hampshire, 1826 to 1832. On 16 August 1832 he was given command of the West India Squadron with *Vandalia* as his flagship. Captain Henley died on board *Vandalia* in Havana, Cuba, 23 May 1835.

I

(DD-39: dp. 787 n.; l. 293'11"; b. 27'; dr. 8'4"; s. 30 k.; cpl. 83; a. 5 3", 6 18" tt.; cl. *Monaghan*)

The first *Henley* (DD-39) was launched 3 April 1912 by the Fore River Ship Building Co., Quincy, Mass.; sponsored by Miss Constance Henley Kane, great-grandniece; and commissioned at Boston 6 December 1912, Lt. Comdr. W. L. Littlefield in command.

After training and shakedown, *Henley* joined the U.S. Atlantic Torpedo Fleet at Newport, R.I., for a peacetime career of tactical exercises and training maneuvers along the coast from the Caribbean to the North Atlantic. On 22 April 1914 she joined the fleet off Tampico, Mexico, to protect American citizens and property in the face of revolution in that country. During this period *Henley* also saw duty transporting refugees and supplies. What with war in Europe that fall, she began Neutrality Patrol along the coast and checked belligerent vessels in American ports.

When America entered the war in April 1917, *Henley* continued patrol along the coast and also escorted fuel ships to the destroyers guarding America's first troop convoy 13 June. For the remainder of the war *Henley* performed convoy duty along the coast and carried out antisubmarine patrol off New York harbor. *Henley* put in at the Philadelphia Navy Yard 22 December 1918 and

decommissioned there 12 December 1919. Transferred to the Coast Guard 16 May 1924, she returned to the Navy 8 May 1931 and sold for scrap to Michael Flynn Inc. of Brooklyn 22 August 1934.

II

(DD-391: dp. 1850; l. 341'4"; b. 35'5"; dr. 10'4"; s. 35 k.; cpl. 158; a. 4 5", 4 50 cal., 16 21" tt.; cl. *Gridley*)

The second *Henley* (DD-391) was launched 12 January 1937 by the Mare Island Navy Yard, Vallejo, Calif.; sponsored by Miss Beryl Henley Joslin, a collateral descendant of Captain Robert Henley; and commissioned 14 August 1937, Lt. Comdr. H. Y. McCown in command.

After shakedown in the Pacific and Hawaiian waters, *Henley* joined the Pacific Battle Force, Destroyer Division 11, at San Diego 12 September 1938. She departed San Diego 14 April 1941 to join the Fleet at Pearl Harbor. When the Japanese attacked Pearl Harbor 7 December 1941, *Henley* was moored in East Loch with battle stations manned, a green sailor having sounded General Quarters instead of Quarters for Muster. This fortunate mistake gave *Henley* the opportunity to fire the first destroyer shots as the initial wave of enemy planes swooped in. A bomb exploded 150 yards off her port bow as she slipped her chain from the buoy, and, as she cleared, she received a signal that a submarine was in the harbor. *Henley* maneuvered through the smoke, fire, and confusion and sped out of the channel. Her gunners splashed one dive bomber with her .50 cal. guns and shared credit for another. Conned by a junior lieutenant—both her commanding officer and executive officer were ashore when the attack began—*Henley* dropped depth charges on a sonar contact, possibly a midget submarine, outside the harbor, and continued to blaze away at the enemy with her guns. In the following weeks *Henley* operated with the task forces to reinforce Wake Island and conducted patrol for the protection of Midway and convoy lanes. She served as part of the ASW screen when *Saratoga*

USS *Henley* (DD-39) at the Fore River Shipyard in September 1912

steamed at high speed from the West Coast bringing replacement planes and her own powerful air group.

Henley carried out convoy and antisubmarine duty, primarily in Australian waters, until departing Wellington 22 July 1942 to escort transports to Guadalcanal. As American forces stormed ashore in the Solomons 7 August, *Henley* patrolled on an ASW station, coming under fire from enemy planes but suffering no casualties and assisting in splashing two in the process. As the fierce struggle for Guadalcanal raged, the destroyer remained in the area to screen ships bringing up supplies and reinforcements until 29 August. *Henley* then set course south, and remained in Australian and New Guinea waters until September 1943 on plane guard, convoy duty, and anti-submarine patrol.

When Australian troops established a beachhead at Finschafen, New Guinea, 21 September 1943, *Henley* formed a part of their protective screen. Attacked by 10 Japanese torpedo bombers, she splashed 3 and assisted in downing 3 others in a fierce half hour engagement. However, the valiant ship's wartime career, begun in the chaos at Pearl Harbor, was drawing to a close. On 3 October 1943 *Henley* was steaming with *Reid* and *Smith* on an offensive sweep off Finschafen when her skipper sighted two torpedoes heading for her. Split-second maneuvering permitted *Henley* to evade those two torpedoes; but a third was immediately sighted, closing too fast and too near to be avoided. *Henley* was struck on the port side, with the torpedo exploding in the number 1 fire-room, destroying her boilers, breaking her keel, and displacing her bow about 30 degrees from the longitudinal axis of the ship.

At 1829, with all her crew having abandoned ship, *Henley* went down, stern first. Her companion DD's searched for the sub, then returned to rescue *Henley's* survivors, who had lashed their life-rafts together and were using flashlights as signals. Eighteen officers and 225 men were rescued, with 1 officer and 14 men missing.

Henley earned four battle stars for her participation in World War II.

III

(DD-762: dp. 2200; l. 376'5"; b. 41'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 16 40mm., 10 20mm., 5 21" tt., 6 dcp., 2 dct.; cl. *Allen M. Sumner*)

The third *Henley* (DD-762) was launched 8 April 1945 by Bethlehem Steel Co., San Francisco; sponsored by Mrs. George S. Wheaton, a descendant of Captain John D. Henley; and commissioned 8 October 1946, Comdr. Dwight L. Moody in command.

After shakedown in the Pacific, *Henley* headed east, reporting to the Sonar School at Key West 19 February 1947 for a 5-month tour of duty. She then reported to Norfolk, from which she sailed 28 July for her first Mediterranean cruise, which terminated 1 December at Boston. On her second tour in the Mediterranean, *Henley* patrolled with other U.N. ships in the summer of 1948 as the Israeli-Arab dispute threatened to erupt into war. After a year of tactical training exercises and fleet maneuvers, *Henley* decommissioned at Charleston 15 March 1950. Less than 6 months later, with the outbreak of war in Korea, *Henley* went back in commission, rejoining the active fleet 23 September. Shakedown over, she sailed July 1951 for another tour with the 6th Fleet in the Mediterranean. *Henley* was detached from this duty and made a cruise to northern European ports, including a journey up the Seine to Rouen, before returning to Norfolk in February 1952.

In company with Destroyer Division 221, *Henley* departed Norfolk 25 September 1953 for a world cruise which was to take her 44,000 miles in 218 days. During this period, *Henley* sailed through the Mediterranean and the Suez Canal, participated in the filming of "The Bridges of Toko-Ri" off the Korean and Japanese coasts, operated with the 7th Fleet in Asian waters, and returned to the States via the Panama Canal and the Caribbean. Following years fell into a pattern for *Henley* as she alternated Mediterranean cruises with ASW and other tactical
